"The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality; so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions and charges of traffic or other-wise. Such conditions and charges of traffic shall be just and equitable."

THE PRINCIPLE OF NEUTRALIZATION UN-AFFECTED. It was not intended that these changes in the treaty should affect the gen-eral principle of neutralization: and Mr. Hay, in recognition of the concessions made by Great Britain in the treaty of November 18, 1901, voluntarily proposed, and it was formally agreed to the fourth article, that no change of territorial sovereignty absolute affect the obligations of the tigh contracting parties under the present treaty.

Since the ratification of the second Hay-Prancetose Treaty the United States has equired by purchase from the Republic of Panama the right to exercise severeign au-thority over the Canal Zone and the adjaent waters within the three-colle limit; but this in no way affects the general principle

of swatcolination.

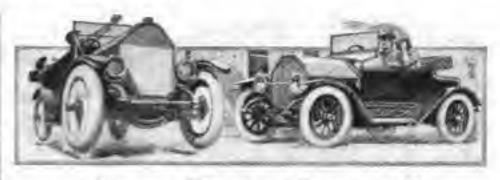

It is important, however, to comprehend the assuming of the term unitralization and the powers implied in the control of neutral-zed territory. Belgium, Switzerland and Laxenhurg are pentralized status; but their domestic concerns are in no way affected by this fact. Their duty consists solely in maintaining and defending their neutrality as between foreign Powers. Their sovereign rights are in no way shridged. Within their own territory all of these rights remain intact.

No other Power has a right to interfere with the relation between their kremeurus and their dominate commerce. under a solemn obligation, voluntarily as sumed, to treat other Powers alive, on far as privileges within their territory are occcerned; and especially not to permit their territory to be used as a military hase or source of supplies for belligerents. This is previsely what the Government of the United States is piedged to do in respect to all na-tions observing the rules of neutralization usopted by the United States—namely, to furnish equal treatment and some service In the canal:

If it were contembed that the Government of the United States should enjoy no divileges in the canal other than those possed by the nations observing its rules. there would be no historic example of noutralization and no intelligible definition of the term on which such a contention could be based. This contention would impos the builders of the canal such servitude to nonmitractants as was never yet imposed by any Power on the owner of any neutralized object.

What, under that interpretation, would become of the agreement in the second arti-cle, that "the said Government shall have and enjoy all the rights invident to such construction, as well as the enclusive right of providing for the regulation and management of the canal"?

"It is true that all these rights are subject to the provisions of the present treaty; but 'they are not subject to theories and definitions not in harmony with these provisions. and they causet be in any way legally

In a "Tight Corner"

You flirt with disaster if you neglect brake lining. You' cando without fancy "extras" on the car you drive-but for safety's sake you must have brake lining on which you can depend.

Brake lining must give uniform gripping power clear throughnot merely on the outside. Then it remains reliable till worn paperthin. Such is Thermoid.

Cut a strip of Thermoid open. Break open the ordinary. Compare their centers. You can see the difference in gripping power.

mermora

Hydraulic compression is the reason Thermoid has the most uniform gripping power. It ex-plains why its density is fixed. Why it cannot be burned outnor affected by oil, water, gasoline, dirt. Why it is used exclusively by so many makers of foremost cars, such as the Peerless, Lozier, White, American, Fiat, National, Marmon, etc.

Thermord HYDRAULIC COMPRESSED Brake Lining - 100%

Thermoid represents 60% more labor and contains 50% more material, size for size, than the ordinary.

Our Guarantee: Thermoid will make good - or uv will.

'ODAY, girls everywhere are waiting to be set to work. To any healthy girl with good red blood in her veins, and the ambitions and aspirations of normal girlhood, it is intolerable to be without an outlet for her energies and an income for her necessities. A very little experience of it shows her that

NOTHING IS MIGHTY CLOSE TO NOBODY

THE LADIES' HOME JOURNAL has a Club of girls who always find something doing and something earning. Its name is "The Girls' Club." You have doubtless heard of it. Since the first of October, 1913, its members have earned about \$58,000,00, and they have still bigger plans for the coming Summer months. Any gol who is fired of doing and earning nothing will learn what these plans are, and will receive a very cordial invitation to join the Club, by writing to the Manager. Ask her to send you (without charge) the little "Found An Hour for The Girls' Clab," Her saldress is

> WATER OF THE GREE CLUB THE LADIES' HOME TOURNAY, PULLADOLPHIA

limited, except by the clear and express stipulations of the treaty itself.

It has been claimed as a restriction on these rights that the preamble of the treaty now in force expressly states that its pur-pose is "to remove any objection which may arise out of the Convention of the nineteenth of April, 1850, commonly called the Clayton-Bulwer Treaty, to the construction of such canal under the suspices of the Government of the United States, without impairing the general principle of neutral-ization established in Article VIII of that Convention"; and that, therefore, Article VIII of that treaty is still in force.

A careful examination of the article in question shows that this cannot possibly be the case; and that it is merely the general principle of neutralization, and not at all the specific form of neutralization presented in that article, which the second Hay-Pauncelote Trenty is designed not to impair. Article VIII of the Clayton-Bulwer Treaty

contemplates the construction of a canal by neither government, but by some company to be formed for that purpose, under the protection of both governments. The canal is, in return for this equal protection, to be "open to the citizene and subjects of the United States and Great Britain on equal

Both governments are pledged not to ex-ercise any control over this tertium quid. Suppose, then, such a company had built the canal, would there be any doubt about its right to puss its own ships freely through its own waterway? Would there be any im-

own waterway? Would there be any impairment of the general principle of neutralization so long as all the protectors of the canal were equally served?

The difference between the Clayton-Rulwer Treaty and the accound Hay-Pauncefote Treaty consists precisely in this: In the Clayton-Hulwer Treaty the United States and Great Britain were joint protectors of a terrinem quid, while in the second Hay-Pauncefote Treaty the United States Government becomes, by a new and special agreement with Great Britain, both the sole owner and the sole protector of a canal built entirely at its own expense, while Great Britentirely at its own expense, while Great Britain reases to bear any burden or accept any responsibility as protector of the canal.

That the right to equal treatment agreed in the Clayton-Bulwer Treaty is based solely on participation in this obligation to protect the canal is evident from the last words of the article in question.

The article reads: " shall also be open on like terms to the citizens and mijects of every other state which is willing to grant thereto such protection as the United States and Great Britain engage to afford."

With the falling away of this protertion, which in the first Hay-Pauncefote Treaty was still joint between the United States and Great Britain, and was to be shared by other Powers also, disappears entirely the specific form of neutrality embosiss in the Clayton-Bulwer Treaty; and only the general principle, as already defined the general principle, as already defined remains—namely, that the owner grand entire equality to all nations observing

THE REMOVAL OF ALL AMBIGUITIES-If it be claimed that the language of the second Hay-Pauncefore Treaty is amig-ous, and that, therefore, the broader posible construction should be placed on it, there is a very simple method of ending al controversy regarding the obligation of

Let it be assumed that the Government of the United States is in honor bound to treat the vessels of all nations precisely all treats its own: what results from this concession? If such conditions and charge of truffic are to be just and equitable it is proper that every gross ton of shipping passing through the canal should bear in due proportion of the total interest clare and cost of maintenance, operation and defense of the canal.

If it be a point of honor on account of the obligations of the treaty for the Government of the United States to accord to the remels of all nations the same treatment

vessels of all nations the same treatment that is accorded to its own vessels, it is also a point of honor for all nations availing themselves of the use of the canal to make good to the treasury of the United States their share of the cost of the service rendered. It would, therefore, be fitting for the Government of the United States, if this construction is to be placed on the treaty, is add a rule requiring the nations using the canal to pledge themselves, as a condition of soloving its benefits. To pay from their of enjoying its benefits, to pay from the respective treasuries such sums as may be necessary to meet any deficit in the annul budget of the causal, in proportion to the gross tonnage of the vessels sailing under their respective flags.

Sense and Nonsense

Cheap Cottages

THE five-hundred-dollar cottage is an ideal that just now is having a great amount of experiment and study in England in the campaign for better housing. One such cottage has been built under very favorable conditions and many have been constructed at near this figure.

Each one, after being finished, has been given wide attention, and its faults as a model home have been pointed out. The latest idea considered is to put up a frame-work of structural steel, to hold grooved concrete slabs for walls and floors

Slabs of a waterproof composition would be used for the roof.

It has been stoutly claimed that, made in quantities at prevailing prices in England, it would be possible to build cottages of ten thousand cubic feet each in this way for five hundred dollars.

Anything to Please

DIGBY BELL, the actor, says be was D once playing a short engagement in a small Middle Western city, when, about an bour before the curtain went up for the matinee, a messenger from the front of the theater came to him as he sat in his dressing

room reading his mail.
"The house manager wants to know," said the emissary, "whether you expect him.

to dress up this afternoon."
"Well," said Bell, "I understand the audience will be fashionable. Tell the manager for me that I think it would be well for him to dress as he always does for his big matinée houses."

When the performance was over Bell alipped around to the box office to observe

the result of his advice.

The house manager stood at the door glorious in a dinner coat, dress waistcoat and broad white lawn tie.

Dyeing Rocks

DUMPING dyes into rock is a new way To discover whether the rock is solid in not, and hence whether it will make a good foundation. Holes are drilled in the rock intended for the foundation of a building and the dye is forced into the holes under pressure. More holes are then drilled near by, and if any rock dust comes up dyet the number and size of seams in the means then indicated. are then indicated.

The New Catechism

AWELL-KNOWN doctor of Savannah has two children—a little daughter, aged six, and a small son, aged four. One day he overheard the little girl putting let brother through an examination in Bitis

"Do you know who the first man and the first woman were?"
"Yeth, I do," lisped the boy,
"I'll bet you don't know their name,"
pressed the sister.
"I bet I do!" replied the little fellow.

"Well, what were their names, then Mr.

"Edem and Ab!" answered the little boy.

Refined Fish

BOB DAVIS, editor of Munsey's, was at the Hotel Cecil, in London, Glancing over the menu one morning at breakfast. he said to the waiter:

What is a whiting?"

"A whiting, sir," said the waiter, "is a fish, sir,"
"I know that," said Davis; "but what kind of a fish? How does it taste?"

The waiter pondered the matter for a

"I'll tell you, sir," he said: "A whiting is like a 'addock, sir-only more refined.'

HOW TO INTEREST INVESTORS

By ROGER W. BABSON

THE young business man who has read the preceding articles of this series has now a fair idea of how money is borrowed temporarily on various forms of notes. I have also endeavored to describe some of the inside workings of a bank and to give readers some friendly and fatherly advice the born to appear to a banker from his as to how to separate a banker from his money.

Many readers, however, desire to issue securities of a more permanent form, so as not to be disturbed every six months with note renewals. How to accomplish this feat will now be considered.

As was explained in a previous article, for many purposes money should only be raised through the issuance of additional capital stock to oneself or family; but there are other purposes for which the young business man is entitled to issue securities to the public, and the following three articles will be devoted to this phase of the subject.

articles will be devoted to this phase of the subject.

When a young business man goes to a banker for advice as to issuing bonds, pre-ferred stocks, or some other form of securi-ties to the public, the banker first asks the young man to describe to him the character of the business in which he is interested. All standard securities may today be grouped under one of the five following headings:

1—Railroad securities; 2—Traction se-curities; 3—Other Public-Utility securi-ties; 4—Industrial securities; 5—Mining securities.

There are styles and fashions in stocks and bonds just as in hats and dresses. To catch the timid investor, one must issue securities to the public when his special class of business is popular, and lie low when his special class of business is unpopular. Some one class of securities is always in favor and some other class is always in disfavor. The fashions of investments change from year to year as does the cut of coats. cut of coats.

One year steam-railroad securities are unpopular and traction securities are very popular; another year traction securities are unpopular and industrials are very much in favor. As ninety-five per cent of the people are like abeep and blindly follow one another, two conclusions can be drawn from the above statement: from the above statement:

The young man desiring to solicit funds for traction property should wait until traction securities are popular and then issue said securities, whether or not be is then in immediate need of additional funds. The young man interested in an industrial proposition, however, should not sacrifice his securities when traction securities his securities when traction securities are popular, but wait until industrials again come into favor.

The Psychological Moment to Sell

In other words, there is a psychological moment for the issuing of any one class of securities. As the wheel keeps going round, a man desirous of selling some one class of securities to the public should wait for the securities to the public should wait for the time when such class is in favor, and then "make hay while the sun shines." It is much easier for the man in need of funds to flost with the tide of popular favor than to attempt to row against this great tide by endeavoring to sell—at any time—securities of a class that for some reason is temporarily in disfavor.

Wise investors always seek to avoid purchasing that class of securities which are temporarily popular. When publicutility securities are popular and industrial securities are in disfavor, the wise investor

securities are in disfavor, the wise investor avoids purchasing public-utility securities and purchases the much-despised indus-

trials. Conversely, when the preferred stocks of industrial companies are very popular and railroads are in disfavor, then the wise investor avoids purchasing the popular industrials and—much to the disgust of his brokers and friends—buys the despised

railroads. Working with the tide the man in need of funds will be able to obtain his funds easier, at a lower rate and on better terms, and on the other hand the investor will

be able to obtain better securities at the lower price, thus yielding a higher rate of interest, by rowing against the tide.

RAILBOAD SECURITIES. The railroads of this country will probably some day be taken over by the Government at an appraised valuation, however much you and I may regret it. Practically speaking, this will take care of all the bond issues. With, however, a few exceptions, the bond and other obligations of the American railroads are worth all they are million for taken are worth all they are selling for today. Reorganizations are inevitable and the par value of certain issues will be cut down; but, in the writer's opinion, there is hardly an obligation of an American railroad today which, if an investor should purchase at present prices and hold on to it, will not

present prices and hold on to it, will not some time refund his money.

In the case of railroad stocks this is different. Much depends on the valuation of railroads now being carried on by the Government. Some stocks will be found to be worth more than par, while others will be found to be worth much less than par. If interested in the promotion of a railroad I should endeavor to keep the bonds myself and sell the stock to the public on a basis which will give these purchasers a handsome profit if the railroad gets a fair deal from the Government, and placing on these people the loss in case the placing on these people the loss in case the railroad does not get a fair deal.

The Tangible Property Basis

On the other hand, as an investor in rail-roads, I should endeavor to confine my purchases to the bonds and other obligations—especially certain four per cent boods selling at a large discount—unless I were in a position to study fundamental conditions and buy stocks.

TRACTION SECURITIES. At one time traction securities were very much in favor and it was very easy to sell bonds or stocks issued by street-railroad companies. Now that the people are getting wise, however, the franchise question is becoming a serious proposition. As franchises expire it is difficult to make a profitable trade with the municipality involved. Moreover, the labor factor is to become a distinct detriment to the street-railroad business.

If the writer personally were engaged in

to the street-railroad business.

If the writer personally were engaged in the street-railroad business at the present time, instead of endeavoring to sell additional securities, he would look round for something else to do, and become interested in some other line from which the cream had not been so thoroughly skimmed. However, this very fact that certain traction securities may be in disrepute during the next few years should make some of their bonds attractive to keen investors who have courage. who have courage.

Investors, however, should be very par-ticular to purchase only traction securities issued on a basis where they will be taken care of if the property is taken over by the state or the municipality at the actual value of the tangible property.

In other words, traction securities should not be purchased on the basis of the franchise value or even on the basis of earnings. Only actual tangible property should be considered by the investor in traction

OTHER PUBLIC-UTILITY SECURITIES. In this group I include the securities of lighting, water and power companies, which, for several reasons, have a number of advantageous leatures. The labor factor is very small in connection with lighting, water and power companies, and therefore, as wages increase, the expenses of these companies should not necessarily increase in any such proportion.

Moreover, the coming generation will probably use much more electricity and other modern conveniences than does even the present generation. Companies that derive their power from water should espe-cially be in favor as coal increases in price and as our streams and forests are conserved.

Promoters of such public utilities should have very little difficulty in placing additional securities at the proper time; and both promoters and investors are apt to

find them quite popular. The promoter, however, must not wait too long, but must sell them while they are in favor.

On the other hand, the investor must be very careful not to get caught while this class is popular, but rather wait until they are in disfavor, as they will have their turn like all others.

INDUSTRIAL SECURITIES. These probably fluctuate more than any other class in public favor. One year they are very popular and the next year they are very unpopular. The men engaged in industrial enterprises desiring to sell securities should plan to do so during these popular years; while investors should plan to buy industrial securities only during years when they are very much in disfavor. These cycles come about once in four years and may be readily recognized.

Personally the writer would advise small investors to invest only a small proportion of their money in industrials; but when such money is invested, cumulative seven or eight per cent preferred stock preferred also as to assets is usually the most desirable.

When purchasing railroad or traction securities the wise investor prefers bonds, letting the other fellow have the stock; but when purchasing into industrial companies the wise investor sometimes purchases the preferred stock. The common stock is too much of a gamble and should be owned by those actively engaged in the business; but if the preferred stack is not good the bonds are usually not good either.

MINISO SECURITIES. This group contains both the most profitable and the most dangerous varieties of investments—if such word can be used in this connection. There are certain classes of people who are bound to take a chance. If they cannot find mining stocks to buy they will play poleer or gamble through a bucketshop in railroads. Those of my friends desiring to raise money for mining purposes I urge to hunt up such people.

Do not try to sell bonds on a mine: de

not sell any mining securities to widows or orphans. Go to business men who want orphans. Go to business men who want to take a flyer with a specified proportion of their money. Tell them the truth—that if ore is struck they may make five dellars for every one dellar invested; while if not they will make a total itse. Business men are generally pleased by such frank statements, and it is often easy to interest them in mining propositions if one goes about it right.

I have not mentioned municipal securi-

ties in the above brief analysis, as most municipal bonds are perfectly good as to security, and the rate of interest simply depends on their convertibility. Bonds of well-known cities, which can quickly be sold, are issued at a lower rate than bunds of small towns, which have a limited market. Personally the writer prefers bonds of a medium-grade city in the Middle West. There is no use in investing in bonds that yield a very low rate, nor is it wise to purchase bonds of those very small towns that are almost impossible to sell.

Five Points for Investors

Investors, however, should be very particular only to purchase such municipal bonds as are secured by the entire municipality, and avoid so-called improvement bonds or assessment bonds, which bold only certain districts or streets.

The young business man can use for his selling talk the fact that every investor should have a certain proportion of his funds in the securities of each of the five classes mentioned above. This gives him an opportunity always to talk up his class— whatever it may be—to every investor.

A striking illustration of the need for

such distribution was fornished by certain fire-insurance companies after the San Francisco earthquake. It appeared that the companies' assets were largely invested in San Francisco real estate and enterprises where the bulk of its fire risks were concentrated. As a result, the very catastrophe that converted its risks into actual liabilitles deprived its assets of all immediate value.

There are five different features that investors observe in the selection of investments which the young business man desiring to raise money should carefully note. These are given by a Wall Street authority as follows:

1-SAPRTY OF PRINCIPAL AND INTEREST. in the quality of safety there is a marked

difference between safety of principal and safety of interest. With some investments the principal is much safer than the interest and vice versa. This can best be illustrated by examples.

The bonds of terminal companies, which are guaranteed as to interest under the terms of a lease by the railroads that use the terminal, are usually far safer as to interest than as to principal. While the lease lasts, the interest is probably perfectly secure; but when the lease expires and the bonds muture, the railroads may see fit to abandon the terminal and build one elsewhere if the city has grown in another direction; and the terminal may cease to have any value except as real estate.

2-RATE OF INCOME. A large part of the problem of investment lies in the careful selection of securities to meet one's actual requirements. The average investor does not thoroughly understand this point. He does not realize that a high degree of one qualities. He may have a general impression that a high rate of income is apt to indicate less assurance of safety, but he rarely applies the same reasoning to other qualities.

When he buys securities he is quite likely to pay for qualities he does not need. It is very common, for example, when he wishes to make a permanent investment and has no thought of reselling, to find him purchasing securities that possess in a high degree the quality of convertibility. This is pure waste for him; and the young business man desiring to interest an investor in the unlisted and inactive securities of his company should preach this fact. A high degree of convertibility is only obtained at the sacrifice of some other quality—usually rate of neome.

3 CONVERTIBILITY. The quality of convertibility divides investors into classes more sharply than any other quality. For some investors convertibility is a matter of small importance; for others it is the paramount consideration. Generally speak-ing, however, the young business man may assume that the private investor does not need to place much emphasis on the quality of convertibility - at least for the larger part of his estate.

On the other hand, for a business surplus ready convertibility is an absolute necessity; and in order to secure it something in the way of income must usually be sacrificed.

Well-Dressed Securities

4-APPRECIATION IN VALUE. "Again, some investors are so situated that they can insist strongly on the promise of apprecia-tion in value, while others cannot afford to do so. Rich men, whose income is in excess of their wants, can afford to forego some-thing in the way of yearly return for the sake of a strong prospect of appreciation in value. Such men naturally buy bank and trust-company stocks, the general chara-teristic of which is a small return on the money invested, but a strong tikelihood of appreciation in value."

5-STABILITY OF MARKET PRICE. Stability of market price is frequently a considera-tion of great importance. This quality tion of great importance. This quality should never be confused with the quality of safety. Safety means the assurance that the maker of the obligation will pay princi-pal and interest when due; stability of market price means that the investment will not shrink in quoted value. These are very different things, though frequently confused in people's minds. An investment may possess assured safety of principal and interest, and yet suffer a violent decline in quoted price owing to a general change in monetary conditions.

The lesson to be learned here by business men desiring to sell securities is that they must always issue them on a basis which will compare favorably with the going market price of similar investments. If they offer too high a rate people will be afraid that the securities are unsafe; while if they offer too little they are wholly unattractive.

This is very important to remember; in fact, as I opened this article by referring to fashions in securities, advising you young business men to conform thereto, I new close by urging you to also adapt yourselves to rate changes and conditions.

Really, if your securities are safe, only two things are necessary in order to sell them -namely: Dress them up in style and make them pay the going rate of interest.

forcettery of State Reyon Rating Intersteamed in the White House Brusedte

Tong and oppression and a property of human rights to be attained, brings freedom." The project released from his terms attitude and smalled.

resident relaxed from his tense attitude and scaled.

"It is a curious thing," he continued, "that every demand for the intablishment of rier in Mexico takes into consideration, and order for the benefit of the people of fexico, the great mass of the population, but order for the benefit of the old-tuse regime, or the aristocrats, for the vested interests, for the men who are responsible for this very pudition of disorder. No one asks for order because order will help the masses of the cople to get a portion of their rights and their land; but all demand it so that the great where of property, the overloads, the hidalgos, the men who have exploited that rich contry for their own selfish purposes, shall be able to continue their processes undisturbed

the protests of the people from whom their wealth and power have been obtained.

"The dangers that beset the Republic are held to be the individual and corporate oubles of these men, not the aggregated injustices that have been heaped on this vastly eater section of the population that is now struggling to recover by force what has ways been theirs by right.

"They want order—the old order; but I say to you that the old order is dead. It is y part, as I see it, to aid in composing those differences so far as I may be able, that e new order, which will have its foundation on human liberty and human rights, shall evail."

We were sitting in the old Cabinet room, on the second floor of the White House, we changed to a library and workroom for the President. Two sides of the walls are sed with books, and opposite the mantel there hangs a great picture of the signing the Spanish War Peace Treaty, showing President McKinley gazing benignantly at cretary Day and the Spanish commissioner, who, seated side by side, are writing their mes on the document that formally ended the war of 1898. A great globe stands in the roor—a great blue globe, with many lines traced on it, many lines running from ashington to the South. There was a cluster of red roses in the corner, and a little seze fluttered the curtains of the windows that looked out on the fountain, the wonderful uses of bloom on the flowering trees, the new, soft green of the leaves, and the velvet the grass. A searchlight played on the tip of the Washington Monument and, far back, a dome of the Capitol swam mistily in the silver light of the new moon.

after of mediation roads to the representatives of Argentina, Brazil and Chile, I can state these conclusions, which will endure regardless of the outcome of mediation negotiations. The willed policy of the President, is regard to Mexico, will be as follows:

First - The United States, so long as Mr. Wilson is President, will not seek to gain a first of Mexican territory in any way or under any protest. When we have finished with Mexica, Mexica will be territorially intact.

Second—No personal aggrandizement by American investors or adventurers or capitalists, or exploitation of that country, will be permitted. Legitimate business interests that seek to develop rather than exploit will be encouraged.

Third—A settlement of the agrarian land question by constitutional means—such as that followed in New Zealand, for example—will be insisted on.

These are the materialistic ideals of President Wilson, the main points he has firmly in his mind. His future policy will rest on these foundations, regardless of what the moment may inject into the situation in the way of minor questions.

We talked for a few moments on that April evening of the historic associations of the portion of the White House where we were, which, until the time of President Rossevelt, was used by the Presidents as office and workroom by the clerical force, by the Cabinet, and as the public reception room. It was in this part of the White House that all the preliminaries of the Spanish War were decided on by President McKinley, and it was this portion of the White House that President Lincoln occupied as his office and workroom during the Civil War. Now it makes up a part of the home space in the White House; but in that library where we were sitting, and where McKinley's Cabinet debated the Spanish War and Lincoln's Cabinet debated the Civil War, a great many of the problems of Mexico, whether war problems or peace problems, have been and will be considered by President Wilson.

"Mr. President," I began, "I have recently been through the country somewhat, and I am constantly meeting men who have arrived from various states. I find and they find that, though the people of this country are patriotic and are loyally standing by the Administration, they do not, as a whole, know just what they are patriotic about."

"I have found that to be true, in a measure, myself," said the President: "and I am glad of an opportunity to explain my ideas and my ideals on the subject."

3

He stopped for a moment as though to select a place for beginning. I noticed that his face, instead of being pule, as it was the last time I saw him, was burned by the sun; that his eye was clear and bright, and his whole attitude that of a man who is strong and well. I noticed, too, that his hands were not burned by the sun; and as he talked I watched those hands and observed how he used them constantly-not in widespread gestures, but rather in supplementary and interpretative motions, as though he were a musician speaking the score of his music and playing the notes with his fingers as he went along. I doubt whether his hands, except when he thwacked the desk, moved more than twelve inches one way or the other; but they seemed almost a part of his speech, and expressed his various attitudes of mind and emotion when he proreeded as vividly as did the intonation of his voice and the emphasis of his words.

He sat back in his chair and half closed his eyes. His fingers faced and interlaced. Then he began to talk, clearly, simply, with a clarity of diction, a sequence of thought and a lucidity of expression that seemed even more remarkable than it really was when compared with the muddled speech of many of our statesmen. New and then he used a colloquialism. Once or twice he dropped into slang. He spoke of some one "butting in," and he said "We must hump ourselves!" He marshaled his facts with such precision and presented his ideas so cogently that it was apparent his viewpoint was the result of a long and continuous study of every phase of the minor problems involved in the great problem: Why are we in Mexico and

what are we going to do there?

"Every phase of the Mexican situation," the President said, "is bused on the condition that those in de facto control of the Government must be relieved of that control before Mexico can realize her manifest destiny."

The Peons' Struggle for Freedom

THE President made it clear that the United States has no quarrel with the Mexican people and that the Mexican people should have no quarrel with us. He sketched the conditions in Mexico under Diaz and came to the underlying cause for all the unrest in that country for many years. This, he said, was a fight for the land—just that and nothing more.

He pointed out how the landed aristocracy, originally given control of vast tracts of land by Spanish grants, had during succeeding years, by coercion, absorption and by other methods of force and with the support of the Goverament, taken away from the small landowners most of their properties, and had created the founds estates, where

the people were virtually slaves.

These processes were followed by the passage of a general law which made legal the condemnation of all land to the state that was not secured by a title which complied with provisions in the law that made most of the titles of the properties the landed aristocracy wanted easy of annulment. Farm after farm passed into the control of the big landowners and there was no recourse for the former owners or for their families but to work at dictated terms and

practically as slaves on the land that had formerly been theirs.

"Fortunately for the peops, but unfortunately for himself," the President continued, "Diaz permitted the establishment of a public-school system. He himself said he raised up the instrument that brought about his own destruction—the school system."

Weak and incomplete as this school system was and is, it nevertheless had the effect of helping in great measure toward the partial education of a sufficient number of the peons to make it easy for agitators to start revolutions. Revolutions were started. Finally there came the successful revolution of Madero and his supporters, and the exile of Diaz. This was fol-lowed by the killing of Madero, and the assumption of power by Huerta. The present revolution. like all preceding revolutions, is primarily a revolution by the peons who want to regain their land.

"To some extent," the President said, "the situation in Mexico is similar to that in France at the time of the Revolution. There are wide differences in many ways," he continued, "but the basic situation has many resemblances."

After the accession of Huerta the President definitely decided not to recognize that alleged Government and remained firm in that resolve. However, for many months, he has not been unaware that a situation was developing which would force him to make an active movement against Mexico, or the alleged Huerta Government of Mexico; and would bring about such a condition as existed at the time mediation was suggested.

"It has been a difficult situation," he said, "because so many elements of it have been without our control and our territory. In a domestic matter we can see our way clear, because ordinarily all the elements are within our view and consideration; but here was a trouble that had its active movements in another and an adjacent and a somewhat remote country, and we were forced to sit and watch, and await such developments as might be. I have known for months that some such thing could happen—was inevitable, in fact; and my prayer was that it might not be a calamity."

Then came the incident at Tampien. Rear-Admiral Mayo, resenting the insult to the flag, issued his demand for an apology, and the President and his Cabinet stepped in behind the Admiral.

"Really," said the President, "it was a psychological moment, if that phrase is not too trite to be used. There was no great disaster like the sinking of the Maine, and there was an adequate reason for our action in this culminating insult of a series of insults to our country and our flag."

The President followed with his emphatic declaration that his passion is for the great masses of the Mexican people, and his statement that his sole object in Mexico is to help the people secure the liberty which he holds is fully theirs by right,

"The function of being a policeman in Mexico has not appealed to me; nor does it appeal to our people," he said. "Our duty is higher than that. If we are to go in there, restore order and immediately get out, and invite a repetition of conflict similar to that which is in progress now, we had better have remained out.

"What we must do and what we hope to do are twofold. First, we hope to show the world that our friendship for Mexico is a disinterested friendship, so far as our own aggrandizement goes; and, second, we hope to prove to the world that the Monroe Doctrine is not what the rest of the world, including some of the countries in this hemisphere, contends—merely an excuse for the gaining of territory for ourselves.

"I hold this to be a wonderful opportunity to prove to the world that the United States of America is not only human but humane; that we are actuated by no other motives than the betterment of the conditions of our unfortunate neighbor, and by the sincere desire to advance the cause of human liberty."

The situation, he pointed out, is intolerable, and requires the strong guiding hand of the great nation on this continent

that, by every appeal of right and justice, and the late for order and the hope for peace and prosperity, must assist these warring people back into the paths of quiet and prosperity. We have an object lesson to give to the read the world; an object lesson that will prove to the skepting outsiders that this nation rises superior to consideration of added power and scorns an opportunity for territoria aggrandizement; an object lesson that will show to the people of this—our own—hemisphere that we are sincerely and unselfishly the friends of all of them, and particular the friends of the Mexican people, with no other inthan the idea and the ideal of helping them composition differences, starting them on the road to continued pear and renewed prosperity, and leaving them to work out their own destiny, but watching them narrowly and insisting that they shall take help when help is needed.

"I have not permitted myself to think of what will be the outcome of these plans for mediation," the President said, "I hope they may be successful. In any event we shall deem it our duty to help the Mexican people, so it we shall continue until we have satisfactory knowledge that peace has been restored, that a constitutional Government is reorganized, and that the way is open for the peacets

reorganisation of that harassed country."

The Possibilities of Self-Government

"WE SHALL not demand a foot of territory nor a certification of money—except, of course, the settlement of up-claims as may justly be made by American citizens be damages to their property during these disturbance-individual claims. There will be no money demand it a national sense. Then we shall have shown the entire world that the Monroe Doctrine means an unselfish friendship for our neighbors—a disinterested friendship in the sense of not being interested in our aggrandizement—and that or motives are only the motives inspired by the higher luminity, by our sense of duty and responsibility, and by or determination that human liberty shall prevail in or hemisphere."

The President paused. He had been intensely in carse: in his talk. He smiled, and his long white fingers you themselves in and out. Then, with a little gesture that betakened amused contempt, he continued:

"They say the Mexicans are not fitted for self-government; and to this I reply that, when prepared directed, there is no people not fitted for self-government. The very fact that the extension of the school system is Diaz brought about a certain degree of understanding among some of the people which caused them to awake to their wrongs and to strive intelligently for their rights makes that contention abourd. I do not hold that the Mexican people—ours, for example; but I do hold that the widespread sentiment that they never will be and never can be made to be capable of self-government is a wickedly false as it is palpably abourd."

He paused again.

"Did you see that dispatch we gave out, from Counti-General Hanna, which detailed his experiences with the

army at Torreon? It was a sort of a diary of his alventures and a record of what he saw. We gave a all out; but the latter just of it was not widely printed, for the first put of it was full of bloody details of the battle. suppose"-and he smiled whimsically again-" suppose the editors (e) there was no particular interest in the peaceful and gratifying information that was in the latter por tion of the dispatch

"Well, if you read that dispatch, you learned that Mr. Hanna was most agreeably surprised and greatly gratified by the treatment Villa's men gave their prisoners; how they endeavored to live up to the rules of civilized warfare. how they were constantly on the lookout for new if formation that would relieve them of the stirtof being barbarians. The merely shows that they prople, if they get the charare capable of learning are anxious to learn. The President returned

to the question of mediate (Concluded on Page 71

Secretary of the Mary Daniels Being Interstewed on the Way From a Cabinet Meeting

SUSANNA AND HER ELDERS

By RICHARD DEHAN

"I Jay is is Bearly to be Expected to Marry Just Because Maney Has Got to be Brought Into the Pumity"

THE Earl of Beaumaris, a worthy and imposing personage flushed from the nape of his neck to the high summit of his cranium - premature baldness figured among the family heredities paced in creaking patent-leather boots up and down the castle library, a noble apartment of Tudor design lined with rare and antique volumes into which none ever looked. There were other persons present besides the dowager countess, and, to judge by the strainedly polite expression of their faces, the squeaking leather must have been playing havor with their nerves; but nobody protested, and Lord Beaumarie continued his agitated perambuations, regularly turning as he reached the limit of the wornout rug. "Gustavus," said his mother at length, "you're an English peer in your own

"you're an English peer in your own notle and not a pointsman on a Broadway block, unless I'm considerably mistaken. Sit down!"

"Mother, I will not be defied!" said Lord Beaumaris. "I will not be bearded by my own child—a mere chit of a gir!! dad Susanna been a boy I should have mown how to deal with this spirit of asubordination. Being a gir!—and, noreover, motherless—I abandon her to ou. She has many things to learn, but et the first lesson you inculcate be this—hat I positively refuse to be defied!"

"The child has, I gather, gone out to ake the air when she ought to have tayed in and taken a scolding," said ady Beaumaris. "Does any body know ther whereabouts?"

Alaric Osmond-Orms, a languid, drabomplexioned, light-haired man of arisperatic appearance, never seen without he smoked eyeglass that concealed a labolic equint, spoke:

"I saw her, in a crimson golfing jacket and a white Tam Shanter, crossing the upper terrace. She carried an ipenstock and was followed by quite a pack of dogs incororated in the body of one extraordinary mongrel I have consionally observed about the stable yards. I gathered hat she was going for a climb on the cliffs. That was about alf an hour ago."

"Alaric, you have attended every family council I recolct since I became a member of this family, and have never efore opened your lips," said Lady Beaumaris, fixing the nfortunate Alaric with her eye, which was still black and appingly bright. "Make this occasion memorable by flering a suggestion. You really owe us one!"

Everybody present looked at Alaric, who smiled helpsely and dropped his eyeglass, revealing the physical eculiarity it concealed. The effect of the diabolic squint combination with his mild features and somewhat feelish opposition conveyed a general impression of reserve force. e spoke, fumbling for the missing article, which had unged rapturously into his bosom, with long, trim fingers crusted with mourning rings.

"The question at issue is, unless I have failed in my ental digest of the situation, how to bring Susanna, Vissuntess Lymston—pardon me if I indulge a little my eakness for prolixity——"

The door creaked and Alaric broke off.

"My dear man," said the dowager, "I never before heard ou utter a sentence of more than two words' length!"

"—— to bring Susanna, who is just seventeen and fiercely rginal in her expressed aversion to and avoidance of ordiary everyday man, into compliance with your paternal ishes"—Alaric bowed to Lord Beaumaris—"where the recurragement of a suitor is concerned."

"I have appealed to her filial feelings, which do not pear to exist," said Lord Beaumaris. "I have appealed her reason; I doubt gravely whether the girl possesses by. 'There is too much landed property, there are too any houses and too many heirlooms, and there is not ough ready money to keep things going, I said. Her ply was: 'Sell some of the land and some of the houses id all of the pictures, and then there will be enough to keep the rest.' 'My dear child, is it possible, I said, 'that your age and occupying the position you occupy you we not idea of what is meant by an entail?'

"Then I made her sit down here in this library, opposite e, and laid plainly before her why it is necessary for her, my daughter, to marry, and to marry wealth, position id title. Before I had ended she rose with a flaming face

and burst into a hysterical tirade that lasted ten minutes. I gathered that she was willing to marry Sir Prosper La Gai or the Knight of the Swan if either of those gentlemen proposed for her hand. Neither being available she intends, I gather, to write great poems or paint great pictures or go on the stage. . . Go on the stage! My blood curdled at the bare idea. It is still in that unpleasant condition." Lord Beaumaris shuddered violently and pressed his handles chief to his nose. "If you have any advice to give, Alaric," he said bluntly, "oblige us by giving it."

The drab-complexioned, light-haired Alaric responded:

"In my poor opinion—which may be crassly wrong—ton much stress has been laid on the necessity of Susanna's marrying." At this point the contrast between the smiable vacuity of Alaric's face and the Mephistophelean intelligence of his monocled eye was so extraordinary as to hold his listeners spellbound in their chairs. "I think we may take it that the principal feature of the child's character is—call it determination amounting to obstinacy—"

"Crass obstinacy!" burst from the earl.
"Pigheadedness!" interjected the downger.

"I think I remember hearing that in her nursery days
the sure way to make her take a dose of harmless necessary
medicine," pursued Alaric, his left eye fixed on the door,
"was to prepare the potion, pill or what not, sweeten and
then carefully conceal it from her. Were she my daughter,
which heaven for—which heaven has not granted—I
should make her take a husband in the same way."

"An utterance possibly inspired, but as obscure as the generality. I fear, my dear Alaric ——" Lord Beaumaris began. The dowager cut him short.

"Say, Gus, can't you let him finish? That's what I call real mean—to switch a man off just when he's beginning to grip the track."

"Mother, I bow to you," Lord Benamaris sald, purpling with indignation. "Pray continue, Alarie!"

"Hum along, Alaric," encouraged the dowager.

Alaric, his countenance as the countenance of a little
child, his right eye beaming with mildness and his left eye
like the eye of an intelligent fiend, went on:

"Susanna has never yet seen the Duke of Halcyon, her cousin and the husband for whom you destine her. When she does see him I think I may be pardoned for saying ——" "She'll raise Cain!" agreed Lady Beaumaris. "Girls

"She'll raise Cain!" agreed Lady Beaumaris. "Girls think such heaps of good looks; I was like that myself before I married your father, Gus."

"My dear mother, granted that Halcyon's gifts, both physical and mental, are not "- the earl coughed-" not of the kind best calculated to impress and win a romantic, willful girl, he is, to speak plainly ——"

"A bideous little troglodyte!" nodded the dowager over her interminable Shetland-wool knitting. "Odd, considering that his mother, when Lady Flora MacCodrum, was, with the sole exception of myself, the handsomest young woman presented in the spring of 1845."

"Mother," said Lord Beaumaris, "delightful as your reminiscences invariably are, Alaric is waiting to resume."

"I had merely intended to suggest," said Alaric, twirling his eyeglass by its black ribbon and turning his demure, drab-colored countenance and balefully glittering left eye on the earl and the dowager in turn, "that the Duke of Halcyon, like the rhubarb of Susanna's infancy, should be rendered tolerable, agreeable and even desirable to our dear girl's pulate by being forbidden and withheld. Ask him here in September for the partridge shooting—as I under-stand you think of doing—but let him appear not in his own character as a young English peer of Immense wealth and irreproachable reputation, but as one of those literary and artistic ineligibles who are encouraged by society to take every liberty with it short of marrying its cousins, sisters or daughters. Let him encourage his hair to grow, and wear a velvet coat, a flamboyant necktie and silk stockings with tweed knickerbockers. Let him pay attention to Susanna-as marked as he choose.

"And do you, for your part"—he fixed Lord Beaumaris with his gleaming left eye—"discourage those attentions and lose no opportunity of impressing on your daughter that she is to discourage them too. Given this tempting

age them too. Given this tempting opportunity of manifesting her independent spirit, you will find—or I know nothing of Susanna—that it will be, Pull baker, pull devil! And I know which will pull the hardest!"

Lord Beaumaris rose to his feet in superb indignation. He struck the attitude in which he had posed for his portrait by Millais, which bung at the upper end of the library, representing him in the act of delivering his maiden speech in Parliament, an address advocating the introduction of foot warmers into the upper bouse, and opened on Alaric.

"Your proposal—I do not besitate to say it—is audacious. You deliberately expect that I—I, Gustavus
Templebar Bloundle-Alabett Bloundle, ninth Earl of
Beaumaris and head of this ancient family—should stoop
to carry out a deception, and on my only child! That I
should take advantage of her willful youth, her undisciplined temper, to—"

"To bring about a match that will set every mother's mouth watering and secure your daughter's son a dukedom and a hundred and thirty thousand a year ——"

"That's so; and I guess you'll do it, Gus!" said Lady Beaumaris. "You're a representative English peer, it's true; but on my side you've Yankee blood in you, and the grandson of Elijah K. Van Powler isn't going to back out of a little bluff that's going to pay. No, sir!" The downger ran her knitting needles through her wool ball and rolled up her work briskly. "He'll do it, Alaric," she said.

"Mother!" exclaimed the earl in desperation. "You were my father's choice, and heaven forbid that I should fail in respect toward a lady he honored with his name; but when you suggest that, to bring about this most desirable union, I should wallow metaphorically in dirt ——"

"It's pay dirt, Gus," said the dowager; "a hundred and thirty thousand a year, my boy 1"

"Mother!" cried Lord Beaumaris. "If I brought myself to grovel in such infamy do you suppose for one moment that Haleyon—"

"That Halcyon would tumble to the plot? There are no flies on Halcyon," said the dowager; "and you bet he'll worry through—velvet coat, orange necktie, forehead curls and all!"

"Then do I understand," said Lord Beaumaris helplessly, "that I am to ask him to accept my hospitality in a character that is not his own and appear at my table in disguise? The idea is inexpressibly loathsome and I cannot imagine in what character he could possibly appear."

"As a painter of the fashionable fresco brand engaged, if you like, to decorate your new ballroom!" put in Alaric in his level, expressionless tones.

"But he can't paint!" said the dowager. "That's where we're going to buckle up and collapse. He can't paint worth a cent! That takes brains, and Halcyon isn't overstocked with 'em, I must allow.'

"Get a man who has the brain and the ability to do the

work," said the imperturbable Alaric.

"Deception on deception!" grouned Lord Beaumaris.

"I have the very fellow in my eye," pursued Alaric; "remarkably clever A. R. A. and a kinsman of your own. Perhaps you have forgotten him," he continued as Lord Beaumaris stiffened with polite inquiry and the dowager elevated her handsome and still jetty eyebrows into interrogative arches. "Perhaps-it's equally likely-you never heard of him; but at least you remember his mother, Janetta Bloundle?"

"She married a person professionally interested in the restoration of perpendicular Gothic churches," said Lord Beaumaris; "and, though I cunnot now recall his name. I remember hearing of his death and forwarding a brief

condolatory postcard to his widow."

"Who joined him - wherever he is-six menths ago."
"Dear me!" said Lord Beaumaris. "This is quite too regrettable. However, it is too late in the day to send another postcard addressed to the surviving members of the family."

There is only a son," said Alaric, "and he is the rising artist to whom I suggest that you offer a commission. He is strong in fresco and has just executed a series of wall cartoons for the new Naval and Military Idiot Asylum

which will carry his name down to the remotest posterity."

"Might I—ah!—ask his name?" said Lard Besumaris.

"Wopes," responded Alaric.

Lord Beaumaris shuddered, "And the Christian prefix?" He closed his eyes in readiness for the coming shock.

"Haleyon."

Lord Beaumaris opened his eyes and the downger uttered

a slight snort of astonishment.

"A relationship existing on the mother's side between young Wopse and the ducal house of Halcyon," said Alaric, twirling his eyeglass faster, "it is not surprising that the poor lady should have improved on the homespun Anglo-Saxonism of Wopse by the heat means in her power. At any rate the young fellow is well-looking and well-bred enough to carry both names in a creditable fashion.

"You've taken considerable time about making it," said Lady Beaumaria, "but I'm bound to say your suggestion ain't worth shucks! Given the real artistic and Bobemian article to nibble at, is a girl like Susanas likely to swallow the imitation article? I guess not!"

"I concur entirely with my mother, Alaric," said Lord Besumaris. "You propose, in the person of this young man, to introduce an element of danger into our limited September house party.

You could let this Mr. Wopse live in the garden chalet and commission the keeper's wife to attend to him," said the dowager; "but, even then, how are you to make sure

"That Susanna does not associate with him? There is

a simple method of divesting the young man of all attraction for a young creature of our dear girl's temperament," said Alaric; "but for several reasons I shrink from recommending its selection.

"Pray mention it," said Lord Beaumuris unessily. "Let's hear it!" said Lady Beaumaris.

"You have only," said Alaric with great distinctness, to call this young Jellow by his Christian name; to let him take Lady Beaumaris in to dinner; to put him up in your best room-the Indian chintz suite; and generally to faster the idea

"That he is the Duke of Haleyon!" cried the downger. "My stars! What a Palais Royal farce to be played under

this respectable old roof!"

You suggest a double-a doubly infamous and objectionable deception! Not a word more! hear it!" Lord fleaumare rapped decidedly on the table, rose in agitation and strode on creaking patent leathers to the door. "The question is closed forever," he said, turning on the threshold. "Let no one refer to it again in my ——"

The door, which had occasionally creaked throughout this discussion, smartly opened from without and, acting on the earl's offended person as a battering-ram, raused him to run forward, tripping over the edge of the worn but

still splendid Turkey carpet.

Lord Beaumaris saved himself by clinging to the high back of an accentral chair, on the seat of which he subsided as the tall young figure of his daughter appeared on the threshold, her Tam o' Shanter cap, her long yellow locks and her red golfing Jacket shiring with moisture, her fresh

cheeks red with the cold above of the March winds.

"It began to snow like Happy Jack," said Susanna, pulling off her rough heaver guntlet gloves; "so I came home.

Well, have you all done plotting? You look like compiraturn-all-with the exception of Alaric,"

This was true, for though the earl, his mother, and three other members of the family council whom we have not found it necessary to describe, wore an air of somewhat guilty perturbation, the drab-colored, mild countenance of Alaric, its diabolical left eye now blandly shuttered with its tinted eyeglass, alone appeared guiltless and unmoved.

We've been discussing the September house party," exclaimed this Catesby as Susanna sat on the elbow of his chair and affectionately rumpled his sparse, light-colored

locks.

"And husbands for me!" said Susanna, half throttling Alaric with her strong young arm.
"Susanna!" cried her father. "I am surprised! I say

no more than that I am surprised!"

"And I say," retorted Susanna, in clear, defant, ringing accents, as she swayed herself to and fro on her narrow perch, "that it is beastly to be expected to marry just because money has got to be brought into the family. Of course I shall marry one day—I don't want to study law or be a hospital nurse like that idiotic Laura Penglebury. but I don't want to be a married woman until I'm tired of being a girl. I want to have lots of fun and do lots at things, and see lots of people, and make my mind up for my own self. And

Lord Beaumaris, who had long been fermenting frother

"When you form an alliance, my child, you will form i with my sanction and my approval; and the husband you honor with your hand will be a person selected and approve of by me. By me! I will choose for you-

And suppose I choose for myself afterward!" ris Susanna, blue fire flashing from her defiant eyes.

"Every woman is at heart—ahem!" muttered Alarie) Lord Beaumaris strove with incipient apoplexy.

Susanna continued with a whimper in her voice: The young men you and grandmother point out to n as nice and eligible, and all that, are simply awful! The have no chins, or too much; and no teeth, or too man and they don't talk at all, or they gabble all the time abou nothing. They never read; they don't care for art poetry-they aren't interested in anything but bridge at raring; and if you told them that Beethoven compohe Heneysuckle and the Bee, or that Chopin wrote Wis I Marry Amelia, they'd believe you. They like marri women better than girls, and people who dance at theats better than the married women

Petalahala!"

%-b-b-h! A customer can come in any minute! and me of old man Klopsky-he used to make in Line stand behind the door and make a noise ile a mary when a customer came in for a good and Thank Aimmel, for boiled tongue we don't sol to rentril'quist in the family !"

16, mamma, am I hurting anybody? Miss monys if I sing low like that in my throat it

me the muscles easy."

Alvaya Miss Anson! For seventy-five cents a had know out of what I save I give you one lesson vivusk. And for what? Before you had lessous whold sing a tune; now you sing like I play the sp and down with one finger."

As, mamma, ain't I told you often enough when t sudy right you got to sing scales? Don't you is Freidini, the greatest soprane in the world. an on over in the De-Luxe Hotel every mornf Didn't I have to pay a dollar to stand up at courday matinée and hear her sing Marguerite! de got to sing scales, ain't 1?"

The a should know that for what you can hear tothing from her room over in the hotel you. I soldlar yet. Nothing but spend money that has on her mind!"

"Is hear her sing I would pay all I --- "

That!" Nothin! !!

In Hoffheimer drew the upper half of herself but the pungent black mouth of a barrel and ped her wet hands again.

Pass should order from Heyman a barrel of sors too. Such pickles as we get from that w never had before! Where papa stays so and's fire sale on canned goods."

Paja ain't so fast to buy; you know how he an and dickers."

Not so fast to buy as you to spend! All I say si to should know that seventy-five-cents singissum you have to have yet, and the other Laber Heyman asked you to sing, you couldn't. the your teacher don't want no more tunes!"

is red I was I could have busted! My good to I spend for no more tunes; and me and for ien years don't feel like we could spend the money

see fifty-six for a trip to the country." Av. mamma, ain't I begged you to spend it, and -But we don't want the country don't make it no dif-

it; but Heyman asks her to sing, and -

day, mamma, when I sing like Feruldini for a thoudillars each time, you'll be sorry --- "

Here's the telephone, Ray. If it's Yetta O'Byrne tell the tate with the deliveries today; but I'll send over introurst and Shamrock herrings just so soon as he back. For a mixup marriage like hers I wouldn't want nile marketing."

nds trickled in and out; this spring sunshine, wan as Malid lady's smile and as timid, ventured into the show irightened the platters of tender pink ham, and when dishes of yellow potato salad, crowned with Belof trembling calves'-foot jelly. With each customer routle larushes of spring air, carrying hints of rising sap whills of far-off meadowland, cracked with the pushing life beneath. Up and down Sixth Avenue, second and third and fourth story windows were flung to their height, with winter-grimed face curtains blowing languidly inward, and blankets and blue-and-white striped pillows and quilts of a thousand colors draped across the sills.

"Mamma, today we can leave the door open. Where's that carpet-covered brick from last spring?"

"There, under the counter."

"Gee! Just smell the air, mamma! How happy and full of sunshine it makes you feel inside! Like your heart was blooming inside of you, like them crocuses over in Schmid's window! Ain't it dandy and warm! Look at the kids spinning their tops already! Look at Selma Levis hanging

"Pickled onions went good this time last March. Papa should order some from Heyman; we-

"Sh-h-b-h! Listen, mammu! Listen! Feruldini's singing-singing the Spring Song that I was just feeling inside of me. Listen! Oh, mamma, listen!"

"Listen, Mammat She's Singing it Over -the Spring Jung - Listen!"

"Grand! And for nothing we can hear what they pay five dollars a seat for in the opera house!"

Always she limbers up for real opera practice with the

Spring Song, Miss Anson says."

"Hand me them knifes, Ray. Ain't papa told you often enough to leave them laying next to the hams? Always keep the knifes next to the tongues and hams; it saves time. For six years, since you was old enough to help down in the store, we been telling you that!"

"Sh-h-h! Mamma, sh-h-h-h!"

"Don't sh-h-h-h me neither! In my own store I talk when I want. I'll be glad when the opera business is over! Seventy-five cents a lesson is what listening to her put in your head. Himmel! How high she goes! But if I say so myself, Ray, your voice is just so good. Ach, listen how high and soft she goes, till it gets far off like a train whistle!"

"Oh! If I-if I could sing like that! If I could!" Like the rapid rise of the most joyous lark that sings; like the thrill of breezes sweeping an Eolian harp: like the

first gurgling of ice-bound streams to the kiss of spring-so mounted the voice, rippling as silk in a breeze, firm as a rock in a gale.

"At my last lesson Miss Anson said my voice -"There's papa now! And look, will you? From the

other way comes Heyman!"

"Sure enough!" "What for are you blushing, Ray! You had girl, you! For papa I know you don't blush! Tell mamma
"Aw, mamma!"

Fix your hair! Pull it down over your ears, curlylike. Papa says it always pays to look prosperous in the store. What you hiding for? Don't go back there! Heyman won't est you!"

"Aw, mamma!"

"If you got to be ate I wish it was a young man like Sol Heyman should do it. Stay out here in front and make yourself sociable—that singing will keep. Ask him what he's got in pickled spring onions."

"In a minute, mamma. Can't I go back and hear how she takes them arpeggios? Miss Anson

said

"Ach, what a stick she is! Hello, papa! We thought you was canning the goods yourself you was gone so long? Wie gehls, Heyman; wir gehls? Make yourself to home on that kraut barrel

"How-do-do, Mrs. Hoffheimer? The old man's

got spring fever, I guess-not?"

Mr. Heyman showed all his teeth, rubbed his firm hands together, and glanced expectantly about him.

"You're right, Heyman! Well, papa, was them tornatoes what they said they was? I forgot to tell you not to buy cans with the labels burnt off. Last year, when Sopinsky's burnt out we took a chance and they all turned out to be navy beans, when just so good they could have been asparagus.

Well, mamma, wait! Don't get excited!" Mr. Hoffbeimer slid out of his shiny lined coat into a shiny unlined one and straked his thin chin whiskers with fingers that were goarled at the knuckles; his burnt-out eyes were screwed small with the squint of satisfaction; "I bought such bargains, mamma, you won't believe!-- two hundred cans of mixed scope, mamma, from chicken-gumba to oxtail, so cheap we can afford to have a fire sale ourmives -

"Papa !"

"Why not? They all do it! Cheaper as you can sell 'em in a hundred years, Heyman.'

"Ack, Mr. Haffheimer, such goods my firm won't

even carry!"

"What I say I mean! You don't do no business with me today, you scalawag! On that pickled goods order I gave you last week I paid like a drug store. Them same pickled peppers I paid you three cents for I seen down there for two, so help me, mamma, if I didn't!"

Mr. Heyman swung binself atop a barrel and sushed his derby but back off his warm brow. Then he Hashed his teeth again—firm, milk-white teeth toward Mrs. Hoffheimer, recumbent over the sausage case, and stroked his shaved-to-the-blood jowi.

"Listen to him, Mrs. Hoffheimer! He compares tay goods with a shyster house down on Delancey Street - a house that would carry second quality if they could get first just as cheap! He compares my aspar-

ages with the slatepencils he gets down there!" For your fat asparagus I pay fat prices; I -

I ask you, Mrs. Hoffheimer, me and your husband don't do business together so well as you and me and Miss luse -so excited he gets! But I ask you, Mrs. Hoffhelmer, right here before him, have you ever had a complaint on a of my goods or a keg of kraut you got off my firm? Has a pickled herring ever come back on you from a customer? I ask you!"

Mrs. Hoffheimer planted her hands on her wide, uncorseted hips in the termagant pose of a Hecate; but her smile, snug-toothed and slightly sunk, deepened into the wrinkled chirography of kindliness,

"For what lancy prices we pay, Heyman, papa thinks we should get good goods, nin't it, papa! My husband talks a lot, Heyman; but he don't mean lots what he says,

ain't it, papa: "Pish!"

Mr. Hoffheimer slid on a pair of veteran spectacles, which straddled his nose halfway down, and waggled his epatulate finger.

"Look right here in this showcase once at them fancypriced imported backwarst you sold us! Did I want 'em? No! But between you and mamma and Rachel I bought 'em-and look how we got stack on 'em!"

"Aw, Mr. Hoffheimer, give 'em a chance and you'll sell 'em! That's as fine a link sausage as there's on the market, I -

"Didn't I tell you we ain't got the fancy trade with the fancy teeth for such stuff? Nineteen cents a pound, and

most of it gold paper, for stuff we can't sell for nine! Not even on my own table can we get rid of it."

Mr. Hoffheimer threw out his hands palm upward. wagged his bald head from side to side, and strangled over his denouncements.

"Next time what you and Ray and mamma got to say makes no never mind with me—you scalawag, you !- with your holdup priess! Just like you play pinocle you sell goods, you scalawag, you!"

Mr. Heyman swung his head backward, laughed, whacked delightedly at his leg, and reached for his hip pocket and order book.

"Listen to him, Mrs. Hoffbeimer! That a man with such a good nature should growl like a bear!"

"Always he was like that, Heyman!"

"Already I got him down for a keg of pickled spring tripe and a barrel of large dills. I ain't foolin', Hoffheimer; for spring goods you can't beat 'em."

"How much a hundred?"

"Aw, what's the difference, Mr. Hoffheimer? You know I do the right thing by you. That's right, Mrs. Hoffheimer; open the door wider and let in the springtime. Smell a little of that sunshine and see if you ain't got to begin thinking of spring stock-eh, Mrs. Hoffheimer?

"You're right!"

"Such pickled tomators as we're delivering this week you never tasted! Twice already Shapiro across the street renewed his order - here, look in my book! I can show it to you. Smell that sunshine! Look at them kids spinning tops right at your door! Soon they'll be comin' in for penny sweet pickles on a statepencil, and you won't have 'em-

"Ach, such a boy! But he's right, papa. Ray said this morning it was time -

"Miss Ray-where-where is Miss Ray this morning?

I where

"Ray! Rachel! Somebody out here wants you. She knows better as her papa and me what's in stock. Back there she stands listening to the singing—like she couldn't sing just as good herself! Rach-el! Come out here! What was it you was telling me about green onions this morning?" "Comin', mamma!"

Mr. Hoffheimer slouched toward the stock shelyes, his feet scraping painfully along the floor, as though rheumatic muscles would not lift them, and his back curved to that same rheumatic hunch.

"Two dozen them spex brand string-beans we need, Heyman, but not a cent over a dollar-ten I pay for them!"

"A dollar-twenty-five, Mr. Hoffheimer, and then you got the cheapest string-bean in the state of New York." 'A dollar-ten! So help me, not a cent over!'

"All right, then, for you I do it; but I pay the difference out of my own pocket. My firm should know I make you such prices! They should know it!"

"I should worry! Three dozen Melbs freestone peaches, small cars, but not a cent, so help me, over a dollar-ninety. Lust time you skinned me enough off 'em. Down by Conrad's that same peach I seen for

"Aw now, Mr. Hoffbeimer, you're a business man and so am 1; and if you can show me a freestone like the Melba for the money, then I give you -

"Ach. you two with your arguments! Wait, I call Hay. Where that girl stays I don't know! Rach-el!

Mrs. Hoffheimer bustled rearward into the dull shadows of kegs and stacked boxes. In the frame of the open window her daughter leaned out to the soft blush of spring, her hands clasped until the nails sprang white, and her eyes raised like a worshiping virgin to the third-floor suite of the De-Luxe Hotel.

"Listen, mamma! She's singing it over-the Spring Song listen! The paper says it's her favorite encore. Listen, mamma!"

"Ray! Ain't you got no manners? You - such a mortification! Twice out there he asked for you, till I don't know what to say no more."

Tell blen I -

"I wish I had never heard the name singing-it's been our ruination! A lesson a week, and two she wanted at first one not enough! Where such a child gets such ideas!"

Sh-h-h, mamma!"

"Go out front, I say once more, Ray, I sek you again, How that child minds! Twice he asked for you. Fix your hair over your ears. Ack, that a girl should worry her mother like that!"

"I'm going, shi't I! Honest, mamma, you less and land!" Miss Hoffheimer emerged from the glowny run like a charming Saskin walking out of the brown alc of a Rembrandt: the pools of hereyes were deeple a shining and her black hair curied to her mock illos sentirils overgrountes. a bit of murble column.

"Hello, papel Hollo, Baynart"
"Ab, Min Ray, has are your

"Fine and duals Here's near or a each a plantic when he would crackets he take on?"

"Net a week about the net a Heyrman, Secreta Stationary

Such a burn show you don't need to bear about, mamma!" Mr. Hayman slid off the barrel; and as the sun opens the furs of a palm tree so his geniality expanded in the warmth of her presence. Red ran high in his face, and his collar seemed suddenly to tighten, as though bent on strangulation. He writhed and stretched his chin above it.

"Miss Ray! Honest, the minute she sets eyes on me she begins to kid me along! Honest, Mrs. Huffhelmer, for how she treats me I ought to charge you three dollars a dozen for Melbas. I ask you, could I belp it the show was no good? I sak you, too, Mr. Hoffbeimer.'

"She's a good one, not, Heyman! How much you think take for her? Not ten thousand dollars if you pay me cash! Ain't it, mamma?"

"Ack, Hoffbelmer, how you talk! A little haby he thinks she is yet, Heyman. Better fathers as papa even give up their daughters when Mr. Right comes along-ain't it, Heyman?

"I should say so!"

Like Spinoza, who was cut off from his people because he could see nothing but God everywhere, Mr. Hoffbeimer retreated within himself.

"Ach," he said, "wimmin, the whole lot of 'em, make me sick!"

Mr. Heyman inclined toward Hay, with eyes that leaped and danced as forest fires leap and dance in the wind. "I-I dare you to go to another show with me tonight,

Miss Ray! I show you I can pick a good one. "On Saturday nights I stay in the store and help, Heyman; and then I go upstairs and practice."

"Don't you believe it, Heyman! Me and papa get along better in the store without her. Overweight she gives like it cost nothin'. Saturday night business ain't so big

"See: Miss Ray, what your mother says?"

"You go, Ray, I say again. At night you shouldn't practice neither. Becky Kopf, next door in the apartments, says she can hear you like day when the windows are open. Do you want that you should get the neighbors down on you and get Beelry's tongue going by waking up her buby! You go, Ray. Barky Kopf I'd rather have for a friend thun an en-

"That's right! Next dies from you all the Kopls live, don't they? Last week Mos Koof took me home with him to support. Nice little place they got there, and such a kid! Home the cutest little slayer, with big ears like his pop!"

"Cube ain't you mame fac him! And crazy for our Ray! and when he first see he come in the room he begins

New Mile that they got there too, Mrs. Haffbeimer, May remodeled that while building is wenderful; at least or the downstains that a new front,"

The then now flats the good. There's an empty one Le Coul floor, right over Becky's -so throp too!

Twenty-two dollars! I said to paps if we didn't dread a to move we'd take it ourselves; but it ain't so handy a right over the store for papa-him, with his rheumatisn having to run in and out in winter.

"Twenty-two dollars! I should say cheap! If I coul find some girl that would have me I'd take it myself."

"Ach, Heyman, a grand young man like you don't nee to worry. You can have your pick from the best. For young married couple it would be grand-steam heat an a washtub built right in the kitchen. Ray, you and Hey man stay here and watch store for a minute; I want pag should go down cellar with me and see what we need pickled goods."

"I go for you, mamma."

"So you should get your hands all mixed with he rings and smoked tongues! That don't go with no seven five-cents singing lessons. Your papa should know i Come, papa, down cellar when you're finished with the

The sudden silence of restraint fell over the little she Without, the noon high tide of Sixth Avenue surged po like a spring torrent-men, with overcoats flung backwa and dropping from their shoulders, mopped at their h bands; the brilliant plumage and foliage of new million truest harbingers of spring, flashed like whole flocks flamingoes past the window. A school child begged a cro from the florist across the street and pinned it on I dirty apron; a draydriver yawned, shed his coat and on it, and a traffic policeman swore at him and smil-Park benches, the tops of omnibuses and perambulat bloomed in un hour.

Mr. Heyman drew his initials on the sawdust-sprink floor with the toe of his shoe.

"Hot, ain't it?"

"Yeh; it is, Heyman."

Silence.

"Heyman, did mamma ordersome of them pickled spt oniona?

"Yeh."

Silence.

"Look, Heyman, at them kids, will you? Ain't wonder more of 'em ain't run over apinning tops in

"Yeh."

"Gee, this sweater's hot!"

"Don't-don't take it off, Miss Ray. It-it looks gr

"I should die of heat so I can look grand!" She dra it back off her shoulders and regarded him from the vor

of sparkling eyes. "Mad cat! "Aw, Miss Ray, quit your teasin' me! After the ou treated me last night I didn't sleep a wink ho

Miss Ray, not a wink!" "Like I did anything to you!"

"If you'd only let me talk and listened to me in

"I-I ain't a good listener."

He advanced toward her and his order book (el) h floor face downward on its crumpled pages. She is defensively against the stock shelves, like Barbara ho her tower.

You mustn't!"

"Miss Ray - Ray!"

"Not here not here! This ain't the place!" "Ray, I can't keep it in how much I love you! I von't let me tell you I'll tell you anyhow-1 love

Right here I say it in your face-I love you, and know it!" "I-I never said I didn't, Heyman; but I-I ain't)

ing of getting married, Heyman. My teacher said. my voice, it would be a madness for me. If I tree voice right and study right, she says—she says to nothing I can't do with it. I want to learn to sing, He how much I can't begin to tell you!"

"Ray, with me you can sing too, why not? You have it emy enough. Ain't I got a good position, Don't my firm raise me every two years? Don't l "All night, Heyman, I lay in bed awake, and I

myself, I mustn't! I mustn't! I mustn't! All night I "Ray, when you look at me like that I

"Sh-h-h-h1"

"I'm in love with you, little canary bird! I just think of nothing else."

"I-I mustn't!"

"Is it like me to forget things like putting an orde in my book, Ray? Yesterday twice I did it for thin you. My firm should know it! I just can't think of

"I mustn't listen to you, Heyman. There comes ma Sh-h-h! Don't forget, Heyman, the small-size onions, the kind we-

"Rachel, I can see it in your eyes you don't -don me. I ach, Mrs. Hoffheimer, come here; I ain't for you."

"Heyman! Don't! Don't-not now-not-no "Mrs. Hoffheimer, I ain't ashamed for you. I'm Mrs. Hoffhelmer. I know I ain't got the right to girl, but I'm in love with your Ray; and -and what's the use trying to say it all? I guess you ain't self me wither, buh? Who am I that such a girl like by sheld want me? Who am I?"

Yr. Heyman leaned against the barrel, his words bitter is tray on his lips. Tiny globules of perspiration sprang at it his brow like a bandeau of beads.

Its Hofbeimer crossed her hands at her waistline and sparted the young couple with a smile rayed over her face to the despring crosses, and her head nodding from left to right fike a toy in a confectioner's window.

'So this is what happens when me and papa ain't lean' he comes and steals our haby! Ach, you had lea, you!"

Manma, 1 ---

Rach-el! Ach, my little haby that's grown up!"

"Mamma, please ---

"|-|'m so happy I don't know what to say to you, thing. Such happiness she brings to us! Kiss me, chire, both of you!"

His Hofbeimer crept into her mother's embrace, with ne is brilliant as barbaric jewels, and her tremulous bicano dayed her speech.

'Imstn't, mamma. It's like I told Heyman—all night |set sping to myself I mustn't!"

To myself I said last night, something that child has prop her sleeve when she comes home so excited-like. Ah my baby, them six new blue-and-white dish towels hild to your troussesso."

"!get a voice for opera, mamma. Miss Anson and everyhily that's heard it says the same thing. I feel it inside a mamma. In the middle of the night I wake up, and it's de conching soprano, here inside my throat, is beggin' to sig, beggin' to sing as high as the sky, as high as leadin! And now Heyman comes; and I can't help it that that I—I like him; but I mustn't, I mustn't!"

A rish of tears flowed over her words; but to Mr. ligran was suddenly flashed the message of hope, just as a ress of the return of Agamemnon was flashed to leps. The stock shelves, the buttallions of ketchup bottles, printeled cars and jars of transparent jellies, and Mrs. lidbeiner's wet and happy face, wavered at him for a parent. And out of the chase his courage came testering brand; and he crossed over to the sour-pickle harvel, so be ascenisting little figure from her mother's arms, to be bend backward and kissed her solemnly and montially. Soles trembled up through her, and the ready so would flow.

"Amesta't!"

"My little canary!"

With my voice and all, Heyman, it ain't right I—I
kull love you so!"

"Coldren! Children! Such a happiness! Kiss me

My new manorea !"

"Faul Papa, come out here: them pickles don't need at hime today. We got excitement in the family for at Come out. I take

le catemer. Stay here,
Mire, and tell papa —in
mistel come back."
N. Hoffheimer hobbled

rvid, patting his moist infranciagainst the other. Reyman, for seventyments a hundred I order is landred dills and two minispects; but, so help kill pay one cent more

"Figs. wait; Heyman's sumsthing to tell you—

Mr. Holfheimer.
I we want to "
Inmediate caution skel into Mr. Hoffheimlike; he wagged a bent day brefnger.

"No.youdon't! No.you it! Last week the two put together got me to it an order of imported favors that I can't get sevenou my own table. I you two urrage, you! We min't that no Sixth Avenue in mee's."

'No.you don't! I know

Want to get married, Rotheimer—married!" "Married, papa, is what Heyman said. Don't you understand we want to be engaged—engaged to be married?"

Her voice rose above the orchestral murmur of the streets, plangent as surging waves beating against his slow comprehension; his toil-stooped shoulders slumped and his slightly publied hand fumbled at one coat lapel.

"Not --

"Yes, papa, yes!"

"Not our little Rachel-sha! She ain't nothing but a baby yet! Run along, Heyman, you scalawag, you, and tend to business. For children's nonsense I got no time. For three hundred dills, Heyman, I pay you not a cent over——"

"You don't understand, papa. Listen once to Heyman!"

"Me and Ray ain't fooling, Mr. Hoffheimer. I know I ain't good enough for her; but I love her, Mr. Hoffheimer; and you know, with my position and a raise every two years, I can take care of her right. Ruchel ain't no baby any more, Mr. Hoffheimer, she's twenty; and when a girl's twenty—"

"Twenty! Arh, only yesterday she didn't come up to the top of the knut harrel. Right upstairs over this store is her little haby chair, and now—now you come and take her away from me and mamma. Now——"

"Not take her away, Mr. Hoffheimer, only --- "

"Singin', I thought, was all she cared about. A fewen a week I have to give her; singin' seventy-five cents a week — but on the siy, so her mother wouldn't know it. She should know that I humor her on such nonsense! So henpecked I am as that, Heyman, on the sly I have to do things. And you, when you see such, you want to get married too!"

"Yes, Mr. Hoffheimer, I want to get pecked tou-ain't

"Silly!"

"Always she's been her papa's girl, Heyman; and now you come and want to steal her! To anybody but a good honest boy like you. I ——"

"I know it, Mr. Hoffheimer-papa! I sin't half good enough for her-eh, little canary?"

"Too good, Heyman!"

She was like a tearuse swaying in conflicting breezesher one band in the caress of her lover's, her other seeking the gnarled palm of her father's.

"Ach, pape - Heyman, if I did the right thing I'd ----"
On the tidal wave of excitoment Mrs. Hoffheimer
returned, her thin salt-and-pepper coil of hair lopping
over one ear.

"Ack, such excitement! Feel, Ray, my heart beating on the outside. Have they told you, papa? Grand, ain't it?"

"When he's our son-in-law, mamma, he'll overcharge just like when he ain't."

Laughter,

"Tonight we close the store and upstairs we have a party," said Mrs. Hoffheimer. "That ain't necessary, neither, mamma. Every day children like ours get engaged."

"Imported bockwarst and beer we have—I ask over the Kopfs and Birdie Levis."

"My son-in-law sells me imported bockwurst when, even on my own table ——"

"Heyman, if you're smart you'll get that flat over Becky Kopf's. Don't let the landlord bluff you—twenty dollars he'll take for it too."

"Yes, mamma."

"Ark, even a hour ago when I talked little did I think our Ray would be the one to have it! Such a march she steals on her parents—not, papa?"

"Such a march!"

"Let me tell you he got from us the best order we ever gave any one that ever came in this store—not, papa?"

"You got our baby from us, you scalawag, you, and me and mamma getting old and ——"

"Ack, he talks like a funeral, ain't it? If we're going to have a funeral I want that we should have a son-in-law to come to it. Next month you get married, and then Aunt Hanna should come and keep store while papa and I take that vacation in the country we've been talking about for ten years on poor Grandma Hoffbeimer's money."

"Yes, maroma; you should go now. Since I was a child

I been hearin' it."

"Yes; that fifty dollars we got stuck between page fiftysix in poor grandma's Bible we should spend now—not, children? Papa, we go in the country for a vacation when the children get settled,"

"For my rheumatism I go, but for my pleasure—no! Where does it come in, vacation I got to have!"

"And new, children, you should go out for a while together—not, pape? The day they get engaged they should take a vacation? Such a day like this, warm like summer, they should both go."

"For my part, yes; but Heyman should first telephone that order for them onises—three calls already we had for them today. From a son-in-law 1 get better prices, eh, you scalawag, you? Family prices, ch?"

"I-I ought to stay home and practice a while this afternoon, Heyman. Miss Anson says —"

"The day she gets engaged she wants to sing yet! Golf sei Dank, you'll soon be safe matried and with such nonsence out of your head!"

"Mamma, 1 -- "

"Go take that customer, papa. I'll take old lady Sonnsizin, just coming in; she wants to fuse with me again that her weight ain't right. She should start something with me!"

Left alone, Mr. Heyman and Miss Hoffheimer smiled at each other with the mysterious eyes of lovers, and he lifted her hand gently and placed his own over it.

"Come, little canary, let's me and you get on a car and ride out where there's country, huh? Let's get where the

green smell in the air comes from, my little Rachel-sha!" "Yes, Heyman."

"My little canary!"
She slid out of her sweater coat and into her hat and jacket; the little curly tendrils caught in her collar and he must fish them out tenderly.

"There, petsie! Petsie!"
"Thanks, Heyman, thanks."

"Such curls, soft like a baby's!"

"Tra-la-la-la!"

"What did you say, petsle?"

"Nothin"."

"'Nothin', she says, and I seen her pretty lips move! Hashful like a baby she is."

"1-I was only singing, Reyman."

"Singing?"
"Yes, to myself."

"Singing what, my little canary?"

"Singing-the Spring

The tyranny of home is as insidious as the fatal hand of marsh fever. It steads out of the lush of dreaming nights and punctures the veins with a hypodermic injection of lassitude. It is as gentle as the threnody of rain falling on flood-stricken roofs; It is as mysterious as a long, low jaguar stretched

Complaining of the Growing Promisions
of Lives in the Public Theymaphians

Lindubitably a she-town. That untranslatable, unmisindubitably a she-town. That untranslatable, unmistakable something which is not to be defined in the plain terms of speech, yet which sets its mark on any long-settled community, has branded them both—the one as being masculine, the other as being feminine. For Paris the lily stands, the conventionalized, feminized lily; London is a lion—a shag-headed, heavy-pawed British lion.

One thinks of Paris as a woman, rather pretty, somewhat regardless of morals and decidedly slovenly of person; craving admiration, but too indolent to earn it by keeping herself presentable; covering up the dirt on a piquant face with rice pewder; wearing pasts jewels in her earlobes in an effort to distract criticism from the fact that the ears themselves stand in need of soap and water.

London, viewed in retrospect, seems a great, clumsy, slow-moving giant, with hair on his chest and soil under his nails; competent in the larger affairs and careless about the smaller ones; amply satisfied with himself and disclainful of the opinions of outsiders; having all of a man's vices and a good share of his virtues; loving sport for sport's sake and power for its own sake and despising art for art's sake.

You do not have to spend a week or a month or a year in either Paris or London to note these things. The distinction is wide enough and plain enough to be seen in a dayyes, or in an hour. It shows in all the outward aspects. An overtowering majority of the smart shops in Paris cater to women; a large majority of the smart shops in London cater to men. It shows in their voices—for cities have voices just as individuals have voices.

The Grinding Bass of London

NEW YORK is not yet old enough to have found its own sex. It belongs still to the neuter gender. New York is not even a noun—it's a verb transitive; but its voice is a female voice, just as Paris' voice is. New York, like Paris, is full of strident, skrieking sounds, shrill outeries, hysterical babblings—a women's bridge-whist club at the hour of casting up the score; but London now is different.

London at all hours speaks with a sustained, sullen, steady, grinding tone, never entirely sinking into quietude, never rising to acute discords. The sound of London rolls on like a river—a river that ebbs sometimes, but rarely floods above its normal banks; it impresses one as the necessary breathing of a grunting and burdened monster who has a mighty job on his hands and is taking his own good time about doing it.

In London, mind you, the newsboys do not shout their extras. They bear in their hands placards with black-typed announcements of the big news story of the day; and even these headings seem designed to soothe rather than to excite—saying, for example, such things as Special From Liner, in referring to a disaster at sea, and Meeting in Ulster, when meaning that the northern part of Ireland has gone on record as favoring civil war before home rule.

The street venders do not bray on noisy trumpets or ring with bells or atter loud criss to advertise their wares. The policeman does not shout his orders out: he holds aloft the stripe-sleeved arm of authority and all London obeys. I think the reason why the Londoners turned so viciously on the suffragettes was not because of the things the suffragettes clamored for, but because they clamored for them so loudly. They jurned the public peace that must have been it.

T.

I can understand why an adult American might go to Paris and stay in Paris and be satisfied with Paris, if he were a lover of art and millinery in all their branches; or why he might go to Berlin if he were studying music and municipal control; or to Amsterdam if he cared for cleanliness and new cheese; or to Vienna if he were concerned with surgery, light opera, and the effect on the human lungs of doing without fresh air for long periods of time; or to Rome if he were an antiquarian and

interested in ancient life; or to Naples if he were an entomologist and interested in insect life; or to Venice if he liked ruins with water round them; or to Padua if he liked ruins with no water anywhere near them—no: I'm blessed if I can think of a single good reason why a same man should go to Padua if he could go anywhere else!

But I think I know, good and well, why a man might spend his whole vacation in London and enjoy every minute of it. For this old fogy, old foggy town of London is a man-sized town, and a man-made, man-run town; and it has a fascination of its own that is as much a part of it as London's grime is; or London's vastness and London's pettiness; or London's wealth and its stark poverty; or its strocious suburbs; or its dirty, trade-fretted river; or its dismal back streets; or its still more dismal slums—or anything that is London's.

To a man halling from a land where everything is so new that quite a good deal of it has not even happened yet, it is a joyful thing to turn off a main-traveled road into one of the crocked byways in which the older parts of London abound, and suddenly to evens, full face, on a house or a court or a pump which figured in epochal history or epochal literature of the English-speaking race.

It is a still greater joy to find it—house or court or pump or what not—looking now pretty much as it must have looked when good Queen Bess, or little Dick Whittington,

or Chaucer the scribe, or Shakspere the player, came this way. It is fine to be riding through the country and pass a peaceful green meadow and inquire its name of your driver and be told, most offhundedly, that it is a place called Runnymede. Each time this happened to me I felt the thrill of a discoverer; as though I had been the first traveler to find these spots.

I remember once that through an open door I was marveling at the do-

mestic economies of an English burber shop. I use the word economies in this connection advisedly: for, compared with the average highantiseptic burber shop of an American city, this shop seemed a torture cave. In London, pubs are like that, and some dentists' establishments and law offices-musty. fusty dees very unlike their Yankee counterparts. In this particular shop now the chairs were hard, wooden chairs; the looking-glass-you could not rightly call it

a mirror—was cracked and bleary; and an apprentice howent from one patron to another, lathering each face and then the master followed after him, razor in hand, and shaved the waiting countenances in turn. Flies that looked as though they properly belonged in a livery stable are buzzing about; and there was a prevalent odor which made me think that all the sick pomade in the world had come hither to spend its last declining hours.

I said to myself that this place would bear further study—that some day, when I felt particularly hardy and daring, I would come here and be shaved, and afterward would write a piece about it and sell it for money. So, the better to fix its location in my mind, I glanced up at the street sign and, behold! I was hard by Drury Lare, where Sweet Nelly once on a time held her court.

Another time I stopped in front of a fruiterer's, my eye having been caught by the presence in his window of half a dozen weary-looking, wilted roasting ears decorated with a placard reading as follows:

AMERICAN MAIZE OR INDIAN CORN A VEGETABLE—TO BE BOILED AND THEN EATEN

I was remarking to myself that these Britishers were surely a strange race of beings—that if England produced so delectable a thing as green corn we in America would import it by the shipload and serve it on every take-whereas here it was so rare that they needs must lakel it as belonging to the vegetable kingdom, lest people should think it might be an animal—when I chanced to look more closely at the building occupied by the fruiterer and now that it was an ancient house, half-timbered above the first floor, with a queer low-browed roof.

In the Abbey and St. Paul's

Inquiring afterward I learned that this house dated straight back to Elizabethan days and still on beyond for so many years that no man knew exactly how many; and I began to understand in a dim sort of way how and why it was these people held so fast to the things they had and cared so little for the things they had not.

Better than by all the reading you have ever done ye absorb a sense and realization of the splender of Englands past when you go to Westminster Abbey and stant-figuratively—with one foot on Jonson and another of Dryden; and if, overcome by the presence of so much dead-and-gone greatness, you fall in a fit you commit a trespass on the last resting-place of Macaulay or Clave, or somebody of equal consequence. More imposing even than Westminster is St. Paul's. I am not thinking so most of the memorials or the tombs or the statues there, but of the tattered battleflags bearing the names of battles fought by the English in every crack and cranny of the world from Quebec to Ladysmith, and from Lucknow to Kharum.

Instead of Being Inside the Ring, the Referee, Dressed in Evening Clothes, Was Outside the Ropes

Beholding them there, draped above the tombs, some aded but still intact, some mere clotted wisps of ragged ilk dinging to blackened standards, gives one an uplifting ocception of the spirit that has sent the British soldier orth to girth the globe, never faltering, never slackening are, never giving back a step today but that he took two teps forward tomorrow; never stopping—except for ten!

The fool hath said in his heart that he would go to logiand and come away and write something about his repressions, but never write a single, solitary word about be Englishman's tea-drinking habit, or the Englishman's ricket-playing habit, or the Englishman's lack of a sense f humor.

I was that fool. But it cannot be done. Lacking these bings England would not be England. It would be Hamlet ithout Hamlet or the Ghost or the wicked Queen or mad phelia or her tiresome old pa; for most English life and he bulk of English conversation center about sporting spics, with the topic of cricket predominating. And at given hour of the day the wheels of the empire stop, and verybody in the empire—from the king in the counting one, counting up his money, to the maid in the garden, anging out the clothes—drops what he or she may be doing at imbibes tea until further orders. And what oceans of a they do imbibe!

There was an old lady who sat near us in a teashop one ternoon. As well as might be judged by one who saw her a sitting posture only, she was no deeper than any other d lady of average dimensions; but in rapid succession a tilted five large cups of piping but tea into herself and as starting on her sixth when we withdrew, stanned by

e speciacle. She must have been fearfully sg-waisted! I had a mental vision of her terior decorations—all fumed-oak wainstings and buff-leather hangings.

Still, I doubt whether their four-o'cheka habit is any worse than our five-o'chekektail habit. It all depends, I suppose, on asther one prefers being tanned inside to ing pickled. But we are getting bravely er our cocktail habit, as attested by figures of the visual evidences, while their tea habit growing on them—so the statisticiars say.

The Vulgarity of Laughter

S FOR the Englishman's sense of humor. Let his lack of it, I judge that we Ameras are partly wrong in our diagnosis of that are of British character and partly right, cause he is slow to laugh at a joke, we nit he cannot see the point of it without fagram and a chart. What we do not take a consideration is that, through centuries self-repression, the Englishman has so lied himself into refraining from laughing public—for fear, you see, of making him-I compicuous—it has become a part of his are. Indeed, in certain quarters a prejue a against laughing under any circumbers appears to have aprung up.

was looking one day through the pages of of the critical English weeklies. Nearly

British weeklies are heavy, and this is the heaviest of lot. Its editorial column alone weighs from twelve to then pounds, and if you strike a man with a clubbed y of it the crime is assault with a duli blunt instrument, hintent to kill. At the end of a ponderous review of the it Indian question I came on a letter written to the editor by a gentleman signing himself with his own name, and reading in part as follows:

Sir; Laughter is always vul-

gar and offensive. For instance, whatever there may be of pleasure in a theater—and there is not much—the place is made impossible by isosphter.

No: it is very schlorn that happiness is refined or pleasant to see merriment that is produced by wine is false merriment, and there is no true merrument without it.

Laughter is profune, in fact, where it is not ridiculous.

On the other hand the English in bulk will laugh at a thing which among us would bring tears to the most hardened cheek and incite our rebellious souls to mayhem and manalaughter. On a certain night we attended a musical show at one of the higgest London these

ters. There was some really clever funning by a straight comedian, but his best efforts died a-borning; they drew but the merest ripple of laughter from the audience.

Later there was a scene between a sad person made up as a Scotchman and another equally sad person of color from the States. These times no English musical show is

And at a Given Hour Everybody Imbibes Ten Until Further Orders

complete unless the cast includes a North American negro with his lips painted to resemble a wide slice of ripe watermelon, singing ragtime ditties touching on his chicken and his Baby Doll. This pair took the stage, all others considerately withdrawing; and presently, after a period of heartrending comicalities, the Scatchman, speaking as

though he had a mouthful of hot oatmeal, proceeded to narrate an account of a fictitious encounter with a bear. Substact ally the dialogue ensied:

THE SCOTCHMAN - flowers a varia tierce grintly tear, ye loss; and be rushed at me from behind a jugged rock.

THE NEGRO-Mistah, you means a jagged rock, don't

THE SCOTCHMAN-Nay, nay, laddie-a jugged rock.

THE NEGRO - What's dat you say? What - what is a jugged rock?

THE SCOTCHMAN (forgetting his sevent)—Why, a rock with a jug on it, old chap. (A stage roll to let that sout into them in all its full strength.) A rock with a jug on it would be a jugged rock, wouldn't it—eh?

The pause had been sufficient—they had it now. And from all parts of the house a whoop of unrestrained juywent up.

If You Have Braught Any Henry Baggage You Ga Back and Pick it Dos

Witnessing such speciacles as this, the American observer naturally begins to think that the English in mass cannot see a joke that is the least bit subtle. Nevertheless, however, and to the contrary notwithstanding—as Colonel Bill Sterritt, of Texas, used to say—England has produced the greatest natural humorists in the world

and some of the greatest comedians, and for a great many years has supported the greatest comic paper printed in the English language—and that is Punch.

Also, at an informal Saturday-night dinner to a well-known London club I heard as much spontaneous repartee from the company at large, and as much quiet humor from the chairman, as I ever heard in one evening anywhere: but if you went into that club on a weekday you might suppose somehody was dead and laid out there, and that everybody about the premises had gone into deep mourning for the deceased.

If any member of that club had dured then to crack a joke they would have expelled him—as soon as they got over the shock of the bounder's confounded cheek. Saturday night? Yes. Monday afternoon? Never! And there you ure!

The Bond of Red Meat

SPEAKING of Punch reminds me that we were in London when Punch, after giving the matter due consideration for a period of years, came out with a colored jacket on him. If the Prime Minister had done a Highland fling in custome at high noon in Oxford Circus it could not have created more excitement than Punch created by coming out with a colored cover.

Yet, to an American's understanding, the change was not so revolutionary and radical as all that. Punch's wellknown lineaments remained the same. There was merely a dab of palish yellow here and there on the sheet; at first glance you might have supposed somebody else had been reading your copy of Punch at breakfast and had been careless in spooning up his soft-boiled egg.

They are our cousins, the English are; our cousins once removed, 'tis true—see standard histories of the American Revolution for further details of the removing—but they are kinemer of our become a doubt.

are kinsmen of ours beyond a doubt.

Even if there were no other evidences, the kinship between us would still be proved by the fact that the English are the only people except the Americans who look on red meat—beef, mutton, pork—as a food to be esten for the taste of the meat itself; whereas the other nations of the earth regard it as a vehicle for carrying various sauces, dressings and stuffings southward to the stomach. But, to the notice of the American who is paying them his first visit, they certainly do offer some amazing

ontradictions.

In the large matters of business the English have been accused of trickiness—which, however, may be but the voice of envious competition speaking: but in the small things they surely are most marvelously honest. Consider their railroad trains now: To a greenhorn from this side the blue water, a railroad journey out of London to almost any point in rural England is a succession of surprises—and all pleasant ones. To begin with, apparently there is nobody at the station whose business it is to show you to your train or to examine your ticket before you have found your train for yourself. There is no mad scurrying about at the moment of departure, no bleating of directions through megaphones. Unchaperoned you move along a long platform under a grimy shed, where trains are standing

with their carriage doors hospitably a jar, and unassisted you find your own train and your own carriage, and enter therein.

Sharp on the minute an unseen hand—at least I never saw it—slams the doors and—you might almost any secre-

tively—the train moves out of the terminal. It moves smoothly and practically without jarring sounds. There is no shricking of steel against steel. It is as though the rails were made of rubber and the wheel-flanges were faced with noise-proof felt. No conductor comes to punch your ticket, no brakeman to bellow the stops, so train butcher bleating the gabbled invoice of his gundrops, bananas and other best-sellers.

Glory be! It is all so peaceful and soothing—as peaceful and as soothing as the land through which you are gliding when once you have left behind smoky London and its interminable environs; for now you are in a land that was fluished and plenished five hundred years ago and since then has not been altered in any material aspect whatsoever. Every blade of grass is in its right place; every wayside shrub seemingly has been restrained and trained to grow in exactly the right and the proper way.

The Honor System on Trains

STREAMING by your car window goes a tastefully arranged succession of the thatched cottages, the huddled little towns, the meandering brooks, the ancient inns, the fine old country places, the high-hedged estates of the landed gentry, with rose-covered lodges at the gates and robust children in the doorways—just as you have

always seen them in the picture books. There are fields that are velvet lawns, and lawns that are carpets of green cut-plush. England is the only country I know of that lives up—exactly and precisely—to its storybook descriptions and its storybook illustrations.

Eventually you come to your stepping point—at least you have reason to believe it may be your stopping point. As well as you may judge by the signs that plaster the front, the sides and even the top of the station, the place is either a beef extract or a washing compound. Nor may you count on any travelers who may be sharing your compartment with you to set you right by a timely word or two. Your fellow passengers may pity you for your ignorance and your perplexity, but they would not speak—they could not, not having been introduced.

A German or a Frenchman would be giving you gladly what aid he might; but a well-born Englishman who had not been introduced would ride for nine years with you and not speak. I found the best way of solving the puzzle was to consult the timecard. If the timecard said our train would reach a given point at a given bour, and this was the given bour, then we might be pretty sure this was the given point. Timetables in England are written by realistists, not by gifted fiction writers of the impressionistic school, as is frequently the case in America.

So, if this timecard says it is time for you to get off you get off, with your ticket still in your possession: and if it be a small station you go yourself and look up the station master, who is tucked away in a secluded cubbyhole somewhere absorbing tea, or else is in the luggage room fussing with baby carriages and putent churns. Having ferreted him out in his hiding-place you hand over your ticket to

him and he touches his capbrim and says "Kew" very politely, which concludes the ceremony so far as you are concerned.

Then, if you have brought any heavy baggage with you in the baggage carpardon, I meant the luggage van-you go back to the platform and pick it out from the heap of luggage that has been dumped there by the trainbunds. With ordinary luck and forethought you could easily pick out and claim and carry off some other person's trunk, provided you fancied it more than your own trunkonly you do not. You do not do this any more than, having purchased a secondclass ticket or a third-class, you ride first-class; though, so far as I could tell, there is no check to prevent a person from so doing. At least an Englishman never does. It never seems to secur to him to do so. The English have no

I have a suspicion, though, that if one of our railroads tried to operate its train service on such a basis of confidence in the general public there would be a most deficitful hiatus in the receipts from pussenger traffic to be reported to a distressed group of stockholders at the end of the fiscal year. This, however, is merely a supposition on my part. I may be wrong.

To a greater degree, I take it, than any other race the English have mustered the difficult art of minding their own affairs. The average Englishman is tremendously knowledgeable about his own concerns and monumentally

FRIGHTFUL DISTRESSING SUBURBAN INCIDENT DISASTER

ignorant about all other things. If an Englishman's business requires that he shall learn the habits and customs of the Patagonians or the Chicagoans or any other race which, because it is not British, he naturally regards

as barbaric, he goes and learns them—and learns them well. Otherwise your Britisher does not bother himself with what the outlander may or may not do.

An Englishman cannot understand an American's instinctive desire to know about things; we do not understand his lack of curiosity in that direction. Both of us forget what I think must be the underlying one that we are a which, until comparatively recently, lived wide distances apart in marsely settled lands, and were dependent on the passing stranger for news of the rest of the world, whereas he belongs to a people who all these centuries have been packed together in their little island like outs in a bin.

London itself is so crewded that the noses of most of the lower classes turn up—there is not room for them to point straight ahead without causing a great and bitter confusion of noses; but whether it points upward or outward or downward the owner of the nose pretty generally refrain from ramming it into other folks' business. If he and all his fellows did not do this; if they had not learned to keep their voices down and to muffle unnecessary noises; if they had not built tight covers of reserve about then selves, as the oyster builds up a shell to protect his tender tissues from irritation—they would long ago have become a race of nervous wrecks instead of being what they are, the most stolid beings alive.

In London even royalty is mercifully vouchsafed a resonable amount of privacy from the intrusion of the girls eye and the chisel nose. Royalty may ride in Rotten flow of a morning, promenade on the Mall at noon, and shop a the Regent Street shops in the afternoon, and at all time go unguarded and unbothered—I had almost said unsticed. It may be that long and constant familiarity win the institution of royalty has bred indifference in the london mind to the physical presence of dukes and prince and things; but I am inclined to think a good share of it should be attributed to the inborn and ingrown British faculty is letting other folks be.

One morning as I was walking at random through the aratocratic district, of which St. James is the solar plexus and Park Lane the spinal cord, I came to a big mansion stars footguards stood sentry at the wall gates. This house are further distinguished from its neighbors by the presence of a policeman pacing alongside it, and a newspaper photorapher setting up his tripod and camera in the road as a small knot of passers-by lingering on the opposite side of the way, as though waiting for somebody to come along it something to happen. I waited too.

In a minute a handsome old man and a well-set-up your man turned the corner afoot. The younger man was leaing a beautiful stag bound. The photographer touched to

> hat and said semething, and the younger man smiling a good-natured smile, obligingly posed in the street for a picture. At this precise more a dirigible balloon came careening over the chin neypots on a cross-Landon air jaunt; and at the sight of it the little crowd left the young our and the photographer and set off at a run to billoon as far as they might, the course of the balloon

A Good Natured Prince

NOW in America this could not have occurred for the balloon man would not have bealoft at such an hour. He would have been the earth; moreover he would have been outed the walls of that mansion house, along with la a million, more or less, of his patriotic follow countrymen, tearing his own clothes off and the clothes off, trampling the weak and sickly uno. foot, bucking the doubled and tripled police line in a mad, vain effort to see the flagpole on the roof or a corner of the rear garden wall - for the house was Clarence House, and the young he who posed so accommodatingly for the photorapher was none other than Prince Arthur Connaught, who was getting himself married very next day.

The next day I beheld from a short distant the passing of the bridal procession. Thoughther were crowds all along the route followed by the

wedding party, there was no scrouging, no shoving, to life ing, no disorderly scramble, no unseemly congestion about the chapel where the coremony took place. It reminded no

notice it. He was busy folding the newspaper so that he could put it into his pocket. Mrs. Drum sat watching him. She would have liked to read the morning paper, but Mr. Drum did not approve of it. He thought newspapers demoralizing to women. However, having now stuffed his into his coat pocket, he helped himself sparingly to a mouthful of water.

'That's right," he observed, his tone oracular; "the whole trouble is you women nowadays have too much time on your hands! If it wasn't for that there wouldn't be half of this talk about the vote and woman's sphere. Not

"Yes; I guess so!" Mrs. Drum hurrledly agreed.
"And dancing their lives away!" continued Mr. Drum.
"Cutting up high jinks everywheres in creation! It's enough to make you sirk!"
"Yes; isn't it?" affirmed Mrs. Drum.

With a final snort Mr. Drum arose. Brushing the crumbs from his waistcoat he sauntered toward the door.

"Well, I must be off," he said, his voice again assuming that note of large, buoyant beartious so often admired in the trade. "And remember, little woman, dinner early! This is my club night. You won't forget?"

Mrs. Drum said she would not. Her husband was a member of the Knights of Zanzibar, a fraternal benevolent order that met once a week at a bowling alley. The week before she had delayed him by forgetting to have the dinner on in time. In consequence, as he now reminded her, he had been greatly put out.

"Yes: I know," she placated. "Good-by, Homer,"

"Good-by," nodded Mr. Drum.

He went out briskly, loudly clearing his throat; and for moment Mrs. Drum sat back, staring down her nose, Then, as the door slammed, she suddenly rose.

The music upstairs had stopped, but scuffling to the airshaft window she threw it open. There, for a period, she leaned forth listening. All was silent, though; and, with a sniff a slight scho of disgust, one had thought she lowered the window; then slipslopped back to her place at the table. A long while passed; and, with her hands in her lap, Mrs. Drum sat staring at the curpet.

Mr. Drum would not have liked to see her. Marriage, as he often pointed out, was strictly business. "Sure!" he would say. "You 'nd me are partners, a regular firm!" Then he would warn her, if she "reneged on the job" the firm would dissolve. "Yes; you gotta do your work!" he would tell her.

No doubt this was in her mind now; for, rising presently, Mrs. Drum began to go about her morning tasks.

It was not the first time she had beard idleness was woman's curse. No, indeed! And as Mrs. Drum washed

and put away the breakfast dishes, made the beds and tidied up the bedroom, her mind dwelt on Mr. Drum's sage words. Curiously the thought lingered while she dusted the parlor and bedroom, swept

the hall, scrubbed the kitchen floor, steamed out the ice-box, and made a pie for dinner and a shirt for Mr. Drum. But, then. that is the way with most apt sayings; they stick like was in one's head. And as Mrs. Drum next. darned four or five pairs of her husband's socks and mended three suits of his onderflannelsshe waastill reflecting on the folly and frivolity of hersex.

However, ere long the thought began tofade. Having cleaned and filled four kerosene lamps she was just about to clean and fill a fifth when all at once she remembered she had yet to do the marketing as well as to take a pair of Mr. Drum's shoes. to the cubbler; after which she must get his silk hat ironed, then go to the cleuner's for a coat he might wish to wear that night. Of course this would

take all her leisure until long past the luncheon hour; but, then, Mrs. Drum did not think of lunching. She seldom did. What now occupied her mind was her back. It felt. singularly as though some one had thrust into it a carving knife, kitchen size; and with one hand on the ache, her head lolled over on her shoulder, she was just limping out. of the dining room when she passed abruptly, her ear cocked up, her manner alert.

The woman in the flat overhead had again put a new sedle in the machine and started it to playing!

The effect was electrical: Mrs. Drum stood poised, her figure rigid; and the change that stole into her expression was curious. Saint Cecilia could not have looked more rapt. It was only for a moment, though. Durting to the airshaft window she flung it open. At once, with all its tantalizing seductiveness, the strains of Too Much Mus-tard came floating in; and scuffling to the sideboard Mrs. Drum yanked open a drawer. From this she produced a newspaper clipping, an article embellished with a series of cabalistic designs. However they seemed quite clear to Mrs. Drum, for, after a brief glance at the text, she turned and, with a vigorous shove, pushed the dining-room table into a corner. Next, having again studied the clipping, she planed it conveniently to the wall paper and backed away. Then, had Mr. Drum been present, it is possible he might. have suffered a momentary shock.

Mrs. Drum had begun to sway. Her figure, melting from its former rigidity, oscillated in time to the music. Left foot forward, her skirts raised high enough to disclose a pair of spinsterlike ankles, she advanced across the room. "One, two, three, four, five, six-dip!" said Mrs. Drum, and did it. "One, two, three-dip! One, two, three!"

It is well Mr. Drum was not present. Fancy John the Baptist eying Herodias from his platter! Meantime overhead the dulcet strains continued, when in earnest, solemn succession Mrs. Drum did the Horse Trot, the Castle and the Kitchen Sink. Then, after again consulting the diagram, she next essayed the Lame Duck, the Fireplug, the Billy and Lillian, the Huckaback Hug and the Can of Worms. Flushed and animated, the light of youth, long submerged, once more dawning in her eyes, she was just taking a try at the Grapevine Dip when overhead the music abruptly ended.

"Shuh!" said Mrs. Drum. She waited eagerly, but those strains from above did not start again. Instead, a door slammed a moment later and all was still. Visibly her face full. "Lord!" sighed Mrs. Drum; and she was mopping her face with her apron when she paused, her eyes fastened on the wall above the fireplace.

A colored decoration hung there-a motto. The thing was one of those worsted and cardboard art creations of the mid-Rutherford B. Hayes period, its frame of black walnut carved to represent rustic work. Mr. Drum had contributed it to the household. Its sentiment seemed inspired:

THERE IS NO PLACE LIKE HOME

Her posture intent, Mrs. Drum pored over the inscription. One would have thought her air now more curious than ever. It was together profound and quizzical; at once mirthless, yet amused. La Gioconda might have gleamed like that some time at Mr. Gioconda. It was not for long, though.

As she lowered the airshaft window and pushed the table back into place she remembered, with a pang of what may have been conscious shame, that the Knights of Zanzibar met that night, that Mr. Drum's. slik hat had yet to be ironed, that she still had to go

to the cleaner's for his coat. No place like home?

"I'll bet not!" said Mrs. Drum.

The hours passed. Noon merged into one o'clock: then came two, lugging onward with heavy feet. Mrs. Drum was still at her household tasks, limping from one to the other. The knife in her back she no longer felt now. It had become a sword, a saher; and subconsciously she waited for it to saw her spine in twain-As this idle thought flitted vaguely through her mind the clock struck half past three. It is the hour when the fiddles at the first thes dansants begin tuning up; she had read about it in the paper. However, Mrs. Drum had no time to think of that. Mr. Drum had ordered

dinner early! Just then the doorbell rang; and, with her hand on her ache, her air indifferent, Mrs. Drum went limping along the hall. A young woman stood on the landing outside and Mrs. Drum, as she opened the door, gave a little gasp. It was the lady from upstairs! She had a flat paper purce! in

her hand and she was smiling.

Though Mrs. Drum had often seen her neighbor, she had never spoken to her. Mr. Drum, she knew, would not approve of it. Besides, there was something about the lady subtly alarming to Mrs. Drum herself. What it was though, Mrs. Drum could not have told. It may have been her manner; possibly it was her clothes. Somehow. they gave the impression that she had just stepped into them or was just stepping out of them. This was due either to the slush in her skirt or the V in her waist. Mrs. Drum could not tell which. To her dazed view they

seemed to meet. The lady's smile, though, was duzzling.
"Say, Mrs. Drum," she said, with informal directness,
"I was wund'ring if you wooden do sumple f' me? I'm Miss La Ray I'm upstairs; you know me, don't yuh? Liane La Ray -yeah. We haven't b'en interduced - bean, I mean - only I guess you know me. I'm on at th' Winter Gurden, y'know; yes, the fourth from the end in that front row bunch of broilers."

"Huh?" inquired Mrs. Drum.

"Yeah, the squab chorus," explained Miss La Ray, adding: "I'm the one that has that line: 'Oh, Benny, see how late it is! The cluck on the taxi says eleven dollars and a quarter! You've heard me, haven't yuh?"

Mrs. Drum had not, but that did not in the least dash

her visitor's exuberant spirits.

"Lissen, dearie!" she beamed. "You wooden mind, would yub, giving this dress to the tailor when he comes? They've got us called I'r a rehoisal this afternoon and I gotta have my dress done so's I c'n wear it t'night. The braid's all kicked off the hem I'm doing the M'shish.

There must have been something in Mrs. Drum's face that expressed bewilderment, for again Miss La Ray explained:

Yes; you know - that Cuban dance they used to call the McSix, on'y that ain't right. The name's Mexican, a gen'l'man told me. He used to work on the Canal, where they talk it." As she spoke Miss La Ray had unwrapped the dress. "And, say," she added, "when you see that tailor just ask him to open up the slit a little, won't you? There's a dear! I just hate my clothes if they hamper me, don't you?" With this she thrust the dress into Mrs. Drum's startled hands. "Thanks offly!" bubbled Miss La Ray. "Remember now; any time you want a favor off

Still piping thanks she flitted, durting down the stairs; and shutting the door in a dream Mrs. Drum wandered up the hall, Miss La Ray's dress held dangling 'twixt her

thumb and forefinger.

It was to the parlor that Mrs. Drum headed. Arriving there she flung the dress over the back of a convenient chair and was solemnly departing when, with a grunt, she halted. Something in the dress seemed to arrest her. She turned. With an energetic hand she twitched up the window shade. Then backing off a bit Mrs. Drum stood poring over the lace and charmense creation, much as a naturalist might pore over some startling sport of Nature.

The dress was what a modiste would have termed a dernier eri. In Mrs. Drum's parlor, though, rather than a

"I Just Hate My Clother if They Rumper Mo, Dun't You?"

mere cry it became a shout. Maybe the thought occurred to Mrs. Dram, too, for she looked about her covertly, her glance curious,

Portraits in erayon of Mr. Drum's dead parents adorned the wall. Father Drum, one saw, had worn whiskers d ld Brigham Young, his upper lip being shaved. As for Mrs. Drum, seidor, she had her hair dressed straight back from her brown; besides which she wore spectacles. In keeping with these art works was the furniture. It included a horsebair sola, the last of its kind probably in any New York flat; and there was also a murble-topped center table as well as a corper whatnet.

A crocheted worsted mat covered the center table, and on this stood a kerosene lamp with a green shade. On the whatnot was a large seashell, a piece of transparent quartz, three flint arrowbeads, a plush photograph album, an ornamented mustache cup, several books, and a glass paperweight with a snowstorm isside. All these Mrs. Drum took in with a quick, comprehensive glance, when again there stole into her face that faint, covert air of locuedity. Then, roving from Mr. Drum's treasured heirlooms, her eyes leaped swiftly again to the dress.

The next justant she had anatched it up!

It was again well that Mr. Drum was absent. Her hands, eager and as avaricious as a miser's, played over the gown, fingering every inch of its soft, alluring finery. She wet her lips. Her eyes sparkled. She bent above it, her breath coming swiftly. She felt, appraised, reveled in the filmy softness of its lace. Her touch ran gloatingly along the fabric's sleek, exquisite surface. Her fingers, horny and rough from want of care, plied like a caress over its braid, even its buttons. She patted down its wrinkles. With quick, birdlike gestures she smoothed it here and there.

A mother crooning over a babe could not have expressed s keener, more joyous tenderness. She had held up the dress, draping it against her figure, when all at once there swam into Mrs. Drum's face a quick, still more extraordinary air. It illuminated all her features like a halo,

There was a mirror hanging tilted against the wall, She turned swiftly to it. One had but to give her a look instantly to guess her purpose. Already her fingers had begun sastching at the buttons of her waist. In pot more than three minutes at the most, her own dress discarded and kicked beneath a chair, Mrs. Drum stood before the glass clad in the charmouse tango gown of the lady from overhead. The transformation was complete!

The former Mrs. Drum seemed somehow to have disappeared. She no longer looked scrawny and stoopshouldered; she did not look submerged. Instead, there posed before the mirror a slim, exect figure, not the least middle-aged. Only the way her hair was dressed reminded

one of Mrs. Drum of old. It still was dressed the wa Mr. Drum liked it dressed; and she gave it a sads giance.

"Ugh!" said Mrs. Drum; and she jabled it in one way, then the other. Afterward for a moment regarded herself critically in the mirror, when low second time that morning Mrs. Drum backed to across the room, at the same time daintily raising to skirts above her ankles. "One, two, three-dip!" a Mes, Drum, and again did it. "Dip!"

This time, however, when she dipped she held a pose; and twisting her head over her shoulder in peeped down at herself. A neat ankle, nos less que sterlike than shapely, was revealed to her. Shi con at it an instant; then she blushed. It was with home ure, though; with pride, not shame. The achtu is back was forgotten. She rejoiced that she was a slender, that age and toll had yet really to tell or be Just then the clocks outside struck four; and less in an attitude of tense attention, Mrs. Dram stavil herself in the glass.

In two hours to the minute Mr. Drum's latelar would rattle in the latch. In just two hours W Drum's dinner must be on the table! Mrs. Dog eyes dropped auddenly. She stood looking at is shoes.

"Good Lord!" shee jaculated. "Aren't they away The next moment, seated on the floor, she laps hurriedly to unbutton them. An instant laterale in flitting down the hall. Presently a door slamed then silence fell.

In the religious-works book trade Mr. Drum's list was a synonym of all that is punctilious, all that methodical. It was especially so in the way to Drum made use of his time. At home he was it same as at his office. Winter or summer Mr. Dru let nothing ever vary his schedule.

Punctually at seven-thirty he rose. At od promptly he sat down at the breakfast table. The on the minute, as he expected, Mrs. Drum had the meal ready for him. As they did not keep a serus Mr. Drum's mother never having had one, Mr. Dro was enabled always to be on time by rising a d o'clock. However, having breakfasted, Mr. Dr. read the newspaper until half past eight. At an thirty-five he left the house. Each morning on

day in the year, the clocks were striking nine as he was the book concern.

There, until half past twelve, Mr. Drum was ruppy with the visiting trade. At twelve-thirty-one he was to seen departing to his luncheon, from which he never regularly at one-twenty-nine. One-thirty to the dot of him at his desk, where he labored until five-one. He's then to walk home. Every weekday evening in the just arrived there promptly on the minute of six.

Tonight was no exception. The clocks were just street as he put his key in the lock. Then, in conformity with usual routine, Mr. Drum loudly cleared his throat.

Mrs. Drum's given name was Lucy. Mr. Drun, by ever, never used it. It was too girlish, not to say map fied, for a married woman; especially one who was his wi His mother's name had been Eliza.

"Mrs. Drum!" cailed Mr. Drum, his voice bent busyantly down the hall.

There was no reply. The house seemed strangely on Smiling indulgently Mr. Drum stepped up the hall toru the horsehair parior.

"Hello, there!" he cried, raising his voice a little he "Is every one dead here?" Enjoying this spirited within he had begun good-naturedly to chuckle, when all it me the silence seemed to sink on and engulf him. Al ". instant, entering the parlor, Mr. Drum's eyes fell in M. Drum's discarded housedress. It lay where she had it-that is, kicked beneath a chair. "What's the inquired Mr. Drum; and, leaning forward to per at it next observed the street shoes she had also cast aside

By now Mr. Drum was frowning darkly. He di like the look of things in the least. It was not the intihe had felt it necessary to chide Mrs. Drum for her was ness; and as he stepped inquiringly toward the idia Mr. Drum's brows were wrinkled more than ent. cleared his throat.

"Mrs. Drum! I say, there!" he called again. Silence still answered; and pushing back the kitcher in Mr. Drum stalked into the kitchen. He knew install something was wrong!

The gas range was lit; there were pots and para sel but no pot or pan gave forth its wonted fragrang 3 grateful incense of dinner to be. Instead there there through the air a thin, acrid smoke, the odor of south meat and burning vegetables. A cry of horror but is expressed burst from Mr. Drum. Mingled with it was tone of stern rebuke:

Mrs. Drum! Mrs. Drum!"

Shutting off the gas, his brows austere, his iips president firmly together, Mr. Drum stalked out of the kitche: " called no more new. As clearly as though Mrs Do-

erself had confessed it he now realized the situation. In rect disregard of every duty he expected of her she had illfully run out somewhere, leaving his dinner to burn! It made little difference to Mr. Drum that this was the at occurrence of its kind. He would see to it, he assured mself, that it should be the last! Armed with this decion he was crossing the dining room to the hall when he iddenly paused.

It was some effect in the room that had halted him. A range had taken place he was subtly aware. What it was, ough, he could not tell. Then his eye roving about him shted all at once as it reached the fireplace. The wall pove it was blank! The worsted motto was gone! A ctangle of faded wall paper was now all that occupied e place once sacred to that household sentiment:

THERE IS NO PLACE LIKE HOME!

Bewildered, Mr. Drum gaped on the vacancy. He emed dumfounded. The disuppearance of that emblem as vaguely ominous. However, ere long his wits returned. d with his mouth set, the Jovian wrath again seated on s brow, he stalked up the hallway to the parlor. There, th a grim solicitude, he picked up both Mrs. Drum's ess and Mrs. Drum's shoes. Next Mr. Drum placed on e sofa both shoes and dress.

Their presence there was conspicuous. However, this parently was what he wished, for, backing away a bit, he

tically studied their appearance.

Then, drawing up a chair, Mr. Drum grimly seated him-If where he could command a free, unobstructed view of e door -of that and any one who might enter by it.

His face was fixed. As he told himself, he must of course strain his temper. Her fault naturally was one he could st condone; but at the same time he must not forget his gnity. He must be firm, not harsh; severe, yet not just. Nor must be fail to be kindly, either. That would due from him as the stronger mind, as the superior in z. Yes; that must be his manner-firm yet kindly! ace he had sufficiently rebuked her, he would make her e the largeness of his nobility. He would show her he as ready to forgive, to forget—that is, if she did not repeat e offense. However, though he knew himself to be nerous, Mr. Drum was fully aware of the gravity of his de's miscloings.

It was at this instant the doorbell rang.

The first tinkling of that summons had hardly echoed rough the flat ere Mr. Drum was on his feet. Then, as he cted toward the hall, he recalled his resolution. He ust not forget himself. There must be no scene. His guity he must remember. Outside, the hell rung again; it Mr. Drum halted. He must first compose himself, Drawing out his watch he exactly noted the time. It

is sixteen minutes to seven. For all purposes that eant his meal already was an hour late. Next, turning to e mirror Mr. Drum carefully noted his appearance. In emotion his necktie had become disarranged. He fixed Then, his eyes on himself in the glass, Mr. Drum loudly

cleared his throat. Firm, not harsh! Severe, yet not unjust! Yes, that was the idea; and, his face grave, his shoulders erect, Mr. Drum strode down the hall.

Flinging open the door be stood there in sllence waiting, his finger leveled, pointing toward the parlor. A pause followed.

"S-a-y!" a voice drawled then, stretching out the word; and, gaping, Mr. Drum looked outside.

"Huh?" he inquired.

It was not Mrs. Drum at all! It was Miss La Ray, the lady from overhead. Indicating the finger, which Mr. Drum still rigidly extended, she inquired in Broadway's happy argot:

"Hey? What's th' plot?" And instantly Mr. Drum assumed a less theatrical pose.

"What is it you wish, madam?" he asked freezingly. Miss La Ray wished to see Mrs. Drum. What is more, she wished to see her forthwith. One gathered from her tone that Miss La Ray was not quite pleased. In return, Mr. Drum raised his brown. It was not his intention that any such neighbor should force her acquaintance on his wife.

"Mrs. Drum is not at home," he said.

"Not at home!" echoed Miss La Hay. "Well, where's abe went?"

As haughtily as he could Mr. Drum said he did not know, at which the visitor gave a loud exclamation. 'Say, this is a swell chance!" she cried, dismayed. "What's she did with my clothes?"

"Your clothes?" repeated Mr. Drum, the inflection

"You said it," returned Miss La Ray; "my dress! The man that called for it says he was all the afternoon trying to get it off her.'

"Off her?" echoed Mr. Drum, starting-

"Away I'm her," Miss La Ray corrected, her voice

Mr. Drum had now perceived the situation. Obviously this female had left with Mrs. Drum a dress that was to be called for by a tailor. The knowledge irritated him. In the first place, Mrs. Drum had her own duties to faitill. Then again, had he not warned her she must not make indiscriminate acquaintances? Miss La Ray's occupation he knew too; and he did not in the least approve of it. Least of all did he approve of her ringing his doorbell. What if any one should see her there talking to him like this!

I know nothing about your dress. You must excuse me!" said Mr. Drum, his tone leier than ever; and he was closing the door when Miss La Ray, in desperate ire, put her shoulder to it and pushed. Meantime her speech flowed on undiminished.

"Hey!" she shrilled. "What's th' idee? Are you tryin' to put sumpin' over on me? . . . Awr, you stop yer shoving -y' hear! I want my dress! Hey, you quit that

Mr. Drum had his back to the door, his feet braced against the wall opposits. Subconsciously he felt the

"Ever lines We Waited to the Atrac Paying Beas Boing All the Talking; and Nam ! Mean to be a Little Tue! MININET STATE

posture to be undignified, especially for one of his position in the religious-works book trade. It was no time to cavil, however. He shoved. Success crowned the effort. The door gave, it shut; and as the latch clicked Mr. Drum breathed a sigh of relief.

His satisfaction, however, was short. A brief full followed. Then the silence was succeeded by a storm of blows on the panel; and at the sudden uproar Mr. Drum turned pale. What if the woman roused the house?

His brow moist, Mr. Drum reflected on the consequences. A scandal like that might smirch any one, no matter who! Not even his known respectability could save him! Think of it! His name would be coupled to a woman's! And such a woman too-a public singer! Worse, they might even have dancing at the Winter Garden!

Leaning over suddenly he shouled through the keybole; "Have a care, young woman! Have a care or I shall

report you to your employers!"

The threat seemed effective. Silence, at any rate, followed; and during it Mr. Drum congratulated himself on his sagacity. Naturally any large public enterprise like the Winter Garden would not care to hear of such carryings on among its employees. He was just about to order her off about her business when he heard her speak.

"You'll do what?" she called in awed tones. When he repeated the warning he was stupefied to hear a shout of ironic laughter. "Say, is that a promise?" she cried; and then: "'Phome it to the press agent, will yub?" Again a shower of blows rained on the door panels. "Hey! You gimme my property!" he could hear her shrill; and, with her mouth pressed to the keyhole, she was threatening to have in the police when all at once she stopped.

Mr. Drum laid his ear to the woodwork. On the floors above and below doors had begun to open; to his dismay hurried footfalls sounded on the stairs. A moment later a murmur of voices arose; and, mute with agony, Mr.

Drum realized that the scandal now was public.

"Has your clothes, has he?" some one said. "And he won't give 'em up? There, Albert; I always said he looked like a criminal!

Mr. Drum recognized the speaker. It was his neighbor across the hall, a Mrs. Schnabel. Her husband was in the retail wall-paper trade; and once Mr. Drum had complained to the landlord about the noise they made. "Piano playing after ten o'clock was not respectable," he had

written. Mrs. Schnabel spoke again.
"Say," she suggested hopefully, "why don't you have him summonsed?"

Mr. Drum started. Summonsed? Why, she would not dare! It would be perjury to swear he had her dress. He had never laid eyes on it; and besides

"Yeah; but that ain't the half of it!" Miss La Ray's voice all at once proclaimed. "When I sez to him, 'You big gloom! You gimme my dress!' didn't he take and shove me out of there! The idea of him dasting to lay hands on me!"

Mr. Drum heard her open-mouthed.

"You don't want a summons-what you want's a warrant!" Mrs. Schnabel was now suggesting; and Mr. Drum wiped his clammy brow.

(Continued on Page 65)

The Inside of the Pork Barrel

First Lock at Jaint Harpe Fatte, Michigan, Restored us an Eshibit

Present Locks at Joint Marye Pails. A Third and Larger Lock is Under Construction

In A FEW days Congress is going to pass an omnibus Rivers and Harbors Bill; and then in a few more days the newspapers will be discoursing on the evils of the Pork Barrel—and why not? Heaven knows they frequently discourse on much worse things, though rarely, it must be admitted, on topics about

which they really know quite so little.

The first thing one does when he leaves the grammar school is to forget his geography. Why should these gentlemen who write editorials for our great newspapers, and who know about tariffs and things, burden their minds with mere geography? Why bother about Raccoon Creek when it is so easy to remember the Suwanee River? Why keep such pressy old names as Poliock Rip and Cooper River in mind when it is so much pleasanter to let one's thoughts rest on The Banks of the Wabash, or Where Rolls The Oregon?

A good Massachusetts friend, for many years a member of the Rivers and Harbors Committee, told us that a Harvard man took him to task on one occasion for wasting money on so many insignificant and worthless streams. "Why," he replied, "the trouble is not with the legislation—it is with you; you don't know the geography of your country." Naturally this was protested. "Well, I will name a river in this country navigable for 300 miles that you never heard of." And naturally enough this, too, went to protest. "The Cooss!" And his friend owned up.

When the new man comes to Congress he has to start something—so many of them believe; and about the surest way to the headlines is to denounce the Pork Barrel. A very wise old man told me many years ago, down in Mississippi, when I was beginning to look round politically and take notice, that the very best thing a young man, so intentioned, could do was to get into a fight with the devil. "It does not make much difference what devil it is. An imaginary one will answer the purpose, just so you fight him loud!" Since that day I have come to believe that this old sage has lectured pretty generally round this country.

The Intracoastal Canal

WHEN the Rivers and Harbors Bill was before Congress
a year ago one of this old teacher's pupils grew almost
eloquent—at any rate he fought loud—denouncing the
Pork Barrel. Naturally he was requested to indicate the
particular project he wished to have eliminated; so he concluded to read the bill and try to guess the answer. The
House adjourned over Sunday and when we resumed consideration of the bill on Monday he was ready to specify.
Somebody has had a big map of the United States printed,
with a broad blue strip running from Baston a short distance inland along the whole Atlantic Coast, across Florida
round the Gulf to the Mexican border.

This is supposed to indicate the course of the Intracoastal Canal. The usual amount of study devoted to this project consists of a more or less easual glance at the map and a somewhat more definite "Well, I'll be darned!" The real project for this inland route may be stated in a few words, and a somewhat careful examination of the map will probably suggest the thought that it is manifestly feasible. A cut across Cape Cod—and private enterprise is now making it—gives a protected course behind that into

By B. G. Humphreys

New York from Boston. The tonnage actually carried now and subjected to the dangers of the passage through Marthas Vineyard and round Cape Cod is difficult to ascertain with exactness. It is very large—just how many millions can only be roughly estimated, but certainly larger than the tonnage that passes through the Suez Canal; and the passenger traffic is enormous.

Surely it would not be a foolish thing to make the way safe. The next cut is across New Jersey from Raritan Bay to the Delaware River, and private enterprise dug that many years ago. The next cut is across Delaware from the river to Chesapeake Bay; and there, too, private enterprise has long since constructed the Delaware & Chesapeake Canal. Running down this protected course several hundred miles through Chesapeake Bay, the next cut is from the Chesapeake to Albemarke Sound.

Strangely enough, these two waters are already connected by two privately dug canals—one through the Dismal Swamp; the other known as the Chesapeake & Albemarie Canal. The traffic carried through both these canals, though the depth is only six feet, was given as seven hundred thousand tom the year before Congress purchased the last named. All of it, of course, was compelled to pay toll to the companies that owned and operated them. It would require an ordinary freight train of thirty loaded cars two trips daily every day in the year to transport this tonnage.

Just what the saving to the commerce of the coast will amount to when this canal is deepened and widened and made a free waterway can only be guessed; but the engineer corps of the army, after a very thorough study of the question, reported that the expense of the improvement, including the purchase price, was justified by the needs of commerce, and thereupon Congress adopted the project. It will enable the smaller craft engaged in the coastwise trade to avoid the storms and hidden reels off Cape Hatterns, the most dangerous point on our Atlantic scaboard, where many fortunes and human lives are annually lost.

From Besufort to Savannah the difficulty will be greater, but future Congresses may find it worth while to undertake this section. From Savannah to Key West the project will require little excavation and the cost will be small.

Along the Gulf of Mexico, Nature has providently so disposed the sea islands as to provide this section of the carral almost without the necessity for human activities to amplify. Look at the map if your curiosity or interest is roused.

However, as one of those immortals who used to gather round the table at the Coffee House and hear Doctor Johnson's long sentences expressed it, "This is going far afield." I must return to our friend the orator. To use expressive slang, the Intracoustal Canal "got its!" It was the biggest and the greasiest piece of park in the barrel! When Clearwater Harbor was reached in the bill it must be stricken out. The chairman explained that this was not a part of this inland waterway.

"Judging from its name I had assumed that it must be some distance inland," the objector explained. Most natural assumption. How could Clearwater Harbor be near the ocean? Traversing the broad prairies from the land of the cactus on his triumphal march to the nation's capital, he had crossed many rivers—to Red, the Arkansas, and even the Father of Water.

All were rushing in tawny currents on and into the sea, and surely this common receptacle of so much silt must be the muddlest hole in Christendom. Clearwater Harbor near the Ocean—the idea!

The rivers whose improvement and maintenance on provided for in the bill now pending in Congress flute: ast year a commerce amounting to 208,813,128 tors. This is exclusive of the traffic on the rivers connecting the Great Lakes, and does not include the tonnage of our harter-These figures will be more readily understood when our pared with the tonnage of other transportation rows which hold a prominent place in the public mind. Mr. Emery Johnson, the official expert upon whose figure the House relied when the rate of tolls was fixed for the Panam Canal, estimated that the total tonnage which would prothrough the Canal in 1915 would be ten and a half million tons. The tonnage of the Suez Canal for 1912 was 20,135 120 tons. The freight carried from coast to coast by all our transcontinental railroads combined is three miller tons. It is estimated that the constwise traffic which will pass through the Canal will be 1,250,000 tons annually, and it is the exemption or nonexemption this million and a quarter tons from the payment of tells which has caused so much acrimonious debate. In other words the rivers, large and small, for which we are providing in our Rivers and Harbors bills, float nearly as much tonnage annually as will pass through the Panama Cana and the Suez Canal, plus the cross-continent tonnage of all the railroads during the next ten years.

Senator Burton's Change of Tune

THEN the creeks and the insignificant rivers—what of the money wasted in their improvement? Surely this purk, and distributed, too, among the members in well fashion as to make the passage of the barrol certain. What curious notion, that a Congressman could gain favor at him by securing appropriations of money to waste on worthle-creeks! Surely this could gain votes only in the immediationity of the miserable creek, and there better than any where else would it be known that the money was in for being wasted. Are the people dunces? Do these creeks a flow through the grounds of some insane asylum? Otherwise how could a Congressman gain popular favor is needless expenditures of the tax-raised money on impossible and worthless creeks?

Senator Burton was chairman of the Rivers and Harbot Committee for ten years. During that time he spent much money on the Great Lakes and viewed the magical groud of commerce there with commendable pride. He also spent much money on the ridiculous creeks, and was severe by haps than any one else in his judgment and in his critical of those who spoke of the Pork Barrel. When the the Rivers and Harbors Bill, after he reached the Senate, we reported to that body, word came over to the House that he was making a most vigorous attack on it. Pork Harm in fact, had been one of the phrases used.

D. S. Alexander, one of the most conscientious paints who ever served in Congress, and cortainly one of the most

vable of men, had been Mr. Burton's pupil for those ten ears and now had succeeded to the chairmanship of the ouse committee. He had framed this bill on the identical os so long laid down and so well defended by Mr. Burton id he refused to believe the story. The old members folwed him posthaste to the other chamber, to be resolved Brutus so unkindly knocked or no. Which particular he he was essaying, Brutus or Casca, nobody knew. All on were aware, however, that he was knocking, and ocking hard at that.

The Bruzos, the Trinity, and some other projects that ere the children of his own brain-or at least had been hered into this breathing world under his skillful legistive attention—shared the shafts of his forceful criticisms. this he seemed to be playing no favorites, whatever else

might be playing.

Alexander was speechless; but being a member of the ouse, and at the moment only a visitor de gratia in the nate, this was not surprising; the rules required it. He d known Saul of Tarsus, but this was Paul! After it was er he led his committee colleagues back to the House, a edder if not a wiser man. They believed the great sens-, at whose feet they had learned how to frame River and arbor bills, had for some reason put an antic disposition The charge of Pork Barrel, however, had been revived. d this time sponsored, by a man whose opinion was oth something and whose words carried weight.

The old adage says that had news travels fast. There some stories that are hardly to be classed as bad news, t that are nevertheless entitled to honorable mention in me speed contests. Videlicet: Once upon a time there s an old priest, Abbé Huc, who visited China and wrote book, in which he said the Yellow River had, by reason

the leveen along its banks, filled its annel until the bottom of the river a higher than the adjacent territory. are was no truth in the story; but it ok the wings of the morning and flew the uttermost parts of the earth.

Work on the Trinity

OW very many people have heard it, and how very few people ever id the book or heard of the abbe! So th the Trinity River. Dallas, Texas, is this river, a few miles above its conence with the East Fork. There has rely been a situation where a competing ter route to the sea was more clearly licated, as the doctors say, than at dles. In the center of the greatest tonbelt in the world it was actually ng strangled by the railroads. It was sposed to improve the Trinity; but in the question was raised whether se was sufficient water in the short etch down to the point where the two ks united to maintain the required oth if a lock and dam were put there. in an unhappy moment an engineer gested that if there were any doubts this point artesian wells could be ik to supply the deficiency! How

it tale spread and how it has grown and waxed fat repetition as well as distance lent enchantment! It

The very matter-offact business men of Dallas were confronted with the condition, while the theory was cutting ita fantastic tricks as clever paragraphers about the country gave it additions and much currency. Everybody smiled when the Trinity was mentioned; and so these selfsame business men went down into their pockets and dug up some sixty-six thousand dollars wherewith to construct a lock and dam to demonstrate that there was ample water in this short section of the river. This they did to everybody's satisfaction and Congress thereupon adopted the project. It was understood from the very outset that no commerce could develop until the series of locks and

darus were completed to the Gulf. There was nothing stranger in this than that there would be no commerce at Panuma cutil the ranal was completed. In a few years the improvement of the Trinity will be completed and this

Old Canal Boot Construction Yard, Delaware and Raritan Const

the people's money on ridiculous creeks. How I have heard the changes rung on these worthless creeks!

A party of Congressmen were riding round Boston Harbor some years ago. We were being shown the shipping

> and the wonderful facilities of that great port by one of the jolliest and eleverest most of the Old Bay State. We passed a curious old bulk lying in a rather muglected need of the harbor, when our guide publisd it out as the old Constitution and really grew eloquent in his resount of its heroic achievements. We were charmed !

> Then another less imaginative Bostoplan broke into explain that this was all a mistake! So far from being the Constitution, it was nothing more than an unworthy harge converted into a houseboat! Turning on this iconoclast our host shouted:

> "Well, I knew that all along; but it was serving the purpose most excellent well, and now you have converted this delightful surprise into the biggest disappointment of the morning- and that, too, simply for the sake of uninteresting

The Tonnage of the Creeks

IFIT were not for the fact that it would be doing ill service to the cause of waterway improvement, by poisoning the public conscience with palatable though thoroughly unwholesome fallacies, I would not break this insignificant-

creek idol; but I must. Let us, therefore, consider some

dry though very pertinent facts.

During the past four years Congress has passed four Rivers and Harbers appropriation bills. The total carried in those four bills for the improvement of creeks, all told, was nine hundred and one thousand dollars. These same bills carried, for all rivers and all harbors, something more than one hundred million dollars. Of this sum the creeks got something less than one per cent. During those same four years those same creeks, counting all, floated in commerce among our people a tonnage officially valued at one billion dollars.

The Ohio River runs for a thousand miles through one of the busiest valleys of this turbulent earth. We are now hurrying to completion a project there for a nine-foot depth from Pittsburgh to the Mississippi River, where it will connect with another nine-foot channel out to the Gulf. We are going to spend on this Ohio River project sixtythree million dollars and everybody applauds the enterprise, as everybody must. The tonnage of the Ohio River is about ten millions annually.

Those creeks, which cost us less than one million in four years, bear an annual commerce of nearly seven million tons. How many railroads are there in these United States that can carry a billion dollars of commerce with a trackage maintenance charge of nine hundred and one thousand dollars? Our maintenance charges at Panama, military included, are going to be some twenty-five or thirty million dollars annually.

Is there any poet now in captivity who expects to see thirty thousand million dollars of commerce pass through the Panama Canal annually? If it does not, then the creeks will show better in the comparison.

THE BUSHER COMES BACE

SAN FRANCISCO, CALIFORNIA, MAY 13. , RIEND AL: I suppose you and the rest of the boys in Bedford will be supprised to learn that I am out here, because I remember telling you when I was sold to San Francisco by the White Sox that not under no circumstances would I report here. I was pretty mad when Comiskey give me my release, because I didn't think I had been given a fair show by Callabam. I don't think so yet Al and I never will but Bill Sullivan the old White Sox catcher talked to me and told me not to pull no boost by refuseing to go where they sent me. He says You're only harting yourself. He says You must remember that this was your first time up in the big show and very less men no matter how much stuff they got can expect to make good right off the reel. He says All you need is expe-

the thing for you. So I went in and asked Comiskey for my transportation and he says That's right Boy go out there and work hard and maybe I will want you back. I teld him I hapset me but I don't hope nothing of the kind Al. I am going to see if I can't get Detroit to buy me, because I would rather live in Detroit than anywheres else. The little girl who got stuck on me this spring lives there. I gove

I told you about her Al. Her name is Violet and she is some queen. And then if I got with the Tigers I wouldn't never have to pitch against Cotth and Crawford, though I believe I maild show both of them up if I was right. They am't got much of a ball club here and hardly any good pitchers outside of me. But I don't

I will win some games if they give me any support and I will get back in the hig league and show them birds something. You know Your pal,

LOS ANGELES, CALIFORNIA, MAY 20.

AL: Well old pal I don't suppose you can find much news of this league in the papers at home so you may not know that I have been standing this league on their heads. I pitched against Oakland up home and shut them out with two hits. I made them look like suckers Al. They hadn't never saw no speed like mine and they was scared to death the

minute I cut loose. I could of pitched the last six innings with my foot and trimmed them they was so scared.

Well we come down here for a serious and I worked the second game. They got four hits and one run, and I just give them the one run. Their shortstop Johnson was on the training trip with the White Sox and of course I knowed him pretty well. So I eased up in the last inning and let him hit one. If I had of wanted to let myself out he couldn't of hit me with a board. So I am going along good and Howard our manager says he is going to use me regular. He's a pretty nice manager and not a bit sarkustic like some of them hig leaguers. I am fielding my position good and watching the bearmours to. Thank guodosse Althey ain't no Cobbe in this league and a man ain't search. of haveing his uniform stole off his back.

But listen Al I don't want to be bought by Detroit no mare. It is all off between Walet and L. Sim warn't flor ourt of gar! I suspected. She is past like them all Al. No. least. Lwrote her a letter from Chicago telling her I was sold to San Francisco and she wrote back a postcard saying comething about not haveing untiree to waste on hurbers. What do you know about that AI? Calling me a bushes. I will show them. She wasn't no good At and I figure I amwell rid of her. Good riddance is rubbish as they say.

I will let you know liew I get along and if I hear anything about loving sold or drulted. Yours truly. Two.

SAN PRANCISCO, CALIFORNIA, JULY 20.

FIRTENITAL: You will forgive use for you writing in you aftener when you hear the news I got for you. Old pal I am engaged to be married. Her name is Hazel Carney and she is some queen, Al a great big strapping girl that must weigh one hundred and sixty lise. Som in out to every game and one got stock on me from watch-

Then she writes a note to me and makes a lane and I ment her down on Market Street one night. Wir gir to a nickel show tugether and have some time. Since they are been together pretty near every events, except when I was away on the road,

Night before last the asked me U I was married and i tells her No and she says a big handsome man like I could not in laye no trouble hading a wife. I mile for I am't

SACRAMENTO, CALIFORNIA, AUGUST FRIENDAL: Well Al I got the supprise of my life night. Howard called me up after I got to my and tells me I are going back to the White Sox. Co. find out, when they sold me out here they kept a o on me and yesterday they exercised it. He told me ly have to report at anes. So I packed up as quick as I and then went down to say good-by to the kid. She all broke up and wanted to go along with me but ! her I stiden't have enough dough to get married. She she would some anyway and we could get married i but I hald her she better wait. She cried all over my a The sure is gone on me Al and I couldn't help feeling for her but I promised to send for her in October and everything will be all O. K. She asked me how much going to get in the big league and I told her I would let more money than out here because I wouldn't ; I didn't. You know me Al. I commover here to Sacramento with the club this

ing and I am linveing tonight for Chi. I will get next Tousday and I guess Callahan will work me by row. I will show them Al.
I backed up the skedule and I seen where we p

Depoil the lifth and sixth of September. I hope the let me pitch there Al. Violet goes to the games and make her sorry she give me that kind of treatment I will make them Tigers sorry they kidded me last I sin't afraid of Cobb or a them now, Al. Your pai, J

CRICAGO, ILLINOIS, AUGUS AL: Well old pal I guess I in right. Did you notic I done to them Athaletics, I ball club in the country? Violet wishes she hadn't cal

I got here last Tuesday up in the stand and watch game that afternoon. Wasl was playing here and J pitched. I was anxious to

him because I had heard a about him. Honest Al he fast as too. He shut them out, but they never wa of a hitting club. I went to the clubbouse after the and abook hands with the bunch. Kid Gless assistant manager seemed pretty glad to see me says Well have you learned something? I says Ye I have. He says Did you see the game this after says I had and he asked me what I thought of 3 I says I don't think so much of him. He says guess you ain't learned nothing then. He say was the matter with Johnson's work? I says He nothing but a fast ball.

says Yes and Rockefell got nothing but a hundre

Wall I asked Callahan i gobig to give me a chance and he says he was. But. the bench a couple of day didn't ask me to do noth nally I usked him why no says I am saving you against a good club, the At Well the Athaletics con guess you know by this ti I done to them. And I have

against Bend but I ain't :

none of them Baker did: pard all after I didn't have with Collins I let them d five blows at the papers g seven. The ers here don't more about than some old They give B: on a fly ball th ought to of only he stur

emething and they handed Oldring a twobase hit on a ball hat Weaver had to duck to get out of the way from. But I on't care nothing about reporters. I beat them Athaletics ad heat them good, five to one. Gleason slapped me on he back after the game and says Well you learned somehing after all. Rub some arnicky on your head to keep he swelling down and you may be a real pitcher yet. I ays I ain't got no swell head. He says No. If I hated yself like you do I would be a moveing-picture actor. Well I asked Callahan would be let me pitch up to Detroit nd he says Sure! He says Do you want to get revenge on hem? I says, Yes I did. He says Well you have certainly of some comeing. He says I never seen no man get worse catment than them Tigers give you last spring. I says tell they won't do it this time because I will know how to itch to them. He says How are you going to pitch : Cobb? I says I am going to feed him on my slow se. He says Well Cobb had ought to make a good meal f of that. Then we quit jokeing and he says You have sproved a hole lot and I am going to work you right along gular and if you can stand the gaff I may be able to use on in the city serious. You know Al the White Sox plays city serious every fall with the Cube and the players akes quite a lot of money. The winners gets about eight

andred dollars a peace and e losers about five hundred. e will be the winners if I have wthing to say about it. I am tickled to death at the

once of working in Detroit id I can't hardly wait till we there. Watch mysmoke Al.

Your pal, JACK. P. S. I am going over to len's flat to play cards a hile tonight. Allen is the leftinder that was on the training ip with us. He ain't got a ing, Al, and I don't see how gets by. He is married and wife a sister is visiting them. e wants to meet me but it m't do her much good, I en her out to the game today d she ain't much for looks.

STROIT, MICH., SEPTEMBER 6. TWIEND AL: I got a hole lot to write but I ain't got ich time because we are goover to Cleveland on the at at ten P. M. I made them gers like it Al just like I said would. And what do you sk Al, Violet called me up er the game and wanted to me but I will tell you about game first.

They got one hit off of me d Cobb made it a scratch gle that he beat out. If he in't of been so dam fast I uld of had a 0 hit game. At it Weaver could of threw him t if he had of started after ball in time. Crawford in't get nothing like a hit and hiffed him once. I give two lks both of them to Bush but is such a little guy that you 't pitch to him.

When I was warming up bee the game Callahan was nding beside me and pretty m Jennings come over. Jen-

gasays You ain't going to pitch that bird are you? And liahan said Yes he was. Then Jennings says I wish wouldn't because my boys is all tired out and can't the bases. Callahan says They won't get no chance lay. No, says Jennings I suppose not. I suppose he I walk them all and they won't have to run. Callahan's He won't give no bases on balls, he says. But you ter tell your gang that he is liable to bean them and they ter stay away from the plate. Jennings says He won't er hurt my boys by beaning them. Then I cut in. Nor neither, I says. Callahan laughs at that so I guess I st of pulled a pretty good one. Jennings didn't have comeback so he walks away.

Then Cobb come over and asked if I was going to work. llahan told him Yes. Cobb says How many innings? liahan says All the way. Then Cobb says Be a good fel-Cal and take him out early. I am lame and can't run. atts in then and said Don't worry, Cobb. You won't ve to run because we have got a catcher who can hold m third strikes. Callahan laughed again and says to You sure did learn something out on that Coast.

Well I walked Bush right off the real and they all cun to holler on the Detroit beach There he goes again. Vitt come up and Jennings yells Leave your but in the bag Osker. He can't get them over. But I got them over for that bird all O. K. and he pops out trying to bunt. And then I whiffed Crawford. He starts off with a foul that had me scared for a minute because it was pretty close to the foul line and it went clear out of the park. But he missed a spitter a foot and then I supprised them Al. I give him a slow ball and I honestly had to laugh to see him lunge for it. I bet he must of strained himself. He throwed his bat away like he was mad and I guess he was. Cobb comes pranceing up like he always does and yells Give me that slow one Boy. So I says All right. But I fooled him, Instead of giveing him a slow one like I said I was going to I handed him a spitter. He hit it all right but it was a line drive right in Chase's hands. He says Pretty lucky Boy but I will get you next time. I come right back at him. I says Yes you will.

the sixth inning Callahan yells from the bench to Jennings What do you think of him now? And Jennings didn't say nothing. What could be of said?

Cobb makes their one hit in the eighth. He never would of made it if Schalk had of let me throw him spitters instead of fast ones. At that Weaver ought to of threw him out.

Well Al I had them going like that all through. About

f Am a Brillian and the Big Rube With Me is Nothing has a Pitcher

> Anyway they didn't score and we made a monkey out of Dubuque, or whatever his name is.

ARTHUR.

Well Ai I got back to the hotel and snuck down the street a ways and had a couple of beers before supper. So I come to the supper table late and Walsh tells me they had been several phone calls for me. I go down to the desk and they tell me to call up a certain number. So I called up and they charged me a nickel for it. A girl's voice answers the phone and I says Was they some one there that wanted to talk to Jack Keefe? She says You bet they is. She says Don't you know me, Jack? This is Violet. Well, you could of knocked me down with a peace of thread. I says What do you want? She says Why I want to see you. I says Well you can't see me. She says Why what's the matter, Jack? What have I did that you should be sore at me? I says I guess you know all right. You called me a busher. She says Why I didn't do nothing of the kind. I says Yes you did. on that postcard. She says I didn't write you no postcard.

Then we argued along for a while and she swore up and down that she didn't write me no postcard or call me no busher. I says Well then why didn't you write me a letter when I was in Frisco? She says she had lost my address. Well Al I don't know if she was telling me the truth or not but maybe she didn't write that postcard after all. She was crying over the telephone so I says Well it is too late for I and you to get together because I am engaged to be married. Then she screamed and I hang up the receiver. She must of called back two or three times because they was calling my name round the hotel but I wouldn't go near the phone. You know me Al.

Well when I hang up and went back to finish my supper the dining room was locked. So I had to go out and buy myself a sandwich. They soaked me fifteen cents for a sandwich and a cup of coffee so with the nickel for the phone I am out twenty cents altogether for nothing. But then I would of had to tip the waiter in the hotel a dime.

Well Al I must close and catch the boat. I expect a letter from Hazel in Cleveland and maybe Violet will write to me too. She is stuck on me all right Al. I can see that, And I don't believe she could of wrote that postcard after Yours truly,

BOSTON, MASSACHUSETTS, SEPTEMBER 12. OLD PAL: Well Al I got a letter from Hazel in Cleveland and she is comeing to Chi in October for the city serious. She asked me to send her a hundred dollars for her fare and to buy some cloths with. I sent her thirty dollars for her

fare and told her she could wait till she got to Chi to buy her cloths. She said she would give me the money back as soon as she seen me but she is a little short now because one of her girl friends borrowed fifty off of her. I guess she must be pretty soft-hearted Al. I hope you and Berths can come up for the wedding because I would like to have you stand up with me.

I all so got a letter from Violet and they was blots all over it like she had been crying. She swore she did not write that postcard and said she would die if I didn't believe her. She wants to know who the lucky girl is who I am sngaged to be married to. I believe her Al when she says she did not write that postcard but it is too late now. I will let you know the date of my wedding as soon as I find out.

I guess you seen what I done in Cleveland and here. Allen was going awful bad in Cleveland and I relieved him in the eighth when we had a lead of two runs. I put them out in one-two-three order in the nighth but had hard work in the ninth due to rotten support. I walked Johnston and Chapman and Turner sacrificed them abend. Jackson come up then and I had two strikes on him. I could of whiffed him but Schalk makes me give him a fast one when I wanted to give him a slow one. He hit it. to Berger and Johnston ought to of been threw out at the plate but Berger fumbles and then has to make the play at first base. He got Jackson all O. K. but they was only one run behind then and Chapman was on third base. Lajoie was up next

and Callahan sends out word for me to walk him. I thought that was rotten manageing because Lajoie or no one else can hit me when I want to cut loose. So after I give him two bad balls I tried to slip over a strike on him but the lucky stiff hit it on a line to Weaver. Anyway the game was over and I felt pretty good. But Callaban don't appresiate good work Al. He give me a call in the club-house and said if I ever disobeyed his orders again he would suspend me without no pay and lick me too. Honest Al it was all I could do to keep from wrapping his jaw but. Gleason winks at me not to do nothing.

I worked the second game here and give them three hits two of which was bunts that Lord ought to of eat up. I

got better support in Frisco than I been getting here Al. But I don't care. The Boston bunch couldn't of hit me with a showel and we beat them two to nothing. I worked against Wood at that. They call him Smoky Joe and they

say he has got a lot of speed.

WILLIAM BOYL

Boston is some town, Al, and I wish you and Bertha could come here sometime. I went down to the wharf this morning and seen them unload the fish. They must of been a million of them but I didn't have time to count them. Every one of them was five or six times as hig as a blue gill.

Violet asked me what would be my address in New York.
City so I am dropping her a post card to let her know all
though I don't know what good it will do her. I certainly
won't start no correspondents with her now that I am
engaged to be married. Yours truly, JACK.

NEW YORK, NEW YORK, SEPTEMBER 16.

FRIEND AL: I opened the serious here and beat them easy but I know you must of saw about it in the Chi papers. At that they don't give me no fair show in the Chi papers. One of the boys bought one here and I seen in it where I was lucky to win that game in Cleveland. If I knowed which one of them reporters wrote that I would punch his jaw.

Al I told you Boston was some town but this is the real one. I never seen nothing like it and I been going some since we got here. I walked down Broadway the Main Street last night and I run into a couple of the ballplayers and they took me to what they call the Garden but it ain't like the gardens at home because this one is indoors. We sat down to a table and had several drinks. Pretty soon one of the boys asked me if I was broke and I says No, why? He says You better get some lubricateing oil and loosen up. I don't know what he meant but pretty soon when we had had a lot of drinks the waiter brings a check and hands it to me. It was for one dollar. I says Oh I ain't paying for all of them. The waiter says This is just for that last drink.

I thought the other boys would make a holler but they didn't say nothing. So I give him a dollar bill and even then he didn't net satisfied so I asked him what he was waiting for and he said Oh nothing, kind of away. I was going to bust him but the boys give me the sign to shut up and not to say nothing. I excused myself pretty soon hecause I wanted to get some air. I give my check for my hat to a boy and he brought my hat and I started going and he says Haven't you forgot something? I guess he must of thought I was wearing a overcost.

Then I went down the Main Street again and some man stopped me and asked me did I want to gu to the show. He said he had a ticket. I asked him what show and he said the Follies. I never heard of it but I told him I would go if he had a ticket to spare. He says I will spare you this one for three dollars. I says You must take me for some boob. He says No I wouldn't insuit no hoob. So I walks on but if he had of insuited me I would of busted him.

I went back to the hotel then and run into Kid Gleasen. He asked me to take a walk with him so out I go again. We went to the corner and he bought me a beer. He don't drink nothing but pop himself. The two drinks was only ten cents so I says This is the place for me. He says Where have you been? and I told him about paying one dollar for three drinks. He says I see I will have to take charge of you. Don't go round with them ballplayers no more.

When you want to go out and see the sights come to me and I will stear you. So tenight he is going to stear me. I will write to you from Philadelphia.

Your pal, JACK.

PHILADELPHIA, PA., SEPTEMBER 19. FRIEND AL: They won't be no game here today because it is raining. all been loafing round the hotel all day and I am glad of it because I got all tired out over in New York City. I and Kid Gleason went round together the last couple of nights over there and he wouldn't let me spend no money. I seen a lot of girls that I would of liked to of got aquainted with but he wouldn't even let me answer them when they spoke to me. We run in to a couple of peaches last night and they had us spotted too. One of them says I'll bet you're a couple of bullplayers. But Kid says You lose your bet. I am a bellhop and the big rube with me is nothing but a pitcher.

One of them says What are you trying to do kid somebody? He says Go home and get some susp and remove your disguise from your face. I didn't think he ought to talk like that to them and I called him about it and said maybe they was lonesome and it wouldn't hurt none if we treated them to a soda or something. But he says Lonesome! If I don't get you away from here they will steal everything you got. They won't even leave you your tast ball. So we left them and he took me to a picture show. It was some Callfornia pictures and they made me think of Hazel so when I got back to the hotel I sent her three postcards.

Glesson made me go to my room at ten o'clock both nights but I was pretty tired anyway because he had walked me all over town. I guess we must of saw twenty shows. He says I would take you to the grand opera only it would be throwing money away because we can hear Ed Walsh for nothing. Walsh has got some voice AI a loud high tenor.

Tomorrow is Sunday and we have a double header Monday on account of the rain today. I thought sure I would get another chance to heat the Athaletics and I asked Callahan if he was going to pitch me here but he said he thought he would save me to work against Johnson in Washington. So you see Al he must figure I am about the best he has got. I'll best him Al if they get a couple of runs behind me.

Yours truly, JACK.

P. S. They was a letter here from Violet and it pretty near made me feel like crying. I wish they was two of me so both them girls could be happy.

WASHINGTON, D. C., SEPTEMBER 22.

DEAR OLD AL: Well Al here I am in the capital of the old United States. We got in last night and I been walking round town all morning. But I didn't tire myself out because I am going to pitch against Johnson this afternoon.

This is the prettiest town I ever seen but I believe they is more colored people here than they is in Evansville or Chi. I seen the White House and the Monumunt. They say that Bill Sullivan and Gabby St. once catched a baseball that was threw off of the top of the Monumunt but I bet they couldn't catch it if I throwed it.

I was in to breakfast this morning with Gleason and Bodie and Weaver and Fournier. Gleason says I'm supprised that you ain't sick in bed today. I says Why?

He says Most of our pitchers gets sick when Cal tells them they are going to work against Johnson. He says Here's these other fellows all feeling pretty sick this morning and they ain't even pitchers. All they have to do is hit against him but it looks like as if Cal would have to send substitutes in for them. Bodie is complaining of a sore arm which he must of strained drawing to two-card flushes. Fournier and Weaver have strained their legs doing the tango dance. Nothing could cure them except to hear that hig Walter had got throwed out of his machine and wouldn't be able to pitch against us this serious.

I says I feel O. K. and I ain't afraid to pitch against Johnson and I ain't afraid to hit against him neither. Then Weaver says Have you ever saw him work? Yes, I says, I seen him in Chi. Then Weaver says Well If you have saw him work and ain't afraid to hit against him I'll bet you would go down to Wall Street and holler Hurrah for Rossevelt. I says No I wouldn't do that but I ain't afraid of no pitcher and what is more if you get me a couple of runs I'll beat him. Then Fournier says Oh we will get you a couple of runs all right. He says That's just as easy as catching whales with a angleworm.

Well Al I must close and go in and get some lunch. My arm feels great and they will have to go some to best me Johnson or no Johnson. Your pal, Jack.

Rab Jame Araicky on Your Head and You May be a Real Pitcher Yet

WASHINGTON, D. C., SEPTEMBER 22.

FRIEND AL: Well I guess you know by this time the they didn't get no two runs for me, only one, but I had him just the same. I heat him one to nothing and Callaha was so pleased that he give me a ticket to the theater, just got back from there and it is pretty late and I show have wrote you one letter today but I am going to show and tell you about it.

It was cloudy before the game started and whm | up warming up I made the remark to Callahan that the date day ought to make my speed good. He says Ye wild

course it will handicap Johnson.

While Washington was takeing their practice ther we conchers Schaefer and Altrock got out on the infeld at cut up and I pretty near busted laughing at them. The certainty is funny Al. Callahun asked me what we laughing at and I told him and he says That's the first ins I ever seen a pitcher laugh when he was going to set against Johnson. He says Griffith is a pretty good felous to give us something to laugh at before he shoots that go at us.

I warmed up good and told Schalk not to ask meless spitter much because my fast one looked faster than less seen it. He says it won't make much difference what an pitch today. I says Oh, yes, it will because Calaboration to show him he didn't make no mistake. Then Gosso, says No he didn't make no mistake. Wasteing Units or Scotty would of been a mistake in this game.

Well, Johnson whiffs Weaver and Chase and man Lord pop out in the first inning. I walked their first pa but I didn't give Milan nothing to bunt and findly in flied out. And then I whiffed the next two. On the left Callahan says That's the way, boy. Keep that up and so

got a chance.

Johnson had fanned four of us when I come up with two out in the third inning and he whiffed me to. I feeled us though that if I had ever of got a good hold of I would a knocked out of the park. In the first seven included didn't have a hit off of him. They had got five or as him ones off of me and I had walked two or three, but I all loose with all I had when they was men on and they read to do nothing with me. The only reason I walked so such was because my fast one was jumping so. Honest All the see fast that Evens the umpire couldn't see it half the loos and he called a lot of balls that was right over the best

Well I come up in the eighth with two out and the sow still nothing and nothing. I had whiffed the second to as well as the first but it was account of Evans using one on me. The eighth started with Shanks multing the ball off of Bodie. It was way out by the fence so here two bases on it and he went to third while they was through Berger out. Then Schalk whiffed.

Callahan says Go up and try to meet one Jack. It mell

whilf this time Al. He gets two struston me with fast ones and then I passed up two bad ones. I took my health at the next one and slapped it over the base. I guess I could of made two laws on it but I didn't want to the mystlon. Anyway Bodie scored and I had the best. And my bit was the only one or got off of him so I guess he is a paster good pitcher after all Al.

They filled up the bases on me will one out in the ninth but it was prodark then and I made McBride and the catcher look like suckers with my appro-

I felt so good after the game that I drunk one of them pink cockuns iden't know what their name is. And the I sent a postcard to poor little Violent don't care nothing about her but it don't me none to try and cheer but once in a while. We leave here Thursdernight for home and they had ought to two or three letters there for me that Hazel because I haven't heard from we lately. She must of lost my road address. Your pal,

P. S. I forgot to tell you what Callhan said after the game. He said I to a real pitcher now and he is going to us me in the city serious. If he does At m will beat them Cube sure.

CHICAGO, ILLINOIS, SEPTEMBER I:

FRIEND AL: They wasn't no left
here at all from Hazel and I guest
must of been sick. Or maybe she de't
think it was worth while writeing = 1/4
as she is comeing next week.

I want to ask you to do me a fator hand that is to see if you can find not house down there. I will want to me in with Mrs. Keefe, don't that we

(Continued on Page 61)

By Edwin Lefèvre CHEAP AT A MILLION LLUSTRATED BY WILL GREEK

H. MERRIWETHER drove to the house of mystery in his motor, told the chauffeur to wait and rang the al. One of the overintelligent-looking otnien opened the door.

"I wish to see Mr. - whoever is master this house."

"Yes, sir!"

The footman led the way. At the door the library he knocked twice sharply. en after a pause once, and then twice ain. He waited; and presently, having idently heard some answer not audible the financier, he opened the door and

"Mr. E. H. Merriwether!"

Why had there been any necessity for mals? Why such cheap theatrical clapip? To make him think things? These estions in Mr. Merriwether's mind showed at the mysterious master of the house ew the advantage of suggesting the imrtant sense of difference.

"Good morning, sir."

"Good morning," answered E. H. Merri-ther, and looked about the room.

It began to irritate him. The man inwified the feeling by speaking very delibstely, as one to whom time is no object: "Pray be seated, Mr. Merriwether."

"I am a very busy man," began the autocrat of fifteen susand miles of railroad.

"Sit down anyhow," imperturbably suggested the man. The autocrat sat down. He said: "But please understand that."

"I won't keep you any longer because you are sitting.

all we get down to business?" "You."

"Mr. Merriwether"-the man spoke almost dreamlylo you know why I asked you to call today at eleven?"

"No." "Because when you were here yesterday it was after nking hours."

"And?" The little exar was in a hurry to finish.

"You, Mr. Merriwether, are one of those fortunate rtals about whom the newspapers do not lie."

Oh, am I? I take it you haven't seen a newspaper in elve years." Mr. Merriwether, after all, was an Amern. His sense of humor helped to make him great. "I've read every line that has ever been printed about

4 I had to, in order to study you exhaustively. I find at you are acknowledged by both friends and foes to be intelligent man." 'Ob, yes!"

'A very intelligent man!" continued the man,

"And therefore?" said the very intelligent man.

"And therefore I now ask you to give me one million llars.

Mr. E. H. Merriwether never so much as batted an eye-He kept his eyes fixed on the stranger's eyes. He sated, a trifle impatiently: "And?"
"A certified check will do."

"Come to the point-I am a busy man," said Mr. erriwether.

The man looked at the little financier admiringly. Then said: "You mean you wish to know why you should "the million, or what you will get for it?" "Either! Both!"

"You should give it because it is I who ask it. You will for it what is very, very cheap at a million."

"My dear sir, we'd do business quicker if you'd play owdown."

Now that it was a matter of money, of paying, of trading, m's father felt a great sense of relief. Still, there was m's unhappiness to consider. Poor boy!

I want you to give me a mill 'e you a daughter-in-law."

"You mean you will not give me a daughter-in-law if I to you a million - don't you?"

"I am in the habit of meaning what I say. The sooner s learn that, the quicker we'll close the deal. I mean at for a million dollars I'll give you a daughter-in-law." Mr. Merriwether shook his head. It was plainly to be no n his face that every moment spent in this room was and waste of time.

"Isn't it worth a million to you?" asked the man, as if

knew it was.

Mr. Merriwether proceeded to look as though it were with even less than a Santo Domingo mining concession. ien he said, with finality: "No!"

The man rose.

"I am Going to Link You With This Whip!"

"Then" - he spoke indifferently - "come back when it is. I'll ask you to excuse me. 1, also, am a busy man. Good

Mr. Merriwether rose and bowed. He looked straight into the man's very shrewd eyes, smiled very slightly-and sat down again.

"Do you mean," he asked very pleasantly, for his bluff had been called, "Miss Calderon?"

The man sat down.

"Oh, no!" he answered unendlingly.

"No? Then?" Mr. Merriwether was so surprised that he forgot not to show it.

"I am sorry you are a busy man, because what I have to say cannot be hurried. First, you must chase from your mind all thoughts of Wall Street, high finance, railroad systems and fill it with love!"

Mr. Merriwether looked alarmed. Would it all end with a Hiblical text and an exhortation to endow some Home?

"You can do this," pursued the man imperturbably, "by thinking of your son Tom. He is your only son. You should love him. Once your mind is attuned to thoughts of love, you will be able to understand me more easily. Concentrate on love!"

The man leaned back in his chair as though he were certain the attuning process would consume an bour, this being, alsa! a Wall Street man; but Merriwether said very promptly:

"I am ready for Chapter II." "I doubt it. Love! The love of father fer son, of son for mother, of son for wife, of son for father and so on!" "I understand. My mind works quickly. Go on!"

"Do you by any chance happen to know that your son is in love?"

"Yes. Where is the girl?" "It isn't the girl. It's just girl." "Oh, quit vaudevilling!

"There is no girl who is the girl. There never was. There doesn't have to be any!"

Quite obviously this man was a lunstlewith the eyes of a particularly sane person. If there was no girl Tom was in no danger of marriage. A million for not marrying an undesirable person - yes; but a million for a daughter-in-law, when Tom was not in love!

"Only," thought Mr. Merriwether, "in pick her I don't have to pay."

"And yet," said the man musingly, "Tom loves her!

Mr. Merriwether's perplexity was fast rising to the dignity of anger.

"If there had been a girl of Tom's own class," the man went on, as if talking to himself, "why shouldn't he have been seen in public with ber?" Mr. Merriwether was listening now with his soul. "And if the girl were of the other class, that financial geniuses, alas! sometimes have to accept for daughters-in-law-a nice, vivacious choruslady, or a refined Reno graduate, or worseshe would have insisted on being seen in public with Tom, to show her power and to raise the paternal bid-price for a trip to Europe-alone!"

The man ceased to speak and began to nod his head slowly, his gaze on the rug at his feet. Mr. Merriwether could stand it no longer.

"If there is no girl, what in blazes do I get for my million?"

Your pick of eight!"

"Eight what?"

"Eight perfect daughters-in-law!"

A thought shot through Mr. Merriwether's mind: Was any form of insanity

He looked at the lunatic. The eyes were sane-cold, shrewd, mindreading eyes, full of a sardonic humor.

"They are all," added the man us if he wished to dispel unworthy suspicion, "in love,"

"With Tom?"

"With love-like Tom!"
"With love-like Tom!" helplessly repeated Mr. E. H. Merriwether.

Your mind"- the man spoke very slowly and distinctly, as if he wished to deprive Mr. Merriwether of every excuse for not understanding him-"does not seem to be working this morning with its usual efficiency!

"No!" admitted Mr. Marriwether sadly, "If you'd only use words of one syllable I think I could follow you

"It isn't that. It is that your mind was not attuned in the beginning to the thought of love, and therefore could not follow my words. You compel me to spend time in explaining the obvious. Listen! If you wish Tom to become the heir to your name, to your railroad, to your work, and to all the dreams you have dreamed about your work and about your son; if you want him to be your successor, to continue your work, to perpetuate the name and influence of Merriwether in his country-I say, if you wish all this he must do one thing and you must see that he does it. And that one thing, Mr. Merriwether, is for him to marry wisely. Do you get that?"

"Yes," amwered Mr. Merriwether very simply.

"If he doesn't it will be death to your hopes a tragic break in the Merriwether succession. No; don't shake your head. Admit it. Face it frankly. I know it. I know that you also know it. Can you expect me to believe that you want Tom to be the fool husband of a fool girl, whose influence on him

"Tom isn't that kind," interrupted E. H. Merriwether. "All men are that kind. Does history record the case of a man, greater even than E. H. Merriwether, who when it came to women was an utter ase? Yes, of a thousand; in fact, the stronger the man the weaker she makes himthe better his brain the worse his folly. And the cure? When an intelligent man realizes that he is a hopeless ass over one woman be realizes that his only escape is by

the saicide route. No! It's much cheaper for you to pay the million. Oblige me by thinking. Isn't it cheaper to pay a million?"

He held up a silencing hand, as though he wished Mr. Merriwether to think for a full hour of the bargain he was getting. Mr. Merriwether thoughtquickly and accurately as was his wont. And he admitted to himself that it was indeed cheap at a million. But there must ved. Pro ises, however plausible, are no more to be capitalized blindly than threats. It depends on who promises and why; and also on what is promised. He thought of offering a smaller sum and of going through the usual preliminaries of a trade, but decided to be frank.

"If you can deliver the goods I'll pay the million." And after a pause he added: "Gladly!"

You Will Love Her for Herself, as Well as for Tom's Jake"

"I banked on that when I decided you ought to contribute a million to our fund," said the man simply. "I studied you and your fortune and your vulnerability, and I decided to attack via Tom. This was easier and cheaper than a stock-market campaign."

The man somehow looked as though he had said all that was necessary; but Mr. Merriwether reminded him:

"You must prove your ability to deliver the goods."

"I thought"-the man seemed mildly surprised -- "we had."

"No; the million hasn't stirred."

"You are a brave man, Mr. Merriwether."

Mr. Merriwether laughed and said:

"What should I fear? People don't murder a man like me and get away with it - not when the motive is money. Political assassination, perhaps; but not for a few dollars-especially when my beirs would spend millions to see that justice did not miscarry." He shook his head smilingly.

"My dear sir, when we decided to go into the gold-mining business

"Gold-mining business!"

"Exactly! We thought to save time and effort by getting our gold already coined. Our general staff studied various methods the ticker, for instance, and legislative attacks on your roads; but we went back to Tom. It is, of course, nearly as stupid to overestimate as to underestimate one's opponent; so, while we provided against every contingency arising from your undoubted possession of a resourceful and fearless mind, we also thought-please take note. That you might display stupidity; and we prepared for it. Such as, for instance, in case you pointblank said No! We have also provided ways of preventing you and your unemptured millions from burting us. Of course we could make the stock market pay us for the trouble of kidnaping you or of murdering you. Don't you see clearly what you would do if you were is my place?"

"Oh, yes—I see it clearly; but I don't believe you could

do what I could in your place!"

Nobody is free from vanity, for everybody seems to be a natural monopolist when it comes to brains. You are kidnaped at this very moment, aren't you?"

"People know I am here

"Oh, yes! We expect to have you telephone McWayne presently not to expect you to lunch and that we have extended every facility to his detectives for having this house under surveillance. We kidnaped the great Garrettson and kept him out of reach of the great world of finance long enough to enable us to cash in. Not only that, but he never told how we did it. You remember when Steel

"You didn't do that!" exclaimed E. H. Merriwether, "Oh, yes, we did; and I'll tell you how." And the man

briefly outlined the case for him.

E. H. Merriwether listened with much interest. When the man made an end of speaking the financier shook his head skeptically, which made the man ask:

You don't believe it?"

"No!" answered Mr. Merriwether.

"Nevertheless it is so. We also might have engineered in your case some deal such as that by which we compelled Ashton Welles to disgurge some of the money he had no business to have." And he proceeded to enlighten the financier.

"Very clever!" said Mr. Merriwether.

"Rather neat!" modestly acquiesced the man. "Sup-pose we had decided to kidnap you? The first thing to do is to get you here. Well, you are here.'

"How will you make money by that?" soked the

financier, smiling.

"We don't expect to. We have not planned to make money by kidnaping you. Nevertheless you must admit it can be made a very expensive matter for you. But please let me kidnap you without interruption!"

"I beg your pardon!" said Mr. Merriwether gravely. It struck him that the possession of a sense of humor makes a crook ten times more dangerous. made the reporter Tully really formidable.

"We assume that you foresaw the danger to yourself in coming alone to this house. You'd employ private detectives to watch it at ten dollars a day a man, exactly as you have had your son watched the moment we decided it was time for you to begin the watching. McWayne, your efficient private secretary, is ready to move to your rescue. I don't see what else you could have done to protect yourself that we have not provided for."

"The police!" mildly suggested Mr. Merriwether.

"And the reporters!" mocked the man, "Pshaw! Weknow what we are doing. Why, we have rehearsed your kidnaping and even your death. Our ablest members have in turn impersonated you - put themselves in were place

"I Sam Ask Tan to Gree Me One Million Bellars"

and fought us, on the principle of the German army maneuvera. I will not bore you with more details and I admit that the human mind cannot foresee accidents; but we have studied how your mind would work. Suppose you assume that you are kidnaped and beyond the possibility of help from your friends. Shall I tell you what we have done to make Tom marry one of our eight desirable candidates?"

"If you still wish that million,"

"Having decided to attack through Tom we studied him and his ancestry on both sides. We easily learned that he had never bad a serious love affair, and that he was imaginative and adventurous like yourself. There were many young women who would have liked to become your daughter-in-law-too many. That was Tom's trouble. But our problem was really made easier by that. We simply had to turn his thoughts to love and to one girl. We therefore did."

How?

We got him here. I piqued his curjosity and made the affair an extraordinary one by saying all we wished him to do was to answer one question. As we had rather expected, he would not come; but, of course, we had foreseen that, and so we got him here in one of our own taxicabs."

"How"

We telephoned him the doctor said be should come instantly and that you were not really in danger. We don't believe to lies; but we took pains that no other cab was in front of the club when we telephoned him from the corner drug stere. Attention to details, my dear sir, always brings home the bacon. Having roused the spirit of adventure in a remarkable way I then asked bim the great question. What do you think it was?"

Tom's father shook his head.

"It was this: Where did you spend your summer at the end of your Freshman year? He told me. Then I gave him a box made to order for me by a French expert, which would deceive other experts so long as we did not try to well it. Anybody can imitate the gold work of any period. In all the museums of the world you will find fakes. Attention to details! I was prepared to have him show that box to local experts. I assumed he would do so, be and, therefore, intelligently curious."

"Box with what?" asked Mr. Merriwether, also intelli-

gently curious:

"Wait! When your son told me where he spent his summer at the end of his Freshman year I knew he was then about nineteen-too young to think of marriage but old enough to think of love. He had for the first time in his life heen free from home influences and direct parental supervision. He was bound to regard himself as a man of the world and think of innocent flirtations as a manly art. Being in that frame of mind, and at the same time being a nive, rich, good-looking chap, all the girls would naturally make a dead set for him. Their numbers would keep him from having one love affair,

"All love affairs at twenty are much to same. A boy always begins by being a love with love. Indeed I believe tweety year love to be exclusively a literary pesion-that is, boys get it from reading about it. Of course I studied time, period locality and manifold probabilities; grill therefore. I sent him on a mission that aggested love-love for the one girl that fur intended him to love and to marry. I order to fix, accentuate and accelerate is love-thinking I used the perfume of sum peas."

"How does that work?"

"I picked out sweet pear because the are found everywhere. Their old strong and characteristic. He must have inhaled that odor thousands of times view he was flirting with pretty girls the summer he spent at Oleander Point with Data Bonner.

"Yes; but about suggesting -

"I advise you to read up on the py chology of odor associations. You use learn that there is a very close relation between the olfactory sense and the deep to love. Oliver Wendell Holmes declard that memory, imagination, old sentions and associations are more readily reader through the sense of smell than by disc. any other channel; and, also, that oldtory impressions tend to be associated vid a sum-total of feeling-tone. This has less known for thousands of years.

'A very interesting paper was writer by Mackenzie, of Johns Hopkins. If yo read it you will know more than I can so take the time to tell you. The Ories understands the value of perfumes in levmaking, and I could tell you among things; but I will refer you to Cabana Dadisett, Hobbes, Jaworski, Iwaniv.

Schiff, Wolff and Zwaardemaker. If you wish, my we retary will prepare an exhaustive bibliography of 10 subject for you.

"No, thanks," said Mr. Merriwether. "But I still had understand

The man sighed. Then he said:

"I'll tell you, of course." He then told Tom's latter about the message in the dark that Tom had carried "But he couldn't possibly believe it!" exclaimed Mr.

Morriwether.

"No: he couldn't -but he did. Of course I have taken you behind the scenes-that is, I have opened your opened and turned your head in the proper direction and bild firmly there and shouted Look! And of course you so the machinery standing still and you can't imagin 10 motion. You are not so imaginative as I though no

"Huh!" said E. H. Merriwether thoughtfully. The after a brief pause he said: "I see the wheels revolve.

Ingenious!"

"More than that practical! My object in having Tom fall in love with love, suggesting that there was me girl born to be his bride, accontuated by my use of the sweet-peas odor as a leitmotif, was to have something to offer you which would be cheap at a million. The next so was to make Tom do foolish things-for effect on / First, to make you fear Tom was crazy. I had a girl who knew young Waters talk to him about Tom's new all alarming queerpess and suggest that he telephone to Ma E. H. Merriwether,

"Of course Waters wouldn't telephone and of course did. And, of course, if you had disbelieved or suspend you would have sent for young Mr. Waters and be would have denied the telephone but admitted the quer action of Tom and the fact that people were talking about their That would have allayed any suspicion you might have entertained. So I stage-managed the opera scene and the Boston trip to make you fear the worst. In that frame of mind you could be induced to come here voluntarily. sent Tully to you. You had to come!"

"Very clever!" said Mr. Merriwether with a thoughtid

absence of enthusiasm.

"Therefore," continued the man as if he had not hear the other's interpolation, "your son, being (all of the thought of love and, even worse, of marrying the mile that Fate selected for him five million years ago, is to? ready to marry any girl that smells of sweet peas. We thought that, instead of vulgarly extracting the talks from you by torture or threats, we would place you is exdebt by perpetuating the Merriwether dynasty. Henthe preparation of eight very nice girls-three of there your own set, three others children of people you know. 522 the remaining two equally desirable but less historical it were."

"Who are they?" If Mr. Merriwether was to pay million he might as well see the label.

"Cynthia, Agnes and Isabel, daughters respectively of ordon Hammersly, William Murray and Vanderpoel loodford. Any objections?"

"No; but you can't

"Yes, I can. Also, Louise Emlen, daughter of Murbury mien, the lawyer

"He's a crook!" interrupted Mr. Merriwether.

"He doubtless interfered with one of your deals; I see ou respect him. He's a crank, but she is a brick. And a liss Lythgoe, daughter of Professor Lythgoe, of Columa-themost beautiful girl in New York. Ramona Ogden; g father is Doctor Ogden, the lung specialist; her mother as a Jewess. The remaining two are of humble birth. at all of them are bealthy and beautiful, of good ancesy, plenty of honesty, brains, and, above all, imaginative. ny one of them will not only make Tom happy but will ake him a worthy successor of a great man. And such andchildren as they will give you! I envy you!"

The man spoke with such fervent sincerity that E. H. erriwether merely said:

'It is a risky business, even though the chances uppear

"That's why we ask one million dollars-because we we eliminated the risk. Very cheap. Are you ready?"

"Yes," said Mr. Merriwether grimly. "Then, will you kindly

"Yes; I will kindly tell you that you are a damned fool! ou've wasted my time. I'm going to my office, and if I e't have you put in jail it will be because I don't want e publicity. But don't push me too far or I'll do it anyw!" And Mr. E. H. Merriwether rose.

"Sit down!" said the man, with a pleasant smile.

"Go to hell!" snarled the exar of the Pacific and Southstern, and looked at the man with the eyes that Sam arps once said reminded him of a mink's when it kills the sheer love of killing.

For all reply the man clapped his hands sharply twice. ur men-the overintelligent-looking footmen-came on behind the heavy plush portieres. Also, the asceticsking man who had held the glass of acid in the taxicab d had brought Tom into the house the first time. The estic-looking man held a cornet to his lips, and his lungs

re filled with still unblown blasts.

Three weeks ago, Mr. Merriwether, "explained the mysinus master of the house, "this worthy artist began to actice on his beautiful instrument at exactly this time every ming. This was in anticipation of the morning when you ould be here—the idea being to drown your cries. The ighbors have complained and I have premised to play plasimo; but a few loud blasts, which will do the trick, will be given. Attention to details, Mr. Merriwether! Ready!" The cornetist inflated his lungs and held the cornet to his

The footmen seized Mr. erriwether by the arms and s, one man to each limb.

"Doctor!" called the master. A sixth man came from behind e portières. He had some tin ns in his hand - plainly labeled rer and also a cylinder of mpressed laughing gas and an wher.

"Expert! Anesthetics!" said man curtly to Mr. Merrither. "We propose to take u out of this house if we kidpyou. If we decide to kill you have arranged to do it right re at home. I think we'll kidp you. A week or two will de you amenable to reason. e realize, of course, that every y you spend under our hospisle roof will make it a little bit re difficult to get the million o our clutches. Would you e to know how we can kidnap and get away with it?"

"Yes," replied Mr. E. H. erriwether with a pleasant

"Tell our Mr. E. H. Merri-ther to come in," said the man the cornetist, who thereupon appeared and presently remed, followed by a man made toresemble the great financier. The task was rendered easy by innous flat-brimmed hat, th the crown like a truncated ne, so familiar to newspaper iders through the cartoonists' orts. The resemblance was 4 striking enough to deceive at se range, but it probably ald work at a distance.

"Walklike him!" commanded

e master.

The fake Mr. Merriwether walked up and down the room with the curious swaggering, jockeylike jauntiness of the little railroad man. From time to time he snapped his fingers impatiently in the same characteristic way Mr. E. H. Merriwether almost always used when giving an order to subordinates.

"That will do!" said the man, with a broad grin at the impersonator of the little financial giant. The double left

the room-still walking & la E. H. M.

"I have had that man-an actor of about your build with a gift of mimicry-coached for weeks to imitate you. We told him it was a joke and guaranteed him an appearance before the most select audience in New York at one of Mrs. Garrettson's world-famous functions. We pledged him to a secreey so natural, under the circumstances, as to rouse no suspicions. A few minutes ago we sent a footman to tell your chauffeur to go away and return at one. He wouldn't do it. The footman said the boss said so. Your man retorted that he took orders from only the boss himself-especially when countermanding previous orders.

"So our Mr. Merriwether went out to the front door, yelled 'One!' in your voice and snapped his finger at the intelligent chauffeur, who thereupon best it. But the sleuth remains. It makes us laugh! But, after all, since we have provided for him, it would be a pity not to go

through the entire program. Does this bore you?"
"Must I tell the truth?" asked Mr. Merriwether.

"I can stand more." In point of fact Mr. Merriwether was sure the situation was serious for him. That is why

he joked about it.

Over six months ago we opened an antique shop on Fourth Avenue. We had the usual truck. Also we have had this antique dealer—who is your humble servant—go from house to house on the Avenue offering to buy or exchange those antiques of which people have grown tired. We even asked you. We have offered such good prices and such excellent swaps that we have taken antiques from some of the wealthiest houses on the Avenue. Also we have made a practice of importing antiques from Europe, which we auction off every two weeks. The money we get we deposit in various banks, and then we buy bills on Paris. The banks now know us. Remember that-it is important.

Well, we also have an exact copy of your motor, even to the initials in the door panels. Pretty soon we send for our Merriwether motor and our E. H. Merriwether emerges from this house and gets into his car and off he goes - and the sleuth with him.

"But if there should be two, and one stay?"

"Then Number Two will see not long afterward an elaborately carved Gothic chest taken from here into the

antique dealer's wagon-a wagon now known to the traffic squad. We carry you away and lock you in a small soundproof room, to get to which people would have to move out of the way a lot of heavy pieces of furniture. There is no question of our ability to kidnap you and to keep you a prisoner. I tell you we have paid attention to details persistently and intelligently. Meantime what does Sam Sharpe do to the stock market? And Northrup Ashe? How much will a month's absence from your office cost you?"

"Not half as much as it will cost you when I get out." "And if you don't get out?"

For reply Mr. E. H. Merriwether grinned broadly. "My dear Mr. Merriwether," the man spoke very seri-

ously now, "we had not really expected such unintelligent skepticism from you; but, as we prepared for everything, we, of course, prepared for even crass stupidity on your part. In demonstrating our power to do what I say some painful moments will be your portion. This I regret more than I can say. Just now our problem is to prove our complete physical control of you and also our utter indiffernce to your feelings.

"I am going to do what will make you hate me to the murder point. In deliberately making a violent enemy of a man like you we pay ourselves the compliment of thinking ourselves absolutely fearless. I propose to have you spanked - to whip you as if you were a bad little boy. We

shall at first use a shingle on you-undraped. You may begin when ready, James."

Sir," said one of the footmen very respectfully to Mr. E. H. Merriwether, "will you kindly take off your coat and waistcoat, preliminary to the removal of your trousers?"

Mr. E. H. Merriwether tried to smile, but desisted when he saw that the men's faces had taken on a grim look. "We know," said the master solemnly, "that for every

blister we raise you will gladly spend a million to clap us into jail. Do you really wish to be spanked and to hate us for it for the rest of your life?"

"Na."

"The alternative is the million- or death."

"You can't kill me and get away with it."

"Oh, yes-even easier than kidnaping. Will you please nesume the fact of your death?"

"I'll do that much to please you," said Mr. Merriwether. He still believed that murder would not be profitable to these men and hence did not believe they would go that far.

"Would you like to know how we propose to dispose of

"I might as well see everything," he answered in a resigned tone of voice. The man looked at him admiringly and said: "Come on!"

They led the great E. H. Merriwether to the cellar. There he saw that the furnace coal had been taken out of

its bin and put in the adjoining compartment. The plank floor had been taken up, and what looked like a short trench had been dug. Outside stood a pile of crushed stone, some bags of coment, some bundles of steel rods, a section of five-inch iron soilpipe with a mushroom-head trap at one end, and concrete-workers tools.

"After we make absolutely sure that you are dead we throw a lot of soft mortar into the grave, deposit the corpse, and then pour in more cement—so that you will be completely surrounded by it. It will make it very difficult indeed to recognize you when they try to chip away the hard cement-if they ever try! Then we fill the grave up to the top with concrete, using plenty of steel rods - not to reenforce the concrete at all, but to make it very hard digging with a pick.

We also stick the soil pipe into the-er-cavity in order to account for the disturbed pavement. Intelligent searchers your son and his detectives - will assume it is plumbing, and seek no

"We replace the plank flooring in the bin and fill it up with coal, thereby further obliterating all traces of your grave.

"We have provided for that part, you see. Why, my dear Mr. Merriwether, what we really do to you is confer immortality on you. We elevate you to the rank of one of the mysteries. Charlie Ross and E. H. Merriwether! Just assume that we'll

PHILADELPHIA, MAY 28, 1914

Feeling the Tariff

AMONG business men nowadays we often hear it remarked that from this time forth, for at least a twelvementh, the country will feel the effect of the new tariff law as it has not felt it hitherto. Probably this is true. Obviously a tariff change the effects of which were entirely imperceptible would have been entirely useless. There is no reasonable doubt that a majority of the people of this country had reached a firm conviction that the tariff was too high and should be radically revised. Certainly they did not expect the revision to go no further than to change some figures on the statute book. They expected it to have some effect on prices. Probably that effect is now beginning to be felt.

Oddly enough the loudest complaints we have encountered come from the South, where steel men declare that English, German and Belgian hars and billets are coming in at prices they cannot meet. The Democratic answer is that, possessing such natural advantages as we do, if we cannot compete with English, German and Belgian manufacturers, after they have paid the freight, we had better shut up shop and buy our steel abroad.

More is made of the importations of corn from Argentina into the Mississippi Valley, resulting in a considerable depression of the price of the cereal at Chicago. Our corn crop in 1913 was twenty per cent smaller than in the year before. As compared with the average of the three preceding years, it fell short about twelve per cent, and the average of the three preceding years was only about equal to consumption. With a deficit in home production the price of corn might have gone somewhat higher than it has. A greater number of immature food animals might have been rushed to market because the owners would not buy the higher-priced corn with which to feed them, which would have resulted in a greater shortage of beef and mut-ton in the future and still higher prices for meat; but curtainly all that would have been no economic gain to the country. Importing some of Argentina's surplus corn is a more rational and profitable arrangement. And at this writing corn at Chicago is fifteen per cent higher than it was a year ago.

Probably in the next twelvementh we shall feel some effects of the new tariff; but that is no condemnation of the act. On the contrary it was for precisely that it was passed.

Opportunity

WE HAVE often wondered whether it would be humanly possible to devise equality of opportunity for children, and are quite inclined to believe that it would not be. Certainly matters might be arranged so that the overwhelming majority of poor children would not have to leave school about the time they get into the grammar grade. By free tuition, free maintenance and compensation to the parents for the youths' earning capacity it would even be possible to give bright children from the pourest homes as fair a chance at higher education as the millionaire's son has,

However, even that would not produce real equality of opportunity between the children of successful and

unsuccessful men. On the whole, children derive as much from their parents and the environment their parents create as from school. A domestic environment flavored with alcohol, bickering and unpaid grocers' bills must be quite as great a handicap to a child as ignorance of syntax. Moreover, a successful parent is in the way of success. His acquaintanceship is among successful men—those who can say the right word and open the right door for a youth,

Opportunity, so to speak, belongs to his club. Whether in art, a profession or trade, the best education a young man can have comes through the personal, friendly interest of a master of the art, profession or trade—who, very likely, is his father's friend. This is something no school can give.

The parent who abuses his own opportunities squanders opportunity for his children. We do not believe it is humanly possible to get away from that; but it is certainly possible to give children greater equality of apportunity than they now have.

Scientific Exploitation

NOBODY will deny that capital lives by exploiting labor. That is its function. To exploit, says Webster, is "to utilize; to get the value or usefulness out of," Certainly, by and large, capital would not pay a dullar for tabor unless it expected the produce of the labor to be worth a dollar plus. Capital calls the plus profit; Socialista call it surplus value and various other more or less hard names, which mean exactly what capital means by profit—that for a dollar outgo in wages there must be something more than a dollar income.

Scientific management is simply scientific exploitation of labor. It means making the labor more efficient; getting a greater value out of it. And, so far as it is really scientific, it means better living and working conditions, better pay, reasonable hours, protection from accidents, better schools; for there is no longer any question that all those things heighten the efficiency of labor.

It is true that a good deal of the progressiveness of our day involves a more scientific exploitation of labor. Similation, factory inspection, child-labor laws, wider educational opportunities, compensation for industrial accidents—all these things and many more involve conserving the labor resources of the country and making them more productive.

Capital will get part of the increased product; but we cannot understand why anythody who assumes to speak for labor should, on that account, wish these things undone. Yet quite a number of persons in that position speak as though they did.

Capital has not a benth part of the stake in heightening the efficiency of labor that labor itself has. With labor of the lowest efficiency, capital has got along very comfortably. A man produces two dollars and a half, of which he gets the two while capital gots the half. If his product is raised to five dollars, of which he gets four—or only three dollars and fifty cents—our poor arithmetic cannot figure him worse off.

Squandering Public Money

THE National Monetary Commission, by authority of Congress and at public expense, visited Europe and investigated all phases of banking, including agricultural credits. The last of the thirty-odd volumes of its report had bardly been printed before Congress sent another commission to Europe to investigate agricultural credits.

Under the new banking law it was necessary to divide the country into reserve districts. All the information that any one needed to determine the number and boundaries of those districts was already available in print within fifteen minutes' walk of the Capitoi; but a commutate traveled all over the country, listening to cratory and discovering at first hand that the Mississippi River flows past St. Louis in a southerly direction.

Of course there was dissatisfaction with the committee's findings; so recently the House, as a matter of course, passed a resolution calling on the committee for all the material it had gathered. This would involve the editing, arranging and prioring of huge tomes of utterly worthless stuff setting forth the reseate claims of rival cities.

This is typical of what goes on at Washington all the time. When it comes to investigating. Uncle Sam is a veritable Coal Oil Johnny. All the information needed may be obtained in the Congressional Library, just across the Capitol grounds; but Congress must send a committee through the whole country and have it gathered all over again.

What Congress really wishes to know might be contained in three pages of a report, but it must have the whole ten volumes printed again. For a quarter of the money Congress sould have had a report of the physical value of railroads that would be exactly as good as the vast detailed inventory of railroad property it has ordered.

The Public Defender

ON ONE side of the American criminal court stands the public pressocutor. On the other side stand a horde of private practitioners, some of them most honorable men, some of them men who would disgrary any calling. And in

the middle ground stand a large number of others, who are even as you and I—not surprisingly good or surprisingly but, but regardful, first of all, of their personal interest in to case, which dictates that they shall win it if possible without doing too great violence to their consciences.

A defendant is free to employ any of these practitioners or as many of them as he can pay. Out of the order between them and the public prosecutor come the delay quibbles, exceptions, appeals, hired experts and married other scandals that were indelibly exemplified, for example, in the Thaw trials.

Long ago a public defender was suggested, and the iten has found favor among many broad-minded lawyers. The public defender should be appointed and paid by the public, exactly as the public prosecutor is. The defense a every criminal action should be in his hands, just as its prosecution is now in the hands of a public officer. The desire of society is simply to know as surely and expetiously as possible whether an accused man is guilty. The present system of private defense tends to prove rather how smart his lawyers are.

We hope the legal profession will thresh out this petion of a public defender. That criminal procedure is the country argently needs some radical reform is not dead by anyhody worth considering.

A Suggestion for Censors

SHELLEY wrote: "The highest moral purpose mody in the highest species of the drama is teaching to human heart, through its sympathies and intiputes knowledge of itself; in proportion to the possessing which knowledge every human being is wise, just, snow tolerant and kind."

We wish all men and women whose mental limitation take the form of an itch to censor other adult persons place and books would cut that out and ponder it was a meaning has, perhaps, illuminated their cloudy minu.

The Meat Bill

THERE is a popular idea, especially among people at pay butchers' bills, that meat is a vanishing artist of diet in the United States. We hear a good deal of the commons decrease in our stock of meat animals in the line of steadily rising population; and from the experience of slast fifteen years it would be easy to construct a curve in declining arcod which would touch the last Irish steep below the end of this century. In fourteen years, in fact, the production of meat has fallen off by three billion possible up three population has resen by twenty-two millions.

However, even this cloud has a bright side. Some receiving the Department of Agriculture—for which one approximate accuracy is claimed—give the consumer of dressed ment as one hundred seventy-nine pounds head in 1900 and only one hundred fifty-two pounds in 1913; but in the latter year seventsen pounds at hear. liver and tongue a head must be added. And, as more the one-tenth of the population is under five years of age, in average inhabitant above that age is eating senether more than half a pound of ment a day.

Half a pound of meat a day is enough for a prize figure in training if the rest of his diet is properly arranged, as we still have meat enough for all rational needs of a population twice the present size. Half the meat esten in the United States had better be exported—not a much because health does not require it as because at the half the meat eaten is of poor quality and hadly cooked.

An Amendment

SECTION SIX of the newest antitrust bill reads as follows: "That nothing contained in the antirust has shall be enstrued to forbid the existence and operational traternal, labor, communers', agricultural and butteralizations associations . . . or to forbid or restrain individual members of such orders and associations from carrying but the legitimate objects of such associations."

To avoid ambiguity, we move to amend this section = ollows:

We stand between the devil and the deep sea. We have deciared there shall be no restraint of competition athave made that the corner stone of our popular trusbusting policy; but any logical application of that dicturwould ban every labor union in the country and every cooperative marketing association of farmers and fra growers. We dare not put these labor and sgriruitura associations squarely inside our trust policy, for that was cost too many votes. We dare not put them squarely veside, for that would give commercial combinations in great a handle against us. The best we can do is to up "! labor and agricultural associations the wink and while behind our hands that they may slip out the back disc. which is not locked at all -at the same time presently stony and forbidding face toward all cooperation and manufacturers and merchants."

That is what the apparently meaningless section be-

entans,

WHO'S WHO-AND WHY

Serious and Frivolous Facts About the Great and the Near Great

The Jenate's Only Claude

THE acience of names is an exact and fascinating science, as we are informed by a lady who scientifically makes her living by expounding the same; and few parents, when labeling their offspring, take adequate heed of its requirements. As we understand this science one's success in life depends largely on whether one is named Mike or Montague. One must have a name that vibrates in harmony with one's vibrations in order to achieve the best that is within one.

It is plain enough, the lady who devotes her life to this subject says, that if Fate has scheduled a person to perform under the name of Percival it is a rude shock to his prospects to have a crass father tag him

or life as Patsy. The name Patsy, of course, has few if ny harmonious vibrations; whereas Percival may almost e played on a flute. Now then, if Percival is called Patrick e is out of harmony and not in tune with his innermost nd better self, and he is likely to get the inharmonious orst of it; but if Percival, as decreed by Fate and as set orth by this lady at five dollars a throw, is rightly percialed at the beginning there is no telling how far he may go. Practically none of us has the right handle. I knew a

an whose first name was Hank. He gave up his five and arned that he should call him-

off Gwenn, which he did, with be result that he lost his credit the bank; but, of course, that its outside the realms of scienfic nomenclature and enters be grosser regions of finance, which the exponents of this sence pay no heed further than smanding each five dollars in fyance.

I am moved to these reflecve statements by the contemation of the first name of the nior Senator from Virginia. ud first name is Claude. This, the way, is the only Claude present on the roll of the eatest deliberative body in e world. We have Jims and has and Williams in profuon, but no other Claude. In e House of Representatives e have three Claudes and one laudius. As will be seen, this a correct ratio, or nearly so. there is one Claude in the mate, with its ninety-six memes when it is running full force, tree Claudes and a Claudius is fair representation for the ouse, with its four hundred sirty-five members-not exetly proportionate, but fairly ood, everything considered.

The question resolves itself to his: Is the particular Cloude a whom I have reference—Sentor Claude Augustus Swanson, (Virginia—named in harmony ith his vibrations? It seems ot, after contemplating both lames and vibrations. Dissectng Claude, we learn that it means, in its original sense, lame. Also, we discover that Augustus means venerable. Wherefore the purents of this statesman started him out as Lame Venerable Swanson, and that makes us laugh, scientists though we may be.

I have not at hand a compendium that shows what the senator should have been named, but I have access to a rather complete record of his performances; and it can be said that any person who conceives the senator to be either lame or venerable is not much of a conceiver.

Lameness, I take it, predicates a slow and halting progress, and the quality of being venerable is usually coincidental with a full quantity of years. Casting a rapid glance backward over the career of Claude Augustus, it must be affirmed that the only time in the past twenty years when the senator, with any justice at all, could have been called lame was between February 1, 1910, and August first of the same year, a period of six months.

He was a bit lame then, for he was not on the payroll. He held no office. He was merely a private citizen. Still, he recovered his old, graceful, elegant and unimpeded manner of progress on the date last mentioned and has displayed no signs of hobbling since. Lame? Not so one might notice it! He has walked—not to say shipped—from one job to another with all the agility of a gazelle and all the desterity of a diplomatist.

A Quick Cure for Lameness

WE FIND him first practicing law in Chatham, Virginia, aftern varied school experience, and exhibiting no signs of impediment either in his walk or his speech, a gallant figure of a young Virginian, true to the historic principles of the statesmen of the Mother of Presidents—which, in short, are to get a job and cling to it. He had no job, but he daily oiled and otherwise kept in good running order his clinging apparatus, with such result as shall be shown. As a clinger Claude is a wonder. He has clung for twenty years and bids fair to cling for twenty more.

It is probably true that if Claude had been named scientifically and harmoniously be would have begun clinging at an earlier date; but he did fairly well. Handicapped as he was, it took him a few years after he left school to grab a congressional nomination, which, no doubt, would have been his instantly if the vibrations had been accurately vibratory. He did the best he could, however, and went to Congress in the fifty-third session of that body, which began operations in 1893, the election having occurred in 1892, which, also, as will be remembered, was Mr. Cleveland's year.

Once in, Claude, not realizing how handicapped he was by his name, found Washington life to his liking and determined to continue as a participant in it. A stalwart and handsome person, he presented himself for the suffrages of his constituents a second time and was reflected. This continued with pleasurable regularity until the Fifty-ninth Congress, when he determined to add another star to his shoulder straps and entered the primary contest for Governor of Virginia. It is a great thing to be Governor of Virginia—greater perhaps in Virginia than elsewhere, but great. All governors of Virginia admit and have admitted that. Besides, it frequently leads to something.

Our hero entered the primary, prudently retaining his sent in Congress the while, pointed with pride to his record at Washington, and was nominated and elected. He served four years, retiring on February 1, 1910. Then came those eventful six months when he was lame. Apparently there was a period of repose at hand; but Senator Daniel died and the lameness disappeared.

Governor Mann appointed Claude Augustus to fill the vacancy and presently the legislature did its part; and thus we observe the senator wearing his toga in a dignified manner and assured of it until March 3, 1917, at any rate. However, there need be no fears as to the less of it, for the probabilities are that Claude will be one of our niftiest togalsts—not tangoists—for years to come. You see, he has the habit and so have his constituents, and this forms a practically unbeatable combination.

You will never find Swanson going up in an aeroplane when he can just as well take the elevator. You will never see him jumping off the roof when he can some decorously down a stairway. You will never discover him yelling fire until he sees what makes the smoke. He puts on few shows, and those he does put on are along the regular, legitimate lines. When he speaks a piece he speaks a regular piece, according to the rules and regulations for speaking pieces. When he does a thing he does it in the usual way. There is nothing sepational about him and nothing frivolous. His record shows that.

When a man can start in life in any state—much more Virginia—and go to Congress for fourteen years, then get

to be governor, and then take a senatorship, it argues that he knows his people and that his people know him. Also, it argues that be uses little new stuff. The old, accepted, regular lines of procedure—politics, progress and propaganda—have been his support and guide.

Swamson is a typical product of our politics. He is never far ahead of his constituents, but is ahead of them just far enough when it is time to be in that position. If it is his turn to be radical he is radical in a becoming manner. Likewise he is never behind them. His usual position is right along with the main body of the voting troops; so it is in the Senate, and so it was in the House of Representatives.

When conservatism is seemly, conservatism is his cue. He is, as I said, a politician and he has made a success of it. At that, he is a most useful legislator and has an uncanny skill for discovering the lines of least resistance. He will never be much of a senatorial soloist, but he always will bring a good, serviceable, well-trained voice to the chorus and will be effective in the close harmony needed now and then.

And, as the lady who makes her living at it might say, what a pity he does not vibrate with his name!—albeit he has done right well in present circumstances. Othomight beright, or Olaf. And we have just elected a Virginian President, too!

10% More for Your Money

Quaker Oats is now put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

Serve Quaker In Big Dishes

If You Would Know Its Vim-Producing Power

Quaker Oats is the utmost in energy food. It should multiply vim, create bubbling vitality, make one "feel his outs."

But a little dish, once daily, doesn't go far enough. Active, growing children need three times what most children get.

Serve Quaker in big dishes. Make it the morning meal. Then you will know the fullness of its vim-producing power.

And millions of grown-ups need a month of such breakfaststo put them at their best. Nobody doubts the energy that's there, but few folks get enough.

The Quaker Oals Company

OUT-OF-DOORS

Hinte for the Amateur Vacation Camper

THERE is no purchaser on earth whose I needs and notions are better studied or better supplied than are those of the Amerscan sportsman. Many firms annually put out catalogues of two or three bundred pages illustrating and describing hundreds and thousands of articles of interest or use to the sportsman. These big mail-order ratalogues are best sellers in the best sense of the word. A man may send back a spring bonnet or a piano he has bought by mail, but he is pretty sure to keep any article of sporting gear he has purchased in the same way.

Some of these myriad articles are usefulsome of these myriad articles are useful, and some are not. You cannot possibly take along with you into the country all the things you see advertised; but perhaps, like others who go vagabonding, you are fond of taking about your outfit. This latter is a most elastic term. A sportsman's outfit is like the dictionary—the editors never get through with the compilation.

Take, for instance, the subject of packbags. Even if you are not going on a tramp-

bugs. Even if you are not going on a tramp-ing trip you will have some kind of warbag or pucksack in which to carry your cioth-ing and odds and ends. The more experienced you are, the less apt you are to take along a trunk—or even a value. As the small boy said in his composition: "There are many kinds of packbags - too numerous

Guides in the Adironducks and Maine still use the pack-basket, which is practically unknown in the West. The professional woodsman of the Western pine country woodsman of the western pine country
uses a capacious bug nearly square in shape,
with a flap that buckles over with three
straps. This hag has shoulder straps and
usually a tumpstrap as well. A professional
cruiser will get eighty pounds of flour, bacon
and odds and ends into one.

The sportsman who has a larger number
of kniecknacks will find that such a bug,
though building them all, will make a

though building them all, will make a jumble of them all; and the thing you want is always at the hottom of the bug. Moreover, this is a shapeless, disreputable sort of package. If you wish something more formal you can buy a smaller and nattier puckling, better shaped to your eye if not to your lack. It will not really be any let-ter than the professional packing of the woodsman. It is a good thing to watch the professional's outfit when you make up YOU GET.

The Tumpline Man

If you travel much in Canada you are apt to get the idea that the tumpline is the only way to pack. The aborigine packs with a band passing over his forehead, and does not use shoulder straps. The heaviest loads of the wilderness are carried in this way, and this is how the boavy portaging is done on all the long Northern trails. The tumpstrap man does not use any pack-bug at all. He spreads his square of canvas on the ground, arranges his loose articles on it, folds in the ends and sides of the package cover, and either fasters his tumpline to the end-straps of the package, or else makes up his package with the tumpline passing through the middle of it. It is more trouble to make up such a pack than it is to throw everything into a purkaark. The tumpline man is simply a beast of burden; and as he carries with his neck be cannot look up or look round very much, or pay any attention to the use of the rifle

After all, each country has its own cus-toms. The tumpline is simply a means of getting heavy loads across the portage. It uscless in mountain country. You will find the hunters and prospectors of the Rockies making up their packages in some uch fashion as above describ but they carry their loads by means of shoulder straps and not tumplines. Sometimes they have pade of sheepskin or felt, which are fitted on the shoulder straps to lessen the cutting. They carry heavy loads in the mountain recentry in that way-and reald not carry

them in any other way.

The general lines of the packbag are adapted to the purpose and the country you have in mind. Anything will do to carry flour and bacon. If you have things you want to keep separate you need pockets. If you are going on short journeys you can carry a large bag. If you are doing mountain climbling you need a small one—and one that sits tight. In general you will bear in mind that you should carry your load we up on your shoulders and not on your hips—any packer will tell you that.

The European rucksack is a light and handy bag, not yet in general use in this country, but worth studying. It is broad at the base and small at the top. Its mouth fastens with a puckering string, and sometimes it has a cover flap. It sits high and

fastens with a puckering string, and some-times it has a cover flap. It sits high and stug on the shoulders, and allows perfect freedom of the head and arms.

I presume that our old friend Nessman, the original go-light artist in American camping matters, never saw a rucksack but he invented a sort of packbag on about the same lines. Sometimes also he would just make a turkey, as the lumberman call it—a grainsack, with a string tied from on corner to the top and thrown over the it—a grainsack, with a string tied from on corner to the top and thrown over the shoulder as soldiers sometimes carry the blanket rolls. You can buy a so-callse Neamuk bag today if you like. Or you can make an excellent turkey of your own by means of a grainsack and a pair of over alls. That is the use for which overally were designed. The the waist of the overalls to the top of your pack, and a lette each lower corner, and you have a easy-carrying a set of packstraps as you could ask. I have often seen this devaused by hunters in British Columbia.

The Norwegian Rucksack

We Americans are apt to think that a can make our own sporting equipment, an certainly we have been prolific and ingenion enough in that regard. Ordinarily we sal enough in that regard. Ordinarily we sal at European sporting gear. Not long as however, I wanted a European ruckeach a light packbag—and a Norwegian frien sent me one. It was a good deal like the duck that was hatched out among the chickens. I never saw anything like it, as joined my friends in the general laugher that greeted its first appearance. Yet thought enough of this bag to try it, made good, and now I shall use it whence I want a packbag in the woods. It is work a description, for some thought has begut into its construction. It is, in fact, the knapsack of the Norwegian mounts inapeack of the Norwegian mounts army—men who often have to carry los while they are traveling on skees. It wou be hard to devise a better mountain pse sack than this one.

In general description this is a large re-sark, broad at the base, narrow at the top but it is not built limp. Running from a bottom corners to the top there is a free of brass rods roughly triangular in shall hollow and not very heavy—but rigid. T. frame keeps the pack away from the bu-yet does not touch the back itself. T shoulder straps run from the lower corners the upper corners of the frame, where the are short adjusting straps. The lower p of the triangular frame is not straight, I semicircular, to fit above the hips. It denot, however, touch the hips at all, becambroad leather hand runs from end to end it. The weight of the pack is distribut between this broad band below, the cross shoulder straps between the frame and shoulder straps between the frame and body, and the straps as they pass over shoulders. Still another strap runs it the corners of the pack round the bo buckling in front.

When you get this pack on you a something like a cross between a Jew peddler and a Constantinople hamal; it is there to stay. You could roll over it if you liked. There is an air space betw the pack and the back, and the weigh beautifully distributed. It will pack in twenty-five to fifty pounds, according nds. the contents. So little does it distress wearer that I find I can walk along an hour or two carrying twenty-five thirty pounds, and hardly know the ba

The general theory of this bag, howe is not its only excellence. It is a per trunk, handbag and packbag combit Inside the body of the bag you can put y soft stuff or your heavy stuff. Bets this and the back of the bag there is a d pocket all the way from top to bots

are just for clean shirts or handkerchiefs, a vist you like. Then you fasten the bag with a drawood like a ruckwack—I run a telerham through the grommets on top of and fasten it with a padlock, so that imstipit as a trunk. Over the open top ten is a protecting flap which buckles to the point of this flap has still taker pocket in it, excellent for toilet

On the front of this omnium gutherum the is a deep, wide pocket, about half its stire length of the bag. You can put a recept in that, or any other soft stuff. Ariseves that all. On each side of the bag Arriseves that all. On each side of the hag yet up to bottom runs a narrow pocket, als with a protecting flap and buckles, as use all the others. You can put ammunities received fluss, or the like, in these side or see. Lastly, underneath the bag are right two little straps to hold your slicker a citra cost, or your rod case. Instead of him one big bag into which to dump outping, you thus have seven different coptacles, all made out of a light water-you material, and all hung to the easiest

respected, all made out of a light water-you material, and all hung to the easiest aming device I personally ever saw. With this kind of rucksack you can find red your camp ax, your combs, brushes, lasts, handkerchiefs, clean clothes, old whe and articles of food, and so on, with-may trouble. You could dispense with faither if you wished; but the dittythiybag if you wished; but the ditty-ing or "possible bag"—made of canvas studokin, or what you like, and holding not needles and thread, buttons, fishbox matrice, whetatone, medicine case, ad ill your little odds and ends— is some-ber no real woodsgoer would care to

I dro my possible bag inside my ruck-in. This gives me eight pockets. With its arangement you can keep house with allows and dispatch.

My Norwegian military rucksack lies be-in pe now, packed for its next journey—

hir) will be, this summer, to the mouth of to Markensie River and over the Rat Fort-sp to the Yukon. It has in it everything an going to take on that trip outside any tedroil and my mosquito tent. It ares three articles without which I should is lest in the woods—my personal ides of good hand-ax; a blue graniteware values, which has always seemed to me fend than the canvas washpan; and a was quart cup, made of block tin, with kranded on the handle. This tin cup Narkened now by many campfires. I prif of the sutier in the Yellowstone Park to 1805, and it has been my mascot ever

patenatic Packing of Camp Gear

Some men are neater by instinct than him the others call them old maids in up. I confess I like to know where I can any hand on a spoonbook without feelclosely for the barbs; where I can find beh roll of film, or another box of carings, or the spare matchbox, or the extra-ings, or the spare matchbox, or the extra it it map. Moreover, there are little inc you want to keep handy when you is storting or fishing—a small pair of ints: a pair of cutting pliers; not to entire fly-hooks, leader box, reels, and

Otce we used to carry all these things in # jockets of our coats when we went Ting. Lately it has become rather the traf thing for the angler or camper to is sither of waterproof canvas or pigthe the English fushion. When you are to use one of these you find it very the in short, it is the old possible bag the early Kentucky hunters. Sometimes 7 carried in it their parched corn or extra tidiats. Sometimes it was of buckskin, dud under the belt in Indian fashion. twith a strap over the shoulder

There are all sorts of ideas and uses in bags. For instance, you can carry food in small, round bags, which nest in a larger These are waterproof, and excellent for salt, sugar, tea, coffee, dried fruit, or the like. Such a bag is better for back or bout. The chuck-wagun on the range carried these things in a box and left a trail of tin

cans across the range.
One beauty of the packbag, or portable One beauty of the packbog, or portable carryall bag, is its freedom from injury in shipment. You can arrange locks for any one of many kinds of inandy canvas packages, containing your bedroll or sleepingbag, your tent, your clothing, or your nested cooking outfit; and you can ship it by rail as your personal baggage. Of late there has come into use the canvas cytinder, like the sailor bag, fitted, as are most rucksacks, with a row of grommets on the top, so that the bag can be shut by means of a gathering string—or, better, lastened with a chain and padlock. One of these big round bags will hold a world of stuff. It is waterproof and if thed tightly will even float for a while in case of a rapsize if it has your bed inside. It goes nicely into a boat your hed inside. It goes nicely into a boat or cance, or even into a wagon; and if you have in your outfit a pair of packstrape you can put your trunk on your back at the end of the wagontrail and march off very

happily.
If you are camping light two or three of these sailor hags will hold all your outfit. In one you can carry your tent and ground In one you can carry your tent and ground-cloth; in another your personal outfit and bed; in yet another the cooking outfit and food. It is just as well to have a little system in your camp work. What are you going to need first when you pitch camp? Hand-ax, floorcloth and tent! Then put these things in last when you break camp, so that you can get at them first when you

pitch camp.

Meantime your chum is perhaps making the fire while you are laying out the tent. He wants, first, his cooking outfit—the frying-pan and coffee-pot, and the little folding griddle with legs which serves as a stove. These should go in his bag last when you break camp. Your bedroil and personal duffel, being needed later in the game, can wait in the other hag until you are ready for them.

Camp Beds and Bedding

Continually you must qualify all these matters by the factor of transportation. In a very long and hard journey you may In a very long and hard journey you may not wish to ship your personal outfit in so perishable a case as a canvas covering. I have a friend who swears by the fiber telescope cases, provided with heavy straps and locks. He has sent his sporting outfits almost all over the world in these cases, and they have come back practically as good as new. They are not so heavy as trunks, are provided with good metal corners, and will hold an indefinite amount of atuff and stand indefinite grief—camelback. stuff and stand indefinite grief - cumelback.

horseback or manback.
You cannot, however, use one of these as a pecking yourself at the end of the wagontrail. If you have wagon transport or even a packtrain these cases are good to take for rough use. You can pack your sleeping-bag or blankets in one and the rest of your outfit in another. The two will make a good pair of sidewacks on a horsemake a good pair of sidepacks on a horse;

and when you get back to the railroad you can check them just like trunks.

A manly and workonanlike efficiency ought to characterize any sportaman's outfit; and, for the most part, he should heware of fads and fashlors that come and It is the business of the professional outlitter to make you think you want a lot of things the most descriptive adjective regarding which would be "rute." You ought not, however, to despise too much the modern tendency toward lightness and compactness. The main thing is to be sincere and simple, and to bewere of affectation, whether that shall mean overmodernity or a blind clinging to the old-fashioned past. An old-time plainsman would not listen

to any talk about a bed other than a blanket-and-quilt roll done up in a big tarpaulin. He would point out that a thin waterproof drilling cover might get a hole punched in it. Yet it might be pounds lighter and holoproof enough. Even yet sleeping-bags are made with very heavy canvas covers, and a very practical bag will run about fifteen pounds.

Some like sleeping-bags. I certainly do not. Yet they have the virtue of cleanliness and compactness. It is hard to get a good camp bed down as low as ten pounds

IS there any floor covering you could use on your porch that could be cooler, more beautiful, more cleanly than these sanitary, finely woven, Deltox Grass Rugs? Colored so daintily, patterned so pleasingly -durable, too.

The fabric of Deltox Rugs, nature's own product, is impervious to dust and moisture, and because the dust sifts through to the floor these rugs are always fresh looking. They save labor, too; simply roll up the rug, sweep the floor, unroll the rug and the work is done. Once over with a vacuum cleaner makes a Deltox Rug. look like new.

On the porch-in the kitchen-bed room-librarynursery-on the office floor-anywhere, Deltox Rugs brighten and beautify every environment because their keynote is harmony. And they are inexpensive, a 9x12 Deltox Rug costs but a fraction of the price of a woolen or worsted rug of the same size,

If your dealer doesn't handle Deltus send as his name and your address and we will send you an unusually attractive broken showing Deltes Rigs in their natural colare with reproduced photographs of many American home interiors where Deltax Rugs

If you will include 10s to cover postage we will send you a sample Deltos Rug 1881H inches, for which you'll surely find some good use.

Look for this Trade Mark

OSHKOSH GRASS MATTING CO. 84 Adel Street OSHKOSH, WISCONSIN

in weight—fifteen is much better. One blanket is not enough for a good camp bed. It should be remembered also that writers who talk about beds of pine boughs are describing only a very limited part of this continent, all of which is open to sporting travel today.

I am a great believer in a good bed. The nearest approach to it I have made, taking in all the compromises, is the thin mattress of descriair, with blankets above it, the whole in a light waterproof cover of canvas or belloon silk. I even induige myself in a pillow—a very small one—of goosehair. It is only large enough to be of service when used on top of a folded aweater or coat. You can throw this bed down anywhere as soon as you break camp and it does not need much softening.

meed much softening.

When you come to the matter of bede
in your outfit you open up another wide
field of practice and conjecture.

If you are in the hands of a Mombass outfitter, who will always send out a safari based on the English ideas of camp life, you will very likely have broad camp cots, folding canvas chairs, a folding table—also made of canvas—and a lot of other things that will take an army of darkies to carry. This is all right for those who like it. I certainly see no use for it—at least in this country. Yet I recall very pleasantly a certain camp cot and a folding canvas chair with a high back that my father enjoyed for many years when we used to camp tagether. Maybe I shall enjoy them some time.

After your packing and your tent and your bed comes your campfire or your campstove. Elsewhere something has been said about the general idea of a camp stove inside of a tent. Do not use it unless the weather is very cold. In that case some one will have to sit up to tend fire. Most of us, however, do not camp in extreme weather during our variations, and usually we conk over an open fire out-of-doors. A very practical range, familiar to every one, is made of a pair of green logs, a few inches in diameter, laid side by side. It is not always convenient to get these logs and they have a way of burning out and spilling the coffee. If you can get hold of a couple of stess bars to put across your logs they will help a great deal. Any of the little griddles with folding legs will make a practical camp stove. Better have two, as they are not large enough to hold all your cooking utensits at once. They weigh very little.

Stoves for Camp Use

One of the best camp stoves I ever used was made of an old gunbarrel, plugged and sharpened like a spike so it could be driven into the ground. The breech was also plugged, and borsd to admit the ends of two or three wire hoops which would swing round as though on pivots. These steel hoops were strong enough not to melt in the fire, and they would hold a frying-pan very comfortably. Another bent bit of steel supported the coffee-pot. We would drive this spike down into the ground and build a fire round it. If a frying-pan got too bot, or if the coffee boiled over, it was easy to swing the vessel to one side on its hinge. This spike, however, was clumsy to pack, as it was a couple of feet long.

Elsewhere mention has been made of the importance of the camp stove in certain countries. Up in Alaska I have seen propectors and hunters traveling with packs on their backs, and carrying a sheet-iron stove called a Yukon stove. In the coast country of the Alaskan peninsula the only firewood is crooked alder of no great size. You can't do much with it without a stove—and, besides, it always rains up there. The man who hunts bear on Kadiak Island, for instance, must either have a Yukon stove under a canvas shelter or else be can cook down on the ground and let the smoke go out at the top, tepes fashion.

the smoke go out at the top, tepes fashion.

There are other kinds of stoves that you can invent for yourself. I have seen a very practical little stave in the tiny shanty of a fasherman on Lake Erie who was fishing through the ice. It was a baseburner, using coal, and was made out of a powder can not much more than a foot in height.

Camp clothing is, of course, something to be selected with reference to the place and season where you intend to use it. For walking or mountain climbing, nothing beats knickerbockers, but they are not good in mosquilto country and not good on horse-back. The usual advice is just to wear your old clothes on a camping trip, but this is not

always good advice. When you are in woods or the mountains in cold was you are very likely wearing an inch or more of shirts and underwear than would at home, and very likely your trowill not meet comfortably.

will not meet comfortably.

I recall a friend of mine who went winter camp in the Rockies once with with the pleasant anticipation of we out an old pair of trausers, once a fitted by a good tailor. When it can putting on his flannel shirt he had to it outside his trousers. It was picture in a way, but hard to witness with gra The best clothes really are those mai camp life.

camp life.

For cold weather it is hard to mackinaw. Some of this is loose shoddy. Ask for the kind of pants the man wears—a close-woven dark mackinot quite so soft and spongy as the average content of the man description of the man stoop or sit down comfortably of over a log without any knee-strain. Over khaki pants will do for warm weat cardurey not!

Nor should you despise the havelock or neck cape, which will be serviceable if the midges are bad. You can wear it also as a

nightcap.

Some like khaki for outdoor wear. It is useful, but not so warm as it might be. The main trouble with most trousers is that they do not give enough room in the knee and hip. Really, a well-cut pair of English Bedford-cord riding breeches ought to be of general all-round utility for riding or foot-work. They would, however, come in for the same restrictions that lie against the

use of the buckskin shirt—one does not want to look too "stunty."

The subject of footwear in camp is un old and an endless one. In general the fashion is now against the old high-top heavy hunting boots. If you are going on slippery rocks you will need nails, otherwise you will not often need them. You can get an easy sincepack, without any heel, and with a sole of what is called elk leather, probably horsehide, soft and pliable, which will do you very well for walking or boatwork. It is not really waterproof or anowproof—and it is not suitable for riding, of course; nor will you find it above repreach in mountain climbing. Cut the tops down so that your trousers will just go into the tops of the shoes. Usually it is the high-top boot that causes the agony of the chafed Achilles' tenden at the heel. If you are troubled with that take your tall boots of, take out your trusty hunting knife, cut then down to street-shoe height—and go on your way happy. ing boots. If you are going on slippery rocks.

happy.

In the Far North moscuains are worn as regular footwear by red men, halfbreeds and white men; but for the average American ican sportaman they are an affectation ex-cept when used round the camp; then they are most comfortable. You cannot get with-out trouble real moccasion anywhere except in Northwestern Canada, in the fur country. When you get them you can't walk in them with much comfort if there is any gravel or other hard going. I have a pair to which I have sewed soles of soft elk leather. They have sewed soles of soft elk leather. They now go very nicely, but are, of course, rather slippery on wet rocks. In certain kinds of straightaway walking, where the going is good, the maccasin is comfertable footwear for a white man, but it takes an education for most persons to enjoy it. However, nothing is better to have in your packing when you come in tired at night. They are good in said, dry anow—horrible and worthless in wet weather.

Watches and Handkerchiefs

Good socks are hard to get in this country. They should be thick, but soft and of good wool—not full of knobs and gobs. Ah, what a comfort there is in a pair of moccasins and a soft, dry pair of socks at night! Have your boots hig enough for two pairs of socks, one of light soft wool and one of heavy soft wool. Tour feet will look large, but they will feel good!

Always wear a waistroat, whether you keep it buttoned or not. It is full of pockets for matches; your compass—or your two compasses—your eyepisses; matchesife, and such odds and ends. Some men wear wrist watches—Englishmen very generally in many parts of the world. Do so if you feel that you are obliged to, but please do not come round to my camp, especially if you have a handkerchief tucked up your sleeve at the same time, for I might not ask you to at the same time, for I might not ask you to supper. I see no reason why you should not wear your watch in camp as you do at home. If you are afraid of losing it get a cheap one in a gunmetal case. The the watch to your person with a thong as you do your compass, your dog whistle—or perhaps your hunting

Do not forget a good, big soft-silk hand-kerchief. It is good to keep off the sun or the cold or the mosquitoes. Wear it sensibly, and do not the it as though you were posing for a picture. It was made for use. not for show; in fart, that is a very good test to apply to yourself as you turn out in your camp outfit-let it all be for use und not for show,

In one pocket of your waistcoat you will have your matchbox-waterproof of course and in your possible bag, which goes inside of your main warbag, you will have your extra box or bottle of matches. As all sportsmen know, you can make a fairly good small matchbox out of two brass shotgun-shells, ten and twelve gauge, by telescoping them. I traded one such for

211 OUT OF A POSSIBLE 264

In Philadelphia are made 211 of the 264 products that are manufactured in the United States. Of these 211 she makes 15 in greater quantity and of greater value than any other city in the country.

This industrial activity naturally produces steady incomes. These incomes swell bank balances, fill savings banks, buy homes, feed, clothe and educate families, and make of Philadelphia one of the greatest buying centers in the world.

You can place advertising before the eyes of open-minded and financially able buyers in Philadelphia in the columns of the

another similar with a forest ranger up on the Peace River once. The primers had started on his matchsale and let in the water. As mine was still waterproof I gave it to him; and I have his today. Also I have a large-mouthed bottle full of matches which has been in my camp outfit, corked and unopened, for some twenty years, in many parts of the country and under many

conditions of transportation. You can break a glass bottle, of course; but until you do it makes a very practical

matchsafe,

Your hunting knife—or perhaps you should rather call it your camp knife—is something by which you may be judged among professionals. The fashion in knife-blades, as in boot-tops, is for smaller longitudinal dimensions. A four-inch blade is long enough to cut up anything. Such a knife, with any kind of handle that has no must, will fit tight in a sheath. You can guard, will fit tight in a sheath. You can bore the handle, if you like, and fasten the knile to your belt or scabbard with a thong, so that it will not be lost should it slip out of its scabbard.

Another item of personal equipment is Another item of personal equipment is the camp ax. Personal habit comes into play here also. When hunting alone in strange country I always like to have a light ax at my belt, as well as a knife and some matches. The best handle is not straight, but has a knob on the end so that it will not slip. About a pound's weight for the head is effective. The steel cannot be too good and it should be kept sharp. Such a tool will do for carrin work, but is not a tool will do for camp work, but is not heavy enough for a trapper or a regular

woodsman, of course.

The half az used by the New Brunswick trapper is a mighty efficient tool. If you trapper is a mighty efficient tool. If you are going on a long trip with a wagon or a packtrain it is best to have one man-size as along. You cannot do much in getting fuel for the whole night with one of the little axes, though it is very handy in camp or bivouse work, or general tinkering. Perhaps it is partly habit that makes a man feed so uncomfortable unless be has some such little friend along with him. Let the weight of your ax so into the head and not such little friend along with him. Let the weight of your ax go into the head and not into the handle. The camp ax ought not to he a toy but a tool. Somewhere in your out-fit there should be a file and a whetstone—carborundum is keen cutting. The steel in your ax and your hunting knife ought not to be too brittle and not too soft. When you are hald of a really rood there of steel in get hold of a really good piece of steel in either it is upt to be by accident. Cherish

Things That Come in Handy

Your camp light is something of a prob-lem. Usually it will be your campfice. The little electric lights that work with a pushbutton are convenient, but are apt to wear out on a long trip where you cannot renew the batteries. Candles get crushed and kerosene lanterns frequently are impos-sible. Perhaps you will have to do your best with the campfire. If you want to sit up all night you can build a fire, and if you want to go to sleep you do not need much light.

Reep your fishing rods and your guns dry at night by putting them under the edges of your blankers. If you have a smallbore, high-power rifle you cannot keep it clean with water and vaseline. You should have along a bottle or a screw-top tin of one of the thin modern cutting oils. Not even the thin modern cutting oils. Not even this will really clean the grooves of a high-power rifle. When you get home take some high-power ammonia and moisten your cleaning rags. They will come through dirty for a much longer time than you would expect. Aromonia is hard to take into camp, though it is very useful to southe mosquito bites. Castor oil is something disliked by mosquitoes very much.

Many other items will occur to other

Many other items will occur to other men as useful or even indispensable, and some readers will perhaps mark off the list some of the suggestions above noted. The beauty of the sportsman's catalogue is that it provokes discussion. There is no better reading than can be found in its handsomely illustrated pages.

Following even in most rudimentary fashion its wide range of suggestions, you may thus transport your own hand-picked, wholly delectable outfit by train, by wagon. by honse, or by your own back, to your chosen spot-may unpark it there, from tent to bed and camplire equipment. You may walk all day with comfort or fish all day with delight; or you may come into camp wet and tired, and soon be dry and comfortable.

TheLettersof William Green

The Mutatione of the Bishop's Butter

DEAR AUNT: Henney Begg and me are in a little more trubble at home witch is ushual but not seryus. Henney said it would not do enny harm

to rite to you about it and see who is to blaim witch is genrelly us because we are the

smallust witch is verry offen the case.

Hennry said we otto tell you alsout it and
if we otto be smalled to go absad and arsald us witch would be the last straw but we

could probily stand it. Hennry said he had grate confydunce in you because you searn to understand a boy on account of not baven too menny of them yourself witch a grate menny do and are afrade thay will get spoilt frum too mutch

And Hennry said when he thinks of his bloo off thum and the serkus and the Forth of July and how kind you always would be he would not be afrade to go to you for ennything eaven a scoalden witch is quite a

big complyment to you don't you think so?
If you are not afrade to go to sumbuddy enven for a scoalden it is a sine thay are your best frend and a boy needs more places were he can go for a talken to and not feel had about it afterward and makes up his mind he will not do it agen whatever it was

But sum scoaldens are wurse than if you did not get enny at all and would never make you a better man.

make you a better man.

Sum of our fathers secondens are with the best intenshuns but do not seem to do us mutch good probily becaws of him besin too himsey to lurn how to smald the rite way witch makes you sorry you did it and you will not do it agen until the necket time and maybe not then.

Hencry said it is a grate feelen to be seconded the rite way and go out hangen your bead and full of shaim back of the barn ware you will stay for severel hours wanten to do rite in the fewchure and not go fishen on Sunday witch broke your mother's hart and she will never hold up her hedd before the minuistur agen.

But a harebrush or a strap or a shingul

her hedd before the minuistur agen.

But a harebrush or a strap or a shingul will not help you to sit down and think it over but onley make you wunder if thay are your reel parunts out in the shed ware one of them did it.

Sumtimes Henary said his father tells him to go in the shed and wate till I rome and Henary is offle mad at furst but by the time his father comes Henary is all out of the noshun of it but his father is not but he would be if he would wate a supple hours.

would be if he would wate a supple hours.

Hennry said a boy's faiher always ofto
wate a cupple hours before he goes in the
shed and then it would be quite diffrunt
becaws a shingul is appto brake a boy's
hart becaws he is too prowd and bates to turn over.

Hennry said to tell it all to you and not spare us at all and so Hennry's muther sent him to the grossersy store at fore o'clock and get sum butter for the hishup who was commen to dinner and it was not enul in the ice box for him becaws a bishup is appto eat more butter than ushual when he is away frum home for dinner and Hemry's muther told him to hurry back becaws she mite want him to borro sum table things for the bishup's dinner when he came home with the butter.

So Hennry's muther gave him a tin pale with a tite lid on it some the butter would be purfeckly safe because a boy is dangerus to carry butter with onley a paper on frum beein so soft in the hot wether.

So Hennry and me started for the grosserey store and got the too pounds of butter witch was all nice and cool and little drops of wotter on it and a big flour on top of the

th of them from the butter mold. Furst Henry would carry the pale and then I would carry it a wile and then Hennry would swing it round his head in the pale and then I would swing it round and it was lots of fun and not like wurk at

all to carry it.

After wile we were passen the livyurey stable and Hennry swung the pale round and the handle came off frum beein bent by too mutch swingen and the pale went about twenty feet becaws of haven sutch a good start frum swingen.

P. A. sure does set the clip

for men who want to know the joys of a jimmy pipe or a makin's cigarette—and "dasn't," There's no soft pedal action needed by you or any other man. You can go at Prince Albert hammer and tongs and it won't bite your tongue. The bite's cut out by a patented process! Thousands upon thousands of pipe and cigarette smokers never would have known the glories of real tobacco if it hadn't been for

PRINGE ALBERT

the national joy smoke

You'll get that fact jolted into your system the first tin of P. A. you smoke. You paste it in your hat that if all we claim for this brand wasn't hard facts, Prince Albert sure never would be "the national joy smoke" today!

You know as well as we do that you can't fourflush and get away with it very long. You present yourself with a tidy red 10c tin of P. A. and you'll pretty quickly know where you get off on the pipe question.

Chicago: 1501-1513 E. 55th St. McKinley Music Co. 80 Fifth Avenue

Then it struck the rode in frunt of the Then it strack the rode in frunt of the liveurey stable ware it was verry dusstey frum so menny horses trampen all the time and the bid floo off and both of the butters fell out and rolled quite a ways before Hennry and me could get them.

Hennry and me could get them.

Hennry and me rould hardly beleave our eyes when the butter was rollen in the dusst became it was all so quick we hardly knew.

becaws it was all so quick we hardly knew

what happened.

What happened.

But Hennry and me hurried up and raught it almost before it got through rollen but a grate deel of dammidge was done already because you would never beleave how mutch dusat you can get on a cupple pounds of butter just by rollen a little wile in the rode. in the rode.

It was a grate supprize to Hennry and me but we both got out our jaknives and scraped off as mutch as we could get and then we washed both of the butters off in the wetteren troff witch did sum good but it did not seem to look like the same butter hut probily just as good to taste Hennry said verry hopeful witch is the kind of a boy

Hennry is.

So Beaury filled the pale with wotter and we put the butters in and put the lid on we put the butters and ran started agen quite tite and Henry and me started agen quite seryus eloshen the butter up and down in the pale to wash off a little mere duest but not sure how it would come out but hopen it would be nice and cleen and we would emty the wotter out before Hennry got home and probily nobuddy would know the difrance.

After wile we took the lid off to see how it was common out and it was mutch wurse and a verry dark brown culler all over. But It was emby dark brown culler all over. But in becawe Hennry scraped sum off with his fingernale and it was all brite and yellow undernoeth.

Henory and me took it out of the pale and

Henory and me took it out of the pase and looked at it but it was verry mornile and we could not see mutch hope for it.

So Henory and me lade it on the grass under a tree ware it was shadey and we pored the wotter out of the pale and then we both lade down to think it over. We had to think quite last for it was nearly time to be home.

Then Henory torrest round switch were

Then Hennry turned round quick ware the butter was on the grass lebind us and a purfeckly stronge dog was licken it witch by this time was quite brite and cleen but a little ruff on the outside from the dog licken them witch seemed verry hungry for butter when Hennry chased him away and we put then in the pale agen and started home walken offic alow.

On the way home there was sum boys

batten up flies and Hermry and me stopped with the butter and batted up a few flies with the tin pule under Hennry's straw hat to kepe it frum getten two warm in the

After we batted up sum flies Hennry looked in the pale under his hat and it was quite soft and runnen a little on the outside

edge.

It was mutch deener though frum the dog assiduatly licken it witch was for-chunate for us Hennry said and it mite be we would still bring home sum fare butter the behave after all.

for the hishup after all.

By this time Hennry and me started home agen and in a little wile Hennry had a good sleem just as we went by the pump a lettle ways from Hennry's bross and we both washed our hands purfockly cleen witch is better for a toy handlen raw butter.

Then Hennry pumped a lot of cold wetter on the hutter one at a time in the

pule and then we took turns equence it with our hands and wurken them into a purfeckly round shape witch was sumthing like a baseball but bigger round.

By doorn this way the dusst was wurkt all through and did not show hardly at all and you would hardly known but it was too hig bulls of butter rite out of the grossery ne books if they made it that way witch Hennry told his muther they often did when they are in a speaked hurrey.

Hennry and me tasted it after we got it fields over and could not find comything the matter with it Henry said.

His muther was a little supprined at the shape of them but Hennry said maybe it was somthing new as they often are. Henny and me lessened at the dore for dinner because Henny could not ste with the hishup on account of levin onley grone people and Hemry's muther said to erka-cuse spex in the butter witch she never saw so menny before but it was a new kind of butter.

After dinner Hennry and me went in the parler to see the biskup witch was quite a

nice man and he yoosto he a boy once he said witch a grate menny minisaturs never

were Hennry said afterward. He said Hennry and me were line boys witch made us feel offle gilty about the butter.

Then he told us some storeys of how he yoosto do when he was a boy and lots of mischuff and Hennry and me felt verry frendly and so Hennry thought it was all rite to tell him about the butter rollen in the dust and the wotteren troff and the dos licken it and the wotteren troff and the dog licken it and batten up flies and the pump and bow we fickst it soze to be purfeckly good after all the trubble we had with it.

Hennry's muther hurd us laffen and the hishup too and my muther hurd us too becaws she was cumpuny and the bishup lafft a grate deel but Hennry's muther did not and my muther eather becaws it did not

seem to be so funney for them.

After wile the bishup went away and
Hennry and me thought we would go outside a wife frum the way our mathers looked witch was not verry cumfortable for as and slepe in the barn.

The rest of the butter was not used eaven for cooken but throne out in the garbidge barrel witch was the last of it after goen through a grate deel of expearence.

Hennry and me did not slepe our best and this mornen Henry said we otto to rite to you and get the butter off of our mind. There is a boys' camp in the woods atoen miles from here and Hennry wondered if it would be all rite to go up there for a few days till our muthers blows over about

It would be fifty sense fore for us to go there and a dollar apeace to stay a week and we manninged to save up twenty-too sense this summer and we can probily get the rest of the munney sumway. We could walk back the ateen miles to

save the fare cummen home.

We have been quite heithy this summer but not as strong as a boy mite be ruffen it and Henry is sumtimes quite week eaven after eaten haffs wottermellun and sum pares. He thinks it mite be stummick

trubble commen on as thay offen do.

Our muthers would be glad to see us when we came back and they could get the butter off of their minds.

A promt ansur would prohily help Hennry and me to make up our minds

about goen to camp.

Mutch love to Uncle William and you mite ast him if he ever did sutch a thing and how mutch he was to blaim.

Your affectshunate nephew, WILLIAM GREEN.

P. S.—The ateen miles would be quite a walk but probily we could stand it all -J. W. Foley.

A Poor Family

A VETERAN surgeon of the Civil War, who still practices in the Piedmont section of Fauquier County, Virginia, where his patients include the wealthy horse fancier of the bluegram and the shiftism, poverty-stricker magnetismer of the Blue Ridge hollows. hollows, was recently summoned to the bunkside of a lank, thin-whiskered hill-billy, stricken with a aluggish fever.

Some two months prior a barrel of whisky had been added to the meager possessions of the hill-billy's family—the ethics of the acquisition does not enter into this tale and of this the good doctor had learned; not, however, through any member of the hill-billy's family.

Desiring to tone up the patient with a stimulant, the doctor concluded his instructions thus:

instructions thus:

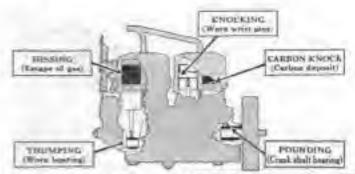

"Now, madam, the best thing for you to do is before each meal to give Jim a good, strong whisky toddy."

"Laws sakes, doctor," replied the woman of the house, "we-all ain got no whisky an an ain got no money fer to buy it neither!"

"What, no whisky!" exclaimed the doctor severely. "I know you had a barrel of it here two months ago."

of it here two months ago."
"Yassir, I know," came the prompt ex-planation; "but a barrel of whisky don' las" long in a fambly what can't afford ter keep

NOISE

The motor's complaint against incorrect oil

If your motor makes some unusual sound, stop your car. Investigate.

Noise frequently means unnecessary friction - the direct result of incorrect lubrication.

Common noises are:

"Thumping." A dull thomp at each revo-lution of the main shall indicates wern main or connecting end bearings. This trouble is hostened by oil of low quality or incorrect budy will finally result in hally worn hearings and knocking.

"Knocking." This may be due to loose wrist-pins. It may be due to builty worn bearings or bushings which should be refuted or replaced. Incorrect lubrication will cause both of these troubles.

"Carbon Knock," A sharp mullled ring, at ignition, indicating executive carbon de-posit usually caused by oil of low quality or incurrect hedy.

"Pounding." Due to engine laboring under overload. Lubrication plays no part in this trouble.

"Histing," This is frequently due to bravy working of cylinder walls. It is most often brought on by inefficient fabrication.

There is only one immurance against the re-sults of incorrect lubrication. That is the use of oil of the highest quality which is correct in body for your type of motor.

You can secure this oil by referring to the Unbricating Chart which is partially shown at the right. For a number of years this Chart has been a standard guide to correct Jubrication,

It represents the professional advice of the Vacuum Oil Company—the recognized world leaders in scientific lubrication.

Our complete Chart will be mailed to any measons on request.

We will also send on request a pamphlet on the Construction, Operation and Lubrica-tion of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

It is sairst to buy Gargoyle Mubiloils, in original barrels, half-barrels and scaled five and one-gallon caus. See that the red Gargoyle, our mark of manufacture, is on the container.

The various grades of Gargovie Mubiloils, purified to remove free carbon, are:

> Gargoyle Mobiloil "A" Cargoyle Mobileil "B" Gargoyle Mobileil "E" Gargoyle Mobiloil "Aretic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply inbricants.

For information, kindly address any in-quiry to our nearest office. The city address will be sufficient.

Punctures 90% Less

Investigations prove that with "Nobby Tread" Tires punctures are 90% less than with the average tire.

The big, thick "nobs" on "Nobby Tread" Tires stand out so far from the shoe that nails, glass, sharp stones, etc., hardly ever reach the shoe.

Study the "nobs," their size, their thickness, and the way they are placed, and you will understand why.

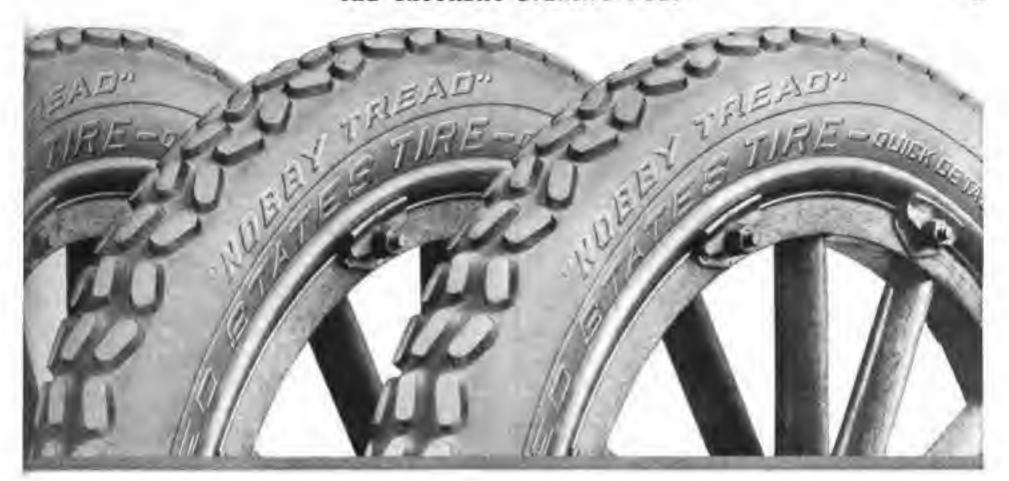

And remember this—you have got to wear out these big, thick, tough "nobs" before you even start to wear out the extra strong tire underneath—that is one reason why experts call "Nobby Treads"

Two Tires in One

Thousands upon thousands of veteran motorists now use "Nobby Tread' through all seasons, because they are such phenomenal mileage tires and re

THE LAME DUCK

Views of an Innocent Bystander

WASHINGTON, D. C.

DEAR JIM: This is the second war-if this is a war, to say nothing of the Boxer uprising, the Cuban intervention, the Philippine insurrection, with a con-siderable slant at the Japanese-Russian fuse and some small angles on the Boer imbroglio—this is the second war that has found me at the theater of executive operations; but it is the first war that has left me in a position where I could not express my burning thoughts on the same in the eve-ning and discover them illuminating asbestinized first pages of newspapers on the

following marning.

Now, Jim, it is true that I am producing as many burning thoughts on this Mexican question as any thought producer you know and at as high caloric pressure; but, as you may realize, war in addition to being hell is also hurried, and there is grave danger that if I light up my cerebrating apparatus the product thereof would not keep hot during the period of time that must elapse between flame and public formulation. In short, what might be per-

lectly proper to-day might be in the discard lung before it reached you. Hence, I am confined to the fixed occurrences, the settled propositions, that have seethed their last seethe in our heaving midst and are historical, as mayhap they were originally hysterical. To this end it is my intention to comment on a grave matter of precedent maintained, an affair of state that was put over in the conventional and regular manner. These incidents, whatever you may think to the contrary, are not so common that, incidental as they are, they are not deserving of comment.

Indeed, respect for precedents in our State Department and observance thereof have not been so frequent or so marked that they may pass unnoticed. We make up our matter of precedent maintained, an affair

tran precedents as we go along, or have been doing so; and that makes this matter I have

doing so; and that makes this matter I have in mind of greater import.

What I have to inform you about relates to Mr. Edward Savoy, of the State Department. Mr. Edward Savoy is a negro and he has been a messenger at the door of our various Secretaries of State for the past forty-four years. Thus it has happened in the past—not now, of course, but in the past—that Mr. Edward Savoy has been in completer possession of knowledge of diplomatic precedure than some of his supelomatic procedure than some of his superiors. He is a most intelligent as well as a most polished messenger, and he has watched the happenings within the door he guards for forty-four years. Small wonder that he is wise!

The Right of the House of Savoy

On the day when Señor Algara, the Mexican charge, came to the State Depart-ment to get his passports or to request them, Mr. Edward Savoy bowed the Mexican charge into the office of Secretary Bryan and then hastened to his good friend Major J. J. Dickinson, who has a room near that of Mr. Bryan.

"Majah," said Mr. Savoy, "you are a good friend of mine?"

"I trust so, Eddie," the Major re-sponded. "I have lelt sure that you have honored me with your friendship. "I have, Majah-I have.

That being the case, Eddie, what can I

of for you at the present moment?"
"Majah," said Mr. Savey, moving close to the Dickinsonian desk, "that Mexican charge is in there with the Secretary."
"So I understand. And what has that to do with me?"

"Nothing, Majah: but it has a lot to do with me. Majah!" And Mr. Savoy's voice became low. "That Mexican charge is there for only one purpose."

"And that is? "He has come for his passports, sub-have been here for ferty-four years, and know. He has come for his passports. I have knowledge of diplomatic procedure. He is here for no other purpose."

Well, what of that? "Majah" - and Mr. Savoy's voice as well as other portions of Mr. Savoy shook with earnestness - "be won't get them!"

Won't get them! Of course he will get

"Begging your pardon, suh, I don't mean what you mean. What I mean is that be won't take them with him. I have been here forty-four years and I know the precedent, sub. His passports will be delivered to him at his embassy, sub-delivered to

him."
"I fear I do not get the drift of your remarks, Eddie."

"Majah, I have been here forty-four years and I know the precedent, suh. The precedent is, suh, that I shall take them to him—that's the precedent, Majah. This is the third time this has happened since I have been here, and on the former two occasions I took the passports to the dip-lomat who demanded them. I took them. Majah. That is the precedent."

"Well, you probably will take them this time."

Thank you, Majah; but that is the precedent. I remember when Lord Sackville-West was handed his passports. He came here and the preliminary negotiations en-

"Then, suh, he returned to his embassy I was summoned by the Secretary and given his passports, incased in an official envelope. I took them to the embassy. I brushed by all the clerks and doorkeepers and entered the room where Lord Sackville-West was sitting. I put my beels together and stood up straight; and I said: "'A communication from the Honorable the Secretary of State, sub.'"

All According to Precedent

"'Let me have it, my good man,' Lord Sackville-West replied; and I handed hit the envelope containing his passports. He tore it open and said: 'Very well! Very well! They are in regular form; and I thank you.

"'But, Lord Sackville-West,' 1 replied, will you be so kind as to give me some receipt so I may show it to the Honorable the Secretary of State on my return to my post of duty, thus satisfying him that I have discharged my trust?" "Lord Sackville-West looked round and

"Lord Sackville-West looked round and said:
"What sort of a receipt do you want?"
"If I may be so bold, Lord Sackville-West," I replied, with a bow, 'kindly write as follows on the back of the envelope: Received intact the contents of this covelope; and sign your name.' He did so. I returned to the State Department and showed the envelope to the Honorable the Secretary of State; and he glanced at it and said:

"'Very well! Very well!"

Mr. Savoy lowered his voice again.
"That envelope, Majah, is in the archives of my family and is one of my priceless heirlooms. And it is so with the envelope to which I delivered his passports to the Spanish Minister in the spring of 1898. I have that also in the archives of my family."

"But, Eddie," commented Major Dickinson, "I do not understand what is needed. How can I assist you?"

"In this way, Majah—in this way: That white man who is the messenger Mrs. John Hay put in here, he knows what is going on too, and he's hanging round the

John Hay put in here, he knows what is going on too, and he's hanging round the Secretary's door. I thought that perhaps, as the Secretary hasn't been here very long. perhaps he wouldn't think of the precedent stablished and held sacred for forty-four years; and when it becomes necessary to send his passports to Senor Algara he might

call in the white man and let him take them.
"It's very important, Majah. The precedent has continued in force for forty-four years. It wouldn't look well or sound well in the public prints to have it spread abroad that a precedent established for forty-four years had been broken. I am sure the Secretary wouldn't do it knowingly; but there are many things, many forms of pro-cedure, with which he may not be entirely familiar, and I feel that in such an important matter as this he would not care to be misled. It's precedent, Majah - precedent; and I shall be obliged if you will call his attention to the far-reaching consequences involved.

"You want me to suggest to the Secretary that you are the proper person to take the passports to the Mexican chargé?"

"Yes, sah - that's it. Yes, sah - diplomatically, Majah, diplomatically; but in such a manner that the proprieties and amenities shall be observed. You are from the South, Majah?"

I was born in Kentucky."

"Well, Majah, you knows how it is; out-ull don't want no white man doing a black man's work—especially in delicate matters like this. Now, if I may be so bold as to say it, Mr. Bryan, the Secretary, he's from Nebraska, and he might not understand that side of it; and he might think nothing at all about the precedent, either."

So Major Dickinson went in to see Secretary Brean.

Secretary Bryan.
"Chief," he said, "Eddie Savoy, who has

been a messenger outside this door for forty-four years, is desperately afraid you will let the white messenger take the passports to the Mexican charge. Eddle rlaims, if you do, that a diplomatic precedent of cert-four years will be broken. forty-four years will be broken. He asked me to suggest to you diplomatically that he

is the proper person to carry the passports."
"Major," Mr. Bryan replied, "your
presentations are received in the diplomatic spirit with which they are tendered. Mr. Savoy shall take the passports. The precisions shall be observed."
"I thank you, sir," said the Major, howing and retiring.

And in consequence of this understanding Mr. Edward Savoy took the pusports to the Mexican charge, efficiating in this capacity for the third time in forty-four years, or on every occasion when such offices were required in our diplomacy. This, too, is settled, fixed, immutable.

Meantime you should hear the Senate growl over the net results of its justification

debate

The trouble arose in this way: After the

The trouble arose in this way: After the President made his war speech and the House passed the justification resolution, that resolution went to the Senate and there they wrangled over it for some time. Then came the dehate. There was criticism, both veiled and open, for the President and his Mexican policy; and it was the duty of the organization members not only to defend the President but to urge the resolution as he wanted it. Also, it was their duty to make it clear to the it was their duty to make it clear to the world that this was a great patriotic movement, and that they—the organization leaders—were great patriotic people; and that the other great patriotic people; and that the other great patriotic people comprising the residue of the population were with them.

The Screaming Eagle Gagged

Now the only people who can be with the Senate in a public delaste, as far as public and immediate manifestations of approval are concerned, are the people in the galleries; and naturally the galleries were full. Thus we have the stage set: The organization leaders ready to be patriotic until they burst the buttons off their vests; the galleries crowded with citizens who were anxious to be patriotic by applauding these senators; and the presiding officer—who was for a time the Vice-President—Thomas Riley Marshall by name.

What happened? Why, Jim, every time a person in the gallery chapped a patriotic hand in approval of some flag-waving, rally-boys-rally, this is our-country-and-our-President sentiment, the Vice-President—himself a Democrat—sternly repressed such manifestations, and twice put

pressed such manifestations, and twice put

pressed such manifestations, and twice put
this entire body of patrictic American
citizens out—cleared the galleries, suppressed the applause, and otherwise injected
himself into the proceedings.

Then he went away; and he called Senator
J. Ham. Lewis to the chair. This position
in the chair kept J. Ham. off the floor and
out of the debate. He could not fling any
polysyllables about; could not wave the
flag in union with his whisters; could do
nothing but provide—that is, nothing but nothing but preside-that is, nothing but one thing. That one thing was to suppress applicuse,

Imagine a senator waving his arms about and, in the middle of a grand, golden and gorgeous percration about the beauties of the flag, being stopped, just as he is preparing to take his final soar into the empyrean, by the rat-tat-tat-tat! of the gavel of the presiding official who says: "The senator

by the rai-lai-tai-tail of the gaves of the presiding official who says: "The senator will suspend for a moment. The chair desires to admonish the galleries" and so on. Talk about funeral baked meats coldly furnishing forth a marriage table! What about such gags for the scream of the eagle! I tell you, Jim, these senators have their troublest. Yours, unvexed, Bill.

"The Boss Told Me to Get the Book"

That's the way a few have asked for one of the three books advertised below. Out of thousands of requests, only a few "let George do it."

No doubt the hous read the book-of he took a big chance. Don't follow

These books were written for executives - not for subordinates. They reyeal an all too common lack of connection between advertising and sales, and suggest the remedy.

Have just copy addressed to you personally,

If ilzer is sales and advertising waste and inefferency in your lossiness you ought to know it first.

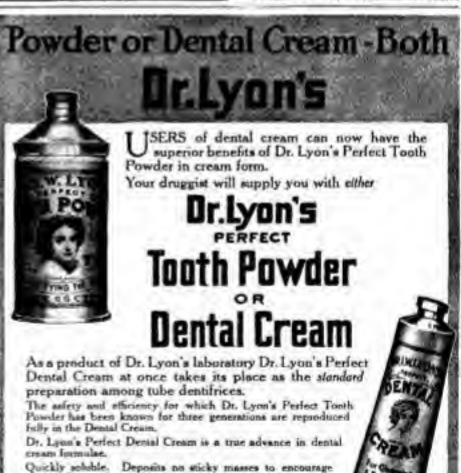

An Astonishing Revelation

These books hold something impor-tant for every leadness man. They was the mark off advertising and show the man who pays the bills love to get the most for his money.

If you check "A" on the coupun be-low, you'll restive "Blazing the Trail," a book for con-advertisers, "B" will bring you "Building the Bondway," a book for men who spend \$25,000 or less a year on advertising; "C" brings "Keeping the Road Open," a book for those who spend over \$25,000.

One book - whichever lits your mosts - will be sent free. If you want mon than mer send 25 cents for each additional copy.

Money-Earning in Small Towns

THE man or woman in a small town who wants to earn some money "on the side" usually lacks the opportunities possessed by those living in larger places. We have a plan by which this can be accomplishedwhich is open to anyone with a little spare time on his or her hands, day or evening.

If you live in a town of less than 5000 inhabitants and expect to have some spare time on your hands this summer, we'll pay you liberally for it. We have a new proposition to make to those living in towns of that size. If you will drop us a line of inquiry we will explain the offer fully to you.

It is an unusual opportunity and if you want to make some extra money - to turn leisure hours into cash - it will interest you.

Agency Decrees, Box 515

THE SATURDAY EVENING POST, PHILADELPHIA, PENNA.

THE SPRING SONG

in the sun and magnetizing a she-cub with

The tyranny of home has carpet-slippered the world. It has preserved its hearth tra-ditions in the denatured atmosphere of the city apartment and the fireless fireside. The rearing peat logs, with their flame-lit circle of cold-backed squires and dames, are

the gas grates and the gilded steam radi-ators of today; but the tyranny of nome is still godfather to the easy chair, and has sponsored the lounging robe, the hartshorn smoking set, and the hand-embroidered cushion-top to the Christmas shopping list

of useful gifts for men.

Geotle-ingered, it bound Mr. Heyman to the plush depths of his golden-oak reclining chair, and held him until theseventh tong of the seven-day wedding present on the manufaltere last its echo and his wife's voice drifted to him through the fragrant huze of a dream and his morning coffee. "Hey-man!"

"Yes-yes, petsis."
"Come! Each morning you read your

paper longer and get later."

He yawned and stretched his arms back-ward to their limit.

"I should worry! With a flat completely furnished, from a dumbwaiter to a wife, I ain't in such a burry to get out in the heat and talk pickled tripe and liverwurst to the trade."

Mrs. Heyman leaned through the frame of the doorway, a blue-aproped Vesta, with the sacred furnes of breakfast bacon hover-

ing in an age about her and a smear of paneake flour across the flush of her check.
"I got a surprise for you, Heyman. You ought to see! Honest, mamma herself could learn from me how to make griddles!"
"Griddles! I could die for joy! But

what we got a new parlor for if we can't sit in it a minute? Marons and papa can save their parlor; but I sit in mine! Come! You their purpor; but I set in mine! Come! You ain't give me but two this morning, little canary! Married only two months and she furgets I take three kisses before breakfast—three kisses and a glass of water."

She slipped into the big breadth of his embrace and transferred the flour streak to

"Ach, Heyman, quit! That's four already you've had. Come on out in the kitchen, everything's getting rold. Don't put your cuffs on the table, Heyman, they scratch."

"Already it's too bot to wear cuffs."

"Ain't it so! Look out, will you? The backs of the houses look like summer, don't.

they? Look over at all them flowers in Feraldin's windows. The paper says the opera closes tonight and she sails next Saturday. Won't I miss her, though, limbering up every morning on the Spring Song and them little expeggios I copy after her!

"It's like mamma and papa say, we got the cheapest flat in New York, twenty dollars, steam best and grand opera thrown

"And me getting free singing lessons from listening to her!"

"Honset, petale, last night when I came borne you was singing the same things as she sings, and I didn't know which one it was, it sounded so fore. So help me, it did, have been and another or your

Ray. She ain't got nothing on you."
"Aw, Heyman!"
"Come, little canary, I'll run you a race to the kitchen."

"Aw, Heyman, quit such nonsense!"
"Ack, how pretty she sets the table with
the fringe on the rapkins turned up!"
"Here, sit on this side, Heyman, so I can
reach the graddles hot off the stove."

They drew up before a tiny table spread in the tiny kitchen. May sunlight wandered in and lay on the tresh red-and-white table-cloth, and glanced off the new tin utensils-hung like armor round the walls. Mr. Heyman plunged a fork into the topmost four of a stack of steaming griddlerakes, transferred them to his plate and tilted a disease of article of a stack of steaming griddlerakes, sluggish stream of golden syrup over them, cup of happiness only to find it bubbling

"These cales, with this syrup, Ray! Before we was married, believe me, I sat more than once in the Subway and looked at the advertisement pictures of 'em with a emptiness inside me that made me dizzy."

"When you go downstairs, Heyman,

stop in the store with a batch of 'em for papa- len be can eat and not know it! You should out your eggs first, Heyman."

"Petsie! Such a care she takes of me I don't deserve it, Rachel; such a happiness I don't deserve. I wonder sometime what right I got to it."

His tones were suddenly low and trend-

in his throat.
"Ach, Heyman, you should talk so! On! last night I says to mamma and papait was lacky day for me when you came in the store and tried to sell us that first order a pickled goods. I only wish all girls should be so lucky."

"Ach!"

"I says to Becky Kopf yesterday when was downstairs in her flat: 'I got it bette even than you, Hecky. Look at Moe tw weeks a year on the road!' How mad shigot! just like I said something to get moat! Can I help it that Moe's house send him on the road?"

"Aw, that reminds me. I forget to go

him on the road?"

"Aw, that reminds me, I forgot to giv Moe and Becky last night what I brough home for the lasty—a little monkey in a to I seen 'em selling down on Fourteen Street for six cents. What's the different I thought: I get the little shaver con can't break me. Always when I come that kid goes right in my pocket, like I was five-and-ten-cent store."

"Tonight when we come home for mamma's we'll stop in with it. Always a ten a clock he wakes up and cries a little." Just like a buzz-saw he cries, so cute! "Becky called upstairs last night the

Becky called upstuirs last night the seeky called apactairs that night to she's got something for you—a surptis I should be jealous! Some more griddle Heyman? Ach, if you cat ten you can a a even dozen too."

"Too much is enough, canary bird. It is met!—half past seven already. If I don sell Sol Herzog & Company that thoughts and ally order today don't you and warm

mel /—half past seven already. If I done sell Sol Herzog & Company that choweho and jelly order today don't you and mammet me in when I come home tonight. Where! How warm it is already, not? "It's grand weather for mamma and pape to be going to the country, not? Yesterflay to be going to the country, not? Yesterflay hought bisself a fishing pole as long a you are. How mad he was when I seen standing behind the refrigerator—like was something to be gashamed of that he was going to enjoy himself."

"The old man'll have the time of hilfe—light he's got already too,"

"Today when I'm done in the flat I'll gover and belp 'em pack. For her and paper two weeks in the country mamma packs hilfer Europe! A basket yesterday at brought special for their luncheon on the train—like a shoetox wouldn't de! Children they are! I'm glad they spend to money on page fifty-six for pleasure: a poor grandma's money one vacation in the lifes they can afford."

"It's grand! With Aunt Harns and you the store can run just as good. We can pickle mamma's tongues for her while she gone and surprise her—not, Ray?"

"Ach, Heyman!" She slid round to table and placed the warmth of her there close to his shaved one. "How good mare, Heyman! How I love you!"

"My little canary bird! I she'h Listen how early in the morning she sing When I get a thousand dollars each operatearly in the morning I wouldn't get up!"

"Listen, Heyman—sh-h-h-h!"

"Why does she always sing the sam sorge—always—"

"Miss Anson says she probably as limbers up on those—light lists this chips like in the probably as limbers up on those—light lists this chips like in the probably as limbers up on those—light lists this chips like

"Why does she always sing the sale songs—always—"
"Miss Anson says she probably to limbers up on those—light little things list the Spring Song; she don't sing grand open in the morning. Listen, Heyman! Always that swell? Listen to her take that C!"
"What's she singing, petsie—the Spring Songs."

Song?"
"No, silly! Ain't I been trying to lear
"No, silly! Ain't I been trying to lear you ever since we moved in how to know when you hear it? The one where she take the little grace-notes on high C is the Sprin Sung-like this Tra-la-la-la: Them

arpeggios she's singing now."
I should stand and listen to the min ence between the Spring Song and grand opera, yet; with Isaacs tryin' to beat met that chowchow order! Put a napkin over them cakes if you want me to take 'em. Hay Sixth Avenue don't need to know win: w had for breakfust."

"Tell mamma she should fix him some country sausage out of stock with the and that I'll be over later. Good by He man. Don't come home so late we recover at mamma's tonight and she gets be a later. The papers are full of the contract of t Take care, Heyman, the papers are full a street-car accidents!"

"Good by, petsie. Go out for a little en-syment today. Walk out with Becky and the baby. I come home early. Good by!"

"lieyman?"

"You only kissed one ear and I feel lepsided

Baby! There now, you got more as you

He closed the door lightly after him and his heavy-shod feet clattered down the flights in a rapid avalanche.

Except for the tenuous twitting of sparrows from zigzag wires and the shouts of rhildren playing in a rear courtyard be-reath a network of clotheslines, the apartment was suddenly quiet. With a little sigh that died in a smile, Mrs. Heyman turned to her kitchen, plunged the waiting dishes into a shining pan, pushed her sleeves further off her round elbows, and let the hot terrent from a high-pressure faucet plunge into the sink.

Presently she broke into a little warble peetly, like a bird singing in its throat, and with her blue-and-white cup towel polished the face of a plate with a rapid rotary mo-tion. The warble grew to a trill and the trill to a full, joyous creecendo that brought her down the scale again in little silvery starcates, like a tiny mountain rill trickling through the roof of a cave and suddenly terminating in delicate suspended stalactites. Then upward sgain, higher, freer, switter, pat against the back doors of Fifth Avenue, up over the roof of the fifteendary De-Luxe, down into a cat-infested courtyard—a lark warbling out its joy; a mother cooing her most sacred lullaby; Prescribe crossing over her flowers.

Beneath the kitchen window a voice ballooed twice. Ray paused on the crest of her flight, placed a dry teacup beside its mate and leaned half out of the window.

"Yes, Becky!" starratos, like a tiny mountain rill trickling

'Yes, Becky!" "Yes, Becky!
"What you doing up there, Ray? I bard Heyman go long after Moe." A head natruded from the window beneath and a round, olive-skinned face turned apward like a paney in the sun. "Was that you found, obve-entimed face tirried upward like a pansy in the sun. "Was that you arging, Ray? Honest, half the time I can't tel which it is, you or the thousand-dollar queen over in the De-Luxe."

"It was me, Becky, trying to capy some of her high notes. I—I could take 'em, ton, if I had the training."

"Cover on down a while Bay."

"Come on down a while, Ray."
"You come up."
"Can't leave the baby—he's asleep."
"I ain't done my dishes yet."

"What you fixing for supper, Ray?" "We're going over to mamma's for sup-per. Next week they go to the country."

"On your way home stop in I got some-thing for Heyman. We'll be sittin' out in

front tonight till you come back.

"I keep my eyes on my hubby; you don't eve him no surprises behind my back. How you two carry on together!" Laughter.

"I'm fixing sweet-sour tongue for sup-pet; Moe is so crazy for it. I got a grand ig one off your mother."

Heyman likes it too."

"Come on down a while, Ray, your house-

"Come on down a while, Ray, your house-work ain't so heavy."
"When I've done my dishes, all right; that kid I ain't seen for a day. Honest, be's all Heyman talks about. Wait, I must go, Becky; there's my bell."
Mrs. Heyman drew inward and opened

ter door cautiously, her checked apron

for door cautiously, her checked aproxi-fung backward over one hip.

"What is it, please?"

"Eas thees the place where madame—"

"This is Soi Heyman's flat, Number 2."

"Eas there the place where madame song thees morning-and all the morn-

"Yes." Mrs. Heyman narrowed the open doorway and placed her foot half aggressively in the opening.
"Madame who seeng early thees morn-

After seven o'clock the lease says that tenants are allowed to use all musical instruments—uin't the voice a musical instrument?" hatrument.

The small black-clad figure without, the sik-stockinged variety, which has opened the first act of every society drama whose gold furniture ever required flecking, whose waist is the size of a small-sized embroidery hoop and whose apron is as sheer and small as a cambric handkerchief, ventured one hall-heeled slipper across the threshold. "Zee note for madame."

Rachel broke the seal of the ciel-blue envelope with fingers that fumbled, and read rapidly and with darting eyes. Then the note fluttered as though it had turned to an aspen leaf in her hand and drifted to the

"Feraldinil She-she wants to see me, girl? My voice she she she giri? My voice she she she wants-me! Feraldini! My apron -I -- oh -- new?"

"Yes; madame come weeth me now, before madame go to the opera house. Now,

please!"
"Yes! Come! We go now—now——"
"Madame's hat?"
"Here on the hatrack—this—my hus-

band's cap will do. Let's burry, girl!"

With her eyes like phosphorus on black water and senses eximming. Rachel dragged the small black figure along with her out into the gaslit hallway.

In its sulky stream of light she paused for moment and glanced down the shabby front of her house-crinkled skirt in sudden hesitation—then went down the stairs with her heart beating in her ears, throbbing in her throat, leaping high in her bosom; and clutched in her hund, like a damp ensign, was the blue-edged cup towel.

In the red-velvet-and-walnut parlor, in a circle of light flung by a painted china lamp and in a silence that was as singingly electric as a wire transmitting its message, a tribunal sat on the least uncomfortable chairs of the six-piece velvet-and-walnut set, and two women wept frankly; and an old man rubbed a gnarled hand across his

"For heaven's sake, mamma, Heyman, papa, say something, one of you! I can't stand no more of this awful stillness!"

Mrs. Hoffheimer rocked herself to and

fro.
"Always this room was bad luck to us! In this room poor Grandma Hoffheimer laid on that red sofs when she was dead; lo this ruom, when pape broke his foot with the keg fulling on it, we laid him till the doctor came. Always when we don't six like always in the kitchen and talk it's bad

"Bad luck! Listen to her, Heyman and paps, had luck the calls it yet! Had luck!" "Bad luck I said; and I say it again— bad luck!"

"Bad luck!" repeated Mrs. Heyman, her voice rising in a semi-hysterical cressenda.
"Bad luck, Heyman, when Feraldini-think once! wants me to go to Vienna with her, in two days, on the same boat! When for eathing, with no expenses, she will make out of me a great singer! Bud lack yet!" "Sh-h-h, petsie!" Mr. Heyman stroked

"Sh-h-h, petale!" Mr. Heyman stroked his wife's hand up and down with a ranor-strop mavement. "The trouble is we all get excited at once. We got to get calm. Remember, when I left home this morning. Ray, you was like always; and when I came home tonight a singer like Feraldini wants to take you to Vienna with her. It has a stroke week in very head all at once." don't get in your head all at once.'

"Heyman, such rooms as here you never seen! Honest, for gold I couldn't see a minute—gold halls; gold elevators; gold furniture! And for flowers! You can believe me, mamma, there were more in her rooms than that time we had tickets for the flower show at Madison Square Garden." "In springtime flowers ain't so expen-

sive and all what glitters ain't always gold neither. With a bottle of gold I gilded three headchesses for our window last Christmas, didn't I, paps? We got 'em yet. For fif-teen cents we got all the gold we wanted. A married woman, Hay, has got her first duty to her husband

But, mamma -In twenty-five years not one hour have I left papa. A woman's place is with her hushand; and not even being a biggest singer, like her over there, can go before making him a home. Don't get no new-fangled ideas like that in your head." "She ain't American, mamma, she's Eye-

talian. Oh, Heyman, would you believe it how plain she is? She gave me some grapes as big as walnuts, and asked that I should sing the Spring Song and some scales up and down, like I did this morning over the dishes, and then the Plewer Song from

"If I say it myself I bet you sang grand!" "I did, mamma, only I was so scared; and afterward she took me in her arms and cried, and me such a sight, with the dishtowel in my hands! And she asked me such questions about you and papa, and who else

in the family was a singer."

Mr. Hoffheimer rubbed his dry fingers

together. "Back in the old country, Ruchel, I remember in our family once was a great singer, who went to Nurnberg and —"

You Can Change the FORD

from Pleasure to Business

Full Parel Delivery Body Load Space 44x54

HIGHLAND Commercial Body

NTERCHANGEABLE with the regulation Ford Pleasure Bodies, a Highland Commercial Body gives you practically two Ford Cars for a little more than the price of one-

Six Models, (four shown here), all built with the same rugged honesty that characterizes the Ford Car, light, roomy and strong. They will carry any load that the Ford Chassis can carry.

No matter what may be the character of your merchandise or how long your hauls, the Ford Car with the appropriate Highland Commercial Body will modernize your delivery system, increase its efficiency and reduce its cost below the cost of horsedrawn vehicles.

We carry a complete stock and can make immediate delivery either direct or through your local Ford Dealer. Prices from \$15.00 upward, F. O. B. Cincinnati, Ohio.

Write today, telling us what business you are in and we will and you full details as to the Highland Commercial Body that will exactly meet your requirements.

The Steel - France Stating Co., Sullabout Stories, Street, Street, N. Y.

"Always on your side Hoffheimer! In my family I guess we didn't have no voices! I ain't sayin' peddlin' needs a singing voice like yours, Rachel, I know better as that: but when poor grandpa soily his tinware used to mend, even when I was a little girl I remember how load and fine his voice was—two blocks away we could hear him coming home to lunch!"

"Arh!" Suddenly Mr. Heyman rose and pushed back his chair until it whined on its rasters; his face had lost some of its light, as though dusk had fallen sadly, and his eyes were dark, like windows with the shades drawn. "It ain't what she's got or where she got it, mamma and papa, it'n

shades drawn. "It ain't what she's got or where she got it, mamma and papa, it's what she's going to do! That's what we got to decide here now—tonight. Rachel, we leave it to you to decide what is best for you to do!"

"Oh, Heyman, what to say I don't know! I—I want to go! I can't sit home and see the greatest singer want to take me to Europe and—"

Mrs. Haffheimer trembled to interrupt.

"In my day wifes didn't leave their husbands, voices or no volces!"

"Keep calm, mamma! It's a grand thing, just the same, that you got a daughter and I got a wife with such a voice."

I got a wife with such a voice."
Rachel turned toward her father, with
her hand on her bosom as though she would

still its heaving.
"A thousand dollars, papa, she told me this morning, she gets every time she sings a rôle. Think of it! Such rooms you never seen! Two maids like the one that came for

seen.) Two maids like the one that came for me, and ——"
"A thousand dollars! Go'way! It don't sound good to me!"
"Ask anybody, papa, what money grand opera singers get! Heyman, you tell him."
Mr. Heyman placed his cold hands on his wife's shoulders and his lips grazed her hair.
"Ray's right, papa. There's big meney in the business. I used to sell greengeods to Lispinsky's, down on Green Street, and his daughter gets four hundred a week with a music show called The Queen of Heuric; and in grand opera it's more."
"In two years, papa, Feraldini says of

"In two years, papa, Feraldini says of me she"li make a singer like herself—two years in Visena, with the best!" Heyman interposed in a voice that verged

"Wait, Ray, three times you've told us all that! Now let's get down to business." "A wife's place is ——"

"No; let me do the talking, mamma. Three hours we been talking! Where she gets her voice ain't the question. The fact in she's got it! What kind of gold furniture Fernidini's got don't get us nowheres. Two

Fernidini's got don't get us nowheres. Two
days Ray's got to get ready. Tonight we
must decide does she go or stay!"

"Ach, Heyman, my husband, I—"

"That don't get us nowhere, Rachel.
You can't go and stay here with me and
minimum and papa too."

"You decide for me, Heyman; you—"

"That none of us can do! For yourself
you must decide. We don't stand in your
way. If we must give you up, then we—we way. If we must give you up, then we we say, if it's for your good, you should go!"
"It is, Heyman! I want to sing! Every night I wake up with something sopranu in my throat that wants to sing. A voice like

my throat that wants to sing. A voice like pure gold, she says, I've got."

"Ack, listen to her, Hoffbeimer, our only baby! Married two months—and listen! Her husband shouldn't be so easy with her; his foot he should put down! For a married worsan two years away frem her husband—it ain't decent! Heyman, ain't you no man? Fapa, sin't you got no foot to put down? Her grand new flut, her grand new furniture, her grand new flut, her grand new furniture, her grand new husband! And now, just because a Eystalian singer—"

"Sb-h, massama, sh-h-h! Heyman's right, Rarbel should decide for herself. A woman that ain't bappy is a hird in a cage. For her

that ain't happy is a bird in a cage. For her flat she don't need to stay home, they can subjet and make money on it. Heyman can come with us. For herself Hachel must

Mrs. Heyman swayed backward into her

husband's arms. ne back and mules you three proud! I'll sing in opera, with all of you in the middle hox. I want to go, Heyman, even when it breaks my heart to leave you and mamma and pape, I want to go!" "You go, then, Rachel. That settles it!

Now we're getting somewheres."
"Ach, my child-uch, that I should live

to see the day when she leaves me and her pape to go across the water! Parents like we been; a husband like hers; a —"
"Mamma!" Heyman's voice was like

"Heyman's right to be mad at you, mamma!" Mr. Hoffheimer waggled an angry finger before his wife's eyes. "She wants to go and we can't hold her. You want a cooped-up woman in the family? Not me! We ain't got nothin' soprano in our throats, Gott sei Dunk! Me and Heyman say, Rachel, that you should go, and mamma says it too."

With a moan that was torn out of her breast, Mrs. Hoffheimer folded her daughter within her arms and sobbed through lips that blubbered outward in frank emotion. "My baby! They don't understand. Nobody can care like a mother for her flesh and blood! Ack, my baby, like papa says, I say you should go; but my heart goes too. I —"

"Mamma! Mamma! I can't standit! It's "Mamma! Mamma! I can tstandit: It's
only for a little while, mamma—two years
and I make you all famous! Think, one;
how you hate the store in winter when the
bulk clives freeze, mamma! And when I
come back we can give up the store, and—
think once, mamma!"

"When your heart is being torn out you
can't think!"

Bay turned to her husband, with each

Ray turned to her husband, with each breath catching on the crest of a sob. "Heyman, you-you ain't mad at me

"For what should I be mad, Rachel! You should do what makes you happy. There ain't many girls got a chance like—like—you."

"Lyric she said I was, Heyman; lyric soprano. It won't be for long. With mamous and papa you won't get lonesome."

"So soon you sail, Rachel! Ach, Hoffheimer, day after tomorrow our child gos

heimer, day after tomorrow our child goes to Europe, and not even warm clothes for the ship she's got!"
"I don't need nothing, mamma—all expenses she says she pays. Tomorrow—Mr. Hoffbelmer batted a remonstrating

"You ain't no beggar that you go without pocket-money. How glad I am to stay home from the country, you should know All day I fight with mamma—country I go!
All day I fight with mamma—country I go!
to go yet! How giad I am to get this mone;
here on the table in page fifty-six out of the
house you should know! Here, take it
book and all, so I get it out of my sight!

"Na-no-no, papa; no-no-no!"

"Take it or, so help me, I throw it ou
the window!"

"Papa, for my own wife I can pay be
expenses."

"Papa, for my own wife I can pay he expenses."

"Takeit, I say; no monkey business! To the sountry I almost had to go! Schnappe next door, went; and like the meanles he came home with mosquito bites. Me and mamma say: "Golf sci Dank! We don't go to the country," set, mamma?"

Mr. Hoffhelmer cackled in a heady, this voice, and showed the book further into his daughter's resisting hands.

"Papa's right, Ruchel. What'll old folk-like us do in the country? Climb trees' With Aunt Hanna tending store, we lose the clothes off our backs, such overweight she

With Aunt Hanna tending store, we lose the clothes off our backs, such overweight she gives. Me and papa can sit in the parl sometimes this summer, if papa don't make me ashamed and take off his shoes to put his feet in the grass! We like it just as we and better, not, Hoffheimer?"

"I should say so!"

"Mamma, papa, I can't!"

"Tomorrow, Kachel, I take you out as buy you what you need. For a husband, got something to say too."

"Ach, mamma, papa, I—honest, I fee sick-like inside with happiness! I could or my eyes out at leaving, but I could hole for happiness because I'm going. She crist when I sang, mamma, and wiped her eyes of the dishtowel and klased me. Ach, it wa wonderful!"

"Such dishtowels like those she don'

"Such dishtowels like those she don' need to be afraid of."

meed to be afraid of."

Mr. Heyman reached for his hat.
"We go home now, Rachel; tomorrov
we got enough excitement before us."
"I be over at six tomorrow, Rachel, with
papa's value he brought from the old country
and them flannels you left here from
your trousseau." Tears rose in Mrs. Heff

heimer's voice and she swallowed then gulpingly. "You take my sweater for the "You take my sweater for the boat, too, it's heavier as yours—"
"Don't worry her with such nonserse tonight, mamma. Ach, don't you put the book out of your hands, Rachel—page fifty-six!"
"Pana, I can't take it!"

Papa, I can't take it!" "Papa, I can't take it!"
"Papa, my wife don't need —"
"Sh-h-h! Good night, children. Good night!"
"Ack mamma mood platat!"

Ach, mamma, good night!"

"Take her home, Heyman. These wimmin with their cryin'! Where they get so much of it from I don't know. Look at 'em on each other's shoulders, like wilted celery heads! I—I—ach!"

"Good night, papa!"
"Sh-b-h! All wet she makes my face
with her nonsense! Look at Heyman, Like a ghost he looks so tired! Go home, go, go! You scalawags, you!"

Come, Ray

"C-comin'! G-good night, mamma, papa. Good night!"

The door closed on her sobs; and on the dark stairway without she swayed toward her husband, with the tears streaming from

her open eyes.
"Heyman, promise me you ain't mad

at me!

"I ain't mad, baby—for why?"
"It won't be so hard after I get started,
Heyman; and when I come back I——" Sh-h-h! All tired out you are, Ray."

They stepped out into a momentary whist of cool May evening. Children danced in shrill groups under arc lamps; and, be-neath the giant network of the Elevated, surface cars clanged at the traffic; and in chairs ranged along the sidewalks, backs to buildings, shopkeepers and their families could glimpse a navy-blue sky between the trellises of the Elevated, except that the arc lamps were so bright they could not see

the stars.
"Sh-h-h, Rachel; there's Becky and Moe sittin' out in front! Put that book in your pocket; don't tell them all our business. Till tomorrow, when it's all settled, they

don't need to know."
"You're right, Heyman, not a word!
Jealous like a cat Becky'll be when she

The Kopfs tilted their chairs back against the plate-glass window of the plumber's shop and greeted them in reproachful pan-

"Hello, night owls! We been waitin' for you. Moe wanted to go up to bed half an hour ago when you didn't come; but I wanted to wait to give Heyman his surprise." Heyman mepped at his damp brow and

rubbed the inside band of his derby. "All day I been guessing, Becky, what you got for me. One of two things it is, I bet you - a new trick the little shaver's got, or some of that apple kecken it makes my mouth water to think about."

Mr. Kopf rose to his corpulent five feet

and closed his campstool.

"You ain't right neither time, Heyman. A surprise she's got for you and Ray that's a real surprise!

Mrs. Heyman showed her teeth in a re-mote and aerial-like smile, and closed her hand over her husband's arm.

"How jeulous I am of Heyman, Becky, you should know-you and him with your sarprises!

Mrs. Kopf's small, bendy eyes danced

inquiringly in her head.
"What's the matter, Hay? You ain't sick, are you? You and Heyman look like you've seen ghosts! Nothin' ain't wrong, is it?

"Such a headache I've got, Becky. And

"Such a headache I've got, Becky. And Heyman, like a rag he gets the minute it gets a little hot."

Mr. Kopf whacked his thigh with the short, fat hand of inspiration.

"I got it, Becky! We'll take 'em upstairs and fix 'em both up with some of our root beer! How's that?"

"For once, Moe, you got a good idea in your head. Come, we go up to our kitchen; it's cool like ice. Here, take my campchair up for me, Heyman. I keep tellin' my old man if he don't stop eating all the good things I make for him we'll soon have to take things I make for him we'll soon have to take

a ground-floor flat, 'cause he can't climb."
"You hear, Rachel," cried Heyman, stretching the rims of his eyes in mock formidability, "how good some husbands get treated?"

treated? hey trooped up the stairs, their gau

They trooped up the stairs, their gauzy laughter drifting backward and downward.

"Moe, go light up the kitchen, so Ray and Heyman can see, but don't wake the baby! It ain't his time for half an hour yet. Come right in, folks. Feel how cool my kitchen is? Sit down."

"Ray ain't feelin' so well, Becky, and we man, when the advice of your grand.

can't stay. We take a drink of your grand

root beer and then go right upstairs."
"Moe, hurry up and bring in from under
the sideboard some of that apple kuchen for Heyman, but don't wake up the baby!"

Mr. Kopf returned with a well-piled cake plate, which he balanced on his upright fingers with the exaggerated genuffections of a waiter.

"Don't go so soon, folks! In a few minutes the baby wakes up—always he wakes up to be fed at ten o'clock. Me and Becky nearly die laffin'; just like a buzz-saw he ells. You can hear him upstairs, ain't it? You stay and watch him.

"Not tonight, Moe; Ray ain't feelin' so well."

"Look, Heyman! Here's the surprise

for you and Ray. Me and Moe had a extra one made. Look!"
"Now what do you think of that? A picture of the little shaver! Say, honest now, look at them little hare feet and all! Honest, Moe, if you like it or not, I'll kiss your wife right here for that! Look, Rachel; see the picture of the little shaver!"

"Aw, ain't he sweet! How grand he got osed! How grand that embroidery took, Becky-look, you can see the pattern! Ain't he sweet?"

Mrs. Heyman bored a kiss into the paste-

board and ruse to her feet. "It was a grand surprise, Becky. We'll have it framed and hang it in the parlor along by mamma and papa. Thanks!"

"Thanks, Becky! It's a grand picture of the little above."

the little shaver." "Don't mention it."

"Good night, folks!"
"Good night!"

In their little flat above it was as quiet as the inside of a shell. Heyman raised the bed-room window and tweaked on the electric light. Heyman's face sprang out yellow and at strunge variance from its habitual terracotta pink.

"Heyman, you—you look like the dead!"
"Don't begin that, Rachel; I'm all right." She sat down on the uncrinkled bed-cover and regarded him with tear-ewelling

"Promise me you ain't mad at me, Heyman!"
"For what should I be mad, Rachel?

Don't begin that again. "I -sometimes when I think of mammamamma and papa, Heyman, and—see how—Becky and Moe are so happy—1— - feel like I - can't - I -

"Ach now, Rachel, such talk! Won't we

all be here when you get home? The old folks and me won't run away, we —"So easy he gives me up! He don't—don't care; and me—I—I could die for homesickness already—before I'm gone!"

She harrowed into the fluff reiller sharm. She burrowed into the fluffy pillow-shams.

"I such a terrible feeling I have —"
"It—it ain't a question of me, little canary; you got a bigger chance than any-thing I can ever do for you. It's you I gotta think about! Ach, Rachel, quit crying so, baby! When you go on like this I feel myself losing—losing my nerve!" "Heyman, I—such a husband you are!

A girl to have all at once such a husband and such a mother and father?"

"What can being the greatest singer give me that I ain't already got? I-premise me, Heyman, I don't have to go. I can't, Heyman! I ____ "Sh-h-h! Tomorrow, Ray, you feel

different.

She flung her arms round his limp collar and clung to him like a rockbound An-

dromeda. "No-no-no! Promise me, Heymanpromise ms I don't have to—promise ms !"

He moved his lips to speak; and because the words would not come he leaned over

and took her in his arms silently.

"You stay home, then, baby-home!"
"Ach, my-my Heyman!"
From below, the Kopf infant raised its voice to the night in a lusty scream that rose to a high-lungpower squall, like a speed-hot huzz-saw biting into hard wood.

Listen, Hey-Heyman, listen to the little s-shaver! He's singing the song for

What song, darlin'?"

"Silly boy! You never know it when you hear it."
"Darlin', you're like me, so upset and happylike that you don't know what you're sayin'. Lie still there, darlin'. That ain't singin', it's only the little shaver yellin'—

the _____ "The Spring Song, silly boy! It's the Spring Song for sure that the little shaver's singin'!"

He took her cheeks between his thumbs and forefingers and looked into her reluctant

"Ruchel, 1 don't ____"

She jerked her head away for the refuge on his shoulder, the timid hope under her heart beating against the high hope in his.

"White at Last"

"I certainly am glad to get this house white. What makes this so much whiter than the paint we had before?"

"Well, I asked Henderson who painted his house last spring and what paint he used. He told me that Davis & Son did the work with Carter White Lead and linseed oil, so I told Davis to send his men up."

"Hasn't our house always been painted with white lead?"

"Yes, but Carter seems to be whiter than other white leads. Davis showed me a couple of samples of white lead that he said were pure and they both looked

gray alongside of Carter. He says it's Carter that made Henderson's house so white, and this looks as if he were right."

CARTER Strictly White Lead

is a perfectly clear, pure white because it is manufactured by a modern process that eliminates even slight impurities and employs no discoloring agents. It is unusually fine because it is being constantly and thoroughly polverized during the fifteen days it is being chemically changed from pure metallic lead to white lead.

Carter White Lead is unexcelled in its affinity for linseed oil, its spreading and covering qualities, in durability or in any of the other qualities that have made white lead the most widely used white pigment.

Carter White Lead is preferred by experienced painters as the base for making colored paints because it contains nothing to dim the brilliancy of the tinting colors used.

If you are thinking of having your house painted in colors ask your painter or paint dealer to show you a copy of "The Puint Beautiful" portfolio, which shows twelve modern houses painted in up-to-date color combinations.

Whether your house is to be painted in colors or white was should send today for a free copy of "Free Paint, a Test-hoch on House-pointing," filter-paint with jour roles feater from The Paint Heartstall and containing in read space information of great value to property superses.

If you have had any trouble with paint or paint-ing, write to our Paint Information Bureau about it.

End time-waste in your billing

This complete correspondence typewriter automatically foots and proves your bills while it types them

11 questions answered

No business man can shut his eyes to this new time-saver. It will soon be as standard as the typewriter itself.

Below are some natural questions:

"Will it really save time and money?"

This is effectively answered in many letters we receive from users large and small. The following is a sample:

sider that we are saving 20% of our time in handling orders, entering, billing, etc., and for making out statements at least 25%."

This is one of the more conservative statements,

"Why should I bother about bookkeeper's work?"

It is not a question of bookkeeping. It is a question of time-taxing.

This machine, by totalling and proving bills while it types them, saves valuable clerical time. The saved time can be used for collections or other productive purposes.

3

"Will it fit my present billing system?"

Yes. It requires absolutely no changes in system. It does your work your way. It applies to small billing departments as effectively as it applies to large ones.

"Is it absolutely accurate?"

The best evidence is this: It is used constantly by the United States Sub-Treasury and by prominent banks throughout the country.

"What is the cost?"

That varies with the carriage-width. It is higher than the cost of a plain typewriter. Compared with the cost of a standard, first-class adding machine it is low. And remember: It is an adding machine combined with a complete typewriter.

The initial cost is soon wiped out by the time-saving, to say nothing of the accuracy insurance.

"Is it complicated?"

No. While it totals with coldsteel precision, its actual operation is simplicity itself.

"Can my present operator use it?"

Most assuredly. Within an hour your typist can learn to operate it readily.

"Can it be used readily on my regular correspondence?"

Yes. It is an absolutely complete Remington Typewriter for correspondence purposes. The simple switch of a lever prepares it for letter winning.

"Who are using it?"

Thousands of manufacturers and retailers-large and small-insurance companies, banks, city departments, railroads, express companies, steamship lines, telegraph companies, brokers and many in other lines.

machines were the first on the market. How much longer they will keep in first class condition, we do not yet know.

The Remington Adding & Subtracting Typewriter can be had in any of the Remington Models shown on this page. Each is a member of the famous Remington family-each is a complete, easy-running typewriter, plus the adding and subtracting feature-each is designed to insure maximum durability -each has distinctive features designed to meet individual requirements.

Two ways to investigate

Sooner or later the adding and subtracting typewriter will be considered as fundamental in practically every up-to-date business equipment as desks and chairs.

Its use is spreading rapidly.

The chief reason why most offices or stores-where bills and statements are part of the day's work-are not using it now is because the office heads have not yet investigated its time-andmoney-saving possibilities.

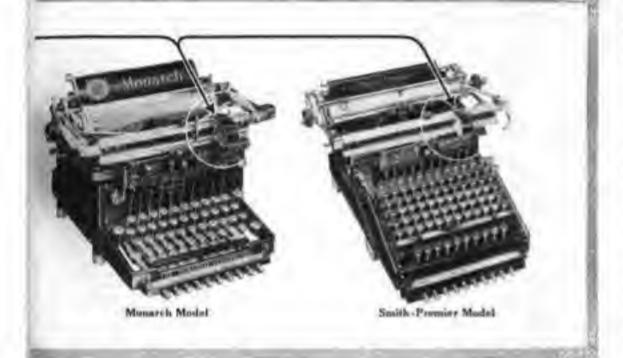

A new illustrated folder, "The Story of a Day's Work", makes it possible for business men, who are alive to the advantages of relieving human effort with improved mechanical helps, to learn specifically how the Remington Adding & Subtracting Typewriter will save clerk-time-and how it will do away with unnecessary error-risk and expensive calculations on their bills and statements.

We will send a copy of "The Story of a Day's Work" to any employer of clerical or stenographic help—on request. The information in this helpful little folder will probably mean to you the important difference between efficiency and inefficiency in certain departments of your business-the difference between an extra profit and a needless reduction of your "net" for the ensuing

twelve months.

A note now dictated to your str-ingrapher will laring you this Tolder by cream mail. Later, if you wish, we will startall a machine in your office, where you can demonstrate its toe-fulness on poor balls — rethout expense to you.

We recommend that you The Stary

"Is the touch light or heavy?"

Light. The keys are not punched s with the usual adding machine. They operate with a light typewriter touch.

When the adding and subtracting mechanism is connected the touch of

the numeral keys is slightly different. This prevents adding on correspondence work. On correspondence work, the adding mechanism is detached by touching a lever. The numeral keys then operite as lightly as the letter ceys.

If you wish to have the name of a user in your neighborhood we shall be glad to supply it.

"Is it durable?"

Decidedly. We have testimonial letters from offices which have been using this machine for 5 years. Their

THE CURTIS PUBLISHING COMPANY PHILADELPHIA, PA.

AN AMERICAN VANDAL

when a millionaire's daughter is being mar-ried to a duke in a fashionable Fifth Avenue hurch-it reminded me of that because it was so different.

Fortunately for us we were so placed that we saw quite distinctly the entrance of the wedding party into the chapel inclosure. Personally I was most concerned with the members of the royal house. As I recollect, they passed in the following order:

His Majesty, King George the Fifth.
Her Majesty, Queen Mary, the remaining Four-Fifths.

cur-Fifthe.

Small fractional royalties to the number

if a donen or more.

I got a clear view of the side face of the queen. As one looked on her profile, which was what you might call firm, and saw the mild-looking little king, who seemed quite sclipsed by her presence, one understood— ar, anyway, one thought one understood— why an English assemblage, when standing to chant the national authors these times, always puts such fervor and meaning into the first line of it.

Only one untoward incident occurredthe inevitable militant lady broke through the lines as the imperial carriage passed and threw a Votes for Women handbill into His Majesty's lap. She was removed thence by the police with the skill and desterity of long practice. The police were competently on the job. They always are which brings me round to the subject of the Landon bobby and leads me to venture the assertion that individually and collectively, personally and officially, he is a splendid plece of work.

The finest thing in London is the London The finest thing in London is the London policeran and the worst thing is the shame-lully small and shabby pay he gets. He is majestic because he represents the majesty of the English law; he is bumble and obliging because, as a servant, he serven the people who make the law. And always

he knows his business.

In Charing Cross, where all roads meet and snarl up in the hewildering semblance of many fishing worms in a can, I ventured of many fishing worms in a ran, I ventured out into the roadway to ask a policementhe best route for reaching a place in a scraewhat obscure quarter. He threw up his arm, semaphore fashion, first to this point of the compass and then to that, and traffic halted instantly. As far as the eye might reach it halted; and it stayed halted, too, while he searched his mind and gave use carefully and paintakingly the directions for which I sought. In that packed chass of cabs and taxis and busses and carriages there were probably dukes and archibishops—dukes and archibishops are always fuseing about in London—but they waited until he was through directing me. It fistbreed see so that I went back to the hotel and put on a larger hat. and put on a larger hat.

The Holders of the Balances

Another time we went to Paddington to take a train for somewhere. Following the custom of the country we took along our trunks and traps on top of the taxicab. At the moment of our arrival there were no the moment of our arrival there were no corters handy, so a policeman on post outside the station jumped forward on the instant and helped our chauffeur to wrestle the luggage down on the bricks. When I, rallying somewhat from the shock of this, thanked him and elipped a coin into his palm, he said in effect that, though he was obliged for the shilling. I must not feel that I had to give him anything—that it was part of his duty to aid the public in these small matters. small matters.

I shat my eyes and tried to imagine a New York policeman doing as much for an unknown alien; but the effort gave me a severe headache. It gave me darting pains across the top of the skull—at about the spot where he would probably have belted me with his club had I even dared to ask him to bear a hand with my baggage.

I had a peep into the workings of the system of which the London bobby is a spoke when I went to what is the very hub of the wheel of the common law-a police court. I understood then what gave the policeman in the street his authority and his dignity—and his bumility—when I saw how carefully the magistrate on the bench weighed each trifling cause and each petty case; how surely he winnowed out the small grain of truth from the gross and tare of surmise and fiction; how particular he was

vividly of that which inevitably happens to give of the abundant store of his patience to any whining ragpicker or street beggar who faced him, whether as defendant at the har, or accuser, or witness

It was the very body of the law, though, It was the very body of the law, though, we saw a few days after this when by invitation we witnessed the procession at the opening of the high courts. Considered from the standpoints of picturesqueness and impressiveness it made one's pulser tingle when those thirty or forty men of the wig and ermine marched in single and double file down the lofty vaulted hall, with the Lord Chancellor in wig and robes of state leading, and Sir Rufus Isaacs, kneedeeched and sword-belted, a pace or two behind him; and then, in turn, the justices and, going on ahead of them and following on behind them, knight escorts and ushers and clerks and all the other human cogs of the great machine. of the great machine.

What struck into me deepest, however, was the look of nearly every one of the judges. Had they been dressed as long shoremen, one would still have known them for possessors of the judicial temperament—men born to hold the balances and litted and transfer. fitted and trained to winnow out the wheat fitted and trained to winnow out the wheat from the chaff. So many eagle-beaked noses, so many hawk-keen eyes, so many smooth-chopped, long-jowled facer, seen here together, made me think of what we are prone to regard as the highwater period of American statesmanship—the Clay-Calhoun-Benton-Webster period.

London's Safety Value

Just watching these men pass helped me to know better than any reading I had ever done why the English have faith and conf-dence in their courts. I said to myself that if I wanted justice—exact justice, heaping high in the scales—I should come to this shop, I should bring the trade to this oldestablished firm; but if I were looking for a little mercy I should take my custom classes.

I cannot tell why I associate it is my mind with this grouped spectacle of the lords of the law, but somehow the scene to be witnessed in Hyde Park just inside the Marble Arch of a Sunday evening seems Marble Arch of a Sunday evening seems bound up somehow with the other institution. They call this place London's safety
valve. It's all of that. Long ago the ruling
powers discovered that if the rabidly discontented were permitted to preach dynamite and destruction unlimited they would
not be so apt to practice their cheerful doctrines. So, without let or hindrance, any
apostle of any creed, cult or propagands,
however lurid and revolutionary, may come
here of a Sunday to meet with his disciples
and spout forth the faith that is in him until
he has geysered himself into peace—or. he has geysered himself into peace of, what comes to the same thing, into speech

When I went to Hyde Park on a certain Sunday rain was falling and the crowds were not so large as usual, a bored policeman on duty in this outdoor forum told me; still, at that, there must have been two or three thousand listeners in sight and not less than twelve speakers. These latter hallowed in the stall postable class. anced themselves on small portable platforms placed in rows, with such short space between them that their voices inter-mingled confusingly. In front of each orator stood his sudience; sometimes they ap-plauded what he said in a sluggish British way, and sometimes they tasked him ques-tions designed to baffle or perplex him-heckling. I believe this is called—but there was never any suggestion of disorder and never any violent demonstration for or against a statement made by him.

against a statement made by him.

At the end of the line nearest the Arch, under a flary light, stood an old bearded man having the look on his face of a kindly but somewhat irritated moo-cow. At the moment I drew near he was having a long and involved argument with another controversialist touching on the sense of the word tabernacle as employed Scripturally one holding it to mean the fleshly tenemen of the soul and the other an actual place of worship. The old man had two favorits words—behoove and emit—but behoove was evidently his choice. As an emitter he was only fair, but he was the best behoove I ever saw anywhere.

The orator next to him was speaking in : soft, sentimental tone, with gestures gently appropriate. I moved along to him, being

(Continued on Page 49)

Continued from Page 46)

misded to learn what particular brand of motherly love he might be expounding. In the same tone a good friend might employ telling you what to do for chapped lips or lever blister he was saying that dergynen and armaments were useless and exposive burdens on the commonwealth; and as a remedy, he was advocating that all the priests and all the preachers in the kingdom should be loaded on all the dreadsughts, and then the dreadnoughts should seamed to the deepest part of the with all on board.

There was scattering applause and a role: "Ow, don't do that! Listen, 'ere! Hi've got a better plan," But the next speaker was blaring away at the top of his care, making threatening faces and waving as deached fists aloft and pounding with them on the top of his rostrum. "Now this," I said to myself, "is going to

Now this," I said to myself, "is going to be worth something worth while. Surely this person would not be content merely with drowning all the parsons and sinking all the warships in the hote at the bottom of the seas. Undoubtedly he will advocate something really radical. I will invest five minutes with him."

I did; but I was sold. He was favoring the immediate adoption of a universal langue for all the peoples of the earth—that vis all. I did not eatch the name of his which he would excel would be a language with few if any h's in it. After this disappointment I lost heart and came away.

Another phase, though a very different ore of the British spirit of fair play and tolrance, was shown to me at the National sporting Club, which is the British shrine boxing, where I saw a fight for one of the championship belts that Lord Lonsdale is herver bestewing on this or that worthy and worshipful fisticusfer. Instead of being lade the ring prying the fighters apart by main force as he would have been doing in America, the referee, dressed in evening withes, was outside the ropes. At a quick word from him the fighters broke apart from clinches on the instant.

The audience—a very mixed one, rang-ing in garb from broadcloths to shoddlee was as quick to approve a telling blow by was as quick to approve a telling blow by the less popular fighter as to hise any sug-gestion of trickiness or fouling on the part of the favorite. When a contestant in one of the preliminary goes, having been ad-paiged a loser on points, objected to the decision and insisted on being heard in his two behalf, the crowd, though plainly not in sympathy with his contention, listened to what he had to say. Nobody jeered him down.

Had be been a ferrigner, and especially and he been an American, I am inclined to kink the situation might have been different; but, as this man was a Briton himself, these other British hearkened to his sput-lerings; for England, you know, grants the right of free speech to all Englishmen—and denies it to all Englishwomen.

Much Ado About a Lion

The settled Englishman declines always to be justled out of his bereditary state of intense calm. They tell of a man who cashed into the reading room of the Savage Ulub with the announcement that a lion was loose on the Strand—a lion which had tooken away from a traveling caravan and was rushing madly to and fro, scaring torses and frightening pedestrians.

"Great excitement! Most terrific, old dears on my word!" he added, addressing

the company.

Over the top of the Pink Un an elderly gentleman of a full habit of life regarded

"Is that any reason," he inquired, "why person should come rushing into a gentieman's club and kick up such a deuced

The first man - he must have been a Colonial -gazed at the other man in amazement. "what would you do he asked. you met a savage lion loose on the

"Sir, I should take a cab!"

And after meeting an Englishman or so of this type I am quite prepared to say the may might have been a true one. If he met s lion on the Strand today he would take a cab; but if tomerrow, walking in the same place, he met two lions, he would write a effect to the Times complaining of the growby prevalence of lions in the public thoroughfares and placing the blame on the

Suffragettes or Lloyd George or the Nonconformists or the increasing discontent of the working classes-that is what he would do.

On the other hand, if he met a squirrel on a street in America it would be a most ex-traordinary thing! Extraordinary would undoubtedly be the word he would use to describe it. Lions on the Strand would be merely annoying, but chipmunks on Broadway would constitute a striking manifeststion of the unsettled conditions existing in a wild and misgoverned land; for, you see, to every right-minded Englishman of the insular variety—and that is the commonest variety in England—whatever happens at home is but a part of an orderly and an or-dered scheme of things, whereas whatever happens beyond the British domains must sarily be highly unusual and exceed-

ingly disorganizing.

An Englishman's newspapers help him to attain this frame of mind; for an English newspaper does not print sensational stories about Englishmen residing in England-it prints them about people resident in other lands. There is a good reason for this - a reason based on prudence. In the first place the private life of a private individual is a must holy thing, with which the papers dare not meddle; besides, the paper that printed a faked-up tale about a private citizen in England would speedily be exposed and also extensively sued.

Sensations to Order

As for public men, they are protected by exceedingly stringent libel laws. As nearly as I might judge, anything true you printed about an English politician would be littel-

ous, and anything libelous you printed about him would be true.

It befalls, therefore, as I was told on most excellent authority, that when the editor of a live London daily finds the local grist to be dull and uninteresting reading he straightway cables to his American corre-spondent or his Paris correspondent—these two being his main standbys for sensations asking. If his choice falls on the mun in America, for a snappy dispatch, say, about an American train smash-up, or a Nature freak, or a scandal in high society with a rich man mixed up in it. He wires for it, and in reply he gets it. I have been in my time a country correspondent for only and I know that what Mr. Editor wants Mr. Editor gott.

As a result America, to the average pro-vincial Englishman's understanding is a land where a hunter is niways being subblod to death by sheep; or a prospective mother is being so badly frighteness by a channelman that her child is born with a recoplexion changeable at will and an ungovernable appetite for flies; or a billionaire is giving a monkey dinner or poleoning his wife something. Also, he gote the uses that a through train in this country is so called because it invariably runs through the train shead of it; and that when a man in Connecticut is expecting a friend on the fact express from Boston, and wents something to remember him by, he goes flown to the station at traintime with a burket.

Under the headlining agotem of the Roglish newspapers the decarment of a work train in Arizona, wherese several Musicas tracklayers get mussed up, becomes Another Frightful American Radway Disaster! Flut a head-on collision, attended by futalities, in the suburbs of Liverpool or Manchester is a Distressing Suburbay Incident! official Blue Book, lamped by the British Board of Trade, showed that to the three months ending March 41, 1912, 2nd persons were killed and 2457 were injured in railway lines in the United Kimploon.

Just as an English gentleman is the most modest person imaginable, and the most backward about offering lip service in praise of his own achievements or his country's achievements, so, in the sums accur-lative degree, some of his newspapers are the most blatunt of beauties. About the time we were leaving England the jub of re-modeling and beautifying the fract deviation of Buckingham Palace reached its constusion, and a dinner was given to the morkingmen who for some months had been manged. on the contract.

It had been expected that the occasion would be graced by the presence of Their Majesties; but the may as I reall, are pasting stamps in the over album the Caar of Russia sent him on his littleme, and the queen was looking through the tile of Godey's Lady's Book for the year 1874. picking out suitable costumes for the ladies

add extra money to

of her court to wear. At any rate they could not attend. Otherwise, though, the dinner must have been a success.

Reading the account of it as published next morning in a London paper, I learned that some of the guests, "with rare British pluck," wore their caps and cordurays; that others, "with true British independence," smalled their pipes after dinage; that there smoked their pipes after dinner; that there was "real British boef" and "genuine British plum pudding" on the menu; and that repeatedly those present uttered "hearty British cheers." From top to bottom the column was studded thick with British thises and British thats.

The editorial writers of that very paper are given to frequent and sovering attacks on the alleged yellowness and the boasting proclivities of the jingo Yankee sheets; also, they are proce to spasshodic attacks on the laxity of our marriage laws. Ferhams what they say of us in true; but for unadul-terated nastness I never saw anything in print to equal the front page of a so-called sporting weekly that circulates freely in

In the campaign to give the stay-ut-home Englishman a strange conception of his American kinsman the press is ably assisted by the stage. In London I went to see a connedy written by a deservedly successful dramatist, and staged, I think, under his personal direction. The English characters in the play were whimsical and, as nearly as I might judge, true to the classes they purported to represent. There was an American character in this piece ton—a

American character in this piece two—a multi-millionaire, of course, and a collector of pictures—presumably a dramatically fair and coalistic drawing of the wealthy, successful, art-loving American.

I have forgotten now whether he was supposed to be one of our mesty Chicago millionaires, or one of our only Chycland millionaires, or one of our steely Pittsburgh millionaires, or one of our steely Pittsburgh millionaires, or one of our steely Pittsburgh millionaires—or just a plain millionaire from the country at large; and I doubt whether the man who wrote the lines had any roposeption when he did write them of the fashion in which they were afterward read. Be that as it may, the artor who comyed to play the American used an infection, or an accent, or a dislect, or a jargon—or whatever you might choose to call it—which was partly of the oldtime drawly wild Westerner school of expression and partly of the oldtime mass! Down East school.

A Continent at a Glance

I had thought-and had hoped-that both these actor-created lingues were hap-plly obsolete; but in their full flower of pay obsciety; but in their full flower of don. Also, the actor who played the part interpreted the physical angles of the char-acter in a manner to suggest a pleasing combination of Uncle Joshua Whitesenh, Mike the Bits, Jefferson Brick and Coal-Oil Johnsy, with a suggestion of Jesse James interspersed here and there.

True, he spat not on the curpet loudly, and he refrained from saying I vumt and Great Smains!—quaint concerts that, I am told, every English actor who respected his art fermerly employed when wishful to type a stage American for an English audience; but he bragged loudly and emphatically of his money and of how he got it. I do not perceive why it is the English, who themselves so dearly love the dollar after it is translated into terms of pounds, shillings is translated into terms of pounds, shillings and pence, should insist on regarding us as a nation of dollar-grabbers, when they only see us in the act of freely dispersing the aforesaid dollar.

They do so regard us, though; and, with true British setness, I suppose they always will. Even so I think that, though they may dislike us as a nation, they like us as individuals; and it is certainly true that they seem to value us more highly than they value Colonials, as they call them—particularly Canadian Colonials. It would appear that your true British can never excuse another British subject for the shockingly poor taste be displayed in being born though in Lime he may forgive us for refusing to be licked in an early number,

by him, he can never forgive the Colonials for saving him from being licked in South Africa.

When I started in to write this article I meant to conclude it with an apology for my audacity in undertaking—in any wise—to sum up the local characteristics of a rountry where I had tarried for so short a time; but I have changed my mind about that. I have merely stolen a page from the book of rules of the British essayists and novelists who come over here to write us up. Bless your soul! I gave nearly eight weeks of time to the task of seeing Europe thoroughly; and of those eight weeks I spent upward of three weeks in and about London—indeed, a most unreasonably long time when measured by the standards of the Englishman of letters who does a book about us.

about us.

He has his itinerary all mapped out in advance. He will squander a whole week on us. We are scarcedy worth it; but, such as we are, we shall have a whole week of his company! Landing on Monday, he will spend Monday in New York, Tuesday in San Francisco, and Wednesday in New Orleans. Thursday he will divide between Boston and Chicago, devoting the forencon to one and the afternoon to the other. Friday morning he will range through the Rocky Mountains; and after luncheon, if he is not too fatigued, he will take a carriage and pop in on Yosemite Valley for an hour or so.

But Saturday—all of it—will be given over to the Far Southland. He is going 'way down South—to sunny South Dakota to see the genuine native American darkies, the

the genuine native American darkies, the real Yankes blackamoors. Most interesting beings, the blackamoors! They live exclusively on poultry—fowls, you know—and all their womenfolk are named Honey Gal.

The Northcliffe Playwrights

He will observe them in their hours of He will observe them in their hours of leisure, when, attired in their national costume, consisting of white duck breeches, banjos, and striped shirts with high realization; they gather beneath the rays of the silvery. Southern moon to sing their tribul melodies on the melon-lined shores of the old Oswego; and by day he will study them at their costomary employment as they climb from limb to limb of the cottonwood trees, picking cotton. On Sunday he will arrange and

tomary employment as they climb from limb to limb of the cottonwood trees, picking cotton. On Sunday he will arrange and revise his notes, and on Monday morning he will sail for home.

Such is the program of Solomon Gruedy; Esquire, the distinguished writing Englishman; but on his arrival he finds the country to be somewhat larger than he expected—larger actually than the Midhanda; so be compromised by spending five days of a private botel in New York, run by a very worthy and deserving Englishwoman of the middle classes, where one may get Yorkshire puddings every day; and two days more at a weslithy toftbunter's million-dollar cuttage in Newport, studying the habits and idiosyncrasies of the common people.

And then he rushes back to England and hurriedly embalms his impressions of us in a large volume, stating it to be his deliberate opinion that, though we mean well enough, we won't do—really!

He necessarily has to burry, because, you see, he has a contract to write a novel or a play—or both a novel and a play—with Lord Northcliffe as the central figure. In these days practically all English novels and most English comedies play up Lord Northcliffe as the central figure. Almost invariably the young English writer chooseshim for the axis about which his plot shall revolve.

English journalists who have been dis-

revolve.

revolve.

English journalists who have been discharged from one of Northeliffe's publications make him their villain, and English journalists who hope to secure jobs on one of his publications make him their hero. The literature of a land is in perilous casswien it depends on the personality of one man. One shudders to think what the future of English fiction would be should anything of English fiction would be should anything happen to His Lordship!

Business of shuddering!

Editor's Note-This is the eighth in a serier of articles by Irvin S. Cobb. The ninth will appear

The Pretty Suffragette And Billy Waring

Went down to Morton's for a week-end, and there, much to Billy's surprise, the Suffragette did a number of things that no one expected of her-least of all Mrs. Morton. What those things were is the story.

Is Any Woman Easy to Live With?

That is a question that only a man can answer, and a man has answered it - for the women's sake no less than for the sake of his brother men-

The Wife's Side of The Liquor Problem

It isn't the sitting up waiting for him to come home, but it's quite another aspect of what liquor means in the house-those little chafing-dishbeer suppers - the bottle of champagne for the prominent guest -a side of the liquor problem that is usually overlooked.

When Henry Was Married

The girl's home was in the East. And not a soul back in Navarre-Ohio-where Henry lived and was to take his bride-sent a single gift. It was rather hard for Henry. And then - but that's the story, too.

Judge Van Doren Went to Europe

It was on business, but just the same he met a girl there that made him forget Loretta, canning fruit and hunting dust back home. Then he returned and made a discovery - which makes another story.

In fact The Ladies' Home Journal for June is mostly stories-The Summer Story Number, it is called. Of course there are the numerous practical articles as well, and the fashion pages in full color, besides a complete section devoted to vacation suggestions and experiences.

CHEAP AT A MILLION

do what I say. Very well! Now, visualize the search made for you. Endow your people with superhuman ingenuity. Useless!"

The man waved a hand toward Mr. Merriwether; but Mr. Merriwether said:
"You assume that the search will be exclusively for me—but they will also search for you!"
"My deer sir, that is unkind of woul!"

"My dear sir, that is unkind of you!"
The man spoke reproachfully. "We know that when we go into crime as a business we must guard against the chief contributory cause of the vast majority of all business failures, according to the statistics of Dun and Bradstreet—to wit, insufficient capital. Murderers are caught when their faces and habits and families are known. Usually their lark of means forces them to betray themselves. But onbody knows how the men who will kill E. H. Merriwether look. And we have enough money to go anywhere. We will become tourists—like thousands of others. Some of us will stay in New York; others will go on round-the-world tours. See this?"

The man culled from his nocket some

round-the-world tours. See this?"

The man pulled from his pocket same parkages of well-worn bills, with the bank-wrappers round them, though a finger hid the bank name. Also the man showed to Mr. Merriwether several books of travelers checks of the fifty-dollar denomination—the specimen signature also being covered by the man's finger.

"Enough for all," said the man. "Kindly oblige me by thinking of what you would do in my place: and in all frankness acknowledge that nothing would be easier than to get away. Ordinary crime is so largely accidental that the average criminal is at the mercy of even the unintelligent police. Professionals do the same thing over and over and acquire telltale mannerisms. Also, they lack culture and find the class attraction too strong to resist—basides always being hard up and therefore defenseless.

therefore defenseless. We had gone about this case systematirally. We wanted your million—but, more, we wanted the sport of taking it from a man who had no moral right to the particular million we desired. If you had been a really conscienceios financier we'd have made it five millions: in fact it is because we are not sure that even this million is tainted that

we ask you to pay it to us for giving you a fine daughter-in-law. Shall we go upstairs?"

The master of the busie led the way upstairs and Mr. E. H. Merriwether, second by the stalwart footness with the intelligent faces, followed, his own intelli-gent face impassive. That he was thinking meant only that he was doing what he always did.

The man sat down in his chair, with his back to the stained-glass window. He saked pleasantly:

"What do you say now, Mr. Merri-

wether?

"I say," the little car answered, with a frown of impatience or anger, or both, "that when you are tired of playing the dammed fool I'd like to return to my business."

The man rose to his feet quickly, his face pale with sager. He took a step toward the financier, his firsts clenched—and then suddenly controlled himself. "You jackaes!" he said. "You idiot! Have you no brains whatever? Must !

lash common sense into you? Take 'em off' It was a command to the footmen. "Will you disrobe, air?" very politely asked the oldent of them.

Mr. Merriwether, six inches shorter than the speaker and a handred pounds lighter, drew back his fist, but the four men seized him and began to take his clothes off. "Tie

him!" commanded the muster.
They tied him to the library table, face

"Music!" cried the man; whereupon the cornetist began to play the Meditation from Thats softly, but obviously ready to play fortissimo at a signal from the chief. "I am going to lick you with this whip!"

He snapped it victously and walked round the table until he stood behind Mr. Merriwether. He lifted his arm and then the great Merriwether, autocrat of fifteen thousand miles of railroad, iron nerved, feprless, imaginative and intelligent, yelled: "Wait!"

"The million?"
"Yes!"

"Help him!" said the man; and the intelligent-looking footmen respectfully served as valets. "I don't believe you would kill me-tur I never liked spankings." Mr. Merriwether Mr. Mentwether spoke jocularly almost!

The man confronted Mr. Merrivetter

and said, very seriously;
"Mr. Merriwether, we should certaily
have killed you if you had persisted in you
stubbornness to the end. We know or hid

to convince you."

The man looked inquiringly at the faancier to see whether any doubt remained;
but Mr. Merriwether asked quirieally

"Honest, now, would you —"
"We would!" interrupted the manlooking straight into Mr. Merriwether a
oyes. And what Mr. Merriwether ave
there made him ask:

"How will you have the million!"
"In each. I'm glad you will make the
payment. But really, sir, I wish to impress
on you that Tom is rive to be taken for

on you that Tom is ripe to be taken lo

Mr. E. H. Merriwether looked long and earnestly into the eyes of the mysterious man who was despositing him of a millon dollars. It began to seep into his under-standing that if Tom could be married to a nice girl the resulting peace of mind sould indeed be cheap at a million.

indeed be cheap at a million.

"Now, if you please," pursued the man pleasantly, "telephone to McWayne that you wish him to come here with certified checks on your different banks, aggregating one million dollars, made payable to Michael P. Mahaffy."

Mr. Merriwether started. The name was that of the world-famous political Boss of New York City. Explanations as to the million might be embarrassing to any political boss; but for a million dollars say political boss; but for a million dollars say political boss would be glad to explain—or even not to explain. even not to explain.

"From this house Mr. McWayne will go "From this house Mr. McWayne will go to the hanks, accompanied by the studious gentleman who had the honor of building your left leg. You will indorse each check by writing 'Indorsement Correct' and signing your name. McWayne will go with our Mr. Michael P. Mahaffy and get the money in fives, tens and twenties, in handy works, all hills preferred and no requested. wads old hills preferred and so requested from the paying tellers, who will intelli-gently understand that Mr. Mahaffy is not signing his name in person; so he can swar in any court of justice that he never saw the checks. Asking for old hills is to make them impossible to trace. This will alsallay the banks' suspicions. The worst that can happen will be that a few tellers will wonder what Mr. Merriwether has to do with city politics that he needs Mahaff,'e aid."

aid."
"I see!" said Mr. Merriwether thoughtfully. Then, after a pause: "Where is the telephone?"
"There!"

In plain sight and hearing of the master of the house the master of the Pacific and Southwestern called up his own office. He

Southwestern called up his own office. He spoke to McWayne:

"Make out checks on all banks according to my balances in them, so that the check will aggregate one million dollars: payable to Michael P. Mahaffy.—What? Yes?

Have the checks certified.—Of course if there isn't enough!—We shall want hill that have been used—fives, tens and two ties.—Yes, all cash. Come up to 777 Blank Avenue. You will go to the bank with a man.—"

"With Mr. Mahaffy," prompted the min "With Mr. Mahaffy," repeated Mr.

"And tell Tom to have luncheon and wal

for me," again prompted the man.
"And tell Tom I can't go to lumber with him, but to wait for me." Mr. Merriwether hung up the receive

and turned to the man saying:

"The idea of using Mahaffy's name."

"Rather good, isn't it?" smiled the man
"Of course you wondered how we wer
going to cash the checks, didn't you? We'l
that's the way. The bank officials will be
surprised to see the checks and they all ratch McWayne and my man to the last They will thus be able to hear my man to the ser.
They will thus be able to hear my man so loudly to the chauffeur: "Tammany Hall Charlie!" Attention to details, my dear sir." I still am not quite convinced that "My dear Mr. Merriwether, there are a

compelled to bet your entire fortune, your very life, on averages. The average man is both stupid and honest; so you and your like are fairly safe for fairly long periods of time. Of course if we had been obliged to kill you we should have done so and buried you, and we should have been wise enough to utilize your death in as many ways as

possible in the stock market—and not of it.
"For instance, I should have instantly telephoned to all the men in your class and told them we had eliminated you—as an example—and to remember that in case we ever had occasion to ask anything from them. We should also give them a countersign, so that they would be able to rec-ognize us when the proper time came. I can kidnap or permanently suppress any millionaire in New York, with neutress,

dispatch and safety. "If Big Tim Sullivan could be killed and lie in the Morgue for days unrecognized, what chance do relatively unknown people like you great millionaires stand to be found, once dead? A dead capitalist, remember, is no more impressive than a dead street-car conductor. If I gut you into this house on the strength of Toro, as I got Toro to come in on the strength of you, what millionaire would refuse, for example, to go—in answer to a telephone message that his child had been run over and was now— let us say—at 128 East Seventy-ninth Street? Or that his wife, acting more or less as if she were intoxicated, was scatter-

und Twenty-ninth Street?"

Mr. Merriwether looked at the man a long time. He could not deny that to really desperate men such deeds offered no pardispersion to a millionaire; but a man fike this is more than dargerous. He thought quickly and formed his conclusions accu-

ing money at the corner of Seventh Avenue

"How are you going to make Tom marry

"How are you going to make Tom marry one of the girls whose names you mentioned?" he asked in the tone of voice one men toward physicians.

The man smiled slightly and said:

"Oh, I am not going to do it. I don't care whether he marries or not. You must do that. But I'll tell you how—if you wish—after McWayne gets here. Just think over the affair. It will put you in a more intelligently receptive frame of mind. And with a pleasant smile the man took a little book bound in green leather and

hegan to read.

Mr. E. H. Merriwether, as was his wunt when thinking, began at the beginning and reviewed the entire affair quickly but carefully. He did this again—it did not take him long—and then he began to coordinate his ideas and study the case. Within ten minutes he had forgotten his animosity. In filteen he felt respect for this man. In In fitteen he felt respect for this man. In twenty he was thinking how helpless any one man is against his ten billion trillion natural fore—microbes, seismic disturbances, floods, and the chemical reaction of hostile brains. This man, whose very name was unknown to him, had vanquished the victor—had louted the tent of the general? This was incredible when spuksn in a conversational tons of voice. Ferhape this same remarkable man might tell how to

same remarkable man might tell how to make Tom choose a desirable wife. It was worth while making the experiment. It was in the nature of a gamble in which E. H. Merriwether stood to win a happiness worth all the money in the world and stood to lose nothing!

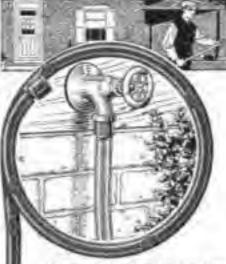

A knock at the door roused him from his reverie. One of the footmen arrived from the threshold.

Mr. McWaynel" Mr. Merriwether's private secretary eotered. E. H. Merriwether held out his right hand.

Mr. McWayne took four slips of paper and gave them to his chief, who quickly looked at them and passed them over to the master of the house. The man looked at them, indersed them and handed a pen to Mr. Merriwether, The caur of the Pacific and Southwestern wrote on each of the checks:

> Indursement Correct. "E. H. MERRIWRINGS."

He returned the checks to the man, who thereupon pushed a button a number of times. One of the footmen with the nonmenial faces appeared dressed for the street. He looked Irish. He wore a big sulftaire scarfpin. His hat inclined to one side noticeably. He carried a square value in each hand. They looked as if they had seen service. On each was printed: Treasurer Tammany Hall.

"Go with Mr. McWayne to the banks and cash the cheeks. Mr. McWayne will identify you," said the master of the bouse. "Yis, sor!" said the footman. The

"Yis, sot!" said the footman. The brogue was unnecessary; but E. H. Merriwether smiled slightly. McWayne and the footman in mufti left together.

"Think some more!" said the man to E. H. Merriwether and resumed his reading of the little groun-leather book.

Mr. Merriwether leaned back and thought some more. To him the million-tiollar loss was already ancient history. The

dollar loss was already ancient history. The only virtue that the Wall Street life gives to a professional is the ability to take a loss of money with more or less philosophy. That philosophy is also met on the racetrack, among er real Christians. among experts in faro-also smong

McWayne and the man were gone an bour and sighteen minutes. Mr. Merri-wether had time to think of Tom and of himself and of the relation that had existed between himself and his son, and of the relations that would exist between them in the future—God willing. "Mr. McWayne!" announced the serv-

"Tell the others! At five o'clock!" said
the master of the house, and the footman left the room—with the values!

"Mr. McWayne, will you kindly wait in the other room!" The man rose and parted the portieres for the secretary to pass

"Certainly," said McWayne, frowning

politely. "Now, Mr. Merriwether," said the man, "as I told you, Turn's mind and soul are prepared for love. The romantic vein in him has been worked to the limit. He can be laughed out of it very easily, for he is not extincity convinced; but it is too valuable a frome of mind for a really intelligent father to destroy.

"The young ladies, also, are ripe for the creeing of the one man in all the world. They will respond readily—and, I may add, respond with relief if they see he is a man like your son, against whom nothing can be said. It will clinch the affair. My advice is for you to call on the young ladies I have mentioned and judge for yourself,

and then you be your own stage manager?"
"Have you any choice yoursel?"
"You know Woodford?"
"Very well."
"And his daughter Isabel?"

"Ne."

"Well, she has the complementary qualities. She will, as it were, complete Tom.
She is bright, healthy, very handsome,
utterly unspoiled by the knowledge of her
good looks—that is, she is highly intelligent. Her mind functionates quickly and
as regulated and made to work safely by
her knew series of bursor. You will love her
for herself, as well as for Tom's sake and
for Tom's children's sake.

"Arrange two things and you can do it.

"Arrange two things and you can do it.

for Tom's children's sake.

"Arrange two things and you can do it.
One is, prepare her to meet Tom. Tell her
you don't know why you want her to know
him, but you do. Tell her you wanted this
before you ever saw her. And tell her you
know she must think you must be going
crary—but will she most Tom in her
lather's home?—in some room with the
lights turned out? She will sak you why

lether's home?—in some room with the lights turned out? She will ask you why you ask such things. And you will rub your hand scross your eyes and say, dazedlike: 'I den't know! Will—will you do it?' "And when you take Tom to her, take salvantage of the dark, and open this little buttle and touch Tom's lapel with this. It is essence of sweet peas. He will associate limbel with the reconstraints. Imbel with the mysterious girl to whom he took a message in the dark, and by the same token she will know he is the man who destiny decrees shall be her husband.

"Then leave the rest to Nature. They won't struggle. They couldn't if they wishest, but they won't wish to fight. My parting words to you are: The man who was smart enough to get a million dollars out of you finds it even easier to make a young man who wants to love fall in love in the spring-time with a handsome, healthy girl who wants to be loved. You and McWayne will now use one of my prisoner-carrying motors.

This way, sir!"

He list the way into the next room, packed up McWayne, and escorted the

financier and his private secretary to the

financier and his private secretary to the curb. A neat little motor stood there.

Mr. Merriwether climbed in. McWayne followed. And then the man said:

"You will find that the doors cannot be opened from the inside. The chauffeur was told this queer feature was due to the fact that his master expects to use this car for his two very active and very mischievous children. He will drive you anywhere. You can arrest him if you wish; but it will be useless. We have spent a good many thousands in accessories that will be thrown away." And the man sighed.

away." And the man sighed.
"Who do you mean by we?" asked E. H.

Merriwether politely.
"The Tainted Wealth Reducing Syndicute, which, having completed its opera-tions, will now dissolve. Good day, sir. In the issue of the World of June ninth

we advertisements appeared. One, under Marriages, read:

"MERRIWETHER-WOODFORD .- On June eighth, at the Church of St. Lawrence, by the Reverend Stephen Vincent Rood, Isabel Woodford to Thomas Thorne Merriwether.

The other, under Personals, read:

"T. W. R. Syndicate. - It was cleap at a million! E. H. M."

(THE END)

Recovering Radium

RADIUM is enormously more valuable than diamonds, and one of its advac-To than diamonds, and one of its advantages is that it cannot be lost easily, as a diamond may be. Wherever a bit of radium is it will vigorously declare its presence. As odd way by which it can be found was recently demonstrated in a Liverpool hospital when a quantity of radium was lost. The hospital had been given five thousand dellars' worth of radium, amounting to about one-five-hundredth part of an outcome somewhere near the head of a pin in size. This, in a little case, was bound one night on the face of a patient to treat a cancerous growth and in the morning the radium was missing. The staff authorities were immediately notified, and it was agreed that in all likelihood the patient had accidentally swallowed the radium during the night. It was easy to decide that question. The patient was carefully examined by X rays, which would surely disclose the location of the treasure in its case if it was in the patient leady. Not a sign of the missing fortune was discovered, however, and it was narrow ledy. Not a sign of the missing fortune was discovered, however; so it was agreed that the next most likely explanation was that the radium had fallen out of the band-

ages and been swept up.

The sweepings were then traced and it was discovered that those for that morning were just then being carried out of the hospital yard in a cart. The cart was stopped but the problem then was to find out whether the tiny case of radium was somewhere in that cardoad of dirt and trash. On the law of it the task seemed like hunting for a needs in a haystack, but actually it was

simple enough.

A hurry call was sent to Professor Lious R. Wilberforce, of Liverpool University, a noted authority on radium. He came a quickly as possible, with an instrument called an electroscope. As soon as he place the electroscope against the wooden side of the cast has appropried that the radium was the eart he announced that the radium wa

By this time it was night; so all the do tors and scientists decided to postpone fur ther search until morning. The cart wa lacked into the yard and guards place over it for the night. In the morning Pro fessor Wilberforce came again with the dec troscope. The dirt was then taken out of the cart, a bucketful at a time. As each bucketful was passed down Professor Wil-berforce tested it with the electroscope an annuanced, "It is not there," until eleva-loads had been rejected. The twelfth buck-tful exceeds a time, in the instrument, as etful caused a jump in the instrument; an when this dirt was spread on a table th case of radium was found.

In another hospital a patient actually allowed about the same quantity radium, and its location was quickly discovered in the intestines by X rays. The doctors were afraid that the powerful actio of the weird metal would destroy the intetines; so the patient was promptly cut opand the radium recovered.

THE INSIDE OF THE PORK BARREL

(Continued from Page 17)

We are all gratified at the commerce on the Great Lakes. It amounted last year to seventy-eight million tons. We have spent something less than fifty million dollars in their improvement and maintenance to date. Four-fifths of the commerce of the Lakes is ore and coal. Expressed in tons of ore this billion dollars of commerce floated on our creeks during the past four years would load fifty-five thousand ore ships of six thousand tons' burden each. If these should set out on the ocean in line, three ships to the mile—and the law will not permit them to travel that close together—we should have a line of loaded ships from Boston through the Panama Casal and across the Pacific Ocean to Hongkong!

If this ore were loaded on cars carrying thirty tons each it would fill eleven million cars and require three hundred and seventy thousand locometives to pull them. Putting the trains one mile apart less distance would be dangerous they would cover every mile of track in the United States and have enough trains left over to encircle the world four times, a double track round the world at the Equator and another double track round the world passing through the North and South Poles

on the way.

If one is at all interested in the development of our transportation facilities the next time he meets nos of these much-maligned creeks he should take his hat off This is what the inside of the Pork Barrel

looks like.

Senator Burton's criticism was not con-fined to the items of the bill. No man understands all the phases of waterway improvement better than he. That Con-gress has invested many dollars in waterway projects which have not returned the service hoped for and expected is most cer-tainly true. That the future will demon-strate we are today no better prophets in such matters than our predecessors may well be granted. No project was ever more ardently advocated both in and out of Congress than the old Hensepin Canal.

How the Money is Spent

Representatives, and maybe some sen-utors as well, came in on the flow as their predecessors went out on the ebb of the tide of popular clamse for the construction of this once far-famed canal. It was the most paramount of all the paramount issues. In a number of districts of the Middle West, It serves today as the horrible example,

But yesterday the word of Cunar might. Have stood against the world; now lies he there. And none so poor to do him reservace.

Mr. Burton's criticism went to the method of appropriating rather than to the items for which the appropriations were made. I should say, perhaps, his shafts were better aimed at the method than at

In the days of his chairmanship, Rivers and Harbors bills were passed only every two or three years. A rask appropriation would be made and then authority given the secretary of war to enter into contracts for continuing the improvement for several years ahead, to be paid for by the Committee on Appropriations from time to time as

the work progressed. Great pressure was brought on Congres to have an annual Rivers and Harbors Bill just as we have annual bills for the army, the navy, and so on. This plan became so popular, in fact, and for obvious reasons, that the committee could not resist either the clamor or the arguments in its favor. Mr. Alexander, therefore, determined to try it. Until it could be tested by actual practice and experience no man could foretell with certainty its success or failure as an economic policy. There were no prophets to read the future none, at any rate, who could show any divine commission; so the policy was looked on as an experiment.

If it was to be attempted, every consideration of wisdom and expediency required that the test be fair and complete. Interpreted in the light of this purpose, the conclusion was irresistible that the annual bill should carry no authorization for continuing contracts. Cash sufficient to carry on

Governor Mann's Testimony

"I am heartily in sympathy with any work that gives boys an uplift, for they are our future citizens." said Governor Mann to our representative.

Virginia's distinguished executive sees in our service for boys an influence that contributes to better citzeenship. Are you familiar with the resoons for Governor Mann's indorsement of our solution for your boy problem?

> Time production to the production of the control of Principal and the second and comment of the property of

the work for one year only made it certain that the next year's bill would pass. In this way alone could a fair trial be had.

Four annual hills have since been passed and the fifth is on the House calendar today ready for action. The policy is now as completely fixed as a part of the legislative program as the policy of any other annual appropriation bill. Several lessons have been learned.

Under the plan universally followed by Congress no river or harbor improvement is ever undertaken until it has first been investigated by the engineers of the army and recommended by them as desirable, cost and commerce both considered. Before the and commerce both considered. Before the annual-bill palicy was adopted it therefore frequently happened that a bill providing for a servey would remain on the commit-tee's calendar for three years; and after the survey was ordered another three years would intervene before the report of the engineers could be acted on.

This country is grawing at a very rapid

This country is grawing at a very rapid pace. Six years is a long time to wait; so it can be asserted with assurance that the annual bill, in obviating this needless and costly delay, has justified itself.

This, however, is not the whole story. Mr. Burton thought the continuing-contract system was the economical way to do the work, and time and experience have abundantly justified his theory. When a project has been adopted that will require five or even ten years to complete the five or even ten yours to complete the nine-fout project for the Ohio River, for illustration—the businesslike course is to ascertain just how rapidly the work can most economically progress, and then attended to the progress. one Congress cannot bind its succ

One Congress cannot bind its successor, and there can be no guaranty that funds will be provided next year it the matter be left entirely to the determination of a future Congress. Contractors besitate to invest in the necessary plant if work for only one year is absolutely assured, and but one method of assurance is possible, and that is to give authority by statute to the Secretary of War to enter into binding contracts.

The Shibbaleth of Economy

Experience is the best of all schools, and Congress now has taken the course pre-scribed. We have learned the lesson and must either return to that system or be convicted of wasteful negligence. The pol-icy of argual bills has been thoroughly justified for the reasons above referred to, though not amplified, and should and will continue; but, if just criticism and even censure are to be avoided, those projects which can be roost economically prosecuted under authority to make contracts for work or materials for several years ahead must be su undertaken.

Congress is always sensitive supersen-sitive, in fact. Members must return to their constituents every two years for judg-ment. The cry of economy and the charge of extravagance are always the shibboletha of the opposition.

of the opposition.

The temptation, them, is indeed great to adhere to the policy of making allowance only for one year's work, though conscious all the while that by so doing the cast of the completed project will be increased. This is the real measure of the service rendered to the taxpayers of the country by those whose seal for economy focuses their mental vision on the total, let the items be what they

If constituencies can be satisfied by seurance that the year's budget is no larger than its predecessor the election re-turns will give no cause for complaint, and the professional economist can continue his wasteful practices while the happy taxpayer foots the bills.

foots the bills.

Every thoughtful citizen understands and confidently expects that the growing needs of this developing country will be reflected in increasing demands on the public treasury. What it is their right to demand and doty to require is that no projection. ect for the improvement be undertaken by Congress that cannot reasonably be expected to promote the general welfare. When such a project is adopted it is the part of statesmanship, as it is the duty of patriotism, to provide for its completion in such manner and in such reasonable time as will effect the result at the minimum cost.

If this rule be faithfully followed the criticism of these who speak without knowledge and the consire of those who scold without reason may well be disregarded.

mean comfort and long service. A shirt may fit when new, but if the neckband shrinks you come to hate that shirt and dodge wearing it.

THE BUSHER COMES BACK

(Continued from Page 20)

funny Al? sometime in the week of Octo-ber twelfth. Old man Cutting's house or that yellow house across from you would be O. K. I would rather have the yellow one so as to be near you. Find out how much rent they want Al and if it is not no more than twelve dollars a month get it for me. We will buy our furniture here in Chi when Hazel comes,

We have a couple of days off now Al and then we play St. Louis two games here. Then Detroit comes to finish the season the third and fourth of October.

CHICAGO, ILLINOIS, OCTOBER 3. DEAR OLD AL: Thanks Al for getting the house. The one-year lease is O. K. You and Bertha and me and Hazel can have all sorts of good times together. I guesa the walk needs repairs but I can fix that up when I come. We can stay at the

that up when I come. We can stay at the hotel when we first get there.

I wish you could of came up for the city serious Al but anyway I want you and Bertha to be sure and come up for our wedding. I will let you know the date as soon as Hazel gets here.

The serious starts Tuesday and this town is wild over it. The Cubs finished second in their league and we was fifth in ours but that don't scare me none. We would of finished right on top if I had of been here all season. been here all season.

Callahan pitched one of the bushers beat him bad. Callahan is saveing up Scott and Allen and Russell and Cicotte and I for the big show. Walsh isn't in no shape and neither is Benz. It looks like I would have a good deal to do because most of them others can't work more than once in four days and Allen ain't no good at all.

We have a day to rest after tomorrow's game with the Tigers and then we go at them Cubs. Your pal, Jack.

P. S. I have got it figured that Hazel is fixing to surprise me by dropping in on me because I haven't heard nothing yet.

CHICAGO, ILLINOIS, OCTOBER 7. FRIEND AL: Well Al you know by this time that they beat me today and tied up the serious. But I have still got plenty of time Al and I will get them before it is over. My arm wasn't feeling good Al and my fast ball didn't hop like it had ought to. But it was the rotten support I got that beat me. That lucky stiff Zimmerman was the only guy that got a real hit off of me and he must of shut his eyes and throwed his but because the ball he hit was a foot over his head. And if they hadn't been over his head. And if they hadn't been makeing all them errors behind me they wouldn't of been nobsely on bases when Zimmerman got that lucky scratch. The serious now stands one and one Al and it is a cinch we will bent them even if they are a bunch of lucky stiffs. They has been great big crowds at both games and it looks like as if we should ought to get over eight hundred dollars a neace if we win and we will dred dollars a peace if we win and we will win sure because I will beat them three straight if nessary.

But Al I have got bigger news than that for you and I am the happyest man in the world. I told you I had not heard from Hazel for a long time. Tonight when I got back to my room they was a letter waiting

for me from her.

Al she is married. Maybe you don't know why that makes me happy but I will tell you. She is married to Kid Levy the middle weight. I guess my thirty deliars is gone because in her letter she called me a cheap skate and she inclosed one one-cent stamp and two twos and said she was pay-ing me for the glass of beer I once bought her. I bought her more than that Al but I e no holler. She all so s for me to never come near her or her husband would bust my jaw. I sin't sfraid of him or no one else Al but they ain't no danger of me ever bothering them. She was no good and I was sorry the minute I agreed to marry her.

But I was going to tell you why I am happy or maybe you can guess. Now I can make Violet my wife and she's got Hazel best forty ways. She ain't nowheres near as big as Hazel but she's classier Al and she will make me a good wife. She ain't never

asked me for no money.

I wrote her a letter the minute I got the good news and told her to come on over here at once at my expence. We will be married right after the serious is over and I want you and Bertha to be sure and stand up with us. I will wire you at my own

expense the exact date.
It all seems like a dream now about Violet and I haveing our misunderstanding Al and I don't see how I ever could of accused her of sending me that postcard. You and Bertha will be just as crazy about her as I am when you see her Al. Just think Al I will be married inside of a week and to the only girl I ever could of been happy with instead of the woman I never really cared for except as a passing fancy. My happyness would be complete Al if I had not of let that woman steal thirty dollars off of Your happy pal,

P. S. Hazel probibly would of insisted on us takeing a trip to Nisgara falls or some-wheres but I know Violet will be perfectly satisfied if I take her right down to Bedferd.

Oh you little yellow house.

CHICAGO, ILLINOIS, OCTOBER 9.

FRIEND AL: Well Al we have got them best three games to one now and will wind up the serious temorrow sure. Callawind up the serious temorrow sure. Cainhan sent me in to save poor Allen yesterday
and I stopped them dead. But I don't care
now Al. I have lost all interest in the game
and I don't care if Callahan pitches me tomorrow ur not. My heart is just about
broke Al and I wouldn't be able to do myself justice feeling the way I do.

I have lost Violet Al and just when I was
linearing on being the happyeest man is the

figureing on being the happyest man in the world. We will get the big money but it won't do me no good. They can keep my share because I won't have no little girl to

spend it on.

Her answer to my letter was waiting for me at home tonight. She is engaged to be married to Joe Hill the big lefthander Jennings got from Providence. Henset Al I don't see how he gets by. He ain't got no more curve hall than a rabbit and his fast one floats up there like a big balloon. He beat us the last game of the regular season here but it was because Callahan had a lot of bushers in the game.

I wish I had knew then that he was stealing my girl and I would of made Callahan

ing my girl and I would of made Callaban pitch me against him. And when he come up to bat I would of beaned him. But I don't suppose you could burt him by hitting him in the head. The big stiff. Their wedding ain't going to come off till next sum-mer and by that time he will be pitching in the Southwestern Texas League for about fifty dollars a month.

lolet wrote that she wished me all the luck and happyness in the world but it is too late for me to be happy Al and I don't care what kind of luck I have now.

Al you will have to get rid of that lease for me. Fix it up the best way you can. Tell the old man I have changed my plans. I don't know just yet what I will do but maybe I will go to Australia with Mike Donlin's team. If I do I won't care if the boat goes down or not. I don't believe I will even come back to Bedford this winter. It would drive me wild to go past that little house every day and think how happy I might of been.

Maybe I will pitch tomorrow Al and if I do the serious will be over temorrow night. I can beat them Cubs if I get any kind of decent support. But I don't care now Al. Yours truly, Jack.

CHICAGO, ILLINOIS, OCTOBER 12. AL: Your letter received. If the old man won't call it off I guess I will have to try and rent the house to some one else. Do you know of any couple that wants one Al? It looks like I would have to come down there myself and fix things up someway. He is just mean enough to stick me with the house on my hands when I won't have no use for it.

They beat us the day before yesterday as you probibly know and it raised yester-day and today. The papers says it will be all O. K. tomorrow and Callahan tells me I am going to work. The Cub pitchers was all shot to peaces and the had weather is just nuts for them because it will give Cheney a good rest. But I will beat him Al if they don't kick it away behind me.

I must close because I promised Allen the little lefthander that I would come over to his flat and play cards a while tonight and I must wash up and change my collar. Allen's wife's sister is visiting them again and I would give anything not to have to

One Motorcycle Tire

Holds Every World's Record-Dominates in Sales And Equips 3/4 of All the New Machines

It is built by Goodyear-built just the same as Goodyear automobile tires, which have won top place in Motordom. Consider that-one maker holds the leading place both in motor car and motorcycle tires, despite tremendous rivalry. In three years Goodyears have gained topmost place in Tiredom. And the only reason lies in super-service proved by millions of these tires.

Why Take a Chance?

Rival makers, of course, must say, "Our times are as good as Goodyears." But look at the evidence.

How is it that Goodyears won all the world's records in speed and durability tests?

How is it that Goodyears, in the test of time, came to outsell others?

Why is it that three fourths of all the 1914 motorcycles come but with Goodyear equip-

And look at automo-tales. Those tires must also stand fearful strain and grind. And most users meter their mile-age. Goodyears in that field have nutrivaled all others. Now they have won in both

fields by giving most of what you desire in a motorcycle tire.

Then why take chances? No tire, in any way, offers more than Goodycars. You pay no more for Goodyears than for other standard makes. No good tire costs you less. And the verdict of users — the final verdict as shown by sales — is that Goodyears

Railroad Men and Others

YOU will be interested in the case of Hawkins. For ten years he had been a conductor in the employ of the Arizona and Eastern Railroad. His weathereye was open; however, and finally he saw his opportunity. He secured a position with the railroad as City Freight Solicitor at Phoenix.

Then he found that to talk freight rates to customers he must study traffic operation. He enrolled as a student in a college making a specialty of that business. Within a month he had the training he needed, and was appointed Travelling Freight and Passenger Agent of the Southern Pacific and the Arizona and Eastern Railroads.

Hawkins has "made good" with a rush. He has had the ability all along, but it won him promotion and an increased salary only when refined by special training.

In whatever business you are engaged, you can secure the training you need free of charge. You can take a course in any university, college, technical school or musical conservatory and we will pay the bills. You are invited to ask for a copy of our Scholarship booklet, in which this offer is fully explained.

Address your postal card or letter to

Educational Division, Box 513

NOT ENOUGH MUSTARD

A warrant! Already he saw himself in the police court, hunted there by this vin-dictive, libelous female. Of course he could prove his innocence; but, then, think of the scandal! What would the world say to hear that he, Homer Drum, had been charged with stealing a ballet singer's clothes! Yes, that was what she must be—a ballet singer! Then there swam into Mr. Drum's mind

sudden remembrance of to what and to whom he owed this outrageous affront-

Mrs. Drum!

Pale with righteous wrath Mr. Drum no longer gave heed to that noisy convocation outside. He turned and, stalking down the hall, entered the dining room, where he closed the door behind him. Again that ballet woman had resumed her tattoo on the panels; the uproargrew, but now he had closed his ears to it. Mr. Drum seated himself. Above the fireplace was a faded rectangle of wall paper, and on this he fixed his eyes. He waited. His mind, meantime, was busy.

was busy.

How long that night Mr. Drum sat there in the dining room he was not at the time aware. Some hours passed. Vaguely he recalled hearing eight o'clock strike; then nine; then ten. Hours before this, however, with a final resounding assault on the door panels Miss La Ray and her allies, the Schnabels, had departed. In the quiet that ensued Mr. Drum was again enabled to think of Mrs. Drum. Where was she? His reflections on the matter were complex. His reflections on the matter were complex. They ranged from moments of icy, austere calm to instants of righteous, superheated

wrath.
These last, though, burned quickly, their

These last, though, burned quickly, their flames subsiding as swiftly as they arose, only asky members remaining. At the end as air of grim, freezing gravity fixed itself on his face and brow.

Firm, not harsh! Severe, yet not unjust! That was it. And, a clock at that instant striking eleven, Mr. Drum was counting the strokes, when all at once a thought leaped into his mind. It was one that had not occurred to him before. What if something had befallen bur!

thing had befallen her!
"Huh!" said Mr. Drum; and he had half risen from his chair when a sound suddenly arrested him.

Miss La Ray evidently had returned home. Down the airshaft again came float-ing the strains of Too Much Mustard, and with a rumble of rage he strode toward the window. Just as he was leaning out, though, to roar "Stop that noise!" Mr. Drumthought betterof it. What If she again descended on him? The thought made him moist. Just then the music stopped suddenly. There was a pause; and afterward Mr. Drum heard a murmur of voices. In the midst of this Miss La Ray's all at once arose. Its tone was one of profound astonishment.

"Well, whattier know about that!"

Again there was a murmur of voices. Listening, Mr. Drum pricked up his ears. Presently some one said something, on which there was a sudden burst of laughter.
"Huh!" said Mr. Drum to himself. His

face was thoughtful. Then, as though the thought were too preposterous, he idly shrugged his shoulders. Gingerly closing the window he returned to his seat before the fireplace.

The thought, though, whatever it was, would not down. "Absurd!" he told himself, and in the next breath "Huh!" he said again. Overhead the music all at once had started up again; in turn with which there followed a steady thumping, which made the gas fixtures rattle and sway. Mr. Drum, the gas fixtures rattle and sway. Mr. Drum, however, gave no heed to this. The question of Mrs. Drum's disappearance now was amount. She must be somewhere, but where? What if, indeed, she had been hurt! She might have fainted in the streets! She might have been run over! Even now she might be lying in some hospital, uncon-scious, unidentified. There might have been railroad wreck, and

Mr. Drum gave a sudden snort. A rail-oad wreck! What would she be doing here? She had no business on a train! Abruptly Mr. Drum pushed back his chair.

What if she had run away!

Then reason returned to his aid. Run Then reason returned to his aid. Run away? Ridiculous! She would not dare! The idea of any woman running off and eaving him! There was nothing in it. Pshaw! Then, besides, when they ran off they always took their trunks. Then, too,

they pinned a note to the pincushion. It was absurd, though, to think of such a thing. Just think of the guod home he had given her. Leave a home like that? Leave a life of ease and comfort? Nonsense! It was hardly worth while looking at that pincushion. No; it would be just a waste

Still, if by any charge she had — Huh!
Oh, well, he would look; but he knew without doing so that there was nothing there. She would not have the impudence! He knew she had just been delayed some where. Before long now she would be home. Then she would explain. She would apologize, too, for worrying him. Yes; he would see to that. Meantime the pincushion was on her bureau and the bureau right heside the door. It was outrageous -the way she had worried him! Yes: .hut what if she had run off?

Mr. Drum had darted halfway down the hall when, with a jerk, he stopped, halted by a sudden sound. It was the click of a

key in the lock!
"You outrageous crea-" Mr. Drum

began; then he got no further.

Mrs. Drum had just entered. His eyes rounding, he stared at her agape. Or was it she? Either he had lost his senses or she

Clad in a dress such as he had never seen on her before, she came slowly down the hall. That she imped he did not notice; neither did he observe her air. It was negligent, idle, easy. All Mr. Drum could see was her dress. There was a slit in the skirt and it was cut V-shape at the throat. To his scandalized sight V and split seemed to meet.

Then she spoke.

"Oh, hello!" murmured Mrs. Drura.

"What are you looking so red about?"

The wellsprings of Mr. Drum's righteous wrath suddenly bubbled over. If he recalled his former resolution, "Firm, not harsb!" and so on, he must have felt that now was no time for etiquette. Where had she been? That was the question be wished sinswered. What is more, Mr. Drum wished it answered forthwith.

"Don't shout, Homer," begged Mrs.

"Don't shout, Homer," begged Mrs. Drum as she began to remove her hat. "You know your throat isn't strong." Then, just

know your throat isn't strong." Then, just as he was about to risk his throat again, she interrupted him. "Where have I been? Why, at a tea," Mrs. Drum responded calmly. "A tea!" she repeated. "You heard me." No hint of what was coming had as yet dawned on Mr. Drum. All he could grapple with at the mornest was the effrontery of with at the moment was the effrontery of

Dawdling at a tea all these hours? Idling her life away while his dinner burned! As she removed her last hatpin Mrs. Drum turned to gaze at him.
"What's that you're mumbling?" she

inquired idly.

There was a pause. Mr. Drum seemed to struggle to express himself. Perhaps he felt speech to be inadequate; fer, pointing his forefinger to the neighborhood of Mrs.

Drum's kness, he began violently to wag it.
"Do you mean the dress?" saked Mrs.
Drum. And with bland satisfaction she smoothed out a wrinkle in its folds. "Swell, ain't it?" she remarked.
Mr. Drum suddenly exploded.
"Where did you are led Thanks."

Mr. Drum suddenly exploded.

"Where did you get it? That?" he demanded. "Answer me!"

"I stole it!" said Mrs. Drum.

The reply. in its inconceivable franknese and simplicity, swept Mr. Drum from his feet. Then it was true! Right, after all, had been on the side of that unspeakable female overhead. Mrs. Drum had purioined the hallet-woman's clothes! However, see

the ballet-woman's clothes! However, ere Mr. Drum could voice the turbulence of his mind, Mrs. Drum delivered him a second

crushing blow. "Yes; I stole it," she said; "only you needn't worry about that. I won't have to go to jail and you won't have to pay for the dress, because I went upstairs and squared myself! Yes, I did! I took the dress to wear; then when I'd worn it I got scared. So I thought I'd tell her everything. Well, she hardly said a word. She just laughed and laughed and laughed. Then she asked me whether I wouldn't come into the parlor and dance. She had a lot of friends there, you know only my feet hurt and I couldn't. So she kissed me," said Mrs. Drum, "and I came away. Yes. that was how it was."

T'S the wet or grease of the slippery pavement that seals the strong, elastic Vacuum Cups and forms the never-slipping suction grip.

On the slippery slant to the curb-in a hundred close situations where a skid means collision-there's positive safety in

PENNSYLVANIA Oilproof VACUUM CUPTIRES

THE CURTIS PUBLISHING COMPANY Independence Square Philadelphia, Pennsylvania

Mr. Drum waited until she had finished. Even be himself wondered at his dignity, his self-control.

"How dare you!" he said then; and again Mrs. Drum stared at him.
"Dare what?" Mrs. Drum inquired.
"Steal her dress or tell her about it? I wish you'd stop puffing up your cheeks like that," she added.

With difficulty Mr. Drum repressed himself.

"Silence! What do you mean by such behavior?

"What behavior?" she asked.
"Answer me!" said Mr. Drum. "Where have you been all day?"

Mrs. Drum for a moment gazed thought-

fully at him. "All day, Homer? Let me see. Well from half past eight till half past eleven this morning I washed dishes, made beds, swept floors, scrubbed the kitchen, dusted the purior and dining room, made a pie and oiled the hardwood floor. Then from half past eleven until half past three I mended your socks, sewed your understancels, took your shoes to the cobbler, your hat to get ironed, and then went to the cleaner's for

your cost. At three, then, I --- "
"No impertinence!" said Mr. Drum.

"Answer me, I say!"
Mrs. Drum smiled curiously.

I went to a tes, Homer, as I've said.

It was a tungo teu. She did not even alter her tone as she told it. The speech flowed from her as un-concernedly as though she announced that chalk is chalk. A pause followed; and during it Mr. Drum's face gradually an-sumed the hor and proportions of a toy balloon. Then he found his tongue. "A tango tea!" he echoed. "Yes, Homer; only you mustn't shout so," Mrs. Drum again begged. "You danced! There in a public place!" asked or rather accused Mr. Drum. Mrs. Drum nodded. told it. The speech flowed from her as un-

Mrs. Drum nodded. "It was a charity dance, Homer. I forget the name of the charity; but they gave it at the New York Roof. It was one of a series. of mid-Lenten dances and it cost me a dollar to get in. At first I just meant to look on; but after a while one of the man-agement asked me whether I'd like to dance with any one. I said no; but he looked so disappointed I had to change my mind. I said I'd dance just once just for charity, you know; so he introduced me to a partner.

"And you danced—you danced with blint" said Mr. Drum, his tone incredulous. "His name was Benny," replied Mrs. Drum. "First we did the Castle Walk and

then the Grapevine Dip. That was easy; so we tried the Horse Walk next, following which we gave the Kitchen Sink, the Lame Duck, and I dunno what. . . . Oh, well, what's the use?" murmured Mrs. Drum. "We just denced and denced, and I had the time of my life!"

Mr. Drum cared to bear no more details.

"You abandoned fe-" he began, when Mrs. Drum swiftly turned on him.

"There new, don't you get excited! I know exactly what I've been doing and I know exactly what you're going to say-only you needn't," added Mrs. Drum. "I don't want to hear about Satan and idle hands, or that a stitch in time is a penny earned, or that a bird in the hand is the noblest work of God."

There was in ber voice a note that Mr. Drum had never heard before. He gasped

Yes," said Mrs. Drum; "and I'm sick of bearing woman's place is the bome and that idleress is woman's curse, and a whole lot of stuff like that you've been telling me for the last eleven years. . . . Keep for the last eleven years.

You're always saying marriage is a partner-ship, and—well, I guess you're right—only up to now you're the only one that's been drawing any dividends. Hereafter I'm going to have mine too."

"You—you——" began Mr. Drum; but Mrs. Drum gave him no chance to

"What are you going to call me now—an ungrateful female? Well, maybe I'm a female and maybe I'm ungrateful—only that don't alter anything. Woman's place may be the home, but just the same that depends on what sort of a home it is. depends on what sort of a home it is. I didn't marry you to be put in jail. Yes: only the last few years you'd have though! I was in for life at hard labor. That's why I took that girl's dress and that's why I went to that tango tea!"

"I—why—new——" Mr. Drum said; and one noted now there had crept into his face a new, somewhat astonishing note. He seemed less sure of himself than usually would have been thought a little star.

He seemed less sure of himself than usual He would have been thought a little startled. "I—why, well—"Oh, stop mumbling, for heaven's sake!" Mrs. Drum exclaimed. "I was just saying I am sick of working on a stonepile and getting nothing for the job! I'm sick, too, of living in solitary confinement. And that reminds me," added Mrs. Drum."I took that fool worsted thing this afternoon and sent it downstairs with the garbage. There may be no place like home, I know.

and sent it downstairs with the garbage. There may be no place like home, I know. Yes; but, thank beaven, there are other places that ain't!" Then she sniffed. "If I can't have a little fun in my own house I know where I can find it now! Put that is your pipe and smoke it!"

Mr. Drum, pale to the eyes, did not reply. In the imagery of his mind a spectacle had been upraised before him. It was the picture of Mrs. Drum whirling unid the maxes of the turkey trot in the arms of the anonymous Benny! Just then some one overhead again put a needle in the machine overhead again put a needle in the machine and down the airshaft came the melody of

Too Much Mustard! Mr. Drum considered. Woman's place.

after all, was the home!
"Say," he said, his voice breaking, "what's the cost of a machine like hers upstairs?

Vocational Training

THE barber is the only workman for whom there is a really fixed demand in American cities. Analyzing the Twelfith Census reports for cities having fifty thousand or more inhabitants, the Russell Sage Foundation finds that in every city there are substantially three burbers to care thousand inhabitants. Every other occu-

pation shows greater variability.

Those occupations that have as many as ten representatives for each ten thousand inhabitants in all cities, number only twenty for men and seven for women. Without knowing the facts one would probably say that every city would show at least one butcher, physician, lawyer, clergymao and dentist for each thousand inhabitants: but he would be mistaken. Those occupations are not among the twenty constant uses. The printer, plumber and baker have steadier jobs in the sense that for each thousand eith following and other following. sand city folks there will be at least one.

The only constant occupations for women-one worker for each thousand inhabitants in all cities - are those of servants, dressmakers, teachers, saleswomen laundresses, nurses and bousekeepers. All but one of these, it will be noted, have to do with the household or with children from which those who take the Kaiser's view of woman's proper place in the universe may

derive much comfort. Even our vocational schools mostly train youngsters for the jobs they want rather than for the jobs they can get. No doubt that is the right method; but an analysis of the actual supply of jobs is helpful.

SUSANNA AND HER ELDERS

"Pet, you'd better go to mademoiselle.

Ask her, with my love, to fix you up some French history to translate."

put up some French history to translate,"
Laty Beaumaris suggested.
"I should prefer a Gullic verb," Lord
featuraris amended. "I marry in accordare with my parents' wishes. Thou marriestin accordance with thy parents' wishes.
He marries—and so on. And make a
sold schoolroom ten while you are about
it, my child," he continued, as Susanna
bestowed a parting strangle on Alaric,
ticked over a footstool, and rose to leave
the room; "for I fear we are to be deprived
of your charming society at dinner this of your charming society at dinner this evening.

Smanna's lovely red underlip pouted; her blue eyes clouded with tears. She habed a resentful look at her sire and went

"She is not manageable by any ordinary methods," said Lord Beaumaria, running his forefinger round the inside of his collar and shaking his head. "In such a case sontimacy must be combated with craft, and defiance met with diplomacy. Alaric, regretable as is the course you have counseled us to pursue. I feel inclined to adopt it... I shall write tonight to make an appointment at the Carlton on Wednesday with the Duke of Halcyon, and I shall be obliged if you will—at your early convenience—favor me with the address of the young man Wopse,"

THE garden chalet was damp. It had been raining and the glittering appearance of the walls betrayed the fact. "As though a bally lot of snails had been dancing a collion on 'em!" said the Duke of Hallyon. He yawned dismally as he opened he casement and leaned out, looking in his gardily hued silken night suit like a tulip

ranging from the window sill.

Then the keeper's wife came splashing up the muddy path carrying a tray covered with a mackintosh; and the knowledge but his breakfast would presently be set before him, and set before him in a luke-warm, flabby and tepid condition, caused in the present to present the meaning when listryon to groun; but presently, when luthed, shaved, and attired in a rest knickerhocker suit of tawny orange velveton, with green silk stockings and tan

does, salmon-colored silk shirt, rainbow neitle and panama, he issued, eigarette in mouth, from the chalet and strolled in the decetion of the newly restored west wing, its grace's equanimity seemed restored. He even hummed a tune, which might have been The Honeysuckle and the Bee, or find save the King! as he mounted the stort, wide, double flight of marble steps that led from the terrace, and, pushing open the glazed awing doors, entered the open the glazed swing doors, entered the follows, the entire space of which was find by a bewildering maze of ropes and safelding, as though a giant spider had pun a cobweb in hemp and pine.

A smell of turpentine and size was in the ir, and a paint table occupied a platform more distributed which were already filled in with the size of which were already filled in with

side of which were already filled in with outlines transferred from cartoons designed by the artist engaged to ornament the spartment. That gentleman, arrayed in a line canvas blouse and wearing a deer-stallor cap on the back of a well-shaped bed, was actively engaged in washing in the values of a colessal nude-figure group with a bucket of sepia and a six-lost brush. its whistled rather queerly as his bright eye ell on the intruder.

You're there, are you?" said the duke "ecessarily. "Shall I come up?" "I you can!" said Haleyon Wopse with

by you can! said Haleyor wopes with a decided smile that revealed a very complete set of very white teeth. "But, to be time, perhaps I had better come down to you." And the painter swung himself egitly down from stage to stage until he racked the ground level of his august relative. relative.

"Put what you've got to tell me as clearly as you can," said the duke. "I never was a up at Eton, and the classic names of these lotanies you're thingumbobbing on the what's its name rather queer me.

"The design outlined on the plaster in the central space on the left-hand side of the stright dome," said Wopse, A. R. A., "is the Judgment of Paris. The three figures of the rival goddesses are completely outbed; but, as you see. Paris is only roughly becked in."

"I don't see a city," said the duke, with ome annoyance. "I see only a bit of a man. And as for being block tin-

"Paris was a man-or, rather, a youth," said Halcyon Wopse, quoting:

Fair and disdainfully lidded, the Shepherd of Ida, Holding the golden apple, desired of -

"Holding the golden apple, desired of

"Hold on! When people get to spouting it knocks me galley-west," said the duke.

"Just tell me plainly what the beggar was to judge. Goddesses! I savvy! And which of em took the biscuit—I mean the apple? Venus! Right you are! That's as much as I can hold at one time, thanky!"

"Sorry if I've overestimated the extent of the accommodation," said Halcyon Wopse, smiling and lighting a cigar.

"One of the Pallagas. Now, hang it," said the duke, "that is infernally stupid of my man."

my man."
"Of my man, you mean," corrected the

"I begin to think," said the duke, "that I have, in falling in with the abourd plot cooked up by that old footler, Beaumaris, and swopping characters with a beg—with an artist fellow like you in order to take the fancy of a long-haired, long-legged coit of a

"I presume you allude to Lady Lymston?" put in the painter coldly.
"Of course! I say, in tumblin' to the idea and embarkin' in the game I've made an ass of myself," said the duke. "As for you, you're in clover."
"Bay nettles!" sighed the painter.
"Papers' under my name."

"Passin' under my name ----"
"Pardon!" said the painter. "The name is my own. And let us say simply that in changing identities with your grace, in order to enable your grace to cust a glamour of artistic romanes over a very ordinary

"Eh!" interjected the duke.
"——situation," eastinued the painter—
"In doing this I have laid up for myself a considerable store of regret."
"Regret! Why—hang you!—you're chalkin up scores the whole hally time!" shrinked the doke stamping his tan shoes on the canvas-protected parquet. "Heaumaris' guests—only a few purposely selected fogles and duffers who don't count, it's true gles and duffers who don't count, it's true-believe you to be me. They flatter you and defer to you. You take the dowager in to dinner and I'm left to toddle after with Suanna's French governess. I'm out of everything and obliged to talk art—bally art!—from mersin until night! While you-you've ridden to cub hunts on my mounts, driven my motor cars and bust my

And very good ones they are," said the

You ride infernally well, and show off before the field at Henworthy Three Gates, where the hardest riders in the county hang buck. You ain't afraid of a trappy take-off—you weren't built for a broken neck!" screeched the incensed poer. "You play golf, too, and win the Coronation Challenge Cup for the Lymston Club, takin' seven holes out of the eighteen, and holin' the round in the score of sixty-eight."

"It was my duty to maintain the honor of your grace's name, once I had consented to assume it," said the painter with a bow. "And you're a dead shot, confound you! knockin" the birds over right and left, and

knockin' the birds over right and left, and getting a par, in every sportin' newspaper for a record hag of feur hundred! You're a pole player too—hit a hall up and down the field and through the goals at each end, and look as though you didn't care whether the ladies applieded you er not, da—hang you. And you must own to bein' a hit of a cricketer and consent to play in the County Cricket Match on Thursday; and I wouldn't like to bet against your chances of

wouldn't nise to net against your chances of makin' a big score—an all-round admirable what's-itz-name of a fellow like you!" "Perhaps you'd better not," the painter remarked calmly, knocking off the ash of his cigar. "But I should be glad to know the reason for this display of temper on your grace's part, all the same," he added. "If I rode like a tailor and shot like a duffer, hit your ponies' legs instead of the ball, and played cricket like a German governess at a girls' boarding school, I could under-

"Don't you understand, when I get back into my own skin again I'll have to live up to the reputation you've made me?" yelled Halcyon. "I could pass muster before

"Don't touch them!" shouted Wopse in

Why not?" asked Susanna. "I don't know. Excuse me, Lady Lymston; I believe the smell of this size isn't wholesome," Wopse stammered. "I'll get out into the sir." He buited.
"Good heavens!" he mouned as he

strods unseeing down a broad path of the damling west-front pasture. "I can't stand this! I'll tell that idiot, Osmond-Orme,

that the deception must come to an end."
"Why do you walk so fast?" said the voice of Susanta behind him. "I have had to race to catch you."
"I am sorry," said Wopse, stopping and turning his troubled eyes on the fair face of

his young relative.
"Let us walk on" - Susanna rast an apprehensive glance behind her-"or some-

Somebody will see us walking together!"

suid Wopse acutely,
"It is so much nicer," Susanna said demurely," when one can keep pleasant things to oneself. And we have had a good many walks and talks since you came down here, haven't we? And cliff scrambles—and bi-cycle rides—and rows on the river. And

the fun of it is that, though we are such pula really, father and grandmother and Uncle
Alaric believe that I positively detest you."
Her young laugh rang out gayly; she
thrust a sprig of lavender, perlumed and
spicy, under the painter's nose. He captured the tantalizing hand.
"Do you not?"
"Detest you? You know I don't."

"Detest you? You know I don't."
"Detest you? You know I don't."
"May I have it?" It was the sprig of lavender; but the painter looked at and squeezed the hand.
"If you promise to make a big score on Thursday."

Thursday. Susunna, it must be admitted, was

learning coquetry.
"I will if you are looking at me!"
"Done!"

"Done! Come into the besch avenue,"
the painter pleaded, "just for a few moresults, before that little beast follows us.
You know he will!"
"He can't!" Susanna's golden eyelnahes
drooped on her crimson cheeks. "He can't
pet down! I — I took away the ladder before
I came away!" she owned.
Both hands were imprisoned; her blue
come lifted and less thermalyes in the broson.

ryes lifted and lost themselves in the brown once that tooked down at her.

"Was that because you wanted—to be alone with me? Wasit?" demanded Wopes.

"Ob. Moontshaart!"

"I'll let you go when you have owned up - not before. Wopne said sternly.

Susanna's reply came in a whisper:
"You - know - it - was!"

The whisper was so Isint that Wopse had to bend quite low to catch it. Of course be need not have kissed Susannu; but he did, as Alaric Osmond-Orme and Lord Beaumaris appeared, walking confidentially

together arm in arm.
"I think my little stratagem succeeda!"
Lord Benumaris had just said, in reference
to the preference exhibited by his daughter for the society of the pretended painter; and Alaric had responded: "Yes, as you say, my plan has proved quite a brilliant sociess." when Land Besumaris clutched his cousin's arm.

"Merciful powers! Susanna and that -that young impostor!"

Alaric's eyeglass fell with a click, and the diabolical left eye twirled and twisted fiendishly in its socket as its retina embraced the picture indicated.

"Feign not to have observed. Weil, Susanna! How are you, Haleyon? We are strolling toward the ballroom for a

We are strong work."
Lord Beaumaris "We are stro Lord Headman's checked and purpled. Alarie dragged him on. "Do you think "—Susanna's cheeks were white roses now—"do you think they—""Saw me kies you? Not a doubt of it!"
"Oh!" Susanna confronted him with

blazing eyes. "You-you did it on pur-pose! It was a plot —" She elenefied her strong young hands, testling with the desire

to buffer the handsome bronzed face be-fore her. "I'll never—never speak to you again!" she cried.
"You will not be allowed to," grouned the poor painter. "Our walks and rides

"You will not be allowed to," groaned the poor painter. "Our walks and rides and all the rest are over. . . . Yes, there has been a plot, but not of the kind you suspect. I am a traitor, but not the kind of traitor you think me. Lady Lymston, I am not the Duke of Halcyon. I am a poor devil—I beg your pardon!—I am a painter; my name is Wopse, and I have diagraced my profession by the part I have played." He sat down miserably an a rustic bench.

a rustic bench. "Oh! It has been a put-up thing between you all!" Susanna gasped. "Oh!" Sie towered over Wopse like an incensed young

"If I could only paint you like that! Yes, I deserve that you should hate me. Never mind who planned the thing; I should have known better than to soil my hands with a deception," said Wopse. "As for the

"The duke! Do I understand that that earwig in velveteen is my Cousin Halcyon?"

Susanna's voice was very cold. "Yes. I am a kind of cousin too," said

Wopes. "But not that kind. Those those da-

signs—the work on the ceiling! They are really yours?" Susanna asked.

"Mine of course! Do you think that fellow could have done them?" cried Wope, firing up. "I've risen at four every morning to work at them, and —."

"And you ride when didnessed."

"And you ride splendidly, and you're a crack shot and pole player, and you're going to win for the county eleven on Thursday!"

to win for the county eleven on Thursday!"
came breathlessly from Susanna.
"Ah, you won't care to look at me new!"
said the depressed Wopse.
"Won't 1?" Susanna's eyes were dancing;
her cheeks were glowing; she pirouetted on
the moss-grown ground of the avenue and
drepped a little curtsy to the painter.
"When doing it will drive father and grandmother and Alaric and the earwig wild with
rage! ... When —when I like doing
it too! When —" She stooped, and her
lips were very near Wopse's cheek. "When
I love doing it!"
"Oh, Susanna!" cried the painter.

"My dear Haleyon!" said Lord Beaumaris, peering short-sightedly upward through a maze of scaffolding. "I think you may as well come down."

you may as well come down."
"In other words, the garne is up!" said Alaric Osmond-Orne mildly. "Come down, my dear fellow, and resume your own rôle of hereditary legislator. Allow me to replace the ladder." He did so.

"So that fellow's done me! I guessed as much when that little—when Susanna took away the ladder," said the duke, preparing to descend. "And then when I saw him liss her—there's a remarkably good view of the gardens through the end window—1—" the gardens through the end window -1-he pointed to some remarkable effects of color splashed on the ground so carefully prepared by the painter-"I took it out o the beggar in the only way I could, don't you know!"

"Take it out of him still more," suggested Alarie, his tinted eyeglass concealing a flexi-ish twinkle, "by playing in the County Cricket Match. He's entered in your name. you know.

"You're very obligin'," said the duke "but I don't think I'm takin' any." He gracefully slithered to the floor as Susanna and Halcyon Wopse entered the ballroom, radiant and hand in hand.

"Papa," said Susanna, taking the bull by the horns, "Mr. Wopse and I are engaged. We mean to be married as soon as possible after the County Cricket Match. Stakesed the perturbed countenance of Lord Besset the perturbed countenance of Lord Beaumaris, nodded to the duke, and walked over to Alaric. "Your plan has succeeded beautifully!" she said. "Aren't you pleased! And won't you congratulate us?" "I am desighted!" said the imperturbable

Alaric. Hedropped his eyeglass, and before the preternatural intelligence of his left eye even Susanna quailed. "And I congratu-late you both most heartily."

He smiled and pressed the hands of 5usanna and her lover; then, moving away, he stepped into the garden. There, unseen, he rubbed his hands, twinkling with mourning

"I loved that boy's mother very dearly, boy as I was then!" said Alaric. "As for Susanna, if she knew that I knew she was listening at the library door—" He replaced his eyeglass, and his expres-

sion became, as usual, a blank,

MEXICO: The Record of a Conversation With President Wilson

and what it might bring forth, but has no internation beyond the general knowledge that Huerta had accepted the friendly offices of the self-proposed mediators. I sixed him whether, in the event of successful mediation, his plans for the betterment of Mexico would be carried out.

"I hope so " he realized." For it is not

"I hope so," he replied; "for it is not my intention, having begun this enterprise, to turn back—unless I am forced to do so— mill I have assurances that the great and intil I have assurances that the great and crying wrongs the people have endured are in process of satisfactory adjustment. Of course it would not do for us to insist on an exact procedure for the partition of the and, for example, for that would set us up in the position of dictators, which we are sot and never shall be; but it is not our intention to cease in our friendly offices until we are assured that all these matters are on their way to successful settlement. It is a great and a complicated question, but I have every hope that a suitable solution will be found, and that the day will come when befound, and that the day will come when the Mexican people will be put in full posses-sion of the land, the liberty and the peace-tal prosperity that are rightfully theirs."

President Wilson banged the desk again.
His smile vanished and his face became

stern and set.

/"And eventually," he said slowly, "I low seeking and who will then be seeking to exploit Mexico for their own selfish ends. I shall do what I can to keep Mexico from their plundering. There shall be no individual exploitation of Mexico if I can stop it."

He walked over to the big blue globe. He walked over to the hig blue globe.
"It is a wonderful country," he said as he put his finger on Mexico, "a wonderful country! There is every advantage there for the peaceful and prosperous pursuit of happiness. Have you ever noticed that if you draw a line straight south from New York it will touch the western coast of South America instead of the eastern, and that it runs along by Chile and Peru, and the other countries on the western side of the Southern Continent?

the Southern Continent?
"Thus, with the Panama Canal running practically north and south, this brings these countries, which have been so remain. into close touch with us, and the commerce of this Western Hemisphere will brood over

Central America.

"What we desire to do and what we shall do is to show our neighbors to the south of us that their interests are identical with our interests; that we have no plans or any thoughts of our own exaltation, but have in

view only the peace and the prosperity of the people in our hemisphere.

The little clock on the bookense struck nine. The President rose. He walked down the ctairs with me and took his het to go across to his office, where there was to be a conference on the vaxing situation in Colorado. As we parted at the end of the corridor he held out his hand and said;

"It will be a great thing not only to have helped humanity by restoring order but to have gone further than that by laying the secure foundations for that liberty without which there can be no happiness."

Sense and Nonsense

The Tactful Cop

CHARLES COMISKEY, who runs the White Sox ball club in Chicago, is suitely acquainted in that big town and in in day has been lavish with pusses to his will park.

Last year he gave a season pass to a young man he had helped to an appointment on the Chicago police force. Soon after this Contakey was pushing his automobile a hit beyond the speed limit up Michigan Bou-levard and was stopped by a policeman. The policeman opened the door of the car and saw Comiskey sitting inside.
"Hello, Bill!" said Comiskey. "How are you getting along since I got you your no on the force?"

The policeman coughed and stuttered.

Finally he said:
"Look here, Charlie; you'll have to go
sower with this car of yours or I'll have
to give back my pass."

Nothing on the President

APROPOS of the human side of President A Wilson, the President was out for a ride in his automobile one afternoon. The machine passed a small boy standing

"Did you notice what that boy did when we passed?" the President saked. "No. Mr. President; I did not."

No. Mr. President; I aid not.

"He made a face at me."

"Is it possible?" exclaimed the shocked companion. "I didn't observe him."

"He did," said the President; "but did you notice what I did?"

"No. sir."

"Well," answered the President happily,
"I made a face right back at him!"

Two-Minute Lights

TWO-MINUTE lights for stairways and I spartment-house entrances are just oming into use in the United States, though they have been in common use abroad. When one reaches home late at light and finds the halls and stairways dark, a pressure on a push button at the door lights up the various lamps; and two minutes later the lights go out, thus giving snough light for the latecomer's convenence, but thriftily obviating the necessity for constantly burning lights.

An added attachment is a switch that will keep all the hallway lamps burning until a fixed hour, such as eleven-thirty,

and at that time turn them all out, but connect them with the two-minute control for the remainder of the night.

Caves of the Winds

CAVERNS filled with stored air are a Comparatively recent trick in mining. Abandoned drifts or tunnels through rock are scaled up and air is pumped in until they contain it at the pressure recessary for run-ning air drills and other mining mechinery. The exverns thus have stored-up power for emergency use or to help keep up an even pressure in the regular supply.

At the great Anaconda Mines this same iden has been ingeniously used to give a

perfectly regular personne. An under-ground rock receiver for the air was blasted out at the foot of a bill and compressed air is pumped into this receiver. Far up on the hill in a reservoir of water, with a pipe running down below the air receiver and coming up into it through the bottom.

The water from the reservoir would nat-urally flow down into the air receiver, but the air pressure there keeps it out. When the stock of stored-up compressed air is reduced water comes up into the air receiver, and when an excessive amount of air is pumped in, the water in the hill reservoir rises; but the air pressure in the rock cavern always remains steady.

No Place for Ladies

A FAMOUS foreign newspaper corre-spondent, a German, was stopping at a seaside hotel where the dining-room helpers, following the New England custom, were nearly all college girls, working during vaca-tion in order to keep themselves at school

the rest of the year.

The spectacied young person who presided over the table where the German excellent breeding, but alse never seemed able to remember whether the eggs were to be fried on one side or acrambled on both.

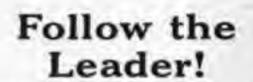

Finally, one evening after he had been served with a meal entirely different from the one he had ordered, the foreigner lost his temper and spoke rather sharply to the

young woman.
"Easy there!" admonished his table
mate, an American writer. "She's a lady,

you know, old man."
"But I do not vant a lady," said the German plaintively. "I vant a vaiter!"

The Most Important Announcement I Ever Made:

There has always been s material difference between Tousted Corn Flakes as we make them and as you buy them.

It has constantly been my ambitton to deliver the flakes to you so fresh and crisp as they are when they come from our ovens.

By the use of new machinery, we are able to offer you, at no increase in price KELLOGG'S TOASTED CORN FLAKES so perfectly sealed that, wherever and whenever you buy them, they will be as fresh, tender and orisp as the mament they left the ovens. We call this "Waxtite," the seal of quality.

This is the most important announcement I ever made.

Number 48

By SAMUEL G. BLYTHE THE FAKERS

ENATOR William H. Paxton, universally known as the Old Fox of the Senate, had been to the White House that morning. ad wheedled the president into promsing an important appointment to a man from the Paxton organization. and was well pleased with himself as ie walked down Pennsylvania Avenue oward the Capitol. His hat was orked a bit to one side, he swung his are jountily, and he blew little clouds smoke into the sunshine from the igar that tilted upward from one orner of his mouth. He smiled geniily at the passers-by, and added a low to his smile whenever any person se met displayed the slightest sign of recgnition, which was frequently, for uston was serving his twentieth year a Congress and was a familiar figure in the streets of Washington.

The senator was not only pleased with himself, but pleased with the olitics he had played, with the presibut who had belped him play it, with is party, his prospects and his power. irroral of his colleagues had candifates for the place Paxton had secured or his own man, and the fight had sen lively and at times acrimonious. ty a judicious scheme of elimination ad some cleverly disposed charges gainst the others he had brought his we candidate into a front position. nd, choosing this particular morning s the psychological time, had decended on the president, persuaded in that the matter should be settled, hat the only safe way to settle it was a appoint the Paxton applicant, and ad won. He contemplated with seresatisfaction the meetings he would ave with the senators who had lost, ad framed the speeches of joking

undolence he would make to them. As he passed the corner of Sixth Street he heard the clutter and clang of an ambulance chind him. He turned. The wagons and carriages on the broad avenue slowed down, ad is common with all those on the aidewalk the senator stepped out to the edge of the sphalt to watch the ambulance go by and to wonder what unfortunate was in it or miting for it and the young doctor who sat behind. Apparently the case was an urgent ow, for the driver was leaning forward and the clamor of the warning gong was incessant. he ambulance was halfway down the block between Seventh and Sixth streets when he senator reached the curb and joined the people who fringed it, staring at the optusching conveyance with that mixture of curiosity and terror the progress of an mbulance always excites.

Paxton, a masterful man, had taken a sort of a supervisory mental control of the ituation. He saw a little boy, whose mother had forgotten him in her interest in the rogress of the ambulance, start across the street, dedging between two wagons. The man irving the ambulance did not see the child, for he made no attempt to stop his horses or o turn them.

"Look out, kid!" shouted a man on the curb. "Look out or you'll be run over!" The mother screamed. The hoy ran ahead, laughing at his escape from restraint.

The ambulance came swiftly, the gong beating a strident tattoo.

The mother screamed again. Then Paxton, pushing ahead of half a dozen men who tarted forward, stepped quickly out on the pavement, scooped up the boy and, holding im in his arms, carried him back to the curb and gave him to his mother. He received or profuse and tearful thanks graciously, bowed, expressed his polite pleasure over what * called a slight service and resumed his walk to the Capitol.

"That's Senator Paxton," said one man in the crowd. "The Old Fox."
Everybody was interested. "Senator Paxton," the onlookers said one to another; "did Fox Paxton." And as Paxton passed out of view the bystanders spoke of him in ntimate terms, as if they all knew him well, after the manner of Washington people,

It was halfpast ten o'clock when Paxton reached his committee room. T. Marmaduke lie's, his assistant secretary, was in the outer office opening letters and sorting the ommunications into piles.

"Morning, Tommie," greeted the senator. "Much grief in the mail this murning?"

"About the usual amount," Hicks answered, "with one particularly pitiful wall from Primston because you don't land that job for him."

"Fixed it today. Wire Primston to come on. Bring in the letters I need to see in about fifteen minutes. I want to look at the paper first."

Paxton walked into the private office and closed the door. Hicks slit another envelope with his opener. opened it dexterously, took out the letter that was within, glanced at it and tossed it on one of his piles. Then the telephone on his desk rang.

"Helio," he said, as he put the re-ceiver to his ear. "Yes, this is Senator Paxton's committee room. . . Who's talking, please? the Evening Dispatch. . . . What's that? . . . Somebody telephoned in the senator rescued a child from death this morning? Hadn't heard of it. . . . No, the senator isn't here yet—expect him any min-ute. . . . Sure, tell him to come down, we'll be glad to see him."

Bicks bung up the receiver and whistled. "What do you know about that?" he asked himself, and knocked on the door of the private office.

"What is it?" asked Paxton as Hicks entered.

"The Evening Dispatch just called up and said they hear you rescued a child from death on the Avenue this morning."

Paxton laughed.

"Bosh!" he said. "Where did they get that yarn?"

"But didn't you?" asked Hicks, his disappointment showing in his voice.

"No. I didn't rescue a child from death, or anything like it. I'm no hero dashing into the street at the peril of my own life to snatch a babbling, prattling, golden-haired infant from beneath the pounding boofs of wildly galloping horses. What I did do was to proceed in a decorous and elderly manner across the asphalt at Sixth Street, pick up a little boy who had strayed out there in the way of an ambulance and restore him to his mother. It was no beroic or thrilling rescue. It was simply a precautionary measure, for the ambulance would have stopped anyhow, and that's all there is to it."

"But a Dispatch reporter is coming to see about it. What'll I say?"

"Tell him just what I have told you, and ask him to forget it," and the senator resumed the reading of his paper.

Hicks returned to his desk much grieved. He sensed a story. Hicks liked stories. He realized the advantages of publicity. He had planned to depict the rescue to the reporter with many exciting details and great declamatory effect. He felt the senator was overlooking an opportunity.

The reporter same. Hicks knew him well - Garson, the man who covered the Senate

end of the Capitol for the Dispatch. "Senator in?" asked Garson.

"No," Hicks replied. "He was here, but had to go to a committee meeting."
"Our people telephoned up to me they have a story that the senator rescued a kid from death down on the Avenue this morning. Heard anything of it?"
"Yes," said Hicks; "he told me about it. Good story too."
"Well, they've got the yarn and they want me to verify it. Can't get a statement

from the old man, can I?"

'He isn't here," repeated Hicks; "but it's true. What have you got on it?" "Oh," said Garson casually, "I don't know the details. All they told me was that the old man was coming along the Avenue simultaneously with an ambulance that some fool of a driver was pushing past the speed limit to pick up a souse or something that one of the intelligent first-aid corps had diagnosed as a fractured skull. A kid ran in front of the horses, and Paxton chased out and grabbed the kid just in time to save it from being run down, and restored it to its distracted mother, as our story will undoubtedly say."

As Garson talked, Hicks fashioned the incident into narrative form, aided by an active and useful imagination.

"That's right," he said, "those are about the main points. The ambulance was coming to heat the band, and the driver didn't see the kid. It was only a little bit of a boy, just able to toddle along, and there wasn't a chance. Everybody was paralyzed with fear—that is, everybody except the senator. He dashed out, plucked the goldenhaired child from beneath the pounding hoofs of the wildly galloping horses"—Hicks had seized on the senator's irony—"and jumped aside just in time to escape death or severe injury himself and to save the child from being awfully mangled on the pavement. The senator carried the child back to the curb and gave him—I guess it was a him—to the hysterical mother and resumed his walk to the Capitol, amid the enthusiastic cheers of the witnesses of the heroic deed."

"Say," commented Garson, "you talk like a man in a best-seller. Back up! What's the kid's name?"

"He didn't stop to inquire."

"But it's straight goods, is it?"

"Sure, and it's a good story. It isn't every day a senator as well known as Senator Paxton pulls a thing like that."

"All right," said Garson. "Let me use your phone, will you? They want it in a hurry for a flash in the noon edition."

Whereupon Garson called his office and verified the thrilling rescue, unconsciously repeating some of the phrases used by Hicks.

"Tell them to put some feathers on it," whispered Hicks.
"Oh," said Garson as he bung up the receiver, "they'll
do that all right. There isn't anything else in sight for
a flash."

Hicks waited impatiently for the noon edition of the Dispatch, which went on the streets at a quarter to twelve. He was highly gratified to find a large black heading across the entire top of the front page, reading: "Senator Paxton Rescues Child From Horrible Death," and a much-paragraphed story beneath reciting, in the most vivid language at the command of one of the desk men on the Dispatch, the circumstantial story of the rescue, wherein the principal figures were the famous senator, who was "heroic" in every other line, the weeping mother, who was "distracted" as frequently, and the child, who was a "prattling, sunny-haired babe" proceeding laughingly to his inevita-ble and frightful doom had not the heroic senator boes on the spot and quick to act. There was a four-column picture of the senator, hurriedly taken from the cut rack, and the smaller headlines screamed of herolem and courage and bravery and modest deprecation on the senator's part.

"If that ain't a peach I don't want a cent," commented Hicks. When the second edition came up Hicks was sorry to observe the seven-column head had been dropped, the leads taken out of the article and the picture of the senator reduced to two columns in width; but an artist had drawn a decoration to go with the picture of the senator—a beld freehand sketch of that agile statesman reaching beneath the upraised hoofs of two infuriated borses and taking therefrom a child that looked up with joyful trustfulness into his steel-blue eyes.

He was a little uneasy, however, for Paxton, though not averse to publicity, was particular as to its character, and he awaited the senator's coming with some apprehension. Soon after three o'clock Paxton stormed in with a copy of the Dispatch in his hand.

"Hicks," he shouted, "what sort of rot is this?"

"What do you mean, senator?" asked Hicks innocently.
"This—this hysterical balderdash about me being a hero."

"Oh, you mean that story in the Dispatch?"

"Yes, I mean that story in the Dispatch! I thought I told you to stop it."

"How could I stop it?" protested Hicks. "They had it. I didn't give it to them. What's the matter with it? Isn't it a good story?"

Paxton laughed. "Good story," he repeated. "I should say it is a good story. It's so good that forty senators have already advised me to apply for a hero medal and have offered to testify to my general heroism, and I won't hear the last of it for weeks."

"But," insisted Hicks, "I don't see how it will do you any harm, and it may help you a lot out home."

Paxton looked curiously at Hicks. He crumpled the paper and threw it on the floor. Then he laughed again. "Hicks," he said, "you didn't try to stop it, now dld you?"

"No, sir: it was true and I couldn't see any harm in it. It's fine publicity."

"In fact," continued Paxton, "you rather pushed it along,"
"Well," confessed Hicks, "I may have added a thrilling
detail here and there."

"Thinking, no doubt, that you are working for an actor instead of a senator, or that I do a high dive in a circus and need attention from the press?"

"Oh, no," protested Hicks, "not at all. It occurred to me that it would be a shame to waste the incident, especially as there can be no political comeback, and I let it go. I would be glad to have a story like that printed about me."

Hicks Found the Study of Cobe and Littleton and Kent a Tedinas Business

"I am sure you would; I am sure you would," said Paxton, and he sat down, lighted a cigar and looked at Hicks for a long time, watching that young man as he worked busily at his typewriter.

"Hicks," said Paxton finally, "you are too good to be wasting yourself here as an assistant secretary."

"That's what I think," assented Hicks, turning quickly from his desk and facing Paxton expectantly.

Paxton smiled. "I am glad my views on the subject coincide with yours," he said. "Well!" prompted Hicks after a moment's slience.

"Oh, nothing," Paxton replied as he rose to go into his private office. He stopped at the door. "I'll study it over," he said. "I have an experiment in mind I think I can work out with you."

11

TOMMIE HICKS changed his name and style of appellation from Tommie to T. Marmaduke in his senior year at high school in Salestown, a county seat in Senator Paxtoo's state, where Tommie was born and lived until he came to Washington. To be sure, notody in Salestown took the change seriously and all his boyhood friends continued to call him Tom and Tommie, but in Washington he used T. Marmaduke for himself and found it was accepted without question. They are familiar with such things in Washington.

He was a delight to Senator Paston, who saw in him undeveloped traits of demagogism that he was sure, with to gain a success in politics. Paxton bated demagogism but he enjoyed demagogues. He made friends with the fakers who came to Congress- and there were many of them - and took a hage pleasure in urging them to greater efforts for the relief of the common people and all the quackery that goes with the professional propaganda of that sort. It was a pastime with him, not dangerous, for at the time the Republican organization was so firmly in power in the Congress and in the nation that even the astute Paxton could see nothing ahead but years of uninterrupted rule for the conservative organization of which he was one of the leaders. Paxton had great private contempt for the people as a mass, holding that they allowed themselves to be fooled so easily that they deserved nothing more than they allowed themselves to get, and using as examples

and proofs for his arguments various political charitans who attained and held political place entirely by the charlatenism.

Hicks was a type. Even as a small boy he liked to be conspicuous and aspired to lead, and was indifferent as to the methods he used to gain his ends so long as he succeeds! He invariably proclaimed himself the leader in every boy ish enterprise, and often had force enough to hold himself at the front. He never went to a party without rescring to little expedients to make himself stand out from the other children at the gathering. At a picnic he was the boy who did the loudest shouting. He insisted on being the captain and pitcher at the ball games, and always but it excuse ready for his failure to pitch winning ball. [another boy swam farther than he did, Tommie, observing his defeat, immediately organized a cramp within hims! and gasped with pain when he reached the shore. | another boy ran faster than he did, Tommie said his for hurt. When he told his tales, with his companions to present, Tommis always caught the most fish, gatherei the greatest number of hickory nuts, knew where most birds nests were, and he never by any possibility acknowledged he was not entirely familiar with any topic of current boyish discussion.

A great egotist, he was not particularly offensive, even with all his proclaimed smartness, for he was good saturd and affable. Moreover, he was smart. His mind we brighter than the minds of most of the other boys, and though he never did get the highest marks in his classes is always made the showlest recitals and never failed to take advantage of a situation that would lead to his own elevation in the classrooms of the school. He skimmed through everything he could skim through, claiming all there we in sight, but, if put to it, he often could and would make good his boasts. And he had a talent for publicity. Thomas Wentworth Hicks, his father, a judge of a load court, often looked at Tommie speculatively and wondered where he would come out. The father hesitated to goes. Tommie's sisters were awed by his showiness, as were most of the other girls of his age, and Tommie's mother shock her head over him and complained: "He's too smart."

Tommie continually thrust himself before his elder in the hope that he would get a few commendatory work. He listened to the conversations between his parents and the people who came to his father's house, storing in his retentive memory what they said, in order that he might show off later by repeating the wisdom of the comment to his bey companions and claim it for his own. He cultivated the big men of the village as much as he could, and hum about law offices and his father's court, trying to impreshimself on the men who were there, and was supremely happy when some lawyer or merchant patted him on the shoulder and told him he was a "bright kid."

Tommie edged his way through high school along the lines of least resistance. He studied Latin and Greek because his father wanted him to, but he hated both layguages. He was one of the first in his class to find out about the use of translations, and when they reached Clove and The Anabazis, after he had somehow mastered the intricacies of the readers and prose composition and conjugations and declensions, and had a dim realization of veris and their roots, he procured interlinear translations and often read from these books instead of from the text when called upon to translate in the class. His nerve carried him through. He found a book that contained the English equivalents for his composition work in these language and used that instead of studying; also, at examinate times, he resorted to these translations and boldly copie! the answers to his questions, regardless of the fact that the students were supposed to be on honor. He was prominent in the literary societies, having taken great pains to be elected to the oldest and strongest one, and he developed himself into a rather fastidious dresser, wearing better clothes than his companions, and being the first boy of these of his particular set who donned a cutaway cost.

He was rather fond of feminine society, largely because he could make more of a personal impression on the your ladles than be could on the boys, who probed into his superficiality farther than the girls did; and he never lost in opportunity to associate with men older than he was, but did he fail to try to impress himself on them as their invilectual equal. There was a lecture course at the high or seven platform orators came each year and six talk to the students. T. Marmaduke invariably sought and these lecturing stars and introduced himself to them. In his senior year be contrived to have himself elected manager of the course for that year, and he took great pains meet the orators and always referred to them as his friends No man of prominence came to the village who was no besieged by young Mr. Hicks, usually with a request is his autograph, and led into a conversation that would enable T. Marmaduke to say later, in some company where he could make an impression: "I was talking to m friend, Mr. White. He's a member of Congress, you know, and he said to me -

He showed an ability for florid orstory and, though a did not shine particularly in the debates of the literarsociety, he was much superior to most of his classmater in declamation. He could string words together so they sounded well, and his perorations always were flowery and usually cribbed from his father's set of Notable Speeches and Debates. His graduation oration was highly commended. It discussed The Trend of the Times elequently and learnedly, and Tommie stole most of it from a bound copy of the Congressional Record he found in the office of a young man friend of his who was studying low.

He wanted to go to college and had selected Harvard as the institution of learning on which he would confer his talents; but his father died soon after the younger Hicks graduated from high school, and college was out of the question. Some years before he had decided to become a lawyer. He felt he had a talent for the law. Also he was interested in politics, and he knew that most of the politics of the country—the showy part of it, at least—is in the hands of the lawyers. So he entered the office of Judge William Percival Smith, the lawyer of Salestown, to study law, and after the proper period of apprenticeship to take he examinations and be admitted to the bar.

T. Marmaduke Hicks, aged nineteen at the time he began the study of law, was a tall, good-leaking youth who had taken earnest and frequent stock of his personal attributes. He were his hair long, brushed it back straight from his forehead and affected gay ties and clothes of extreme cut. When trousers were baggy T. Marmaduke's were baggier than any of the baggy ones worn by his associates; and when trousers were tight T. Marmaduke's were the tightest in the village. He went to the city as often as he could, and was the first to appear in a straw hat with a brilliant ribbon on it. He denied himself some necessities to buy a pair of patent-leather shoes with pearl-colored

tops, and he was the first young man in those parts to wear spats.

Hicks found the study of Coke and Littleton and Kent a tedious business. He much preferred the appearances he could make in the minor courts, and never failed to be at the courthouse when the various terms of court were is progress. He took his prerogative of sitting in the indosure devoted to members of the bar with a grand air, and became acquainted with all the lawyers of the county and with those from other sections who came to try their rases there. He had a smatlering of legal phranes which be used on every occasion. He spent little time at his desk. His father left some money, and T. Marmaduke lived at home with his mother, who thought him the most spoderful person in the world and supplied his financial needs as well as she could, londly looking forward to the lay when he should take his ather's place at the local bar.

The presidential campaign f 1896 gave Hicks a further xeuse for neglecting his law tudies and an opportunity or mingling in politics. He oully supported the gold tandard, was vociferously for McKinley as against Bryan, eganized the young men of is village into a first-voters' hib although he was not yet first voter himself, and wrote nany letters to state and utional headquarters telling the good work he was doing for the cause." He proudly xhibited the replies he reeived, and by dint of peristent effort and many letters nanaged to secure a brief ommunication from Mark danna himself, thanking him or the interest he was showng in the loyal endeavor to edeem the country from the Jemocracy, and, as Mr. lanna's note had it, "saving is from the ruin and disaster hat will inevitably arise if we dopt the heresy of free silver is preached by the enemies of he republic."

When there was a big speaker in the neighboring city he borrowed enough money from his mather to enable him to go to hear him, and he never came away without shaking hands with the orator and saying a few kind words for himself. He would loaf for hours about a hotel corridor awaiting a chance to edge up to a spellhinder and grasp him by the hand.

by the hand.

"Aw, come on, Tom," a companion said one day;

"what's the use of sticking round here just to shake hands
with that hot-air artist? He don't care anything about
you."

"I know that," Hicks replied, "but I care something about him." And he waited.

The speaker, who was Senator Paxton, came down into the lobby. Hicks rushed over and extended his hand.

"I am Mr. Hicks, senator," he said — "Mr. T. Marmaduke Hicks, of Salestown: and I want to shake you by the hand and tell you how much inspiration I get from your magnificent speeches."

The tired compaigner looked at this ardent young man curiously.

"Well, son," he said, "I'm glad you like 'em. What did you say your name is?"

"T. Marmaduke Hicks, of Salestown."

"Glad you like 'em," repeated the senator. "Come and see me if you ever happen to be in Washington." And he moved away.

"There," exulted Hicks to his companion, "you see what that means. He asked me to come and see him in Washington. Like as not he'll get McKinley to give me a big place after election."

"Huh." scoffed the other, "I can see him giving you a place! What a nerve you'd have to ask him for one."

Hicks looked at his friend compassionately. "Charley," he said, "maybe be won't give me a place, but you can bet your life it won't be because he won't have an opportunity."

"Do you mean you're going to ask Billy Paxton for a job?"

"Sure!" Hicks replied. "I'm doing a lot for McKinley and I know darn well that I won't get anything for it unless I do ask. Besides, he told me to come and see him."

"Told you to come and see him," mimicked his friend.
"Why, I heard him tell that to forty other people."

"That may all be," assented Hicks genially; "but perhaps the other thirty-nine won't accept the invitation."

AFTER the election Hicks wrote another letter to Mark Hanns, recalling his own efforts in the campaign, but generously giving Mr. Hanns due credit. He received a short reply thanking him for his congratulations, a short letter signed with a facsimile signature done by a rubber stamp. Hicks carefully traced the rubber-stamp signature with a pen, giving it the appearance of an autograph signature, and showed the letter round Salestown as an evidence of his political acquaintance with Hanns. Also he wrote to Senator Paxton, congratulating him on his "noble efforts which had borne such glorious fruit" and saying therein that he contemplated an early visit to Washington, when he intended to call on the senator and congratulate him in person. The senator wrote that he always was glad to see his constituents, and Hicks carefully preserved that letter.

He had decided to go into politics, to get an office, to become a statesman. Judge William Percival Smith advised him to take up stenography and seek a secretarial position

first, and Hicks thought that might be a good idea. He stopped loafing, abandoned his law books and applied himself to shorthand. He could work when he wanted to, and he spent hours over his stenography and practicing on a typewriter. By inauguration time he was fairly proficient at taking dictation and had a good speed on the machine.

"Mother," he said at the dinner table one day late in February, "I think I'll go down to see McKinley inaugurated and call on Senator Paxion."

"That will be nice," assented his adoring mother.

"Probably," continued Hicks, "I shall not come back."

"Won't come back? Why, Temmie, what do you mean?"

"Oh, I guess I'll take some place under this new administration. Mark Hanna and Billy Paxton will get me a good job. I have letters from both of them, you know."

"Mark Hanna!" gasped his mother. "Do you mean Mr. Mark Hanna?"

"Sure, Mark Hanna; old friend of mine; fine old chap too. He knows I did a lot of work for McKinley."

"What place will you take?" asked Mrs. Hicks, gazing at her son in frank admiration.

"Oh, it's too early to say about that. Something good."

"Don't you let them appoint you ambassador," warned Mrs. Hicks. "I couldn't allow you to go away off to a foreign country."

"Of course," responded Hicks, holding out his plate for another piece of pie, "if they insist on my taking an ambassadorship I suppose I would have to oblige. But," and he smiled across at his mother, "you needn't worry much about that, I guess. I'll pick out something, and put up such a fight they'll have to take care of me."

He Came to Dinner Ten Minuter Late, and Made an Impressive Entrance

THE SQUAREHEAD

For a Manth the Palgrane Buthed the Westerlies

KRAGERO gasped in wonder when, as winter was setting in, Eric Sigurdsen returned to take away his widowed sister, Besla Svensen, and her little daughter, Hildigunn of the Sea Eyes.

Life in the Norse fishing village paused in amazement just to behold him. Many a son of Kragero had fared out of its flord and gone down the Skager-Rack, but never had one come back like this.

It was hard to believe that this man of the world, with a diamond as large as a hazelnut on one of his ropelike fingers and another, its mate in size and refulgence, in his magenta satin scarf, was the tow-headed fisher bay who ten years before had gone away to sail on deep water. Kragere saw nothing at which to smile in the ornateness of these gens—no incongruitles; no had taste in Eric Sigurdsen's apparel. It had no esthetic conscience to be upheaved by magenta satin ties and green plaid tweeds and yellow-topped shoes.

To the unsophisticated villagers these things were but the habiliments of the mirscle that had happened: but what drew and held their imaginations above all his other belongings were a thick golden watch chain across his wide chest and, hanging midway on it, a nugget charm the size of a pigeon's egg. This chain and this nugget were symbols of the miracle. They were literally a part of the golden hoard he had wrested from the mountain breasts of California. That nugget was the first of his riches the earth had given him.

"As you see this nugget so I found it!" he loudly boasted to the oldtimers on the one night he spent with them in the inn of the Northern Light.

And for the most part they were old men, who awesomely passed the nugget and chain from seaworn hand to
seaworn hand. The past three seasons had taken beavy
toll of Kragerö. The youngest there was Olaf Greig; and,
being the youngest, it was to him that the nugget and chain
came last to beft and to admire; but without so much as a
word he returned them to Sigurdsen and his silence went
unnoticed, for the parting drink had been tapped and stood
ready. Otherwise the fact that Greig had nothing to say
would have occasioned no comment. This sea orphan was
not one to talk. Since the great fleet disaster two years
previously of which the lad was one of a handful of survivors, who owed their lives to him, he had come to be
known as Olaf the Silent. It was this disaster that had
widowed Besla Svensen.

"It's like one of the Edda tales—eh?" said Old Jon Thorsen a few minutes later, turning from closing the inn door on Sigurdsen and as he spoke slipping into his trousers pocket three goldpieces, which the miner had left in his knotted pulm. A murmur of assent was answering him through the pips-smoked atmosphere when his gaze picked up Olaf Greig in Iront of the hearth. "There!" he exclaimed, pointing at the lad. "Just as you see my smark partner now so I saw Eric Sigurdsen ten year ago! Standing that way at that very fireplace he was!"

All eyes centered on the boy at this. Olaf, his back toward the company, was staring down at the flames, lest in a study of their play. Against the yellow, lesping light his tall, sea-hooted form stood out like the trunk of a young oak. Thorsen had to call him twice to bring round his curl-matted blond head.

"But Eric was never the makings of such a man when he was eighteen never!" said the bust of the Northern

CITERTED AT ANTON OTTO FISCHE

Light, beginning the distribution of a freshly filled set of mugs, an installment of Sigurdsen's largess. A chorus of indorsement answered this comment, for it was known of all there that no man or boy in Kragerii, or for miles up and down the coast, was Olaf Greig's equal in strength.

In this moment the lad became aware that he was the subject of discussion. He shifted uneasily, self-consciously returned, with something of defiance, the drink-fuddled gaze of those who stared at him, and then, jamming on a storm cap, made for the street.

"Going home," was the answer he gave to Thorsen's query as to whither he went. He did not drink and nobody sought to detain him, but he paused a second in the closing of the Northern Light's door. Jon Thorsen was speaking.

"It's like it is in the Scriptures," was what he said:
"'Many are called, but few are chosen.' Eric Sigurdaen is

one in a hundred thousand. Aye, one in a million!"

Sigurdsen had left behind him at the Northern Light the price of much drink, and so it was not until an early morning hour that Thorsen tacked homeward. A blur of light from the window of a shack by the waterside, which Olaf shared with him, was his leading beacon; but this morning his partner was not eiting up with a book. By a candle's spluttering glearn he was putting the finishing tauches to the rigging of a model brig, a dainty thing to be held in the palm of one hand. And an hour later, while old Jon lay snoring. Olaf stood on the quaybead waving goodby to Hildiguan Svensen—Hildiguan of the Sea Eyes—where she stood between her uncle Eric and Besla, her mother, at the rail of the steamer that was carrying them away from Kragero.

The model was in the girl's hands, but Olaf could not see that her tears were falling on it like rain: the distance was too great. Besides, there was a mist in his own eyes, which had come there when he had put the little brig in her clusp and she had reached up and kissed him full on his broad mouth. With the exception of his Tromso mother, whom he could not remember, this girl of twelve was the first woman to touch her lips to his.

Eric Sigurdsen had spent but two days and three nights in Kragerö. There were some who said they would not believe he had been among them if it were not that Besla Svensen and Hildigunn were gone and that so many had strange American goldpieces to show for it. His coming and going were like the passing of a comet, and like the passing of a comet he left old men and women nodding and whispering of the past; but also be left a boy stargazing.

Winter's hard clinch was loosening on Kragerö, its tattered white cloak drifting down the Skager-Rack, when a letter—the first he had ever received—came to Olaf Greig from Hildigunn of the Sea Eyes in far-away California. His blue eyes glittered as he spelled from the childish scrawl the message that she would never cease to think of him, and finally this tremendous sentence:

"Uncle Eric says that if you should come to California there would be work for a man like you. Come!"

In the hour that brought that letter Olaf found Jon Thorsen in the Northern Light and told him he was going away. And Thorsen said, as he had before:
"'Many are called, but few are chose.
Eric Sigurdsen is one in a hundred thousand—in a million! Better stay herefoling, Olaf." And there he paused at what

he saw in the youth's eyes—that light of long far-her dreams that freezes the tengue of age. His last well attempt at argument was: "How can you go? You have no money to pay for your travel."

"I'll go to the Golden Gate as a sailor goes—road its Horn!" the boy answered; and when May was yet you; be had found him a California-bound ship, an Englishmu, and was sailing out of Newcastle-upon-Tyne.

On the last day of July at midnight he was stanging his feet in the forecastle of the Falls of Dee and besting his arms round his body, like the rest of his watch, in a endeavor to make the blood flow again in frozen toes not fingers. For six weeks the Falls of Dee had been trying to weather Cape Horn; for six weeks she had been bucking the dreaded westerly gales of those latitudes; for six web the voices in her had been lifted in blasphemy—but new once had Olaf Greig complained. He was smiling now what all his mates were cursing their lot with gall-stept

"What makes you smile—eh?—always as at a jok?"
demanded an old cockeyed Swede who, during these land
times, had more than once marked the unvarying happiness of the boy's expression. And, foolishly and youthlike
boasting, Olaf answered, using his own Norse tongue, he is
knew little English:

"I go to sea no more after this. In California I go to work in the gold mines."

With a scotling laugh the Swede translated this to its forecastle and the forecastle remembered it.

Suddenly one September midday Olaf Greig saw the land of his dreams ahead. He saw it from the highest point in the ship—from where he had been sent to reeve the halyards for the Falls' house flag. Standing on the min-skysuil yard, with an arm round the hare pole, and swaying with it as though part of it, his eyes smatched it to him. And of a truth it was a golden land. The Marin Hills and the Coast Range, which loomed up at the end of the yata formed by the gleaming Gate, had already put on their autumn garb. With the sun shining through a shimments hage on this brown dress, they seemed, in fact, burgeoning of the yellow riches of which the watcher had come it ravish them. Nor as the ship sped landward did the likeness grow less.

"Won't Hildigunn be surprised, and Besla and Editoo?" he was repeating for the twentieth time in his except of joy, when a hall from the deck started him descending

As he reached the crosstrees, his eyes cast down by suilor and waterwise though he was, paused in fascination of such small boatmanship as he had never believed possible. Little open craft, some carrying two and other three passengers, were reaching up to the lee side of the Falls of Dee and fastening to it with long iron books. For a second one of the narrow cockleshells would ding to the huge surging hull, risking destruction, courting death, and in that second deliver an occupant or two over the ship rail. The next instant the cockleshell, apparently fit may for a summer lake, but now ten miles from land in the deep sea, was safely trailing astern at the end of a long line attached to its iron book. It made Olaf's sailor blood by

with admiration. This was a great country to which he was coming—a marvelous land, indeed, whose watermen rould do things like that!

Some of the strangers ran aft to where the captain stood beside the pilot, and the boy saw them force cards into his hands. One knocked another down. He guessed they must be traders, the Yankees who, Jon Thorsen had told him, could outwit a Stockholm ship chandler; but he had no more than a moment of his wonder to give them. Another cockleshell was riding almost flush with the Falls' rail amidships. In the instant that he caught his breath, expecting to see the boat crushed, a man in such a garb as government folk wore in Norway—a long black coat and a tall, shiny hat—leaped aboard. And he had just time to mark that this man landed on the deck with an ease and lightness that none of the others had shown, when a hail from the mate stopped his descent and sent him climbing aloft again to furl the slatting skysail.

Once again in the hour that followed the boy glimpsed the man in the tall, shiny hat talking to the captain on the took. And he could not know that this person, whom he took for somebody of importance, was Bull Wilson, king crimp of the port; but, even had he known it, he had no time or interest to give to what went on below him. There was the welcoming land for an eye feast and the furling of

many sails for his hands.

Not until the ship lay anchored in the stream of San Francisco did Olaf's feet touch deck again. As he awarg out of the rigging, drunk with the drink of his dreaming, the man in the tall hat and frock coat met him and, more wonderful than all, hailed him by his own name.

"Yub bound fer th' mines—eh, Greig?" he asked in English, only to repeat the question immediately in a

bastard sort of Norwegian.

"Oh, jes-jes, sir," stammered the boy, removing his mp and not daring to look above the diamond sparkling in the middle of Bull Wilson's blue necktie. "Ay go buy Eric Sigurdsen's—bay Coffee Creek in day County Trinity."

"Right enough!" And Buil Wilson pretended to read from a card: "Got yuh on m'list. I'm Sigurdsen's agent his labor agent. Your is de kind dey need in de mines!"

The kindly pat on the shoulder that accompanied the last brought Olaf's abashed gaze up to Bull Wilson's face, but he did not mark then its thin, cruel lips, or the small, crumpled ears—cauliflower ears, princfighters call them. This important person was simply a part of the whole wonderful golden scheme of things that was enmosting him.

"'Ere, me square'ead pal, 'ave a wipe!" cut in a Cockney sailor, reeling between them and pressing a whisky

fask to Olaf's lips.

The boy gave the sailor a push that sent him twenty feet. It was an exhibition of strength that brought a low whistle from the crimp; but there was no time to be lost.

"It's all right! Yuh dunnage's in de hoat. Quick—'fore is skipper comes for'ard an' stops yuh!"

There was no danger of interference from that quarter, bough, for it was money in the ship's pocket to let the rimps take her sail-

m; by their deserion all they had arned on the passage at would be forfeit a ber. And, eager to put foot on the here of his dreamand, congratulating wreelf that he was so con and so easily to scape the vessel on which he had signed intil she should each England again, Mal Greig dropped wer the side into one I the Whitehalls he rad admired so much stsea. The Cockney vas already there, ind with him was he cockeved Swede.

"Ay got a yob bay lay mines!" cried he Swede at sight of haf. "Ay goan to nake fave tollar a lay too!"

And thereat the soy's imagination caped. Five dollars i day! That was wenty kroner! For me day's work in his land of gold a was to receive as much as a month in be home fisheries rought!

As these figures raced through his brain the boat passed under the stern of a big merchantman at anchor and an near that he spelled her name and port—the Scafarer, of London. By the few men he saw aloft bending sail and by her deep lading he knew her for an outwardbound, and his heart was stirred of pity for her and her sailors. They were going away from the golden shore! Why could not they know enough to stay?

That night, as the city clocks struck ten and the bells in the harbor echoed the hour, Olaf Greig stood against the bar of Bull Wilson's bourding house, the Bowhead, gazing into the blue eyes of Olga, the crimp's wife. They were

alone. The few whom drink had not put to bed on the floors above had gone seeking adventure along the adventurous Barbary Coast. For nearly an hour this woman had held the boy in conversation, held him by an attraction with which he had never yet reckoned. He thought he liked her and that his heart had opened to her because her hair was yellow and her eyes blue, and because she was the daughter of a woman of Tromso, which was his mother's hirthplace.

Often, as he talked or listened, his eyes went to the street door expectantly; for when Bull Wilson had gone out he had told him that it was to purchase the railroad tickets to carry him and the other sailors to the mines in Trinity County. And always the woman's eyes followed the boy's, but not with expectation of her spouse's return. Suddenly she leaned far across the bar, the light of a strange desire in her face.

"You are a pretty boy, sailor—do you know that?" she laughed tremulously, and one of her hands closed on his. Otaf reddened; his breath caught at the insimuation. With a feeling akin to fright he drew his hand away. The woman frowned; and then, laughing tremulously again,

she whispered:
"I believe you now—that you've never touched a

woman's hand before."

There was hardly anything Olaf had not told this slattern Circe about himself, even including that. And as he was struggling to save his senses from the spell that was closing on them—he felt like one who had been under water too long—the street door banged open and Bull Wilson entered.

"Come, sallor!" he called, ignoring the woman and signaling the boy to follow him into a dimly lighted hallway

that led toward the rear of the Bowhead.

"Don't go with him!" Olaf thought he heard the woman whisper; but, without fear and glad to escape her, he

obeyed the crimp.

With the utterance of that warning whisper, Olga Wilson hesitated a second and then stole from behind the bar and into the hall after them. She overtook her husband as he bade Olaf enter the silencing room, a dim, gaslit, sound-proof hole the ice-chest door of which stood open on his right.

"Please, Bull!" she pleaded. "Don't do him up!"

"Gwan! Beat it! You're soused!"

"He'll shanghai you! Run! Run!" she shricked at the boy in his own and her mother's native tongue; and her arms encircled her husband's.

"I'll Go to the Golden Gate as a failer Gees - Round the Horn!"

At this warning Olaf Greig instinctively leaped toward the door, only to pause as he saw one of Bull's fists strike the woman and fell her. In that instant all the chivalry of youth lighted the fire of a consuming, berserk rage. And above the roar of this blaze he heard the primitive racial call. He was Norse. This woman was Norse. Her mother, like his own, had been a Tromsö woman. With the cry of a wild beast he flung himself at Bull Wilson who, sneering as had been his wont in his prize-ring days, certain of the outcome, calmly waited to receive the attack.

There could have been only one result of that clash. The skill of fist, the brain cunning, the cold blood, that had made Bull a champion of champions, were still his despite his forty-odd years of age and long retirement. He ground the Norse boy as a mill grinds grist. Thus it happened an hour afterward that

Olaf Greig, triesd hand and foot, and unconscious, was sold, with the Cockney and the cockeyed Swede, across the main hatch of the Seafarer, of London, the ship to whose people his beart had opened in pity only that afternoon. And thus it happened that as this Liverpool-bound merchantman cleared the Gate in the morning light it took the strength of her three mates to prevent this aquarehead from jumping overboard and to tie again the hands and feet they had loosened to put to work.

Toward the end of the day the captain and chief mate, with pistols in hand, freed him again and lifted him upright where he had been lying prone beside the hatch on which he had been sold. He was dazed; his strength was spont. His limbs trembled under him. A handshove would have toppled him over; and, realizing this with something of shame, his masters put their weapons away. As they pocketed the pistols a lurch of the ship dropped him on his buttocks. He did not attempt to rise. The shock sent his bruised and swollen hands to his chest, which gaped black-and-blue with heelprints through his reat shirt. From the chest they went uncertainly to his raw face and finally

clasped his rocking head; but he uttered no sound, not even when the captain leaned over him anxiously and, with no tender hands, felt of his ribs and his limbs for breaks.

"Seems all right," he announced, finishing the examination.

"But we'd better not turn him to till morning, sir," suggested the mate doubtfully; and with that, their voices sunk to a murmur, they went aft together.

Where they left him there he continued to sit until, of a sudden, the breeze freshened and bore down the yessel's lee rail to an angle that revealed a low, indefinite shadow along the ocean's rim to the eastward. That shadow was land. It stirred Olaf's bewildered, groping brain-gave it something to fasten on.

Slowly, painfully, he rose to his feet, and as he reached

A West They Had Been Fighting Their Way Toward the Land

his full height his face came on a level with a glistening, brass-bound glass port in the house at his side. In its mirroring surface he saw himself, and the memory of what had happened returned like a floodtide—engulfed him. That receding coast in the distance was the land of his dreams!

His blackened eyes leaped toward it. A low moan escaped birn, and as his puffed lips shut again the setting sun's blood-red disk dyed sea and sky and coast a crimson hue. A reddish glow shot through the sails of the ship. All the world was incarnedine, even as was the soul and brain of Olaf Greig. In that moment he was ten thousand of his Viking ancestors aflame with blood lust—an unquenchable desire of vengeance.

"I will come again! I will come again!" he swore, his right hand uplifted in witness. By the gods of his heather forebears he swore it—by Frey, by Njord, by Odin! By Odin's ravens of thought and memory, Hugin and Munin, he dedicated himself! The Christian God of his own

childhood had departed from him.

Barnacied, foul of bottom, undermanned, the Seafarer made a long passage home. It was the end of September when she cleared the Golden Gate. March was a week old when she went up the Mersey. As her last mooring line was made fast a blond-headed young giant known fore and aft as the Silent Squarehead went over her side, alone and pennilses. Under one arm he carried a thin bag of clothes purchased from the ship's slop closst. It represented his part of the earnings for the half-year's toil. The rest had gone to make up the blood money the ship had paid Bulk

Wilson for him.

Twenty-four hours later Olaf Greig was outwardhoused for San Francisco. Three months' wages he had signed away to a Norwegian boarding-house keeper for the chance. What manner of ship the Palgrave was mattered not to him. She was bound toward the Golden Goto. That was sufficient. He had not paused to write so much as a line to Jon Thorsen. Eric Sigurdsen, Besla Svensen, Hildiguan of the Sea Eyes—all in Kragero might never have existed; in fact, there were only two persons in the allent red world in which he was living now—himself and Bull Wilson.

The one link that connected past and present was little Hildigunn's letter, now a year aid; but no tender thought, springing from the days when she had called him Olaf the Happy, prompted his keeping the blood-stained acrap of paper. It was the symbol of his noth, the silent accepte of his terrible passion. It was the one thing Bull Wilson had not taken from his pockets the night he had beaten him and sold him as they sold cattle at the

Summer, the season of his own Northern summer. But the whiterines of the South, found him ugain off Cippe Horn, in an less shouthed abip. For a roomb and until her faremant work by the bound the Palgrave burled the westeries. Their also put took to the Falkland talkeds. August now her of the lesses the Partie. A September hursioner food bor three topmasts from her to the westward of Vidparains. A wall work up from low foreseasts.

"This iron backet'll never forch Frisent" proclaimed an Irinkman the marring the ship's head was furned toward the Chillenn port to sock repairs.

"Jas, we great time by Friencia good time," said Olaf solemnly in the broken English that was now his. And for the rest of that day the Larrength had something size besides lift took to talk about, if was the first time that any body there had ever heard the Squarehead that wish he called us he had been on the Scatarer and on the Falls of Decide to top for any open than Jetur No.

More than half the crew descreed to Valparate, but that Greig warned one of those. The Palgrave was bound toward the Golden Gate. She would have been sinking before he could have thought of braving her. The Palgrave finally would carry him to where his enemy lived and traffiched; nomer or law rate would set

him down there, and then

With his bare, unwerponed hands be
planted to we at his very ance, and the
bread day was to look on. And after he
had beaten and trampled Bull Wilson, as
the crimp had beaten and trampled dyraand breaken area who are assent would
break weller, the arm with a had, be find
by by the Wesser also had world to
be brigged him.

The plan or the main

of consequences. The death of his enemy would be the end—that was all. The course of his passion was like the irresistible motion of one of his native glaciers. Of the law, of what might happen to himself, of the possibility of his own death or life, he held no comprehension. That accident or death, or any other agency, might remove the boardingbouse master from his vengeance never suggested itself.

After two months' delay in Valparaiso the Palgrave sailed a third time for her destination. Baffling winds stayed her passage through December; contrary gales beset her in January. It was on November second, nearly eight months out from the Mersey, that Olaf Greig, on the lookout at daybreak, sighted the Heads of San Francisco. And though they loomed up gray-browed and white-toothed under the onelaught of a westerly storm, he nevertheless strained his eyes to discover a small hout carrying a man with a tall, shiny hat; but no boat came off from the land to board the Palgrave. No small boat could have lived in the men that was practice.

lived in the sea that was running. Not until the ship lay anchored in front of the hillsprawled city did the crimps and their runners appear; and as he realized that Wilson was not among them something akin to doubt assailed his passion. It began to pass in a moment, however, for the second man to solicit him and offer a flask was a Wilson runner. Olaf wanted to ask him where Wilson was, but he dared not. He was fearful his purpose might be guessed. He remembered nearly all the runners, but the fact that they did not recognize him made him suspicious. Perhaps this was but a pretense on their part; so he got another sailor to make the inquiry, and when this man brought him word that Bull Wilson was not only alive but more prosperous than ever the Squarelead scuttled into the ship's dark sailroom and sat there alone for nearly ten minutes. As suddenly as he had

Wilson's runner, said:
"Ay go syone veet you."

Without a belonging he west over the rail into the Wilson Whitehall; and, swing him do this, the Palgrave's skipper and her young chief mate could not believe their eyes. They had a warm feeling for this Norse blond hand, who had attack by them and the ship with an incredible loyalty. They hailed him from the peop, beckened him hack, shouled warnings against the crimps; but his only answer was a dogged shake of the head.

disappeared from the deck he reappeared and, going up to

And the runner, fearful that this sailor might change his mind and demand to return to the ship, signaled the hoat puller to lay to his own the while he patted the giant familiarly on the back and whispered him ruby promises. The runner knew that he had accomplished a feat worthy of Bull Wilson himself—the pulling of this seaman out of a ship that owed him eight months' wages. He had done something to brag about in this season when the whaling fiset was paying a bonus of two hundred dollars a man but in the glow of his artistic pride—and let it not be forgotten there is urt in all things—he did not mark that this squarehead listened with no eagerness to his panderer' tongue. Silent, grim, his jaws clenched, his hands locking and unlocking where he held them between his cramper kness, his eyes half shut, his head nodding now and then Olaf sat until they reached the shore.

"Take it from me, sailor, yuh'll git a real welcome at di Bowhead," said the crimp, exhausted by Olaf's silence. As he spoke he was hustling his game into the covered wagon that awaited them at the boat landing. "Bull Wilson' de man tuh treat yuh right."

"Jes," assented Olaf, taking a seat on the bottom of the wagon and letting his legs hang over the tailboard. He underly, the runner, were the only passengers, but with decisive shake of the head he refused to ride beside him of the driver's seat. It was thus he had ridden the first time through Sap Francisco's crowded downtown streets to the Bowhead. He remembered how easily he had alighted a the wagon had backed up to the curb in front of the boarding house. He wanted to be in readiness to apring. This was one of the things he had thought about in the darknes of the Palgrave's suitroom.

The wagen had made half the distance from the vatefront toward the Bowhead when a messenger boy, with bundle, attempted to crawl up beside the man on the talheard, missed his footing and fell sprawling. Burt as spiteful, he picked up a stone and hurled it straight i Olaf. It clipped the Squarehead cruelly on the chin as drew blood.

"That rat hit yes, sailor?" called the driver, pollic up and looking back to where Olaf ant as motionless as rigarature Indian.

rigarstore Indian.

"Naw," he answered, his gaze balefully fixed on the laraming round a corner. Nothing must delay him not and, as he wished it, the driver whipped up his her again.

And five minutes afterward the wagon stopped sadden and began backing. It was in front of the Bowhead, as standing in the open door, with his silk hat area's I shortly cropped gray head and a larger diamond than evin his blue-striped shirthosom, was Bull Wilson. He wsmiling the stage smile with which he was wont to me that covered wagon when it returned from a ship. At t

vehicle's end squared with the curb advanced on it. In the second that put out his stage hand of welcome human avalanche, uttoring a wild, articulate cry, hunched itself at him

A quarter of an hour later—not men Bull Wilson was kneeling beside the conscious form of Olaf Greig where? on the floor of the room with the ke-ch door. At his side, watching what he c stood Olga, his wife, and Crocky, runner.

"If he'd eyer landed on me once!" dat," said Bull, shaking his head, "der have been a wake in de Bowhead ! night!"

He was holding up the imp ami which he had just driven a hypoderm morphine. It was bare to the about Below the elbow it was of the his bronze; above as white as Parian mar Michelangelo must have had sad model for his Moses. But it was in pacity of terrific strength, not its latiful formation, that made Bull Wirun a hand lovingly along its length

"Gee, what a pile driver!" he claimed in admiration, patting the round biceps. "Wid half a head an's like dese dis squarehead cud clean u Nigger an' Jeff an' a couple o' John-hin a night—make'm all look like the night." Take a pipe at dat chest!" pulled back the torn front of Olaf'ss." "It's a hunderd-gallon bar'!!" Twith a sigh, he dropped the arm standing up, added: "An' tah the's jest a plain nut!"

"What's gettin' me, though," en Crocky, "is, what set him nuts on y Bull? Sure yuh never seen him - n handled him?"

"Maybe I've handled him. 1 dm but I ____"

The woman interrupted:

"It's that young Norwegian you upan'shanghaied more'n a year agoone that wanted tuh go tuh th' mir

With the try at a Wood Board He Flore Himself at Rull Wilson

The National Pastime—Indoors and Out By CHARLES E. VAN LOAN

A BASEBALL fan would he all right if he could forget it once in a while. Whenever I meet one I'm reminded of that line in Huck Finn—"Harmless when not out of his head."

A fan is usually a good fellow; but he can't understand that the man who plays baseball for a living doesn't want to eat it, drink it, sleep it and talk it. I appose I've met thousands and thousands of fans, ranging all the way from true sports to the rednecks who want to lynch you for kickisg away a close game, and sot one of 'em would ever et me talk anything but saseball. I try to be polite to 'em, because it's better to have boosters than mockers sitting over beund third base; but the ther day I handed a fan i jolt that he'll remember

He was a nervous little arty with noseglasses and whiston which he weeded all the time with one hand.

The whiskers prejudiced me against him at first, because I've lever been able to figure out why a man should go to a lot d trouble to raise a crop of hair on his face when it grows wild on the top of his head. I met him on a street car.

"Excuse me," says he, edging up alongside, "but you're dike Purcell, aren't you? I've watched you play ball for o long that I feel as if I know you. The very first week ou joined the club I said to the hoys: 'There's a shortstop or you!' It's hard to fool me on a ballplayer. I can tell a

tar as far as I can see him."

Well, that was fair enough. I'm always willing to listen a say man who starts in by telling me how good I aroome of the boys pretend they don't like that sort of stuff;
ut, take it from me, they do. Whiskers handed me his
ard and it turned out that he was a statistician or somehing with an insurance company. Figures were his long
ad heavy suit; and, say, he certainly had 'em trainedfe could make 'em lie down, roll over, double up, and
arch in a column a mile long; but the best thing he did
as to string 'em out five points beyond the decimal.

He passed me a line of talk so full of figures that it bunded like a census report. Part of the time I was treading water and the rest of the time I was coming up for air. he best I could do was to look wise and ned my head nee in a while. He had a new system of figuring fielding rerages that would be a wonder if anybody besides inself could understand it. By and by he started in to smonstrate to me just when and where we won the World's ross from the Panthers. He was so darned sure about it at I had to break in on his argument.

"No," says I; "your dope is all out of line. We licked to Panthers the second week in September."

"Eh?" says the human multiplication table, digging into s whiskers as if he wanted to pull 'em out by the roots. But the World's Series was not played until October!"

"Right you are," I says; "but, even so, we licked the anthers in September. If you're ever in St. Louis go to a Transcontinental Hotel and you can see the table that is World's Series was won on. It's in Room Three-meteen."

"Table!" says he, rooting into his whiskers harder than

"Mahogany table," says I, "with burn legs and a arble top."

Then I got off the car and left him standing there, tensing a whiskers with both hands and trying to make up his ind which one of us was crazy. Unless he reads this he'll ever know that he was being tipped off to some inside

That World's Series was decided a month before it was ayed, and it was won on a marble-topped table in Room bree-nineteen at the Transcontinental Hotel, in St. ouis. Here is the story:

We needed another winning pitcher. I've never yet seen the ball club that wasn't in the same fix. Winning pitchers can't be bought—they must be developed. They can't be bought because the mints don't work nights. There isn't enough money in circulation to pay for one. If you think this is a joke sak to see the price tag on Matty or Walter Johnson.

We not only needed a winning pitcher but we had to have one or drop out of the first division. We had three good men in Jim Ainslee, Tod Shoiter and Mylee McNabb; but McNabb—the best one of the trio—was getting old and be could work but once a week. That left a gap in between, and to fill it we had only Ainslee, Shoiter and a flock of has been and never-was-ers.

We needed another good man the worst way; and it was up to Silvertip Jamieson, our manager, to rustle up one if he expected us to have a fighting chance for the pennant. He turned the ivory-hunters loose, with instructions to go the limit.

It is remarkable what a number of pitchers a few scouts can scare out of the tall timber between the Twilight League and Southwest Texas. A scout is a good deal like a detective—he thinks he's got to find something or the boss will accuse him of laying down on his job. If he can't find the real thing he digs up a counterfeit and gets credit for being busy.

Pitchers came rolling into the training camp by the carload, and some of 'em couldn't be trusted to pitch hay into a barn. There were tall ones and short ones, fat ones and thin ones, righthanders and lefthanders; and there was one foolish boy from Oklahoma who pitched with either hand and called himself The Amphibious Wonder.

Fatty Fitzgerald, our retired catcher, who does nothing now but coach young pitchers, gave the bunch the onceover and roured like a lion.

"I want a commission in lunary to sit on these scouts of ours," says Fitz. "The pitchers they have shipped us so far are worth about seven dollars a ton on the hoof."

One recruit pitcher reported late—a long-legged, lopsided Shanghai rooster of a kid named Doty—Maxwell Doty. I think one of the scouts caught him in a beartrap somewhere in Wyoming. He had all the earmarks of a farmer and he walked as though he was used to following a plow; but, suffering centipedes! How that kid could pitch!

He had an audience the first time he began to warm up and get the kinks out of his arm, and before he started for the shower room the jury was for him sixty ways. It seems that he had been working some all winter and his arm was in first-class shape.

His fast one was better than Jim Ainslee's best and had more of a hop to it; and he knew where his slow one was going when he cut it loose.

Give a man a good fast ball, a good slow one, and absolute control of 'em both, and there isn't much more to it - except, of course, the heart and the head. It's necessary for a pitcher to be game and he ought to be able to think every so often. We didn't know much about Doty's beart, and his head was shaped too much like a turkey egg to suit me; but he seemed to have everything else that he needed. After the third day with Doty old Fitz was going round with a broad grin on his face.

"If this fellow's nerve is all right," says Fitz, "we've got a winner sure. It don't make any difference whether he's a pinhead or not—the catchers can do the thinking for him. All they've got to do with that boy is to show him where they want him to put the ball. I can give him a sign, shove the mitt down and shut my eyes—bang! right into the cup every time. If

be can keep that control—even when he's scared—he'll be all right. A whole lot depends on the start he gets. Let him lick a few second-division ball clubs and get confidence, and after that you can shoot him at the tough ones. Yes, sir—he looks like a million dollars to me!"

It's queer about pitchers—you never know when a star is going to turn up or where he'll come from, though it's a safe bet that it will be some little whistling station that nobody ever heard of. The best pitchers in the world come from the small towns—very few of 'em are big-town boys. Every so often a kid is born with the ability to throw a stone where he wants it to go—the rest of it is training and practice, though all the training and practice in the world won't make a pitcher unless he's born to be one.

It took Doty some time to get acquainted with the gang. He was the most bushful chap I ever saw in the beginning; but the boys didn't josh him much. We all wanted him to have the best start possible. A pitcher is bound to go a lot stronger when he knows that the men behind him are his friends. If Doty had been an infielder, say, trying for somebody's job, it wouldn't have been made so easy for him; but he was a pitcher and we all knew we were going to need him. It makes a difference, you bet!

At the training camp Doty used to come up to my room and look on when we played poker. He would sit on the bed for hours and never say a word. Once we asked him whether he wanted to play, but he blushed and shook his head.

"I don't know enough about the game," says he; "but I'm learning. By and by I'll be able to give you boys a whirl."

That tipped us off that he was broke and wouldn't have any money until the season opened. It was a cinch he wouldn't have any too much then, because it's only the pitcher with a strong minor-league reputation who gets a chunk of coin out of his first season in the big league. Doty had no more reputation than a rabbit and nobody had ever heard of him. As a matter of fact he signed for two hundred dollars a month—and I'll bet he thought it was a lot of money.

11

WE OPENED the season away from home and Silvertip kept Doty on the bench for quite a while, waiting for something soft. In addition to that he wanted him to get used to the crowds and the noise. We all took turns shooting confidence into him, because we wanted him to win his first game. A licking right off the reel might have set him back a whole season. You have to figure all these angles with a green pitcher. There's nothing in the world like a good start.

When we got up against the Canaries—the weakesthitting team in the league—Silvertip turned Doty loose on 'em. "If he can't beat these lizards," says the boss, "he can't beat anybody! If he does beat 'em he'll feel just as good over it as if he'd trimmed a sure-enough ball dub."

Doty won his opening game all right enough: but, at that, there was some credit coming to us. We stepped up there in the first half of the first inning, before Doty even took the ball in his hand, and we whaled in four nice juicy runs—and that's the stuff that puts heart into a pitcher.

Pitching winning ball for us isn't like doing it for a weakhitting outfit, where a pitcher knows before he starts that
he's got to be fifty per cent better than the man he's up
against in order to get an even break. We wallop the ball
behind our pitchers, and when we start hitting we generally
go right down the line. Our twirlers walk into the box
with a certain amount of confidence. They know they're
going to have help in winning the game, and a run or two
by the other folks won't lick us.

We staked Doty to four aces, and the kid pitched like a veteran. The Caparies got him in the hole twice, but Monk Mundon, our first-string catcher, stendied him down with a little talk; and Doty braced up and pitched himself out of trouble in a way that was beautiful to see. The Camaries got only five hits off him, but they didn't even get foul tips when men were on the bases. Monk called for the fast one,

up round the neck, and Doty put it there a white streak under the chin. They didn't score on him and nine of 'em fanned. It was a happy bunch that went to the clubbouse after the game. It was a toss-up as to who was the most tickled—Silvertip, Futty Fitz-gerald or Doty binsself.

The kid said the hig lengue wasn't as tough as he had expected, and that was taking quite a lot of credit for licking a lot of cripples; but we let him get away with it. We told him that so long as his fast ball was working, shoulder-high and inside, all clubs would look alike to him. It annoys a latter quite considerable to have to pick a ball off his ear and hit it somewhere.

That was the beginning of Doty's winning streak—fifteen games in a row and nine of 'em shut-outs—and there's no telling how far he would have gone if we hadn't booted the eixteenth away behind him. He let the Game-cocks down with three hits in eleven innings, and we lost by a two-to-one score.

All the sporting writers in the country had bysteries trying to dope out how a raw kid, with about as much intelligence as a rabbit, could go on licking the best-hitting clube and the wisset heads in the league game after game. They haven't explained it yet; and the only point where they all agreed was that Doty didn't have any license to do it. Any fool could have told 'em that.

Some of 'em took to analyzing his pitching motion and printing photographs of the way he gripped the ball. If they could have found out where he was different from other pitchers they would have laid his winning streak to that peculiarity. I think they were all bark-

ing up the wrong tree.

I've studied Maxwell Dety just like a kid studies a new monkey in the zoo, and I believe the secret of his success as a pitcher isn't in his right arm at all, but in his number sizand-five-eighths head. He wins baseball games because he thinks he can. There's a whole lot in that. Take it from me, mental suggestion works on hallplayers just the same as on other folks. I'll grant you that Dety

can put a lot of stuff on a baseball; but so can Billy O'Day and Billy hasn't won a game this season. He's afraid be's going to be licked—and be is.

Take another instance of what mental suggestion will do for a ballplayer: Jack McShane, our pinch hitter, used to play regularly until his legs went bad. He never hit over .270 in his life. Silvertip asked for walvers on him, and while Jack was waiting on the bench the boss sent him up three times to hit in the pinches. Jack pocked of a double, a triple and a home run. He's getting four thousand dollars a season now just for going to the but two or three times a week—and he's worth it. He can't field a ball to save his neck; he can't outrun an applementan; and he's not even a good coacher, because he is mostly bone upstairs—but how he can helt 'em in the pinches!

There isn't a pitcher in the league who doesn't hate to see McShane come up out of the pit, dragging his big black bat behind him. Why! Because deep down in his gizzard Jack really believes that he's got something on the best pitcher that ever lived. He thinks that Matty himself isn't able to throw him a ball the can look at two and the can look at two and the can look at two and the system of the fence is a caution! His system.

worrying. Three tim-

Explain it? I can't

Doty is another Jack McShane. After he had licked three teams in a row he got the notion jammed crossways in his little teacup of a head that there wasn't a club in the league that rould beat him. He had it settled in his own mind that the batters were more afraid of him than he was of them, and that's a mighty useful idea for a pitcher to have. It keeps him from choking up when the bases are loaded, the rount is three and two, and the next one has to be over.

Call it confidence if you like; it's really a deeper and stronger feeing than that—more like what the out specialists call a fixed delusion. And what difference does it make whether it's a delusion or not, so long as it produces effects and wins ball games?

The thing that you're afraid of is the thing that will get you in the long run every time; and they say that where there's no fear there's no danger. I can't go so far as to indorse that last statement in full, but this much I do know: Doty isn't afraid of the most dangerous batter in the league. I've seen him stand up there, three and two on the Dutchman, and the bases loaded for bear, and laugh at Homm as he let the big one fly.

It's a queer proposition all round and I don't pretend to understand or explain it. I've looked at it from several

"It's Bard to Foot Me on a Rattologer. I can Tett a Jun as For at I can Jee Bim"

angles, and I've come to the conclusion that mental suggestion works better on a fellow with just room enough in his head for one idea at a time. I've tried it on reyself, but it didn't get me snything.

I can't hold a thought in the face of a lot of other notions when they come crowding in. I can go up there to the but with my mind all framed up for a hit, but I get to thinking about the amount of stuff the pitcher has got on the bull, and double plays and infield flies and blind umpires—and the original thought gots lost in the shuffle. In the end I have to dig my spiles into the ground, grit my teeth and pray for luck.

WHILE Doty was sinning half games he was losing out at the indeer national pastime. We got our first paychecks in Baston, and as soon as he could get his cashed Duty was right on the job, hunting up poker games.

Silvertip isn't so cranky as some managers. He knows that, rules or no rules, a certain amount of poker is sure to be played. He bars a table-stakes game, but with a decent limit and eleven o'clock as the deadline, be never says anything. I've heard that before he was married be paid better salaries than he does now—and got most of the money back in the poker games.

Duty went hunting for trouble and he found it. It wasn't exactly the sort of a game that an amateur would

have picked out. There are some fairly tight poker play with our clubs—sure-thing boys who can wait all right the cards to come, and bet 'em good and hard when t do arrive.

I've heard that I play 'em pretty close to the cl myself—but I've got to do it, with Walker, Owly Elliott Jib Smith in the game. Those birds won't spend a wichip to help out a short pair; a raise before the draw me aces-up or better, and when they begin tossing in the and bloss afterward you can put three kings back in deck without regretting it in the least.

This was the sort of a contest that Doty picked out himself. A lamb in a slaughter-house would have sto better chance. We sold him a ten-dollar stack and it lahim almost as long as his cigarette. The poor boob alv wanted to see the next three off the top of the deck; to make it worse, he had a notion that everybody wastr to bluff him. Then, when he got off loser, he went cr

There are a few baserunners in the league who will down from first on anything. We say they run hog Duty was a hogwild poker player. When he was lost which was pretty much all the time—he would draw cards to an ace, back-raise on a pair and call with any thing whatever. That system will break a Rockel.

for, though you may catch a man blu once in an evening, the rest of the time likely to have 'em.

Just to make it more binding Doty couget rid of the notion that poker is mluck anyway, and that it's the cards yofor in the draw that do the work. Ucertain conditions there may be an elemluck in the game, but in the long runplaying with a bunch of hardshells, icomes nearer being an airtight cinch.

Doty's first check lasted him two night then he had to horrow a ten-spot to tide over the next two weeks. When the scheck came it was the same thing over a but he lasted a little longer. One nighad a lucky streak and lost only about dollars. When the cleaning process waished he went to hed with his lowhanging, and we held a council of wwanted him barred from the game.

"Playing poker with Doty," says grand larceny from the person. If I is the money I wouldn't mind shakin penniss out of a kid's bank, or I might bag a blind man and empty his tin cup separating this poor loon from his pay is my notion of rotten sport. He ou be playing five-cent limit with the wo-

"Listen to him, boys!" says Elliott. sore because Doty paid five dollars to d a pair of treys and took in another trey pair of queens against his pat flush!"

Well, I don't pretend that I had for the circumstance. It makes a good player sere to have a sucker take a blin and hook up the winning hand when an with sense would have stayed out. The worst of a hogwild player. Sometimes I a thousand-to-one shot over on you—as himself on the back for using judgmen

We had quite an argument about we ought to do. Most of the boys though if Doty had the gambling fever the on was to let it run its course.

"He'd only carry his dough to an a game or lose it shooting craps. Myou're so stuck on getting rid of his dan't you tip it off to Doty on the q. t. that he's a

outclessed in this company?"

That was Walker's suggestion and I acted on it, the thanks a fellow usually gets for a disinterested Doty didn't say it in so many words, but it was plain that he thought we didn't want to give him a chance his two hundred back again.

He had fixed delusions about poker, too, one being that luck is bound to turn sometime. He exthat much to me.

That made me sore and I washed my hands of hir can't save a fool from his folly or build a moral ferwill keep habit within bounds. The born gambgamble, whether you provide tools for him or not. I had all the money I've seen won and lost with twof sugar, spotted as crap dice!

Doty became a regular contributor. Every pay walked right in, laid down his check, and walked riagain. For all the chance he had he might just have indersed it and mailed it to us to be split fiv-When he went broke he played on tick and ran taus, paying up every two weeks.

The poor kid didn't even hold out enough money a new summer suit. All the rest of us blossomed pin-striped flannels and Panama hats; but Doty w same old heavy thing he brought to the training r March—a double-breasted blue serge suit made by some bick tailor who probably hadn't seen a fashion card in ten

Because he always looked shabby and never spent a nickel. Doty got credit for being close-fisted. One of the hoys caught him going into a cheap-lunch joint for dinner, and after that he was called the miser on the sly. You see, when a ball club is on the road each man is allowed three dollars a day to eat on—and he's supposed to spend the three dollars for food. A penny-pincher will eat waffles and coffee for breakfast, a bowl of soup at noon, an Irlsh stew at night—and sink about two and a quarter to the day. That's what they figured Doty was doing; but I know now he was holding out that money to gamble on. Tod Sholter, who roomed with Doty on the road, had a hunch how things were going and made a few sarcastic cracks from time to time—but not when Silvertip was about. We've never had an informer on the payroll.

You'll recall there wasn't much of a battle in our league that year. It was more like a pursuit race. Doty was stacking up victories every time out, Ainslee, Sholter and McNabb were all going great guns, and the team was hitting hard and consistently. There are seasons when all the breaks in the luck are with one club, and this was our turn. In July we had such a long lead that it seemed as though nothing but a trainwreck could beat us; and naturally we began to count on the World's Series money as already in our pockets—twenty-five hundred dollars apiece at the owest estimate, and from that up to four thousand dollars.

It's funny how the spirit of extravagance hit every one of us about the same time. Shalter began talking about the piece of property he was going to buy out near Walla Walla, where his folks lived. Fatty Fitzgerald paid nine follars for a hat—marked down from fitteen because the cason was half over on straws. Silvertip gave his wife a pair of diamond earrings on her birthday. My wife ordered a mahogany sideboard for the flat, and I loaded up with dother and things.

Thinking about that soft money coming to us in October ad unsettled our notions of economy—we were spending t in advance.

The poker game got a little steeper and once in a while we played table-stakes. Doty's I Q U's got bigger. The

"Oh, well," says some fool at the table, "that's all right, od. Charge up the difference against your split of the World's Series."

"Is—is there any objection to that?" asks Doty, looking.
from one to the other of us.

I wanted to object; but I remembered how he'd acted selore and I kept my mouth shut. It didn't seem right to me o let the boy run up a tab against money that he only hoped o get and which a switch in the luck could beat us out of. "No objections?" says Doty. "All right, boys! Put me on the slate for a couple of stacks and I'm playing fifty behind 'em. I feel lucky this evening."

IV

WE WERE at home the last week in July and the first half of August. When the team isn't on the road I'm as quiet a married man as anybody and I don't play much poker. In the first place, my wife won't stand for it. In the second place, if I do play she finds it out and asks for the winnings. That sort of thing makes a losing session come high.

While we were at home I lost track of the paker bunch, but I understood the game had been running three or four nights a week, with the roof for the limit and Doty slipping his paper to everybody. I had a couple of his I O U's myself—one for fifty and one for seventy-five; and, as it turned out, I didn't have a chance to get any more.

My wife, still thinking about that soft October money, invited horself to go West on the last trip of the season. I'm not what you'd call a seasoned and hardened married man, but I've learned some things in two years—and one of 'em is that when Besa wants to do anything I save time and trouble by saying Yes right off the reel. I knew her being with me meant no poker and, to tell the truth, I wasn't sorry. I was a winner on the season and satisfied to keep that way.

Our first stop was with the Canaries—still at the tailend of the lengue—and we figured to wallop 'em four straight and pass on without drawing a long breath. Doty had had their number all the season, so the boss sent him in to pitch the opener.

Before the game I overheard stratches of a talk between Duty and Owly in the clubbonse. Owly was arguing and Duty seemed to be begging.

"I'm only telling you what the boys think," says Owly.
"But—it ain't fair!" says Doty. "It ain't fair! Can't
you see it don't leave me a chance? And look how deep—"

After Doty had left the dressing room I asked Owly what was doing.

"We've burned him from the game," says Owly. "Confound it, we had to do it to keep him from owing us a million dollars!"

"Is he hooked in deep?"

"Deep enough! I wish this I-O-U thing had never been started."

I knew then that if those hardshells were getting conscience stricken they must have the kid gaffed for further orders.

Well, sir, there wasn't but just room enough for his troubles in Doty's little peanut of a head that afternoon. Whatever the thought was that he was holding crossways in his beliry, it certainly didn't have anything to do with

pitching winning baseball. The kiddidn't have a thing in the world and he couldn't locate the plate with what he did have. He pitched like a sandlotter, which means that he was even worse than a busher. Silvertip yanked him in the sixth; but by that time the game was gone.

All good pitchers have had days now and then. I didn't really begin to corry about Doty until the fourth day, when the boss sent him back to close the series and fight for an even break. The Conuries had licked tas two out of three and were. twittering about it. Between his garnes the kid. had been mooning round the botel, smoking cigarettes and looking as though he'd lost his last friend. He tried to persuade the poker players to let him have a final whirl, but they stood firm.

His second game against the Canaries was even worse than his first. His control was gone and so was his nerve. He showed that by walking out of the box to talk with Monk Mundon every time he got in the hole. The real Doty would have laughed at those weak batters and fed 'em

A Long-Legged, Lopelded Thoughoi Rosster of a Kid Named Bary

the fast one between the ear and the shoulder. Once more Silvertip palled him out; and the Canary coachers told Doty that he was about through and that they knew when he broke in that he was too lucky to last.

"I dunne what's the matter with me," says the kid as he started for the clubhouse. "I guess I'm all in."

"Forget that!" growls Silvertip. "You'll be all right when we get to Chicago. There's a team you can beat by just walking into the diamond."

But in Chicago they knocked Doty out of the box in the second inning—and you can bet that gave us something to think about. I don't know of anything that can worry a ball club like having the winning pitcher go wrong; and we had something special to worry about.

With Doty in shape for the World's Series, we figured on a cinch with the Panthers. Those fellows have always been suckers for a righthander with a good fast bull. With Doty out of it the

tattle would be a desperate one, with the odds the other way. It meant a matter of twelve hundred or fifteen hundred dollars to every man on the team—the difference between winning and losing the big series.

The newspapers were full of Doty's collapse, as they called it. Three games in a row he'd been taken out or knocked out. Some of the critics explained just how it happened and what made him go to pieces. It's queer how a newspaper man who can't catch a foul tip in a clother banket can pick a real player apart joint by joint and find out exactly what ails him!

Silvertip was as much worried as anybody and as puzsied. I suppose the real answer never occurred to him certainly he wouldn't have believed that five or six men who should have known better had made the kid a nervous wreck by winning a big chunk of his World's Series money in advance.

This was the situation when we reached St. Louis and rulled over to the old Transcontinental Hotel. We won the opening game with McNahb in the box, and as I was leaving the rlubbouse Tod Sholter touched me on the arm.

"Mike," says he, "Max Doty owes you some money. Come up to my room as soon as you get to the hotel. I want to see you."

"What business is it of yours?" says I. "Where do you come in on this?"

"It ain't where I come in—it's where the kid is going to come out that counts. If you don't want to see me you can see Silvertip about it."

Well, I didn't want to see Silvertip. I knew what he'd say; and, besides, I'd been feeling rotten enough about my part in the Doty business. When I opened the door of Tod's room, Walker, Jib Smith and Owly Elliott were sitting on the bed, and Hetherington and Dowling were over in one corner.

"Hello!" I says. "Is this a mass meeting of Doty's creditors?"

"Just that, exactly," says Tod. "Sit down."

Sholter is one of those serious-minded, slow-talking country fellows. Without raising his voice once or giving anybody a chance to interrupt him, he told his story.

"Boys," says he, "I've known right along that there was something doing with Doty, but I never knew how serious it was until the other night in Chicago. I went upstairs late and found Doty crying over a lot of torn paper on the writing desk. He didn't want to tell me what was the matter, but I made him. It took me two hours to get at the truth.

"That kid has got a girl out in Nebraska somewhere it doesn't seem possible, but he has—and she expects to marry him after the World's Series is over. He'd been trying to write her a letter to say that there wouldn't be any wedding—first, because he wouldn't have enough money; and second, because he was all in as a pitcher.

"He talked a lot of nonsense about his ruined life and how he'd be better off dead and all that sort of thing. You know what notions a kid gets sometimes. . . . I'm not going

Where Das Thousand Cuests Diagd With Prints Henry of Prussia

The steward of the Van-Waldorbilt took down a bulging letter file. It held several hundred sheets of thin paper, each bearing the type-

written menu of a dinner given at that hotel during the past winter. "There's the story for the season," he said; "but it isn't finished, because the season isn't over yet. Some of these were small private dinners of a dozen plates, but most of them represent public banquets of a hundred plates and upward. Half a dozen hotels in New York now do as large a business as ourselves.

"Not so long ago," the steward added, "a dinner for seven or eight hundred guests was an event with us—a great hig banquet. We had maybe two or three of that magnitude in the winter and looked forward to them with anxiety. The chef's department and my own had busy days ahead, and when the night finally came the boss stayed down until everything was safely over. Our mechanical equipment for handling the food still needed improvements, and the human organization to handle the equipment had to be built up. Everything was excitement and tension. Nobody knew what might happen. Sossike made in taking the flashlight picture might mysteriously disappear in the hotel's ventilating system, to energe later in a guest's room and cause trouble. The kitchen force might alip up or the waiters fall down.

"Nowadays, however, we serve a dinner of from one thousand to fifteen hundred plates almost as a matter of routine; and, though we now call fifteen hundred people a big banquet, everything goes off on a smooth schedule."

New York's dinner industry is a hig one. No accurate statistics have ever been compiled to show its magnitude, but there are some interesting estimates.

Just after the guests sit down to a banquet, and while the tables are still in nice order, a flashlight photograph is taken. One concern in New York makes these pictures at all the large hotels, and the manager estimated that seven bundred and eighty thousand diners had been photographed by his concern during the season of 1913-14.

Banquets for Fifteen Hundred

THE New York public-dinner season lasts from October to April, about six months; though, of course, banquets are being given throughout the year. One of the largest hotels serves no average of three banquets each week night during the season, or a total of about five bundred. There will be an average of one hundred and lifty guests at each dinner, or average of one hundred and lifty guests at each dinner, or average of one hundred and lifty guests at each dinner, or average of one hundred and lifty guests at each dinner, or average of one hundred and lifty guests at each dinner, and nearly half a million diner, and the business in the smaller botels and restaurants will probably being the grand total up in a million. At an outlay of ten dellars a plate, therefore, there is no expenditure of ten million dellars—if exact figures could be gathered probably it would be much more.

The disser industry is constantly growing, for discoupley a vital cart in the business, social and political interests of the town. All the industries have arganized to promote their interests.

New York is a favorite city for convention, and and movements of one sire of another and the ingo invariably wind up with a date. There is

By John Mappelbeck

of professional men, college graduates and fraternities, natives of the different states and loreign countries, and many other kinds of organizations that make a practice of assembling at least once a year for a dinner. Local organizations dine as often as once a month in the winter; business houses bring their executives and salesmen together for conferences and dinners; truffic men and others whose work keeps them on the move find periodical dinners a means for keeping in touch with each other.

If a personage comes to town a public dinner is the best way of according him recognition, and also enables plain John Smith to see and hear the animals for from five to ten dollars a plate. Affairs are started and finished with public dinners, and important announcements are made; and when there is no other excuse for dining. New York will get together on an anniversary or a birthday—and so the industry thrives and expands.

A dinner for fifteen hundred guests is considered a big one, and about New York's limit in size; for if it is given at one of the botols prominent in the industry the great ballroom must be used and some of the diners must be placed in the gallery. Fifteen hundred persons is about as large a number as can hear the speakers comfortably, because the ancience is scattered round small tables; so the size of a public dinner tends to be limited by that condition. Moreover, it takes a strong organization, like one of the great college alumni associations, to bring out such a gathering, or the attraction of a very notable guest of honor.

The hig dinner starts when the hotel receives an order for approximately so many guests on a given date. First, the prim of a plate is settled. At the prominent hotels this will not be less than four dollars, without wine. From that it may range upward to any figure. Theoretically the only limit is the sky, but practically the charge for a large affair is seldom more than ten dollars; for guests pay for their own dinners, or small parties are made up, with one man acting as host at a table—and so the expense must be kept within reason.

Higher prices prevail where one man gives a small dinner for some purpose. The motive for spending is then entirely different, and the sourcease may cont more than plain John Smith's dinner at a large public affair. The fact often plans months about, and the sourceast may be a privately printed book omytaining portraits and information issuring on the occasion, or specially designed articles of plate or jewelry.

Probably the most inturious public dinners given in New York are the sof the shariff spary panels, which are made up of new procedured in the city's life, who are fixed whenever they tall to serve when drawn for duty on the shariff a juriou. These firms are specifing dinners, at which the control of the control of the control of the their

For the clad and diagrees coming them to exemple calls for a submang them will be the first a factor, or all the factors and credi-

from abroad. For every dinner the chef likes serve something scarce or fine. Boats have because to catch a particular kind of fish, and hunte to get strange game for hig dinners. Those specialties not rally take some time. New York's cold-storage reserv afford many unusual food products, such as Egyptian quand kangaroe talls, and the canning industry new provid novelties like palm hearts; but when the chef is asked serve reindeer steaks or elephant's foot he appreciates it be is told a few days in advance.

It is a common belief that all the food for a big distribute the cooked many hours before it is eaten. That in have been necessary in the early days of the distributery, but it is not today.

Supplies are bought by the steward's department a turned over to the chef's men the day before the dine so that all the raw materials may be in hand; but actual cooking is done mainly while guests are at tables, and most of the dishes are handled just as the fifteen hundred patrons had suddenly walked in from street, sat down, looked over the menu, and given the order to the waiter, with directions to burry it up.

Making the Final Count

THE soup requires longer cooking than anything claration that is started on the morning of the day set for dinner. Grapefruit can be cut and oysters opened a hours shead; so that is denound they are placed in the hot cold-storage rooms, to be ready when wanted. The I reasts and broiled meats, however, are cooked on a solute governed by the time the dinner starts, and the stables are cooked with them. As the waiters serve schedule, the flashlight picture is taken on achedule; even the tables are set, the decorations arranged and music played on schedule. There is really but one clem of uncertainty about a big dinner—the guests. How maked there be, and at what time shall they sit down?

Half past six in the evening is the time and all rest tables set, first course prepared for serving, orchestra band, flashlight apparatus in place, the waiters in botel, who have had their own supper. It is highly imtant to feed waiters well before they go to work; other they would est half the dinner themselves.

Men in evening dothes stroll in through different of ways of the hotel, check hats and overcoats, and awkwardly in the anteroom. Lights and mirrors do clawhammer coats offer no refuge for hands, and they cautiously round in the crowd until friends are acquaintances made or an attendant puts them at with a rocktail. The number grows, and all the with count is being kept and word sent down to the kitch

"Now they're coming in fast—eight hundred: a t sand; fourteen bundred. There will be fourteen bun and ninety in the final count. Now they are going in they are sitting down."

First cames the flashlight picture, taken just as guests are seated, an admirable product in itself, mad a highly developed separate industry. The cameras have been designed especially for this purpose. The made with self-locusing features that give almost flexibility of a snapshot camera, and in compact for

aluminum, so that they may be carried about easily. The flashlight powder has been perfected for this work and is set off in fireproof cloth bags, which retain all the

At seven-fifteen the photographer says, "All ready!" and fires his shot. In an emergency he could quickly make another exposure. Three minutes later he is in a taxicab with the camera, and on his way to the darkroom maintained in the heart of the Dinner Belt for convenience. Ten minutes after exposure the plate is developed, in tuelve minutes fixed; and after five minutes' washing it is put into wood alcohol and quickly dried before a hotair blast. Twenty minutes after exposure it is ready to print, and three minutes after that a proof is taken and in the hypo.

Two minutes' immersion serves to fix it so it will last for a lew days, though from ten to fifteen minutes are needed for a durable print; and not much more than half an hour ater this proof is being circulated round the dinner tables and orders taken for copies. Sales of pictures must be made while the interest of the dinner is fresh, and so the photographer delivers all pictures the next day. If the linner happens to be one of great news interest an enlargement of the speakers' table will be made for the newspapers and perhaps be started running on the presses before the zinner ends.

While the flashlight is being made, waiters are lined up satside with the grapefruit and enter on signal. About that time the fish goes on the fire, and then come oysters: the soup is sent up from the kitchens piping hot, and other courses are cooked on a schedule governed by the progress of the dinner. Even roast fowl will not go into the overse until the meal is well under way, and everything s done to a nice turn, dispatched from kitchen to table in he shortest possible time, and kept warm on big trucks, with covers that protect the food. These trucks are cheeled bodily into the ovens and heated, and then go frect to service elevators which land them on the banquet loor in a few seconds.

The serving room is as busy as a factory. Usually this is he anteroom where, twenty minutes before, guests were etting acquainted. The moment they enter the banquet nom there is a quick shift of somery. Rugs come up, palms and furniture disappear, trestles are laid and converted into long serving tables, and a force of kitchen men in white pops up from below to deliver the food to the waiters. A great deal of space is needed, for while waiters are serving one course it is necessary to spread long lines of trays for the next, so that they can get everything simultaneously and take the food to the tables hot from the fire.

When the waiter battalion marches into this factory annex for the next course it is a good deal like the charge of the Light Brigade at Balaklava, for everything is done on signal, by number, together. The black-coated waiters pour out of the dining room in a long column of twos, bringing armfuls of dishes, which are set down, seized and whisked off, while they pour back with fresh plates of hot

Each waiter serves eight guests, but can usually carry food for only four; so the brigade makes two complete assaults on the trestles for each course, and there is a tremendous rattle of china and silver, prodigious bustle and joking, very apt to get into the blood of anybody who likes to be where things are going on fast in a large way. Probably that is why banquet walters are regular war horses at the game, working night after night through the season. going from one hotel to another, and piecing out earnings by serving at downtown restaurants during the noon rush.

To serve a dinner of fifteen hundred places requires a force of more than six hundred workers. There will be two hundred table waiters; a hundred wine waiters; a service force of ninety men to portion out food as it comes up from the kitchens; a staff of one hundred twenty-five cooks in the rhef's department; and seventy-five helpers under the steward, who cut butter, prepare vegetables, fruit, nuts and other aundries, wash dishes and carry on odd jobs. This makes a total of five hundred ninety workers directly engaged and does not include controom helpers, messengers, supervision, bookkeeping and overhead generally.

The upstairs work on a big dinner starts about two o'clock in the afternoon. At that hour one waiter in every ten reports for duty, sets up the tables, lays them and makes preparations. The others arrive in the evening, have their suppers, make a few final touches to the tables and are assigned to places.

It was once difficult to get the large number of trained waiters needed for a dinner of more than a thousand places, and extra men were recruited; but nowadays the seasoned banquet waiter is available in greater numbers and understands his trade so well that a dinner of the largest size goes off smoothly. His service is skillful. He takes his place almost automatically, according to the scheme laid out for the occasion, and performs on signal many little tasks not perceived by guests.

When the flashlight man was ready, for instance, there used to be a hitch while word was passed round to remove the number cards on the tables, which hide faces and spoil the pirture; but now a signal is given and each waiter lifts his numbers, retires out of focus and replaces the cards when the flash is over.

The table waiter works about four or five hours in serving a hig diener and is paid pretty good wages-two dollars and a half a night in the leading New York hotels, or three dollars if he comes to work in the afternoon. As soon as cigars are lighted and the speaking begins he is free to go home, for the regular hotel force clears the tables after the guests leave. As he goes out the timekeeper pays him for the night's work, because in six nights he may serve dinners at six different places.

A big dinner calls for an interesting investment in tools and equipment. For a ten-course affair, served to fifteen hundred guests, there will be needed about six thousand knives, six thousand spoons, eight thousand forks, fifteen thousand plates, twelve thousand glasses, two hundred tablecloths, fifteen hundred napkins, and a miscellany of other tableware. The investment in tableware alone amounts to several times the whole charge for the dinner.

As an illustration, take the silver-plated trays used by walters. Two hundred waiters serving a large dinner will need more than seven hundred trays, for while they are carrying in one course another is being spread on extra trays to facilitate service, and odd trays are necessary for incidentals. These trays cost ten dollars apiece. So plain John Smith, who pays five dollars for his banquet, must be served from ten dollars' worth of tray.

Another costly item is chairs. Hotel chairs cost anywhere from ten dollars to forty dollars apiece, and in a big establishment a thousand chairs are as nothing. So the seating for a hig dinner represents an investment of from fifteen to twenty-five thousand dollars; and the money

(Concluded on Page 27)

THE STORY OF A HARLEQUIN

TIS as natural for me to be a harlequin as it is for a duck to follow the tendencies of ts aquatic ancestors. It was ominme. My father, George W. Smith, was the greatest urlequin of his day-today I on the only harlequin in the world. He was taught by Fanny issier and the great Sulvianroperly spelled Sullivanshom he succeeded. At the Frand Grignol, in Paris, may w seen a picture of George W. emith and Fanny Elssler dancng and, as a matter of fact, I ave a slipper - the first toelacking slipper - worn by that sdy when she danced with my

My father was born in the lity of Brotherly Love, otherrise called Philadelphia, and hat dancing agreed with him pretty well established by he fact that he lived to be dnety-seven; and he was eaching and producing as a swiness and attending balls nd parties for the sheer fun of until a few days before he lled. Naturally he was in great emand. He danced with all he premier dancers who visited merica in his time, even as I ave danced with all the great lancers who have come to this ountry in my time.

wer went through a thorough school of dancing-that is, arlequin dancing, which is the most artistic, the most lifficult, and withal the most dangerous of the terpsichocan arts. You will wonder at the word dangerous used in panection with dancing. But more of that later on. My ather firmly believed in the European system-a system

By JOSEPH C. SMITH

Chinese Maxine -Impravised by Jaseph C. Smith and Rite Juliest, Lending Woman With 1900 Years Ago

My father and myself were the only two Americans who now gradually being abandoned—that of handing an art down from father to son, and so gave me the real French schooling, with the benefit of such inventions and eliminations as he had made.

He was better than any school-teacher I have ever known, both in dancing and in speaking, and a self-educated man at that. To illustrate: When he was the harlequin with

the great Revelles, and I was only a little boy, he wanted to teach me to be a harlequin; but I did not want to be one-doing all those quick movements of head and body and having everybody laughing at me, I urged.

My father would listen to my protestations and then, just to throw me off my guard, would say: "Oh, well; I must rest a while now."

Then he would sit down and yawn and stretch his body, and do all the funny little movements of the harlequin. That was his way of amusing me, of engaging my interest, of making me like a thing I did not like-in brief, of teaching me to be a harlequin without my knowing it.

When my father was dead and gone, and they wanted some one to play the barlequin, they came to me. I was twenty-two years old; and, though I had never done any little boy, yet I had never forgetten a single detail of what he had taught me, and was able to go on and do the work.

Once he tried to teach me to do a double turn in the air. I do not mean a double somersault, which is comparatively

easy, but springing erect into the air and whirling like a top. I kept falling all the time and at last rebelled.

"It can't be done!" I cried.

"Can't, eh?" said he. "Come to the show with me tonight!

When we got there he pointed out an Italian who was doing a one-and-three-quarters turn.

"What one man can do another man can do," he said, which was his way of exciting the spirit of rivalry in me.

I was only a boy at the time, but I went to the theater next morning, practiced a bit, and actually, did a triple turn before my father got there. And I can do a triple turn today, though I am feath were old.

today, though I am forty years old.

My father was not only a great dancer but a great producer of pantomime. Among other famous productions be put on The Black Crook and during the run of the piece danced with seven premier dancers at each performance, which was some work, believe me! Among these dancers were De Rosa, Diana and Bon Fonti. Bon Fonti is now teaching dancing in New York at eighty years of age, which fact also tends to refute the idea that dancers die young because of excessive heart tax and the like.

That my father was a strict disciplinarian was shown by his treatment of the great dancer, Countess Lola Montez, whom he taught and brought out. That lady had a very uncertain temper and used to indulge her penchant for horsewhipping everybody she did not like; but my father would not stand any of her nonsense. One day at rehearsal she had just begun one of her violent outbursts when he

grabbed her, bent her over his knee, and soundly spanked her in the presence of the whole company.

My father never intended me for the stage, but when I was a little boy I was very delicate and he started to train me for my health. He first put me on a horse; in fact I learned to ride before I learned to walk. He used to hold me in position in order that I might learn the horse's motions. So I got to be quite a rider; and when I was ten years old I was the first one to leap from the ground to a horse's back and stay on—a horse fifteen hands high. It was a running jump—a dash across the ring and then into the air; and when I struck the horse's back I stayed there. I never touched him with my hand. As a matter of fact, it was due to this training that I was at one time the greatest high jumper in the world.

Circus riding is very difficult and one should begin early to learn. There are few child circus riders today. The training is too severe; it is considered crueity. Today they put a strap round the youngster's waist and he is supported by a pole that goes round like the arm of a derrick as the horse gallops. In my day the child had to stand on the horse's back without any support, and every time he fell off he got cut with a long whip, which sometimes drew blood. Many a time I have fallen off a horse's back and hung on to his tall, his hind legs kicking me, and then struggled up on to his back again rather than touch the ground and get a cut frem the awful whip.

Years of Fencing and Dancing

EVEN when I was a little chap of five, before I had become a full-flestged circus rider, my life was exceedingly strenuous. I used to get up at seven o'clock and at eight was riding a horse. Then I went to school from nine until two. In the afternoon when I came home I put on the gloves and sparred. Then I would take the swords, the combat, the quarterstaff, the single-

stick, until I was able to handle every kind of sword known.

I kept up this sort of thing for ten years before my father would admit that I amounted to anything at all.

When I was fourteen years of age, and was just about finishing school, an Italian dancer came to this country and wanted a dancer to go to Europe in a hurry. He took me to Italy with him and I was made premier male dancer over ten Italian dancers at La Scala, in Milan. There was a young woman there who got so jealous of what this young foreigner could do—I had grown to be a very busky chap—that when I used to hold her up in the air as we danced she would shake herself and wriggle and try to fall, so that I should be blamed for it. And, as Kipling would say, "I learned about women from her."

While I was still very young I was engaged at a theater in New Orleans where there was a skating built—all Frenchmen—who performed on roller skates. One day one of these performers was injured and I was asked whether I would help out the following night. I promised to do so, though I had never had a skate on my foot. The next morning I went to the rink and practiced for an hour or so, during which time I got a few pretty savage bumps: but got on to the way of the skates all right. The rehearsal was at ten o'clock.

"Have you ever had akates on before?" said the principal Frenchman.

"No," said I. "Give me a pair and let's see what I can do."

I put them on and fastened them while the Frenchmen stood round and laughed.

"Watch the Yank break his neck!" they said.

The Yank did not break his neck, however, Instead, he took a whirl round, and that night he went on and made a

big hit. It would have been quite impossible for a man who had not had my early gymnastic training to have done that.

The harlequin originated in Italy. His art is unique. It is the finesse of pantomime. The eight characters that are in all plays start from the harlequin. He is, for instance, the leading man and the juvenile. Then comes Pantaloon, the grouchy old father; then the clown, who is the comedian. Columbine is the souhrette, the prima donna, or whatever else she may be; and the fairy queen is the peacemaker in the family. The fop is the dode of today, the English fool. He is always the butt-in, the one father likes best for the daughter because he is an aristocrat; but he has no money. He is always coming in and getting beaten and batted about; they all go up and hit him with a stick, or something like that. The old witch is the mischiefmaker, who comes in and upsets things; and the devil is the villain.

The work of the harlequin is dancing, facial expression, pantomime. He never speaks. His every pose or movement of the head, hand or foot has a meaning of its own. These various movements are called animations. When his

Finale of the Musice as Ganced on the Stage. When Donced in a Drawing Room the Man Ruises His Furiner Only a Few Inches From the Finer

mask is down over his eyes he is invisible; when it is up he is visible. The old nursery rhyme expresses it best:

> Take this mask; when over your eyes No one can see you if he tries.

The harlequin is the sleight-of-hand man, the arch magician. He taps a enalscuttle and lo! it changes into a wagon or whatnut; he taps the wall and a bed comes out; he taps the bed and it disappears. He pulls the rose of Pantaloon and coins tinkle out, much to that gentleman's amazement and the delight of the children out in front. He is the marvel of wonder-workers. He picks up a quarter and it becomes half a dollar right before your eyes.

His dress is no less brilliant than his accomplishments. The colors on it represent the seven different passions. Black is death; if any one must die the harlequin points to this particular spot. White is purity; blue is truth; green is envy; yellow is jealousy; and red is love or passion. These colors in themselves give the harlequin quite a dumb vocabulary, and taken in combination they afford him an unlimited means of expression.

To make this wonderful dress was no mean job in the old days. They used to put tights on the artist and then sew each putch on separately. My father used to stand for hours while my mother thus built him up, patch by patch; but nowadays they weave the colors in, which makes the dress very expensive indeed. Also, the woven suits are very heavy and difficult to jump about in.

The most difficult thing in a harlequin dance is whirling in the air with the feet off the ground. Compared to this a double somersault is easy. The acrobat who does the latter makes a run and leaps many feet into the air and lands several yards distant. Again, he turns in the same direction which he is going, thus availing himself of the momenta acquired as he leaps. But the harlequin jumps straight a into the air and then turns quickly at right angles. To be sure, he is able to gain direction and some momentum below he leaves the ground; but he must maintain the momentum by contortive work in the air, which is about the nearest be lifting oneself by one's bootstraps of anything I know

A double turn in the air is very difficult; but, as | sai | I can do a triple turn, and I am forty years old. I do not do this often. It is done so fast the audience does not relize it and does not applaud me when I do it; but if I do a double turn they can follow it and they always round applaud. So what is the use? Another thing, I can pay my feet eight times in the air; but when I do, the actual so fast the audience cannot follow me and does not applaud. A six-pass, however, they will applaud every time. So tarrely do the eight-pass except when Harry Disey, and appreciates it, is my audience. I never notice the star audience.

In a pirouette you always look at a light or some one object, and it is your head that does the pirouetting-me

is, you hold the light with your eyes as log a possible while your body is whirling, then boar your head round quickly and catch the less again. This turning of the head gives mousture to the body and, if done quickly enough has to appearance of wringing one's own neck, Yes start in the second position—that is, with its leg out straight-and hop round until you pe perfect balance: then you bring in you be and start with your head. You have get to be absolutely rigid. You dare not move from the position after you have started. If you my your chest an inch you will fall backward. Whe I am in good condition I can pirouette to skyfour bars of music, probably one hundred us twenty times.

The Art of Pirouetting

THE Frenchman and the Italian begin sixty
and work up to top speed in pirouetting, see
ping instantaneously at the very height of the
velocity they have attained; but the Russia
does not know how to turn a pirouette. He surwith a fast spin and turns until he dies down.

The dangers a harlequin encounters are such as the general public would never dream of Ke have heard of men falling and breaking thering or ribs on highly polished ballroom floors. The harlequis must guard not only against slopes but against many other dangers. For instance in piracetting, though he stops with elecsuddenness, be must stand motionless. It was never do for him to go reeling about the moafter he ceased to pirouette, seeking to repair balance. The effect and beauty of the morment would be lost. It would be grotesque T get this absolute control and balance is the work of years. I have known only two men beide myself who could do a triple turn in the ar, and one of them broke his neck at it at last,

The harlequin wearing soft-soled shoes always has the terrible dread of getting a tack in history. Once I had just taken my first step in the danger

when I landed on the point of one of those little devil's datgers and did fourteen jumps into the air before I could stap driving the deadly thing farther and farther into the hall of my foot with each jump. My friends had to take pinns and pull the tack out of the bone.

In a dance like this, which requires the finest balance all adjustment in every way, it is necessary to have an absolutely secure and reliable floor from which to start. The public does not realize the difficulty and danger I am assolutely be a from lack of this prime requisite. Where I am dancing be they put on three floor cloths, one on top of the other, inche of five minutes, and when I jump from the staircase as land on these I slide. I cannot get any purchase on the with which to leap into the air as I should from a bare floor but even when dancing on a bare floor you are set to encounter a bad board, one that is not absolutely seem. The dancer, however, can detect that sort of thing the instant he touches it and is careful to avoid it thereals.

Changing from theater to theater has its disadvanture. I may dance one week on a perfectly flat stage and proceed to the same and proceed to the same and the sam

The least thing will take your mind off your work, put the shifting of a featherweight will throw you off your later when you are in the air. For instance, the lights you and the scene is changed; then the lights come of you have to begin your movement before your sight adjusted to the new glare. Or some slight change in the

neation of things will throw you off. One night, as I made hat leap off the stairs, one of the fellows happened to have he mag a little too far front, which, trifling though it seems, sould have thrown me out had not my brain, trained to nect just such emergencies, automatically adjusted itself o the unexpected conditions and saved me.

There is also danger of the rope or wire, by which the urlequin is sometimes suspended or swung in doing his urious stunts, giving way. A wire when straight may tund a great strain, but if it be bent or kinked it is greatly

reskened and becomes very treacherous.

Once I was playing in Denver, in The Statue Blanche, was the harlequin and was supposed to steal Columbine at run away with her. The crowd pursued; a balloon arise by with a trapeze attached, which I grabbed as the stated hag swung into the air and was carried away, with he girl under my arm. As a matter of fact, the girl was ally a dummy. I knew that I must rise forty-five feet to the air before I was swung into the wing. I had got input that high when I heard the wire going Pin-n-n-g! [1-n-n-n-g!] You always have warning of a breaking wire, a it stretches it makes that little pin-n-n-g—such a sound a you would make by touching one of the wires of a piano ith the point of a feather very, very lightly, but instantly aight by the ever-listening, apprehensive ear of the an who has to do that kind of stunt.

I knew that I must act at once. It would never do adopt feet first and drive my legs up into my body. I dropped the dummy figure, doubled up round the ar, bent my head forward and clasped my hands round by kness—in short, made myself into a ball; and as as wire broke I dropped to the stage forty feet below, riking on my thigh. I cannot tell you how hard I ruck, but instantly my whole body began to turn black. bey put me into an alcohol bath in the star dressing on and I was back on the stage within two days.

The Dangers of the Star Trap

Of ALL dangers that threaten the hariequin, however, that of the star trap is the most terrifying. The star ap is an octagon-shaped contrivance let into the stage, has eight points of half-inch oak and is designed to rate the illusion that the harlequin is bursting through a very surface of the earth, so to speak—an illusion at was impaired by the old square trap, which every-say in the balcony and boxes could see.

When the harlequin says Go! the men underneath ill the belts, the weights are released, and he is shot to the air. His head hits the points of the octagon, liftg them; and, once he has passed, these immediately il back into place. This is the most dangerous trap the world. If anything should go wrong and it should be slowly you might in your descent strike this hale of the descending oak points would run you through the spears of a borde of savages. There is one way avoiding this danger. If you see that you are comg down straight on the trap spread your feet and they are each side of it. Or something may happen so

Mr. and Mrs. Smith Turkey Tretting

that you are shot only halfway through the trap, in which case you can quickly put your hands on the stage and rest your weight on them, thus saving yourself from being pinioned.

There is always the possibility of something going wrong in the working of the trap under the stage. The contrivance from which you are catapulted up through the octagon-shaped opening is something like an elevator weighted down. If this is released ahead of time the performer is apt to be banged against the stage. On one occasion I had just stepped on to the trap and was not quite in its center when the word was given to let go, and I was thrown up against the stage so hard that I forced three boards loose and my back was nearly broken.

Pantominists are more jealous, I believe, than any other professional people, and this quality sometimes forces them to the most deadly extremes in dealing with rivals. This is another very definite danger that must be reckoped with.

I started the present dancing craze in America. A hall in Thirty-ninth Street was the cradle of the mania. I used to go down there and dance the Turkey Trot, which I had just invented or, rather, adapted. I did this dance in Chicago when we were putting on Madame Sherry at

Another Step of the Chinese Musice

the Colonial Theater. Then I put it on at Wallack's in A Certain Party, and later on used it in The Country Girl.

The Turkey Trot does not come from the Barbary Coast, the orgy zone of San Francisco. As a matter of fact the original of this dance is a hundred years old, and goodness only knows how much older! I got it by watching the negroes on the banks of the Mississippi. Down there the darkies go along the levess carrying their bags or sacks, moving with a slouthing, swinging, half-gliding, half-loping gait, and singing or, rather, intoning: "Tote lon-n-g! Tote lon-n-g! Tote long!" There you have it—the Turkey Trot. That is where I got it. Variations of this dance are called the Bunny Hug, the Gobbler Glide and other names; but they all come from that "Tote lon-n-g!"

I was the first to do the Tango in this country. I brought it over from Spain, where the natives have danced it for generations. It is nothing more or less than the Spanish Fandango modified and adapted for ballroom purposes. The claim that the Tango was brought from the Argentine Republic is absurd. Even the Cubans have been dancing it for a long time. Really nobody invented the Tango: it just grew and came to this country in the natural course of events.

Mr. Imith Wearing His Father's Harisquia Bress

It is curious that a dance like this can have such a tremendously popular hold in one country and not be taken up by another; but when we consider that golf was the great game in Scotland for centuries before it was developed in England, right next door, we cease to wonder. It is curious how these wonderful things are confined to a small territory for centuries, and then quite accidentally burst into a world-wide craze.

When I first brought the Tango here I put it on at the Winter Garden and everybody laughed at it—the funniset and the most absurd thing they had ever seen, they declared. Now it is the rage of the world. Maurice saw how it went here and started it in Europe, and now it is all the rage there, where it has practically forced every other form of amusement to the wall.

The Apaches of Paris

THE Aparbe Dance is another modernized, debarbarized and transplanted form of the terpsichoremart. There are probably more claimants to the foster parentship of this dance in America than in any other case. Though many foreigners in Paris witnessed this dance, I claim to be the first to have discovered from its crude and villainous form in the dives there the possibilities of beauty and grace; in fact some of the persons I taught to perform this dance have most vehemently protested their authorship of it.

There are twenty thousand low, murderous, cowardly, skulking characters in Paris called Apaches. These men are, in a way, like the gangsters of New York, though neither so cowardly nor so treacherous—that is, they do not betray their pals to save their own miserable

skins. Many of them work during the day. You may have one in your employ and not know it. Perhaps he is a salesman in your shop, with well-manicured nails and snave manners—a dandy.

All day he stands behind your counter and waits on your customers—susvely, manicuredly—and at night puts on the red bandanna and black sash, the signs of his avocation, and goes forth to join the boys.

The Apache used to hold up his victim in a dark street; but, since he has got the police of Paris demoralized, his audacity or bravado leads him to attempt coups in the most frequented thoroughfares. However, where murder is to be his means, he tackles his victim in a lonely street, throws his red bandanna over his eyes, makes him hold his hands over his head and ties them with his black assh; then he moves round behind his victim and thrusts a knife into his bank, letting go of the instrument instantaneously and stepping back as the blow falls. Thus he avoids getting blood on his hands; and his precaution of blindfolding the man and turning his face away helps to prevent the identification of the murderer.

This, in brief, is a description of the Apache and one of his methods of procedure. There are many others that no

(Continued on Page 28)

Corporal Billy's Come-Back

HIS thing of bravery under fireshould be better understood. We may not all be cowards at heart; but we are

gifted with a mighty discretion that would stamp us such if we were not too cowardly to give it play. Fearing our own cowardice we sham a valor we have not. It works out like one of those scrambled-looking algebraic affairs with plus and minus signs that finally equal something you were looking for. The more cowardly, the more reckless- in proportion to our conceit. This has averaged high enough thus far to insure plenty of reckless behavior on battlefields. The men who run away are merely honest

men who very modestly crave no undeserved applause. Private Hicks hates to be shot at; but he would rather be shot at than have Private Henderson beside him know how he hates it. And he believes, of course, that Henderson. really loves being shot at. It never dawns upon him that Henderson's bravery is like his own, assumed to impress Hicks and the other privates and the officers and the war correspondents and the falks back home. If they understood each other there would be fewer fool charges and less of that pretty but uneconomic flagwaving nutside the trenches. And fewer wars, to be sure. If the current brand of Scotch philanthropy - with a side-line of armor plate-had run to a Palace of Truth instead of a Peace Palace which is a nice enough place for squabbles, soldiers might by this time be coldly refusing to let the powers make fools. of them for the sake of proving to each other that they are not something which each man knows he is. Any ordinary union psychologist should be able to show them in twenty minutes that they all equally hate to be shot at, and if ever they come to see through each other's little game

No, it isn't a war story; no sples with cipher messages; nor two brothers fighting on opposite sides at Shiloh: nor the sergeant in the Philippines who has an affair with a beautiful native girl and gets cut to small bits all but what the head-hunter wanted-with a sampan or a jabot or one of those things. None of that, although the tale does sound a martial strain here and there and the dominant theme was heard in the opening bars. Let us be on,

through a diminished seventh, to the real trouble.

The ancient Corporal Billy Safford, G. A. R., lightly hummed Marching Through Georgia, as he turned the sizzling pork chops under the hostile glare of another and much younger military character. The atmosphere of the small living room back of Corporal Billy's cobbler shop, redolent though it was of the kindly aroma of browning chops, was tense with a smoldering animosity. For the other military character had heatedly averred that the only way to cook the chops was to broil them out in the open over a fragrant campfire, about which, when the meal was done, stories of adventure would be told. Indeed, preparations had been made for this fire in the backyard and then Corporal Billy had put his foot down. He was too busy that evening to fool round. They would have supper right there in the house and let that end it! Didn't he have to shave right after supper and then get into his uniform to attend the meeting of the Decoration Day committee? Certain

people seemed to forget that he was the sole surviving member of his G. A. R. Post in Ophirville, and that much

was expected of him on the morrow.

The other military character, slumping far down in his chair until he seemed to sit on his shoulder blades, scowled moodily down the sides of a stubby and freekled nose and into the gleaming teeth of the range. He was no other than Cyril Naughton Webster, captain of Boy Senuts, who had been put off upon his defenseless Uncle Billy Safford for a whole summer because it was feared by his mother that one more vacation in Oakland would secure him the unwelcome and perhaps enduring notice of a harried constabulary. We have scant knowledge of the lawless activities that incurred this sequestration; yet all too much may be safely inferred from the bare admission of his mother in her letter to Uncle Billy: "He is undeniably a boy of high spirits." When a mother will say this of her first born, how much it eloquently leaves unsaid!

But Corporal Billy was old enough to have forgotten about boys. He had fatuously agreed that the placid upland town of Ophirville was just the place for a boy of

undeniably high spirits.

And in the main he had found the association not without charm. Their military careers formed a bond between them. Captain Webster, as he preferred to be addressed indeed he promptly fought any one of his own weight who addressed him as Cyril - had quickly learned what might and what might not be attempted within the municipal confines, baving become a keen appraiser of the police spirit in any place where he abided. And, moreover, the wooded hills beyond the town and the foaming river that threaded them had lured him from the streets. There he

By HARRY LEON WILSON

boy-scouted tirelessly, and in his lighter moments hunted and fished. And he ardently preached this open-air life to

He believed, and said, that his Uncle Billy was getting out of condition by reason of his close application to workwhence the disagreement of the moment, because Uncle Billy would not cook supper out where it ought to be cooked. And yet the trouble was less simple than this, for the matter of the Indians preceded it.

A mile below the town on a grassy flat sojourned for the fishing the family of one Joe Twohead - consisting of that reverend ward of the government himself, Sarah Twohead, his wife, his son, Eura Elk, and the latter's consort, Annabelle Elk, nee Swampy. These peaceful four, being observed by Captain Webster the day of his arrival, had fired him to high endeavor. He had behaved in their hed terrier quently pleased him to believe that they were hostile Indians, that they came to buy supplies from the Boston Cash Store merely to ascertain the town's most vulnerable point, and that they traitorously meant to attack it on the first moonless night. Captain Webster meant to foil them if scouting would do it. He had trailed them furtively through the forest; he had baunted the brushy outskirts of their camp; and be had more than once unexpectedly confronted them, steely-eyed and threatening. He had left them no peace. They could make no move except under his surveillance. And then the distressing affair of the twenty-two-automatic of which more at once,

Corporal Billy removed the supper from the range to the table, neatly spread with its red-and-white checkered cloth—the sizzling pork chops, the fried potatoes, the stewed tomatoes and the pot of steaming coffee. He took his seat and Captali Webster drew his own chair to the table stimulated by the food, yet still moree

"And Sheriff Kritzler swears," resumed Corporal Billi sternly, as the meal began, "that if you make one monbreak at them Indians he'll put you in the lock-up and keep you there. What in time did you mean by it anywe! Wha'd you want to go and shoot one for? Answer me the Cyril Webster! — No, I won't call you 'cap'u' age less'n you act like you had some judgment."

"I never tried to shoot him," denied the captain sach "I was just tracking him through the forest, and he never saw me because I moved stealthy from tree to tree. The he stopped a minute to pick up a package of tea or seething that had fell out of his bundle, and I thought what bully shot that would be if he was only on the warpith of I covered him with my rifle, just to see how fine I code draw a head on him. But I never meant to pull the trigge honest I never did; I just barely touched it. And it die: hit him anyway-just snipped off a twig beside his bad But he let out an awful yell and jumped round and have to before I could vanish into the underbrush and make posmy escape. Then by the time I got back to town, herether all four come and was after the sheriff to have me arrests or something. What kind of a way is that for an Indian act? They swore I'd tried to kill that old one, and that sheriff he says

"I know well enough what he said," interrupted in listener. "He paroled you in my custody and I'm reco-sible for your peaceful behavior, mind that now. If hadn't 'a' been a well-known and prominently respects citizen you'd been tried and sent over there to Folion # hard labor for attempted violent murder, that's whitysive 'a' been! Undeniable high spirits! My land, I should think so!"

"Huh!" sniffed the unabashed captain. "Nice way he Indians to act, wasn't it. Every one knows they're cowardly race. They can act brave enough in the morabut look at how they do when it comes to a showdow; or in the open us man to man—they run right off and lattle to a Dutch sheriff, that's what the cowards do!"

"You got no right to pester them Indians," ware Corporal Billy, spearing his second pork chop. "They's peaceable, quiet folks, jest like you and me.

"Yes, and we'll all be scalped in our beds some nich that's what," continued the captain. "I seen the up gleam in their eyes when they was trying to have he sheriff arrest me

You let 'em alone!"

"Oh, very well! I'll let 'em alone for the present to mark my words, a time will come and I'll show 'em nomeny If one of 'em ever crosses my path again he'd better have care. I'll put a dose of cold lead through his craves but that's what I'll

S-sh! That'll do -

"Why, say," went on the captain, brightening, "jot and I alone could go down there and make 'em all bite the

dust. Just before dawn is the best time to attackt—"
"Look ahere, my lad," said Corporal Billy desperant you do any more of that and the sheriff 'll have you inside lookin' out, that's what he'll have you. And)# for the way you talk, you leave that gun of your rall here to home for three days. Now I guess you'll talk so

"Want me to go out unarmed, do you?" inquired in captain bitterly.

'That's just what! You'll go unarmed until you was some discipline. How'd I ever gone through the wat i'll been like you, shootin' up people right and left?"

"Oh, all right," growled the captain, gloomily engage

Corporal Billy pushed his chair back from the tall emitted a long sigh of repletion and gnawed relishing) his plug of tobacco. The captain observed this with at disapproval.

"Tobacco is a filthy habit," he began oracularly

"My growth is had," retorted the corporal.

"And poisons your systems. See what it's done to you already. Look at the way you carry yourself! You say some setting-up exercises. Bend over and touch your [9] a hundred times, morning and night, and get seets let dumbbells -- Oh, well, if you don't want to listen -

For the corporal, with elaborate disregard, was ashumming Marching Through Georgia, while he massed shaving apparatus before the small mirror above the Undoubtedly he needed setting-up exercises as much a any man of seventy-five ever needed them. He was the sized, with a wisp of a white beard, dim and sorrowf eyes and bent shoulders, and his limp was pronounced Tobacco may have been the cause. Then again forty) of cobbling might be accused.

Yet the corporal now went about the almost tragic usiness of shaving with real elation. Relentlessly he lought the blade over his lined old face to a sinister depth. He did not shave so much as scarify, but his ensuing greans were cheerful. For this was the one time in the rear when Corporal Billy was the central and resplendent gure of the town. This was the eve of his great day. fonight was the meeting of the Decoration Day committee, be program of which never varied, from the introductory ration of the mayor to the declamation of the Gettysburg ddress by a girl pupil of the high school and the perunctory election of Corporal William Safford, late of the Iwenty-third Indiana Infantry, to the post of grand marshal if the parade - Corporal Billy on a safely prancing horse, milormed, embellished with a gorgeous such! Year after our it had been thus. He sometimes pretended to be ored by the regularity of the thing, but he was Ophirville's or surviving veteran of the Civil War, and could he unless to a decay of his public spirit? Not Corporal Billy! Captain Webster from his seat had watched that fearome ordeal of shaving with mingled hope and alarm. It ad seemed inevitable from the first gash that the old man rould do something fatal to himself with that razor; but he operation was amazingly completed with only some ninor casualties. Thereupon Corporal Billy, in the tiny djacent bedroom, proceeded to bedeck himself in his mart blue uniform. It was this uniform that won back he momentarily difficult respect of Captain Webster and estored his waning enthusiasm for life. He noted with oproval that the old man became more erect, lifting his ead pridefully, and the limp was hardly to be noticed. he captain himself brushed the fatigue cap and experineed a thrill in doing it. Corporal Billy set it firmly upon is lifted head and coyly approved himself in the mirror. be captain was undoubtedly respectful as he also surveyed be result.

"It's a bully uniform," he declared; "and I'll bet you ere a corking good soldier. I'll bet you were the bravest us in all your regiment."

"Shucks?" muttered the preening corporal. "Not at Il lots braver than me."

"Oh, I know you've got to be modest," the other con-

eded; "but how about those times you told me of!" But for the recent shave, a blush might have been berved to mantle the jowls of Corporal Billy. It was rue that in certain expansive moments since the captain's rival he had recounted two or three little adventures in hich he had played snything but a coward's part. But he boy was insistent for stories, and they might inspire im to brave deeds of his own; and if you were going to

il a story at all you ought to tell it right, oughtn't youod little ornamenting details here and there. Still, with he old uniform actually on, the corporal somehow regretted

ne or two of the more daring flights. "Shucks!" he muttered again in self-disparagement.

"Say," urged the now glowing captain, "tell us again tout that big six-foot rebel that you shoved your hayonet can through the chest of, when he was just going to shoot re down in cold blood

"No time for yarns," said the corporal shortly, "We

at to harry to the c'mittee meeting."

Here the captain had to search at length for his own cap, hich always became mysteriously lost the moment he stend the house. Corporal Billy waited impatiently atil this was found in the wood-box back of the rangend then they were out in the main street of Ophirville

making a notable progress to the town hall. Corporal Hilly strade with a military alertness, stiffly saluting such of his fellow townsmen as engaged his notice. Captain Webster stalked stiffly at his side, with frequent upward glances of pride, a pleased unit of the spectacle. A block up the street they encountered Mrs. Honora Kelly, a lady of billowy amplitudes, also garbed ceremoniously and wearing her best lilac bonnet above a high-colored and cordial face. Mrs. Kelly was the relict of one Michael Kelly, also a veteran of the Civil War. When Ophirville had hoasted enough civil war veterans to maintain a fraction of a Grand Army Post, Mrs. Kelly had been the president of the local ladies of the G. A. R. But now of the post there remained only Corporal Billy, and of the local ladies only Mrs. Honors.

"Evenin', Mis' Kelly!" The corporal lifted his fatigue cap with a flourish. "To the c'mittee meetin', I take it?"

'Tis not so many more Dec'ration Days we'll be seeing, Corporal Safford," observed Mrs. Kelly with an effort at

"The Grand Army is passin' on," he retorted gallantly. "but the ladies of the Grand Army are ever young and fair, as the poet said."

"Be still with your jests," returned Mrs. Kelly, and the best honnet was tossed coquettishly. Each year she angled for this compliment, and the winning of it never failed to brighten her.

As they walked on Mrs. Kelly waved an eloquently insulting hand toward the opposite side of the street.

'Tis the Spanish war vets, would you look now!" she

Corporal Hilly glowered at three youngish men in blue shirts and khaki trousers who conversed earnestly in front of the Boston Cash Store. True enough, they were veteruns, but Corporal Billy's glance seemed to say that this term was too elastic.

"Vet'rum of the so-called war with Spain, I believe," he remarked grandly. It is unquestionably the way of Corporal Billy and his like to sniff at the opera-bouffe campaigns in Cuba and the Philippines. By them the propriety of allowing the younger veterans to participate at all in the observances of Memorial Day is still mooted in many sections.

"An' wearin' gur-rand medals on the chests of them!"

pursued Mrs. Kelly.

"Metals!" Corporal Billy sneered wickedly, "What them boys went through wouldn't 'a' been camp sports to what me and your husband and our cumruds went through, Mis' Kelly. And they got two medals aplece for their skylarking. Me? I got two medals myself, only I can't. exhibit 'em to ladies. One in my shoulder - that's a salver cut. One in my leg-that's a minule hall. They sin't a mite showy, but nobody can pull 'em off's me.'

Would you think they was talkin' of us now?" demanded Mrs. Kelly. "Seems like, the way they're lookin' over here.

"Like 'em!" growled the corporal. "Wha'd the mayor have to go put 'em on our c'mittee for? 'Tain't right for such as them to be messin' round the graves of our cumrads, Let 'em wait till they got some graves of their own to mess

"They'd wait long," observed Mrs. Kelly crisply. Their health was never threatened, though I believe one of them did catch a hard cold in Porty Reeky.

They were still companionably muttering this grievance when Corporal Billy handed Mrs. Kelly into the ball, followed by the now subdued Captain Webster,

> who was tasting his fill of reflected glory. The Mayor of Ophirville, as chairman of the

"I Walked Gut With You and Gut Pit Jeap"

and looked formal. The superintendent of schools sat at a small table beside the desk to record the formidable minutes of the meeting. The town clerk, the sheriff and prominent citizens to the number of a dozen were also present. The Spanish-American war delegation filed in after the G. A. R. representation and found seats near the town clerk, with whom they held earnest speech in whispers.

"Meeting of the committee on arrangements for Memorial Day will now come to order," announced the mayor. He coughed gracefully and sipped from a glass of water selicitously tendered him by the alert superintendent of schools. "We are met together on this occasion to arrange for a fitting observance of the day set apart for honoring the nation's heroic dead. Needless to say that while our thriving little city is not so large as some other cities in this broad and united land, nevertheless its public-spirited citizens are not found wanting in respect in the matter of honoring the nation's heroic dead. On the morrow we shall pay a just tribute to those who so nobly haid down their young lives-

At this point Mrs. Kelly wept audibly in tribute to Michael Kelly, who at the age of sixty-eight had been killed in a mine shaft.

"True for you, may'r!" she sobbed approvingly.

"Nominations," concluded the slightly annoyed mayor,
"are now in order for the honorable post of grand marshal of the Ophirville Memorial Day parade."

Corporal Billy Safford tried not to look self-conscious at this. He had made the effort for years. He was running over in his mind the set little speech by which he should accept the honor to be feisted upon him.

The town clerk arose, but he did not look in the direction of Corporal Safford. He looked straight at the mayor. Something appeared to be wrong with the meeting. He was the brother-in-law of a Cuban veteran.

Mr. Chairman, ladies and gentlemen," began the town clerk urbanely. "Ophirville has always seen her duty on this day of days, and need I say she has always met it -

You need not," hissed Mrs. Kelly, already clairvoyant to his design.

"Every Memorial Day," continued the orator, after an iry stare at the insurgent widow, "has done our thriving little city and its public-spirited cohorts abundant credit, and far be it from me to intimate an intention of-er-Intimating that we could have done it better otherwise than in the manner we did do it. But this year, though far be it from me to cast undue reflections

"It'd better be!" threatened the watchful widow,

it is my pleasure and my duty to propose an innovation. The grand marshal of our parade has heretofore been a member of the Grand Army of the Republic, that glorious organization without which, as the poeriess Webster said -

"And who should it be but a G. A. R.? Come now!" demanded Mrs. Kelly in full-toned wrath. Corporal Billy choked strangely and there was a curious buzzing

"Order!" demanded the mayor sharply.

"The innovation which I have to propose," continued the orator, indignant because he had wished to quote Daniel Webster on liberty and union and now realized that he had forgotten the lines, "is the election of a member of the Spanish-American War veterans to the honorable post of grand marshal of the Ophirville Decoration Day parade. I nominate Sergeant Sam Gates, of the First California Regiment, for that post."

"Second the nomination," mumbled one of the

younger veterans in khaki.

Corporal Safford, G. A. R., cowered as from a blow. Mrs. Kelly was on her feet with truculent fists aloft.

"I nom'nate Corp'ral William Safford," she shouted deflantly.

There was a painful silence. Corporal Billy, listening intently, looked about him with dumb appeal.

"Any second to the nomination of Corporal Safford?" demanded the mayor briskly. There was no response.

"Then Sergeant Sam Gates stands elected to the post of grand marshal," concluded the mayor, brutally flouting the manual of Cushing.

Corporal Sufford rose unsteadily to his feet, holding to the back of his chair. Then abruptly he straightened as if he had heard a command.

He clicked his heels together, put on his fatigue cap and marched stiffly from the room.

For a block he continued to march stiffly, head erect, with the rhythmic tread of a soldier. But then he wilted to the cobbler's stoop and again he limped. He did not realize that he had been followed until he felt Mrs. Kelly's hand on his arm.

"The snakes!" she said simply. "But don't you take

it to heart, my boy.

"I'm not, Mrs. Kelly." The old man straightened once more. "Maybe they're right and I'm too old for a grand marshal. To tell you the truth, I ain't felt so very fancy on horseback this last two-three years. But, anyhow, you'll be representln' the ladies of the G. A. R.'

"I'll not that!" she flashed. "I walked out with you and out I'll stay. What would our cumruds be thinkin', especially Mike, rest his soul."

"Our cumruds," murmured the corporal, as they walked on in silence.

Captain Webster, of the Boy Scouts, marched excitedly beside them. He was mentally dramatizing an Indian foray, in which the red devils should descend upon the settlement at once and scalp every one of those smarties back there who had rejected his Uncle Billy for grand marshal-"given him the hook," was the captain's phrasing of this process.

Back in the little kitchen Corporal Billy went mechanically about the washing of the supper dishes. He did not hum Marching Through Georgia, though at moments he affected a lively interest in the scraping of plates and the heating of dishwater. Nor was he unaided in his task. Captain Webster, despite a career of hardening adventure, was not without his human side. Indeed, as he deftly helped with the work there was something almost softly human in the glances be stole at the outworn veteran. He spoke but little, however, until the kitchen was once more neat. Then, as the corporal drew off his long kitchen apron and hung it on its nail, the captain, for purposes of light conversation, brought up a matter which had nothing to do with the affair of the evening.

"Now if I could take my rifle out just for an hour tomorrow morning—that Mrs. Kelly said she'd like me to shoot two of her young roosters and I think we should always try to perform little services for those about us and make their lives brighter."

"All right, but you bring that rifle right back when you've done it, mind that!" And Corporal Billy sank wearily into a chair to regard on the wall opposite him a steel engraving in a walnut frame of Abraham Lincoln striking the shackles from a kneeling slave,

"I wonder if it was worth while," muttered the old man grimly. The reference was lest upon the captain, who

was nevertheless sympathetic. "You could come back all right," he announced cheerfully. "Come back? Back from where?"

"Oh, you know come back. They think you're down and out, but you could come back,

Uncle Billy."

"Oh, I'm a has-been all right." He continued to glare at the engraving, but Captain Webster was persistent. He planted himself before the old man, feet apart, head tilted, eyes half-shut in calculation.

"No, sir; you can come back, I tell you. If you'd just put yourself in my hands and give up chewing tobacco and take those bending exercises and breather deep in the open air and drink pure spring water between meals, I'd make a new man of you. I got a book tells all about how to get hearty and rugged. Of course you're older than I arn, but you can come back enough to make this jay town set up all right, all right. I'll bet you're the bravest man in this whole county today, bar none. I'll bet you

wouldn't be afraid of anything you could think of. Now you bend over and touch your toes a hundred times and -

"Bedtime," interrupted the corporal, who had been a poor listener. "And you can stay out all day tomorrow after you bring that gun back."

"Not unarmed?" queried the captain. "You don't mean totally unarmed?"

The corporal deigned no response to this.

"Well, can I take this old pistol? That'll be something." He took from the table the ancient army revolver that had long reposed in the trunk containing the blue uniform. It was a weapon large and long, of a battered grimness. The lock was broken, but its aspect was impressively sinister. It was at least three sizes too large for a boy scout, but, as the captain had observed, it would be something.

"I'll keep the shop shut tomorrow," said the corporal, "but I won't go out myself—I'll be busy round here. Yes, take the pistol." With a heroic effort at pleasantry he added: "And you can shoot all the Indians you want to with that." "Very good, sir!" said the captain, and formally saluted.

Decaration Day naturally saw the shops of Ophirville closed; but the shop of William Safford, its wooden boot swinging above the door, seemed more tightly closed than any other. Not only was the door locked, but the curtains were closely drawn. The place had the air of being bermetically scaled. Nor was its owner to be seen on the street mingling with his fellow-citizens in the pleasant bustle of preparation. There were those who said he sulked behind his darkened door, being deficient in public spirit. The town clerk, that wily politician responsible for the corporal's humiliation, said bluntly in front of the post office that no man who would not bow to the will of the people, veteran or no veteran, was worthy of a post of trust and honor. Grand marshal elect, Sam Gates, who was trying out horses up back of the livery stable - he wanted one that would prance nervously when the hand played-announced that the town needed new blood, and that if the old fomil wanted to be huffy, why let him! From which it will be seen that there was scant public sympathy for Corporal William Safford. Such as there was came from Mrs. Kelly, who had her own curtains drawn and kept herself behind them,

The parade, starting from the town hall at two o'clock, vas duly impressive. Grand Marshal Sam Gates, having discovered a sufficiently neurotic mount, rode at the head, encircled by a rainbow of fluttering such and carrying a creps-bound baton. He was followed by the Ophirville silver cornet band, which played very slowly Flee as a Bird. Came the mayor in frockroat and silk hat, the Order of Rebekah in full regalia, the uniformed Knights of Pythias, school children carrying bouquets of wild flowers, a platous of national guardenes and the ladies of the Spanish-American War-four of them in the depot back. Prominent citizens trudged in the dusty rear.

Grand Marshal Gates caused his charger to do fancy steps as he passed the cobbler's shop, whereat the band played with an added emphasis, especially the E-flat cornet, who was related by marriage to the grand marshal. And so the line wound its way to the cemetery.

Inside the closed shop Corporal Billy sat at his bench, his withered shoulders hunched forward, his head in his hands. The music became fainter; even the strains of the taunting cornet expired. Sadly the veteran arose and threw off his leather apron. In his bedroom back of his shop he arrayed himself in his G. A. R. uniform, carefully as if for a public appearance. He brushed the worn fatigue

cap and adjusted it before the mirror. Last of all he asduced a saber of an obsolete type and buckled the bet about his waist. Then, back in the dim light of the mon he waited tensely.

From the distant hillside where lay Ophirville's onetery there came at length the muffled crash of a volley of musketry, then another and another.

With a brisk rattle Corporal Billy drew his saber from its sheath and smartly swung it to "Present!" Faintly, swell; came the bugle-call of "taps."

"Cumruds, I salute you," murmured Corporal BL, So he stood a moment, dreaming back to the days of its fighting youth. Unsoldierly tears welled to his old sys. And then he slumped to his bench, drooping in every line his head again in his hands. A long time he sat there. Ho need for the setting-up exercises recommended by Captain Webster had perhaps never been so apparent.

In the depths of his despondency he lost track of the hours. He was dimly aware that the parade had returne and scattered; the revived street life came faintly to to dull ears. And then, mingling with this came shape, unaccustomed notes, the gallop of a horse, two horse shouts; the hurried, excited speech of two men before his door, and swiftly running feet along the sidewalk. At last he became alert to this flurry. He stepped to the dor. turned the key in the lock and stood out in the glare at in afternoon sun. Citizens in unwonted haste were specify from all quarters toward the town hall. Here and there two would pause briefly for speech together. Weel of some novel event ran among them. Two of these nor is

door were halled by Corporal Billy.
"What's doin'?" he asked.
In unison they spluttered at him incoherently. He was obliged to demand the news of two others before he can prehended it. The thing was simple enough. Seavy, the negro murderer, a life prisoner over at the Felson pertentiary twenty-five miles distant, had escaped early the morning. The single telegraph wire being down, the new had just reached Ophirville. He had taken to the hills and it was thought that he would not easily be recaptured &: the guards from Folsom were tracking him and already Sheriff Kritzler was forming a posso. The hunted man su known to have started toward Ophirville.

Instantly Corporal Billy was thrilled to a foolist and tion. He would show them! He would be a member of that posse. He would let them see that veterans diff flinch from danger. He might be in at the capture. Is might distinguish himself. He might "come back," at 18 boy scout had put it. Accoutered as he was, he set out is the town hall. On his way he gathered bits of information that might have daunted a less foolish cobbler of seventy five. Seavy, an enormous black fellow, had swen by would not be taken alive; he had throttled a guard who the to prevent his escape. Once in the hills, he had left a valof destruction-be had murdered a rancher, the rander) family, two families of ranchers, burned their howes. He was savage, wild, mowing down all who opposed his Such was the gossip Corporal Billy encountered. Anstal glimmered within him that perhaps he would be of small use to the posse; that perhaps, while there was yet are. he would do better to seek once more the dignified seli-sion of his locked shop; but he was helpless—his feet or ried him on. He felt that his feet were his masters. It could no longer control them.

And then he was pushing a way through the crowd shoul the sheriff's office. It was an excited crowd, each man of

seeking to voice more local than his neighbors his plan for taking the prisoner, for each man, it seemed, had shrevel guessed his hiding place. Atd yet Corporal Billy for a mount quelled the eager voices. Seething in his military bearing an uniform must have done it. rested a hand upon his saler [2] and saluted Sheriff Kritzler val frowning with fat impertars. paused to stare amazedly at in-A dozen mounted men, the Spanish-American veterals among them, were on the 00 skirts of the group armed with rifles and revolvers, awaits word from the sheriff to be of And Corporal Billy held them !.. until he could speak his lines: "Corporal William Saffeed

formerly of the Twenty-thi-Indiana Infantry, reports # 1 volunteer, sir!"

The sheriff gasped and frowned importantly: "(a: bother with you. Safface Posse's big enough already

There was a marmured redorsement of this reply he Continued on Page 43

MEN WHO LIVE ON NOTHING

70U know Rupert Vallon?" said my wife as the butler was bringing in the coffee.
I nodded, tossing away the match with which I had

ighted my cigarette. Of course I knew Rupert Vallon.

"I mean, do you really know him, anything about him?" "Of course I don't really know anything about anyody here in New York," I answered with absolute truth.
"Well," she went on, "there's some mystery

hout Rupert. What do you suppose he does or a living?"

"My dear Clare," I replied, "I never ask the andsome gentlemen who sit in the boxes at be opera what they do for a living. It might mbarrass them. Moreover, it doesn't matter, hat I can see, what they do or whether they do mything. Generically all rosy young eligibles ave always been in Wall Street-that is, they sere until the Supreme Court began to construe he Sherman Law. I suppose now they are on ifth Avenue. But what about Rupert?"

"I tried to get some one to fill a place at our inner tomorrow night- Tom Hartfield has been aken down with pneuroonia, you know-and alled up the Stuyvesant Club. You instructed se always to ask old Peter, the doorman, who in the club; so I told the boy to send him a the telephone. 'Is that you, Peter?' I said. This is Mrs. Marathon.' 'Yes, ma'am,' he rewered. 'What can I do for you?' 'I'm aving a dinner tomorrow night for Lady Van irchid, said 1. 'Some one has given out and sant to fill his place. Will you kindly tell me to is in the club?"

There was a confused mutter at the other ad of the wire, from which I gathered that eter had said he'd go and look at the page the doorlist. He came back in a moment. There ain't nobody here at all, ma'am,' said e, 'except Mr. Wiggin - and I'm sure you don't ant him! None of the ladies ever do. Oh! seuse me-there's Mr. Rupert Vallon just ming in. Shall I ask him?' 'By all means?' acquiesced, much relieved. A moment later eter informed me that Mr. Vallon accepted with course Mrs. Marathon's kind invitation to

She paused, her eyes smiling with mystery. "I don't see anything extraordinary yet!" I remarked. "Wait!" she ordered excitedly. "The Stuyvesant Club on the corner of Thirty-third Street and Fifth Avenue,

n't it? How far is that from here?"

ne the next night at half after eight o'clock,

"Two miles and a quarter," I estimated,
"How long would it take a strong-legged man like spert to walk it?"

Hall an hour-if he kept going right along."

"Listen! Five minutes after I had called up the rlub I ent out for a little stroll before lunch and ran right into r. Rupert Vallon at the corner of Sixty-ninth Street and ifth Avenue. 'So glad you are coming tomorrow night!' said, without thinking. 'Ah! Yes!' he answered in a ther vague way. 'Delighted!' And then I suddenly alized that if he had actually got my message himself he ust have flown from the club in an aëroplane in order to standing there talking to me within less than ten minutes. "I'm not a clever talker, as you know. If you'd been ere I'm sure you would have got at the truth of the atter; but before I could frame a leading question be u off on the opera and the opening of that new dancing are the other night, and I forgot all about it until after had gone home."

"Gone home?" I queried.

"Yes I invited him in to luncheon and he came."

I laughed.

"I fancy you will find that you've invited two separate d distinct individuals to fill Hartfield's place. You misunderstood the name, and Peter h

"No. I didn't!" my wife asserted.

"Anyhow, it doesn't seem worth taking much trouble out," I commented, "So long as he got the message and

coming to dinner, why does it matter?"
"I'll tell you why," she replied with sudden seriousness.

Rupert's rather a pal of mine. I like him. I've-we've th known him for years. He's visited us at Newport. ne on motor trips with us, and is always dining and aching here. Superficially he is apparently one of the st friends we have. He's a dear, too-kindly, courteous d faithful. Yet it is a fact that I don't know a single ing about him - and, what's more, I don't remember at is minute where I first met him!"

"We met him at the Osgoods', on Long Island," I

swered.

THE PET CAT

"I beg your pardon," my wife retorted: "we've known him ever so much longer than that. I remember now-I met him at Helen Happood's at tea and he walked home with me."

tions in the Brains

"Monstrous!" I cried. "And this is the viper I have taken to my bosom!"

"What does he do for a living?" she persisted.
"I don't suppose he does anything." I admitted: "in fact I always supposed he had an independent income."

"I'm going to find out," she asserted. "Here is one of the few people who would really care if I were suddenly killed in a railroad accident—one whom I introduce to all my friends and for whom, to a certain extent, I am a social eponsue

"You, with fifty other women!" I interjected.

"Who is a constant visitor at my house and who knows practically all there is to know about me!"

"Thinks he does!" I smended cruelly.

"And, while giving the impression of having withheld no confidence, is as much a stranger to me as my butler!"

"Well," I replied, "what do you propose to do about it? What do you care how he exists, so long as he is, as you say, faithful and courteous and kindly? You may go prying over this castle of friendship and suddenly find yourself in a secret chamber full of murdered wives. Be careful! So long as you don't know anything about Vallon

and he doesn't borrow money, let well enough alone!"
"You're perfectly horrid!" she cried. "You ought to

"But you yourself have just said that you propose to solve the mystery of Rupert's existence!"

"You lawyer!"

"And how are you going to guess the riddle of this social. sphinx?" I continued.

"Leave that to me!" she exclaimed, "I've a plan." "All the same, I don't like the idea of your encoping into a friend's affairs like this!" I insisted. "I don't see the excuse for it."

You don't?" she queried. "Well, suppose he wanted to marry Myra?"

Her answer staggered me. Myra was my wife's cherished younger sister, a mere haby of twenty-three—and a beauty.
"I never thought of ——" I began.

"Don't worry!" she laughed. "He doesn't. But, after all, she's been out four seasons,"

During the next two mouths I heard nothing more of my wife's proposed activities as a society detective. Vallon, except as one of innumerable Vallons, passed out of my mind. Yet he was forever at the house, filling a place at luncheon or dinner, making the extra man in our operahox, and performing the absolutely necessary function of gentleman-in-waiting to Her Majesty My Wife. In these

modern days, when the ordinary New York society woman lives more luxuriously than did the queens and duchesses of medieval times, she has need of some one round her to play the part

of page, courtier and jester.

We have our measurvants and our maidservants, but we must have our minstrels and our gallants as well. Hence the development of the Pet Cat in a social system that in the older generation had its beaus, its dandles, its Ward McAllisters. The grandam of fashion the world over has always had her court, with its attendant. gentlemen, its parasites, its sycophants; and in a lesser degree this has been true everywhere of those whose wealth enables them to entertain lavishly and to throw open their houses to a large. circle of people.

Thackerny has pictured, with a master hand, English society under the Georges and during the early Victorian era; but until the comparatively recent concentration of wealth in America our social system did not afford opportunity to the merely ornamental to make a living.

Twenty years ago men like McAllister were regarded as human jokes. The society man was the daily butt of the paragrapher and the squib in the comic paper. We boasted loudly that we had no leisure class. The shadow of the Puritan still stalked abroad. We feit in a vague way that it was wrong to be happy and domnation to be gay. To admit that one did not work at some productive form of task was to plead guilty to general worthlessness and neglect of duty as a child of God, an inheritor of the Kingdom of Heaven, and a citizen of the United States.

Things have changed surprisingly in the last couple of decades. Social life may not be any happier, but it is vastly gayer. We may not be any better and we may be a good deal worse-

let others decide but we are indubitably better company, behave more naturally and are better informed, except possibly from a purely pedantic point of view.

A girl of eighteen today is a far better equipped human being than she was twenty yours ago in almost every respect. She is more cosmopolitan, better able to look out for berself, and less amenable to social bank than her mother and her mother's friends were at her age. The girls of today are not easily fooled. They are not deceived by the shams of a society that glitters but does not satisfy and they play the social game for only what it is worth.

And because their college friends, whom they will eventually marry, are hard at work in law offices, hospitals, banks and factories, and have small time or inclination for the more trivial social frivolities, the requirements of our young ladies have given rise to a class of men of ambigtimis age who year by year keep the social ball rolling and do the work which the younger fellows have too much sense

The dearth of presentable young males in New York society is such that anything which wears clean linen, can speak in an intelligent dialect and has not been convicted of crime need never go hungry. The less known about him the better. If he is a foreigner he leaves nothing to be desired; and if he be young besides, his life will be all pink roses and yellow satin-until he is foolish enough to marry or enter some employment that will interfere with his rounds at five o'clock.

adult ove finds his business life. engrossing and fatiguing. If he is able to tear himself away from the office before it is time to dress for dinner he usually has only leisure enough to drop into the club for a glance at the paper and a cocktail.

Moreover he is too tired to make a particularly agreeable companion over the teacups. Hence calling has gone out of fashion-not because the women do not wish to have callers, but because the men are too busy. And as it is out of fashion the men who are not too busy make that an excuse to stay at the club and play billiards or bridge, instead of performing what used to be regarded as their social duties.

The fact, however, that the men who work no longer make calls only makes the others the more welcome; and by assiduously leaving pasteboards on his new acquaintances a comparative stranger in the city will find that he has immediately roused in the hearts of the ladies whose doorbells he rings a grateful and responsive regard.

There is no true woman who does not like attention, and few women care what the underlying motive of their pseudo-admirers may be. Alas! there are few, also, who will not accept it blindly as a tribute to their personal attractiveness rather than to the excellence of their dinners—as it more probably is.

Though the majority of the five-o'clock-tea men are not the ones of her acquaintance whom the hostess would prefer to see, she is nevertheless glad enough to get them. whoever they are. Most men have a natural distaste for laying themselves open to the accusation of being toadies. and their tendency is to neglect their women friends rather than hazard the chance of being classed with the Johnnies; but the foreigner has no false pride and calls regularly.

He knows women. To do so is part of his stock in trade. and his flattery is often no more insincere than our own crude compliments. His hostess is grateful to him for not being afraid publicly to recognize the fact that she is a charming woman, and to say so. The blush may spring to her faded cheek, but the marquis inevitably stays to dinner.

Of course the women are not the only ones. 'Tis an old maxim in the schools

That flattery's the food of fools; Yet now and then your

wen of wil Will condescend to take a bit.

After all, who would not prefer to be told she is rapissante than to receive the somewhat ambiguous compliment of looking "rather fit"? And so when my lady wishes to fill her opera box or country house it is the flattering foreigner to whom she first fondly turns; then to the good-looking boy just out of college, who has not yet found a job and who hankers after the fleshpots; and then, in default of others, to old reliable Mr. Pet Cat, who is young enough to be agreeable and is generally old

enough to be quite safe-even with Myra. The seething currents of New York society, with their dangerous undertow, are too complicated for adequate analysis in a few pages; but society in America is primarily a show window in the Bond Street of matrimony, and its psychology can truly be understood only by accepting this simple major premise.

Each succeeding season brings out its galaxy of girls of charm and heauty. The choicest dozen of these are absorbed into the whirl of adult society, where wealth is almost an essential; the others marry inconspicuous men, go away, or gradually drift into the buckwater of mere respectability. The circle of respectable people in New York who are socially impeceable without being at all fashionable is enormous.

In a word, smart society is the survival of the fittest, and it exists for the ultimate purpose of satisfying woman's craving for admiration. To this end man is indispensable. Without him society would lose its ultimate object-and his years make no difference. Hence the Pet Cat is of all ages from eighteen to sixty-five. He is always a Tom and he has nine long lives.

In France, Spain and Italy, to exert an attraction for women is a thing to be hoasted of; while in Anglo-Saxon countries the term ladies' man has inevitably been one of mild repreach, carrying with it the imputation of effeminacy. Carpet knights have always been pictured as coxcombs.

Even today, for a man to overdress is the quickest and surest way to excite hostile criticism.

All these things make easy the path of the man who lives on nothing. He has but to possess the conventional swallowtail, a toothbrush and a safety razor to challenge in the lists the most arrogant son of the plutocracy. The rest depends on himself alone. He will work his passage and purchase his rations with a smile. The man who lives on nothing! Who shall say that he does not pay for all he gets and for all he loses?

According to an old story, which bears the earmarks of authority, Mr. John L. Sullivan once fistic champion of the world and proud holder of the Diamond Belt-had a certain inseparable companion who, whenever the great man went into a saloon to buy a drink, always stationed himself at the hero's elbow. Sullivan, much too fine a

gentleman to bother about change, invariably threw a dollar bill on the counter in payment for his refreshment and turned grandly away; but his friend, having no such absurd scruples, carefully swept up the despised coins, put them in his pocket, and by so doing amassed a comfortable fortune, on which in due course he retired. Thus ran the tale

One besitates to speculate on the number of drinks involved in the accomplishment of this result. I believed the story as a boy and I refuse to disbelieve it now. I have seen too many similar instances among my contemporaries to doubt its substantial accuracy. I doubt not the great John carried many a poor man to affluence on his

Even in Nature we find the prototype of this friend of the presperous. The rhinocens hird, whose performances are vouched for by our naturalistic ex-president, otherwise known as Ruphaus crathrorkyncha-I refer, of course, to the bird-is familiar to the reader as an African sturnoid hornbill, which takes a free ride on the back of the unsuspecting rhino in order to partake of the parasites that infest the hide of the larger snimal. And there is even a

Metropolitan. Vallon himself dines and goes to the open every night of the season. He is in great demand; for y knows the plots of all the operas, the intimate pricehistories of the prima donnas, and all the scandals of &-Diamond Horseshoe. He is a genuine musical hariboo and saves buying a libretto.

"Do you notice that young chap-directly appoint he asked me once during a performance of L'Amon to Tre Re. "The fellow with the sandy mustache when just come in-shaking hands?"

"What about him?" I inquired. It was during to

intermission after the first act.
"Watch!" said he, smiling.
The curtain went up—the lights went down. Using a glass I could see that the box already contained a persons - two women and four men; but the revene remained seated unostentationaly in the rear sine throughout the act. Just as the barytone was confiden his final aria the visitor disappeared. Once more light appeared and the boxes moved and swayed like recent in a breeze. Vallon touched my arm again.

There he is," he remarked, "in Mrs. Vann's box new

I looked down the Horseshoe. Yes an friend had shifted le position to our side a the house and was to ready bowing over the gloved hand of a latjust on our left. I'm dently he was bill of merry quipa and casia. for his boston and he companions laughet constantly at what in was saying.

Ten minutes pased Once more the mestreamed back down the nisles, and the leader of the orchestra returned to his year anif a scattering of applicafrom the galleries. The lights sank again. To young man board, reand moved into the back of the box be. as before, he remains! there throughout the act only to disapper just before its onelias: "To see is to know."

remarked Vallon, "The young gentleman gets opera de luze at a dollar a nightthat is, when he does not get it for nothing."

"Just how do you mean?" I asked, my mind still = entirely clarified.

Vallon gave a deprecating shrug.

"Perhaps I ought not to disclose trade secrets," said to "That young man, when he is not invited to the sponbuys an entrance ticket for a dollar. Very likely he per without his dinner to do so. He stands in an inconspicaro place during the first act—or perhaps he does not amountil the first act is over. Then he checks his hat and cut. pulls on his white gloves and pays his first visit to see a terre box-only he doesn't leave it when the curtain reup, but sits there throughout the act until it is almost time for the curtain to be rung down; then he beats it to atom

"Necessity is the mother of polite invention!" I we've "Why own an opera box?"

"Why, indeed?" said he. "If kind hearts are more than coroneta!"

All of which brings me to my good friend Vallon hims. the intimate companion and social shadow of my wile, in mirror and mentor of fashion, her younger sister's over lier, my comrade in travel, the haunter of my fresh-Vallen, who has his own peg on my hatrack and walalmost have a latchkey to my door -could have if be said for one!-Vallon, who would walk behind my coffin at all funeral and execute my will.

One would suppose that the description of such a one friend would be an easy thing, but it is not; for wise come to the actual drawing of the picture I find that some strange reason there is no salient feature to limitprominent characteristics; no definition. I find his thinking of Rupert all in negatives. I cannot truthill describe him as handsome, brilliant or cultured; but he distinctly not bad looking, dull or uneducated.

The casual stranger would see a rather muscular mat / five feet eight or so, with ruddy complexion and black the plastered carefully back from a part exactly in the milof his rather high forehead. Vallon's features are to means classic, and yet neither are they insignificant. in has an alert, good-natured face, a ready smile and aima superabundance of manner. He talks a good inmakes conversation, I believe the phrase to be limit

piscatorial sycophant, which follows the shark wherever he goes and fesats whenever the latter makes a killing.

> o, naturalists abserve, a flea Has smaller flow that on him prey; And these have smaller still to bite em-And so proceed ad infinitum.

The Pet Cat, like the rhinocerus bird, serves a useful purpose. Indeed he is not in most instances a parasite at all; but just as the hard and jester paid their heard in older days by their songs and horseplay-and on rare occasions by their wit so he pays his by coming when he is hid, playing cards with his elderly patronesses, chaperoning the débutantes, and being neverfailing in his attentions to the entire family. One may pity his choice of an occupation, but at least give the poor devil his due.

My first suspicion of the existence of a leisurely class of gentlemen who live on nothing was when I caught an ancient member of one of my clubs surreptitiously removing some paper and envelopes from a receptacle in the writing room. At a safe distance I observed him smuggle the lost into his ample pocket and stroll innocently away. I held my peace. Rankin was a friend of my father. But I inquired of the captain on the library floor how much writing paper was used in the course of the year. He looked at me in a scandalized way.

"The pyper an' benvelopes some members swipes is sumthin' hawful!" be whispered. "That old gentleman— Mr. Rankin, now," be went on complainingly, "'e tykes 'ole quires!"

I left him burriedly. I did not wish to hear more of the sins of the antique Rankin. But what did he do with it? Carried on a claudestine currespondence from his bedroom probably. Poor old Rankin! He is always at the clubthe earliest to get the evening papers - the first to scutile into the dining room when the club has a free supper. I often see him in a corner drinking a glass of milk and eating a place of crackers while the rest of us are going upstairs to dinner. And he smokes a pipe! I wonder about Rankin! Perhaps, after all, he is the uptown brother of the Bowery gentleman who lives by the grace of the free-lunch counter.

I am straying from Vallon. However, I shall get back to him. I remember now that it was he who told me how some younger men got their music de lure at the endily and gives the impression of always being thoroughly a home and enjoying himself. I am giving his convex.

He is inevitably on the job-Johnny on the spot. He nakes it his business to know everybody he ought to know, and to know who everybody is whom he ought not to know. le convoys débutantes to and from their dancing parties and the opera. He is Rupert to all of them. He is the atural trustee of their reputations-and he has given no and. He is the friend of the old as well as the young, and s always to be found on Sunday afternoons in the drawing ooms of the dowagers. He has a soft, thick, flannel-like pice, some sense of humor and great tact.

In a word he is a useful person to a very large number of seful people and is disliked by nobody-which, now that come to analyze it, is probably equivalent to saying that e has all the superficial qualities which make a person tractive, and few of the deep or profound characteristics

hich make a man either loved or hated.

Vallon is the greatest common divisor in society. He is opular not for what he is but for what he is not. He never ays anything elever or very amusing; but, on the other and, he never says anything impolite or caustic. Rupert always smiling. If there were no smile on his face I metimes wonder what would be left,

He is not distinguished exactly, but he has an air about im an elusive suggestion of class. He is a good sport, lays all games well, and is an expert with rod and gun. te is a handbook of useful information, equally at home in

se woods or the crosstrees.

He will follow a moose all day on snowshoes over a heartreaking crust of snow, cast into an eddy with a thirty-sixunce rod for eight hours on a stretch, and sit in a blind in z icy wind from starlight to sunset walting for ducks that ever come. After you have camped and cruised with a an time and again, with never a cross word, you get to ave a peculiar fondness for him- and that is what we all

Moreover, he has an excellent position and has a distinct nd well-recognized value merely as a social asset. More an one débutante owes her present vogue to Rupert's reful and diplomatic generalship. And, when all is said od done, a fellow with no corners is a good sort to have and at the end of a hard day's work, or when you are ying to pilot a female family across Europe in a cranky

otor.

Yet, with all my fondness for him, I did not, as I truthly told my wife, really know anything about him. There as no need to know anything about him. Nothing would we made any difference. One felt instinctively that, no atter what his origin, his connectious or his sources of come, he could not be any the less the gentleman he was. nd so he remained a friend taken for granted, a somewhat ysterious friend-none the less valued. And he dined at ir house several times between my wife's laughing chalage to my ignorance and her first report as a society

"Well," she announced more than a month after our first "Wonderful! Marvelous!" I

ted-a Doctor Watson to her

"Rupert, I feel sure, has some rt of understanding with old ter at the Stuyvesant Club. I and it out rather eleverly, I think. ou see, Dorothy Post and I both spected something; so we agreed at she should call Rupert up at eclub and invite him to dinnerien we knew he wasn't there."

icity!" I growled; but Clare ent on unperturbed.

re yesterday?" I nodded.

"I called up Dorothy as soon he arrived and she at once telephoned the club and asked Peter who was there. As usual he said the club was empty, or something; and then after a minute he added that Mr. Vallon had just come in-and wanted to know whether he should ask him. Dorothy said yes; and pretty soon Peter came back to the telephone and said that Mr. Vallon would be delighted to dine with her on Thursday. Then she called me up and told me."

"You young devil!" I cried indignantly.

"Oh, that's not all! I've sunk to far worse depths of infamy than that," she retorted. "So instantly I asked Rupert to dine on Thursday, too, just to find out whether he'd accept; but he was too smart for me-said he'd left his engagement book at the club and should have to let me know later. Sure enough, about five o'clock he telephoned that he was surry to find that he had a previous engagement to dine with Mrs. Post!"

"From which you infer," I began, rather amused in spite of myself, "that Rupert has a deal with Peter to the effect that if certain people call up the club and want an extra man for dinner, Peter will accept the invitation for him?"

"Of course that involves Peter's having a list of all his engagements," she commented; "but that's simple enough."

"Well, suppose he has such an arrangement-what does it prove?" I demanded.

My wife laughed.

"It proves that Rupert wants the dinners pretty badly. doesn't it?" she saked.

"Lots of people want dinners!" I muttered; but, in spite of myself. I felt annoyed with my wife for having been guilty of tricking a friend-and amazed at my friend for

having attempted to trick my wife,

After all what did it matter? Yet-the thought refused to remove itself from the back yard of my mind - why should Rupert care so much about being miked out to dinner? He was the most inviid man in New York! I knew of my own knowledge that inside of two weeks he was going off in a private car to spend a month on Jack Sheppard's housebout on the East Coast of Florida; that on his return he was sailing for Algiers, to be gone on a six weeks' motor trip with the Churchills in North Africa; that he was booked for the June salmon fishing on the Restigouche with Charley Keene; was to spend July on a yacht; and was full up with visits at Newport for August and early September.

I knew all this because I myself had tried to get him to go with me on a camping trip to New Brunswick and told him to fix his own time. So why did one with such a surfeit of friends and pleasures stoop - was it a stooping? I was not quite sure - to an intrigue with a club servant to get an

eatre invitation or so to dinner?

In the whirl of the closing social sesson, however, the matter passed from my thoughts and I saw on more of Vallon save to hear of him distantly as shooting alligators in Florida and photographing Arabs in the environs of Biskra and Tunis. Then came summer, and Clare and I donned khaki and plunged into the primeval forests of the Canadian wilderness.

The Foreigner Hat No Pales Pride and Calle Regularly

Lean, hard, mosquito bitten and happy, having fought with salmon and toyed with trout. lured the moose from the ridges to the bogun, and photographed him at sunrise, we emerged from the burnt land, paddled down the Tobique and reached Plaster Rock after an absence of twenty days, hungry for news and white-man's food.

The day was just beginning to fade as we beached our canoes just below the log drive and pitched camp for the last time, half a mile above the town. Tomorrow we should take the railroad and the day after be back in New York.

A hundred yards beyoud our campfire stood a small lumber mill; and near it, in the river, a stalwart old man with a white heard was climbing round on the floating logs and poking at them with a pole, As Clare and I approached he leaped ashore and, leaning on his pole. accosted us good-

naturedly. He was a lusty specimen of the frontiersmanthin and spare, with keen gray eyes and a lurking humor about the corners of his mouth.

'Lookin' fer a camp site?" he inquired genially. "Make yourselves to home anywheres ye want-only be keerful to

put out your fire in the meraing."
"Much obliged," I replied. "We'll take good care to
put ours out. Can we buy some eggs round here!"

You can get all you want down to the store," be answered. "Been long in the woods?"

"Three weeks."

Where be you from?" was his next question.

New York City.

"Don't say!" he remarked. "That's some ways off. 've never been thar. I'd like to go sometime 'n' see Harry Thaw and the Tombs and the guomen, and all the rest of it. I had a good chance last year to get reduced rates to the Sportsmen's Show in Madison Square Garden; but times is hard. My son went instead. But the rich food upset his stomach. What might your name be?"

"Marathon," I answered. "And yours?"

He turned to the mill and waved his hand toward a large sign over the door, which neither Clare nor I had noticed before. It rend:

VALLON BROTHERS-LUMBER

PLANKS, DEALS, BOARDS SHINGLES, SCANTLINGS, PULP, CLAPROARDS KINDLINGS, BOXWOOD, BAWDUST, ETC.

FOR SALE

"I'm Vallon Bros.," he said. "I'm the only Vallon left on the river. Know any folks by that name in New York?" "Why-yes," I hesitated. "It isn't exactly an uncommon name."

The old man took out a corncob pipe and shaved a filling

from a plug he took from his pocket.

"I've got a nephew down thar," he continued rumina-tively. "I ain't seen him in ten years. Rupert's his front name. Ever run acrost him?"

I caught Clare's eye.

"Oh, yes," I answered. "We both know him-rather ill: but I never knew he came from New Brunswic

The old man grinned good-naturedly.

"Oh, Rupert-he'd fit in most anywhere, I guess! I ain't got nothin' agin Rupert. Nice feller to talk to-but he never was no great shakes to work. He never cared none for the river and he had all kinds of highfalutin idees, How's he making out?"

"I don't know anything about his affairs," I returned; "but he seems prosperous. He has plenty of friends."

"Rupert always made friends!" assented his uncle. He looked pensively across the logs, which choked the river from shore to shore. Then he shook his head. "But he'd never have made a riverman!" he concluded.

Was he born here?" asked Clare,

The old lumberman pointed with a bony index finger to a frame house fifty yards below the mill.

Food From Argentina

TO SHIP a bushel of corn from the interior of Argentina to New York costs about the same as to ship it from Buffalo across the Empire State. If you go some hundreds of miles farther up the Plate River, the rate thence to New York is about the same as from Chicago to New York. To Galveston, of late, the rate on corn from upriver ports in Argentina has been considerably lower than from Kansas City.

Taking the average of the last five years Argentina produces about six per cent as much corn as we do—less than one bushel to our fifteen. While we use all of our own corn, and this year some more, the southern republic exports considerably more than half her relatively small output.

Argentina also slaughters something over two million cattle a year—so many, in fact, that her herds have not increased at all during the last five years and have probably decreased. Beef from that country constitutes about four-fifths of the imported supply of England, or about one-third of the total consumption of the kingdom. A little of it has come this way for some years. And since the new tariff act went into effect the Argentine supply has amounted to something over one per cent of our total consumption; but every pound of Argentine beef sent here tends to increase the London price and so attract South American shipments back to that market.

Argentina is bound to be an almost negligible factor in our food supply; but in a time of relative domestic searcity the pantry may be replenished a little from that source.

About Washington

EVERY novice who feels called on to describe the National Capital begins by saying that Washington is unlike any other American city—which, considering its chief function, is a terrible indictment of it. The energy of other cities is expended in buying and selling goods, borrowing and lending money, practicing the professions, building libraries, paving streets.

Washington's energy is most conspacuously expended in discussing other energies. The dominant motive there arises from a struggle for party advantage, which is something that other cities concern themselves with—in a more or less incidental way—about once in two years. The Capital has its special atmosphere, which is mainly a compound of this struggle for party advantage and a scramble for social recognition; and neither of them is a particularly promising element out of which to make an atmosphere.

Nowhere else in the United States are the men who carry forward the major work of a city made so constantly and scutely aware of Mrs. Notch-Higher's dinner invitations and Mrs. Topshell's receptions. Nowhere else are the motives from which men habitually act so roundabout and uncertain.

Citizen Jones knows exactly why he is going to put a new plate-glass window in his grocery—because it will help his trade. Congressman Brown is going to vote for a certain measure because the party leaders whom he regards as the best guessers think it will be popular, or because thereby he can get Congressman Thompson to vote for a bill that possibly may induce Citizen Jones to vote for Brown at the next election.

A charming place, of course—in early April one of the most charming in the world. A delightful place to visit and in which to loaf round. Going from it to Chicago or New York, we sometimes get a queer impression that if it were drawn to scale with other cities the domed building on the hill would fit nicely in the show window of a toyshop.

Government Pensions

A CORRESPONDENT writes: "A hill before Congress provides for the pensioning of superannuated Government employees in the classified civil service. In Congress and the press there is a wide difference of opinion as to the need of such a law. What do you think of it?"

Not a great while ago we happened to be in a Govern-

Not a great while ago we happened to be in a Government office on hosiness. Its chief was an aged and alling man. His appearance suggested an infirmary rather than an administrative deak. In apologizing for the office the chief's superior said:

"That office is a drag on our whole work. But what can I do? The old man has been in the Government service many years. I cannot turn him into the street, and while he is on the payroll I cannot put another man in his place. It would pay the Government to grant him his full salary for the short remainder of his life and send him off to a sanatorium, and put an efficient man in his place."

There are a good many such cases.

The Whole Truth

A BEILLIN dispatch says: "A banker representing many members of the Bourse applied to-day to the listing committee to exclude any further listings of Canadian Pacific stock, because the prospectus issued by the company in Murch for sixty million dollars of new stock contained no mention of the case pending for the reduction of freight rates."

The railroad mentioned issued some new stock and gave a description of it from which investors might deduce an opinion as to its value. A freight-rate bearing was pending at the time. An adverse decision would injuriously affect the road's earnings. Some time later there was an adverse decision and the stock fell sharply.

The road can plead that it is not customary in mention pending litigation of that sort; but it ought to be customary. Every fact that has an important immediate or contingent bearing on the value of a security should be set forth. A prospectus ought to centain just what an impartial investment expert who was examining the security for an individual client would show in his report. If water will spot a piece of dress goods the intelligent merchant says so when be sells the goods. In the long run he finds

it pays.

No one road is more blamable than another, for to set out truthfully the good points of a security is all that custom now requires; but if present or contingent bad points are known to the prospectus writer they should be stated.

Regulation and Vexation

NEARLY every issue of the Congressional Record illustrates a unique condition in the United States—namely, that persons who know nothing about business are saying how business shall be conducted. No parallel condition, we believe, is discoverable elsewhere in the world.

Business should be regulated. Public-service concerns should not be permitted to charge more than reasonable rates. They should be required to safeguard the lives and limbs of their employees, to compensate for industrial accidents, and so on; but all that is quite different from reaching into the mechanism of business and shifting the cogs to suit one's uninstructed famer.

Our statesmen's readiness to feel with the works known no bounds. We have no occan-carrying trade. England and Germany have immense businesses in that line. Yet, in the very field where we have dismally failed while they have brilliantly succeeded, we do not hesitate to tell them how they must organize and conduct the trade—and all on our own closet-spun theories as against their actual

Regulating a clock so that it will run true, and tying a flatiron to the pendulum on a theory that that will make the days longer, are quite different things.

The Historical Argument

FROM Neah down men have used and abused intoxicants; but that signifies nothing whatever. From Neah down men have done all sorts of fool things, and as to some of the things have gradually learned that they were follies and so exchemed them. George Washington drank rum before breakfast. There is no more reason for sticking to George's rum than for cupping and bleeding patients for every illness. The use of tobacco is much more general than the use of intexicants. That human nature does not require tobacco we know from the simple fact that it got along very comfortably for several thousand years without it. That normal human nature does not need alone or know equally well from the millions of men and women who do without it—and female human nature has always bee able to subsist without getting drunk.

The historical argument is bogus. The modern drinker need not be considered at all; for if a mas is truly, moderate drinker, alcohol is of such slight account to be that its presence or absence can make no difference. Me who really want alcohol are not moderate drinker although a great majority of them so miscall themsing Rational men, if they drink it at all, do so precisely in micro become intoxicated in some degree or other. They drink it because they want to have its warmth and sile and cheering lies in their brains.

Public Bookkeeping

THE Census Bureau has been asked to devise a standard system of state accounting. Perhaps that is not to best way to go about it, but we do need an intelligent and uniform method of bookkeeping for states and cities. Bureads are obliged to keep books after a standard patter formulated by the Interstate Commerce Commerce Every road must treat every like item in the same with Consequently every railroad report has a precise mentage and is strictly comparable, not only with the reports of the same road for precise other roads but with reports of the same road for precise.

States and cities keep books in any way they choose and, in spite of notable improvements in the last thee of four years, many of them choose the worst possible walls plain language, some state and city accounts an rail furgeries that would well entitle the perpetrators to peak servitude if they were used to decrive commercial crediminates of merely to decrive voters.

When there is no standard for accounting it is conenough to juggle receipts and payments from one holds another and conceal the fraud under a mass of meanings, non-comparable figures. Your report may disclose that the policy department bought eighteen papers of tacks of three cents each and conceal the fact that five hundres additional jobs have recently been created in the soon department.

State and city reports should be not only accurate a intelligible, but comparable. We hope the House of limernors, if it is still extant, will take up the subject a standard state accounting.

In the Right Direction

HERE are two fiscal reports by Obio. The older on a mess. It consists mainly of a great mass of semplained and unintelligible details. Every petty transition is set forth and the essential facts about the size condition are buried in a maze of figures. The state's foolyear ends November fifteenth; but the preparation so publication of this huge obscurantist report task so we'll time that the volume was not off the press until so the end of the following fiscal year. Of course make had any interest in it then, even if anybody could be understood it.

The plan on which the newer report was compiled a sufficiently indicated by this paragraph in a letter for the auditor: "Government reports should contain our such matter as is of public interest and only so much will receive public attention"—that is, the essential for briefly and intelligibly stated. This report was publicated within six weeks of the end of the fiscal year, and size is publication the auditor's office has received from fift a hundred requests a day for it. People want it because they can understand it.

Not only should every state make a concise, intelligible fiscal report, but the reports for all states ought to a strictly comparable—made up in substantially the same way and embracing substantially the same items. That I Indiana had an economical government and Illines a extravagant one the people of the latter could put that fingers on the difference.

Capital Punishment

THIRTY-FIVE boys, all under sixteen years of age was gathered in a boys' club in a social settlement on the East Side of the city of New York. They were—says I'm Survey—exceptionally keen, ambitious and clean-minora a few of them wage-carners, most of them in the publishment of the city of the

A member aged fifteen addressed the chair as folker.
"I move that the whole club stands for two minutes of honor of the four guamen who died to-day!" Which of club did. Many of the boys commented, with the admiration, on bow gamely the murderers had died of related at much length in the newspapers.

Making boys' heroes out of hired cutthroats sees

dubious proceeding.

WHO'S WHO-AND WHY

Scrious and Frivolous Facts About the Great

uplift provider; but it has happened mostly that he has confined his efforts to the retail trade. statesmen.

SENATOR William Squire Kenyon, of Iowa, is an earnest young man, and typically so. Indeed, it may be said that William Squire Kenyon is The Earnest Young Man.

Life, to the senator, is merely one darned problem after another to be solved; and he is the Eurnest Young Mun who always has a solution ready for any and all that come in such unending proression. He is not to be set down as an indiscriminate problem solver, for the prollems he solves are usually the problems that come within the purview of his immediate gaze; but there exists no problem that he will not solve if given an opportunity-provided, of course, it is a problem that has none but an uplifting effect on the voters of Iowa.

Though the senstor is a problem solver who has few peers, he,

the other hand, takes a few peers himself into the politd aftermath of such problems as he may have it in mind solve. There is nothing reckless about the senator shing at all. He is no harum-scarum solver. Rather t it be said of him that he is a good, steady, equilibratory former, who looks before he leaps to relieve the woos of a body politic.

Plant for Reforming Jennines

Two of the principal objects or subjects of his reform ork have been and are the Senate itself and the District Columbia—both, no doubt, sadly in need of regeneration, of peither having any votes that may be last to the

nator if his reforms ould happen to be omerangish in effect. e is in the Senate witht right of question, til 1919, and can go as r as be likes with the making and reclamsm of that body. So so with the District of dumbia. He has nothg to lose there - which. the way, is the intense tuating motive for that ditional grand galaxy statesmen who desire make Washington a odel city, but seem to tertain no such desires ncerning the suffragelding cities of their me states.

I do not intend to cree an impression that a senator is not willing d anxious to enter on y reform work of any aracter that may be cessary. He certainly

His is a temperament at will not permit an use to exist or a wrong go unrighted, proded the exigencies of a case are not exigent an lowa sense, for extiple. He is an all-round to leade problem solver if a buse corrector and

mostly that he has confined his efforts to the retail trade.

Did you ever walk through a field, carrying a cane or a
twig, and as you walked enap tops of weeds here and there?

Thus with Kenyon. He sees, to his great abhorrence, a
governmental field wherein there is a rank growth of weeds

governmental field wherein there is a rank growth of weeds of one kind and another; but not for him, as a reaping machine, to cut them all down, though he is a good reaper at that. Instead, he proceeds across the field and snaps the head off a weed now and then—or what he considers to be a weed; and at the end of the session he has done

considerable cleaning up.

One of the principal objects of the tendencies of the senator is the very Senate of which he is a member. The Senate is an institution that has been making its dignified progress across the space of years in its own accustomed manner. It has its faults, maybap, but those faults are its own faults and very dear to the Senate. Likewise it has had its little perquisites and pie. Still, there can be no manner of doubt that it has long been susceptible of reform; and it occurred to the Honorable William Squire Kenyon that he was the identical reformer to reform it.

The Strategic Reformer

HE WAS a member; and regeneration, to be enduring and valuable, must come from within and not from without. Casting about for a snitable place to begin, his fearless eye chanced to fall on the barber shop. There, gentlemen, was a valuable starting point! There was a blot on the 'scutcheon of the Senate! There was an abuse, an outrage; for not only was the luxurious Senate and the luxuriant members thereof maintaining a barber shop, but also the same Senate was maintaining a series of baths wherein aged and dilapidated follows might be rubbed together each day by skilled masseurs, who, it may have been, were carried on the rolls as clerks, in order that these statesmen might go through another day without falling into pieces ere the shades of evening fell.

This, it seemed to Kenyon, was a clear subversion of the Constitution and a gross and profligate waste of the money of the people. Also, being sparsely provided with whiskers and naming a safety razor, and not one of the barbers or bathmen voting in his state, he determined to call the Senate to a halt on this iniquitous outlay. He entered into this crusade so vigorously that the Senate bathmon is no more and the Senate barber shop is a more reminiscence, a mere fleeting exhalation of witch-basel; whereas in the gay old days there was always attar of roses there for

the whiskers of Eugene Hale and pomade for the luxuriant treases of sundry other statesmen. He had help, but that only proved the justice of his contention—a great and advantageous reform!

More recently he has sought to reform the Senate in other ways, and principally as to executive sessions. Almost coincidentally with his earnest crusade against free telegraph facilities for his fellow senators, Senator Kenyon tackled this question of executive sessions.

It came about in this way: The President nominated a man for the Interstate Commerce Commission. There was opposition. The senator was of the opposition. However, steam-ruller tactics were adopted and the candidate for the commissionership was confirmed. This so fixed in the mind of the senator from Iowa the Iniquity of secret sessions, wherein his contention lost, that he hastily determined to reform the Senate in that particular and now demands open sessions for the consideration of executive nominations. Once secured, this will be a remarkable reform, and it will have no political reverse English on it, or any effect in Iowa in 1919, at which time the senator's present term expires.

These and other similar measures are in all probability aimply the beginning of the senator's plan to make over the Senate to suit his own ideas on the subject. What we must have, as he views it, is a Senate that shall operate along lines laid down by William Squire Kenyon; a Senate that shall shave itself and cut its own hair; a Senate that shall not use the wires when letters will do as well; a Senate that shall be compelled to wash its dirty patronage lines in public and its membership at home, instead of in the Senate hathroom; and a Senate that in all other respects shall conduct itself in accordance with the austere and earnest convictions of W. S. Kenyon, of Iowa, aged forty-five, and having completed his third reconstructive year in that body.

And it is well. The Senate has been in existence since 1789, and struggled feetly along until April 24, 1911, in a desultory and aimless fashion, without the guidance, supervision and reformatory measures of William Squire Kenyon. Since that day, when he took it in hand, it has gone steadily forward; and there is every reason for the hope that by 1919 it will be completely Kenyonized.

You observe the picture of the senator that accompanies these lines of tribute. It is regrettable that the senator was not depicted when engaging in some notable work of reconstruction. As it is, he is shown in a preparatory attitude, carrying in his hand a roll of paper containing outlines of various other projects for the betterment of his colleagues, all drawn down to the scale of his own

thinking-or about

seven to the inch. The senator was prosecuting attorney for Webster County, Iowa, for five years and then became a district judge, which position he held for two years. He was made a local attorney for the Illinois Central Railroad in 1904, and in 1907 was promoted to a general attorneyship, which he held until 1910, when he became an assistant to the Attorney-General of the United States. He had to do with the beef investigations and, after Senator Dolliver died, contested the election Young, who held it by appointment, and was elected. He was reëlected in 1913.

As I have said, he is an earnest young man. He is also a clever young man, and will never be found promoting any project that is likely to be too vexatious in Iowa. He is a strategic reformer as well as an earnest one; and strategic reform is rarely schismatic—back home!

THE LAME DUCK

Viewe of an Innocent Byetander

WASHINGTON, D. C. DEAR JIM: One of the minor but always attendant borrors of war as it If always attendant horrors of war as it is conducted in Washington, or of rumors of war as they are inducted in the same, is the story of the split in the Cabinet. It always arrives along about the third day, or the fourth day, when the keen edge is off the news and the editors are howling for stuff they can sell extras on. So the correspondents take out their tom-toms and the Cabinet bloom upon strictly in the diamatches.

net blows up—strictly in the dispatches, Jim—strictly in the dispatches, "Secretary Lane pulls out a bunch of Secretary Redfield's whickers and a grave

Secretary Redfield's whisters and a grave crisis results!"

"William G. McAdoo intimates that Josephus Daniels is no better than he ought to be and redgnations are expected!"

"Entire Cabinet opposed to President's policy and disaster is imminent!"

"William J. Bryan tells Lindley M. Garrison that 'War is Hell,' and L. M. Garrison tells W. J. Bryan to go to it, which must work great delay in war plant!"

"President steps on the face of his Secretary of Labor and disposed in his test at "

"President steps on the face of his Secre-tary of Labor and discord is hinted at!"
And so it goes. Take it from the corre-spondent boys, who are required to furnish the stuff for the red-ink headlines and the extrus, and a meeting of the Cabinet in war-time, or heavy-variance, as the common laboration.

extrus, and a meeting of the Cabinet in wartime, or hear-wartime, as the case may be,
begins with a general denunciation of everything the President proposes by all others
present, and an insmediate renunciation of
everything all others propose by the President. From that sort of start it works up
to a free light, in which none of the rules
of warfare as countenanced by divilized
nations prevail, and in which maybern is the dightest of the attentions paid by statesmen

Why Cabinets Do Not Split

Hence there must be a split—of a cer-tainty there must be a split. Resignations are demanded by the circumstances. These sterling patriots the President induced to become members of his official family can

become membere of his official family can never sit by, it is stated, and not make a vigorous protest against his suples or otherwise policy by giving up their portfolios. The situation is very dark and smells like cheese, and internal dissensions predicate external dissent.

However, the split doesn't come. It never has and it never will. The reason for that, my dear James, may be imported to you in a few words. The reason there isn't a split in the Cabinet is because every man in the Cabinet would rather lose his right leg than his job. You couldn't get that launch of patriots to quit unless the President ordered them on the firing line; and I guess they wouldn't quit then, but would take the official carriages and drive down slowly and trust to time to straighten things out. The men in the Cabinet are not trying to get out, Jim. Their principal concern is with staying in:

ataying in.

When a Cabineteer pounds the table at another of his set, however, it is immediately taken as an evidence of the gravest of row. I have learned, after long observa-tion, that what a Cabinet member may think privately of the policies of his Admin-istration, or of the plans of any one or all of his colleagues, doesn't count much in bring-ing about u split. Plenty of times they shout at one another, but it is entirely spectacular and momentary.

Founding the table at one another doesn't mean resignation, and usually does mean that after the Chief Person, at the head of the table, has said soothingly, "Now, boys, you behave?" the disputants will go out and get a drink at some convenient and not too public place, and forget it - unless, of course, said disputants happen to be Mr. Bryan and Mr. Daniels, who will seal a new compact of eternal friendship with beakers of

buttermllk. Don't you worry about splits in the Cabinet. There are no such things—officially, I mean. It is quite true that certain members of this Cabinet have rather set opinions concerning certain other members, but that sort of thing doesn't provoke a split or even

Learn the Secrets of Famous Chefs

On page after page of Cox's New Manual of Gelatine Cookery are revealed the many little "knacks" by which you can serve just as appetizingjust as attractive dishes as a che can serve. Here are dishes for formal occasions and disher for everyday use-all distin guished from the commonplace So carefully explained and so easily understood!

Jellies, puddings, creams frozen dishes and other dessert are given in endless variety.

Cox's New Manual of Gelatine Cookery

is indeed a storehouse o indispensable recipes. A remarkably complete book compiled by Marion Harri Neil, head of the Philadelphi School of Cookery, and cov ering every course from soup tdessert. We will be very glad to mail you a free copywith our compliments - if yo will but ask us.

Sale Agents in U. S. A. for I. & G. Cax, Lis Edinburgh, Scatland,

"There's the coffee we use— Barrington Hall, the Bakerized coffee. You can generally count on things advertised in this magazine."

SEND for a trial package. Then you can see for yourself that it is not only better and purer, but that it costs less per cup than ordinary coffee, as it makes more cups to the pound.

A Trial Can Free

WRITE us your grocer's name and we will ernd you a trial can of Barrington Hall, enough to make aix cups of delicious coffee, and lacklet, "The Evolution of Barrington Hall" This explains the three stages of progress through which this formous coffee how passed.

BarringtonHall The Baker-ized Coffee

At first Barrington Hall was sold whole of ground as ordinary coffer is haday, then steel cut with the bitter chaff resolved, and finally Baker ized. In it as have retained the good points of our other methods and adopted new frustures (explained in booklet) that make it exmany without economising. A largey not at the expense of booklet, but one that is an aid to correct itsing.

Baker's Steel-Cut Coffee

Soul-Qui Coffee backs a little in quantic and in symptom of granulation when compared with Baker and Beautigns Hall, but the that with its eligethmobile taste is regarded from it alone. It is an appearing to the so-saled (at online) that are effected in prototion of likely hald Coffee.

Our Crifice is for sain by gracers in all different inset tirees. Where not for sale, we will send to be Passed Post prepaid and arrangements on he made with your gracer to sain a you

HAKER IMPORTING COMPANY 116 Hudson Street, New York, N. Y. 246 No. Second St., Minovapolis, Mino.

a splinter; for, when it comes down to brass tacks, the only opinions held in that Cahinet worth considering in their final form are the opinions held by the President. In-asmuch as the President has it is his power to demand resignations, there may be polite differences, but there are no here a where-I-quit features. You couldn't jar one of those men out of the Cahinet with a blast of dynamite. They are pleased with their jobs. They are not splitting with anybody or over anything.

anything.

The most circumstantial story of the lot concerned the resignation of Mr. Bryan as Secretary of State. There are two reasons why this story is not true. The first is that Mr. Bryan doesn't intend to resign—now or at any time in the near future. The second is Mr. Wilson does not intend that Mr. Bryan shall resign. Inasmuch as the President and the Secretary of State are the two high contracting parties in this business, it may be set down that Mr. Bryan will remain in the Cabinet indefinitely and that Mr. Wilson intends to see that he so remains. Inasmuch as Mr. Wilson put Mr. Bryan in the Cabinet for certain, definite reasons, largely political; and lnasmuch as Mr. Bryan went into the Cabinet by the same influences; and inasmuch, again, as those certain, definite political reasons are us powerful now as they were in the fall of 1912, Mr. Bryan will stay where he is and Mr. Wilson will keep him there.

Many persons have said they cannot sectiow Mr. Bryan can stay in a Cabinet that
is staging and managing a war, owing to his
well-known peace proclivities. These persons do not stop to think what the effect on
Mr. Bryan, Mr. Wilson and the Democratic
party would be if, right in the midst of a
situation like this, Mr. Bryan should go out
or Mr. Wilson should put him out. Mr.
Bryan is sincerely enough for peace, and so
is every other man who thinks twice about
what war means; but Mr. Bryan is in
exactly the same status as a man enlisted
for a war. He has enlisted and be will not
let his fondness for peace bring him to the
desertion of his chief, and all that would
mean as the Democratic party is now constituted. Mureover, Mr. Bryan likes his jeb,
even if we do show some symptoms of war.

Peaceful War Preparations

Nevertheless, though there are no splits in the Cabinet, there have been occasions, numbering two or three, when certain sections of the Cabinet rather put over something on rertain other portions—that is to say, though there was no particular show of opposition in regular Cabinet meetings, there have been moments when the army, for example, rather resented interference from other quarters and did a little of its own. There was that little question of restoring the embargo on arms. Though it is quite true the Administration has high hopes and pleasant anticipations of the friendliness of Carranza and Villa and the other Constitutionalists in Mexico, there was a measure of doubt of some of those eminent statesmen and soldiers in the minds of some of the army people, who knew them and their soldiers. It was not beyond the possibilities, these army people said, that the arms which this country allowed to go across the border to the revolutionists might, in turn, be used against the soldiers of the United States; and the army people thought, as things were at a crisis, it would be well to stop the shipment of arms and munitions of war.

Now, Jim, I am telling you this story as it came to me. Perish the thought that I should even intimate that the War Department took any step not fully decided on by the Administration! Perish the thought—

but listen to the story:

The question of restoring the embargo was warmly discussed. There was opposition to it by certain members of the Cabinet. It was pointed out that this might mean the severing of friendly relations with the Constitutionalists, who needed the arms and who had large orders in this country in process of filling. To be sure, the American gun makers and ammunition makers, to a man, patriotically and immediately notified the Government that they would cancel all orders for cartridges and rifles, and didso; but there were arms and ammunition in transit.

Considerable debate ensued and considerable delay. So, as I hear it, while the debate and the delay were on, somebody somebody, name not known, but a highly efficient person none the less—sent an innocent telegram to General Bliss, commanding at the border, which was to this broad general effect:

A little more "grape"— if it's Welch's

No other drink than Welch's could so typify Americanism. Welch's is the pure unfermented juice of the finest Concords. The Concord was originated in America and Welch's originated the popularity of Grape Juice as a beverage.

You get the Nation's best, and Nature's best AT its best in

Welch's

Keep a case of Welch's in your home, and be prepared always to give your family and friends a treat they will enjoy. Try one of these favorite ways of serving Welch's:

> Welch Julep Fill an ordinary size numbler full with usint leaves (do not use the sterns). Add a temporally of super. After this has "drawn" for about two minutes, strain into a tail glass filled with its cracked the size of a valout. Add two sloes of mange and serve with springs of the minueticking out of the glass.

> Welch Punch for a dainty unformented punch, take cause, one pint of Welch a, one quant of water and one cup of water. Add sliced consegue and pinespile and serve cold. This punch has become a standard of excellence.

A Suggestion

To extend the use of Welch's, June 29 to July 4 is "Welch Week" in the stores of the principal distributors of Welch's.

A Welch Week or at least some Welch "occasions" will be appreciated by your family and friends—don't forget the youngsters.

At the party, at that verands "affair," at the picnic on the Fourth—nothing quite so good as Welch's.

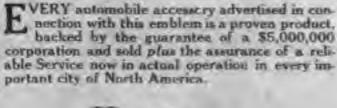

Look for the store with the Welch display, The National Drink for the National Day.

Get the Welch habit it's one that won't get you

If unable to get Welch's at your dealer's, we will send a trial dozen puts, express prepaid east of Omaha, for \$3, Sample tour-ounce bottle, 10 cents. Booklet of recipes free.

VILLE CO.

"We understand large quantities of arms and ammunition are being snuggled across the border. Please investigate and report." General Blies is a citizen who instantly can tell a hawk from a handsaw. Also, he

can read between telegraphic lines. Also, be knew what might happen if these arms and munitions of war went in. Officially he had been warned that smuggling was going on; and far be it from so good a soldier as Tasker Bliss, commandant at the border, to

allow any emuggling.
So he sent out men to see whether there was smuggling and stop it by seizing what was being smuggled, especially if the smug-glers were smuggling guns and cartridges. Naturally this took time. Investigations of that moment cannot be concluded in a moment. The exact amount of time it took to gather in all the guns and cartridges was seven hours. He sent a telegram that read

seven hours. He sent a telegram that road semewhat like this:

"I have the honor to report that I tonk your telegram to mean that all arms about to be sent over the border should be selved; and I have maked them."

When that telegram came to the War Department there was consternation. Here was a general of the army who had actually seized arms before the embargo had been restored. It was amazing! Also, it called for long discussion, and great cure was ex-sected in replying to the general. After four hours and a half the War Department.

resovered from its amazement sufficiently to send a telegram to General Bliss, which was somewhat like this:

"Oh, our dear General, what have you done? Fie on you! Canader this a slap on the wrist. You were fully aware that the embargo was not restored when you took this summary action. Bully boy! But in future please regard our instructions more future please regard our instructions more carefully."

You see, the War Department knew Hilm and knew what it wanted; and while the Cabinet was debuting the question the War Department took a twelve-hour advantage of the situation.

War According to Hoyle

One of the most interesting features of the situation, as it developed, was the vast and public fondness displayed by the spokesment of the Administration for Villa.

It seems that Villa, who had been of the opinion that war is a business of fighting and fighting is a business of killing, was told by General Scott, not long before the battle of Torreon, that he should not conduct his part of the war on the broad, general theory that every one of the anemy who fell into his hands should be slaughtered immediately. "Why not?" asked Villa. "That is what we are righting for, isn't it?"

"But, General Scott replied, "there are certain rules of war that are regarded and practiced by all nations. You should neek the good opinion of the world by observing those rules."

those rules."

"What rules!" asked Villa. "I never heard of any rules of war except to kill as many of the enemy as I can and keep from getting killed myself."

Whereupon General Scott gave Villa a book on the rules of war, which Villa, having learned to read English when he was in prison, read with interest, and which be had translated into Spanish for his generals. The result was that at the battle of Torreon, when the Federal general proposed a truce when the Federal general proposed a truce so the wounded might be taken care of, Villa sent word that he needed no truce as all his wounded were in the hands of dactors and nurses. It developed that he had fitted up a train, with a tile-lined operating car, in charge of a surgeon from Johns Hopkins, and that his wounded were cared for as

soon as they were brought in.

This sort of thing gave Villa a fine mark with the Washington people and they depend more on what he may do in the future than they care to say. They think he is the one real friend this country has among the fighters in Mexico.

But, returning to the question of discord in the Cabinet, I am given pause by this item I read in a local newspaper:

"The President left the White House early this morning for the Virginia golf grounds and played mineteen holes with Doctor Grayson.

You know what that nineteenth hole at golf is, Jim; and I'm wondering how the President will explain to Bryan and Daniels when they hear about it! However, let's hope be enjoyed it. Yours, for a tall glass,

PULLING OFF A BIG DINNER

(Concluded from Page 13)

constantly tied up in chairs at a hotel would finance many a prosperous business.

Then there are depreciation and loss. If a waiter drops a tray of dishes it furnishes a laugh for the diners and bright remarks about deductions from his wages; but the loss from dishes broken by waiters is a mere incident, a pleasantry of hotel management compared with the relentiess breakage of china and glass that goes on in the kitchens. One large New York hotel has losses of this kind amounting to more than a hundred thousand dollars yearly.

If an efficiency expert could prevent breakage in the dinner season alone it would be equivalent to a magnificent salary, for the weekly crockery bill then often rises to four or five thousand dollars. Most of the breakage occurs in dishwashing. A chip or crack in glass or plate is as effective as a complete smash.

From time to time the attempt has been made to feed pigs on hotel swill, but with little success, because no way has been found of separating from it the bits of glass and crockery which kill the pigs. Not only glass and china go out in the swill but knives, forter arrange and other plated ware.

forks, spoons and other plated ware.

The depreciation and loss on silverware are high, and the loss in linen amounts to more than a thousand dollars a week during the dinner season—not from wear alone, but from burned tablecloths and torn capture.

The plant downstairs is a comprehensive factory for the manufacture of good cheer. Separate cold storage is provided for supplies like milk and cream, butter and eggs, fruit, vegetables, meats, poultry and game, fish and oysters.

Ice is made; water bottles frozen solid; ice shaved, crushed and cubed for table use; frozen desserts prepared.

frozen desserts prepared.

Machinery is everywhere, run by the clean, flexible electric motor, delivering energy wherever wanted at any rate desired, from one-twentieth of a horse power up. Potatoes are peeled by having their jackets ground off quickly and economically. Bread is sliced by apparatus that makes several cubs at once—and vegetables too.

cuts at once—and vegetables too.

The steward goes to market looking for long cucumbers, which lend themselves to results under such a continuous process. There are machines for washing, mixing, kneading, whipping, grinding, cutting and making food ready in countless shapes and

When plain John Smith pays ten dollars for his place at a big hanquet he wants to see and hear the animals, and also to feel that the occasion is out of the ordinary. Perhaps he does this only once or twice a year, and he expects a certain degree of luxury and even extravarance.

luxury and even extravaguace.

A big dianer is staged to give him full value in that way, besides in good food and entertainment; but behind the scenes, after all the costs, risks, losses and other items have been figured, there is no extravagance at all. The dinner industry produces its goods on a staple manufacturing basis and sells them at a pretty close staple profit.

Sponge Muscles

RUBBER-SPONGE muscles is a vivid to description of a new method of filling up a hole in a person's hody caused by accident or perhaps by a surgical operation. Some operations leave a hole that in size is serious, and that can be repaired with difficulty—if at all—by one of half a dozen surgical methods; and the only time the rubber-sponge method has been tried on persons, so far, is after such operations.

A rubber sponge accidentally left in a wound was found months afterward with new flesh grown all through its cavities. Experiments that followed, during the past two years, show that, at first, a rubber sponge in a wound causes a swelling; but soon the flesh begins to work through all the interstices until the sponge becomes a solid plug, which does not seem to cause inconvenience of any kind. Lately the idea has been used to obtain the flesh plug needed after some operations.

TRUMBUL

CYCLE

CAR

You could write an almost perfect description of this wonderful little car just by putting down the car qualities you have wanted for years: lightness, low fuel cost, lowest possible tire cost, the rugged strength of a truck and the graceful, stream lines of an imported racer, all achieved without freakiness or experimental vagaries.

The Trumbull is an evolution. It stands for all that is known of automobile design and construction. Every mechanical device that insures strength and durability, every refinement of design that has been developed in the automobile industry, is incorporated in the Trumbull. Nothing is lacking.

To read Trambell specifications is to recognize them as the specification of a highly developed obta-modes automobile. The only difference is at size. Machanical starter? Yes. Electric lights? Yes. Combet? Ample for two, with compartment in reas for two hundred punted of laggage. Four-cylinder water-cooled unter. Splitched high-tension magnets. Non-skid U. S. Tors. Top, windshield, electric lights and hom, mechanical self-starter and tools are

The Trumbull Cycle Car was designed by an eminent automobile engineer. These designs were checked over, down to the minutest bolt. Then car after car was built solely for testing purposes. There is literally not an ounce of metal in the Trumbull but has been proced.

The motor is a marvel of compactness.

GENERAL MOTORS COMPANY

TRUCKS

GMC Gasoline and Electric trucks are solving the delivery and haulage problems of hundreds of merchants and manufacturers.

Our line is so broad and comprehensive that you can select a GMC truck that exactly fits the conditions of your business.

And whether you need a small electric delivery wagon or a massive gasoline dray-you can feel confident that the GMC truck you choose is a high-grade commercial vehicle.

There are no better trucks built than those going from our factory every day. They are sold at reasonable prices, but are absolutely of highest quality, both in material and workmanship.

Our prices are low because of quantity production and a sound factory policy that reduces overhead expense to a minimum.

THE STORY OF A HARLEQUIN

Continued from Page 15)

decent paper would print; but this is enough

to show the desperate character of the man. When I first tried the Apache Dance with Louise Alexander her hair arcidentally fell down, which greatly added to the effect of the thing. "A good idea!" I exciaimed. "We'll keep it for America." So I had hig bone hairpins made, with weights to them. These she were, and they would drop out and her hair would fall down during the

From the original Whirlwind Dance, which I invented, I got the reputation of being the first man to dance on the stage in a dress suit: but such reputation, as well as the invention of the dance itself, was quite a matter of accident. I was dancing in London at the time. One night I was late in getting to the theater. I was supposed to dance in tights, but was so late I had no time to change and had to rush on the stage in my dress suit. In turning I grabbed the girl with whom I was dancing more quickly than I intended, not being accustomed to dancing in anything but tights; and, having lost my balance, her weight pulled me over. To regain our equilibrium we had to get up great speed, like spinning a top. My constrails began to fly in this furious dance and everything was wild and hillarious.

Later the manager came back to me and

"That is a wonderful idea! You are going to wear your dress suit right along

"No," said I; "that was an accident,"
"Don't wear your tights again," said he; wear the dress suit.

did not work half so hard after that; in fact I could not work so hard in my dress suit as in my tights.

An Accidental Success

Another dance I was credited with having carefully worked out was also a matter of accident. This dance was put on really in the last set of Madame Sherry, and was called the Dance of Danger. Derothy Jardin was playing the part of the manish woman. They had put a song in the last act to bol-ster the thing up, but when Lesieve heard

it he said:
"I dun't think it will do."
"Why not fix a dance in there!" I

suggested. "Do so," said he.

Then something occurred to me and I said to Lederer: "Leave it to me!" And this he seemed quite glad to do.

Just before we sent on the stage that night I said to Miss Jardin;
"I'm going to pick you an and throw you

"I'm going to pick you up and throw you round, but don't be scared—I'll put you hack on your feet every time." She weighed

one hundred and fifty-five pounds.
"All right—I'm game!" said she:
Well, we danced like mad; and every now and then, with the change of music, I would pick her up and whirl her round. The dance was a scenation; but my desire to help got me into trouble, for when it was over Lederer said:

'Great, my boy! Great! But you'll have to go on and do it every night. She's such a tall noman, and so large, mobile else can hundle her." And I had to do it! Again, in this same Madame Sherry, encof

the most important things was more or less arridental. Lederer was opposed to putting in the piece Every Little Movement Has a Meaning All Its Own, which is a dates accompanied by a song; but I urged him so hard that finally he consented. "Very well; I'll ring up the curtain with it," be said, which is the worst insult you

can offer in one in the profession.

I said nothing; but the answer was that
the piece, instead of being killed, as Lederer had expected, by being put on first, when there was practically no one in the house to hear it, made the hit of the show. People gut into the habit of getting there on time just to enjoy this part of the performance. Lederer was quick to recognize this and made Every Little Movement the theme of

the entire play.

I was the first to put long dresses on the stage for dancers. I did it in the extravaganza called 1492. When I proposed the thing Manager Rice told me I was crucy that nobody wanted to see gowns on the

"That may be true of the men," I urged: "but if you put long evening gowns on your ladies the women will bring their bushands and talk them into buying the same things for them. That will help the drygoods trade, I'll make a bet that the merchants will do-nate the gowns if you'll give them credit on

the program."
"I won't do it, even if you get the gowns
for nothing!" Rice said.
Notwithstanding, I went to the head of one of the leading dry goods stores, and had a long talk with him. He donated the gowns: and I put on a gavotte, with twelve girls in it, called Twelve Dally Hints From Paris. The gowns made the thing a big suc-A year later George Lederer adopted the idea, calling it the Show Girls; and then George Edwardes took it up in London. I created the first Pony Ballet; in fact I

have had something original every season. And I have danced twenty-two years consecutively on Broadway.

The Little Red Domino

My creation of novelties has not been confissed wholly to dancing. One day Mark Lucien told me be had to get a sensation for the New York Roof Garden and saled me to help him think up something. So we conjured up a scheme. We engaged Little Datey, who was then denoing at the Majes-We put a red domino on her and sent her to Europe, where we had arranged that a newspaper man should meet and exploit her. She was to travel over Europe, always

wearing a little red domino.

This she did for eighteen months, taking in Paris, Berlin and London. Wherever she went an air of deep mystery enshrouded her. She got to be an object of the keenest interest on the part of newspaper men and soon arquired a world-wide reputation as the Red Domino. Then we brought our wonderful European cutch to New York.

For days before her appearance at the New York Roof Garden she was driven through the streets in an open barouche and took daily drives in the Park—always wearing the red domiso. Nobody knew who she was but Lucien and myself.

That she made a big semantion is a matter of history. Owar Hammerstein character-ized our work as the most remarkable bit of

The late dancing craze occurred—why?

Dancing has been in the air since the world began, but few could do it well. The waitz is the basis of all parlor dancing, but it is the most difficult to learn, because to do it gracefully depends so much on perfect rhythm of movement. Therefore any modfication of this dance that was easy to learn

was balled with delight.
Dancing contributes to vanity. It makes
the old young. The Tyrolese retain their
youth by nightly dancing. It makes the
ungainly graceful. It brighters the eye and
reddens the cheek; and if there is a possibility of beauty in a homely woman it brings
it out. A woman who never knew how to
ank or correl a dress leaves to do so through walk or curry a dress learns to do so through dancing. It has made the elderly man graceful again. Instead of worrying about his business he is dancing.

No one is burred. The very old and the very young, the very rich and the very poor all steat it. Even the lame, the halt and the blind we doing it now. Speaking of the lame dancing, the most beautiful waltzer I ever saw was a man with hip disease my father taught. He was so lame that he overbalanced almost six inches when he put his foot down. When he danced he put his

his foot down. When he danced he put his weight on his one leg and with the short one worked on he tip of the toe.

Steat people are the essiest on the flour. I do not know vhy, unless it is that they feel their weight and work it into grace. There was a German woman in Philadelphia who weighed three hundred and fifty ounds. One night I danced with her and and her to be one of the lightest waltzers

Dancing is hygienic. It stimulates the quickened circulation promotes high spirits. The tired business man finds recreation in it.

for recreation means change, not inaction.
Assurely as the night follows the day the present dancing came has developed a great army of teachers an army made up of all kinds and conditions of men and women,

old, young and middle-aged.

Of all the new trackers the burbet seems to be the most aduptable, possibly because he is so slick. It would be hard to tranrelationship between the barber's

dancer's arts; but the aforesaid gentleman seems to be nimble-footed as well as nimblefingered, spider-legged, sprightly and alert of movement—all of which lend themselves to dancing. The fact that one of these spindly persons could be a good dancer would be quite as accountable as that a grasshopper could dance well; but that a car conductor or a policeman should be able to dance gracefully, with his notoriously hig feet, is quite as difficult to imagine as it would be to funcy a broken-arched ex-headwaiter doing it. Yet all these and more are posing as teachers of the Tango and the Turkey Trut—all hanging out their shingles. But people who themselves dance badly often make good teachers.

And those of the unemployed who do not teach spend their time in dancing in the

cabarets for what they can get out of it.

But they're all fooling the public, for the present-day dances are nothing but graceful walking. You go into any of the cafes and you will see people dancing on the floors—guests—who are better dancers than those who are better dancers than those who are hired to amuse them.

New Dances Easy to Learn

These mushroom dunning teachers—ob-viously to boost prices—dilate on the diffi-culty of learning the Tango and the Turkey Trot; but that's all rubbish! I will guarantee to teach any normal person a one-step, waltz, Tango, Turkey Trot, Maxise—sny-thing they are doing today—in one hour! There is a vast difference between danc-

ing and teaching dancing. After I had spent ten years working with my father he

Now I am going to teach you how to

The first emential in teaching is mover to

lose patience with your pupil, and also to keep him from losing patience with himself. Do not start by teaching your pupil to watch your feet or to watch his own. If watch your feet or to watch his own. If you do you will get him into the had habit of looking down when he dances, like a mourner at a funeral. Tell him to keep his head up and you will be respensible for his feet. I can tell hy looking at the eyes whether the feet are going wrong. Impress on him that dancing is done with the brain and not with the feet. However, after he has learned the steps, it is a good thing to practice before a mirror. By teaching your pupil not to look at his feet you help him to overcome self-consciousness.

These mushroom teachers do not know

These mushroom teachers do not know These mistroom teachers do not know anything shout all this. They cannot explain a point. They cannot tell a pupil why it is difficult to take a certain step or what is the remedy. Yet they go on teaching and protending to get all kinds of fabulous prices for doing so; but the fabulous prices generally resolve themselves into a matter of fifty cents an hour. cents an hour.

Anybody can learn to dance. Age has nothing to do with it. And I have already shown that neither lameness nor obesity stands in the way. It is not easier to teach a child than to teach a man or woman of ninety; in fact the youngster does not learn so well, has not the intelligence, is too flighty. He may pick it up quickly, but he will not

do it correctly.

Take a man who does my style of dancing, for example. Though he must begin almost as a haby, he is no good at it until after he is twenty years old, because he has not the balance, the precision, the physical control. Today, at forty, I am more finished in my dancing than I was at twenty-five.

The girl learns more easily than the bey, because she is less awkward: and the

because she is less awkward; and the woman is much essier to teach than the man, because she is a natural dancer and can more easily abandon herself to the motion of dancing. But the same may be said of the male and the female along all lines. The girl in school is always the bright one and the boy is always the dummy.

An Obliging Enemy

NEGRO truck driver backed his A into the space allotted to a rived transer concern at a railway freight depot in Dallas, Texas.

"Hey, dar, niggah!" yelled the driver on whose territory the other had transgressed.
"I'll knock yo' outs yo' house an' home of
yo' don't back up!"

"I's got no home," retorted the offendbout dat?" "Now what yo' gonna do

I'll dig yo' one, niggab-I'll dig yo' one!"

"" Way Jour spot the Swanes Ribber, Far, for every, Dere's what he of fells stay."

Your Compare-How to Use It

THE same as yourself, when I was a kid there were two questions that not even my Sunday-school teacher was able to What holds the stars up? The other was: Where does fire come from? It is not absolutely sure to me, even yet, that anybody ever has answered those questions luridly and comprehensively—so many un-swers being just different ways of looking

at questions.

Which of us does not recall lying awake at night and looking up at the stars and wondering why they did not fall down? They do sometimes, as any boy can tell; but why not all the time? Sir Isauc Nowton propounded a certain theory about it; but it is like the critic's comment on the beroine in a novel-she is not convincing. Not even my college professor could ever put the law of gravitation across with me. It is thin stuff. But, anyhow, the stars are fine to look at.

Then again, that question of the fire. How many times have we all asked mother what made the match light when you struck it? And where did the flume of the candle go when you blew it out? And if it was not before it went out, why did it not stay but where it went? And where did it go anyhow?

The dear lady never could get those questions are wered to suit us at all. Has this ever been plain to you? If you have got that and the question about the stars settled so that you understand them clearly

you are some wise. There is something mutual between the stars and the campline—that seems plain. The campline at night under the stars—who has not studied in that school and found out. that perhaps answers are not so important to life as just questions? Certainly life in the open would be robbed of all charm were

the open sould be related of all charm were it not for the stars and the first.

Where did the first fire come from? Who made it? How was it discovered? Intermiting books have been written on those questions; and some of them have paid fair royalties, though under (also protenses,. The only thing certain is that a first campine was made; and without the campine fire was made; and without the camplire there would be no sport, no geography and no history.

Father's Magic Fire Stick

Books have been written about the camp-Books have been written about the camp-fire itself—bow to make it and use it—proof that man is drifting away from that day and age in the world when every man knew how to build a fire. We face the time when the only man able to build a fire will be the panior—and he will belong to a union and be liable to walk out any minute.

In the old days father used to get up before the other mombers of the family—did be not?—and build the fire in the kitchen stove, summer or winter. He always built the first fire in the kitchen stove, because that was where the later operations of the day began.

He went out into the kitchen without much on but a pair of carpet slippers; and what he did—in a climate where perhaps the thermometer was far below zero and the kitchen floor well covered with snow that had blown in under the kitchen door was something direct, simple and highly

You can gamble father did not make any false motions about that fire. He had been building it for sixty years and knew how. Besides, it was cold.

The preparations for these matutinal pyrotechnics were made on the evening previous. Before he went to bed, father went out into the kitchen and got his kindling wood ready for the next morning. He had a trusty hatchet sacred to the purpose of splitting kindling, and with the said hatchet he would reduce certain pine The day boards to inflammable sizes. the ten-cent bundle of kindling wood, with resio on the end-the sort you buy at a delicatessen store—had not yet dawned in American family life, and in those days

people did things for themselves.

After futher had split his own kindling wood, the last thing he did was to take a straight pine stick; and with the trusty pecketkane—which at that time made part

Betreit Venue Steve Co., Datrait, Mich. DEIROII VAPOR STOVES

DRITED LODGE OF THEMSOFRISTS

of every householder's personal equip-ment, for all householders then chewed tobacco instead of amoking cigarettes-raise along the edge of this stick a series of undetached shavings, which stood out fan-like from the parent stem, fine and thin at the free ends. This stick was the essential ingredient of the next morning's fire. It is

ingredient of the next morning's fire. It is very much worth remembering as a historical institution in American folklore.

The next morning rising in his whiskers and curpet slippers, father would pass through the "settin" moon, "dinin" room and pantry to the kitchen. There he would make a pass or so with the poker to free the grate of seles, take off the stovellid and insert his prepared shaving stick in such fashion that the free edges of the shavings would just protrude through the firegrate.

Over this he would place small sticks, then larger sticks, then dry stovewood; and then other stovewood—or maybe soft After that he would replace the stovelid. Then he would open the two little doors in front of the stove above the hearth, or castiron apren, which is in front of all good cookstoves.

Probably you do not know what this sort of hearth is, since you mostly have read about hearths in books that have Yuletide written on them in gold letters, and that cost anywhere from ten cents to a dollarforty, according to the value you place or the folks you send them to. A real, true, honest-to-goodness hearth is made of cast-iron and is situated cust of the conkstove and south of the two little doors aforesaid.

The Old Timer's Methods

Well, anyhow, when those two little doors were pushed open father saw the edge of his shaving stick protruding between the bars of the firegrate—not the sort of shaving stick you use, but the one he had made the night before. Whereupon he scratched a match somewhere and touched off the shavings drawing the little doors. off the shavings, drawing the little doors a trille closer together and fixing the damper in the back part of the stove so she would draw well. After this father went back to the sitting room, shook down the bac-burner, put in another had of coal, and

burner, put in another hod of coal, and went back to bed to get warm.

About this time you could hear sister begin to move round upstairs, where there was no fire, about as swift as a grasshoopper in the dew. Then sister would stroil congeniedly down and put some more wood on the kitchen fire and get the cruck out from behind the cookstove, where it had been wrapped up over night, and start in to getting the calos ready—What?

Afterward, when the baseburner was beginning to get red round the middle, buddy—also, son—would get up and before long all would meet in the atting room for family prayers. We needed them? Maybe. But then, as compared to the be-junitared

But then, as compared to the be-junitored

flat of today, I am not so sure. Still, you can find the same stars and, for that matter, can use the same old kindling that matter, can use the same old kindling stick in making a fire for yourself out-of-deors; in fact you will find it extremely useful in building a campfire—which is just what we started to remark a while back. Now, to use the same phrase you did in your first composition, there are a great many kinds of campfires—too numerous to mention. But a some of them are force.

mention. Bad as some of them are from a thechnical standpoint, none of them is any-thing but good from a human standpoint. Most of them are built by amateurs, and this is eminently fitting.

The higoted old-timer, who knows it all and insists that his way is the only good way, is of all beings the most intelerable. The amateur needs but little of his lore, but would best figure out for himself what he wants to do and how to do it - which is the

practical and usual way in human life.

One good rule is advanced by most authorities—and that is not to build a campfire too large. A small campfire is warmer, safer, more convenient and more comfortable. Of course your fire must be larger than that of the old conkstove, unless you have contrived some retaining walls to hold in its heat. A big campfire takes too much wood, is too apt to set the tent on fire, even if it does not set the woods on fire; and it is hard to put out when you leave. It will make you uncomfortable when you cook at it and it will burn the grub. Still, you will probably build your own campfire just as large as you like. Par cobicson! It is much hetter than not to build it at all.

Different camptires are used for different purposes. Suppose you were traveling

A SPECIALIST IN HOMES

Philadelphia is a city of homes to a degree which is not true of any other large city in the country. Every home is a buying center. The better the home, the greater the buying power. Philadelphians have homes in the real sense of the word—not flats and tables in restaurants. This makes Philadelphia a market for everything that is bought to be used, or worn, or consumed in a home.

In every one of these homes where the buying power is measured by an income large enough to be taxed, you will find the

PUBLIC EDGER

Inst through a country, making one-night stands and cooking four meals a day. That requires one sort of fire. A permanent count, where there is plently of acod, asks for a different sort. Deep now requires yet another kind—a pleasant summer site still another. A score of things may affect the fashion of your campiles, and it is your own purt to make each fire in workmanide fashion, adjusted to the needs of the bour.

A very common rule laid down by makers of being on outdoor sports is that the camp-five should be laid between two small green logs, such four or live feet long, bewa flat on one side, and placed six inches apart—or maybe aircen inches: I forget which. That is all very well if you have plenty of time to make ween fire.

make your fire.

An Indian lives out-of-doors all his life, but he never builds a camplire that way. Neither can you build a camplire that an Indian will not take apart and make over again to suit his own notion. Some of these notions are good ones and are accepted by white men that live in Indian countries.

Suppose you are traveling with a party of Indiana or breeds, with a packtrain or cause in some Nurthern wilderness country. You will not see any of these rice little side logs out at all. Perhaps, also, you will revie your idea as to the assertion that the Indian always builds a small fire. Sometimes he does not became he is lary. Sometimes he does not became he can save time

times he does not became be can save time by not doing so.

In fast traveling, forty minutes is about all the time allowed to unpack, make a fire, cook a meal, each the dishes repack, smoke a pire, and hat the trail again. Your half-bread usually makes one of these lettle fires out of poles—long one, dry most; such as he can find already drying on the ground. He puts these poles together not is coshouse findion and not in a boom heap, but in a long pile, side by side. He will provide as kinding certain dry twigs.

Cooking With a Teastick

Sometime be will use birchbark, but most aften you will find him whittling up a rew of ment-datached shavings on the side of a stick. This is precisely father's old kindling stick. No one knows who first discovered it, but it is worth remembering by any one who needs to start a fire out-of-daser.

When Pearre has raised some shavings on the edge of bla stick, he stands it upside down under his pole pile and throws some loose, dry kindling over it - perhaps shellering it all with his hat if it is raining. Then to louistest a match to the lower edge of his chavings and by and by they set live to the solid stock, and that sets five to the twigs, which is lare touch off the whole works. And this five, begun at the counter of

Then he loader a match to the lower edge of his shavings and by and by they set fire in the solid stock, and that sets fire to the swigs, which is burn bouch off the whole works. And the fire, begin at the center of the log or pule bour, appeads both ways.

There are no side logs, because their has been no time to get them; but as the poles turn in a bright flame l'lerre bangs his bashattle in the flame, dependent from the end of a stant stick the butt of which he has much into the ground—the teatrick or quorgan stick of the Northern woods. He does not usually set the teatritle down on the poles; but perhaps he can find a place where two of linear call hold a leging pan. And at the other end of his long fore he will hang the stewkelile, which was not cleaned not start the bast mad—so offair of spairrel, rabbit, duck, partridge, rice, pointeen, onloss, or so whing else that happens as he in comp. A good stew per may largen at the first of a month and still be going thirty days later, milithern being razirs from meal is great.

Besides these three ute only, there may or may not be another in which to boil dedeater. If so there will be from for all on this long fire, which has been broked topeller with no loss of time at all.

The I offers's desiral a long, narrow trees a good one. It is only the rank top-derious also builds a car ular top, mode by lessping the transed up to the center so that the thores run entirely about. You rannot get that to that knot of iro, which is wanteful of iteal and room alike. So a general run regarding your complete is to make it long and testrow.

An Indian thes not usually books a high complete to but through the night, unless the wather a very cold. He will have fur less bed executed than a while turn and in a might blastler will show not in weather nite a single blastler will show not in weather nite a white many would purish in lour time, as much bed evening.

A campfire really has two purposes—it may be used for cooking or for warmth, or for both. If you cook in kettles or pots you can use the direct flame. If you are frying or broiling you want to cook over the coals and not over the flames.

There are all sorts of fads and poses in sport, as in everything else. Some of us like to affect the D. Boone and S. Kentan simplicity stunt and scorn to use anything modern. As a matter of fact, you cannot very well beat a Dutch oven as a camp utensil. At the same time, an aluminum reflector is much lighter and will cook just as good hisroits.

as good biscuits.

Also, a little folding grid, with legs that you can drive down into the ground, is something that weighs very little and is very useful in steadying a coffee pot or holding a broiler. Drive them right down over your bed of coals, so that the top will be only four or five lockes above the ground. It will be handy to set things on; and if you do not try to use too much fire it will make

a very comfortable broiler.

Neither, as I have often said, need you despise the long, wooden-handled fork of commerce, or a patent handle for your frying pan—one into which you can drive a long pole—so that you may sit off from the fire and cook without burning your handle.

Of course these things will sound effete to some, and to yet others not sufficiently effete. The latter will want to rig a stovetop or a vast gridiron made of steel bars laid across the two side logs, as recommended by the textbooks.

A Campfire in the South

If you are actually in the wilderness your fare will be rough and it will be condensed—such stuff as bears, dried fruits, and the like. It takes time to cook bears. An iron pot is best; but you can do very well with a tin vessel if you have nothing better.

Before you build your long-pole fire take the butt of the ax and knock out a trench, over which the fire may be built. It will fill with coals gradually, and after you have finished the meal you may set the beanpot down in this trench, and cover it with ashes and coals and let it cook over night—shifting your campire to some other point if it must burn all night.

Suppose you are fairly modern and fairly well equipped, that you want to have a quiet time in camp in the woods, and that you are out in the fall when the nights are used, though there is no snow as yet. Your first thought is a wall tent and a sheetiren stove. Men can winter in these conditions, but it would be hard to devise anything more uncomfortable or more unhealthy. You will be more comfortable if your tent is open in front, so that you may get the light and heat of a good campfire.

It will be all the better if your tent has

It will be all the better if your tent has a back so arranged that it will reflect the heat down. The openface camp or shanty or lean-to looks like all out-of-doors, but it is quite comfortable if your campfire is made correctly and kept up adequately.

made correctly and kept up adequately.

I proved this not long ago in the wintertime, in one of the Southern States, under
circumstances which convinced all the
neighborhood that I was crazy—and which
convinced me, on the other hand, that
everybody else was crazy who was not
privileged to sleep in precisely the same
way.

way.

It came about that a hospitable planter insisted on sending down a couple of negro boys to do the campwork. These boys pitched the tent, secured abundant hay for a bed, and provided an excellent woodpile of sound oak timber eighteen inches in diameter—likewise other oak, hickory and divers priceless materials of like sort, wherewith to light the altar fire.

I slept alone a few nights thus—the fire in front, the same old stars above. It was warm in my tent. I do not know just how it was in the shelter where the negro boys lay huddled in their cotton quilts, but it was fine, along toward morning, when the dawn was becoming gray and the fire had burned low, just to follow the advice of the old planter: "Lie still and holler for the colored population!"

I have never found a scheme that beat this, though it is not in the textbooks. It was a trifle hard on the youngsters, but they were used to it anyhow; so they would get up, build up the fire, cook a very decent breakfast of broiled quail and bacon, with a good cup of coffee—and then stand round, afruid to wake the boss up for breakfast. Can you beat that for a camptire? You cannot?

Smooth Riding Rough Roads

A Portable Boundary

A NEGRO trooper of the Tenth Cavalry, spick-and-span in his uniform, was walking on one side of a street in Nogales,

walking on one side of a street in Nogales, the Arizona town that is partly in this country and partly in Mexico.

A Mexican, walking on the Mexican side, called to the trooper:

"You going to invade Mexico?"

"No, saih." the trooper replied.

"You going to fight Mexico?"

"No, suh." said the trooper.

"What you going to do?"

"Well, suh." said the trooper, pushing out his chest, "as soon as then folks up in Washington gives us orders we is jist naturally goin' to take this yere border line right up in our hands and never stop with it until we has laid it down on the other side of the we has laid it down on the other side of the Panama Canal."

Water With Meals

TESTS on a paison equad have recently shown that the common belief that drinking much water at mealtimes tends to make one fat is apparently without foundation, Students were given carefully controlled diets for fixed periods, and every drop of water and ounce of food was carefully measured and recorded.

After a preliminary period they were required to drink water copiously at every socal; and then followed another period during which they had little or nothing to

drink with their meals.

The compared results showed that in same instances there was a very slight increase in the utilization of fat in the food

during the water-drinking period; but this was about balanced by negative results in other cases, so that the final conclusion was that the amount of fat and carbohydrates utilized by the body from food eaten was opporently uninfluenced by the amount of water taken at mealtimes.

Defying the Bullikin Board

APROPOS of the war spirit Represent-ative Hefin, of Alabama, tells of a orgre who, at the time of the Spanish War, was much afraid he might be sent to Cuba to fight.

He was told that if he went to work he would not be drafted; so be got a job ditch-ing and kept at it faithfully. One day another negro came along and called: "Hey, Jim, we-all mus" go to war." "Not me," said the ditcher, bending to

his work.

"Yes, suh—you an' me an' all de res'. It's up on them bullikin boards that we-all mus' go to war."

"Not me." persisted the ditcher. "Ise got my wuk to do."

"But th' Maine's done bin blowed up!" "I don' care if de mane an' de tail too is blowed up—lee not goin'!"

A Round Trip

THE attorney for a street-railroad of I pany in a Kentucky town was examining I pany in a Kentucky town was extending a skinny sixteen-year-old negro boy who had sued for injuries ostensibly incurred in a collision on the highway.

"You say," he asked, "that when this street car hit that wagon you were riding on the front seat of the wagon?"

"Dat's what I said," answered the little

"And you say the force of the blow knocked you up in the air?"
"Yas, suh—way up in de air." "Well, how long did you stay up there?"

demanded the attorney.
"Not no longer dan it tuck me to git
down!" answered the truthful complainant promptly.

Union Repartee

LABOR unions are strong in the West and especially strong in a city where, or Halloween, the hoys pulled a lot of pickets off the fence belonging to a house in which a union barber lived and made a bonfire of

The barber bought some new pickets and nailed them on his fence himself. Where-upon he was promptly fined fifty dollars by the council for doing carpenter work which should have been done by a union carpenter.

The barber thought over this for some time. Then he presented the Carpenter' Union with a bill for thirteen hundred and

seventy-five dollars.
"What's this for?" asked the chief of the Carpenters' Union,
"Why," the barber replied, "that's what's due the barbers because the carpenters shave themselves."

His fine was remitted.

Some Prosperous

"SPEAKING about prosperity," said Fred B. Lynch, Democratic National Committeeman from Minnesota, "I have

the prize story.
"A merchant who runs a general store is a town in the middle of my state came in to see me one day.

"'How are things, Bill?' I asked him.
"Fine,' he replied. 'I've just closed up
the season's business and I've made twentytwo thousand dollars. I had some extra expense this year too.

"What extra expense?' I asked.
"Why,' the merchant replied, 'I had to hire a faotman to stand outside the store to open the doors of the automobiles in which the farmers' wives brought their produce."

Divorce Teamwork

KANSAS woman, weighing two hun-A dred pounds and as strong as a female White Hope, came before a Kansas lawyer with her puny, one-hundred-and-thirty-pound husband and said they desired to

pound husband and said they desired in get a divorce.

"On what grounds?" asked the lawyer.

"Extreme cruelty," said the woman.

"But," said the lawyer, "that is absurd.

Here you are, big and brawny, and you say this little, weak man has been tyrannical and cruel to you. You must do better that that. You could turn him over your knew and spank him and not half try!"

"That's all right, Mister Lawyer," broke in the husband. "I agreed to let her have an extra thousand dollars in alimony if she would put that in. You see, I want to send

would put that in. You see, I want to send the petition back to my folks in Ohio. When they read it they'll think I have spunked up to beat the band since I came West."

An inexcusable Error

CYRIL MAUDE, the English actor, and his pretty daughter, who supports him in his plays, were the guests at a tea given by the American Dramatists' Society is New York not long ago.

A newcomer inquired of an earlier arrival who the two guests were. The second person, desiring to be humorous, said gravely. "That is Cyril Maude, the English actor and his daughter, Miss Maude Cyril."

A hand plucked at his elbow and from behind him a member of the imported

behind him a member of the imported English company spoke in tones of well-bred

surprise:
"Pardon me," said the voice; "the
young lady's name is Marjory Maude."

Logical Reasoning

A PRIMARY-GRADE teacher in New York—so Bayard Veiller says—was describing a horse race to a class of in-tensely interested little foreign-born Americans. She explained that, though a certain horse was first under the wire, the jockey fell off him in the home stretch, so that the purse-fifty thousand dollars went to the horse that had finished second.

"I know why that was, teacher," put in an eager youngster. "It was because the horse was so much lighter after his jocks' fell off that he could run faster." "Naw; that ain't it," spoke up little Herman Feldsberg. "Wot would a horse

do with all that money?"

THE NATIONAL PASTIME-INDOORS AND OUT

to tell you what I think of a lot of grown men, experienced curdplayers, who would st down night after night to gamble with a half-baked kid. Some of you are getting five and six thousand a season. You didn't need

his pitiful little two hundred a month.
"Mike has asked me where I come in on this. I come in where every other man on the payroll comes in. You sharks have won a lew hundred apiece from Doty at the outside, but you've put the rollers under the best pitcher we've got—the pitcher that rould win the World's Series for us if he was right. Where do I come in? On the differonce between sixty and forty per cent of that gate! That's where I come in! Your tradie-robbing poker game la liable to cost

or about thirty thousand dollars!"

Tod stopped for breath and we looked ut such other. There didn't seem to be anything to say. It was a true bill. Walker reached for his pocketbook and took out

thing to say. It was a true bill. Walker reached for his pocketbook and took out half a dozen slipe of paper.

"Hell!" says he, "I didn't know it was as bad as that, Tod, I've been wanting to do this ever since the kid blew up!"

"Hold on!" says Tod, "Don't destroy 'em! That won't help matters any. Doty is a fool, but he's an honest one. He's got a record of every cent that he owes and he'll pay to the last nickel. Tearing up his 10 U's won't square this."

"I guess that's right," says Owly Elliott. "We'll have to find some other way—but how?"

"Huh!" says Jib Smith. "The easiest proposition in the world! You know how Daty has been holdering for a chance to get even. We'll, he'll get it in my room tomorrow night—three-nineteen. There's a log round marble-topped table in it that's just the thing. We can tell Doty we've devided to give him one more session—and only one—with the blue sky for the limit.

"I don't know how much cash I've won from him during the sesson, but I'm willing to tose some bread on the waters and look for it to come floating back in October, buttered on both sides. I'll contribute fifty bucks to the conscience fund basides the I O U's. A little dough in his

ribute fifty bucks to the conscience fund besides the I O U's. A little dough in his packets ought to brace him up. If his poker debts are all that keeps him from pitching in his oldtime form it's me for easing his mind right away—quick. What d'ye say, boys?"

"But—suppose he doesn't win?" sake sholter.

Sholter.

Smith laughed—the first real laugh of

the evening.
"He'll win, old son-don't you worry shout that! The only question is, how much -eh, boys?"

We figured it out between us, and every man pledged a certain amount of each for the conscience fund, as Jih called it—and you could pretty near tell how much of a conscience each fellow had. As near as we rould come to it. Doty had lost between as and seven hundred dollars into the game.

we and seven hundred dollars into the game. We made up an even three hundred dollars. The I O U's amounted to pretty near two thousand. No wonder they barred him!

"All right, fellows!" says 'Tod. "I knew I wouldn't have to do any mere than explain matters. Be careful in pulling this poker game. Silvertip is beginning to suspect that Doty's smash was due to gamning. He was buzzing me about it this afternoon, but I didn't tell him anything. When you pail this game, pull it on the When you pull this game, pull it on the

Quiet. Do you get me?"

We got him, and later we got Silvertip too.

The old boy rounded us up one at a time and talked to us like a Dutch uncle. He warned us about playing eards with Doty, and said that if we did - and he found it out — he'd soak every man in the game with a fine of one bundred dollars.

If I had the goods on you I'd fine yo now!" says he.

ON THE dot of eight o'clock, which was the time set, Doty showed up at three-nineteen—white round the gills and very nervous, but itching for action. He re-minded me of Daniel in the lions' den. He brought his last salary check with him, laid it down on the table, and piled a little silver on top of it.

We were all present and waiting for him. As a matter of fact we'd been there for some time, rehearing the miracle that was to happen when the game warmed up. There were six of us, and the vacunt chair at Jib Smith's right was reserved for Doty.
"What kind of game shall we play?"

asks Doty, trying to keep his chin from wabbling, but not getting away with it.
"You name it, kid," says Owly. "You're the guest of honor."
"Table stakes dollar ante jackpots go with the back."

with the buck.

"Fair enough!" says Walker, who was riffling the deck. "Jib is banking. Whiten one dollar—reds five—blues ten."

Of course we all bought chips to the of course we all fought chips to the extent of our conscience money, and then Elliott pulled not his wallet. You understand, the theory of table-stakes poker is that a man may bet just as much as he has in front of him, but no more—unless he declares himself as playing a certain amount behind his stack.

"I've you some collateral here that's just

"I've got some collateral here that's just as good as cash," says Elliott. "Doty, you don't care who collects these I O U's, do

you? I'd like to play 'em behind my stack."

"Sure! Play 'em!" says Dowling.

"They're just the same as cash. Is that satisfactory to you, kid?"

Doty nesided and swallowed a few times, and the I O U's came out all round the table. By this arrangement nobedy was liable for more than Doty owed him and the amount of his conscience money.

the amount of his conscience money.

We had a tough time getting the kid started. Evidently he had been doing a lot of thinking and had made up his mind to play a conservative game. He stayed out of the first four pots—and that was a world's record for him—but when he did come in on the fifth everybody chipped and drew cards. Doty bet five dollars after the draw and four of us called him—me among

"Tem and sevens," says Doty,
"That wins!" says Dowling, showing me

queens and sixes.

I put three jucks back in the deck without saying a word and Dety was off to a flying start. The idea was to fatten Dety to the point where most of the chips would be in front of him; so whenever he barned into a pot it didn't make any difference what he had—it was enough to win. An outsider watching that game would have seen some mighty queer things.

Along about nine o'clock Doty began to prattle like a aid will when he's excited and happy. He was about two hundred and fifty to the good. There wasn't any sense in prolonging the agony or taking a chance so being raught by Silvertip; so when it came Jib's turn to deal a jackpot he gave us the wink and we went through with the sketch as it had been reheared.

as it had been rehearend.

As Jib began to shuffle the cards I called Doty's attention to my new seal ring with the monogram on it; and while Doty was trying to figure out the letters Jih went down in his hip-pocket and dug up a cold deck, with seven of the hottest poker hands in it that ever appeared in company. It took us half an hour to stack that deck and

you can bet we did an artistic job.
"Cut 'em!" says Jih; and he slid the

"Cut 'em!" says Jih; and he slid the warm deck over in Doty.

The cold one was under Jib's left hand and the switch was made without a fumble. When I picked up three kings and a pair of treys I knew the stacking was correct. I heard Doty suck in his breath as he looked at the last one. He always picked up his cards one by one, which is a sure sign of a bad poker player. Elliott, on Jih's left, had the first say.

"Boys," says Owly, "I hate to do this—

Boys," says Owly, "I hate to do this right under the gun; but here's a hand that won't play itself. Five little castiron dollars to associate!"

"Just to keep out the pikers," Hetherington, "I'll make it ten.

"Piker your own self!" says Walker, and

he hurls a twenty-dollar I O U into the pot. "Play to that!"

Dowling saw the twenty and so did I, which put it up to Doty. While we were stacking the deck we had quite an argument as to how he'd play that hand when he got it — whether he'd go wild and bet his head off before the draw; or whether he'd be foxy enough to let everybody draw against it, which is the correct thing to do when you've got a hand they can't beat by

"Eat Sunkist Oranges"

Nature made them for you and your children. She knows how good they are. So does your physician - ask him.

People who fast to improve their health eat only oranges. And orange juice is one of the first louds that the timest ballies get.

Suskist Oranges - solidly packed with thiusands of tender little juice containers - are lieaviest, most buscious, aweetest and most healthful non-

Easy perling, richly flavored. Tree-ripened Sunkist Oranges are glove picked in California every day the year round, tissue wrapped and shipped right from the tree by fast freight. No matter where you live you get them fresh.

Keep well this summer on Sunkist Oranges. Eat them at meals, between meals and at bed-time. Oranges now and then are of only temporary benefit.

Learn the permonent health-giving qualities

of Simkist Oranges through regular use.

The world's most perfect froit is offered you in Sunkist Oranges at trifling cost, so see that you get "Sunkist."

Sunkist Oranges Sunkist Lemons

Get Sunkist Lemons, top-juicy, full-flavored. practically sendless.

The most appetizing looking lemons with the most appetizing tang. They make the prettiest appearance im the table, sliced or quartered and served with fish or meats.

Try "Sunkist" lemonade. Use "Sunkist" lemon june in place of vinegas in salads or any other dish that calls for vinegar. Many noted theta add the connoiseur-touch with lemon juice.

See what you can do.

Dun't forget. Don't ask any langer for merely "oranges" or "lemons." Say, "I want

the Sunkist brand,"

taking the rest of the deck and going as far as they like with it.

"I-I may be beat," says Doty, "but-I'll have to see that twenty!

I felt like patting him on the back; he was really learning something about poker after all. Jib Smith put up his twenty, and Elliott and Hetherington made good—"on

Elliott and Hentering percentage," as they said. "Lucky is the dealer of a large Johnpot!" "Lucky is the dealer on the derk. "Cards, sings Jib, picking up the derk.

Elliott studied a while and then took two.
Hetherington said one would suit him.
Walker stood pat; Dowling took one; I said I didn't need any—and Jib looked at Doty, who was still squeezing his five cards with all his might.

"I-I'll play these!" says he, clearing

his throat.

Jib whistled.
"Three put bands!" be says. "If I make fours you'd better run with 'em. Dealer takes a couple off the top. Now then, Elliott, it's up to you." Owly scratched his head, counted what

chips he had left, sorted over his I O U's and cussed a little under his breath.
"This may be had poleer," says he, "but this was a good hand before the draw and it's better now. I helped it some, and—I'll hast step down and het a elittering soll." just step down and bet a glittering gob! Weak sisters to the fire-escapes! One hundred is bet!"

hundred is bet!"

Hetherington, Walker, Dowling and myself did considerable acting, but we all managed to get one hundred dollars into the pot. The bet nearly cleaned me—I didn't have as much paper as the rest.

"Well, kid?" says Jib to Doty. "Be careful what you do, because there's a lot of money in this pot!"

Doty didn't say a word. He laid his left hand flat on his five cards and nicked up his

hand flat on his five cards and picked up his salary check with his right. It looked for a minute as though all he was going to do was to call—but maybe he was just think-ing. He gulped once, and his Adam's apple moved up and down like a slide on a trommoved up and down like a slide on a from-bene. Then he dropped the check on top of his chips and shoveled the whole pile into the center. If Jib hadn't made a quick grab Doty would have mixed up the pot then and there.

"I raise it!" he croaks.

Well, sir, my statistical friend with the whiskers would have appreciated the figur-ing that was done after that bet. Roughly speaking, there was about twenty-two

speaking, there was about twenty-two hundred in the game, divided in seven equal parts. Four hondred of it was in cash— Doty's salary check for the half month and the conscience fund. The rest was in

collateral security.

Doty tried to count his chips without letting go of his cards, but he was too servous; so I audited the pile for him. He had raised us two bundred and thirtyseven dollars-more than enough to wipe the table clean. That was the main idea

of course—to get every chip and every I O U into the pot, one way or another. "Kid," says Jib to Doty, "if you're trying to steal something you're in a bad fix. Let's see—three hundred and thirty-seven dollars to call. You've got a customer; and

if you're out on a limb I'm certainly sorry for you!"

The call traveled slowly round the table and I never heard such a lot of beefing and roaring in my life! It sounded like a real poker game at that. Efficit and Dowling started an argument, and Dowling offered to bet Efficit a thousand on the side that he had him beat. Walker and Hetherington pretty near got into a fight; but all the time the I O U's were coming to the center. Those who didn't have enough to make the call borrowed from those who had too much; and when it came my turn I swept the table bare and took a short interest in the pot,

Jib. who is a great stage manager, ined on stopping the gam tong enough to figure out how much would be coming to me in case I won-and that was cruel, because poor Doty was sitting there shaking like a

man with the ague.

"All set!" says Jib. "Turn 'em over! I don't mind saying that I can beat an ace full!" He boarded four sevens.

"No good!" says Elliett. "Four nines.

"Walt a minute! Wait a minute!" says

Dowling. He had a straight flush in bearts, from the deuce to the six.

Duty couldn't stand the suspense. "Look at 'em!" be yelled, and his voice eracked like a whip. "Look at 'em! A royal flush in diamonds!"

Well, that was what we had given him because we wanted him to have something he could play with confidence. It's the ser of hand that you can't best -and one in million years you may tie it.

It was half an hour before Doty was fire leave the room. The nervous reaction gave him a terrific jolt and I never saw a luminosing go to pieces like it in my life -1 hop-I never will again. He wanted to hap and cry and talk - all at once. Then he insisted on learing up each separate 101 and making a ceremony about it. Abothat he thanked each one of us for gauge him the chance to get even. him the chance to get even.
"I was sure the luck would turn sometime!" says be.

"Listen to me!" says Dowing pa-tending to be very sore. "Such luck a yes had tonight comes only once in a lifetime You beat a straight flush for me and if you played a thousand years you couldn't deter again. To show you what I think of your luck, I'll never turn another card wat you!"

You won't have a chance!" says Date.

"I'm done!"

Doty shook hands with us all round as

said he had to go and write some letter.

He was on his way to the door when a opened in his face—and there was as Silvertip, fairly bristling.

"Aha!" says the boss, looking round in room. "And I warned you fellows to: Doty, have you been playing poker—alter what I told you?"

"Yes—yes, sir," stammers the tid.

"Yes—yes, sir," stammers the kid.
"That's right! Tell the truth and many
the devil! You're fined twenty-ave su-

"Yes, sir," says Doty. Never having been fined before to dis: know that it would be deducted from his next salary check. He reached down in to pocket and brought out a roll of bile of thick as his wrist. I thought Silvering eyes would pop out of his head. Don skinned off two tens and a five and hade the bills to the boss. "Get out of here!" says Sliverip. " want to talk to these pirates!"

Doty was only too glad to get away; and then Silvertip turned loose on us. Thirds that I've heard many a good ross in me time, but never anything like that ou. Silvertip picked up where everybody ele-quit and went on from there. Body smatchers was the nicest name be called a Jib Smith butted in once when Silverti;

Jib Smith butted in once when Silverby ran out of adjectives for a second.

"But, boss," says Jib, "you—you den't understand! You—"

I kicked him on the shin good and hely and he quit. We had done a fine piece of work, but we couldn't get any credit for without explaining why it had to be done.

"I fine every one of you one handred dollars!" says Silvertip when his versitalizery petered out on him.

There was considerable silence and it lot of deep thinking after the door disset.

lot of deep thinking after the door deed

behind him.

"Well?" says Owly.

"Boys," says Jib Smith, "there's only one way out: Mr. Doty has got to find his pitching habits again between here sail October. A piece of bread on the wair is all right—but heaving in a whole lod's wasteful. Yes; we've got to ready him up for that series!"

AS EVERYBODY knows, it wasn't a ber investment. Doty told me on the bench before the first game started—the his girl would be at the telegraph offer a North Platte waiting for the returns.
"Give her something to cheer about

kid!" says I.
"Watch me!" says Maxwell. "They
tramps will be lucky if they get a loui of
me today!"

as the thought he took into the box with him and he never lost it through the entire series. He worked in two game and had those Panthers pulling their chill out of the way of his fast one from start to finish

The difference between sixty and ferry per cent amounted to \$1375.23 a man. " we all cleaned up nicely on the poker game in Room Three-nineteen.

Doty is married now and his wife trans-

with him. She plays casino with him in the evenings-at five cents a game-and bear bim out of all his small change. On this first wedding anniversary we are good ? chip in and make 'em a present of that marble-topped table.

"SIXES" RUN 32.8 MILES ON ONE GALLON OF GASOLINE

NINETY-FOUR CARS MAKE STARTLING AVERAGE IN "FRANKLIN" TEST

"Stock" Machines With Three Passengers Each Make Simultaneous Record Runs in All Parts of United States

VICTORY FOR LIGHT-WEIGHT IDEA

Many Dealers, Sold Out, Compelled to Borrow the Machines of Local Owners to Take Part. Varying Weather Conditions Met.

Syracuse, N. Y.—On May 1st, 94 Franklin dealers in the United States and Canada, in 94 Franklin Six-Thirty stock touring cars, regardless of weather conditions, made a test to demonstrate the best possible mileage on one gallon of gasoline.

The rules required that the finish be as near the starting point as possible. Each test was made with two official observers, and results sworn to before a Notary Public. The test represents the average of 94 cars, 94 drivers, various road conditions, all kinds of weather, different grades of gasoline and, therefore, what can be obtained by skillful driving in the scientifically light-weight six-cylinder Franklin car.

The highest mileage was made by Wm. F. Sanger, Milwaukee, Wis. (See list.)

The different conditions under which the tests were made are graphically shown by the following telegrams:

Salt Lake City, Utah - "40.1 miles. High wind and wet reads or could easily have nade 50."

Laramie, Wyo.- "32.1 miles. Weather cold. Roads rough but hard."

San Diego, Cal. - "33.1 miles. Roads very slippery. Drizzling rain during run. Rather cold. Country drove. Top and glass front down. H. C. Covell, Club representative, Louis Elingren, Fire Chief, observers. Car with load weighed 3385."

Georgetown, Texas—"Made 17.2 miles. Top and windshield up. Wet and badly vashed pike roads. Very little wind. Three passengers and car weighed 3310 including accumulated mud. Showered just before starting. Average speed eighteen miles per hour. Affidavit follows by letter."

Bangor, Maine - "21.5 miles. Dry dirt roads, rough in places, and hilly. Weather told, thermometer 31 at six, 45 at end of run. Strong wind. Driver, Hall. Weight 3250. Glass front and top down. Snowed lightly during night. Started at ten, finished at eleven-thirty."

Newark, N. J.—"On official test obtained 34 4-10 miles. Roads dry, fair condition. Weather clear, mild. Driver, Walter Parcella. Weight of car including passengers 3320 pounds. We doubled back over identical course. Course contained 15 hills (grades from 2 to 8 or 10 percent). Demonstrating car used, run total 5,000 miles covered period 6 months."

York, Pa.—"Made thirty-seven and nine-tenths miles on turnpike which was covered one-tenth of way by deep blue stone. Can do forty-five miles if roads are in good condition."

Kansas City, Mo.-" Williams makes forty-two and eighty-eight hundredths miles on one gallon gasoline. Weather cool. Slight wind. Roads good."

(Continued in booklet, sent free on request by Franklin Automobile Company, Syrucuse, N. Y.)

National

Beauty, Luxury and Utility

OUR advanced design, the on the new "SIX" are of the Canti-lever type, which, combined with the -beautifully and distinctively original-reflect your good taste and judgment.

The smart, sloping hood and pointed effect of the National (due to the body converging towards the radiator) adds a distinct note of attractiveness. The wide metal guards are enclosed, continuous and unobstructed. These points of refinement and care help to give the National its ensemble effect of a long, low, graceful craft.

The admitted mechanical superiority of the National, added to its comfort and convenience, gives you the ideal combination of a quality car, built and guaranteed by an old, reliable and suc-cessful institution. The rear springs National's wide, deep, resilient, spa-cious body and general balance, enables you to enjoy unexcelled comfort in riding. The left side drive center control, convenient and simple dash equipment and easy access to all four doors add to your comfort and satisfaction.

National cars are built for service, proved by their fourteen years of dependability and reliable performance; their ample reserve force and speed when you need it, or two miles an hour if you prefer,

We my "you don't have to raise the hood" because the National's success justifies your confidence in our mechanical

The one and only American-made car that remains superior to all foreign cars in the Inter-national 500-mile rates is the NATIONAL.

The Fakers

"Do you mean you won't be a lawyer?" and Mrs. Hicks' voice broke a little, for she had earnestly wished her son might follow in his father's profession.

"No," Tommie said as he rose from the table, "I'll be a lawyer all right, but this properties in the page of the last."

opportunity is too good to be lost."

That afternoon he went down to the office of the Salestown Bencon. Grandison, the editor and proprietor of the Beacon, was busy with some auction bills that meant ten dollars cash when delivered, and he was not very cordial when Hicks entered

the composing room.

"Mr. Grandison," began Hicks, "I am going down to Washington to attend the inauguration and see my old friends Mark Hanna and Senator Paxton."

Grandison was cutting some leads and he stopped and looked at his visitor. "You don't say." he commented.
"Yes, and it is quite probable I shall not return for some time. In fact I expect to enter the Government service."
"Do tell," said Grandison, resuming his leadertime.

leadrutting.

"I thought," continued Hicks, "that you might want to make mention of my departure in the Beacon.

departure in the Beacon."

"I'm busy, gol-durped busy."

"I see you are, and I thought I might help you by writing the notice myself."

"Go ahead," said Grandison; "go as far as you like. There's copy paper in there."

"Oh," said Hicks easily, "I brought down a little piece I fixed up on my typewriter. I'll out it on your desk."

writer. I'll put it on your desk."
When Grandison had his auction bills on
the press he went to his desk and read the
Hicks communication. He laughed a little and hung it on the copy hook. Grandison liked Hicks and so did almost everybody in Salestown. Hicks attended to that. He desired to be everybody's friend, and was; and though he welcomed reciprocity in his friendships he did not demand it as a requisite of continuity. He paid no attention to rebuffs, or to ridicule, or to ansers. If a man tried to be sarcastic at his expense Hicks blandly took the remarks at their word value and was grateful. He was ubiquitous and urbane. Some of the village folks said his hide was as thick as the hide of a physograps, and Hicks heard these hide of a rhinoceros, and Hicks heard these comments with a smile, and invariably

sought a way to say something compli-mentary about the detractor or do him a favor if the opportunity came.

When the Hesicon came out on Thursday Judge William Percival Smith read the notice about Hicks to Col. Seth Howard, an old crony who spent much time in the judge's office. "Listen to this, Seth," chuckled the judge, and he began:

"'Our esteemed fellow townsman, Mr. T. Marmaduke Hicks, has in contemplation a trip to Washington, the capital of the nation, to participate in the inauguration ceremonies incumbent on the installation of William McKinley as president of the United States. Mr. Hicks was active in the campaign that culminated so gloriously in the election of Mr. McKinley, and his nowthe election of Mr. McKinley, and his powerful efforts have been recognized both by Chairman Mark Hanna, of the Republican National Committee, and by Senator William H. Paxton, of this state. Mr. Hicks has letters from both of these distinguished statesmen inviting him to come to Washingstatesmen inviting him to come to Washing-ton, and it has been intimated he will receive from the new administration an ade-quate measure of reward for his valiant services in the cause of the gold standard. We congratulate Mr. Hicks on this auspicinus and well-merited recognition both of his Republicanism and of his success as a pulitical leader."

"There's only one thing lacking so far's VIND NW commented Col. Seth Howard after the judge had finished the puragraph. "What's that?" asked the judge. "It

seems to me to be a pretty reasonably com-plete statement of the case."

"It ought to be signed by T. Marmaduke

"Probably," continued the judge. "But you must say this for Tommie-be cer-tainly doesn't lack the nerve to push himself in anywhere he wante to go, and I wouldn't be surprised if one of these days he got somewhere."

"He'll get somewhere," agreed Colonel Howard. "I don't know whether it will be in the Senate or in jail, but he won't stand still, you can bet on that."

"Oh, pshaw, colonel!" laughet the judge; "don't be too rough on him. He's clever boy, and the Congress of the United States, for example, is all cluttered up with men who have developed to a paying poliical basis just these traits we observe a

our young friend Tommie."

I tell you he's a demagogue alread;
and he ain't hardly dry behind the ear ye. I met him the other day and what do you think he said to me-what do you think

he said?"
"What did he say?" asked the judy.
"Tommie is likely to say almost anything pleasant. Told you you are getting younge every day. I suppose, and that you are ex-of the great men of Salestown, whose exa-ple and dally walk and convenation are as

"Well," admitted the colone rather sheepishly, "he did show some sense those remarks, but he got to taking painties and he said something like this"—and the Colonel rose stiffly and assumed at

oratorical position:
"'Colonel,' he said, 'Colonel, I feel tizz there is a great opportunity for me in pub-lic life. I have made a study of condition and I have firmly resolved to espone un-cause of the people, to help lift the turiens of the toiling reasues, to relieve them of the oppressions that now dismay them, to led

them into the sunlight of a happier day."
"Hooray!" cheered Judge Smith.
"Yes," he said, "the people are to be on first concern. I shall address my shifted to the improvement of their political are social conditions. I shall labor for them and the said. social conditions. I shall labor for them and with them. I have decided to enter politics for no other purpose than to protect the toiling masses from the cruel and rapaces oppression of the classes."

"Hooray!" shouted Judge Smith again. "And what I want to know," continue the colonel, "is how he squares that sort is a program with his support of McKinley and the goldbugs."

"My dear colonel," answered the judge, "he doesn't have to square it. If he get a job under this administration he'll topp it. If he doesn't get a job he'll have not-

it. If he doesn't get a job he'll have not-ing to square, for that naturally will be in platform in the circumstances."

"A demagogue," insisted the colorel again, "a demagogue before he's dry behind

the ears."
"Well," answered the judge, "I goes that's so; but so far as I can see from the angle there seems to be a better market angle there seems to be a better market angle there seems to be a better market and the religious transfer and transf for demagogism than for any other political

commodity in these days."
"Humph!" retorted the colone, who could think of nothing better to say, and stalked out. He met Hicks at the foot of the stairs that led to the street from July

Smith's office. "Going to Washington, I see," the colonel greeted him.
"Yes, colonel; that is my intention."
"Going to take a job under McKinley!"

"It may be."
"Now look here, young man," and the

colonel was indigment, "how in blaze are you going to join out with this golding administration and believe in all that stall

about the common people you handed to me the other day?"

"Why, colonel," Hicks replied survey, "reforms can be more easily accomplished from within than from without the party

organization. If the people — "Great Scott!" shouted the old manufacture it! Don't insult my intelligence by that sort of rot. I'll tell you where you be long—not here in this community, but as in the prairies with the Populists. Good afternoon."

Hicks looked after him and laughed is little. "There might be something in that too," he said to himself.

Hicks made his preparations and went ! Washington, where he arrived with many thousands of other people on the night of March 2, 1897. He had written to a fried who had a place in one of the departments and had the address of a good boarding the state of the state house. He secured a room and spent the next three days in happy enjoyment of the crowds, the clamor, the parades, the works, the glitter and the glamour of an ir auguration and its aftermath. He called by Senator Paxton, found him out, but serure from Paxton's secretary a gallery ticket in the ordinary sessions of the Senate. and jammed his way in on the busy March that and saw the burly-burly of the closing hars

of a Congress. He watched the proceedings carefully, tried to pick out the famous sen-utors on the floor, and was somewhat hurt because Senator Paxton did not send for him and give him a ticket admitting him to the inauguration ceremonies in the Senate ever, he was up early on March fourth, se-cured a good position in the crowded plaza, and was much impressed with the ceremony that made Mr. McKinley president and outred Grover Cleveland to private life.

Senator Paxton was busy, exceedingly busy. The change of administration from Cleveland to McKinley brought many pat-ronage problems to him, and he was early and eagerly trying to find places for some of his leaders in the home state. Hicks called three or four times a day at his office, but each time was shunted off. He stood for hours in the corridor waiting for Paxton to come out, unconscious of the fact that the senator had a side door to his office through which he except from the office seniors. which he escaped from the office-seekers. Hicks carried himself jauntily, although scretly much depressed because of the tordy recognition of his merits and claims. and exerted himself to make the Paxton and exerted himself to make the l'axtoncorps of clerks and secretaries his friends.
He sat a good deal in the outer office of the
l'axton suite, reading the papers and waitling for the senator, positively refusing to be
turned away by any of the subordinates
who constantly assured him there was no
chance for him and that he'd better go home.
One day as Hicks was sitting in the outer
uffice, about two weeks after he arrived in
Washington, the door to the inner room.

wifice, about two weeks after he arrived in Washington, the door to the inner room opened and Senator Paxton came out with a great bunch of papers in his hands. "Look here, Madden!" the senator shouted to his secretary, "you're a thousand miles behind with this correspondence. What's the matter? Can't you keep up with it?"

"I'm doing the best I can with it," Madden answered sulkily, "You don't seem to appreciate that since McKinley came in your correspondence has increased about aix hundred per cent and you are making us

hundred per cent and you are making us handle it with the same old force."
"That's so," admitted Paxton. "I hadn't thought of that. Get another stemographer or a typewriter or something, and clean

or a typewriter or something, and clean it up."

Hicks started engerly from his chair.
"Senator," he said, coming forward, "let me take hold of it."

"Who are you?" asked Paxton brusquely."
"I never saw you before."

Hicks winerd. "Oh, yes, you have," he replied. "I met you out in Salestown and you wrote to me. I have the letter here."

He took out the well-worn letter. Paxton planeed at it and amiled. "That won't see

He took out the well-worn letter. Paxton glanced at it and smiled. "That won't get you very far," he said. "Who are you!" I am T. Marmaduke Hicks, of Salestown. I am a competent stenographer and typewriter and I want a job with you." Paxton leeked at him. He saw a tall, well-dressed young man, his eyes alight with engerness, a young man who had a tright face and an agreeable manner. "From Salestown, are you?"

From Salestown, are you?

"Yes, sir." "Whom do you know there?"

"Everybody. I have studied law with Judge William Pereival Smith." "Studied with Billy Smith, have you?

Well, that's a good start. Will be recom-mend you?"
"I think so."

Paston turned to his secretary. "Mad-den," he said, "wire Judge Smith at Sales-lown and ask him about this young man-if he's all right put him on extra in the morning. We've simply got to get this mess
of stuff cleaned up. Meantime try him out
on the typewriter and see if he is any good.
Give him some of the form-letter stuff."
Paxton turned and went back to his
room without another look at Hicks. Mad-

ten said: "Pull off your east, young man, and get busy. Take that machine over there and use these addresses for this letter." He handed Hicks a printed form. "Copy is exactly," he ordered, "and do them as

reatly as you can so each rube will think he has a personal letter from the senator.

Hicks took the form letter and the list of addresses and began work at the typewriter ssigned to him, but his heart was heavy within him. His letter from Senator Paxton had been a form letter also.

JUDGE SMITH telegraphed to Senator Paxton that Hicks was honest and mart, came of a good family and had no ad habits. He wrote at length detailing

Every Boy Has His Hobby

He may spend his vacation fishing in the stream below the dam for bass and suckers. He may take long jaunts over the hills with his camera slung over his shoulder. He may be planning a wireless station of his own-and with a friend or two, rigging up his aerial and connecting his apparatus. He may be building a shop in the backyard so that, when winter comes, he'll have a place to work on stormy days. But whatever it is, it's his hobby - and his heart's in it.

Now, good fishing tackle and camena are expensive. So are the detector, tuning coil and other odds and ends that go to make up a wireless until. A carpenter's chest with guaranteed tools - this costs ood money, too. Every hobby has a little expense attached -

But that's no reason why you shouldn't own what you want and need-and without paying a cent for it. There is a small army of a ert, entitumentic boys represent-ing Tur. Curtis Puntismus; Company in cities, towns and villages throughout the country. Like grown-up salesmen, each has his own circle of friends and "business orquintances" to whom he tells his goods — the Curtis publications. On Pop and Journal days he is eagerly assaited as he makes his rounds with the current issues.

Each cupy he delivers nets him a cush profit; many of our boys earn from two he also receives a lot of premiums selected from our Book of Relates, an Illustrated catalogue describing over five hundred spiresfiel prizes. Whatever his hobby is, here he can secure what he needs.

Every hey has his hobby. You have ours. Whatever it is, let us hear from you. You can then see for yourself how these thousands of boys are earning morey by selling The Saturday Evening Past, bow they have secured the articles they reanted more than anything else - how you can serure what you want. Address your fetter to

Sales Divining, Ban 5.11

THE CURTIS PROTESTING COMPANY, PHILADELPHIA, PENNA

me of the Hicksian personal characteristics, and Secator Paxton read the letter, Isughed and asked Mudden: "How's he

doing?"
"Pretty fair," the harassed Madden replied. "He's a reasonably good typewriter, seems to be intelligent, is willing to work and to learn, and is companionable enough round the office, although he doesn't under-

round the office, although he doesn't underestimate his own abilities any."

"Judging from what Hilly Smith says,"
commented the senator, "he has several
kinds of pep in him and may be worth
watching. Put him on temporarily and
give him a good work-out."

Whereupon T. Marmaduke Hicks because an attaché of the office of Senator
William H. Paxton at a wage of sixty dollars a month. Madden thought he might
remain two or three months, until the great
rush was over. Paxton dismissed him from rush was over. Paxton dismissed him from his mind. Hicks himself had no other idea his mind. Hicks himself had no other idea than a permanent billet in the office, and he was right. He gree expert on the type-writer, practiced stenography assiduously, cultivated Maddon in every possible way, was willing to labor nights and Sundays, and at the end of the third month was a fixture and had his pay raised to a hundred dollars a month. This was done by the simple Faxtonian expedient of placing him on the senate roll as an amistant committee clark. senate roll as an amistant committee clerk, which not only gave Hicks more money but relieved Paxton of the necessity of paying Hicks sixty dollars out of his own

Hirks had a natural bent for politics and he studied Paxton's methods carefully. He had a retentive memory and applied it to all of the minor matters that came up in the office. He remembered names and dates and hept close track of the files. He studied state-patronage questions, briefed applica-tions, watched the Senate when be could, read the newspapers assiduously and kept in touch with all important measures, and especially those in which his chief was interested. He started a little clipping bureau of his own, reading the state papers closely for all articles and editorial comment having a bearing on Paxton's activities, saved up small items for the correspondents of the botton newspapers, and before he had been there six months knew as much about the imide routine of the office as Madden did,

who had been with Paxton for fifteen years.
One morning he arrived at the office at eight o'clock and to his astonishment found Senator Paxton there, Jussing and Juming

for a stenographer,
"Where's Madden?" saked the senator

"He down't get here until nine o'clock."
"Damn!" exploded Paxton. "I want to

dictate a few paragraphs of a speach."
I can take it, "said Hicks eagedy.
"Are you a stenographer?"

You, mr.

"Come on, then, and don't hash it any

more than you can help."

Paxton dictated swiftly for half an hour.

Hicks concentrated every atom of intelligence he had on his work, and when Paxton had finished and ordered, "Make a carbon of it," he went nervously to his typewriter and began to transcribe his notes.

He handed the typewritten sheets to the senator and stood anxiously by while the great man read them. Every time the senator made a pencil mark on the paper Hicks felt his heart sink within him, but he was radiant when the senator said, after he had finished reading: "Not so had." That night at the boarding house he told his table companions that he was now the confidential stenographer for Senator Paxton.

Six months later this statement became reasonably true, for Hicks made himself so useful and worked with such currectness and seal and intelligence that Senator Paxton appointed him assistant to Mad-den and increased his salary to sixteen hundred dollars a year by and with the aid of a friendly contingent-expenses committee of the Senate, of which the chairman was an old friend of the senator's.

This enabled Hicks to move to another boarding bouse, and he chose the establishment of Mrs. Lake.

Washington is freekled with boarding houses. There are sections of the capital that resemble Bloomsbury in London. Row after row of what were once fashionable residences are now, and were in Tommie's time, establishments of varying merit as places of entertainment, occupied by various grades of boarders, ranging from is nursuus or prevarious statesmen to clerks. and other employees in the service of the Government.

The house conducted by Mrs. Lake an her daughter was on a good street and a cellent of its kind. Mrs. Lake was to widow of a man who had had some proerty and more debts, and had been our pelled to support herself after the lawyer had finished settling the estate. She was well bred, a good housekeeper and a wanta of attractiveness and ability. She was wise boarding-house mistress. Her paro and her dining room and her hall were we furnished. She knew the charm of shok lamps and cozy corners and employed the both numerously. Her rugs were good. He pictures were copies of old masters, her ser pactures were copies of our massers, her ser-ice careful and expert, and her food, those not lavishly served, was of the best quali-and well cooked. The brass docknot always shone brightly, the small regro wi-opened the door was immarulate in a bi-uniform and white cotton gloves, and in uniform and white cotton gloves, and in a welcoming smile that was an essenti part of his training. Occasionally Mi-Lake entertained transients sent by sor former boarder, but most of her peo-stayed with her for long periods. Tommie took a small room on the n

Temmie took a small room on the timor, which he secured for sixty dellar month, a sum quite insignificant, is Mi Lake maured him, when compared with a social advantages he would enjoy structer her roof. These social advantages he would requirement dawned on Hicks on the first Friday sighe dined at the boarding house. Everyboard dressed for dinner on Friday nights. It was the custom of the establishment.

To be sure, Mrs. Lake and her daught dressed for dinner every night and marregal state at a small table near the dathrough which the waltrenses came into room, thus giving a "real swell tese" the establishment, as Mrs. Lake put it, it the other guests—not boarders, guests ate in their usual day costumes. Mrs. Larather insisted that the modish resource the artible house.

rather insisted that the modish resources the establishment should be displayed one night of the week, and it had come be accepted that the guests should tog of in their very less on that night. Usual in order to give an added air of distinctions. Lake served a canapé of caviar the night instead of beginning the med a

night instead of beginning the meal at the customary soup.

Tommie did not know of this customad he was abtounded when he came do to dinner on his first Friday night a found the women, some of them in low-bodiers and some in bodiers with guint removed, and the men rigged out in discouts, evening coats and stiff white all fronts. Even the Texan, who had made tenet of his politics not to wear a dress a compromised between his principles. compromised between his principles; his politeness by wearing a low-cut was coat beneath the long and flowing in coat in which he made his impassion appeals for the welfare of the people the floor of the House of Representation and the stared a little at the unwendisplay of slegance but was neither concerted nor dismayed. p with his evening clothes, but the friend him he could wear his derby and to agood form, and that gratified Tommie. But, some the less, he almost bought a much hat. He had seen pictures in the nagazines that presented tall and exquisitely dressed men carrying crush hats in cones modish crush-hat positions, and he iditional give him much added distinction the could come down to the hig assembly som in the hearding house with his hat conessly but gracefully disposed beneath he are, and when going out could open it at the door with a flourish and a pop.

On the following Friday night he came than to dinner ten minutes late in order to so the others amake time to be at their

On the following Friday night he came too to dinner ten minutes late in order to go the others ample time to be at their lines, and made an impressive entrance and a his new clothes. He had placed his ancilerchief in his sleeve, for he had observed that an under-secretary at one of the chasies, whom he had clossely scrutinized the that rising young diplomatist was taking to Senator Paxton, carried his handwested that way. Tommie looked round to som. So far as he could observe, no pease there had his handkerchief in his lever, and Tommie saw to it that all near an were made aware of this crowning such of slegance. Indeed he took out his tandkerchief so often that one of his table conjunions, the motherly wife of a reposentative, asked anxiously whether he lad a rold and offered to supply him with senedy.

Hicks spent the next year and a half I semiortably with Mrs. Lake, laboritudy with Senator Paxton, and profitably a timed in a way, for he skiftered through lasted a law course in a sort of a law school, issuing two nights or three a week to the semulation of such legal knowledge as yes depended at this institution. He made a serious study of the law, because serious said of any subject whatsoever, save that of he own aggrandizement, was foreign to be mind of Hicks.

He bought notes of lectures from impertables digs, flattered and cultivated the reasons and lecturers, delivered semiration when called upon to tell what he have, and was on his way toward his degree

lie did not care for the law, but he felt he seed the law as a peg on which to hang is pelitical ambitions. He made a close stay of politica, watching Paxton's every portuent.—Paxton was a master political—and had it vaguely in mind to go enterhere, after he had saved a little story, open a law office and depend on his fall as a handshaker and his general alertness of mind and lack of scruples to advance him in politica. He knew most of the sua political tricks, for politics was his passes, and he essayed the various artifices employed by the men who seek votes for the values as votegetters rather than for the showing of principle and principles. Sicks had learned one thing. He never effected any person who might possibly do

Ricas had learned one thing. He never cheeded any person who might possibly do imany good, and took whatever came from tan sources with smiles and thanks; and is sever failed to impress on those whom he nestifiered on terms of equality with himself his own advanced ideas of his personal injectance and ability. His affability and trianity were famous in clerical circles at the Capitol; his polite attention to his better made him many friends; and his complainance and readiness to do what was represented in semi-important affairs. Madden of course was the real operator for Paxton, the man who stood with broad shoulders is any ready for any shifted responsibility, who may such risks as there were and who was seloyal as he was pilable.

Fatton's attitude toward politics and

public service was that it is a game, with the people as pawns. This also was the attition of the men associated with Paxton in the leadership of the Senate and the direction of the House. That was the atmosphere in which Hicks worked and the atmosphere he absorbed. Paxton himself was a view and likable person who never went further in his philosophy of politics than to usert the theory that the end justifies the mean and that power must be retained by the regarization at all hazards. He was willing to do for the people whatever would have the organization in the doing, and almost every act of his and of his controlling associates in the Congresa was predicted on the political effect that act would have to the personal and political fortunes of himself and his friends.

Long years of experience with the selfish motives and desires and practices of the men in politics, and long years of observing the case with which these selfish and self-seeking men deluded the people, had given him a sort of good-humored contempt for the people as a whole, especially as to their politics and the practice of it. He had accumulated a fortune through politics and he had assumed a philosophical view of the game, as he called it, and took nothing seriously that did not threaten his own continuance as a leader of those who played the game with him. He was under no delusions as to his colleagues. He knew just how shallow their pretenses were, how much of lip-service there was in their resounding promises on the stump and on the floor of the Senate, how bogus it all was. So he continued at it for the fun be had and for the power it gave him, and though he was as bogus as the rest of them, so far as regard for the general good was concerned, he had the redeeming quality of knowing himself exactly how bogus he was, and not assuming virtue.

He had a sense of perspective, a sense of

He had a sense of perspective, a sense of humor, and a full working knowledge of all the weaknesses, follies, ill-considered sentiment and lack of knowledge among the

timent and lack of knowledge among the populace.

"Undoubtedly," he said to Hicks one day, "undoubtedly, Tommis, Mr. Lincoln was right when he said you cannot fool all the people all the time. But the limit hasn't been reached. A large number of men in the politics of this country have been at that business of fooling the people for a great many years and haven't been caught yet. In the long, the ultimate, run the contention may be right, but no one of much consequence as a fooler has been stopped thus for to my terrester."

yet. In the long, the ultimate, run the contention may be right, but no one of much consequence as a fooler has been stopped thus far to my knowledge."

Hicks pondered this and similar sentiments from the cynical and contemptassus Paxton. He watched the operations of the organization leaders in the Senate and saw them doing things day after day that were planned carefully, and so executed, for the effect they would have on the political and other fortunes of the party and with small regard for any popular merit except such as might incidentally accrue. He accepted this as the proper theory of politics and the wise theory, and be shaped his own plans and actions thereby. He intended to be a politician, to enter politics, and he had no other idea of entering politics than the steadfast idea of getting everything possible for Hicks by whatever means might present themselves. He formed the Hicks party, with himself as sole member, solely to profit thereby, and resolved to operate along those lines.

He was encouraged in his attitude by his occasional visits to Salestown, where the village people locked on him as some sort of an extraordinary person who was shaping the destinies of the nation in conjunction with the famous Senator Paxton. Hicks tried out on his old friends some tentative poasts and assertions of his importance and was amazed to see how unquestioningly they took as true everything he claimed. Once he made a speech at an Old Rome Day dinner. He began, rather modestly for him, his recital of his activities at the capital, but, on observing the pleased acceptance of his assertions by his auditors, threw off all restraint and proclaimed himself as a most potent power behind the throne.

"It is my good fortune," be spouted, "to be associated with these great men at Washington who are directing the affairs of this nation, to act with them, to consult with them and to be consulted by them; and I want to say to you, friends of my boyhood days, that no one knows better than I the unselfishness, the clear-aighted patriatism, the high nobility of purpose and the unfaltering determination of these statesmen to conserve the welfare of the people."

There was load appliance from everybody except Col. Seth Howard.

"Tommie," said that unbeliever after the dinner, "I thought the constitution provides for no more than two senators from

a state."

"Why, so it does, colonel," replied Hicks.

"That's the way I read it," continued
the colonel, "but I take it from your remarks our state has three."

"Why, no, colonel; only two."

"I'm glad to be reassured on that point, for I gathered from what you said that you are acting as a senutor for un also."

are acting as a senator for us also."

Tommie laughed. "Oh, colonel," he said, "I am afraid you didn't listen closely to what I said."

O'R Marine Oil is to the life of your Motor Boat what our Motor Oil is to the life of your Car. Each oil is made only of sne uniform, base crude of tested quality and lubricativeness, and is manufactured by a special process which preserves the molecules of the oil and consequently its lubricating value. Thus while they are thoroughly filtered of free carbon and impurities, they nevertheless hold their potency and life.

By forming an even film of oil between the metal parts, it preserves the life of the Motor and increases its efficiency. This lubricating oil "cushion" eases the contact between parts and leaves the least carbon deposit upon them, because it burns up evenly and cleanly. Frictional lusses are thus minimized.

Sold on Lund at the Garage, General Store or Greery W. at the Moser East Club or on the Foot

"That's the trouble," snarled the colonel. "I was about the only one who did listen closely"; and he stumped away. Tommie saw to it that the Beacon had a

report of that speech, and when the paper came in put a clipping of it on Senator Paxton's desk.

Parton's eyes twinkled when he sum-

moned Hicks to his room.
"Temmie," he said, holding in his hand
the clipping from the Bencon, "I see that
you have begun to inculcate the true faith

in the minds of the people."

"What do you mean?" asked Hicks.

"Why, I have just been reading this report of the speech you made up at Salestown. I couldn't have done better myself in portraying the high and patriotic aims of such workers in the vineyard of the com-roon people as are the instruments here at this capital for ameliorating their wees.

I coogratulate you."

Madden read the clipping also. "Say,"
he said to Tommie after he had finished
Hicks' glowing account of his own performance; "you are wasting your time round here."

"What do you mean?" asked Tommie to slarm, for Madden was a powerful factor in that office.

"I mean you're too good to be working so a stenographer to a senator—any sena-tor—or snybody else. A young man who can get away with that sort of guff as well

can get away with that sort of guff as well as you can ought to be out among the dear people. You are not deluding anybody here, you know, but it is different outside."

"I don't understand you," Hieles replied.

"Oh, all right," continued Madden, "but I understand you. Now don't attitudinize to me. I tell you there is a future for you in politics if you get the right field."

Madden stopped, lighted a rigar and tooked out of the window,

"I have been here for twenty years," he said, as if talking mostly to himself, "and fifteen of those years I have served with the

said, as if talking mostly to himself, "and fifteen of those years I have served with the secator. I've seen them blow in, blow up and blose out by the hundreds. If there is any kind of bunkn artist, faker, charlatan, demagague or other professional friend of the people I haven't run across in my time, it is some new sort just invented. I tell you, Hicks, you've got the sarmarks and all the tendencies and all the traits for a sur-cossful curvet as a public and self-accrificion.

the tendences and all the traits for a successful curvet as a noble and self-sucrificing citizen who is actuated by the sole desire to aid the common people. You could bring yourself to love them. I know it."

"But ——" began Hicks.

"Oh, but nothing!" interrupted Madden. "There are no buts about it. If there ever was a man born to handshake and talk his way to a good place on the payroll, that man is yourself, Hicks, and I don't say this to your disparagement, for I admire your abilities. You are a born friend of the people. Moreover, you are rapidly acquiring all the knowledge and details of that pious profession, and it's a chame for you to stay here pounding the typewriter when you might be out uplifting the dear common people from the slough of despond, to your own subsequent advantage both politically and financially."

"It high you missingly may Mr. Madden."

and financially."

"I think you misjudge me, Mr. Madden,"
Hicks began again. "I certainly do not feel
that my principles should be weighed in
any such serdid scale..."

"Misjudge you!" broke in Madden.
"That line of talk you have just begun
stamps my judgment as infallible. Let me
have those letters about the Redding case."
Hicks brought the Redding file. He
thought a good deal that day of what the
senator and Madden bud said. In his opinion their ideas of his abilities and tendenries, to say nothing of his ambitious, were course, to say nothing of his ambitions, were couched in terms that might have been more delicately put, but on the whole he was not dissatisfied. Fur if two such experts were beginning to consider him adroit enough to make his way with the populace,

And when the correspondents came in that afternoon to see if there was any news for home consumption. Tommie handed each of a type n excerpt fro the Beacen's account of his speech. He had early learned that political success depends to a large extent on the proper appreciation and cultivation of the source of publicity, and the reporters liked him. They all made puragraphs about the speech, which went with the day's news grist, and some of these were printed, to the great delight of Hicks and to the great amusement of Senator Paxton and Madden.

CORPORAL BILLY'S COME-BACK

the crowd. Corporal Billy was all right, but at his age what would he be doing on a posse after a desperate murderer? Better sick to his last! More than one wit audibly suggested this, and the sally evoked laugh-ter. defore it had died the posse was off, with a final word from the sheriff, who was remaining right there because he felt that was the place for a sheriff.

Corporal Billy turned away. It was the apreme insult! He who had marched to be ringing strains of We are Coming, Father Abraham, Three Hundred Thousand More, to be refused as a volunteer to a little Caliirnia mountain posse. And they had hoghed at him; in fact they had laughed a his uniform—insulted the blue! Corpond Billy was near to an unseemly outbreak when he grasped that. He had turned back to the remnant of the crowd, wild words on tistips, when a low, tense voice at his side artested him.
"Hist!" said the voice.

He turned and confronted Cyril Naughion Webster, the intrepid captain of boy

"Hey?" asked Corporal Billy. "What

Hist!" repeated the captain. "A word "Hey?" queried the corporal again.

"Aw, com'on over here away from those rules where I can speak to you," said the spiain, irritated into a relinquishment of tis official manner. By one blue sleeve he togged Corporal Billy beyond earshot of

What's all this?" demanded the cor-

"You'll find out soon enough," flashed he captain ominously. "You've got your we'k cut out. Now not another word!

sork cut out. Now not another word! simply follow me. One incautious word may spoil all."

"All what?" demanded the corporal.

"Who knows what the day may bring forth?" parried the captain, ingering the appled army pistol at his belt. "Trust in me, no matter if the skies seem dark. And cone an! Hurry up!" He turned and marched briskly down the street. Carporal filly gazed after him briefly and was slocked to a sudden alarm.

"My good land!" he muttered; "he's gone and done it! He's killed one them indians! He's takin' me to the body!" He started after the swinging figure of the captain, a sickening fear in his heart. Through the town the pair made their way. The captain did not look back. The corporal parased him. Wrath was growing within pursued him. Wrath was growing within him, even above his fear. He devised a aries of ingenious punishments for this yeath of undenliably high spirits.

At the edge of town the captain turned of and skirted the railroad track. Corparal Billy removed the fatigue cap to wipe a steaming brow, and followed his leader. From time to time he shouted ahead impatent demands for details, but the captain merely waved back a silencing hand. After half a mile beside the track, he leaped ightly up the bank and paused at the edge of the wood. Into this wood and ascend-ing the steep hill Corporal Billy observed i well-marked trail; it was the trail leading to the Indians' camp. He was breath-less when he reached the captain's side, not slone with his rapid walk but with rage and siarm. The captain stood coolly there, but pirriously restraining with vast effort some ubterranean excitement.

"I knew you were the bravest man in these parts," said the captain before Corporal Billy was equal to speech. "I knew you wouldn't be afraid of anything." "Where you got him?" demanded the orporal, visualizing a murdered Indian. "Never you mind! I got him all right to tight! But I'm—of course I'm not draid—but I thought I'd better have you." "You young foo!! Whe'd I tell you?" "Say, you've got a giant's strength.

"Say, you've got a giant's strength, aven't you," asked the captain, curiously

"Well-of course I used to — What I have?" replied the corporal savagely.

You told me you once felled an ox with that? You know you did. And you're brave as a lion; you can't fool me. Gee whiz, if I could grow up to be as brave as

"Look here! What's this mean?" But the rage of the corporal was sensibly molliThe captain turned to ascend the trail.

"Not a word above a whisper," he bissed, "and don't make a sound."

"Now look ahere —" But the cap-tain was stealthily climbing and the corporal followed him perforce. For twenty minutes he toiled up through the gloom of the spruce and pines, stumbling over boulders in the ancient trail, slipping on the damp earth-mold, once more heartily dis-paraging the first born of his only sister. And then, twenty paces beyond him, the captain left the trail, beckoning to his follower, and dove through a dense wall of manzanita shrub. The corporal pursued him at some cost to his uniform, sadly impeded by

the dangling saler.

Beyond the manzanita the captain pointed mysteriously downward and surprisingly dropped from view. Making his way to the spot the corporal looked over a wall of rock to where the captain stood on a ledge some six feet below. His upward glare was so tense, the finger on his lips so eloquent, his beckoning gesture so potent, that Corporal Billy, once more under his apell, dropped precariously to the ledge beside him. The captain thereupon descended to another projecting bank another descended by the second of the second bank and the

feet below. It was only a narrow bank and of soft earth, affording a most perilous fewthold, and even to sustain this they had to grasp for partial support at the bushes growing above them. Corporal Billy did not discover the insecurity of this perchuntil he stood panting beside the captain. "Look ahere — "he began indignantly, but the answering his was again so truly ominous that he broke off. The captain now firmly grasped a bush and leaned far over the edge of their narrow foothold to peer intently below him. Then Corporal Billy recognized the spot. They were back at the railroad track, still ten feet above its level, and on the verge of a bush-accessed semi-circle that a spring had hellowed out of the hillside.

The captain squirmed farther forward for a clearer view into the depths. Then suddenly he resumed his upright position beside the corporal, the keenest pleasure irradiating his ingenuous young face.

"Still there," he housely whispered, and delightedly dug the amused corporal in the side of the arrivalest fact.

side with a grinding flat.
"The Indian?" demanded the corporal,

whispering in turn.
"Indian? Aw, wake up! It's that big
coon they're huntin' for!"

coon they're huntin' for?"

Corporal Billy's heart set up a pounding that he thought must reverberate for miles through the forest. He could feel his scalp contracting, though there was little hair for it to move. With a dinzying distinctness there can through his mind the items be had gleaned back there on the street—"In for murder, hig fellow, savage, wild, already killed half a dozen people since he broke away, won't be taken alive." He swayed lightly and reached for a stouter bush to lightly and reached for a stouter bush support him. A hit of earth crumbled be-neath his feet and rattled down the sheer bank. He drew a shuddering breath and glanced upward.

"He's sound asleep," whispered the

"How we goin' to get back up there."
whispered the corporal with no want of
caution in his tone. "We can't get back," responded the captain promptly. "I figured out this was the way for you to get him. You got to item on him."

jump on him."
"My good lands!" grouned the dismayed

corporal.

"What would you want to get back for anyway," again hissed the captain. "You want to go back there and give those rubes the credit, when all you got to do is jump on him and take him in by yourself?"

"Jump on him!" repeated the corporal

"Sure, jump on him-if he makes any resistance just tear his beart out." The captain grinned fiendishly. The corporal

shuddered. "I wouldn't trusted any one but you to do it this way," continued the captain. "I knew you were braver than that whole bunch rolled into one. It'll seem like old times, like when those three rebs come at you and you laid 'em all out," be concluded

Once more the captain peered over the bank. Corporal Billy had not yet dared to do so. But now in his ordinarily discreet

and sensible mind there loomed the image of a gloriously intropid Corporal William Safford, a superb being, primed for feats of the most grandiose daring. Of course it was the sudience that in an instant made this reckless fool of him. And the yeath of the audience aggravated his folly. With a man of his own age beside him Corporal Billy would doubtless have relied upon the other's understanding in such matters and acted with a wiser restraint. But who of us would confess to cowardies, even to the tempered orwardine we call discretion, when the calmly believing eyes of youth are upon us, so adoring, so absolute in their trust? Corporal Hilly drew a long breath and peered over the edge of the bank,

Ten feet below him in a preson uniform a giant negro lay sleeping on his back. The immetise legs sprawled over the damp ground in a weary abandon; one powerful arm partly shielded his face. His mouth

arm partly shielded his tace. He mouth
was half open. The very snore that issued

the captain. "I saw him sneak in there and
climbed up here and watched him awhile,
and then I thought I'd give you all the
credit. I knew you'd make light of it, with credit. I knew you'd make light of it, with

your strength."

Corporal Billy assumed an expression

which he boped was gratitude.

"He's stirring," warned the captain.
"Quick, draw your sword!"
Corporal Billy stiffened, listening in-

Corporal Bully stiffened, lottening in-tently, but did not snove. The captain him-self drew the antique saler and thrust it into the other's hand. The hand was nerve-less, but somehow the fingers closed upon it. "Get ready!" urged the captain. Dis-cretion shrieked alarm to the corporal, but

there was confident youth at his elbow, and dimly a background of those who had thought him done for, not even man enough for a grand marshal. He did not flinch; yet he did not advance. So tenuous are these lines of bravery that accident may easily earn a credit it does not receive. Again the corporal period over the edge of the bank.

The captain peered with him.
"Take this," directed the captain, and thrust the wrecked pistol into the corporal's left band.

Below them the vast bulk stirred uneas

by, a grean was heard, and two immerses
fists rubbed the shut eyes open.

"Jump!" commanded the captain in a
firm, loud tone. The eyes below them
looked upward in afright. They beheld,
poised across the heavens, a formidable figure is uniform, arms outspread, one hand grasping a saher, the other a powerful-looking pistol. Even as the fright grew in socking pietol. Even as the tright grew in those eyes the terrifying figure descended with a demon's yell, for the captain had with one foot neatly scoured the soft earth from bereath Corporal Billy's feet, and the corporal, feeling himself going, had made the best of it. The captain had never questioned the iron of Corporal Billy's purpose; he had, divining that the moment had arrived membry feared heatation. He had arrived, merely feared hesitation. passed but a moment to look below before scrambling down the bank. Two yells had scrambing down the bank. Two your had sevended to him, Corporal Billy's and the one inspired thereby. This had emptised the lungs of the hunted one even as the man from the sky had fallen upon him.

When the captain reached their level.

When the capture reached their level.
Corporal Billy, in a sitting posture, was rubbing both his knees. The negro, gasping
fearfully for breath, lay half unconscious
from the assault. Corporal Billy arose,
picked up his fatigue cap with his sword
hand and carefully donored it. Captain
Webster regrettably forgot his dignity as an
officer and a contleman and danced wildly officer and a gentleman and danced wildly about the two

"Hurray! Hurray! You get him, Uncle Billy! You get him! I knew you could do it. I knew you wouldn't be afraid!" It was music to the ears of the corporal,

and yet he perceived that this was no time for music. Their victim gave a final shuddering gasp of restored breath and essayed to sit up. Standing above him, Corporal Billy kicked out vigorously. The recumbent one yelled in supreme pain and grasped both ships. Corporal Billy kicked again, em-phatically and with effect. Then he stood off and turned the ancient pistol upon his

"Look here, you!" he challenged grimly.
"Yes, suh! Yes, suh, Mistah Gen'ral!"
The Corporal felt relieved. The reply had come with a pleading white.

"You listen. Get up and walk straight down that track into town. I'll be ten

inches behind you, and if this gun goes of it'll blow the whole top of your head off and

then I'll cut you to pieces with this sword.

Do you understand?"

"Yes, suh! Yes, suh! I undastand."

His eyes flitted over the uniform. "My
Lawd! They got the ahmy out aften me.

Yes, suh, Mistah Gen'ral."

"Get up."

"Get up."
Slowly, with many groans, the huge hall cas partially raised. While he still crouched

was partially raised. While he still crouched his eyen flashed aside furtively.

"Rick again!" warned the lynx-eyel captain, and Corporal Billy again kicked, emphatically and with a deadly aim. A yell of utter submission was evoked, while the big hands nursed the abraded shin.

"Get up," directed the corporal in steely tones. "Walk down that track and don't forget this gun is right at your head."

The prisoner had been hunted for a day. He was weary and bruissed and spiritles. And the uniform of the corporal, no less than his fearful weapons and the cool authority of his manner, had been of hypnotic

thority of his manner, had been of hypnotic

Slowly he gained his feet. Corporal Billy held the pistol upon him. "If I have to shoot ——" warned the

'Aw, don't shoot him, Uncle Billy pleaded the captain. 'Just fell him with one blow like you felled the ox!" The prisoner flashed a glance of extreme

disfavor at this officer. "Throw him down and tear his heart it," urged the captain. The prisoner flinched and tamely bowed

his head.
"March!" rang the command.

At the edge of town an excitable small boy observed Ophirville's second paradethat day and dashed ahead to the townhall with the news of its coming. The shorid stumbled down the steps, hurried and increduleus. Remnants of the crowd surge sagerly back. Corporal Billy, behind the prisoner who towered above him, murchely parted to receive them. With military precision the captor raised his saber to "powent" and declaimed: "Corporal Safford Twenty-third Indiana Infantry, report one prisoner, sir."

The sheriff called frantically to the crowd:

The sheriff called frantically acrowd:

"Hold another gun on him, somebody!"
Corporal Billy permitted himself to sheer. Then he is unched a final kick at hi prize, a hard kick truly aimed. The crowgraped and a cry of pained protest can from the victim.

"A real soldier don't need to hold a guest his kind," appounced the corporal is

"A real soldier don't need to hold a guen his kind," announced the corporal itones of rich contempt. "I brought him a the way in without a gun, except for the there old fool broken thing the kid's beplaying with. Are you afraid of him, she iff? Shali I kick him again for you?"

There was another howl of protest for the prisoner, a howl of appeal from the military to the civil authorities.

"Oh, Mistah She'ff, doan' let that so juhman rough me up no mo'! He bestbusin' me. He sin't got no right!"

"We got bim! We got him!" shouts the dancing sheriff. "Put these irons a him, some of you."

"Three cheers for good old Billy Sa

him, some of you."

"Three cheers for good old Billy Sa ford!" shouted the town clerk, who we ever an opportunist. The cheers ranged vehicinently from the enlarging three Corporal Billy blushed and essayed to slir off, but they crowded about him, cheeric him again and again, proudly wringing hand. He knew that he was now perpetu grand marshal of all public functions. Ophirville, but he suffered acutely as I saw his captive led away to the jail. I was wishing he hadn't been so rough withe fellow. "I kicked the poor devil show off," he muttered. "I'm jest a for smarty! If only I hadn't kicked him the last time!" He looked about him for it face of one who would truly understan and brightened when he saw Mrs. Kelbeaming afar on the outskirts of the crow She would know just how he felt.

"Hist!" said a law target water of the crow.

She would know just how he felt.

"Hist!" said a low, tense voice at helion. He turned to see Captain Cyl.

Naughton Webster, B. S.

"Hey? What's that?"

"Hist!" repeated the captain. "The Mrs. Kelly wants us to come up to helions to supper. She's got fried chicken.

And it was even so. And it was even so.

But let us learn from this that braves may be one thing; then again it may

Emancipation for the engine!

Do you realize that—ten chances to one-you are today putting up with certain handicaps which limit the performance of your engine?

Do you realize that your power at slow speeds should be far greater than at presentyour maximum speed appreciably highercontrol far simpler and more automatic, - and that starting should be a mere matter of an easy turn without "spinning"? Those handicaps are avoided in cars using

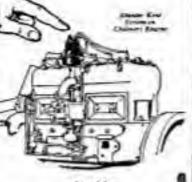

Atwater Kent Ignition System

with Automatic Spark Advance

Hisberto you have associated a certain performence with certain cylinder sizes. Furget it! It was not the natural performance of the engine, but only of the ignition equipment. The angine will do far better if it has a chance !

Try any of the latest cars in the list herewith-do not choose your new car until you have done so. You will gain a brand-new conception of power, flexibility, smooth running and easy control. You will wonder at the limitations you have suffered so long.

The simplicity and endurance of Atwater Reut Ignition have been proved by alm years of service. 21 in cars carry it tuday. Over 50,000 are being added in 1814. Will you be one of the fortunate mass to secure its benefits? Ask any agent of the care named above to full information, or write us direct.

THE SQUAREHEAD

(Continued from Page 8)

Bull Wilson swept the form at his feet

with a glance.
"Gwan!" he growled at her. "This un'd runke t'ree o' dat kid." Then, chuckling, he nodded her and Crocky out of the room. As he closed and locked the heavy door he called to the woman as she went toward the bar: "I've allus had a sneakin' idea yuh was selt on dut squarehead kid, Olga."

A light laugh was her answer; and it was so dark in the narrow hallway that Bull Wilson could not see that his wife and Crocky were holding hands.

In the dead of that night Bull Wilson

opened the ire-chest door again to bring forth the thing he had to sell. And as day broke Olaf Greig opened his eyes in a coffin-like space, which created and moved as though being borne by stumbling men; but consciousness did not return all at once. For a moment he believed himself in a coffin and being carried to his grave. Then he imagined himself in the tight berth that had been his on old Jon Thorsen's fishing smark. This thought suggested the sea and proved a spark. It exploded the mine

of memory.

The mist in his brain was swept away. He brought himself up to the point where he had leaped from the wagon in front of the Bowhead. Bull Wilson, the man in the tall, shiny hat—his enemy—had been within his grasp and he had just taken a deep breath before crushing him when— Something had happened then. He could not remember what. But here he was on a ship. This was a forecastle bunk in which he was lying. He was at em. He had been shangbaled again. He had been cheated of his vengeance!

With a cry of ruge which choked, half sitered, in his purched throat he harled himself from the bunk and went staggering toward the souttle through which the new day was beginning to drop a square shalt of light. His way led over a corduroy road of prestrate men—some steeping in drink, some under the influence of drugs.

As he came to the gangway ladder a form darkened the scuttle opening. Upward he plunged, red-eyed, unseeing. With a side lunge he sent the man in the forecastle entranen sprawling on all fours and kept on until be come to the waist of the vessel. He was on a whaler-a steamer called the Karluk. Then he stopped short. He knew where he was. There was no swimming ashore from here. Over the side were the Faralismes Islands, their light tower shedding its final night ray on their bleak and lichesed rocks. Astern full thirty-five miles away, lay the coast behind a base. There was Buil Wilson—safe!

Yet Ay vill come again!" he was crying when the saller he had knocked down as he herst from the forecastle scrittle seized him by an arm and faced him round. "Yuh hig bum! What'd yer mean by dropping me!" he demanded in open

Hub? Vat?" stammered the Squarehead in fewilderment, compelled to bend down to meet the other's lack of height.
"Hub!" repeated the smaller man

asgrily.

With that, his right fist crashed on the point of Olal Greig's juw. A repetition of 'Vat?' was followed by the left under his chin and the Squarehead measured his length on the deck. He started to rise, got as far as his ellows, and there pursed, smiling, the while his opponent bade him stand up and fight. He was smiling because this little man, whom he could have broken in two, had crumpled ears like Bull Wilson's, and because he remembered that with lightwhere he was now, his eternal enemy had twice encompassed him. In that moment curning was been in Olaf Greig.

An officer came running forward, swing-ing a peace-invoking belaying pin, and closed the incident.

"I'll take th' fight out o' ye in th' next seatern months?" he flung at Olaf; and thus the Norseman learned the term of his

The following night he was at the wheel and overheard the chief mate say to the captain of the Karluk:

That rat with the cauliflower ears in my watch a Stanfow Larkin. Used to be champion lightweight of the world-greatest of

ero all. But be's a bad ---"
Then they passed out of hearing, but they left the Squarehead smiling grimly.

A week afterward Olaf and the Shadow were put at overhauling the whaler's points supply. Neither had spoken to the other since the first morning at sea. Both lived in a silence apart from the rest of the crew without cronies. This silence continue now, though they were side by side, unti-Olaf suddenly touched the Shadow and without a word, directed his gaze to a large

without a word, directed his gaze to a large potato, solid and firm and edible, lying in the open palm of his outstretched righthand. "Well?" snapped the Shadow. "See!" answered the Squarehead; and his hand closed, crushing the tuber to applp. "Whatcher tryin" on, ch?" excisined the Shadow, snarling and leaping to his feet. "Tink yuh can run a bluff on me wid bull stren'th?"
"Naw. Ay lake he franch wit work.

"Naw. Ay lake be frands vit you, Ay lak you t' learn me boo t' praze fight." A scornful laugh burst from the Shalow: and that was an end of the conversation, for the mate separated them, sending the Squarehead aloft to a job that required his real sailor skill. During the rest of that afternoon, however, Olaf Greig made no more that encaped the terrierlike eyes of the former charmeter.

former champion.

A potate had started Shadow Larkin dreaming. And his dreams took new wings and inwardly he glowed when, at the end of the day's work, he beheld the Norseman standing stripped in the Karluk's waist and aloshing himself with sea water. Never he-fore had he seen a man made like this, and he was familiar with the prize-ring masters of twenty years past. In comparison the other bathers were but grotesques beide

this blond giant.

"If dis feller's only got a heart inside he can clean up de wolld! He's de White Hope!" murmured the Shadow.

As he watched Olaf dress he asked him

why he wished to learn how to fight.
"Ay yust lak to knaw," answered the Squarehead.
"Yuh want tuh lick somebody, chi Ala't dat it?"

Ain't dat it?"

"Jes," was his simple reply; but neither then nor afterward did he reveal the identity of his enemy to Shadow Larkin.

There and then began the Norseman's first bexing lesson. The mates and the cree thought the Shadow and he had respect hostilities until between puffed lips Olai explained he was Larkin's pupil and that they were the best of friends. Every evening after that, except when work or the weather ferhade, it became the custom for the ship's company to foregather to watch them. It was rare, fascingting sport for the rough.

It was rare, fascinating sport for the rough and moticy onlookers just to see the Shales in action. They knew what his fame habean; but to see him, a lightweight, a was of a man compared with Greig, play will the giant and strike him where he willows uproarious fun. As the Karluk's chie engineer put it, it was like watching a New foundland pup trying to catch a flare but while the spectators laughed and madjokes the Shadow held his peace. He was jokes the Shadow beld his peace. He was exploring, endeavoring to find out whether his pupil possessed the two essential qualities for ring success—heart, or what becalled sand, and head. And on a Sueday a the month's end he decided that the Square heard was the characters for the same and the same and

the month's end he decided that the Squar-hend was the champion for whom the work was waiting. Not once had his crucle blow stepped the Norseman, not once he the giant lost his temper. So the dream that had started with potato sprang into the form of a wend drawn and misspelled contract, in white Olaf Greig agreed with James Larkin the for the next lifteen years the said Lark for the next fifteen years the said Lark should be the manager of the said Grei and share and skare alike in all the earning or prizes that should come to the said Gre and, further, that the said Greig bound his self during that time not to engage wit anybody in any fight or athletic conto without the written consent of the sail James Larkin. But when the Shadow in finished reading this composition to Norseman shock his head.

Norseman shock his head.

"But yub goin' tuh he a champeen!" prested the Shadow. "Every champeen he gotta have a manager. Champeens don light grudges ner mix wid nolsedy 'cep' i de riog an' fer coin. Yuh t'ink I'm gin tuh teach yuh an' train yuh, an' den ha yuh give me de rinky-dink? Nix!"

"It is roug dat. Virgeny. A commission

yuh give me de rinky-dink? Nix!"
"It is naw dat, Yimmy. Ay promise à
no run avay," answered Olaf. "But voc Ay fight vit von faller, und yon -Nobody can say me nutting!"

The Squarehead's eyes blazed like live coals as the last words burst from him: and if only the Shadow could have looked into his brain at that moment he would not have

his brain at that moment he would not have pleaded for hours to turn his decision. At last he gave in and interpolated in the final clause of the contract: "except one fight."

"A couple o' years, Dutch, an' we'll be on Easy Street—on de sunny side!" he exclaimed as he watched Olaf affix his strawl to the agreement. The Shadow was jubilant. "De kink o' Norway'll have nuttin on yous! All yuh gotta do's cut hooze an' women, an' de woild's yours!" Then, patting himself on the chest, he added: "An' here's one ex-champ dat's goin' tun come here's one ex-champ dat's goin' tun come back wid bells on!"

The Norseman for a moment studied him

"So mooch money ve make—so mooch as Ay can make tay de gold mines?" he

The Shadow doubled with laughter, and The Shadow doubled with laughter, and at the sound of it many an eye went forward to where he and Olal sat together on the forecastle head. It was the first time Larkin had been heard to laugh since coming aboard the Karluk.

"As much as yuh sud make in de gold mines!" he chuckled. "Dere's a mint!" He slapped the hack of one of Olaf's big heads. "An" dere's anudder!" And he slapped its mate.

hands. "An" dere's anudder!" And ne slapped its mate. Olaf looked away at the sea and pondered

this for some time.

"You bane champeen vooce, Yimmy," said he, turning round again. "Vay you come here? Huh?"

The jubilant light went out of the Shadow's face; his square, pugnacious jaw set, and his small black eyes became pin-

set, and his small black eyes became pur-points as he met the Norseman's gaze.

"If I wasn't here, Dutch, dey'd have me in jall back dere—see?" he answered eva-sively. "Dey's a indictment 'gainst me in Frisce fer votin' four times too many last Tection day. But yuh don't unnerstan' dese t'ings. Yous is a furriner. But I'll fix dat indictment up wid de feist poise yuh

The Shadow was right. Ofaf did not understand any of this, except that his ques-tion had not been answered, and stolidly be

repeated it.

"Vay, Ay ast, Yimmy—vay sir you be more day champeen praze fighter?" was the way he put it; and the Shadow's wit

failed bim.

"John Barleycorn!" he snapped in answer. "Hoose, Dutch, an an a an a woman.

Come un an take yuh lesson!"

And that evening the Squarehead felt a new sting in the Shadow's gloves, the beating gloves they had improvined from pieces of canvas and stuffings of oakum. They cut like knives, bruised like slungshots; and the master was savage, merciless. Yet

his pupil made no complaint, though he wondered much at Yimmy's mood. That night, as they turned in at the end of the second dogwatch, the Shadow, who was already in his bunk, suddenly drew a battered heart-shaped locket of silver from

under his pillow.

"Dere she is, Dutch—de goil what trun me down," said he, holding out the locket toward where Olaf stood unbuttoning his coat. "I'd be champeen tub-day ef she'd

coat. "I'd be champeen tuh-day ef she'd stuck. She was me wife—oncet."

The Squarehend crossed the forecastle to the guttering lamp which dimly lit the hole. As he raised the heart to the light it fell open loosely on a worn hinge, and he lound himself looking into the face of Olga, 2nd Wilson's wife and thereuses he Bull Wilson's wife; and thereupon he understood much. Silently he handed the heart back to its owner.

"A feller what I was good tuh w'en he was down an' out -- he stole her, Dutch!"
whispered the Shadow.
"Vay you have have billed det toll

"Vay you naw have killed dat faller, Yimmy?" asked Olaf with solemn mien; hot be was a seething furnare inwardly. "I'll have tuh do it some day! I'll have

The rest was smothered in his pillow; and, all attemble, the Squarehead climbed into the bunk over Jimmy Larkin's, but

not to sleep. The Karluk fished her way into the Arctic by way of the Kamehatkan coast. By June she was up with Wrangel Island. Thence she went off to the eastward and the world heard of her no more until one September day the lookout on the rocky brow of Point Barrow sighted two specks far off

to the northward in the ice-packed sea.

Makers of Jamous Yellow Strand wire rope

forthwith smashed out through the floes and a couple of hours later came up to the specks-two boatloads of all that remained of the whaler Karluk's company. A week they had been fighting their way toward the land from where the bergs had nipped their ship.

In the stern sheets of the first boat sat the Karluk's captain, in command and alone. In the stern sheets of the second sat a giant Norseman in command, but not alone. Cuddled up against his side, where the Norseman had tried to keep him warm and where death had turned him to ice, was all that was mortal of the once great Jimmy Larkin, surnamed by men the Shadow.

A fortnight afterward the Bear went south through Bering Strait, carrying Olaf Greig, a person distinguished among all her company simply because he had been a friend and the pupil of the Shadow. Such is fame! Dead though Jimmy Larkin was, yet he lived again as the attractor. yet he lived again, as the cutter's crew saw it, in this Norseman, when they heard the Karluk's survivors tell how the Shadow had proclaimed him the White Hope. They gave him of the best of their bedding and food; they gave him shore clothes and money. A king could have commanded no

But silently the Squarehead accepted all that was thrust on him, and this silence was construed as a proof of the greatness to which be was considered heir. Such is the fetish of hero worship. Yet never for a moment did Olaf Greig's mind open to one thing extraneous to the vengeance he had vowed and renewed again when Jimmy Larkin's farewell breath, calling "Olga! Olga!" froze against his ear. against his ec

He and Bull Wilson were alone once more in the red world he had entered on that September day, two years before. Still, often as he counted the Bear's screw throbs, every one of which carried him closer and closer to his goal, he felt that he was not alone. Sometimes he even imagined he could hear a voice whispering: "He stole her from me, Dutch; an' I was good tuh him w'en he was down an' out!" And, with this whisper, always a battered silver heart would fill his vision, the heart with which the Shadow, his friend, slept in Point Barrow's key flank.

Barrow's icy flank.

It was on a Sunday morning, a new October day, sparkling with sunshine and bius of heaven, that the Bear went through the Golden Gate. It was a day to make the soul soar. The tang of new and heady wine was in its air. Down from the city on the hills the sound of many worshiping bells floated to the sea. Now and again the laughing and calling of children at play came off from the waterfront streets.

Aboard the Bear the men whom she had

Aboard the Bear the men whom she had saved from death saw and heard and were thankful, and thought deeply of the life that lay ahead of them. All save one cast their thoughts in this wise; but his life's course ran only so far as the door of the Bow-head, a sailors' boarding house in Drumm Street. That door was the portal of the end.

An hour after the Bear anchored in the stream one of her boats was landing the Squarehead and the rest of the Karluk's survivors at the wharf float where, with only kindness and dreams in his heart, he had first come ashore. Greig, with cunning, cluded his companions. One moment he was among them; the next they stood in bewilderment, wondering whither he could have disappeared. And while they looked round and made inquiries the Norseman was holding toward the Bowhead. As straight as a bullet he went, ignorant though he was of the streets. he was of the streets.

Had he been blind he could have found

his way. A thousand, a million thousand times he had traveled it! And suddenly the Squarehead halted. Across the street was the Bowhead, and in a chair to the right of the swinging bar door sat Bull Wilson. There he was in his shirtsleeves, basking in the sunlight. A boy flying a kite ran along the sidewalk, obscuring him for a second. As the youngster passed on, Olaf Greig started on a run toward his enemy; but as he reached the opposite curb in front of his prey he stopped as though he had butted into a brick wall.

The chair in which Bull Wilson was sitting had wheels under it, and his legs were wrapped in a rug. His hair was long and gray; the florid countenance of old was now a pasty, sickly white. The diamons stud was missing from his blue-striped shot front. The silk tile was roughed and its

black nearly green.

"Hello, sallor!" hailed the crimp, with
an effort at his old stage heartiness. "If
yuh lookin' fer a good boardin' house de
Bowhead's de place tuh bring yuh dinnage." He did not recognize Olaf; but if he had it would not have mattered. From his point of view—and everything is in the point of view—he had not wronged the man. In the true crimp's scheme of thing it is foreordained that sailors are born to be bought and sold; and that is all there is to be bought and sold; and that is all there is to it. "Come ahead, sailor," Bull went or, "an' I'll blow yuh th' drinks—only yih gotta wheel me inside."

While he had been talking the Square-bead had been slowly, almost imperceptibly, drawing closer and closer to his enemy. Now he stood over him. He had but to

Now he stood over him. He had but to open one of his elenched hands and close it open one of his clenched hands and close it again on the scrawny, dewlapped throat, and this thing in the chair would speak to more; and one of the big hands started up and opened—only to fall back inert. The man was broken, helpless. The Norseman could not touch him.

"Have anythin' yuh want, sailor," Wilsen was saying. "Whisky, wine, heer. But pub me gently through th' door—th' threshold's high. Gotta have it cut down. Doctors as:

high. Gotta have it cut down. Doctors at I'll never get outer dis chair. Hell an't it' Fell from a ship's side intuh a boat at months ago — both me legs paralyzed."

The earth was slipping from under Out. He could not touch this man, and yet be could not leave him.

could not leave him. His threat was rising, his gaze darting round seeking a mean of escape. His impulse was to run, but is could not. Instinct called to action.

could not. Instinct called to action.

At this moment his roving eyes with over the Bowhead's swinging door, and at the end of the bar he saw Olga kissing the runner who had brought him from the Palgrave. Crocky's arms were round her.

"Ain't yuh goin' tuh roll me in, sallor?" pleaded Hull.

"Jes," answered Olaf, but quite as preconscious that he answered the crimp as he was of taking hold of the wheel chair and pushing it through the deorway. As he seed

pushing it through the doorway. As beween t spinning across the bar floor a screech of belpless rage from Wilson broke Olga's lips from the man to whom she was rendering

Laughing loudly, like one in drink, Out Greig staggered out into the street. An eddy of a passing Salvation Army procession drew him into its wake, and he marched with it willynilly until a corot player called him a drunken beast and pushed him anide.

And have the reliable of the control of the corot.

And here the eddy of another processor, a benevolent society of some kind, pienic bound and marching like an army with banners, snatched him up and carried him along to the gates of a ferry, where he are hurled back because he had no tides. Somebody seized him and pushed him laside a railing, before an over window.

a railing, before an open window.
"Where to?" snapped the ticket seler

Olaf looked in at him dumbly, as one in a

"Where to? Where to?" repeated the ticket seller; and thereat the Squarehead plunged his hands into his pockets and broughtforth a fistful of money—the money the Hear's sailors had contributed to Jimmy Larkin's White Hope. Among the coins was a discolored and tattered piece of paper. The man in the window greatched it and The man in the window snatched it and opened it. It was Hildigunn Svenser's

"Coffee Creek, Trinity County, is"

read the agent.
"Jes!" said Olaf eagerly.

"Well, why didn't you say so in the first place? Here! Hurry! Shake a leg! That's your train boat!

A kindly policeman standing by caught the Squarehead by an arm and rushed him through the closing gates. A moment later the ticket seller was saying to the cop:

MEN WHO LIVE ON NOTHING

"In that house," he replied; "and he went to school right in Plaster Rock. The went to school right in Plaster Rock. The truth is Rupert got his money too young. You see, his pa and ma both died when he was fifteen, and Rupert got his share of the mill profits from that time on. Kinder turned his head. Money's a bad thing for a boy and Rupert has always had his five bundred a year. That's what give him the idee of goin' to college. That finished him for good!"

"Oh, come!" I protested. "There's no use in talking about him like that. He's all

use in talking about him like that. He's all

Rupert's uncle shook his head. Evi-dently he felt the lack of conviction in my

"I suspect Rupert's kind of petered out?"
he answered meditatively. "Still, you know him better'n I do, I guess, Anybow he went to Harvard, and when he came back he was no good, to my way of thinking. He hung round a while summers, but he wasn't any use in the business, and he talked of nothing but books and the folks he knew; and so I told him he'd better try his luck where his talents would be more appreciated." He gave a dry laugh and looked at us quizzically.

"He's very much liked in New York," said Clare with a show of warmth. After all, Rupert was her friend!

"Oh, I min't got nuthin' agin Rupert!" he repeated, "I guess it's in the bloost somewheres—this wanderin' streak. His mother's people was sort of unreliablelite. ing. He hung round a while summers, but

mother's people was sort of unreliablelike. She was a De Grégoire from up the coast. They came over from France 'way back— God knows when! My wife was a MacMurtie from Aberdeen. Most of the folks along the river are Scotch, with a few French. Rupert's more like a feller out of a book than the rest of us."

My wife looked at me quickly. That was it Rupert was like a fellow out of a book. And yet what a riverman he would have made in a red shirt and bottes soumost Strange are the usages of inherit-Covenanter, and Rupert would have been a

Covenanter, and Rupert would have been a lumberjack; while a drop or two of the atavic De Grégoire strain made him, in fact, a modern chevalier loitering away his existence amid the fair women and luxuries of the metropolis—just as his ancestors had perhaps done under the old régime.

"Anyhow, I send him his share of the profits—two hundred and fifty dollars—regular every six months to some club in New York; and I never git a word from him," finished Uncle Vallon. "But give him my regards when you see him. Yes; it's going to be clear weather tomorrow. Good-night!"

He turned and sauntered away through

He turned and sauntered away through the lumberyard, leaving the sweet, harsh odor of his pipe hanging on the chill air. "Well!" I chuckled, gazing at my wife sidewise. "How about Mr. Rupert Vallon

"Well!" she answered. "Didn't I tell you I'd solve the mystery? I have!"

We strolled back along the bank toward our campfire in the growing dusk of the early autumn evening, our minds full of frange thoughts.
"Whoever would have imagined ----"

"Whoever would have imagined began.
"But that's what makes it so interestsg!" she interrupted eagerly. "Don't you see? Rupert's nothing but a nobleman in finguise. Can you reconcile the idea of one in whose veins flow the united streams of the blood of the Vallons and the De Gréphires spending his life working in a lumber will? He could have conquered the wildermest was fought with Indians and wild ness yes, fought with Indians and wild mimals, struggled against disease and amine; but once the frontier had been tester back, and the craving for adventure tould no longer be satisfied, then the love % esse and luxury, of gayety and amuse-ment, became uppermost in his nature. "To hear that old man talk took me back

to the voyages of Champlain and De Guast. No doubt some of Rupert's ancestors sailed with them from France and helped well the company of nobles, priests and

idventurers who sought their future in the new world!"

"How romantic!" I retorted cruelly.
"From what I have read they were more ikely a rare bunch of gamblers, cutthroats, isreputable young blades of the court of Henry IV and thieves fleeing from the gal-47s. In which class do you tuck Rupert?"

"Poor old Rupert!" she sighed. "And his uncle thinks that he's been ruined by five hundred a year!"

We were late in getting back that winter, and Thanksgiving was over before we moved in from our Long Island country place. Vallon usually kept the feast with us, but we heard nothing from him and assumed that he was away hunting or duck shooting. Even after our town house had been opened Rupert did not put in an appearance.

Inquiry at the Stuyvesant Club elicited no information; and old Peter, the door-man, assured us that Mr. Vallon had been seen there only a few days in October and had then gone off somewhere; that his mail had been accumulating ever since, and that he had left no instructions about having it forwarded. Peter was plausible and convincing. So Clare had to look round for other gentlemen to balance her single ladies, and even the despised Wiggin was requisitioned in Vallon's place on more than one occasion.

Gray November had stretched into a raw Gray November had stretched into a raw and blustering December when one evening after dinner our butler came to the drawing room and announced a person to see me at the front door. The visitor had given no name, he said, but had stated that I would know him. A furious storm of sleet was drifting through the side streets, and the wind was shricking and rattling at the French windows. the French windows.
"Goodness!" I exclaimed to Clare.

"Whoever it is must want to see me pretty badly! Even a beggar deserves something

for coming out on a night like this."

So, cigar in mouth, I descended to the front hall. There, standing snow covered by the freplace, holding a carriage umbrella nearly as big as himself, stood a little ahriveled figure that I recognized with difficulty as Peter.

"Bless my soul, Peter! What are you doing out in this storm?" I cried in amazement. "Won't you have a glass of something hot?"
"No; thank you, sir," replied the old servant, who had stased at the door of the Stuyvesant Club ever since I was a boy. "I bee your pardon for disturbing you." "I beg your pardon for disturbing you; but it's about Mr. Vallon-I think he's

dying."
"Dying!" I felt a sudden remorse in which was mingled a certain incredulity. One could not imagine Rupert as dying. "But I thought he had gone away!" I added in feeble protest.

Peter glanced significantly at my butler,

who was lingering within earshot.
"You may go, Merton!" said I, and he

"That's what Mr. Rupert told me to say, sir," answered Peter miserably. "You see him and me's been such good friends, sir-"You see, that is, as much as a servant can be to a gentleman. You didn't suspect he was poor, did you, sir? And he was too proud to let anybody know. Sometimes he hardly had enough to eat. And he wouldn't tell anybody where he lived. I was the only

anybody where he lived. I was the only one who knew—just one little room in a furnished-room house, at four dollars a week. Why, I pay six for mine, sir! But he's a fine gentleman!

"Do you mind that three days' storm we had? Mr. Rupert didn't have a proper coat. He spent all his money on tipe in Newport. I offered him one of Mr. Grosvenor's, who's gone to California and left it in the coatroom; but he wouldn't take it—not him! So he caught a shockin' cold, sir. I went over to see him and fetched him. sir. I went over to see him and fetched him a doctor. 'Don't tell anybody I'm sick, Peter!' he says. 'Tell 'em I'm gone away.' So I did as he bid me.

"Then he got worse and the cold moved down into his lungs. All his food had to be brought in from outside from a cheap restaurant. The doctor said he must go to a hospital-a free one; but Mr. Rupert refused to go on any account. I think he was afraid people might find out if he went there. That was ten days ago. And his room was terrible cold, sir only a wretched gas stove, sir; and it leaked at that. Two days ago be developed pneumonia. And now he's dying!"

He wrung his wrinkled old hands, the tears trickling over his furrowed cheeks.

I rang the bell for Merton and directed

him to order a taxi in a hurry. Then I dashed up the stairs three at a time and

SECOND YEAR

TIRE MILEAGE CONTEST

\$5,000 IN PRIZES

SO great was the success of the first Ajax tire mileage contest, recently concluded, that we are moved to repeat it, and to offer again 208 cash prizes totaling \$5,000. Winners of the first thirty capital prizes in this initial contest averaged 10,323 miles, and the 208 prize-winning contestants averaged 6,906 miles. The higher in-built worth of "Ajax guaranteed in writing 5,000 miles" tires is thus demonstrated, and a full confidence is inspired.

How to Enter the Contest

It costs nothing to enter the Ajax Tire Mileage Contest. The simple requirements are that your car be equipped with an Ajax tire, and a separate entry blank, signed by your employer, for each individual Ajax tire be filled out. Entry blanks and final report blanks are to be had of our branches and Ajax dealers, or are mailed on request. Enter NOW and take advantage of the full time allotted to the contest. The contest is open to employed chauffeurs, and prizes will be awarded to those who realize highest mileage by the contest's close, March 31st, 1915. In case of ries, a prize identical with that tied for will be given each tying contestant.

To the Chauffeur

Alax tires are guaranteed in writing for 5,000 miles. This should be the minimum milenge, providing you give your tires the same care and attention you give to the car. Guard against under inflation. Give immediate and prompt attention to small cuts and graines. Avoid running in car tracks. Use the throttle more and the brakes how, and conserve the mileage of tires.

To the Car Owner

The great proportion of tires which have short life rome to their untimely, end through lack of proper care. We are prompted to repeat out for mileage contest, with \$1,000 in prices, because of the sorress met in the first contest, revently chand. Our unn compensa-tion comes in the actidaction which every Afac the will give, and in the continued patronage of actioned owners.

"While others are claiming Quality we are guarantising it."

told Clare to get into her wraps. Rupert dying! Good old Rupert! I might have known be would not have stayed away so

long unless something was wrong.

It was a strange ride—the strangest Clare had ever had—that one to Rupert's lodgings; for old Peter sat inside between us pouring out his wretched old soul and apologizing every few moments for pre-suming to have the feelings of a human being. Clare sobbed quietly all the way. It seemed hours before the taxi stopped

in the middle of a shabby brownstone block west of Eighth Avenue, and when we arrived there an ambulance was already waiting at the door. We stumbled hurriedly up the three flights to what Peter said was Rupert's room. But others were before us and they were carrying something out—a man on a stretcher.

My heart falled my. A brisk sharm farmed

My heart falled me. A brisk, sharp-faced young man had hold of the front hundles. He had the front handles of the whole

"Are you friends of this man?" he de-"Are you friends of this man?" be de-manded. I nodded. "Time you came!" he mapped. "He's got double pneu-monia—bare chance if I get him to the hospital alive; and I'm taking him by main force. Stubborn as a mule, he was! But he's out of his head now and doesn't know. Give us a hand, will you!" I grasped one pole of the stretcher, and I was shocked to find it feather light. I could not see Rupert's large, for the doctor

could not see Rupert's face, for the doctor had thrown his cost over the upper half of his body. God knows how we got him down the narrow stairs and down the steps.

down the narrow stairs and down the steps.
On the sidewalk I mustered courage to accost that steel trap of a doctor.

"Can't we take him to my house?" I asked. "We've only just found not. He was too proud to let us know. Why, we didn't even have his address!"

"You don't say!" answered the doctor more genially. "Queer case, all right. I never met such a man. Certainly the ambulance can take him there. And bless you!"

you!"

In the sunny hospital room at the top of our establishment Vallon jay for two days and nights struggling for life. Death came out of the closet and becknowl to him, but Rupert's vigorous constitution rallied to his decisies and he lought the specter off.

The crisis came nod passed. Weak, hollow cheeked and wan, he lay helplessly in the sunlight while Clare and Myra hovered over him and fed him with beef tea and chicken broth. With two such nurses his convaluecency was rapid and in a week he was sitting up by the fire, almost his old self.

A strange and contradictory phase of the situation, however, was that while he had been utterly prostrated and confined to the bed be had seemed a different man from the Ropert we had known before. He had been grave, simple, direct—as though his true personality, long submerged in artificiality, had at last floated to the surface. But now that he was up again, in dressing gown and slippers, with his hair neatly parted, all the old mannerisms, the tricks of speech, the chronic smile had returned.

The man was slowly disappearing and the Pet Cat was coming back! And, delighted as I was that his life had been sayed, I wondered after I had gone downstairs into my library whether in fact we had done Rupert Vallon a good turn or an ill in last letting him dis as he had nighted with not letting him die as he had wished, with as he supposed — his secret buried in his own breast, leaving behind only the reputation a gallant gentleman.

of a galiant gentleman.

We had spoiled all that; had cheated him out of his ending; had rained his little tragedy with an anticlinux.

It was a queer world! I pitied Rupert from the bottom of my beart. For one reason or another he had preferred to watch the game rather than to play in it. He had carried the ladies' wraps and sat on the side lines. Had be been a roward—afraid to take his rhance in the rough-and-tumble of life? Or merely a lover of laxury who familied that there was nothing in existence but motors and yachts, dances, dinners, int motors and yachts, dances, dinners, wine and crears-who thought "the sovereign'st thing on earth was parmaceti for an inward bruise"? A little of both perhaps.

He had tried to play safe- to have his cake and eat it too; to make sure of his fun while he had the chance, before he had earned it. But is anything fun unless it is escraed?

Poor old Rupert! He had sarrificed swrything that makes life really worth living in order to grasp those superficial and

momentary pleasures that are as unsatis-fying and ephemeral as smoke rings! Rupert had no home except his club, no-

where to lay his head but a bedroom in a furnished-room house; he had no wife to share his pleasures or disappointments, no one to whom he could turn in hours of sadness or regret; no children to love or teach the lessons he had so hardly learned him-self, to care for him in his old age or keep

that old age young. He had no real friends, bound to him by ties of mutual endeavor toward right living; nothing to give an edge to the only life that he would ever lead; no aspirations toward anything higher than a visit to Newport or a trip to Havre-de-Grace after ducks; no dangers or chances save that he might lose a dinner at a millionaire's table, no ambition but to be invited again, and no

zest for the dinner itself.

The love of woman, the warmth of genuine friendship, the fleron thrill of competition and of struggle, the glow of achievement, the exultation of success, the antisfaction in work well done or of doing one's best even when one has failed, even the bittermes of

sorrow - he had lost them all!
Did he know? Was he conscious that
he had played too safe? Did he see himself as he really was—a straw man?—a human being with legs and arms and a stomach, but illied with sawdust instead of red blood? A "little brother to the rich" who paid for life with a debused coinage supplied by

others who held the purse-strings? A fool!
Ropert continued to improve. His color
returned; daily he put on more flesh. Soon
he was the identical Rupert we had always. known. And he also continued to remain our guest, sitting in the sun in my silk dressing gown and smoking my cigara-justed over and read to by my wife and Myra.

Once he may have felt the undertone of disapproval in my conversation, for he cracked a feeble joke about soon being with Street & Walter—and being able to get a job. A job? Did he really mean it? Was it possible that his recent experience had given him a new vision of his responsibilities, of the meaning of life, of all that be had lost?

But my wife laughed when I repeated this threat to her. "Rupert get a job!" she said. "Why, what use would he be to anybody? He can't help being what he is. And why should he? After all, he's a dear, sweet fellow—just as I've always said. I wish there were a lot more men in the world like him."

him!"
"I don't see anything to admire in a Pet Cot," I demurred, "a fellew who doesn't even doze to fall in love for fear he'll have to go to work and support a wife!"
"It takes a great many different sorts of people to make a world," answered Clare. "Perhaps we need a few cheery souls like Rupert who are only fitted for the task of telling you the sun is shining."
"That's a devil of a job for a grown man!" I grunted.

man!" I grunted.

"Do you remember Emerson's Essay on Manners "I she asked. "I was reading it today. Hesays: 'It is easy to see that what is called by distinction society and fashion has good laws as well as bad; has much has good laws as well as bad; has much that is necessary and much that is absurd. Too good for banning, too had for blessing, it reminds us of a tradition of the pagun mythology in any attempt to settle its character. "I overheard Juve, one day," said Silenus, "talking of destroying the earth. He said it had failed; they were all rogues and vivers, who went from had to rogues and vixeus, who went from had to worse as fast as the days succeeded each other. Minerva said she hoped not; they were only ridiculous little creatures, with this odd circumstance, that they had a blurred or indeterminate aspect, seen far or seen near; if you called them had they would appear so; if you called them good they would appear so; and there was no one person or action among them which would not puzzle her owl-much more all Olympus—to know whether it was funda-mentally bad or good." "

I took a long pull on my eight. I did not pretend to be any philosopher. I liked Rupert and I did not deny his attractions, but I did not understand the reason for my wife's defense. So I tried an argumentum

ad hominem.

"Anyhow, you wouldn't want him to marry Myra!" I announced conclusively. A curious expression came over my wife's face—one that I had never seen there before.

"He is going to marry Myra!" she said.

"Well That's Fine!!"

Goodyear Prices What They Buy

At Goodyear prices, this is what you get today in an automobile tire:

The tire which—starting from a tiny factor—won against some scores of rivals the topmost place in Tiredom.

The tire of which more than three million have been put to the test of use. And which this year—after those millions of mileage comparisons—has jumped 55 per cent in sales over last year.

The tire which scores of experts—working in laboratories—have spent years and years in perfecting. They have built thousands of tires in thousands of ways to learn how to better this one. In these ways they have spent \$100,000 yearly to attain the farthest limit in low cost per mile. And all their achievements are embodied today in this Goodyear No-Rim-Cut tire.

You get the tires which once cost users one-fifth more than other standard tires. They retain the same costly features. And today—as then—No-Rim-Cut tires are the only tires which have them.

Four Exclusive Features

Our No-Rim-Cut feature is found in these tires alone. That completely stopped rim-cutting, the major cause of tire ruin. And it brought you this saving in a feasible, faultless way.

Our "On-Air" cure is employed in no other tire. It adds \$1,500 per day to our tire cost. But it saves our users the countless blow-outs due to wrinkled fabric. We final-cure on air-filled tubes, under actual road conditions.

Our rubber rivets are created in these tires only. Hundreds are formed, during vulcanization, to combat loose treads. Thus we lessen this danger by 60 per cent.

All-Weather treads are exclusive to Goodyears. These are double-thick, tough anti-skids. They are flat so they run like a plain tread, yet they grasp wet roads with deep, sharp, resistless grips.

Note again those four exclusive features. Mark that

they cover the four greatest tire troubles. Together they have made No-Rim-Cut tires the most popular tires in the world. They've saved motorists millions of dollars. And no other tire, whatever its price, offers you one of them—or anything that fairly compares with them. You get them all in No-Rim-Cut tires, and you get them at Goodyear prices.

Higher Prices How They Come

Now comes a condition where 16 makes are being sold above these Goodyear prices.

Some are nearly one-half higher. Numerous makers charge for three tires as much as four Goodyears cost. Tires which once undersold No-Rim-Cuts now cost you \$4 to \$15 more than these per tire.

It has come about in this way:

In the past few years No-Rim-Cut prices have been cut in two. Last year alone these prices dropped 28 per cent.

Other makers shared our lower cost for rubber. But we made other savings. We built new factories, modernly equipped. We invented and built money-saving machines. We employed efficiency experts.

Our output doubled over and over, until it lately exceeded 10,000 motor tires in a day. Our overhead cost dropped 30 per cent—labor cost 25 per cent. All because of this matchless output.

Profit Down to 61/2 Per Cent

With multiplied output came the need for less profit. Last year we brought the average down to 61/2 per cent.

The result of all is this year's Goodyear prices. They have come down so fast and far of late that most others have ceased to follow. And the paramount question in Tiredom today is this question of extra price.

The self-evident truth is this:

You get in Goodyears the utmost in a tire. Their place and prestige prove that. Their amazing sales, after years of comparison, show what men have proved about them.

You get in Goodyears four great features which no other maker offers. Each adds to our cost but reduces your upkeep. And no extra price can buy one of them.

As for "quality" in a tire—that can mean only minimum cost per mile. And all our tests show that we have that. Any item of "quality" which means higher cost per mile is something no user wants.

It is folly to add to your tire cost. Get Goodyear tires at Goodyear prices. Almost any dealer will supply them.

Public Ownership of Railroads, Waterways and Water Power

Grand Central Terminal Yurds of New York Central Lines, New York, in 1905

Present Firm of Terminal Tords, Lacking North From Practically Jume Viewpoint

HE conclusions reached in this paper have been forced on me by the logic of events during the ten years last past, reënforced by practical knowledge ained in regard to the cost of building rail-

onds and to the method used in financing and operating them. My experience in railroad operating began with driving a mule team in a grading camp and ended more than a core of years later with the completion of certain railroad construction contracts, ggregating in value several million dollars.

If any one at that time had said that I should come to believe in government ownership / railroads the statement would have seemed preposterous; but my experience as a public ficial during six years of service in the state legislature and four years in the governor's flor caused me to make an exhaustive investigation of the whole transportation question,

avolving rates, service, operation and apitalization, from a public-service inequity, and this investigation has even me an entirely new view of the slation of railroads to government in he nation and the several states.

As a member of the legislature of 108 I saw a big railroad system force he election of a United States senator vho, as a member of the lower house of longress, had voted with that particuar railroad against a president of hiswe party in the settlement of obligaions involving millions of dollars due he Government for aid in construction. saw this senator fulfill a preelection greement with another great railroad y recommending to the president of be United States the appointment of its general counsel as a judge of the United States Circuit Court, though the latter was not of his political faith. Fortunately President Roosevelt prevented the consummation of this agreement.

As speaker of the Kansas House of Representatives in 1905, I saw the same influence secure control of a majority of the Senate—a bipartisan majority, called the Senate lodge.

atate politics; the same roll call in the legislature that opposed the law reorganizing the railroad commission opposed the law taking the state charitable institutions out of politics; the same group of men who begged the governor not to push the railroad freight bills importuned him to accept a weak primary law. Whenever the people of Kunsas desired to effect a political or economic reform of any kind, whether or not the reform even remotely affected the railroads, the lobby organized by the railroads and directed by their attorneys always led the onslaught against that reform.

The state at that session witnessed a most shameful betrayal of the public trust, and after the legislature adjourned rewards began to follow. A leader of the Sonate lodge

moved out of a small law office into the law headquarters of the Standard Oil Company of Kansas. Another member, who came to Topeka impecunious, blossomed out as a capitalist after the session and made a grand tour of Europe and the Orient.

It was not merely anti-railroad legislation

that this Senate lodge fought. The same

crowd that opposed the two-cent fare fought

the introduction of a civil-service law into

Whenever a Federal judge was to be appointed from the West I saw the railroad attorneys of Kansas flock to Washington to line up senators and representatives for their man. The value in cash to the railroads and corporations of a Federal judge for life, who has the corporation viewpoint, is well known. The railroads are in politics for business.

The Wall Street interests that finance the railroads and dominate their political policies have also financed the big business consolidations, combinations and trusts of the country. They are all so interwoven and interlocked that dissolution decrees of the Supreme Court of the United States now seem to help rather than hinder them, as witness the rapid rise in market value of the Standard Oil and Tobacco Trust stocks when the Supreme Court dissolved them,

Washing on the P. C. & St. L. Res. Three Miles East of New Compressions, Okia

The Federal Government can never effectively control monopolies until it controls the source of the political influence that makes unlawful combines and trusts possible.

If the political power of the railroads in the several states does not now stand between the people of the United States and a responsive representative national government, it certainly is a menace to our form of government.

The Outlook of July 30, 1910, said editorially: "The railroad question is another form of the fundamental issue between oligarchy and democracy." Every passing year makes the absolute truth of this statement more apparent.

There was a period when it seemed to me that rigid control would be better than public ownership; and, though forced by the logic of events to see that the railroads were governing the country and that the little brigandage of our state capitals was duplicated in national affairs, I still hesitated before believing that government ownership was necessary to remove this evil and dangerous influence.

It seemed that the achievements we had made in railroad building, the advance we had made in many matters of transportation over certain other countries, would warrant giving the old system further trial; but as one goes more deeply into the facts, under the surface of things, be is compelled to question the wisdom, justice and soundness of the policies and principles underlying private ownership of our railroads. Not only is the transportation question involved in this problem, but it is closely allied with many other great questions disturbing the country.

Therefore, having come through the long. slow way of circumstance and events to my present belief, it seems wise to justify that belief with such facts as investigations bave disclosed and such arguments as the facts adduce. The fundamental idea of American government is that it should be conducted in such a manner as to benefit the largest possible number of people. It is a self-evident fact, and needs no proof. that anything which tends to carry out this idea is not in conflict with our institutions.

The Question

GOVERNMENT Gownership of railroads means simply venting the title of our

railroad properties in the Government for the benefit of all the people alike. Private ownership of the great railroads of this country means the vesting of the title in a corporation and holding it in trust for the benefit of the few. Railroads are and always will be an actual public necessity and a natural monopoly. The question I propose to discuss is, whether it is best for the American people to have the title to our railroads held in trust by the Government for the benefit of all the people, or whether it is better to have the title to all this vast property vested in corporations and held in trust for the benefit of private individuals.

In considering the general welfare, comfort and convenience of the people, we find that only the soil on which we live is more important than is the question of efficient, economical transportation service for all persons and property on equal terms and conditions. During the year 1913 the railroad companies of the United States received in revenue \$3,171,000,000. There are in this country approximately twenty million families of five persons each. The average cost of living for these families last year was approximately \$625 each. Railroad transportation cost each of these families an average of \$158,50, or a quarter of its total expense. President Waters, of the Kansas Agricultural College, recently said: "Last year one-fifth of the average cost of living in the United States was due to freight and expressage, or an average of \$125 for each family."

Our highways of transportation, of commerce and distribution are now in the hands of private interests whose selfish welfare is opposed to the common welfare. Under public ownership the Government of the United States, acting for and representing all the people, will condemn and purchase the railroads at their true value and operate them on the basis of equal service, without discrimination between persons, cities and communities.

All the railroads need not be purchased at once. They were not so acquired in Germany and France. It is quite

often assumed that all the railroads of the country—about 250,000 miles of them—would be taken over at the same time. There is no reason for such an assumption. A dozen of the greatest railroad systems of the country have a valuation of not much more than three billion dollars. Control of these roads by the Government would mean virtual control of the railroad business of the entire country. If the railroad corporations, with their record of reckless financiering and stock juggling, can sell railroad bonds and stocks and provide money to build and equip the railroads of the country, certainly railroad bonds guaranteed by the Government would find a world market if they were not all sold quickly at home.

The Government need not bankrupt itself in borrowing money to buy the railroads. Four-per-cent nontaxable railroad bonds, in denominations of one hundred dollars and multiples thereof, the principal and interest guaranteed by the United States, can be issued under authority of Congress to pay their purchase price.

National ownership and control of the means of transportation, and the exercise of the nation's power over the distribution of its population and products, will accomplish the following results:

First - Furnish an absolutely safe investment, at a reasonable rate of interest, for millions of citizens with small capital. Under private ownership the stock gamblers and speculators monopolize railroad stock and bond markets to such an extent that conservative people cannot afford to risk their small savings, and the general public is therefore largely excluded from participating in

Fiew Showing the Present Line Through Bristal, After Straightening Curse

the ownership or control of the second largest and most

View of Line at Britisi, Pennsylvania, Ikewing Curve

Important industry in the United States.

Second—Courdinate along natural lines a great national system of railways and waterways, and will make transportation the servant and handmaid of commerce. Instead of acting on the principle of charging all the traffic will bear, it will nourish and build up the agricultural, commercial and manufacturing industries of the country.

Third—End forever the war against water transportation that has been fought so effectively and bitterly by the railways. The proper and natural development of water transportation for heavy, slow-moving traffic—such as coal, lumber, iron, steel, and their kindred products, salt, rement, grain, and so on—will reduce the cost of transportation of such commodities to approximately one-third of the present railway rate, as has been thoroughly proved by the development of water transportation on a large scale in the German Empire. Extensive intelligent development of our inland water transportation is impossible so long as it interferes with the profits of privately owned railways.

Of the need of harmony between rail and water transportation President Charles R. Van Hise, of Wisconsin University, has this significant statement in his book, The Conservation of Natural Resources of the United States: "The ideal system of transportation is that in which waterways and railways perfectly cooperate. It is comparatively easy to require such cooperation where the Government owns both systems; but in this country, where the ownscribip of the railways rests exclusively with private corporations, the securing of cooperation in place of illegitimate competition will be far more difficult, and have must be exacted that will accomplish this."

Did space permit, quotations to the same general effect could be made from the preliminary report and recommendations of the Inland Waterways Commission, appointed by President Roscovelt and making its report in 1909.

Public ownership will make railway operation comparatively safe for railway workers. There are now ever, year more than one hundred and fifty thousand persease either killed or injured as a sacrifice to profits underprivate ownership. It will benefit labor further by the betterment of wages and greater steadiness of employment. It will make service the end and object of all railway operation, management and methods, while under private ownership it is not unusual that everything including human life, is sacrificed for profit.

It required many years of public agitation, resulting in a national law, to secure the general use of automatic coplings, uniform steps, handholds, and other safety device in railway equipment to protect the lives and limit of employees; and every step in this humane program has been fought most bitterly by the financial interests that dominate absolutely railway political activities. Public ownership will standardize the management of all

Public ownership will standardize the management of all railways and stramship lines on the basis of the most efficient best-managed transportation lines of the country, not only eliminating bad and inefficient management, but also reducing overhead charges by consolidating many small railways (see one big system under one directing head, thereby effecting enormous varings.

As long ago as 1891, Collis P. Huntington said: "I am satisfied that the best results will not be reached until substantially all the transportation business of this country is done by one company. . . What is wanted is not more than two or three—one would be better—great carrying companies. . . . With the best talent in the country

to manage and rooted such an organization many millions could be saved to those who me the railroads of the country and million to those who own them over what is now being received by the ingree ntary, hadly equipped and inefficiently managed root that, with few exceptions, now exist."

Mr. Huntington, of course, thought that one great management would be a private monopoly. We know better. If any economprinciple is settled in that private monopoly is intolerable; but the principle of unity is correct, and the management should be vessed in the people.

Public ownership will wipe out of mid ence preferential race

on raw materials and manufactured products that my favor certain localities and cities. This favoritism the inequality of rates and service—results in the longest possible haul for railways. It accelerates the crowded into cities and manufacturing districts of poorly house lill-fed, ill-clothed workers; and these conditions are producing many of the perplexing evils of our time.

Sources of Political Power

IT INCREASES the cost of food and other living expense to the wage-earners and lowers prices received by the farmers for their products; and all this is only for the propose of increasing the profits of the railways that arbitrary fix the discriminating rates. Under government owners all freight traffic between common points could be trapported over natural routes, using the shortest mileage of the lowest grades. To estimate accurately the saving the could be effected by routing freight in this way is impossible; but it is safe to say that it would be enormous.

Public ownership will tear up by the roots the new dangerous, corrupting and insidiously powerful politic influence in the United States. It will remove the politic machinery through which elections are influenced at act trelled in the interests of monopolies, trusts, combine, in every species of special privilege. It will take from the new and powerful the greatest source of their political power through which national, state and municipal legislation of Federal judicial appointments are influenced or controlled in the interests of corporations.

The most powerful political machinery in the world would be smashed if the political organizations of the railway were taken away from the brewery and liquor interest Standard Oil, the Steel Trust, the packing house, contamber, salt, and other combines, trusts and monopole. For the railways furnish the only nation-wide promise political organization available for big business.

The taking over of the railways by the Government means precisely taking them out of politics. Our cities furnish excellent illustrations of the fact that the publicly owned utilities are not in politics, in the ordinary sense, while the privately owned utilities are nearly always most emphatically in politics. It will scarcely be claimed that the water system or the fire department of the average city under public ownership is in politics, though it is notorious that the street railways and the gas companies under private ownership have been exceedingly active politically.

It is almost invariably the rule in our American cities, as it has been in European cities, that when a public utility is taken over by the municipality it is by that very act taken permanently out of politics. According to Professor Ely: "Our terrible corruption in cities dates from the rise of private corporations in control of natural monopolies; and when we abolish them we do away with the chief cause of corruption."

Galling Abuse of Sovereign Power

PUBLIC ownership will take away from the railway corporations the most gignatic taxing power in the world, and will place that power to the hands of public officers who can be removed and replaced if power is abused. The railways themselves, finding the practice unprofitable, have recently discontinuoused discrimination in rates as to persons, but they still maintain discrimination as to localities. Says Brooks Adams, in his Theory of Social Revolution:

Says Brooks Adams, in his Theory of Social Revolution:
"Now among abuses of severeign power this is one of
the most galling, for of all taxes the transportation tax is
perhaps the most searching, most insidious and, when
misused, most destructive. The price paid for transportation is not so essential to the public welfare as its equality,

for neither persons nor localities can prosper when the necessaries of life cost them more than they cost their competitors. In towns no home can be built, no crust of bread eaten, no garment worn, which has not paid the transportation tax; and every manufacturing plant or distributing agency in every city of the country must stand still or close down if its competitor's rates are enough lower to exclude its products from the markets.

"Yet this formidable power to build up or destroy cities, communities and industries has been usurped by private individuals, who have used it selfishly, as no legitimate sovcreign could have used it, and by persons who have indigcantly denounced as an infringement of their constitutional rights all attempts to

a old them accountable. High among sovereign powers have dways ranked the ownership and administration of highvays. And it is evident why this should have been so: Movement is life and the stoppage of movement is death, and the movement of every people flows along its highways."

This whole nation is now stirred to its very heart by the need of conservation of its resources. Conscience and intelligence are awake to this necessity. Conservation of burnan life as well as of national wealth is our pressing obligation in order to give to every man, weman and child in this land at least a latr chance at the tilings that make life dear.

Have we made even an appreciable start toward that condition when our cities show overcrowding and our country spaces have no considerable pertion of the population they might support in happiness?

And can we start, or can we get anywhere when we do start, until we have put into a harmonious working system our means of transportation and distribution?

Mr. Franklin K. Lane, Secretary of the Interior, said in May, 1914: "Whoever owns the railways of a country

determines very largely the future of that country." The German, Bhonarck, said, years carrier: "Either the government will own the reilroads or the reilroads will own the government." In Germany it has passed into a proverb that whoever owns and operates a country's transportation

General Vice of Main Waiting Room, Pennsylvania Station, New York City

to your private railroad companies. I prophesy with certainty that if you do this they will be masters of the government before ten years."

The late Mr. Justice Harlan said: "Grest and rapidly increasing corporate wealth is the supremo peril of the United

States." Of the total of one hundred and forty billion dollars of wealth of all kinds in this country, ninety-six billions have been capitalized by the corporations. On this the publie is now paying interest and dividends through the use of commodities that are necessities of life, including transportation taxes levied by the railways in the shape of freight and passenger rates. The expitalization of the railways, including stock and bond issues, approximates nineteen billion dollars.

Has the time not arrived when we should heed the warning of Justice Harlan? And where could we so profitably begin as on the most vital of all phases of corporate capital control? The transportation tax collected by the railways during the year ending June 30, 1913, was \$3,171,000,000. The

total revenue receipts of all kinds by the United States Government for the year ending June 30, 1912, was less than one billion. The total revenue receipts of all kinds by all the states, all the counties, and all the towns and cities with a population of more than eight thousand people, were also at eleven hundred millions. The national, state, county and municipal governments together collected one billion less than the single transportation tax taken by the railways.

Toughtists Century Limited Brawn by Respect Type of Electric Locumettee

owns the country. This has been in brief the underlying philosophy of state ownership in Germany.

I have seen in a recent book, Government Ownership of Railroads, by Mr. Anthony Van Wagenen, of Iowa, this remarkable warning and prophecy by the Frenchman.

Lamartine, written as long ago as 1833:

"What will be our condition when, according to your imprudent system, you shall have constituted into a unified interest with industrial and financial corporations the innumerable stockholders of the five or six billions of securities the organization of your railroads will place in the hands of these companies? You, the partisans of the liberty and enfranch masses; you, who have overthrown fendalism and its tolle, its rights of the past and its boundaries; you, who are about to allow the railroads to fetter the people and divide up the country among a new feudality, a moneyed aristocracy! Never a government, never a nation, has constituted outside of itself a more oppressive money power, a more menacing and encroaching political power, than you are going to create in delivering up your soil, your administration, and

five or six billions of securities

TWO years ago Cleveland and Powell, in their book on Railroad Finance, said: "Within a century it is probable that the people of the United States had invested no less than twelve billion dollars in the improvement of the country roads and turnpikes; one billion dollars in river and harbor and canal improvements, state and national; and twelve billion dollars in the construction and equipment of tramlines and railroads."

The chief point of interest here is that the people have invested approximately the same amount of money in the common wagon roads that has been invested in the railways; but the railways are privately owned because there is a profit in them, while the wagon roads are publicly owned because there is only expense attached to them. I believe it was Mr. Francis J. Heney, of San Francisco, who said that the idea seemed to prevail that the public officials were intelligent enough and honest enough to run the public utilities, which cost them money, such as universities, schools, wagon roads, city parks, charitable institutions, jails, penitentiaries, sewers, and so on, but were not intelligent enough to run the utilities from which a revenue is derived, such as railways, canals, street

railways, and the like.

Railway conditions in the United States and Europe are so entirely different in the average distance freight is

Interior of Agricultural Exhibition Car

ON ACCOUNT OF A LADY

THEN great men fall out they send for Associated Press reporters and all the world knows about it the next morning; but when the little fellows quarrel the news travels slowly and arrives late, bringing with it unquestionable proof of the large percentage of liars in the average community.

For instance, if Fighting Sammy Dugan had been a champion of the world and Whitey Wilson a challenger for the title, sharp-nosed reporters would have had the

whole truth out of one of them at least; but Dugar, and Wilson were not great men. They were only preliminary boxers of the sort known as pork-and-beaners, and that they should quarrel at all was something of a joke. When reporters are not sufficiently interested to be curious, first explanations stand unchallenged, and because of this the theory of professional jealousy went unquestioned.

The report was correct as to the jealousy, but it was not of the profeedoral variety. It was the real old green-eyed nort, which nothing but the Eternal Triangle has ever been known to produce. There was a lady mixed up in it-as there has been in nearly all the serious trouble since the apple and the snakeand in this particular case it was the brown-eyed one who presided over the cash register at the end of T-bone Riley's lunch counter.

T-hone, so called because be served the best T-bone steaks in the

world for thirty cents this was before the increased cost of living became a harning issue; probably T-bone's steaks are thinner now-was a philanthropist in his own pseuliar way. He fed all the preliminary fighters whether they had any money or not.

And why shouldn't 1?" asked Riley. "Where are these pork-and-beaners going to eat if they don't eat with me? If a fighter don't eat reg'lar he can't light; and me, I like to see good fights. I'm what you call a patron of the arts, I am: and when these birds ain't got any dough I put 'em on the state till they get some. They always settle. I haven't lost a nickel on 'em, because they ain't the kind of people that'll skin a friend."

There had always been a great deal of social freedom and personal liberty at Riley's. A man ordered his steakrare, medium or well done and are his coroanut-custard pie with his knife, if such was his custom, and nobody said anything about it. If he had the price, he paid. If he did not have the price, he held up two fingers as he went out and Riley made another entry in the dog-eared memorandum book which he called his state.

T-bone's place was headquarters for fighters, pool sharks, racetrack touts, tinhorn gamblers and pinfeather clerks with sporting tendencies. Sometimes a rank out-sider dropped in, but not often; for Riley had a way of discouraging the sort of trade he did not want. We will let the Dis-and-Dat Kid, the king of the pork-and-bean brigade, describe an instance:

I'm in Riley's - see? - chuckin' a feed into meself. In comes a Clarence boy an' sets down beside me. He tipped his mitt de minute he took off his dicer. T-bone himself is hehin' de counter because one of de regular waiters is out on a toot. T-hone gives dis Clarence party a setup un' asks him what will be have.

"'Name it, cully!' says T-bone.

"'Who do you t'ink you're talking to?' says Clarence,

some peeved. 'Don't be so fresh!'

"Den he orders a steak, medium, hashed brown, an" Java. Right away he begins to holler. He hollers about de paper napidne an' he hollers about some egg en his fork. 'Dat's all right, cully,' says T-bone. 'We don't charge

you for dat. We t'row in de egg wit' de steak - see?" "Pretty soon de bread don't suit Clarence. He wants French bread, an' be wants it split open an' toasted. An' he don't t'ink de butter is on de level. T-bene is good an'

sore by dis time.

"You got de wrong number,' he says. 'De Astor Grill is furder up de street. Dis is Riley's joint."

"'Joint is right!' says Clarence.

teak comes off de fire an' T-hone slides it brence takes one gash at it wit' his

says he. 'It's bleedin'!'

By Charles E. Van Loan

"I'm Georg to Lick That foulflasher Louis Str Telle for the Police"

> "'So'll you be in a minute!' says T-bone; an' be grabe dat strak by de tail an' wallops Clarence on de jaw wit' it. Down he goes for de count, an' T-hone comes out from behin' and puts de boots to him proper.

"'Now,' says T-bone, jamesin' de diese on Clarence's head an' turnin' him round so's he could get one more good kick at him, 'don't you never let me ketch you in here no more! Out!!'

"Did he go? Oh, no: I guess not! He on'y jumped over t'ree guys because he couldn't spure de time to go round 'em. De gall of him - puller dat highlines stuff on

This was the atmosphere of T-hone's establishment in the old days before prosperity came. Itiley did well in spite of his peculiar credit system—or because of it—and opened a bank account when his hip pocket rould no longer accommodate his savings. He bought a dismond ringnot even an expert could have told there was anything the matter with the diamond unless he put it under a magnifying glass-and later he allowed a fluent salesman to sell him a cash register.

Riley did not need a cash register any more than he needed a diamond, but he had to spend the money on something. Then, of course, he had to have some one to munipulate the machine; so he hired a brown-eyed girl named Myrtle Schmidt.

Myrtle's presence at the end of the lunch counter shocked and amazed the regular patrons and for a time freedom of speech suffered greatly. The habitus became self-conscious, but gradually this feeling of restraint wore off and they voted Myrtle a "good feller." By this they meant that she laughed at their witticisms, listened sympathetirally to their hard-luck stories and was not in the least stuck up or haughty.

Fighting Sammy Dugan and Whitey Wilson were two of T-hone's star boardens. Together they had risen from obscurity, making names for themselves by virtue of the talent that was in them. When Sammy fought, Whitey was sure to be in his corner; and when Whitey fought, Sammy assisted with counsel and advice. They were becom friends and had gone through many lean periods wide by side.

Sammy could make the lightweight limit if pressed-Whitey scaled a few notches below him; but the exact poundage of a pork-and-besner is never an important matter. Professionally speaking, they were very evenly matchesi, Summy's slight pull in the weight being offset by a longer reach. Both were rushing, tearing battlers of the slambang school, and the Queensherry followers had long cherished the hope of seeing them matched in a ten-round encounter. The fight premoter bad aften broached the subject to the boys, always with the same result:

'Nix! Whadds we want to fight for? We're puls!"

Sammy was not at all a bad-looking boy. He had crisp curly hair, snapping dark eyes, a fair nose, a good chin, and he bore few scars of battle. Whitey was less fortunate. His hair was straw-colored; is eyes were a pale, faded blue; his complexion was heavily shot with freckles, and he had a tin ear that stood out from his head like a doorknob.

Sammy might have won his way into the second flight at a beauty contest; Whitey would have been disqualified at

sight. They were the David and Jonathan, the Damon and Pythias. of the pork-and-bean brigade, and their friendship was a sermon on brotherly love.

Then Myrtle came to T-bone Riley's to operate the cash register. and her flying fingers rang up trouble for the young gladiators.

"Oh, gee! Askirt!" said Sammy. his mouth full of rice pudding. "A skirt working for Riley! Well, whadda you think of that?"

"I think she's a queen!" said Whitey.

"I wonder if she knows who we are?"said Sammy, "I see her givin' me the once-over a while ago."

"Aw," said Whitey, "maybeshe was isokin' at me." "At you!" scoffed Sammy. "If

she was she was wonderin' how a feller could have a face like yours an' keep his health!"

The rivalry began in fun, but the jest was short-lived. In fairness to Myrtle it must be set down here

that she was in no way to blame. She was the sort of girl who smiles easily because of good teeth and a dimple; and she did not reslize that danger may attend the practice. She smiled on everyhody, for she wished to be an good terms with everybody.

She was amused, though not impressed, when White: brought her a remarkable document, which he called his record. It was laboriously penwritten, with many inky flourishes; and the knockouts Whitey had administered were heavily underscored in red. Candor compels the statement that no mention was made of the knockouts scored against Whitey, thus bearing out Mark Twain's contention that no man can write an autobiography without

becoming a liar of the first magnitude.

"How int'resting!" said Myrtle. "What is it?"

"It's me record," explained Whitey. "It tells who I've fought and all about it. I wrote it out for you. Some day

when I'm a champion, you might want to take a look at it. "Oh, very well," said Myrtle, who had not the slightest idea as to what this amazing screed might be. In the same accommodating spirit she accepted a worn pair of boxing gloves from Sammy.

"I hung it on Battling Watlington with these," said the depar modestly. "They might come in handy to stick up in your room somewhere. Take it from me, this Watling ton is one tough guy? He gimme a fierce battle: but in the sixth round I tore into his pantry, an' when he dropped his guard—hang! goes the big right hook on his chin—an' be was through for the night. Sure you can have 'em! Souvenirs, you know. This blue ribbon is to hang 'ern up with.

Myrtle thanked Sammy as prettily as she knew how, but in her heart she regarded the gloves as musty things and drapped them into a convenient ashcan on the way home. The same ashcan, by the way, received Whitey's record.

Whiley witnessed the presentation of the gloves, and he heart burned under his ribs. Why had he not thought of that? There remained nothing but to belittle Sammy's gift, which be proceeded to do at the first opportunity.

There's some awful bad fighters round here," said Whitey to Myrtle, apropos of nothing.

"Yes?" said Myrtle, seemingly much interested, but really not knowing what else to say.

"Ub-huh! This Battling Watlington, he's a terrible piece of cheese. Awful! Can't fight fast enough to ge up a swent; and they say he takes a shot in the arm once in a while. Sammy was all puffed up when he knocked him out; but if he'd a took my advice Watlington wouldn't have lasted two rounds. 'Tear into him, Sammy!' I says. 'He can't hit hard enough to break a promise. Root into him un' make him quit!

"If it had been me an' that Watlington had lasted six rounds I wouldn't have done no bragging - and I wouldn't have saved the gloves, neither. If I'm going to give

inybody a souvenir it's got to be gloves that was in a real ight. Now Kid Cassidy-you saw him in my record, jidn't you?—there was some fighting wolf; but I never did know what become of them gloves." And so on.

Mischief of this sort, once afoot, travels rapidly and inds advance couriers to clear the way. Split-tooth Durcee, retired bantamweight pork-and-beaner and all-night suiter at Riley's, assisted matters materially when he epeated to Sammy a portion of the foregoing conversation with embellishments of his own.

"Whitey's doin' you dirt with the chicken at the cash.

egister," said Split-tooth.

"How so?" demanded Sammy.

"Now listen! I ain't no trouble maker," said Splitooth virtuously; "and, anyway, you got to promise not o bring me into it. My fighting days are over-see?"

"You're declared out," said Sammy. "Tell me what he

"Well," said Split-tooth, "to begin with, he says you in't never licked no regular fighters like he has. He tells er you was all swole up over knocking out Battling Watington-a feller that couldn't fight himself out of a paper

"Did Whitey say that? What's he knocking me for?" "Oh, that ain't all. He says he made you win all your ghts by bein' in your corner an' tellin' you what to do. le says you'd have quit three or four times if he hadn't een behind you - Wait, now! Don't get excited. temember, I'm out of this. I'm only tellin' you as a friend,

Split-tooth was nothing if not impartial. The next day e had some interesting information for Whitey - as before, sisting on protection. There should be no closed season

or the man who says:

"I'm your friend and I think you ought to know this." "Sammy was pannin' you to Myrtle," said Split-tooth.
"He was!" ejaculated Whitey. "Why, the dawg! That was he doing that for?"

"To put you in bad, o' course. You know what he told er? He said he hadn't never fought you because he was kind-hearted guy and he didn't want to show you up efore the public.

Here Whitey gurgled incoherently.

"Yes; he said you was only a harmless kind of nut that al kidded yourself into thinkin' you could fight. He told er he could put you out cold in four rounds any day in the cek, and if he didn't do it he'd donate his share of the urse to charity. He said he could lick you and make you ke it them's the words he used make you like it! ice! You ain't sore, are you, Whitey? I told you because thought you ought to know what was coming off behind our back. I've always been your friend, ain't I? Well ben, keep me out of it."

PHE secretary and matchmaker of the club which pro-I moted boxing contests looked up from his desk to greet Vhitey Wilson on the point of exploding with wrath and appressed emotion.

Aw, Whitey!" said he. "What's new?"

"I want you to get Sammy Dugan for me on the fifenth of next month. I'm going to lick that fourflusher atil he yells for the police. I'm going to hand him a triming that will -

"Hello!" said the matchmaker. "Have the Siamese

wins had a falling out?"

"Worse than that!" said Whitey bitterly. "He's been sing round making cracks that he could put me out in four junds. Make it any distance you want four, six or ten: I don't stop him I won't ask for a nicket! Not a nicket!"

"But suppose he doesn't want

to fight you?"

"He'll have to!" squealed Whitey. "He can't get away, I'll fight him in the street-anywhere! You can lock us in a cellar and drop the key down a well! I'll git him -

"Easy! Easy!" said the wise official. "Don't get excited. Never give away anything that you can sell, Whitey. If there's a real grudge fight in sight let us stage it, and we'll all make some money. What started the trouble between you?"

"He's been lying about me!" said Whitey. "He's been tellin' all over town that I only think I can

"And you won't think so long!" a third voice cut into the discussion.

Fighting Sammy Dugan stood in the doorway. After the initial out-

burst he ignored Whitey and addressed himself to the matchmaker, speaking with labored politeness.

"Greetings and salutations!" said he, "Sign up this windbag for me. I'll fight him-winner take all; and if I don't make him jump out of the ring I won't ask for a cent."

"Me-jump out of the ring!" acreamed Whitey. "He better look out I don't make him jump out of the ring!" "Gentlemen! Gentlemen!" said the matchmaker. "Don't start anything here. Shake it up, boys; but don't spill it. Save it for the fifteenth. Now about the

purse -"Any old way sults me," said Samny.

"Winner take all!" suggested Whitey.

"One hundred dollars - winner take all," said the matchmaker. "Is that astisfactory?"

"I'd fight him for nothing!" said Sammy.
"That's what you'll get!" said Whitey.
"This is the resi thing," reflected the matchmaker. "What a pity the reporters aren't here! They could make

quite a story out of this." Later in the day they did make quite a story out of it

under headlines proclaiming the sundering of friendship's bonds and the dissolution of a partnership. Professional jealousy was mentioned as the contributing cause, which explanation appealed to the sporting humorists and they made merry with the topic. Whitey was interviewed by a representative of a morning paper - a great honor, which almost overwhelmed him and made him nervous and woluble.

"Say, print this, will you?" said he. "Put it in the paper that I'm going to fight this Dugan just to show him up-se? Just to let the public know he never was any

good! Don't forget that,

"Here's another thing you can put in-better write it down so you won't forget it-I'm going to meet him coming out of his corner and if I ever take a backward step I hope I don't get out of the ring alive. Got that? I'm going to hit him so hard that it will make his grandfather's head ache. I'm going to -

"Yes, yes!" said the reporter soothingly. "I know you are; but what's it all about? What started the row? You

used to be pals, didn't you?"

"Sure!" said Whitey excitedly. "Sure, we did! That's what gets my goat. I've cut up my last dollar with Dugan

Don't forget that." The reporter did not forget, and Split-tooth Durkee saw to it that a copy of the paper containing this remarkable interview was handed to Myrtle Schmidt, who read the article with wide eyes.

STREET, SQUARE,

"Morey sakes!" said she, "They must have had a

quarrel!

"Yeh." grinned the diminutive Durkee; "it does kind of look as if they've parted doll-rags." He stepped closer and lowered his voice insinuatingly. "And I'll bet you don't know what it was about or nothing. Oh, no! P'fes-sional jealousy! That's a hot one - that is! Say, you could tell these reporters a thing or two-couldn't you, kid?"

"Miss Schmidt to you if you please!" snapped Myrtle. "And I couldn't tell anybody unything, because I don't know anything. What's more, I don't want to know! If anybody mixes me up in a fuse like this they'll be sorry. I attend to my business, and I'll thank you to attend to yours!"

"Just an you say," hered Split-tooth wickedly. "Just na you say, girlie. You don't need to get sore about it. Nobody's trying to mix you up: but it's kind of queer when two old pals bust up like this and -

"The cook is calling you!" interrupted Myrtle. "And on keep away from this end of the counter-do you hear? Bother me once more and I'll speak to Mr. Riley!"

Split-tooth enarled as he moved toward the range, Goin' to holler to T-bone, eh?" he muttered to himself. "She ain't had no use for me since the night I ast her to go to a movin'-pitcher show. Bawled me out good! I

wonder who she thinks she is? Too stuck up for common people - yes, sir! Coming right up! Ger-man fried, wasn't it? There you are, sport!"

ON THE eve of battle, as the sporting writers so happily phrase it, the Wilson-Dugan match divided interest with the main event-an elimination contest in the White Hope division. All the world loves a grudge fight-sad commentary on our boasted civilization - and for days the reporters had bombarded their readers with articles on the approaching combat between the Siamese Twins of the pork-and-bean brigade-"side-kicks once but strangers now," as one sporting writer put it,

Professional jealousy was still the only explanation offered, and at T-bone's place there was but one topic of conversation. The White Hopes were forgotten-it transpired later that they deserved to be-in the discussion of the relative merits and abilities of Fighting Sammy Dugan and Whitey Wilson.

On the night before the fight there came to Riley's one Ed Faraday, a sporting writer who tossed a nimble quill for an afternoon paper. He was seeking a T-bone, rare, French fried potatoes, apple pie and coffee. The hour was late, patrons were infrequent, and Split-tooth Durkee, having delivered Faraday's order to Saginaw, the night cook, lingered to gossip.

(Continued on Page 45)

THE FLOATING LABORER

Some Humble Biographies—By Will Irwin

ORMERLY we looked on the tramp with a sense of romance or of shame, according to our individual dispositions. The man who begged for a breakfast at the door of a farmhouse; the travel-stained individual we met trudging along the country roads; the soldier of misfortune we glimpsed swinging on or off a brake beam at the station, was the picturesque outcast.

The laborer digging trenches in our city streets, pitching hay on our farms and rolling logs in our sawmills was, on the other hand, the noble American workman, for whose greater prosperity the Republican party maintained the protective tariff and the Democratic party wanted to revise the coinage. We did not know that the two classes were loosely interchangeable—that the tramp of today is the common laborer of tomorrow, and the common laborer of today the tramp of tomorrow. Such observers of picturesque fact as Walter A. Wyckoff and Josiah Flynt hinted at the truth; but the whole truth is just beginning to dawn.

Those same tramps of the dusty roads-they understand. However, they had no power to force their under-standing on the rest of us. In the nature of things they were inarticulate. They had no union to enforce their just or unjust demands. They had no organizers to put their

case before our parliaments and our press. Now and then, when hard times came, when the shoe of industry pinched too tight, they rose in such picturesque and futile movements as Coxey's Army, and attracted for a time the attention of a somewhat puzzled people. Then the return of prosperity, in which they never fully shared, would put such movements to sleep. The members of the army would drop back into the old routine of hard work varied by hard tramping and only too often by hard

In a previous article I tried to sketch the history of one John Smith, a typical American laborer of this floating type. I have shown him beginning life as an average man, with the average amount of will power and ambition. I have shown how a life of short, broken spasms of unemployment broke his will power and made his ambition a mockery. I have shown him caught in a web of circumstance-drifting from one short job to another short job, with intervals of tramping, of living on organized charity,

I have shown just where drink came into the scheme of his life; how this curse of the workingman was in his case an effect and not a cause. I have shown how life denied him marriage and children; I have shown him burned out in his middle thirties - half his actual working days so far, all his potential working days in the future, lest to industry. I have tried to show, also, that this same John Smith was not a defective, as the outworn sociology of twenty years age would have called him, but a normal man in physique, in mentality and in will power,

An Army of John Smiths

TT REMAINS for me to prove that John Smith's case is A not exceptional, but typical; and the proof, so far as it goes, comes mainly from the notes on American society by one Peter Alexander Speek, investigator for the Commission on Industrial Relations. This new government department. was born of the agitation that followed the McNamara case and other like revolutionary movements in labor. It was begotten of a dim feeling in our legislators that there was some factor in American labor which no one understood. It started out to find what labor really wanted and needed - which of its demands, under the present organization of society, were just, and what society might do to relieve the pressure. It aimed to study the psychological factors in its problem-to put heart as well as head into

The members of the commission realize that these floating members of the industrial body most need their study and their help. For a year Speek has been living among

The Rund of the Broad Line

laborers, noting the conditions under which they work and getting from them, as accurately as he can, the story of their individual lives.

He brings to this task a singular equipment. Speek is a Russian-to be exact, an Esthonian. A university graduate, he started a newspaper in his home city, took the liberal side in the abortive revolution of 1905, and left Russia, when the reactionary party snuffed out the revolution, with a life sentence to Siberia hanging over his head. In his early American wanderings he himself was a partner in human misery. His wanderings led him into Wisconsin. By this time he had found he could make a living by writing for the Russian magazines. Houttended the University of Wisconsin, took a degree in sociology; and from the university he proceeded to this task of finding out for America what is wrong with her labor.

Speek has the art of gaining confidences; further, being Russian, he uses five or six languages. In the course of his investigation he has gathered hundreds of life stories from American laborers. In substance they do not differ from the story of John Smith. This one factor is common to them all—among the laborers whom he has interviewed, in grading camps, employment offices, workingmen's lodging houses, and similar institutions, he has found carcely one who ever held a steady job for a period of even two or three years. The tale is always the same-spurts of work lasting from three days to three months; the search for a job; more hunting, ending often in a period of balf starvation; more work.

The hundred or more biographies in Speek's collection should be read as a whole in order to get a picture of the casual American laborer. Their effect is cumulative. However, let us look at a few of the more typical histories.

Take the case of James Ryan-in this and all future instances I shall disguise the name-thirty-five years old, a native Irish-American from New England. His father had been alternately a sailor and a farmer. He bimself began life as a sailor on the Great Lakes. The work was irregular. Of course there was little employment in winter and none whatever in midwinter. Being a union man he joined the seamen's strike on the Great Lakes. After living for many weeks on strike benefits he gave up sailoring as too irregular, and tried to get a land job at any kind of common labor. His biography proceeds as follows:

He found a job in a Chicago restaurant as a porter. He worked twelve hours a day for seven days a week at seven dollars a week, with meals, paying for his room. He worked on that job three months; quit because he found a better job with a telephone company. He was employed as a common laborer, putting wire pipes into the street. It was a non-union job. He worked nine hours a day for thirty-five cents an hour. . . . In six months the job was finished. The muney he carned was paid to his sister. Three weeks out of work; his sister kept him. He was always watching for jobs in the Want Ads. He then found through a newspaper advertisement a hodearrying job-eight hours a day, forty cents an hour. This was a union job,

Though be was not a union min. still the foreman took him, saying that the job was only for six webs and that a union delegate would come next day to collect three de-lars for a union card. The union

delegate never came.

After six days' work the for-man kept back from the pay of every non-union man one dalar and fifty cents, promising to pay
it to the union delegate; but if
the beginning of the next werk
Ryan was unexpectedly decharged because a union man hal taken his job. He thinks the lor-man kept the money. Such a trick is often played by forme. This happened in February. He wan two weeks out of work. The next job he found with the Education Electric Company, passing to for the firemen. He worked to hours a day seven days a week for fourteen dollars a week. The work was dirty, heavy and duty He worked at this job too months; then the veins of his fee became swollen and one we broke. He was seven week at the city hospital. When he is the bospital he was still west an could not work for two months and lived with his sister.

The next job he found through

an employment office. It was an employment office. It was a odd job, cleaning floors, beating carpets, washing window, and so on. He worked continuously two weeks; then the job played out. He was five weeks out of work. Every morning he was at the newspaper offices, watching the Help Wanted advertisements in the windows. When is saw a job advertised he either ran or took a car to the place. Very often a crowder was waiting. The stronger is place. pushed the weaker saids. He finally secured a job through an employers' employment office to pass coal in a big argonds store at four-teen dollars a week for nine hours also He worked at this job for seven weeks. He quit because cramps in his feet. The next job he secured through a be employment office—it lasted two and a half days—days a basement for a contractor.

And so on, down the line. Ryan, though he has so tracted the drink habit and has occasional spress whech is in funds, is still able to hold a steady job — if he coulder it

The Hardships of Loafing

MARTIN CASEY is another, a little older, but of themer class. He did some sailoring in his youth, and might even now be an ironworker had it not been for an injury by received early in his service with that trade. He institute suit for damages, which closed his connection with the arr pany. He has never received any damages. Then he drifted into casual labor. Here is a passage from his biograph

In September, 1910, he saw an advertisement is to paper for men in the woods. He got a job there deared away logs for a road—nine hours a day at thirty dollars away logs for a road—nine hours a day at thirty dollar month. Meals were good . . . but the bedding bad. No laundry or bathing accommodations. After months and a half the job played out. He then went is farm to pick potatoes. . . . He earned three doing and fifty cents a day for a month, when the work was ished. He then jumped a freight train to a town in low Here he got a helper's job on a new building—eight work a day at forty cents an hour. After four months the played out. He jumped a freight train to Milwater Here he got a job as helper with a construction compatible did not like the job. The foreman was always species up and using profamity to his men. After two months quit. He got all sorts of jobs from the State Free Employer. quit. He got all sorts of jobs from the State Free Empley

Notice this: Several weeks of short-time jobs, lastitt few weeks or at most a few months, and Casey quit! first really steady job he had had for some time. When held a regular position in the iron trade he was probable capable of steady work for life; but desultary wers, vill workless periods, had become a habit he could not but Casey, one would say, is on the downgrade. It is not be fault; but the fact remains.

Here is another man, slightly younger, who may or an not be far down the grade. His reasons for quitting after job may be sound; perhaps he has had only an extradinary run of bad luck. Heaven knows that condition in some construction and grading camps are bud so 121 It may be, on the other hand, that he has reached the that

where he is incapable of continuous employment and that his successive quarrels with the conditions in the camps are but an execuse:

A year ago he was replacing rails on a railroad. He found the job himself. He worked nine hours a day at seyentees n and a half cents an hour. The boss worked them pyertime and also on Sundays. The company furnished camp and board for four dollars a week. The commissary store belonged to the same company. The prices were almost store belonged to the same company. The prices were almost three tirnes as high as in the city and the men had to buy from the company's store. He slept in a box car. Bedding ans poor; no washing, laundry or tollet accommodations. The board was poor—frozen potatoes, cheap, half-spoiled neat, and canned stuffs. After four months of work the foreman put the young immigrant men to work in the switches. They did not know how to handle heavy becaus; so the work became dangerous to life and limb. There he was unemployed for a month. . . . During his time he looked for work, asking for it personally, vatching newspaper advertisements, applying at employvatching newspaper advertisements, applying at employ-nent offices.

Finally he found ice work in a city near Chicago. He worked ten hours a day for one dollar and seventy-five ents a day, and paid four dollars and fifty cents for board and bed. The job lasted only eighteen days. He went sack to Chicago. After a week he was shipped to a railroad construction camp forty miles away—ten hours a day, one lollar and seventy-five cents a day, three dollars and fifty ents a week for board. Living conditions the same as in he camp on the other railroad. He quit at the end of a seek the camp of the board and because he thought the board. reck toecause of the board and because he thought the boss vas speeding-up the men—he wanted more work than the my was worth. He best his way to Minneapolis and got, brough an employment agency, a job laying steel rails on new track. . . . After two months he injured a too.
ie as ked for medical aid, but was refused; therefore he uit. After two weeks he was shipped out on another allroad-construction job. . . The men were forced o work late at night without lights. They demanded ghts and twenty cents an hour for night work; but the ompany refused and they struck. He rested two weeks in direct and they struck at two dellars. firm empolis. Then he worked two weeks at two dollars and fifty cents a day, breaking old cement. He was disharged for reporting late one morning.

When Unemployed Spells Unemployable

W E COME finally to the habitual drifter, typically with the drink habit, who has been at desultory labor so long hat he finds himself incapable of sustained work. Here is short passage from the working life of such a man:

Her was shipped free to Buffalo to work on a railroad in nextra gang. Hard work; ten bours a day, one dollar and any—five cents a day. He refused to work because there ould be no money left and the work was horsework. He ent to the Seamen's Institute and applied for a job as reman on a ship, but did not get it. He then jumped freight train to a town in Ohio where he hired out to a arrier to plant potatoes; got one dollar and fifty cents a sy and board. It was fine work and the farmer was a good ari. The work was finished in three days. In another hio town he got work on the streets laying blocks. . . . le worked one week and quit. He jumped a freight train a Cleveland. He found no work there. After wandering orn town to town in freight cars and on brake beams he ot a job with a circus as tent man; pay, thirty dollars a

Illinois, where he got work on the streets.

After five days he quit again. He then went to work on an ice wagon for two dollars and twenty-five cents a day. As he was on another man's job it lasted only three days. He got a job as deck hand on an excursion steamer. There was no sleeping place or other accommodation; pay, one dollar a day with hoard. After six days he became sick of this job and quit. The next place was on a freight steamer. He worked for three days at a dollar a day. This landed him in St. Paul. He then worked about a farm, picking potatoes. The maand the job was fin-ished. He returned

to town. A farmer picked him up in front of a salson and hired him as farm hand at a dollar a day. This was in August. It might have lasted until the end of the season, but the whisky fever got hold of him and he quit.

And so on, month after month, the same story. Yet, from the naive account be gave to Speek, it would seem that in his youth this man was just as capable of holding a steady job as any other man.

To present any more extracts from Speek's collection of humble biographies would only be to repeat unnecessary details. The story is always the same; but please note the age of these men. The oldest is forty. The three others have not yet passed thirty-five.

All the men whose biographies I have quoted so far are Americans, save one of Irish parentage who came to this country so early that he may be considered an American. Twenty years ago the casual laborers of the United States were almost all native-born. Such foreign laborers as we had worked usually in gangs under pudrones. Shallow social philosophers used to hold up their thrift, frugality and economy as examples for our own laborers

Times have moved fast since then. The casual European laborer has appeared. The man trudging the dusty roads with a blanket on his back is just as likely to speak Lithuanian or Polish or Italian as English. These immigrants have their own problems, of which their ignerance of our language and institutions is the chief; and the same destructive forces are making them first casual laborers, then unemployed laborers, and finally unemployable laborers. Take the case of Ivan Witknwaki, a Polish boy picked up among the applicants for work at the Milwaukee Free Employment Agency. He is strong and healthy, and only twenty years old. He left his native land, as so many other immigrants do, to escape military service.

Like the rest, he looked on America as the land of golden opportunity. He had mastered the elements of tailoring, but he found conditions and methods of work so different in America that be must learn his trade again. He had no money to support himself during apprenticeship; he became a common laborer. In a little more than a year his wanderings took him from New York to Milwaukee. This is the story of the last part of that year. It begins in a city west of New York:

He joined the crowd of men looking for work in front. of a factory office. He and nine others were selected and put to work carrying boxes. The work was not beavy; ten hours a day, one dollar and seventy-five

camts a day. After thirteen and a half days of work he quit and went to tailoring. One of his friends had directed him to a shop where they made sults to order. He was employed as helper and worked thirteen hours a day. The tallor promised to teach him the trade and pay him five dollars a week; from that he must provide his own board and lodging. He worked two weeks and got his pay, but for the second two weeks they made him take in lieu of payment an old suit, which he believed was not worth more than four dollars. He could not live on such terms and quit. . . . He found his way to Milwaukee where he was four days without work. A countryman directed him to the employment office, where he got a job working on the roads; twelve hours a day, pay thirty dollars a month if he worked less than a month and thirty-five dollars if he worked a month or more. . . . The winter came on and work was stopped. In Milwaukee he was out of work for a week, when he secured a job for one day cleaning the surroundings of a house. Looked for work for a week. The State Free Employment Office got him a job loading and unloading fruit on ships. The work lasted two days; thirteen and a half hours a day, thirty-five cents an hour. He registered at the State Employment Bureau for another job.

When interviewed Ivan expressed the opinion that Russia is a better country than America, because in Russia you get steady work. Speek has gathered several other biographies of foreigners, which tell the same story with varying details.

WEN making allowance for the fact that every unsuccess-E ful man is a constitutional kicker, one cannot read these biographies without an indignant sense of the constant injustices imposed on such laborers. We read occasionally an expose of peonage conditions in a lumber camp in the West or South. I should say now that these are only examples of a system that is pretty deep-seated. That this should be true squares with reason and with human nature,

The tendency of power is to tyranny. Any man less than a saint, appointed to govern other men without check or control, unconsciously takes more than his share, unconsciously becomes an oppressor. The government clerks who perpetrated the Congo atrocities were in the beginning nice little Belgian boys, with a good sense of morals and of honor. Unlimited and unchecked power made them what they were.

These casual common laborers, without organization, without any means of expressing their grievances, are apparently the prey of this tendency in buman nature, Crooked employment agencies send them to nonexistent or impossible jobs, or ship them to the dangerous and often degrading job of strike breaking without informing them that there is a strike. Railroad companies and lumber companies fred them improperly at company boarding houses that are paying their toll of graft, mulct them at company stores, reduce their vitality in camps unfit to be occupied by human beings.

Some corporations wanting a new force of laborers circulate rumors that bring to their factory gates ten times as many men as they can possibly use. Trade-union men or even factory operatives, confronted with such conditions, would strike, and strike hard. They have unions; they have behind these unions the whole organization of regularly employed labor. These casuals are without organization. When conditions grow too hard they can only quit peaceably, which is a very different thing from striking.

Through all these biographies run such common experiences as these: "The bunks were not fit for a white man to (Continued on Page 61)

Men Waiting Call to Work an the Docks at Hobeben

The Head of the "Ihoe" Line

ROOKS ALL By HARRY LEON WILSON

T WAS green May in Paris. The terrace of the Café de la Paix was crowded to its outmost table. Latins were sipping of France's milder distillations, mitigating even the slight alcoholic potency of these with floods of carbonated water. Only Anglo-Saxons took whisky and soda-the English and Americans, who by brute force must be raised from a native moodiness to the Latin's normal gayety.

As I scanned the ranks for a seat an alert waiter beckoned me to a chair just vacated. It was almost at that corner celebrated for its outlook on a shifting world. Sit there for so long as one hour and there will pass before you people you had thought were in Panama or Pittsfield, Ohio, or the Orient. Sit there for an afternoon and it is said you will see quite all the people in the world whom you may ever have spoken in passing.

Faces loom from the surge to take on familiar lines. There is the man with whom four years ago you traded tea for tobacco on the White Horse Trail; behind him is your next-door neighbor at home. There is the American couple of middle age who crossed with you, hotly disputing how the Louvre can be both an art gallery and a department store. Follows the saturnine Englishman who had the row with the customs man at Boulogne. Like all Englishmen here, his expression denotes: "Oh, yes, fairish—but, of course, it's not London!" A tempered sun flooded the boulevard with gay

flashes of color struck from the weaving throng. I settled in my chair and surrendered to the hypnosis of that human flow, to the rhythmic scuff of shocleather on the pavement. the cool play of light and shade on Paris gowns, and always. the faces of that endless film—the world-faces gathered

here to pique or mystify.

Absorbed in the human play, I had not observed my nearest neighbor, noting merely that his chair occupied that precise magic corner which is directly under the & la Café on the striped awning; but when I heard his voice, a hearty Middle-Western voice, I saw that my compatriot was an old acquaintance.

"Garsawng, porty moy ung fresh pot of teat" com-

manded the voice,

I did not at once invite his attention. This might or might not be desirable. That is as happens. For one thing, Duc is not nice to look at. Herr Nordau, at sight of him, I dare say, would burst into tears of sestasy. If Doc lacks any of the well-known criminal stigmata the omission has yet to be noted. His face simply shouts evil; a presiatory cunning, boundless greed, ingenuous iniquity. His body is of a rounded stoutness, with short arms and huge, clumsy hands. A ten-year-old boy glancing once at his fattish face, with its keen little eyes and its vulture heak, would scorn to trust Doc with his cheapest marble.

Yet the shrewdest of adults come to telerate him after a second or third glance, and for a very simple reason: It is too incredible that any man should be so evil of purpose as Doc frankly seems to be; impossible that Nature should have been so erudely obvious. Many of these students of human nature swiftly convince themselves, therefore, that he is a babe for guile and must carry a heart of gold. This reasoning flatters their perspiculty and they forthwith warm to the rugged cattleman from Oklahomz, which is often oh, regularly often!—to their cost; for Doc is Denver Doc and has most amazingly the precise character his face says he has. You see the paradox and I have tried to expound it. I can imagine no other line of reasoning in his victims to explain Doc's very notable success as a buccaneer - one of the modern breed that go about the sea in ships for the sole purpose of playing at games of chance with their fellow passengers.

In common with those who now and again traverse the great white waterway I had often speculated as to the look and manner of these craftsmen, picturing them as plausible, tastefully garbed, insinuating villains, who would be thought anything but what they were. And Denver Doc drew another picture.

In crossing the year before I had encountered him and his two adjutants, encountering also my wise friend Ben, of the New York Central Office, retired. Ben promptly catalogued the three for me: Doc, in his slouch hat and

country-tailored suit, bung profusely with the insignia of all known fruternal orders, from scimitar to ella's teeth; old Sam Joyce, a shade less alarming than Doc, but still rather incredible for the president of the First National Bank of Kansas City, or Galveston, or Fort Worth, as might be; and Velvet Eddie, tall, decemps, subdued, with the chastened geniality of a funeral director. And Ben did more than entalogue the trie: he so dismayed them by the mere sarcastic overlooking of their first merry games that they surrendered more or less gracefully the second day out and thereafter made him a fourth in innocent games of easing, chatting amicably meantime of low finance.

And if I record that Ben relented, as to one passenger, it is written merely to show that Denver Doc was an executive of no mean order. On our printed list shone the line: "T. Walsingham Wadleigh and Valet." The mere words had incited Duc's evil fancies to their fallest play. With moist eyes he showed us the name in the smoking room one night and pleaded for the victim.

"Lamp it, Ben," he tearfully urged. "Do you get it?-

and Valet. Say, let me prong him, just for that!"
"Who is he?" demanded Ben, himself no more than human about names.

"Why, the Claude settin' right at your own table in the dining room - the one with the sorks.

"Him? You sure?" asked Ben. "I pledge you my word- and wears his handkerchief up.

his sleeve.

"Go to it!" said Ben grimly.

I gathered that the person in question had in some obscure fashion, perhaps by the possession of too much manner, affronted Hen. Anyway, it was delicately conveyed to me later that he had disembarked at Plymouth much lighter of purse after a coinmatching bout of heroic dimensions with the wealthy cattleman from Oklahoma and the president of the First National Bank of El Paso, which exposed T. Walsingham Wadleigh's need of more than a valet to travel with him, both men looking enough like prosperous burglars.

And here on this spring afternoon was Denver Doc, far from the raging main and gulping hastily of tea while the careless world paraded before him. As I studied his nefarious profile I saw that he reviewed the passing show with a weightier purpose than mere entertainment. His glance ever durted to question the faces of the oncoming throng. His sharp little eyes took toll not only from both sides of the boulevard but guarded the Rue Auber on his left. and distantly scanned the frontiers of the Place de l'Opéra. Twice he half started from his chair as though one he sought had shown in the offing; but each time he fell back with muttered irritation. I touched his arm.

"Looking for some one?"

He turned on me the good-fellow smile of his calling.

"Well! Howdy? Howdy? It's certainly good for sore eyes to be you here." He paused and the smile faded into a not-too-cordial look of recognition. "Oh! It's you, a at Wasn't you with Ben Lockwood to the George Washington last year! Didn't get you at first."

His manner proclaimed that is would have been as well please not to get me at all. His eyes roved back to their quest. Plainly I sale fered in his esteem for my ferme companionship with a man who had hurt husiness for him.

Ben didn't come over this year," I ventured. "What sort of trip dd you have?"

He turned to me heavily.

"Say, on the level, I only wish Bewas bere. Ben's a square guy. Red help Eddie and me.

"Velvet Eddie?" I suggested. "Yea; him and me made it alone this time. Old Sam had to lay over a trip to get some pivot teeth put in. A hardware man from St. Long done it. Say, you'd thought the eight hundred dollars of his we his right eye, and old Sam two his age at that - the coward! But he dentist said he could give Sun a swell new front. Anyway, Eddiesol me say, I might as well tell we about it, long's you're a friend of Ren's." He seared his throat wat the fresh ten and breathed he "Gee, but that guy's got me famy in the fighting-top!" he mattend

"You were going to tell me Doc's eyes continued to sound the human stream. He spake adeptly from a mere corner of his roomy mouth.

Yes, sir; me and Eddie has been played about the worst lowdown trick you ever heard of, and by a ma: w trusted right down to the ground. But that's the way it this world. And I kept saying to Eddle—if I said it world said it a dozen times - Eddie, I says, 'that guy may is all right, but I think he's crooked. Mark my world! You give him a chance and he'll throw the spear into us.' Be Eddie's right back with the Tut! Tut! stuff, telling no don't know a straight guy when I see one, and pull a mess of words about this here physiology, or whatever the call it, that shows how a guy's wheels go round incide hi

"Eddie's the great boy for that. You might call it is hobby with him. 'I'm a student of physiology,' he are 'and that guy's as straight as you or me.' So I had to Hit go at that. But you can lay chips to coppers Eddin talking nine different ways from that since last Wedieday. He's back is London doing 'Little Mabel, with he' face against the pane'; and I'm waiting to see if the gu won't happen along here. If he does - say, they's liab be a low, brutal murder right here on the sidewallthrowing down his only friends like that!

"Yes, sir; Eddie and me befriended him. We was not to stick by him through thick and thin, understand what mean? There wasn't nothing we wouldn't have done him. And what gratitude does he show, what sense a decency? I ask you that! Well, this is what he show: He ducks out over in London last Wednesday with if: thousand dollars hard cash money belonging to Edde and me-about every cent we had, too just took it ave from us. That's what he done! You come right down to

it, he sin't no better than a crook!" I looked amazement and sympathy.

"Fifty thousand!"

"Not a cent less. And here I been three days drink tea till I'm tanned inside like a leather trunk. Sometime I think he won't show up. Maybe he beat it for Egypt ? Buenos Aires. A guy as low as him is liable to fool) al from soda to bock."

Doc quaffed of tea once more. Even over the raised an his eyes kept to the crowd.

"How did you happen to trust him with so much! Ex-

a psychologist -

We was on that new boat, understand. Everithing looks fine; a full passenger list and a bunch that looked if money bores them stiff. You'd have said yourself bewe got past the Hook that a good time was going to be hall by all present. Me and Eddie would have giggled at >10 if you'd offered us two thousand for our taking. Wi didn't even bother to be strangers to each other. It was

one of them leery crowds that begins to get about half wise in a game, so that me and Eddie has to act nervous and call attention to the little card about gamblers and denounce somebody as a card sharp. They all look easy and liberal, and anxious to start something, so we waited or it, playing casino at two bits a side, getting all excited about it and asking people to look at our hands when they

oafed up-you know!

"And then the whole thing went blah. Yes, sir; I'm a illas with neck whiskers if one o' that bunch would touch card the whole way over! I tell you they ain't been tothing like it since Hall was hanged in Troy. Seemed like one of them ever saw the ocean before. They'd hang ound out on deck playing silly games, or they'd lean over he rail and count the water as it went by: or if they set fown they'd wrap up in horse blankets and read these sere trushy novels with a girl on the cover. You bet, if I vas running one o' them big rafts you wouldn't catch me etting one o' them hooks be fetched on board. And me and Eddie dealing our lonely casino and listening to the toarse growls of the smoking-room stewards, who wasn't naking a cent either, understand. It was against Nature, hat's what it was. Of course I don't believe in superstiions, but you can't tell me they wasn't something queer bout our having to walk under that ladder with the two minters on when we got to the dock.

"The second day out we give up. We'd been done. Faat steamship company had took our good money and i we us nothing for it. We copped three, four pools; but wen that was like ditchdigging and didn't run to carfare, Frat with the rake-off that had to go belowstairs. Nothas went right. We run into a storm and it done us no od on earth. What couldn't stay on deck went to bed. and, just to show you, when we bought the low field in hae pool that night, having got the office that we'd lay up Evout three hours for repairs to the shaft or something ext morning, the most we can win, side bets and all, is inty-two dollars-and two thousand would have been unt fair. Parties taking their own autos across would bet is much as two whole dollars. Well, it was enough to make

tood sore; you know how you'd feel -I nodded discreetly.

"And I worried about Eddie too. He gets low in his ind when they don't come right. Take him when the cetting is good and Eddle is as nice people as you'd care os meet, bur none; other times you'd think the world was e n feet under snow and the shovels had give out. Well, I at him talk to me for hours at a time, thinking it will beer him. He's always after me to wear sidewhiskers and e more quiet and refined, but I tell him 'Handsome is as andsome does'; and them that I do are plenty. Only his time I promise to do everything he says and quit rearing striped vests-kidding him along, you understand. even got one o' them disgusting novels for him to read rhile I played Canfield-and I lose eight thousand to nyself at that; so you can see the gypsy's curse was sure on us. Say, it was about as funny as a sidetracked freight car on a rainy day!

Then one afternoon in the smoking room Eddie looks up from his book and comes to life. I seen the same look in his eyes one time on the Mauretania. when a pat straight flush was dealt him-dealt by a perfect stranger, understand Well, I look round to see what has shined up his lamps. They was a fat old couple, man and wife, that played dominous every day till they broke up in a row; and a bridal pair drinking ginger ale, sneaking sips out of each other's glass just to be vicious; and a grouphy-looking hick that always kept his gloves on and read magnzines-say, he kept up that reading day in and day out till I could have choked him; and then they was an oldish kind of guy that I hadn't noticed before. I seen it must be this one had brought Eddie to life;

so naturally I give him the once-over.

'He was little and skinny and stoop-shouldered, and had sandy-gray sidewhiskers, close trimmed, with a kind of a thinnish little mouth that looked like a buttonhole in one of these here yellow overenats. His clothes was like they keep to wear to church and them places: black cutaway coat and vest, and gray pants that bagged some, and Congress galters-yes, sir, the kind with elastic in the sides that you pull on and shine them yourself out in the woodshed Sunday morning; and a black felt hat with a crease in the top; a stiff white shirt with little gold studs; a black satin bowtie; a gold watch-chain and mother-ofpearl cuff-buttons. I was looking how none of his clothes was new and how he seemed sickish. Then he took out his watch, and that give me his number; he kept it in one o' these shammy-skin bags—a watch he had to pop open to see what time it was.

"'Now it's the hour for the dyspepey dope,' I says to myself. And over he toddles to the little bur-place and asks for a glass of plain water. He shook a powder in and drunk it, while three German stewards looked at him-say, if looks could kill!

He wasn't taking a chance on having to let go a tip. "'Do you get him?' says Eddie, kind of eager, and putting the velvet in his voice.

Sure! I says. 'Who wouldn't? But why the heaving chest and flashing eye? They's no bug under that chip,"

I says.
"'I admit he puzzled me momentarily,' says Eddle: but then, of course, I'm only a novice in them realms where you pervade. I can't be expected to penetrate those denser obscurities whence you boast the blinding glare of a searchlight,' he says, or something like that; 'so suppose you enlighten me as to why and how and when is you gentle stranger who has taken his meddy and is now about to settle down for a hot old time with the Christian Bulletin."

"Why sure!" I says, coming right back at him. 'You do well, little one, to come to me in your trouble. First, you

know, you are on a great big choo-choo boat sailing across the bright blue son, and if you was to go out and walk off you'd get as wet as anything, and like as not a shiny black fish would swim up

"Go on, tell me!' he says, and I seen he was getting more excited every minute, watching this old gink with his paper. So I says: 'Very well; but don't you ever dare to breathe a word of it to a single soul or I'll never tell you another thing so long as I live. His name is Jusper Q. Hemingway, and belives in Cleveland. or Buffalo, or one of them jaytowns. He's secretary of the Y. M. C. A., superintendent of the Methodist Episcopal Sunday School, president of the North Side Building and Loan Association, and vice-president of the Farmers' Mutual Trust and Highly Cooperative Insurance Company, with offices in the Empire Building, where he gets most of it. Counting the ten-thousand life he carries and his salary, the house and lot on North Elm and the street-car shares he grabbed just before they put through that deal for the franchise, his beirs will be fighting over about two hundred thousand dollars tomorrow if that boy up in the wheelhouse gets careless.

"And it might be a little more,' I went on; 'for I see by his heart line that last October he lets loose of six hundred dollars to a cousin of his wife's that invented a patent churn; Cousin Jas, here, taking fifty-one per cent of the stock for his. This is the first vacation he ever had and he's sorry he took it. He wishes the boat would turn round. He knows things are going wrong in the office and him away only four days. The doctors there can't tell him what's the matter with him; so

his wife buffaloed him into trying Carlsbad. And he's mad because he's on to himself. He knows they sin't a thing on earth the matter with him but meanness. He is a snappy little companion. He knows what year everything happened, who invented electricity, what rubber is made of, and how to act in case of drowning. On his person this minute is cash and paper for about one thousand dollars. The cash is ninety dollars in his inside vest pocket and the pocket is pinned with two safety-

"'I could tell you a lot more about him, Eddie, but some way,' I says, 'I don't feel it's quite nice of me to set here talking so free about a perfect stranger. I will only add that he would skin prettyvery pretty, indeed-but it can't be done. No one has ever took a nickel off him since he started with his tin bank at the age of three. Now let's watch some one else,' I says. 'Looking at this one thoroughly, I ain't had such ugly thoughts since the wet winter in Pioche.

"Well, all this time I'd been guffing to Eddle, trying to get him cheerful in adversity—understand what I mean? he wasn't doing a thing but keep his eyes on the old boy. freezing to him like one o' these here spotty bird dogs

that's got hep to a flock of patridges,

"You ain't bad on the rough work, Doc,' he says, 'I give you good for the obvious generalities. With a few trifling exceptions, such as that he's New England instead of Cleveland or Buffalo, and that his main graft is banking stead of insurance, you get him good as far as you go; but you ain't went far. You pulled up just before the waterjump. Now I'll show you,' he says, 'the advantages of studying physiology' or whatever that there word is which enables the patient student to tunnel under his victim and ground-sluice him while he slumbers in funcied security. Watch me shake the tree of intuition,' he says; and when the ripe fruit drops into our hats you'll have something to meditate profoundly about during the long winter evenings that will soon be on us."

"Shake on, perfessor,' I says; 'and I got another hat

besides this one.

"'Already I touch the bough gently,' he murmurs; and, sure enough, I see the old party is getting the fidgets under Eddie's gaze. He'll uncross his legs and flap his paper about and pull off his hat to look inside, and finger his necktie and twist on his sent; and then he'll settle again to reading, but only for a minute. And he never looked straight at us, but you knew he was wise to Eddie's eye. Pretty soon he can't bluff it out another minute; so he gets up and stumbles round, pertending to be delighted with the nice new furniture. He works kind of aimless over toward the door and when he gets near it he's outside

"It was kind of funny; still, any man's liable to get all nervoused up if you give him the eye steady like Eddie

"'Now I guess you're wise,' says Eddie.

"'Oh, in a way,' I says. 'I been told so once or twice by

people I could trust."

"It just goes to show,' he says, 'if I hadn't got powers to look below the surface I wouldn't be any wiser than what you be. My mind works strange,' he says. 'It registers people whether I want to or not. Now I caught this boy the morning we come aboard and paid no attention to him; but here my mind's been working on him ever since and just now it tells me all about him like I'd been through him with a dark lantern. It's great to have a mind like that,' he says. 'Sometimes it scares me.'

"Does this conclude your part of the evening's entertainment, perfessor?' I asks, seeing him light a eigar like

he had finished.

"'It does, my good man,' he says; 'but yours is only just beginning. I hate to trust you with it, Doc. Honestly, I've often thought the only job you're qualified for is night watchman in a department store, where you could get a nice long sleep in the made-up bed they keep in their Bijou Flat Furnished Complete for \$89.99. But I suppose I got to rely on you; so do what I tell you—no more, no less."

"If You Bare Any Reart in You, Show a Little Marcy?"

"'It must be terrible to know as much as some folks," I says, 'especially if you got to tell it all every time you think of it. I must see if I can't get you some throat

lozengers; your voice is roughing up.

"Go on out now," he says, paying no attention, 'and walk about on the plazza till you come up with this lad. When you do-now listen!-just stall round like you hadn't a thing above that eighteen-inch collar of yours. That won't be hard for you. Do whatever he does. If he walks you walk-about six feet back of him. If he sets down cop a chair-not too near him. If he leans over the rail you do the same. Don't look much at him, but about every ten minutes give him the cold once-over till he gets it; then look away quick and hum something kind of soft. as if you hadn't wanted him to catch you. The general idea,' he says, 'that I'm trying to smuggle into that sacredly guarded ivory temple of yours is that you're watching him close, but you don't want him to know itonly you're so much of a dub you give the snap away. And don't speak to him whatever he does. If you say a single word to him I'll have you put in from. Now heat

it, while I do something else.'
"'Yes; and I know what it is you're going to do, too,' I says, 'You're going up on the roof and show the captain how to run the ship. I understand he was scared stiff till

be found out you was along."

"'Go on,' he says, 'and remember every word I told you. If I find out you've bungled it they's likely to be a

"Well, out I go feeling like a fool, because I know this old guy wouldn't play any game on earth for fun, money or marbles. You can tell the kind-never touched a card in his life. You knew he wouldn't het apples was red, not if you was to give him 'way above track odds on it. But I was willing to humor Eddie, you understand.

"And maybe that little dried apricot didn't give me some walle! First I went all round two decks-say, it's like walking twice round the fairgrounds at home-and no sign of his nibs. Then I climb up to the boatdeck and there he is, hid up back of a ventilator, his hat down and his collar up. I stop about six feet off and let on to be looking out over the wet. Pretty soon I give him the eye, like Eddle says to, then look away quick when he gets me. That happens twice and he moves off, trying to go careless. I move careless too, understand. When he stops I stop. I had to admit it was kind of funny. He stood the eye three or four times, then down he toddles to the next deck and walks that, me trailing him like he had me on a string. If he stops to let me go by I stop too.

"After he tries me out that way some few times he just settles down to walk, and some walker he was, believe me and me having to kind of favor my feet. I says to myself: Look here, it's all right to humor a friend, but I want a

sweater and some spiked shoes if this Jasper is going to pace me. What I really had ought to have, I mays, 'is a taxi,' Still, it was kind of interesting, understand, to see the way he'd shiver and squirm every time he valehet me lump him. His eyes never hit mino; they'd touch me about the hid or the neekthe. And all at once it come over me like a flush that this old buy is alraid of me, But why? That's what causes me to meditate performily, on Kiddin mays.

"Well, anyhow, he walks and walkstill I'm reasly to above him off if I get a chance. Then all at more he sware her treade and trice to loss me bidging aparel down them narrow ballways between staterosum. And, of sourse, me close up-Then he makes down worde pussage and stops at a stateroum door to unfact: it. At that I wasn't knowing upon to not but the opposite door opens and out page Eddle, not fooking at the old one; but giving me the high sign and saying. all volvety:

"Ob, there you are, Daysor! I've had the steward change on to this statement. I fancy we can do our work better here." late stayer.

"Certainly, Colonel,' I says. 'I think you made a wise move; we seem to belong right here."

"By this time the old boy had got looelde and shut his door; but we could bear him breathing hard. Eddie wed too walk off a little ways.

"'Look here, I says, 'if they's to be much of this gumaboo smill I stought jost to have roller-skutes. My left tire is

> to me one bright look and attful need he's coming

> > I mays. 'All I tranof me.

"'You ought to go to a good oculist,' says Eddie, 'the minute you land if that's all you can see. But just now you fly up and get into dinner soon's they open. I'll stay on watch. Remember, from now on this lad can't poke his head out that door without one of us being here and sticking to him like wallpaper."

"'Well,' I says, 'if the little rascal starts walking again you want to get a dogteum and about a thousand dollars' worth of peromican. As a walker, that boy has got old

man Weston looking like Buby's First Step. 'Save your monologue,' says Eddie, 'till you can get

the big time for it, and hurry up and eat."

"So up I go, stopping first to get into a pair of easier shoes, and leaving Eddie to loaf round by the door. And I'm in to the table as soon as they let me. I get through soup and fish all right, and I'm mushing round in a dish of this here German goo, and looking mernly forward to some roast goese and a few other things on the bill, when in comes the old boy, followed by Eddie.

"Eddie goes right to his table 'stead of coming to ours; but the old boy don't seem hungry. He orders a little and watches Eddie sideways when he orders for himself, and I can see Eddie paying no attention to him while they walt. They no more than get their dinner when the old joker shoves his plate back and beats it, like he couldn't bear the sight of food. Friend Eddle makes horrible signs to me; so I follow, with a low cry of despuir, because the

rest of my dinner has just come.

"I catch up with the lad at the top of the stairs and, say, he looks sick-understand what I mean? He ducks out on deck and in a minute there I am, humming lightly under my breath, though God knows I didn't feel like singing. I was afraid the old devil was going to walk from the Rat-tery to High Bridge again. He did start, but I give him such an awful glare he heads into the smolding room and just stood there in the middle of the floor. All right, I thinks, and I sunk into a chair where I could regard him in an evil manner. Then he tetered over to the far side and set down. I take another seat near him and he makes the bluff with his newspaper again; but his face is yellow.

"After a white Eddie comes in and sets down by me, and the lad gives in again and wanders about the room, trying to make out we wasn't there at all. Eddie and I stand up and he can see we're discussing him in low tones. At least that's what it looked like. What it sounded like was me telling Eddie I'd had about coough of the old farm and was going up to the big city where the squirrels didn't hits people, and a man could finish his dinner and get a chance to set down in the plush rocker once in a while now and then from time to time.

"After a minute or two of this out the old dodger goes egain and Eddle after birn.

"'I'll take him now for a spell,' be says, 'It's good to change on him, and he's coming awful pretty,"

belong I'll come see you every week; bring you marmalade and take you out to see the goldfish in the fountain, and let you tell me how you're Roosevelt or the King a Europe. I don't think you'll be violent,' I says. "So I get my feet up and settle down to a good smela and try to figure out what hand Eddie's holding so clear to his chest; but all the further I can get is that the guy In about an hour Eddie shows up alone. "'Our little playmate has gone night-night,' he says 'so come on-we got to go too. "'We got to tuck him in and sing Hushaby!' I says 'Of course I understand that; but you got a sweet ten voice yourself and likely it would fuss him to have the tw

"'All right,' I says; 'and when they get you where you

"We got to retire to our stateroom,' says Eddie firmly so's he can hear us conversing in low, eager tones, an planning to keep watch on his door all night.

"'If he listens good he'll hear me tell you some lov eager things about yourself that may puzzle him-by they'll be plain enough to you,' I says.

"Eddie just give me one look and says:

"I never believed it until this minute, what the explore tell, about there being a tribe in the interior of Africa : debased that they can't count beyond three. Now seems God's ruth to me."

"I saw it wasn't any good reasoning with him, so dow we go and prop our door open and converse quite a lot, wit Eddie saying loud after a while: 'He must be saleep by the time. I'll take the first watch till two-thirty, then call you And finally we did get to sleep, me being pretty sore, account of Eddie's not tipping his hand to me.

You can believe it or not, but I pledge you my son understand, that Eddle makes us keep that same thing t all next day; has me ready and dressed in the morning so I am right there when the old boy comes out. And one us was glued to him every minute after that.

"Finally I begin to get excited myself because of the w our actions is telling on this party. By three o'clock th afternoon he's a pale, sickly green, and he don't dare we any more. He sets in the smoking room and counts ! fingers, giving us a quick look about every thirty minus He was certainly coming swift, like Eddie said; but whe was be coming to?

"'Tell me this much, anyway,' I begs Eddle that nig after dinner; 'Do we do it here or after we land?' - here! this was our last night out.

"And Eddie just says:

"That's up to our anxious little friend. We do it wh he asks for it and not a minute before; but I don't mile telling you I apprehend his speedy request for a remail tion. That's the superb delicacy of my method. I making him do all the fighting and he's licking himsel!

"Of course that mess of words left ! knowing a lot more than I had belo with a copper on the chips; so I shut and worked the eye harder on the boy. It was about nine o'clock and was setting across the room from kicking the table legs and gnawing fingernails.

"'It's all over!' says Eddie in a minu

What did I tell you?"

"The old guy gets up and does one his nervous runabouts. When he's to the door he turns and gives us a se look over his shoulder and motions w his head just before he goes out. Say was silly for a minute; but Eddle gr me and out we go. He pulls me up the deck and says:

"Now you remember you're it nobody but old Doctor Mum, of Ma burg. All you got to do is to keep ! and look mean. Part of that will be a

for you.

"The next minute he rushes me in and down that gangway to the dost this party's room. He didn't knock; just grabbed the knob and pushed in l a farmer opening a barndoor in a but And there stood our lad had to grab the bunkrail. Eddie s the door and just stood a minute lo ing down at the little old lollop. Il be turns to me.

"Search him for weapons, Doctor he orders. So I frisk the old boy : make sure he ain't got a gun.

"'All right, Colonel,' I says to Edi and at that the guy sort of sloshes do on the couch like he didn't have a hi left in him and begins making who gurgles in his throat.

'Our chase is over, Doctor,' s Eddie. 'We have our man, Inc. (Continued on Page 57)

AN AMERICAN VANDAL

Being Guyed and Guided-By Irvin S. Cobb

ILLUSTRATED BY JOHN T. MICUTCHEON

DURING our recent scientific explorations in the Eastern Hemisphere we met two guides who had served
the late Samuel L. Clemens, one who had served the
ste J. Pierpont Morgan, and one who had acted as courier
oex-President Theodore Roosevelt. After inquiry among
smons who were also lately abroad I have come to the conlation that my experience in this regard was remarkable,
of because I met so many as four of the guides who had
stended these distinguished Americans, but because I met
o few as four of them.

One man with whom I discussed the matter told of havng encountered, in the course of a brief scurry across brope, five members in good standing of the International association of Former Guides to Mark Twain. All of them ad their union cards to prove it too.

Others said that in practically every city of any size idded by them there was a guide who told of his deep tachment to the memory of Mr. Morgan, and described ow Mr. Morgan had hired him without inquiring in dvance what his rate for professional services a day would e; and how—lingering with wistful emphasis on the words long here and looking meaningly the while at the present atton—how very, very generous Mr. Morgan had been in estowing gratuities on parting.

Our first experience with guides was at Westminster thbey. As it happened, this guide was one of the Mark. wain survivors. I think, though, he was genuine; he had

ocuments of apparent authenticity in his common to help him in proving up his title. In how, he knew his trade. He led us up and down those parts of the Abbey which are see to the general public and brought us nally to a wicket gate, opening on the royal bapels, which was as far as he could go.

Royalties on Royalty

THERE he turned us over to a severelooking dignitary in robes—an archishop, I judged, or possibly a canon—who,
a payment by us of a shilling a head,
souted our party through the remaining indiscurs, showing us the tombe of England's
queres and kings, or a good many of them
myway; the Black Prince's belinet and
reastplate; the exquisite chapel of Henry
he Seventh, and the ancient chair on which
ill the kings sit for their coronations, with
the lamous Scotch Stone of Scone under it.

The chair itself was not particularly imressive. It was not nearly so rickety and lecropit as the chairs one sees in almost any london barber shop. Nor was my emotion tarticularly excited by the stone. I would inguge to get a better-looking one out of the landiest rock quarry inside of twenty minster. This stone should not be confused with the ordinary scones, which also come from Scotland and which are by some people regarded as edible.

What did seem to us rather a queer thing was that the nuthorities of Westminster should make capital of the dead rulers of the realm and, except on certain days of the week, should charge an admission fee to their sepulchers. Later, on the Continent, we sustained an even more severe shock when we saw royal palaces—palaces that on occasion are used by the royal proprietors—with the quarters of the monarche upstairs, and downstairs novelty shops and tourist agencies and restaurants, and the like of that.

I jotted down a few crisp notes concerning these matters, my intention being to comment on them as evidence of an incomprehensible thrift on the part of our European kinspeople; but on second thought I decided to refrain from so doing. I recalled the fact that we ourselves are not entirely free from certain petty national economies. Abroad we house our embassies up back streets, next door to hird and animal stores; and at home there is many a public institution where the doormat says Welcome! but the soap is chained and the roller towel is padlocked to its little roller.

Guides are not particularly numerous in England. Even in the places most frequented by the sight-seer they do not abound in any profusion. At Madame Tussaud's, for example, we found only one guide. We encountered him just after we had spent a mournful five minutes in contemplation of ex-President Taft. Friends and acquaintances of Mr. Taft will be shocked to note the great change in him when they see him here in wax. He does not weigh so much as he used to weigh by at least one hundred and fifty pounds; he has lost considerable height too; his hair has turned another color; his mustache is not a close fit any more, either; and he is wearing a suit of English-made clothes.

The Land of Pet Murderers

O's LEAVING the sadly sitered form of our former Chief Executive we descended a flight of stone steps leading to the Chamber of Horrors. This department was quite crowded with parents escorting their children about. Like America, England appears to be well stocked with parents who make a custom of taking their young and susceptible offspring to places where the young ones stand a good chance of being scared into conniption fits. The official guide was in the Chamber of Horrors. He was piloting a group of visitors about, but as soon as he saw our smaller party he left them and came directly to us: for they were Scotch and we were Americans, citizens of the happy land where tips come from. Undoubtedly the guide knew best.

With pride and pleasure he showed us a representative assortment of England's most popular and prominent murderers. The English dearly love a murderer. Perhaps that is because they have fewer murderers than we have, and have less luck than we do in keeping them alive and in

good spirits to a ripe old age. Almost any American community of fair size can afford at least two murderers—one in fail, under sentence, receiving gifts of flowers and angel cake from kind ladies, and waiting for the court above to reverse the verdict in his case because the indictment was shy a comma; and the other out on bail, awaiting his time for going through the same procedure. But with the English it is different.

We rarely hang anybody who is anybody, and only occasionally make an issue of stretching the neck of the veriest nobody. They will hang almost anybody Hamanhigh, or even higher than that. They do not exactly hang their murderer before they catch him, but the two events occur in such close succession that one can readily understand why a confusion should have arisen in the public mind on these points. First, of all, though, they catch him; and then some morning between ten and twelve they try him. This is a brief and businesslike formality. While the judge is looking in a drawer of his desk to see whether the black cap is handy the bailiffs shoo twelve tradesmen into the jury box. A tradesman is generally chosen for jury service because he is naturally anxious to get the thing over and hurry back to his shop before his helper goes to lunch.

The judge tells the jurors to look on the prisoner, because he is going away shortly and is not expected back; so they take full advantage of the opportunity, realizing it to be their last chance. Then, in order to comply with the forms, the judge asks the accused whether he is guilty or not guilty, and the jurors promptly say he is. His Worship, concurring heartily, fixes the date of execution for the first friday morning when the hangman has no other engagements. It is never necessary to postpone this event through failure of the condemned to be present. He is always there; there is no record of his having disappointed an audience. So, on the date named he is hanged rather extensively; but after the hanging is over they write songs and books about him and revere his memory.

Our guide was pleased to introduce us to the late Mr. Charles Pease, as done in paraffin, with créped hair and bright, shiny glass eyes. Mr. Pease was undoubtedly England's most fashionable murderer of the past century and his name is imperishably enshrined in the British affections. The guide spoke of his life and works with deep and sincere feeling. He also appeared to derive unfeigned pleasure from describing the accomplishments of another murderer, only slightly less famous than the late Mr. Pease. It seemed that this murderer, after slaying his victim, set to dismembering the body and boiling it. They boil nearly everything in England. But the police broke in and interrupted the job.

Our attention was directed to a large chart showing the form of the victim, the boiled portions being outlined in red and the unboiled portions in black. Considered as a murderer solely this particular murderer may have been

deserving of his fame; but when it came to boiling, that was another matter. He showed poor judgment here. It all goes to show that a man should stick to his own trade and not try to follow two or more widely dissimilar callings at the same time. Sooner or later he is bound to slip up.

We found Stratford-upon-Avon to be the one town in England where guides are really abundant. There are as many guides in Stratford as there are historic spots. I started to say that there is at least one guide in Stratford for every American who goes there; but that would be stretching the real facts. because hearly every American who goes to England manages to spend at least a day in Strutford, it being a spot very dear to his heart. The very name of it is associated with two of the most conspicuous figures in our literature. 1 refer first to Andrew Carnegie; second to William Shakspere. Shakspere, who wrote the books, was born here; but Carnegie, who built the libraries in which to keep the books, and who has done some writing himself, provided money for preserving and perpetuating the relies.

Speaking Polar and Schweitzer

WE FOUND a guide in the ancient schoolhouse where the Bard-I am speaking now of William, not of Andrew-acquired the rodiments of his education; and on duty at the old

village church was another guide, who for a price showed us the identical gravestone bearing the identical inscription which, reproduced in a design of burnt wood, is today to be found on the walls of every American household, however humble, whose members are wishful of imparting an artistic and literary atmosphere to their home. A third guide greeted us warmly when we drove to the cottage, a mile or two from the town, where the Hathaway family lived.

Here we saw the high-backed settle on which Shakspere sat, night after night, wooing Anne Hathaway. I myself sat on it to test it. I should say that the wooing could not have been particularly good there, especially for a thin man. That settle has a very hard seat and history does not record that there was a cushion. Shakspere's affections for the hady must indeed have been steadfast. Or perhaps he was of stouter build than his pictures show him to have been.

Guides were scattered all over the birthplace house in Stratford in the ratio of one or more to each room. Downstairs a woman guide presided over a battery of glass cases containing personal belongings of Shakspere's and documents written by him and signed by him. It is conceded that he could write, but he certainly was a mighty poor speller. This has been a failing of many well-known writers. Chaucer was deficient in this regard; and if it were not for a feeling of personal modesty I could apply the illustration nearer home.

Two guides accompanied us as we climbed the stairs to the low-moded room on the second floor where the creater of Shylock and Juliet was born —or was not born, if you believe what Ignatius Donnelly had to say on the subject.

But would it not be interesting and valued information if we could only get the evidence on this point of old Mrs. Shakspere who was undoubtedly present on the occasion? A member of our party, an American, ventured to remark as much to one of the guides; but the latter did not seem to understand him. So the American told him just to keep thinking it over at odd moments, and that he would be back again in a couple of years, if nothing happened, and possibly by that time the guide would have caught the drift of his observation. On second thought, later on, he decided to make it three years—he did not want to crowd the guide, he said, or put too great a burden on his mentality in a limited space of time.

If England harbors few guides the Continent is fairly glutted with them. After nightfall the houlevards of Paris are so choked with them that in places there is standing room only. In Rome the congestion is even greater. In Rome every other person is a guide—sometimes twins. I do not know why, in thinking of Europe, I invariably associate the subject of guides with the the subject of tips. The guides were no greedler for tips than the cahmen, or the hotel helpers, or the railroad hands, or the populace at large. Nevertheless this is true. In my mind I am sure guides and tips will always be roupled, as surely as any of those standard team-word combinations of our language that are familiar to all; as firmly paired off as, for example, Castor and Pollux, or Damon and Pythias, or Fair and Warmer, or Hay and Feed. In the future when I think of one I know I shall think of the other. Also I shall think of languages, but for that there is a reason.

Tipping—the giving of tips and the occasional avoidance of giving them—takes up a good deal of the tourist's time in Europe. At first reading, the arrangement advised by the guidebooks, of setting aside ten per cent of one's bill for tipping purposes, seems a better plan and a less costly one than the indiscriminate American system of tipping for each small service at the time of its performance. The trouble is that this arrangement does not work out so well in actual practice as it sounds in theory.

In Venter Even the Jimple

Condeller Has a Secret Under-

standing With All Brunches of the Retnil Trade

On the day of your departure you send for your hotel bill. You do not go to the desk and settle up there after the American fashion. If you have learned the ropes you order your room waiter to fetch your bill to you, and in the privacy of your spartment you pore over the formidable document wherein every small charge is fully specified, the whole concluding with an impressive array of items regarding which you have no prior recollection whatsoever. Considering the total, you put aside an additional ten per cent, calculated for division on the basis of so much for the waiter, so much for the boots, so much for the maid and the porter, and the cashier, and the rest of them. It is not necessary that you send for these persons in order to confer your farewell remembrances on them; they will be waiting for you in the hallways. No matter how early or late the hour of your leaving may be, you find them there in a long and serried rank.

You distribute bills and coins until your ten per cent is exhausted and then you are pained to note that several servitors yet remain, lined up and all expectant, owners of strange faces that you do not recall ever having seen before, but who are now on hand with claims, real or imaginary, or your purse. Inasmuch as you have a deadly fear of being remembered afterward in this hotel as a piker, you continue to dip down and to fork over, and so by the time you read the tail end of the procession your ten per cent has given to twelve or fifteen per cent, or even more.

As regards the tipping of guides for their service, the on a fairly satisfactory plan, which I gladly reveal here to the benefit of my fellow man. I think it is a good then offer the guide, on parting, about twice as much as puthink he is entitled to, which will be about half as much as he expects. From this starting point you then work town each other, you conceding a little from time to time he abating a trifle here and there, until you have reached a happy compromise on a basis of fifty-fifty; and so you put in mutual good will.

The average American, on the eve of going to Europe thinks of the European as speaking each his own larguest the conceives of the Poles speaking Polar; of the Helinder talking Hellandaise; of the Swiss as employing Schweizer for ordinary conversations and yodeling when address friends at a distance—and so on. Such, however, is ruch the case. Nearly every person with whom one come of contact in Europe appears to have fluent command of everal tongues beside his or her own. It is true this does not apply to Italy, where the natives mainly stick to Italian but then Italian is not a language—it is a calisthenic.

Our train, going from Florence to Rome, stopped it a small way station in the mountains. As soon as the like locomotive had panted itself to a standard the train

hands, following their habit, pad of the cars and engaged in a trementsconflab with the assembled officials: the platform. Immediately all its loafers in sight joined in. A droug hillsman, muffled to his back hards a long brown cloak, and with business his legs such as a stage bandit wan, was dozing against the wall. Haloson as though he had stepped right at a a comic opera to add picturesquences to the scene.

Acrobatic Tongues

HE ROUSED himself and joined a so did a bearded party who. judge by his uniform, was either a Knight of Pythias or a general is the army; so did all the rest of the tree! In ten seconds they were james in gether in a hard knot, and going it w the high speed with the muffler of the white teeth shining, arms flyntshoulders shrugging, spinal course writhing, mustaches rising and ldla. legs wriggling, sculps and ears foliable suit. Feeding hour in the pared or at the Zoo never produced anything it so noisy and animated a serothese parts acute hysteria is not a symptom - it is merely a state of miss.

A waiter in soiled habiliments butted up, abandoning chances of trade of the prospect of something infinitely ment exciting. He wanted to stick his or into the argument. He had a fer pregnant thoughts of his own creek.

utterance—you could tell that; but he was handwips into a state of dumbness by the fact that he needed by areas to balance a tray of wine and sandwiches on his less Merely using his voice in that company would not be counted. He stood it as long as he could, which was very long, let me tell you. Then he slammed his tray down on the platform and, with one quick movement, jether to coat sleeves back to his elbows, and inside thirty seems he had the floor in both hands, as it were. He counted mainly with the Australian crawl stroke, but one is while switched to the Spencerian free-arm movement of occasionally introduced the Chautauqua salute with the effect.

On the Continent guides, as a class, excel in the gift tongues—guides and hotel concierges. The concierges hotel in Berlin was a big, upstanding chap, half Russ and half Swiss, and therefore qualified by his breding speak many languages; for the Russians are born with speak many languages; for the Russians are born with tongues and can give cards and spades to any talking on that ever lived; while the Swiss lag but little behind the in linguistic aptitude. It seemed such a pity that the six was not alive when the hands knocked off work at it Tower of Babel; he could have put the job through with Cextending himself.

No matter what the nationality of a guest might be and the guests were of many nationalities—he could go with that guest in his own language or in any other at guage the guest might fancy. I myself was sorely territe to try him on Coptic and early Aztec; but I held at 9. Coptic is not what it once was; and, partly through have

and partly through carelessness, I have allowed my command of early Aztec to fall off pretty badly these last few months.

All linguistic freakishness is not confined to the Continent. The English, who are popularly supposed to use the same language we ourselves use, sometimes speak with a mighty strange tongue. A great many of them do not speak English; they speak British, a very different thing. An Englishwoman of breeding has a wonderful speaking voice -- as pure as a Boston woman's and more liquid; as soft as a Southern woman's and with more attention paid to the r's. But the Cockney type-Wowie! During a carriage ride in Florence with a mixed company of tourists I chanced to say something of a complimentary nature about something English, and a little London-bred woman moke up and said: "Thenks! It's vurry naire of you to sezzo 'm sure." Some of them talk like that-honestly they do!

Though Americo-English may not be an especially musical speech, it certainly does lend itself most admirably to slang purposes. Here again the Britishere show their inability to utilize the vehicle to the ball of its possibilities. England never produced a Billy Baxter or a George Ade, and I am afraid she never will. Most of our slang means something; you hear a new slang phrase and instantly you realize that the genius who coined it has hit on a

sappy and a graphic and an illuminating expression; that at one bound he rose triumphant above the limitations of the anguage and tremendously enriched the working vocabulary if the man in the street. Whereas an Englishman's idea of baging slang is to scoop up at random some inoffensive and well-meaning word that never did him any harm and apply t in the place of some other word, to which the first word anot related, even by marriage. And look how they deliberitely mispronounce proper names! Everybody knows bout Chalmondeley and St. John. But take the Scandiiavian word fjord. Why, I ask you, should the English usist on pronouncing it Ferguson?

American Stong From British Peas

AT OXPORD, the seat of learning, Magdalen is probounced Maudlin, probably in subtle tribute to the condition of the person who first pronounced it so. Generaldiminsion day is not the day you enter, but the day you wave. Full term means three quarters of a term. An orlinary degree is a degree obtained by a special examination. An inspector of arts does not mean an inspector of arts, but a student; and from this point they go right ahead,

etting worse all the time.

When an Englishman undertakes to wrestle with Amercan slang be makes a fearful hash of it. In an English bagazine I read a short story, written by an Englishman the is regarded by a good many persons, competent to udge, as being the eleverest writer of English alive today. The story was beautifully done from the standpoint of emposition; it bristled with flashing metaphers and whimical phrasing. The scene of the yare was supposed to be hicago and naturally the principal figure in it was a milionaire. In one place the author has this person saying, I recken you'll feel pretty mean," and in another place, I recken I'm not a man with no pull."

Another character in the story says, "I know you don't cotton to the march of science in these matters," and speaks of something that is unusual as being "a rum affair." A walled state prison, presumably in Illinois, is referred to as a "convict ramp"; and its warden is called a "governor" and an assistant kneper is called a "warder"; while a Chicago daily paper is quoted as saying that "larrikins" directed the attention of a policeman to a person who was doing thus and so.

The writer describes a "mysterious there" known as Pilgrim's Pond, "in which they say"—a prison official is supposed to be talking now—"our fathers made witches walk until they sank." Descendants of the original Puritans who went from Plymouth Rock, in the summer of 1621, and founded Chicago, will recall this pond distinctly. Cotton Mather is buried on its far bank, and from there it is just twelve miles to Salem, Massachusetts. It is stated also in this story that the prairies begin a matter of thirty-odd miles from Chicago, and that to reach them one must first traverse a "perfect no man's land." Englewood and South Chicago papers please copy.

Getting back again to guides, I am reminded that our

Getting back again to guides, I am remarked that our acquaintanceship with the second member of the Mark Twain brotherhood was staged in Paris. This gentleman wished himself on us one afternoon at the Hôtel des Invalides. We did not engage him; he engaged us, doing the trick with such finesse and skill that before we realized it we had been retained to accompany him to various points of interest in and round Paris. However, we remained under his control one day only. At nightfall we wrested ourselves free and fled under cover of darkness to German soil, where we were comparatively safe.

I never knew a man who advanced so rapidly in a military way as he did during the course of that one day. Our own national guard could not hold a candle to him. He started out at ten A M. by being an officer of volunteers in the Franco-Prussian War; but every time be slipped away and took a nip out of his private bottle, which was often, he advanced in rank automatically. Before the dusk of evening came he was a corps commander, who had been emobled on the field of battle by the hand of Napoleon the Third.

He took us to Versailles. We did not particularly care to go to Versailles that day, because it was raining; but he insisted and we went. In spite of the drizzle we might have enjoyed that wonderful place had he not been constantly at our elbows, gabbling away steadily, except when he excused himself for a moment and stepped behind a tree, to emerge a moment later wiping his mouth on his sleeve. Then he would return to us, with an added gimpiness in his elderly legs, an increased expansion of the chest inside his tight and shiny frock coat, and a fresh freight of richness on his breath, to report another deserved promotion.

The Brigadier's Boast

AFTER be had eaten luncheon—all except such portions of it as he spilled on himself—the colonel grew confidential and chammy. He tried to tell me an offcolor story and forgot the point of it, if indeed it had any point. He began humming the Marseillaise Hymn, but broke

off to say he expected to live to see the day when a column of French troops, singing that air, would march up Unter den Linden to stack their arms in the halls of the Kaiser's palace. I did not take issue with him. Every man is entitled to his own wishes in those matters; but later on, when I had seen something of the Kaiser's standing army, I thought to myself that when the French troops did march up Unter den Linden they would find it a tolerably hard trip, and if there was any singing done a good many of them probably would not be able to join in the last verse.

Immediately following this our conductor confided to me that he had once had the honor of serving Mr. Clemens, whom he referred to as Mick Twine. He told me things about Mr. Clemens of which I had never heard. I do not think Mr. Clemens ever heard of them either. Then the brigadier—it was now after three o'clock, and between three and three-thirty he was a brigadier—drew my arm within his.

"I, too, am an author," he stated. "It is not generally known, but I have written much. I wrote a book of which you may have heard—The Wandering Jew." And he tapped himself on the bosson proudly.

I said I had somehow contracted a notion that a party named Sue — Eugène Sue — had something to do with writing the work of that name.

"Ah, but you are right there, my friend," he said. "Sue wrote The Wandering Jew the first time—as a novel, merely; but I wrote him much better—as a eatire on the anti-Semitic movement."

I surrendered without offering to strike another blow and from that time on be had his own way with us. The day, as I was pleased to note at the time, had begun mercifully to draw to a close; we were driving back to Paris, and he, sitting on the front seat, had just attained the highest post in the army under the régime of the last Empire, when he said: (Continued on Page 65)

THE LANTESCANE ROSES

PERSIS pushed her coffee cup away and leaned back in her chair with a little frown. She was distinctly though vaguely unhappy, as no one has right to be on a terrace, with the Mediterranean spread out below, a blue tent of air above, blossoming cleanders nearby, and a viny pergola in the distance. Let us add, also, a well-spread breakfast table before one.

A well-spread breakfast consists precisely of a pot of coffee, another of hot milk, a tiny one of cream, a pat or a square of butter, and two crisp brown rolls. The remains of exactly this ideal breakfast, multiplied by two, which is the only known means to improve it, stood at this very moment on the table between Persis and her husband.

I have forgotten to mention the husband before. Yet he was very much there; and really there seemed to be no reason, at first blush, why he should not be included in the list of causes why Persis ought not to have been even vaguely unhappy. Yet Tom More, innocent as he both looked and was of the fact, was the very essence of his wife's discontent.

For Persis had hoped for a thing that had not come to pass, a thing almost as vague as her unhappiness because it had not come to pass. She had fendly fancied that when Tom and she were once in Italy together something would happen to their lives. Just what, she herself hardly knew, but something—a something that would render existence quite different from existence as it had been in their fairly expensive apartment in New York.

For one thing, there would be less business about it; it would be that much farther from Tom's office and Wall Street. As a matter of fact, Tom had nothing at all to do with Wall Street, except to bank there; but to Persis that served as a convenient synonym for all Business, with a big B, which devoured her husband's days—not that she had anything to

complain of specially or was of a complaining disposition; she had been very reasonably happy during all the years of her married life, but she wanted more—to be unreasonably happy. And it is to her credit, or to that of those who reared her, that she preferred to be so with her own husband. She nursed no secret flames; she had really never seen anybody she liked better than her husband.

Tom More was essentially a good fellow—even his wife thought so; but she had expected her husband to be something more than a good fellow, at least as regarded herself. She did not for a moment question his loyalty or devotion; it was patent that he loved her—in his own way—only sometimes she would have liked to be loved in another way. And latterly it had struck her that she detected in him the faint first beginnings of a certain matter-of-courseness which she justly resented, seeing there is nothing less a matter of course than marriage.

For his part Tom seemed satisfied enough. He was busy; that was the real difference in their case. There was between them that great and growing gulf which America makes between the keen man of business and the cultured woman he marries, who goes on culturing on his money, Tom's days were spent chiefly at his office, making money, and Persis' days were spent in spending. With the money Tom made she attended functions, clubs, lectures, theaters, operas; taking in with an admirable catholicity of spirit whatever came her way—Grierson, Ibsen, Bergson, the Academy Show, the Futurists and the Russian dancers.

Tom was pleased that she was amusing herself, and proud of her culture, even when that a little amused him. He had conscientiously tried to fulfill the American man's ideal of giving his wife everything she wanted, never doubting that what she wanted must be good for her to have; and, therefore, when she wanted a European trip he immediately offered to send her over with anybody she would name. Persis, however, wanted a European trip precisely with him. There were in her, unsuspected by her his land, certain loyalties of sentiment.

By Grace Ellery Channing

It had not been an easy thing for Tom to get away, even for two months; but Persis' augmenting unrest, culminating finally in a visit to an eminent physician, who had addressed a few cryptic sentences to Tom in private, had led Tom to see new light on his duty as an American husband. The trip, the doctor had said with a shrug, might save a pervous breakdown.

Tom had been horrified at the very notion of Persis' having nerves. He remembered hastily all the nervous invalids in their circle, and that Persis had indeed been what Tom charitably called almost irritable more than once of late; and he instantly subordinated business to Persis. Between the two there could not be a moment's question. Business, after all, existed mainly in order that Persis might be suitably supported. He spuke cheerfully to Persis of the European trip.

"Anything to make you happy, Persis!"

And they had a really good time planning it. They had had a good time carrying it out as well, as two well-bred and well-meaning persons are likely to do in traveling through interesting places. Once having come, Tom had thrown himself into the trip with the same energy he would have devoted to Construction—which was his branch of Big Business—at home; his thorough and tenacious grasp of Baedeker at times almost got on those nerves that Persis was supposed to have left behind. On the whole, however, they had had a very good time indeed. Persis had no just cause for grievance or discontent; merely she had made the disconcerting discovery that they remained substantially the same persons in Italy they had been in New York.

Up to now nothing had happened materially to alter their relations to life or to each other, and now they were on their lingering way up to Genoa, to take their steamer back—back to the same colorless life as Persis saw it; back to the same gorgeous and varied world where things were done according to her husband's vision of it.

And all the time Italy was getting more colorful every hour, with an arder of conscious life to come that made all Persis' untried capacities for living cry out for satisfaction, for something to happen to her too.

With the vague hope of making it happen, she opened the one note that was her meager portion of their mill glanced through it and laid it down

"We are just going to miss Jane! Seabury," she observed languidly.

Her husband, from the midst of his letters, without looking up, mermured an absent "That so?" Tasy had just made connection with their mail, and his was, speaking connentally, of a largeness. Peniglanced at it with resentment. By the printed letterheads she know they were business—that business she hoped they had left behind a America.

Persis frowned once more; and her discontented eyes, wandering arrethe terrace background of the anioleanders, were suddenly caught an arrested by another pair of eye, belonging to the only other occupanof the terrace.

They were dark eyes—naturally, Persis would have told you, since they belonged to an Italian; actually there are plenty of blue-eyed Italian, beginning with His Majesty, the king—but these were the perfect dark Italian eyes of fiction, of the opera, of one's dreams in one's early Italian period. They were set in a very handsome face to match and were fixed on Persis without any effort on the part of their owner is disguise his interest in her.

It was quite a moment before Pesis, absorbed in her train of though, woke to their import; then she turns her own deliberately away, drawing herself up, at the same time, ver slightly in a way that carried reprod. Not for nothing had Persis been well brought up.

The owner of the eyes smiled, ever so slightly too, beckened to a water paid his score, rose, bowed like a wellbred foreigner to their table impresonally in passing, and went on he way. Now that he was not looking

Persis' eyes followed him thoughtfully. He was undensity suited to the landscape—she could not say why.

She fell to studying her husband. He was a fine, clear and lean American, as typical of one type as the India was of another. One felt that Tom More's cleanness rollike the scarlet thread of the British navy, all through His hair was brown; his color fresh, but not ruddy, because he was American, not English; his teeth were white, and his blue eyes held ever imminent the glint of their radiand inimitable humor, unmistakable as the Celt's, by usually were serious and determined as a man's must be who wars daily for his own bread and his wife's diamond and automobiles.

Really there seemed to be no reason why he, too, might not have fitted into the landscape, thought Persis, a only ———She sighed ever so little. Immediately be husband looked too.

bushand looked up.
"Tired?" he asked with concern. "Didn't you sleep
last night?"

Persis shook her head, which might be an answer a either question, and returned one of her own:

"What are we going to do to-day?"

"Whatever you like," replied her husband promptly qualifying with—"just as soon as I've dashed off a few notes. These"—he indicated some of the obnoxious leaves heads—"have been twice forwarded. Burton must be dancing in the air by now."

"Oh, take all the time you want," said Persis police; She took up her parasol. "I'll stroll toward the Pinza I think; it looks like a pretty place."

"All right; I'll overtake you somewhere. Can't les oneself in a place the size of a pocket handkerchief."

Persis made no reply; she did not even turn her bad. It was the only sign she gave of her annoyance, but he bands acquire a sixth sense; and, by the pricking of he sixth sense. Tom was led to look after his wife, vagos; questioning. He even hesitated a moment, but those letters were quite too important—they meant more made.

cars and things for Persis in the future; so he compromised by rushing up the hotel steps to dash them off at top speed, as the best concession to a divided duty. Persis was just

disappearing down the winding Way.

She dawdled on, twirling her parasol hundle impatiently to she went. She was as nearly annoyed as she ever allowed herself to be. A Way barren of all happenings stretched before her mental eyes, sheer up to that steamer plank in Genoa and down on the other side to Broadway. Nothing would ever happen, she knew now.

That section of it immediately under her vision was, however, a very pretty Way indeed, consolingly so. It ran in curves above the cliff, bordered on one side by highwalled villas and on the other by a line of oleanders and tamarisks, through which the blue, marvelously modified by the rose and green and smoky mauves, played an astounding color scale.

Persis was no student of color, for all the Academy shows and the Futurists; so she merely felt the charm- but she did feel it. Over the villa's walls roses smiled and the tops of promising trees beckoned, and every now and then she came to an iron gateway which, closed or open, equally promised mysterious things within. To stroll down such a Way on such a day might, thought Persis, under certain circumstances mean a great many things, and she sighed.

The air streamed its filtered sunshine down; there were sounds within the sounds, odors within the fragrancesand all this was thrown away. Here she was, sauntering alone, and Tom fathoms deep in business, for all the world. as though she had been—as she usually was—alone in New York and Tom in his office! Tom responded to none of these influences. Just what effect she expected them to have on him she hardly knew; but some effect. And already she perceived this was a delusion.

She had come in her wandering to another iron gateway between two posts, through which great masses of roses waved jubilantly to her. She drew nearer to read the name on the enameled plate.

Villa Lant - Lantes " She tried the syliables aloud. "Lantescane," pronounced a voice for her.

She looked up. It was her neighbor of the breakfast table, who smilingly corrected her pronunciation, his eyes on her face. And now he removed his hat politely.

"It is my villa," he said with a strong accent, adding quietly: "I am Count Lantescane, at the signora's service." Persis blushed crimson.

" she began stupidly. "I was only looking -

"At the roses?" he politely interrupted her. "Every one does. But will you not enter? The grounds are open to the public." Persis hesitated, looked once up the road, saw no signs of Tom, felt what is community called a just resentment and entered.

"It is no longer what it was," said the count with a slight sigh; "but the park is pretty. We have a rather good fountain and in the house a few really good pictures!"

He walked beside her with a simplicity that put Persis instantly at ease. After all, it was a very simple

thing. The grounds were open to the public, for presently they encountered other strollers, and the count's manner was irreproachable in its courtesy. If his eyes dwelt on her as the eyes of an American man never do, it was with a perfectly respectful homage. He might have, and as a matter of fact he would have, looked at her exactly the same if Tom had been there.

Now the peril as well as the charm of such looking - to the looked-at - is that the more one looks at you thus, the better worth looking at you become. The eye of the beholder does in such a case bring beauty with it, and to both the bringer and the

brought there is a pleasantness in the result calculated to lead to and even to justify courting the means.

In her own country Persia was a pretty, graceful woman, who passed unnoted among a million more; but by the time she had made the tour of the little park -she refused to enter the house-and was coming out of the gate again with her arms full of deep-red roses, she was a raving beauty -or, at any rate, near enough it for Tom, hastening with long and conscience-stricken strides along the road, to halt with extreme abruptness at the sight, and pull off his hat with another odd pricking of that acquired sixth sense of his. The count raised his hat and Persia briefly presented the two men to each other.

"I have been giving myself the honor of showing madame my little place," said the count.

"Giving her your garden, too, I see," remarked Tom. "Thanks, very much; flowers are a passion with my wife."

'Ah, indeed!" murmured the count, as though be heard it for the first time, letting his eyes stray meditatively from one to the other of them. "She must not lack them, then, in San Carlo. You are staying some days?"

"More or less," answered Tom, ruising his hat,

"In that case we shall meet again."

The count bowed courteously, bringing his heels together, allowed his eyes to rest for a discreet moment on Persis,

and turned away. "Seems a decent sort of chap, the count," observed Tom cheerfully, poss ing himself of Persis' parasol and holding it dutifully over her head. Versis did not immediately re-

ply. She was still experiencing the exhibitation that comes of meting oneself in a flattering mirror, and felt subtly young and excited. As it was not un emotion also could share with her husband, all sought and found an outlet for it in an artistically worked-up enthusiasm for a necklace of beryl and amethyst scarabs, strung on a wire of gold, in a curio-shop win-

dow to which they presently came, and beneath the awning of which they halted for protection from the blazing sun. She expressed so much admiration for it that Tom went in and priced it, returning with a fabulously named price, which Persis, ashumed at the success of her insincerity, vetoed,

Tom himself pronounced it rather a faded show for the money, and suggested a cab back to the hotel, mopping his brow the while. He was amused to have his suggestion gracefully accepted-not that Persis was tired. It was a long time since she had felt so untired, so gayly alive; but she sat back against the carriage seat and let her gaze follow the dreaming sea below, while the red roses in her lap wilted apare.

"You'd better throw those things away and let

me buy you some more," said her hus-band, observing their state as he handed her from the carriage at the hotel.

"Funny these roses can't stand their own climate better! I don't blame them, though; they look just as I feel."

"It is the Lantescane rose; it has been in the count's family for generations," said Persia, a trifle piqued. She did not add, as the count had done, that he did not give it to everybody.

"A family rose, really!" said Tom with a grin. "They

run that family racket harder than a Bostonian, don't they? Family trees I know; but a family rose tree

Persis did not reply; but she took the roses up to her room and put them in water, and when she dressed for dinner that night she fastened one to her gown. Then she stepped out on the tiny balcony, throwing the casements wide to the evening breeze. After all, it had been rather a nice day—aimost as if something had happened. Below them the gulf of blue water, now opalescent, was studded with the looped-up sails of boats drifting home. And the boatmen were singing; somebody was playing a mandolin.

"Oh!" exclaimed Persis, flinging out her arms. "Isn't it wonderful!"

Tom, standing beside her, gave the scenery an honest and appraising look.

"It is certainly mighty pretty," he conceded.

Persis turned on him.

Daubt Be Filrted With Every American

Who Came Along

"Confess! This is better than Broadway?" The hint of a smile parted her husband's lips.

"They're rather different, aren't they? I admit this is prettier; but if you want me to say I honestly prefer it -I

"Well, I do!" flashed his wife with emphasis. "I could live here forever!"

Tom looked apologetic and slightly troubled; he did not want Persis to live here forever. When he spoke it was diffidently.

"Well, I dare say if I had been caught young-young enough - I should feel that way too; but as it is, honcetly I think a little of it goes quite a long way. I'm used to being busy, you see," he explained apologetically. "It's different with you." To make a complete job of it he added: "And, after all, I don't see that it's so awfully much better than the Hudson."

The Hudson! And being busy! For a moment Persis wished they had never come. Her silence was eloquent and affected her husband as eloquenes is meant to do. He followed her humbly down the stairs. Persis was all at once wondering whether the count dined in the hotel.

He not only dined there, but was their opposite at the table d'hôte; and, though he addressed himself almost exclusively to Tom, he made Persis aware, by forestalling all her little wants, that he lost no movement of hers; and his eyes told her that his Lantescane roses became her.

After dinner the two men smoked cigarettes in the garden and struck up a kind of acquaintance. Pensis did not smoke she severely disapproved of it for women; but to-night, following from her terrace the moving lights of the cigarettes, she half regretted her piety. Men were such companionable creatures! They seemed to find plenty to talk about. The count was a very intelligent man and a gentleman: Tom, by that birthright of the American man of affairs, was eminently a good mixer. Persis sighed and went to bed.

The next morning she woke with the sense of a little new interest in life, though it was some moments before she could remember what it was. She looked out a fresh waist from her store, fluffed her pretty hair with unusual care, and stepped out on the terrace to order coffee, while Tom stopped to get the mail.

She did not know what she expected, yet there was expectancy in the glance that swept the terrace. Nothing was there save an orderly array of tables, chairs and waiters; but on one of these, precisely that set apart for Tom and herself, flamed a great torck of crimson roses. Then at once Persis knew what it was she had expected, and her cheeks sent forth a tiny answering flame. She asked a quick question of the waiter who respectfully drew forth her chalr.

"Da dose?" It was almost all her Italian, but she supplemented with it a gesture even more Italian.

"From the garden of the signore conte," replied the waiter respectfully, accurately shoving the chair under her with an advoitness born of a lifetime of chair shoving. And at

'I Am Count Lantescans, at the Signora's Isrolco"

that moment the noise of another chair being shoved caused Persis to glance up, to meet the eyes of the Count of Lantescane, with a little smile in them, as he glanced from her to the roses and bowed. She asked no more questions, except of herself. Ought she to tell Tom? She decided that she ought-at least if he showed the least symptom of noticing, and she waited for his approach with indecision.

He came with downbent head, reading his letters as he came, and handing hers silently sat down, without observation or comment, and fell to an intent perusal of business. Persis watched him with mingled exasperation and relief. After all, it would be time enough if it happened again, she reflected. Meantime she kept her own gaze discreetly on her plate; and it was only when he paused for a brief morning salutation on his way out that the count's eyes found an opportunity to tell her she was even more charming this morning than she had been yesterday. Persis estentationsly left the rosss on the table.

The next morning there were fresh ones, and a fresh smile from the count as he openly regarded them and her in turn. Persis decided she would speak seriously to Tom if he betrayed even the smallest sign of intelligence in the matter; but he betrayed sone. Apparently he supposed roses grew glued to their breakfast table or else that a benevolent Italian landlord furnished them free and fresh; or, more likely, thought Persis, he never even saw them at all. Something was happening to steel and iron just then, and Tom read his way unseeing through most of his meals. Persis decided to wait.

Every day thereafter fresh Lantescane roses appeared at Perals' plate, and each morning the dark eyes of the count saluted her with their little secret smile of deepening understanding. That was all, but it was enough. It was, indeed. abominably too much! To have an understanding, a continued understanding, with a man about which your husband knew nothing! The count, however, contrived to throw about it an amazing glamour of naturalness. His manner to Tom caused Persis alternately to shrink from his duplicity and to admire his command of the situation. And Tom went on reading his letters and Baedeker.

At first Persis told herself that to mention the matter was to make too much of it; later she came to feel there was quite too much of the matter to make it mentionable. She had tacitly accepted the roses by the mere fact of not rejecting them; she had also tacitly accepted the count's smiles by the mere fact of not rejecting those. Tom would wonder why; he might even resent it.

Well, Persis resented the presence of the big B, which prevented him from seeing what she had certainly taken no particular pains to hide. She carefully cultivated this resentment she had to; it was her only justificationuntil with this simple and slender implement of wrath she had accomplished marvels. Not only did it enable her to go on accepting the roses, but it eventually permitted her to return smile for smile as she exchanged how for how, while Tom was unfolding his everlasting paper.

And here is the curious point: to have accepted smilingly the count's bows, smiles and roses would have been as nothing, the mere commonplace of polite intercourse, if Tom had been a party to the transaction; the whole quality of the adventure lay in Tom's ignorance, his willful ignorance, thought Persis severely.

The count was the great man of San Carlo, she had discovered. The last of his ruined family, he retained the

almost feudal prestige of a time when the little village had been an appanage of the Lantescane lordship. His acquaintance with them, distant though it was, gave them increased importance with the people of the hotel. And he was more than discreet. If he looked at Persia he talked with Tom - when he talked at all only now and then addressing a few phrases to Persis; but those few phrases were spoken in another tone of voice and with another manner. which subtly conveyed that the rest had been but chatter and it was these few words with her that counted. It was impossible not to watch for that fittle change of voice.

Altogether and in spite of a guilty conscience, or perhaps because of it. Persis was enjoying herself. enjoying herself almost indecently. She grew prettier and younger every day. Tomsaid theclimate agreed with her, and Persis had hopes that he would propose staying on longer therefore; but he did not, and she herself could think of no tolerable reason to produce looking to a change in the sacred schedule by which her hushand inexerably moved. They had laid out the route beforehand; it was the only way, Tom said, to get the whole out of anything-just make up your mind and stick to it.

So Persis saw, with an unprotesting sigh, the approaching end of her little idyl on that day when Tom reminded her it was time to pack her trunks. Of course she had expected it to end; and they had certainly exhausted San Carlo. It was impossible to explain to Tom that she would like to stay and hear a man's eyes tell her daily that she was more charming every day, especially when she was not the very least in the world in love with said man-not the very least in the world! Though why it would have been any easier to tell Tom if she had been is no plainer to me than it was to Persis herself, except that she may rightly have felt it would have been more respectable. She packed the trunks, only leaving out her very prettiest dinner dress, which she presently donned for their last dinner.

"I shall mise my roses," she thought with a sigh, as she

fastened one for the last time on her gown.

She was all in white, having indeed made a quite unwarranted toilet for the occasion; but she would have been shocked to death if told that she was dressing for any man except her husband.

What she told herself was, she was dressing for the weather, which was certainly very warm-even Tom had remarked it; perhaps she was not to blame for not being able to distinguish it from the count's eyes, which were also warm. Warmest of all were her own cheeks when she joined her husband in the dining room.

"Aren't you unusually gorgeous to-night?" he commented gayly; and she murmured that the dress was cool.

The count's eyes at once told her she had not dressed in vain. No one ever does dress in vain for a foreigner. Had he had the opportunity he would have told her in conventional terms that her gown became her, taking as much conscientious pairs to do so as an American would have taken to appear oblivious. As it was, his eyes told her respectfully-and it became more becoming on the spot. Decidedly she was going to miss those roses!

She had already begun to do so the next morning when she came down ready for departure. The count was there. She saw him give one quick inquiring glance from her bat and veil to the baggage, and then saunter slowly up to the desk, where Tom was paying the bill and leaving a forwarding address for Junet Seabury. The count said a few words to Tom; and then, when Tom went out to see the beggage stowed in the motor car, she saw the count stoop and copy something from the hotel register.

Persis pulled down her veil and decided to pass down the hall without stopping; but the count, but in hand, was waiting deliberately to salute ber, and before she knew it she was standing before him, with her veil thrown buck. For a moment she looked straight into those sumber wells of light that were the count's eyes. The next she was giving him her hand and saying under her breath;

"I shall miss the roses.

The count, who had bent in European fashion to kiss her gloved fingers, straightened himself and hoked back into her eyes. "Chi at?" he said with an enigmatic smile,

"Perhaps not. Chi ea?" he repeated before he released her hand and turned, smiling, as Tom drew near.

"All ready, Persis!" announced Tom.

The two men exchanged a handshake, and the count's good wishes and the count followed them to the door. where the entire population of San Carlo apparently had gathered, nominally to wish them a "buon riaggio!"-in reality to reap an impatiently expected harvest. While Tom was engaged in scattering this, Persis from the depthof the car looked up once more to the top of the steps. where the count was standing bareheaded, but no longer smiling. He was still there when the car bore them away.

"Really, he's a very decent chap," Tom declared. "! gave him my card-told him if he ever came over to look us up." Here he extracted a Baedeker from his pocket. "I hope our rooms will be all right in Genou; had to vire for them ahead." Receiving no response from Persis he subsided into what is known to good tourists as the Book

There was nothing the matter with their rooms at Genta, and no regrets kept Persis from healthy aleep that night; only the next morning the image in her glass did not flatter her quite so much, and she was aware of a certain flatness about the going down to a hotel breakfast, as of already tasted food. One hotel breakfast is exactly like another

It was not until she was fairly in sight of the table reserved for them by a beckoning waiter that she regained her animation and color with a rush. There on the table was a flaming torch of roses-red roses-Lantescane roses; and when Persis raised half-frightened eyes she knew fatally what they must encounter before they actually met Count Lantescane's smiling at her across the room. He must have seen her come in and he bowed with a perfecself-possession; but Persis turned suddenly from hot to cold.

After all she was from New England, and this - nobody would call it at all nice! She resolved to speak to Tom a once, and the only reason she did not was that he caught sight of the count as he entered the room and stopped to shake hands with him cordially before he came over to her. After that, to say anything seemed abourd. She remembered, too, and for the first time gladly, that they were sailing at noon; the count would certainly not follow them

"Quite funny—meeting the count again!" vouchsafel Tom genially. "Came up on the midnight train, he says. to look at a little rigad he has up here; but it's odd we struck the same botel,"

And Persis answered wealdy:

"Oh, I dare say every one comes here,"

"Baedeker gives it a star," said Tom in explanation He made no observation concerning the red roses, probably being convinced by now that they formed an integral part of an Italian breakfast, and Persis hurried through her coffee and did not encourage conversation. As soon as possible she went off to put on her hat.

But she was not to escape the count; the two men were talking together when she presently returned.

"And you are sailing, then, at noon?" she heard the count ask, and Tom's reply, with an ill-feigned attempt to conceal his joy:

"At noon, by the Savoia."

Then they caught sight of her, and two hats automatically removed themselves while the count's beels as auto-matically clicked together. "It is a fortunate destiny that

enables me to salute you once more, eigeora," be said, with his gentle and melancholy gravity of tone, "and to wish you farewell." His eyes said all the rest. They said it so well that against her every resolution Perso once more held out her hand to be kissed.

"That is the last of that nonsense!" she told herself severely behind bet veil on the way down in the boat.

And while Tom went to look after table stewards and deck stewards she hunted up the room stareard and went to her cabin prudently to forestall the future. On its threshold a whiff of fragrance met her and she stopped appalled. There on the stand was a superb mass of the Labbescame roses,

"Who brought these." she asked the steward.

"A signor Haliane: doubtless a friend of madame."

OUR CONTINENTAL POLICY

POSTO, DO PAGE THEORYGON, AND THEN GO

A First of American Warthips

By Melville Davisson Post

HE situation in Mexico brings the Monroe Doctrine forward out of the region of academic speculation. We have had

such discussion of the Doctrine and its application to the arious courses the United States was advised to follow store our decisive step at Vera Cruz; but the air has not sen cleared. Confusion, for the most part, results from sture to recognize the precise limitations of this policy—differentiate what President Monroe defined it to be from a vague notion of a continental protectorate so insistently the public mind.

There can be no greater hardship than to live under definite laws. The greatest safeguard of the citizen is let the laws shall be so certainly defined that no question in arise about their meaning. There is a like peril when ational policies are not certain. If we are to consider the cm Monroe Doctrine to be synonymous with the terms ational Honor and General Welfare, or the like, then it simply out of the question to undertake to say how any slicy may affect it. These latter are terms that change ith education, ideals and public sentiment. No man can be what our conception of national honor or public welfare ay be; therefore no man can say what acts of foreign itions may be taken to contravene these vague ideals.

If however, we define the Monroe Dectrine to mean that a land on this continent shall be considered as subject to reign colonization, and that no foreign nation is to be smitted to impose its system on any American state at is to say, no land of any American state shall be taken any European Power, and every American state shall permitted to work out its own governmental policy, dependent of European Intervention—then we have tablished a measure we may apply accurately to any oposed national act.

The Army of the Allies at Peking

ME United States was urged in the beginning to regard Mexico as in a condition similar to that of China during a Boxer Rebellion—a country in a condition of internal acc, with no responsible government, and with the lives of property of foreigners at the mercy of flying squadrons bandits. The President was advised to call a conference the Powers of Europe and march on the city of Mexico we marched on Peking.

It was pointed out that this armed intervention in him was accomplished as a concerted action and without by grave clash between the different authorities. In the arch on Peking there were Japanese, Russians, British, insticans, Germans and French. This force was, without ifficulty, put under the general command of the highest reign officer in China, who at that time happened to be ield Marshal Count von Waldersee.

The legations besieged in Peking were relieved; order as restored and maintained until China was able to guarattee the general safety; and then the troops were withrawn. China was impressed by the fact that the nations the earth were determined to put down anarchy wherever might appear, and to insist on some form of orderly overnment everywhere in the world.

In the beginning certain authorities urged the United tates to take precisely this course with Mexico. There were

a to the subjects of all the great Powers in Mexico; their lives and property were in jeopardy. And it was pointed out that has not these nations should be as willing to care for their unofficial subjects as they would be for the personnel of official legations; and consequently the same duty devolved on them to restore order in Mexico as to restore it in China.

It was further indicated that if one nation abould act alone—for instance, the United States—all patriotic Mexicans might resent it; but they could not resent allied intervention.

If Mexico were a country unaffected by the Monroe Doctrine, or what it is imagined to be, this course might have been undertaken long ago; but the Monroe Doctrine was generally considered to stand in the way of such a plan. It is interesting to consider just how far this position is tenable.

Mr. Roosevelt said to Congress, in discussing the Monroe Doctrine:

"We do not guarantee any state against punishment if it misconducts itself, provided that punishment does not take the form of an acquisition of territory by any non-American power."

And, again, he said to the Fifty-ninth Congress:

"Moreover, we must make it evident that we do not intend to permit the Monroe Doctrine to be used by any nation on this continent as a shield to protect it from the consequences of its misdeeds against foreign nations. If a republic to the south of us commits a tort against a foreign nation, such as an outrage against a citizen of that nation, then the Monroe Doctrine does not force us to interfere to prevent punishment of the tort—save to see that the punishment does not assume the form of territorial occupation in any shape."

And Mr. Olney said, during the Venezuelan controversy: "It [the Monroe Doctrine] does not relieve any American state from its obligations as fixed by international law, or prevent any European Power directly interested from enforcing such obligations and from inflicting a merited punishment for the breach of them."

Mr. Roosevelt was clearly of the opinion that Southern states could not use our policy to protect them from European Powers if they flagrantly outraged the rights of any foreign nation. It therefore happened that he did not consider the Monroe Doctrine to be involved when the ports of Venezuela were bombarded by German, English and Italian warships.

He took the position that if any Southern states refused to follow the usual customs of civilization, in their foreign relations, they must suffer for that defiance; and that, so long as territory of the state was not actually taken, our policy was not involved, no matter how severely the offending American state was punished for its misdeeds.

It is therefore certain that, so far as the Monroe Doctrine is concerned. European nations have the right to punish Southern states for gross violation of the ordinary humane customs of civilization, and they have the right to protect their citizens and their property. The main point is that European nations shall not occupy the territory of those states. We seem to have made a distinction: their ports

may be bombarded, but marines ought not to be landed—the idea being that the Monroe Doctrine would not be violated by the land-

ing of troops in Southern states, but that European nations, having once occupied territory of an American state for a rightful purpose, might remain for a wrongful purpose, And to continue to occupy territory would be a violation of the Monroe Doctrine.

Some years ago European nations were about to seize the custombouse of the Dominican Republic. The United States undertook to act for them and took charge of the custombouse of that government, on the theory that if Santo Domingo were once occupied by European Powers it might continue to be occupied by them. A permanent occupation of the territory of any Southern state would be a violation of the Monroe Doctrine and would call for our interference.

The landing of European troops on the soil of a Southern state is not regarded by us as a violation of the Doctrine, but as a thing that may lead to a violation of it. It is not the act that contravenes our policy, but the probable result that may contravene it.

Intervention Under American Leadership

IT SEEMS, therefore, clear that if foreign powers, independent of the United States, were to undertake to make a concerted march into the interior of a South American state, we might be forced to protest against it on the precedent of Santo Domingo—that is to say, on account of the fear that the Monroe Doctrine might be involved by the refusal of some one of the Powers to withdraw its troops. If the United States, however, were assured that these forces would be withdrawn and that no permanent occupation of the territory of the Southern state could result, then the Monroe Doctrine would not be drawn into the question. It would be no more involved than it was involved by the bombardment of Venezuela.

How could the United States be certain that the Powers would withdraw their troops? It would seem that if the United States should lead in any required intervention, and the whole expedition should be under the leadership of a superior American officer, as the Chinese expedition was under the leadership of Field Marshal Count von Waldersee, the difficulty would be removed.

It appears practically certain that the Powers could make no valid objection to a plan of this character if they should ever find it necessary to enter a Southern state. Small forces of Great Britain, France, Germany, and of other nations, associated with a larger American force and under unquestioned American leadership, might make such a joint intervention without infringing the Monroe Doctrine.

If it does not violate the Monroe Doctrine for European powers to protect their rights by bombarding Southern ports from warships, it is difficult to see how the policy is violated when foreign nations protect their rights by landing troops, if it is certain that the troops are to be removed after the wrongs have been corrected. If a concerted action by warships, in which we do not join and over which we have no control, is no violation of the Doctrine, how can it be a violation of it to have a concerted action of troops in which the United States takes the leading part?

Digifized by Google

If the whole expedition were under the command of an American general, as the whole Chinese expedition was under that of Field Marshal Count von Waldersee, it seems exceedingly unlikely that any portion of this command would be able to remain on Southern territory if the American officer commanding the expedition deemed it advisable to withdraw.

The current idea that Mr. Olney and Mr. Hay expanded the Monroe Doctrine to mean that the United States must alone settle all internal affairs of America, without interference by or suggestions from European Powers, is not sound. The Doctrine never meant anything like that. It meant precisely what Monroe said in his message. Mr. Olney's dictum that we are practically sovereign on this continent was gratuitous, as are the efforts of later secretaries of state to make the Doctrine vague and general. We are under no obligations to accept them.

There is no more reuson why the United States should accept these modern theories as definitions of the Monroe Doctrine than there is reason for our accepting those of Polk and Grant as properly illustrative of it. President Polk suggested that we ought to seize Yucatan, because, under the Monroe Doctrine, we were bound to take over any territory that a European Power might be tempted to annex; and that was the theory adopted by Grant when he wished to seize the eastern end of the Island of Santo Domingo. It was a novel and ingenious conception of the Monroe Doctrine, but not one likely to appeal to us; as though one should say to his neighbor: "A highwayman may take your purse; and therefore, to prevent that mis-

fortune, I shall take it myself." A piece of irresistible logic! There can be no doubt that a concert of the Powers to police all disorderly places of the world is an advance. It shows that the human race is beginning to move vaguely as a unit and to consider the welfare of all. That it may lead to universal peace, to a sort of federation of all peoples, is a hope not entirely of the fancy. Every concerted move, then, looking to the welfare of all is to be encouraged. The joint action of civilized nations carries more weight and incurs less antagonism than that of a single Power. It is the force of united national opinion. As a man is more influenced by the concerted act of his neighbors than by the act of one, so a nation must be more impressed by the joint act of all the great Powers about her.

The Nation Not Bound by Heresies

IF THE United States should be of the opinion, then, that it would be wise for all the Powers interested to intervene at any time in Southern affairs, for the purpose of establishing order and protecting the lives and property of foreigners, it can be done under the dominating leadership of this country without affecting the Monroe Doctrine.

The fact cannot be overlooked, however, that this policy is not accurately understood by the people. Unfortunately the conception of it is uncertain. The general impression is that we have forbidden any armed European foot to touch, under any pretext, the soil of a South Amerlean state. This is a feelish, dangerous and profoundly erroneous idea. That is not the Monroe Doctrine-it is a hereny superimposed on it; but it is widely believed and is the current opinion of the average ritizen.

Therefore it must be recognized that if, in the beginning, the Administration had undertaken to negotiate joint inter-

vention of all the Powers in Mexico it would have been subjected to the gravest criticism. Those opposed would have marshaled a vast patriotic sentiment. A popular appeal would have been made to patriotic motives. The Administration would have been charged with the abandonment of American ideals and a surrender to European domination.

All this criticism might have had no base in reality, but it. may very well be doubted whether any Administration would dare to undertake the experiment of stemming such a current of misunderstanding. It might be that a great executive, sufficiently in the confidence of the whole people,

would have been able to go forward with it, and so to clearly define the limitations of the Monroe Doctrine that the people would have been able to see that no national policy of this country would be violated by such a course.

Looking at the situation from all quarters, however, one must admit that the undertaking would have been extremely doubtful. Old wars, especially with Great Britain, have left their heritage of bitterness. Emigrants from oppressed countries have brought with them their sentiment against the dominion of monarchies. Any policy that would seem to conciliate or invite a joint action of European nations on this continent would inflame this sentiment.

This sentiment is anachronistic and a pressure against federation of the human race, but it exists and must be reckoned with. Even the great peace movement that Count Mouravieff inaugurated on the twenty-fourth of August, 1898, at the direction of the Emperor of Russia, has, from time to time in this country, been opposed by this sentiment. The pressure of it was so great that the representatives of the United States declined to sign the twenty-seventh article of the Convention for the Pacific Settlement of International Disputes, except with the reservation that nothing therein contained should be conatrued to imply a relinquishment by the United States of America of our traditional attitude toward purely American questions-thereby excluding the United States from the obligation of submitting any American question concerning this continent to The Hague Court.

If the Chinese and Japanese had excluded any Asiatic question, and European Powers any Continental question, international questions to be settled by arbitration would have been difficult to find.

However, if any Administration were powerful enough to substitute in the public mind the actual Monroe Doctrine for the current Monroe hereay, the joint intervention of all Powers, when such a course might become necessary in South American affairs, could be had without violation of any American ideal.

We have seen that the United States could hardly permit foreign Powers to intervene in Southern states exclusive of ourselves-not because the Monroe Doctrine would be thereby violated, but because it might be violated by the refusal of some one of the Powers to withdraw its forces after the necessity for them has passed. And we have seen that the United States, dominating a concerted movement of the Powers, could intervene in Southern states without violating the Monroe Doctrine, but at the peril of rousing a great sentiment that might destroy the Administration which undertook it.

A measure to avoid the pressure of this false sentiment lies in the plan of settling disputes on this continent through the mediation of American governments only, and the recent efforts along that line are a decided advance. Such stable governments as Argentina, Brazil and Chile could very well join with the United States in maintaining order where it is necessary, and to protect the lives and property of foreigners. Such a cooperation of American Powers with the United States could, of course, in no way affect the Menroe Dectrine or any American tradition. It is probable, also, that it would provoke less resentment on the part of the American state so entered than if the invasion were by European troops.

It is by no means a mere fancy that we shall be able in time to effect a confederation of Southern states, which,

with the cooperation of the United States, shall underside to settle all American disputes without the interventing any European Power. This would be an ideal solution of the difficulties on this hemisphere. A good deal has bedone toward such cooperation, and it may be accomplish-It is an end well worth every reasonable effort.

It must be admitted, however, that to make such miseration permanently effective we must get rid of the imment against us in the South; we must get rid of the bear of a protectorate and the unsolicited elaboration dis-Monroe Doctrine gratuitously made by some if or officials the idea that we sit as a sort of overlori, at that all Southern states must maintain the kind of goverment we think is suited to them, or the sort of grylling we deem advisable. We should have to make it our that we take the Monroe Doctrine to mean precisely wir.

It is proper to remember that, if the United States sen to effect a permanent working cooperation with the Sea. American governments for the purpose of settling digital on this continent, the Monroe Doctrine would in to use be violated; but the modern acceptance of it, nor attributed to Olney and Hay, that there is an obligation. the United States to settle the internal affairs of Annua. heraelf, without interference and suggestions from a other Power, is heresy. It never was the Monroe Ductor and it cannot be taken to be the Monroe Doctrine to-la. except by the use of that elastic construction for which is courts are famous.

The Egotism of Mr. Seward

THIS brings us to the inquiry as to whether the limit States is, in fact, under any obligation to take any active course toward a Southern government usless our sales. honor is involved or our citizens are in peril. The letter notion that because the United States decline to percha European Power to colonize any part of America w what troops for the purpose of oppressing any South America state, or impose its system on it, we are therely use obligation to police Southern countries, is error.

By the maintenance of the Monroe Doctrine this must does not undertake to establish order in any South Aurlean country, or to collect the debts of any foreign Free. or to force any Administration to meet its obligation

Our traditions do not obligate us to send an involve army into any South American state unless on or national honor demands it. We have not undersite a Mr. Roosevelt has pointed out, to protect any Section state from the result of its wrongdoing. We undertake protect it only from foreign colonization and from her forced to adopt a form of government suggested or input on it by a European Power.

Thus we stood calruly aside and allowed England for many and Italy to bombard the ports of Venezuiz wi before that, in 1861, outrages on foreigners beam to flagrant in Mexico that they led to a treaty of joint like vention. Great Britain, Spain and France felt it seems to intervene. Later Great Britain and Spain within their troops; but Louis Napoleon remained. Attent the United States pressed France to withdraw to top which was finally done.

It seems strange that Mr. Seward, in presenting request of the United States, made no mention of the

THE FAKERS By Samuel G. Blythe

TICKS remained in Mrs. Lake's boarding house, but he expanded a hit. He took a larger room on the second floor, and fitted this up as he thought a room should look. He had a banjo on the wall, though he couldn't play a note on it. He had a guitar standng in a corner, and so far as he was concerned it might as well have been in sergambia for all the music he could nake on it. He had Indian clubs over he mantel, and couldn't swing them to ave his life. A pair of foils hung under a sicture of No Cross No Crown that went with the room, and Tommie didn't know which end he would grasp if he had to use

He had picked up a snowshoe and it ms displayed conspicuously near the door, and he had no idea whether snowshoers sed one or two shoes in their progress.

A pair of Harvard pennants had the duce of honor opposite the entrance. ticks always considered himself a sort of Harvard man, for he would have been me if his father had not died, and he poke of "Dear old Harvard" whenever is was sure no one was present who had sen to Cambridge. Once, while looking n the window of a pawnbroker's shop, he ud been sorely tempted to go in and buy a lresk-letter fraternity pin displayed there, at he refrained. He knew he might one ay run across a member of the fraternity stitled to wear that pin, and he felt he ran't quite up to negotiating a grip and ussword and all that.

One day, while browsing in a secondand store, he came across a framed photoraph of President McKinley, which was igned "Yours truly, William McKinley, cly 16, 1897." It was one of the hunrade of such photographs signed by every resident, and it had fallen into the hands the junkman. Hicks bought it, had it sframed and hung it in his room. He toke of the picture frequently and told ow President McKinley gave it to him. then he visited him at the White House. An old friend of mine from boyhood up," e would say, as if he were on the closest erms of intimacy with the president. agraphs to his collection, but put up

one but pictures of prominent men. As oon as a picture was bung, the pictured one became the

mg-time friend of T. Marmaduke Hicks, He was popular in the boarding house. In addition to sing good looking and lively he had an emphatic way of peaking, using many gentures to make his point, which almost every instance concerned himself, and never esitating to exaggerate to make himself heroic. He was kilful at this, and usually managed to have an element f truth in what he said in case any one disputed him too arshly. He was an adroit flatterer and paid particular ttention to the ladies, talking to them and fussing over ben; and they to the last one pronounced him a most harming young man and sang his praises wherever they ent. He would let an old lady bore him for an hour with quavering story of her troubles and pains and aches, if he bought she would say a good word about him sometime. and she always did. When he was talking, and saw an spression on the face of one of his listeners that betokened oubt or even incredulity, he immediately shaped his conersation to convince that doubter and directed the force (his argument or narrative to him.

It was customary at Mrs. Lake's for the boarders to ather round the piano at night for a little close harmony. licks had a voice with two or three good notes in it, but e could not carry a tune or sing anything alone. He knew ext when these notes would carry, and he used them every me he had a chance. He never knew the words of a song, ut faked them, humming along until he could throw in ne of his good notes. When he was asked to sing a solo he vighed and protested he couldn't think of it. Modesty

The custom of dressing for dinner on Friday nights he rupulously observed, and, discarding his ready-to-wear inner jacket, he had secured a full-dress regalia and wore with much effectiveness. He was tall and of good figre, and attracted attention at any outside functions he ttended. These were not many, for Hicks did not seek

"Jau-ru-en-tem!" Whispered Hicke, "Thut's the Must Isunning Woman I Ever Jun"

much after society. He was busy studying politics and law, besides doing his work for Paxton. He had been to a White House reception or two and went occasionally to the theater, taking, in regular succession, the various unattached ladies who lived with Mrs. Lake

One Tuesday night, after all the regular guests were seated in the dining room and Hicks had begun to explain learnedly to his table companions what was the exact political significance of a measure pending in the Senate, Mrs. Marnie, a business woman who was one of the regular boarders, interrupted him with a long-drawn: "Ob-h-h!" Tommie looked at her. She was staring at a man and a woman who stood in the doorway. Tommie turned and stared also, as did everybody in the room. The soup was

The woman entered, followed by the man. They walked down the center of the room, apparently unconscious of the presence of any persons there save themselves.

"Gee!" said Hicks half aloud. "A corker!" The woman was tall and dark. She wore with much effectiveness a black spangled gown cut in a low "V" both front and back. The trail was long, and the spangles, which shimmered softly in the shaded light of the dining room, were so closely set together that they gave out a little soothing, rustling sound as she moved. Her arms were bare and white and round. Her gown was molded so closely to her figure that every curve was accentuated, and she carried herself with grace, advancing with a glide rather than a walk. Her neck and shoulders were creamy white, her black eyes flashed brilliantly, and she exhaled a slight perfume that seemed to be the combined odors of many flowers. Her purplish-black hair was arranged in an elaborate coiffure which held a rhinestone ornament that glistened and sparkled. She wore no color of any kind save one red rose at her waist, a little on her cheeks and plenty on her lips, which were vividly crimson and contrusted sharply with the healthy pallor of her cheeks.

"Jee-ru-sa-lem!" whispered Hicks to Mrs. Marnie. "That's the most stunning woman I ever saw."

"Sh-h-h!" Mrs. Marnie whispered back. "Don't talk-look."

The man was big and blond. He wore evening clothes correct to the smallest detail. When they reached their table, which evidently Mrs. Lake had allotted to them previously, he pulled back the chair for her with elaborate courtesy, bowed to her after she was seated and helped her arrange her draperies.

"Merci!" she said to him prettily, look-

ing up and smiling.

Lucky dog!" thought Tommie.

The man bowed to Mrs. Lake, made another bow that included the rest of the room, sat down and began a conversation in French with the woman. He talked in a low voice, but all those in the room heard him, for no other person said a word and all were staring. The woman replied vivaciously in the same language, using her hands in pretty gestures and shrug-ging her hare shoulders expressively and frequently. Apparently the man's conversation was interesting, for she punctoated what he said with frequent tinkling laughs and often turned to him in smiling enjoyment of some particularly entertain-

ing remark.
"They've just come back from abroad," Mrs. Marnle whispered to Hicks, for Mrs. Marnie went to Paris frequently in the course of her business and knew French. "They are talking about some of the places they have been to and the big people they have visited. He has been recalling a time when they were at a villa at Denuville staying with some French fashionables, and they've said some things about

being in Russia too."

"Not Americana, then?" saked Tommie. "Oh, yes, I guess they are," Mrs. Maroie replied, "but they have been abroad for a long time."

The man and the woman paid no attention to the others in the room, although it was apparent that the woman was acting a little to make an impression, and she was successful. Some of Mrs. Lake's dinner was uneaten that night. The waltresses came and went, removing halfconsumed food, for the other women in

the room were too engrossed in awaying the newcomer and commenting on her among themselves to have much time left for eating.

"Looks like a regular Frenchwoman to me," said

You never can tell," the wise Mrs. Marnle replied; "but that's a French rig she has on, you may be sure of that."

After they had finished their meal the man rose, helped the woman with her chair, waited deferentially until she had preceded him, and, bowing again to those in the room, followed her as she swept out, her spangles rustling in cadence to her graceful movements.

As soon as they had passed through the door the room huzzed with comment. "Who are they?" chorused the boarders at Mrs. Lake.

"Mr. and Mrs. Hugo de Mountfort Lester," Mrs. Lake replied. "They are here for a short stay and are foreigners, I think, for they talk mostly in French."

The boarders gathered in the big hall round the fireplace and discussed the Lesters. The women took acute stock of her costume, her figure, her hair, her general appearance, her reddened lips, her gestures and her shrugs; the men contented themselves with the general statement that Mrs. Lester certainly was a peach. The Lesters did not come down again, and at ten o'clock Hicks went up to his room. He repeated the name over many times-"Hugo de Mountfort Lester."

"By George!" he said as he turned out his light; "I'd like to know that woman. She's a corker-a regular

stunner. I wonder who they are."

Hicks dallied over his breakfast, hoping the Lesters would come down, but they did not. Mrs. Lake explained, after he had made a casual inquiry about the new guests, that they had arranged to take their breakfasts in their room, saying they had lived in France so long that they preferred the continental meal of coffee and rolls. They were discussed again at the tables. The women generally concluded that Mrs. Lester was French, although one or two thought she must be a Russian, as she had used a few phrases of that language, or of what they took to be that language, the night. before. Theman undenlably was an Englishman.

All were agreed upon that.

Tommie usually ate his luncheon at the Capitol, but he made an excuse to Madden about some papers left in his room, and came to the boarding house in the hope of having another look at Mrs. Lester. As he turned in at the house Mrs. Lester came out on the porch. She was dressed in a blue tailored suit which displayed the numerous perfections of her figure to the best possible advantage. She were a chic little French hat and she was altogether the best-dressed and most charming woman Hicks had ever seen. She had a big, squat, ugly bulldog on a leash tugging along ahead of her, and she was saying pretty, endearing things to him in French, calling him her baby and her darling. and otherwise lavishing affection on him that was not appreciated, for the dog tried valiantly to get away from his mistress to proceed on adventures of his own up the street.

Mrs. Lester's eyes sparkled, her cheeks showed just a touch of red, her manner was vivacious and her one-sided conversation with the bulldog animated. Tommie racked his brain for something in French to say to her. All he could think of was à la curie, and he knew that wouldn't do. Mrs. Lester apparently did not look at him. She leaned gracefully back against the tugging of the dog on the leash, a fascinating

picture.

Just as she started down the short flight of steps leading from the porch to the ground

Tommie had a thought, "Bongjoor," he said, lifting his hat.

She turned her head and smiled a bright little smile. "Good morning," in musical English she saluted cheerily and ran along with the dog. Tommie was quite pleased with himself. He didn't know exactly what his borgjoor meant, but he thought it had answered the purpose. That night he sought an opportunity to talk to the Lesters, but they went immediately to their

room after dinner and next day they left. Mrs. Lake said they had been called out of town. The picture of Mrs. Lenter and her dog remained long with Tommle. He often thought about her and wondered if he ever would see her again. So far as the boarding house was concerned the Lesters vanished completely. They did not tell the landlady where they were going, and presently everybody forgot them-everybody but T. Marmaduke Hicks.

THE Spanish war came with its exciting days. Hicks was kept at the Capitol with Senator Paxton almost continuously. He thought of enlisting in order to gain a war record to aid in his future political adventures, but was deterred by stories of long waits for ambitious and embryo heroes at camps where the principal fighting seemed to be with typhoid fever, and by the assurances of Senator Paxton that the war wouldn't last long enough to enable anybody to get any glory out of it. Besides, Tommie was intrinsically no hero. His conception of the situation was that he could be of greater service to his country-and himself—by confining his fighting to the bloodless arena of polities rather than by going to the jungles of Cuba for that futile purpose,

Peace was concluded. The Cuban and the Philippine problems obtraded, and then came the morning when Senator Paxton made his rescue of the child on the avenue. A few days after Hicks' presentation of the episode through the columns of the Evening Dispatch, Paxton called

Madden into his office.

Madden was on the most confidential terms with Paxton. He had been with him for fifteen years, and had come to be the senator's political executive as well as his intimate adviser. Paxton had given him every test for loyalty, and Madden never failed to prove true blue. His principal interest in life was to be of service to Paxton, and his chief ambition to do as Paxton would have it done each task Paston put upon him. He had much of political shrewdness and, though he lacked initiative, once instructed, he was a marvel at performance.

"Bert," said the senator, "have you sounded out young Hicks lately?"

"What do you mean?"

"Have you had any conversations with him about his future? What has he in mind?"

"I think he intends to pick out some place in our state or another, take up the practice of law and go into politics." "Has he selected a city?"

"Not yet, so far as I know. He is saving his money and plugging at the law, but I suppose he wants to stay here for a while yet."

"Oh, I don't want to get rid of him. He interests me and he's useful too. It isn't often that an old, track-sore, tired politician like myself finds both amusement and aid in an assistant-not thinking of you, Madden, not at all: I like him."

"So do I," said Madden. "And, take my word for it, he'll glad-hand and talk himself into something good one

"That's my idea. He's fresh, of course, and a bit blatant, but potentially he's the ideal fake friend-of-thepeople politician. He's smart and adaptable—I might say ductile-and I never knew a young man who so continuously kept his eye on the main chance."

"Nor I. What he wants is to get along, and he'll get along too if he has half a show. He's the brightest kid we've had in this place since I've been here, and he does his work well. And when it comes to getting publicity the climbing mother of a fashionable débutante is a mere amateur compared with Hicks. He took part in a most court the other night, and you'd think, to see the accounts of it, it was the president himself instead of Hicks who was there!

"I have observed that phase of his activities, and I've half a mind to trust an experiment with him.

"What sort of an experiment?" asked Madden, wondering what whimsical idea his chief was harboring.

"The experiment of proving that a man of his poculiar abilities can make a great success in politics by following a certain course of action in a certain way. It has been proved aften enough, but not scientifically, Bert, not scientifically. Hundreds of men have done what I have in mind for him to do, but their actions and the results therefrom have been sort of haphanard except in a few instances. They just happened on the scheme that gave them success.

What I want is to prove my theory that the greatest popular success of a certain kind in politics can be attained by entirely superficial methods. Do you follow me?"

Not exactly."

"Well, take a look round the Senate. There's Jaxon, who is nothing but a noise which is always noisiest when the dear people are concerned. And Bogardus, as arrant a demagogue as ever came to this capital, and he is returned times without number because he is continually blatting about what he is doing for the general uplift. Watch McPhyle for a little. Totally without ability except for stringing words together, he has talked himself to the top by the simple expedient of proclaiming himself the only honest man. What do you think of Somerset, who is tied up with a dozen emporations, and who gets away with it by constantly braying his antagonism to all trusts not specifically on his list of retainers? And Austrutter, who

secures his by his reputation of rugged, sterling honesty and his assumption of the plain-an-aold-shoe pose, when he is luxurious as a sybaric and crooked as a dog's hindleg?

"There are dozens, scores, hundreds more of them in politics-four-flushers, trimmers, hypocrites, humbugs-playing both ends against the middle; posing as religious and pious, when a reality they are foul and vicious; howling for restriction of the liquor traffic because restriction is indorsed by the good people at home and doing their best to restrict it here inc elsewhere by drinking all they can buy or m: get others to buy for them; espousing emp measure favored by church people, yet living up to none of them in their daily walk and coversation; grafters, who yammer of their purity and pester to death for money some of us who are not so virtuous and are willing to sell the votes for it; men who roar from every storie about their labors for the people and tur behind the closed doors of every committee room and their own offices for their share of the graft; men who are so cheap they can be bought by special favors and by a few filthy dollars: men who haven't an honest conviction on any subject and who are willing to resort to almor. any expedient to hold themselves in office; But why go on?"

"What have these to do with Hicks?" asked

Madden as the senator paused.

"This: There are certain processes by which these men retain themselves in politics. Most of them are crude workers. They all begin with about the same raw materials Hicks has, and have developed them each along his own lines Each has his good points as a political fake and each has his weaknesses. Now here is what I have in mind: Why not, knowing these met and many others like them as we do-why not make a scientific, exact compilation of all ther excellences as fakers, discarding their west points, and then combine all those good points in the practices and purposes of one man?" 'Do you mean in Hicks?"

"Hicks is exactly the person I do mean. He is the biggest potential political faker I ever

saw. He has it in him. He can get about anything he wants if he will play the game as I shall outline it to him."

"I am afraid I don't understand."

"Well, let me make it specific: Suppose I say to He'o that I'm interested in him and will finance him to a reasonable extent and send him out to some good town, to live there and practice law. Suppose I get some fun out of it by coaching him, and as the result of my coaching-reyours, Madden, for you know this game-and his natural abilities, we make a foray into politics, Hicks to get the rewards and Paxton to have the fun. Don't you think w could put something over?"

"It might be done," answered the conservative Madden "Might?" exclaimed Paxton. "Where's your imagine tion, Madden. Might? Why, man, it's being done every day of every year by men who are working by impulse instead of being scientifically directed and managed. Mr. are getting to Washington who are mere clumsy amateur at this friend-of-the-people game. With Hicks properly located and properly instructed, there would inevitable result a triumph of political fakery that would amaze ever us, accustomed as we are to the outcome of such propganda. I tell you, Madden, we can erect, direct, own and operate a first-class tribune of the 'pee-pul'."

"By George!" said Madden, "We could, and have a bay of fun out of it too. But what do you want Hicks to do!

"Nothing, nothing on God's green earth he wouldn't @ himself, with this difference: What he does he will accurately; those he does he will do scientifically, without lost motion or scattered effort and in full accord with the latest standards. He will have the expert instruction at William H. Paxton, who knows a few things about the great, bogus game of politics and is pretty thoroughly disgusted with it; more so, Madden, than you images "Oh, I don't know about that," said Madden. "I a

pretty well aware of that phase of it."

Well, then, why hesitate to give your approval to issocio-politico-Hicksico experiment? Come on, we organize a corporation and I'll be the board of directors and take my dividends in amusement. Hicks can be the promoter and reap his reward in promotion profits, and you can be the advisory committee and get the subsidiar/ Increment. What do you say?"

"All right!" Madden was enthusiastic-for him. "It has possibilities. But-" and his natural caution sttruded-"do you think Hicks will stay put?"

"Oh, I guess so, but even if he doesn't, that is one of the phases of the game. You must take a chance. I think !will, for he knows where his interests are better than and other young person of my acquaintance."

"Have you talked to Hicks?"

"Not yet, but send him in when he has some leisure." Madden went to the outer office. Hicks was filing letters. "Tommie," Madden said, "the senator wants to see you." "Do you want me, senator?" asked Hicks soon after-

"Yes. Sit down."

Hicks took a chair, wondering what the senator had in his mind. He hoped he was to get an increase in salary. He was fearful he was to be disciplined for the rescue incident.

The senator looked at his assistant secretary for half a minute. He noted the long hair, brushed back from the forehead; the flowing tie; the general air of a modified political make-up. Then he took an inventory of Hicks' face. He saw a broad, low forehead, a fair nose, a clean complexion. The lips were large and full and the lower one slightly pendulous. The chin was just a chin with no strong characteristic. Paxton dwelt longest on the eyes. They were small eyes, set close together, hard eyes with greenish glints in them. Hicks smiled. He had a pleasant smile, that lighted up his face and made him appear affable and good natured. But there was no smile in the eyes. With a better mouth the face would have been a fairly strong one, but with those eyes and that mouth it was the face of a youth willing to do whatever was necessary, and to consider necessary whatever there was to do.

"Tommie," Paxton asked finally, "what are your plans?" "Nothing new, senator. I am studying law nights and

trying to fit myself for practice."

Where?" "I haven't decided. I am considering several places."

"Probably you have an idea of entering politics also?"
"Why, yes, I have thought of that." Hicks wondered what the senator was leading to, for he knew Paxton never wked such questions to gratify a casual curiosity.

'Have you looked over Rextown?"

"Rextown? Why, Rextown isn't in our state!"

"I know, but it may be that opportunities exist elsewhere in this great republic than in our imperial commonwealth?"

"Possibly," Hicks replied, at a loss to understand the drift of the

conversation. "Probably," continued Paxton. "Now I happen to know some things about Rextown, and it seems to me an ideal place for a young and sapiring lawyer to make the scene of his operations."
"Is it?"

"Yes, it's just the place for you, particularly if you desire to go into polities, os you say you do and as I think you should do. Let mesuggest that you go to Rextown and join the Democratic party.

Hicks jumped from his chair. "Join the Democratic party!" be exclaimed. "Why, senator, I am a Republican, my father was a Republican and Felped organize the party, and you are a Republican. What do you mean?"

"I mean exactly what I say. Go to Rextown and join the Democratic party."

"But I am a Republican and so

are you," protested Hicks.
"I know: I know. I am too old to reform, but you are not. You are young and facing the future. I am elderly and principally concerned with trying to forget the past. I have been attracted by your good mind and general adaptability to your environment. I have thought a good deal about you. I suggest Rextown entirely in the capacity of an old and mayyou up on a mountain and shows you things below that you may obtain. You have ambitions. I have nothing better to do at the moment than to make a few suggestions in an entirely friendly manner that may help you to realize those ambitions. Do you know anything at all about Rextown?"

"Not much." "Well, it is a fine, thriving city of about forty-five thousand peopie, and so strongly Republican that no Democrat has been elected to anything there since the war."

"Then what's the use of being a Democrat?"

"I expected you to ask that. As I say, Rextown gives an overwhelming Republican majority and the outlying towns in Corliss County are practically unanimous for the Grand Old Party. The result is that every young man who goes there and all those who have grown up there are Republicans, either from conviction or for the sake of policy. This is especially true of the young men and the older ones who have office in mind. There's no sense in being a Democrat there, looking at it in the light of getting an immediate or a possible something out of politics for oneself, for a Democrat hasn't a chance. Of course I assume you think you would take a nomination in the fullness of time!"

Yes. "No doubt of it, not a doubt. However, there is a phuse of that situation that may not have occurred to you. In addition to yourself there will always be scores of other Republicans who think the same—who are, in their own minds at least, entitled to office. Now you can see what that means. There will be vast competition for the nominations, much work and worry, and, taking previous services and claims of natives and older men than you into consideration, it is likely to be a long time before you can make enough of an impression to get a chance. It will be years before it is your turn."

Hicks looked incredulous. "Why," he said, "I think

"I know you think you can, but you can't. Party service and party obligation go a long way in determining selection for the prizes of politics. Also consider the fierce competition from these hordes of other Republicans, all of them as eager for political increment as you will be. My way is surer than that."

"But you are a Republican," protested Hicks again. "I know I am, and I suppose I have no right to be advis-

ing a young man to desert my party. "I'm afraid I don't follow you," said the amazed Hicks.

"It's simple enough. Here is a city largely Republican and a county almost unanimously so. There are hardly any Democrats. Still there are enough to keep up a semblance of an organization and to nominate men for the principal offices. These men are named time after time, and time after time go down to defeat." "And you think I should join that party? What for?

can't win anything."

"That's where you make your mistake. Inasmuch as you already hold certain practical ideas about politics I am showing you the way to get results. Be a Democrat, I tell you. There are only a few of them. They will welcome a recruit, especially an alert young chap like you. It will be the easiest thing in the world, after you get some acquaintance, to secure any of those worthless nominations you may choose, to become a local Democratic leader, to be prominent in the party there and in the county."

"But what good will it do me?"

"None for a time probably. But, my son, sooner or later in every community like this there comes a turnover. Always there is a shift. The people become disgusted with the party in power. They get sore on the leaders. They rise, blindly, but effectively, and turn out those leaders and that party. That is where you would come in."

Hicks was leaning eagerly forward in his chair. 'Do you mean," he asked, "that if I join the Democrats

and stick it out I can win quicker that way than if I stand by the Republican party."

Exactly. The law of political averages proves it. It is as certain as sunrise. All you have to do is to hang on, take such nominations as you can get, and then, when the auspicious moment arrives, you can point to yourself as the patriotic person who has made all these sacrifices in the past, you can demand your reward when there is a reward in sight, and you can land topside up."

"Do you think so, senator? Do you really think so?"

T. Marmaduke Hicks was excitedly interested.

"I know it. It is politics. It is history. You can do it, provid-

Providing what?" "Providing you can bring yourself to abandon the principles of the Republican party, which you revere, the party your father helped organize, and become a

Democrat. Well -

"It's not so difficult," Paxton continued. "Haven't you often, as a result of your observations here, considered the step of joining the opposition in order to relieve the country of this saturnalia of profligate extravagance and criminal disregard of the fundamental rights of the people displayed by the plutocratic Republicans? Haven't you about made up your mind that, in basic principles of government, the Democrats have the more patriotic and the more logical foundation for their political beliefs and practices?

"Haven't you always considered Thomas Jefferson as one of the greatest of Americans?"

"Yes, to tell the truth, I have given the matter consideration from that angle," Hicks answered, without a flicker of a smile.

VIII

HICKS thought much over what the senator had said, and every bour of thought he gave to the proposition added to his eagerness to make a trial of the senator's theory. Backed by be, be felt he could not lose.

When the senator came into his office next day he stopped for a moment by Hicks' desk.

"Disciple of T. Jefferson, I salute you!" he said cheerily. Then, more seriously: "I am quite sure you have arrived at the very wise conclusion that a man is entitled to change his political principles when he is convinced of the greater patriotism, the greater statesmanship, the greater regard for the plain people shown by the other party. It would be mere blind partisanship, which is

PHILADELPHIA, JUNE 6, 1914

The People Want to Know

CONGRESS apprepriates thirty-five or forty million dollars a year for improvement of rivers and harburs. The bills are passed on the time-honored purk-barrel plan. That the expenditures involve huge waste of public funds, and that a considerable part of them is nothing better than graft in an especially obnexious form, is commonly believed.

If it were generally accepted that such misuse of money derived from the general public obtained in any other field say, in the railroad field Congress would immediately order an investigation. Congressman Frear proposes in a concurrent resolution that the House shall order a thorough investigation by the Interstate Commerce Commission of river and harbor expenditures. An investigation by a body independent of Congress would be better, but the Interstate Commerce Commission is acceptable.

We feel warranted in assuring Congress that the public would like to know approximately how much of the hundred and fifty millions or upward that has been spent on river and harbor improvement in the last five years has resulted in any tangible public benefit, approximately how much has been wasted, and about how much represents a form of political graft.

We say this without prejudice. A great part of the expenditure may have been quite justified by tangible public benefits resulting from it. The waste may be inconsiderable. But people generally believe that an important portion of the hundred and fifty millions or upward is just a tapping of the public till for the political benefit of individual Congressmen.

Surely that circumstance requires an authoritative investigation. Congress commands extensive resources for investigating. Let it employ them in this case at home.

The Independent Banks

WE WISH nobody would ever again repeat the foolish statement that country banks are dependent on Wall Street and subject to dictation by the financial institutions of that sinful center. The fact is, Wall Street banks are dependent on those in the country. Their relations to the country banks are precisely those of a wholesale merchant to his retail patrons. Many of them employ drums invite the trade of country banks. At every bankers' convention you see representatives of the city banks, hat in hand and wreathed in seductive smiles, wooing the favor of country banks.

Last full the berrowings of country banks were extraordinarily large. At the time of the August report those in the national system owed eighty million dollars - mostly to central reserve banks in New York, Chicago and St. Louis; but, at the same time, these country banks had on deposit with city banks-mainly in New York, Chicago and St. Louis-six hundred million dollars. In short, for every dollar the country bank owed the city bank, the latter owed the former seven dollars and a half.

Nor does borrowing from a city bank establish any dependent relationship. City bunks make their profit. by lending money. When a country bank borrows from

a city bank it owes the lender nothing but the money. If any institutions in the world are free from Wall Street domination and direction-as to which some statesmen in Washington evidently entertain grave doubts-the country banks are in that position.

Unlocked Directors

ONE section of the new antitrust bill provides: After two years no one may be a director of a railroad to which he or his firm, or a corporation in which he is a director, sells equipment or supplies. No banker or director or officer of a bank may be a director of a railroad whose securities the bank underwrites or sells as agent of the road; or if the bank purchases from the road issues or parts of issues of securities. No private banker or director of any state or national bank having more than two and a half million dollars capital and deposits shall be a director of any other national bank having more than two and a ball million dollars capital and deposits. No private banker shall be a director of a national bank in any city baving more than a hundred thousand inhabitants; nor shall any person be a director in two banks in such city, one of the two being a national bank, except in cases where the entire capital stock of a state bank is owned by stockholders of a national hank. No person shall be a director of any two or more corporations engaged in interstate commerce, and having more than a million dollars capital, when the businesses of the corporations are so nearly alike that an agreement between them to eliminate competition would be a violation of the Sherman Law.

Such is the substance of the proposed law to abolish interlocking directors. No doubt, if enacted, it will prove essentially harmless and futile; but the remarkable point is the limitation as to size that runs all through it.

What is the difference in principle between a man's acting as director of two banks with assets of two and a balf million dollars and of two banks with only one and a half million dollars' assets? Why should two industrial companies with a million dollars capital be forbidden to have a common director, but not two with only eight hundred thousand dollars capital? Do not the baneful effects of monopoly operate in places of less than a hundred thousand inhabitants as well as in places with a larger population?

This section of the bill dealing with interlocking directors. illustrates the old point that in antitrust legislation sin and nize are taken as synonymous.

Taxes That Bite

THE outstanding facts in the new British budget are the increased taxes on large incomes and large estates. The new inheritance tax, if it had been in force in this country, would have taken thirty million dellars from the estates of John Jacob Astor and E. H. Harriman.

In dealing with ewollen fortunes England bites, while we only growt. The present political complexion of both countries is much the same. In both the dominant political fact is a fight by little capital - more or less allied with the better-paid labor on big capital. We wage the war by attempting to upset the machinery through which big capital mostly operates and by which it is partly produced. England wages it by direct taxation. Their unearnedincrement and inheritance tuxes show a deliberate purpose to break up the big family fortune in land which dominated the country for centuries.

The heavy inheritance tax will reduce any other inactive large fortune to moderate proportions by the time it passes to the third heir. The English convern themselves hardly at all with the mechanism of business; but when the product reaches a certain size they appropriate a generous slice of it. The chief fault in our method is that upsetting the machinery of big capital throws little capital's works out of gear, while big capital is by no means restricted to the particular set of operations we attack. The chief fault with the English method is that it may involve a considerable destruction of capital.

For example, taking thirty million dollars from the Astor and Harriman fortunes, to be spent by the Empire State in public buildings that fall apart in the course of construction, or by the Federal Government in pork-barrel appropriations, involves a not loss to the country. On the other hand, the English method does get tangible results.

The Protected Defendant

THE indictment charged two defendants with murder by I "choking, strangling, and by beating and striking." The judge's instructions to the jury said that if the defendands arted in concert it would make no difference which "uctually struck the blow or choked or smothered" the victim. On appeal the higher court held this to be a fatul error, entitling the convicted murderer to a new trial, because strangling, as charged in the indictment, was a different thing from smothering,

Such instances occur frequently; but the fine technical points on which murderers are liberated or granted new trials were not invented in a lunatic asylum. Strange as it

may seem to a layman, there was once a reason for then. In most jurisdictions the defense can appeal on any tags nical point, but the prosecution cannot appeal at al; a defendant convicted of manslaughter, say, may demuni: new trial, and on the new trial he cannot be convicted a murder, no matter what the evidence shows.

The maze of technical advantages to the defendant that survive in our criminal law is a product of past centurie. when stealing a sheep or a piece of cloth was punishillby death and when criminal courts were used by sid. tyrants as James II for the purpose of political venguinor private malice.

Almost any device that sheltered the accused from the rigors of the law was then justified—and we retain if the devices, though the reasons for them vanished long ago.

Our criminal jurisprudence operates on the theory that the governor of a state may at any time attempt to per a score or so of citizens to death because they led the opposition to him in the last campaign.

Declining Prices

OUR old enemy, the high cost of living, is on the retrait.
It is no unseemly rout; nothing in the enemy's newmenta suggests panie-stricken flight. However, these persons who make it a business to dog his footsteps with tupeline and microscope are able to unnounce that ere: month since last October his toe has receded a little well at this writing the distance by which he has gone bad a fairly perceptible to the naked eye. To express the ditance mathematically, put down a decimal point follows by four, six, nine and a cipher,

We should like to claim this wavering of the toe a : tangible result of tariff reform; but in England, where car they follow cost of living with tapeline and microscope, and where there has been no change in tariff, the bin number, which is a complex of the prices of leading memodities, has declined, in the same period, just about a much as in this country. It is easy enough to trace the course of pricess. To say what any given factor counts is in the price movement is decidedly more difficult.

A College in Politics

FROM Wisconsin comes a plercing cry to rise and reput political liberties that have been lost. Shackled voin of that state are told:

"Under the old caucus rule, with all its fault, you could come together in district and county conventors and voice your opinions. Under the primary you in a silent as the dead. Then, when it came to making a pixform your delegates set forth what you stood for Nov you have not a word to say. Formerly every legislate was master of itself. Now we have forty-six rings cale: commissions, in which is concentrated control over over

And, to remedy this appalling political seridon: "If a Progressive shows his head for office anywire spot him! Vote out the Progressives in either party. Far up conservative men. Then, whether Democrate Republicans win, you will have a safe, reliable lot of the men in the legislature."

This is only one among many passionate demands for a revival of the precious caucus, convention and bost regard under which Wisconsin's legislature did indeed conjusa safe, reliable lot of hired men. No doubt the denim are very comforting to gentlemen who did the hiring.

For the ruthless destruction of their former libertie to bosses very properly lay much responsibility on the State University. In the campaign that seems to be shaple a return to the old regime, Progressives and university professors are coupled in denunciation.

"The university," says one spokesman for the safe it! sane, "should devote its entire time to education." By education is exactly what killed his crowd.

Paying for War

To Finance our war with Spain the Government borrowed two hundred million dollars, increased in taxes on spirits, beer and tobacco, and levied stamp tass. Revenue from spirits rose from ninety-two million delarin 1898 to ninety-nine millions in 1899 and one hundred of sixteen millions in 1901. Revenue from beer rose for thirty-nine millions in 1898 to sixty-nine millions in 1897 and seventy-five millions in 1901.

Revenue from tobacco rose from thirty-six milicate 1898 to fifty-two millions in 1899 and sixty-two million ? 1901. Stamp taxes produced forty millions a year.

Since 1898, however, consumption of spirits has increased from eighty-one million gallons to a hundred and fati millions; and of beer, from eleven hundred million rale to two thousand millions. War taxes on those articles well be correspondingly more productive.

Judging from the experience of France, where there is a state monopoly, that commodity alone could be made to yield a revenue of one hundred and lifty million dalart a year in this country.

WHO'S WHO-AND WHY

MILES ME ME

Serious and Frivolous Facts About the Great

You may say what you like about William Jennings Bryan—and many persons are availing themselves of the privilege—but he surely does remember the boys who stood by, and particularly the hoys who stood by oratorically.

Those, as Mr. Bryan putsit, who live by the spoken word shall be exalted thereby, naturally provided said spoken word or words shall have concerned and consecrated the person who has the exalting privileges—who in a certain department of our Government is none other than Mr. Bryan himself.

Nor is this to be wendered at, for Mr. Bryan is by way of being a word purveyor himself, and it need occasion neither remark nor rejoinder if he shall judge qualifieation on the output of words to the minute

The New Legal Talent is the of words to the minute of words to the minute as a basis—of course, a basis—of course, sa basis—of the minute of words to the minute

restles with international law.

Appreciation, to be sure, is valued of all men and has its efinite worth, which is evolved on a sliding scale that

sry of State said, or might have-and I care not who

egins with opportuneness and ends with appositaess. A fitting thing said I a fitting moment has a virtue; but if it is said I the right spirit and at he exact moment, then hat thing stands preminent as a matter entitled to reward.

Therefore, allow me to scall to your memory the emocratic National Conention at Baltimore in 912, and the first senion thereof, when the Jemocratic National ommittee proposed for emporary chairman of hat gathering Mr. Alton I. Parker, sometime derated for the presidency in nalmost unanimous maner, but a leading Demorat none the less, and not verly radical in his views, ot overly; in fact a man shose habit of mind might onservatism.

Mr. Bryan, after the preiding efficer, Mr. Norman

Z. Mack, who presided
with great dignity and in
whisper had put forward
Mr. Parker as the choice
of the committee, leaped
soldly to the platform, exding language of protest
it every pore, and began
o say Judge Parker nay.
Indeed he began to say
nay not only to Judge
Parker, but to Judge
Parker's sponsors, to Wall

Street, to the vested interests, and to va-

rious other persons, things and considerations he held to be good nay-saying objects. He said them may for quite a spell and offered John W. Kern, of Indiana, as his idea of a nifty and noble temporary chairman. Immediately John W. Kern, his chin whiskers waving like a gonfalon in the breeze created by the impassioned nay-nays of Mr. Bryan, passed the buck right back to Mr. Bryan and nominated Mr. Bryan himself.

Whereupon much oratory ensued and it was clearly apparent that Mr. Bryan did not have the votes. However, there came a moment when a tall Texan scrambled to the lee of Norman Mack and whooped a series of resounding whoops. Inquiry brought forth the information that this tall Texan was none other than Cone Johnson, and Cone certainly gave Mr. Bryan a fine recommendation.

Cone began with an allusion to a few natural phenomena, not perhaps considered in their true significance at the time, owing to the excitement that prevailed. "The tides yonder," he said, "rise and fall; night follows day and men sleep to wake again." Having made this clear, he said a few kind words for T. Jefferson, A. Jackson and A. Lincoln, and then hopped right into his reason for being present, which was: "You cannot do this thing to W. J. Bryan."

High Tide in Nebraska

OF COURSE they did do that thing to W. J. Bryan; but, just the same, Mr. Johnson told them they could not, and he referred to Mr. Bryan in these burning words: "The rising tide"—a great man for tides—"of trust creations, strangling the freedom of trade, and the riot of ill-gotten wealth roused a giant from Nebraska's plains"—the inference being, of course, that Mr. Bryan was the giant the tides awakened from his nap.

There was some more to it. G. Johnson assured the delegates, who were waiting to do what G. Johnson said they could not to Mr. Bryan, that the Democracy must not loiter on the shore. Contrariwise, the Demmies were exherted boldly to put their barks to sea, "and the Republican ship will go down in the gale of November, lost in the weltering tempest of a nation's just rebuke."

That was not all. Mr. Johnson informed those delegates further: "The fight is on, and Bryan is on one side and

Wall Street is on the other." And he concluded in one grand, gorgeous whoop to this general effect: "For this convention to put Bryan to the knile of defeat will send a chill to the hearts of six million

and a half Democrats in the United States."

Sad to say, they sent the chill at the moment; but nothing serious came of it and something pleasant resulted to Cone Johnson, for when that other eminent orator, Mr. Joseph W. Folk, transferred his services from the State Department to the Interstate Commerce Commission, lostantly Mr. Bryan telegraphed to Cone Johnson to come up and take the place of Solicitor for the State Department. He was solicitous about Cone and he solicitod him to be solicitor. Cone came. He was just as solicitous about it as Mr. Bryan was, if you must know. And thus do we rediscover that verbalism is its own reward.

Aside from all that, however, Cone Johnson, of Texas, and now official custodian of the legal machinery of our State Department, is not entirely voice and vocabulary. Indeed, he is a capable lawyer and a rather distinguished Texan.

Mr. Johnson comes from Tyler, which they used to call the Athens of Texas, on the one hand, and the abiding place of the Tyler Gang, on the derisive other. At one time the Tylerites held about all the worth-while political offices in the state. Johnson was of the younger generation, but he learned his politics from the astute Tyler persons who accomplished all this.

He was active for a time, dropped out and hunted foxes and practiced law, and then, about ten years ago, he was changed, through attending a revival, from a passive Methodist to an intense and active one. He preached a sermon that attracted wide attention, and traveled up and down delivering other lay sermons. He changed his view on the liquor question, always the most political of the issues in Texas, and became a fighter for prohibition.

He had been against prohibition earlier in life; and once he had a notable debate with Representative Joseph W. Bailey, who was at the moment in favor of prohibition. Politics changed Bailey's view and religion changed Johnson's; but there were no more debates between himself and Johnson on that issue, the reason being that Johnson rather put a muffler on Bailey in the previous encounter.

Later, however, Johnson went after Bailey again. This was on the issue of whether Bailey should go to Denver as

a delegate to the national convention in 1904. Johnson, as leader of the Progressive Democrata in the state, opposed Bailey, and Bailey went home from Washington and fought for himself. Both Johnson. and Bailey are great campaign speakers, and it was a ding-dong for some weeks. Bailey won by seventeen thousand votes in a total of three hundred and sixty thousand, but he has never been the same since; and he is now in private life.

Johnson was for Bryan. The Bailey followers opposed Bryan, and that led Johnson to Baltimore at the head of a delegation that gave Wilson forty votes on the first ballot all they had-and on each ensuing ballot until he was nominated. Also, as I have shown, it led Johnson to make the speech to wh some fleeting reference has been made herewith, and, furthermore, it led to the presence at this moment of Cone Johnson in the State Department as the solicitor thereof.

It is quite impossible to print here what Mr. Bailey thinks of Mr. Johnson; but there is no doubt Mr. Bryan thinks he is a fine man which he is, physically and mentally; and, as it happened, Mr. Bryan had the appointing power.

Getting Back to a Competitive Backs

The Natural Question Not to Ask By EDWIN LEFÈVRE

HE man who writes special articles is a sort of war correspondent in time of peace. This was especially true, of course, during the muckraking days when all writers had to be fighters or cuttlefish and discharged oceans of ink at the

public enemies.

The life had its compensations: it was exciting, it was always changing, and it paid. It had its disadvantages, chief among them being the syncopated friendships the affections that never grew to full size—the delightful though transitory intimacy with acquaintances who would have become bosom friends with two more weeks, but who stayed acqualntances and were forgotten. And then there were first chapters of romances that never got so far as a second, and tantalizing experiences of all sorts which left an unsatisfied curiosity in

I recall many such. Once, on my way to the City of Mexico, I met a Frenchman who had found treasure on an island in the Gulf of California. He was an archa-

ologist of vast erudition and the most amazing memory I have ever known. He had a keen analytical mind and knew all about inscriptions and secret ciphers and codes. He told me, by the way, that the best cipher code in existence was that used by members of the Rothschild family for personal matters-not their commercial code, which is composed exclusively of words of four letters.

The codes of the various foreign offices, he said, would not require two minutes to find the key. I amused myself telling him some of the Sherlock Holmes stories and he always guessed right-except in two instances in which, by reason of my not having given all the clews, he evolved explanations infinitely superior to Conan Doyle's.

He had raised two hundred and fifty thousand france among his professional colleagues and was going to bring back the treasure. He promised to write me on his return.

Never heard of him again!

I ran across a slender little Englishman, with a hyphenated name, whose life was one of those Kiplingesque affairs so many of his countrymen can show. He was starting on a rubber-hunting expedition to Bolivia. After that, he said, he was going home for good. There was but one life between him and a historic earldom—and that life was lost later and-I read in the Graphic-the heir was not found. Never heard of him again!

I met one of those seedhunters of the United States Agricultural Department, who was a great folklorist on the side. He was going after a specimen of the legendary Mictian corn. Mictian, in Aztec, means the Place of the Dead. The corn was said to be very white, the ears large and weirdly regular; and each plant was supposed to bear four perfect ears and each ear fourteen rows. The ear did not taper.

He was inclined to believe the legend and thought he might be able to prove that the Aztec priests had gone in for seed selection for generations. He was going to a wild region in Mexico. Never heard of him again! The Department, when I inquired in Washington, had lost track of

I met a Belgian baron on the train from Chicago to Salt Lake City. We became pretty good friends and took our dining-car meals together. He owned some mines in Utah. We went to the same hotel together. A cablegram was waiting for him at the hotel office. He opened it, read it, got red, and began to swear in French. I asked him what was the matter and he told me:

"I must kill him. This man, he has gone with my wifemy brother writes. I must return!"

"A duel?" I asked.

"Oh, no. One does not fight dogs! One kills them!" He had grown calm. "Oh, yes!" he told me quietly, "It is the end for him!"

He was a well-known Belgian nobleman and very wealthy. I watched the papers. Nothing!

In San Antonio, Texas, I once made the acquaintance of a Mr. Metzger, whose daughter Nettie took a particular liking to me. She was sixteen, and very pretty, with big black eyes and black hair, said to be inherited from her grandmother, who was a highborn Mexican. All Mexicans that marry into your family are highborn. All others are greasers or yaller-bellies.

In the Two Hours I Ivant With the Metagers, Waits Did Not Juy Two Words

Nettie was a nice girl, very romantic at the most romantic of all the ages of a girl, and very talkative. When I say very of a talkative woman I mean exactly that,

When I had finished my work I left San Antonio, I sent the Metzgers Christmas cards in the following December, and later-in April-made another trip to the Southwest to do an irrigation story. I stopped at San Antonio on my way back, to get a line on a certain phase of a petroleum muckraking special, and I looked up my old friends, the

They were very glad to see me. Old man Metager, with a wort of proud affection that later made me feel like a silly ass, took me to Nettle's room and showed me, on the girl's bureau, an oval silver frame, inside of which was a half-tone reproduction of a photograph of myself.

He had cut it out of the advertising pages of a magazine I had honored with a series of articles, and she had begged for it. He had given it to her; but it was really the family's, he assured me. They were very proud of me for being so famous and of themselves for knowing me.

Nettie was still talking. She told me about her fellow-Whitey Waite a quiet young chap, with curious, discon-certing eyes. They always looked as though they were staring at you and yet they were not wide open enough for that. They were pale blue in color and so very clear they reminded you of turquoise beads. They had a tinge of that gray which you see in some Persian cats.

They called him Whitey because he was so blond - almost

In the two hours I spent with the Metzgers, Waite did. not say two words; but often I caught him looking at me with those unblinking pale-blue eyes of his, with a sort of meditative expression, as though he had not made up his mind what to do to me. They suggested, also, an absence of eyelids and incessant thinking going on behind the sockets-thinking to which you got absolutely no clew, though you felt the thinking concerned you,

The eyes did not seem to be a part of his body, but a part of his mind; and they buffled you as a snake's eyes buffle you, because you always think a snake is looking straight at you and is prepared or preparing to do something to you. Look out for a man with those eyes. He either is loyal to the death, or else he does not think your death of any more consequence than enting an apple.

I congratulated Nettie on picking out a man who hated to talk and did not seem to object to listening by the hour. Bottling up a woman's speech is fatal to happiness.

"I suit him, all right," she told me defiantly.
"How do you know?" I trused her.

"I know!"

"He never told you!" I asserted.

"No," she admitted rejustantly, "he never told me; but I know it, just as well as though he had told me for breakfast, dinner and supper ten years ronning."

"Nettie," I said to her paternally, "next to your reticence and your taciturnity, what I most admire in you is your penetration and your modesty.'

"I do!" she averred stoutly. "He just looked at me and I knew he knew I - I was crazy about him. And I knew he cared for me; so it was all settled."

"But didn't he say anything" I asked her.

"Yes, indeed!" She spose indignantly. "Do you think is is a mute? He can talk!"

'Can he?"

"Yes, he can; and he dan too."

She happened to see me graning and she laughed indersively, as women do when they wish you to know that they see the joke and enjoy it -only the really do not see and do not enjoy.

"Ah!" I exclaimed very sen-ously. "He talks! And prowhat does he talk?"

"I think you are mean," she said, with hurt dignity.

She was so serious about it that I saw she thought the one man she knew who came from the great outside world of book and romantic people and navelous magazine makers ward nice to her -or to the one man in all the world for her. Sol and contritely:

but really your remance is not extraordinary - and very best! ful. So it is all settled?"

"My dear child, I was jesting.

"Oh, yes!" She smiled happily at me and looked a though she could talk about it for fifty years steadily. "Then he must have said something to your folks."

"Oh, no! He said it to me." "Nettie, just what did he say?"

"He said: 'I reckon when I get that Panama job will get married and ge down there together.'

"He said all that?" "Yes, he did!"

Z CHEMONER X

"And that settled it, of course?"

"Of course!"

I looked at her and clearly perceived that, so far is its was concerned, it was settled indeed. I spoke to her father a little later.

"Nettie tells me she and young Waite are going to set married.

"Yes." He did not seem exactly tickled to death over h.

"Don't you like the idea?" I naked.

"I don't like the idea of her going to Panama."

"Then why do you let her go?"
"Well," he said dubiously, "well, I ——" I could so he had never before thought about his reasons. "Well," is finished, "Whitey said he was going to take her down that after they got married." He had not the faintest notice of dreaming to think of daring to oppose Whitey. It was wry remarkable.

I more or less desultorily asked for information abut young Waite and heard nothing against him. I leave that he was a quiet, honest, industrious sort of chap, neither very popular with anybody nor especially distiked auwhere. He had always lived with his mother, except when he was working on a ranch in the Panhandle country-I forget just where,

I left the next day and the Metzgers became one of the hundreds of nice, friendly families I had met in my travel-

no more, no less,

Some years later a magazine wished to find out how Und Sam had become Papa Sam to a lot of ditchdiggers. At experiment in government control of everything, include: the cost of food and wages, had created a demand in character sketches of men who were handling million o the hundred, tackling problems by the thousand, tain; chances with life like intelligent heroes, living like deat men and guessing like geniuses.

I therefore went to Panama. I was watching the recating of the railroad - this was before the Gatun Dam vamuch more than begun-and as I walked along the trad! heard a calm voice say:

"I reckon you had better get a rustle on."

It was a drawling voice-almost purring; but for see reason it reminded me of the soft velvet sheath of a partiularly sharp knife. It was a voice that greatly interested me. Everything is interesting to a man who make is living by writing about anything.
"Who is be?" I asked my cicerone.

"That's the roadmaster. Did you notice how this Jamaican coons bustled?"

"Did I? I consider it the most remarkable thing on its Isthmus, bar none. Why, that man has just got 'em sone. to death! Oblige me by looking at them."

The negro tracklayers were indeed working like madmen. One of them, a tall, sculpturesque husky, was positively maniacal in his activity.

"That big buck yonder," I observed, "probably could

teur the roadmaster in two. It shows

"Hold on, before you make a break! I'll tell you what it shows: it shows love! That big Jamaican swears by Whitey. Come with me. I'll show you. Hello, Roberts!" He spoke to the lunatic. "What's your work today?"

"I don' know. Arsk Mars Wee-yet!" he replied in the queer jargon of the British West Indian.

Mars Wee-yet approached us.

"How do you do?" he said to me, as though I were an inspector on one of his regular daily routine trips. "Nettie will be glad to see you."

I shook hands non-committally and presently recalled Texas, the Metzgers, Nettie, whose father had cut my portrait out of a magazine, and Whitey Waite.

I hung round a bit longer, but he had nothing more to my to me, his remarks-few and gently spoken-being

"I'll see you again!" I called to him.

"Dinwiddle knows the house. Nettle is there. I'll be

nome at eleven," he answered.

Dinwiddle, my guide, one of the engineers of the division, took me to the Waite cottage. I found Nettle at home. She seemed glad to see me in a subdued sort of way. She told me the latest news of her father and mother; but I noticed she only did so in answer to questions. She volunpered nothing. There was nothing to hide, but her girlish oquacity was gone. This made her a new Nettie.

At first I thought her taciturnity might come from living a the tropics; but I recalled other American women I had net in the Zone and they had not been made reticent by the climate - quite the contrary. Therefore I concluded that Whitey had something to do with it.

"Nettie," I said, "you were an awful chatterbox as a id. Now you are what novelists would call a saturnine foung woman. Why?"

"Most people talk too much," she answered.

"And say too little?" She nodded.

"You are happy, of course."

"Yes."

"Does Mars Wee-yet talk to you evenings?"

She smiled—and nodded! She had not lost her sense of simor-only her penchant for talking. A woman does not sy silly things when she does not talk at all. Nettie had equired much wisdom.

We conversed—or, rather, I talked in a more or less esultory fushion; told her about some of the things I had one and places I had visited since our last meeting in San intonio. She listened with interest and, I like to think, ith intelligence.

In one of the pauses she rose and went into the housere had been talking, American fashion, in rocking-chairs n the mosquito-screened porch. She returned with a

undle of old magazines and weeklies.

"He saves everything of yours he comes across," she said roudly-like a mother trying to speak dispassionately bout her prodigy. "I read them aloud to him evenings."
"That doubtless gives your vocal cords all the exercise

hey require," I said. She nodded - twice! Then she shamefacedly took the recious literature back - possibly she felt she had been too

alkative with her nods.

Shortly after eleven Waite came in. He was tanned a rick-red and his eyebrows and hair showed sunbleach.

His curious pale-blue eyes showed the same disconcerting immobility of the eyelids, but were less staring.

I decided that this came from the effort to keep himself from blinking in the awful glare of the tropic sun. You saw the infinitude of little wrinkles, such as you see about the eyes of old sea-captains - and also the inscrutability you see in the eyes of people who do their talking in silence, as it were.

He washed leisurely and then came out and shook hands with me-in silence. Somehow I did not feel that I had to supply any conversation, and yet I could swear I was among friends intimate enough to be silent with for months at a stretch. We do not have many such friends-have we now?

After breakfast, which they called lunch, he said to

"I had to see the colonel." It was so plain he was apoloizing for being late that when she nodded understandingly did so too. He went on: "I've asked for three months' leave of absence."

She opened her eyes wide and stared at him. He was looking at the floor, so her eyes could not ask his eyes anything. She fell back on her tongue:

"I thought vacation didn't come until February."

He took a letter from his pocket. The envelope was edged with black. She turned very pale when she saw the mourning stationery and her lips moved silently, but I easily read: Mother! Her hands trembled as she took over the letter.

She read with unpleasantly wide-open eyes and quivering lips; then she began to weep softly. Whitey had pushed his chair back from the table and was staring at the tips of his boots.

I looked inquiringly at Nettie, my features composedas well as I could manage it-to what you might call a general funereal expression. I did not know who had died or when. She understood and for all answer said:

"George-his brother!" She nodded toward Whitey. Whenever she said he or him she meant her husband. Childless women always talk that way-God bless 'em!and girls in their first love affair.

I shook my head sadly. I had never heard of George Walte; but he was the brother of a man I had met once, for an hour or two, six years before. Whitey looked up at his wife and said calculy:

"I gotter get 'im!"

She drew in her breath sharply, with a frightened little gasp. Then she stared unblinkingly at him, dumb with error, fascinated into utter petrification by what she saw in her husband's eyes. Then she nodded-exactly as if a powerful hand had grasped her head and made it bow!

He looked at me. I looked at him. I got no definite message—only an unpleasant goosefleshing along the spine; but because this always was a bouse of silence and now also was a house of death I bravely raised my sysbrows and whispered:

What?

"Man got George. Gotter get him!"

The gooseflesh left me and before I knew it I asked:

When do you sail?

"Tomorrow! New Orleans!" he vouchsafed.

He rose from his chair and beckoned me with a motion of his hand to follow him. I immediately did so- and felt glad to do it. I do not know why. Really I do not! As he passed his wife he stopped, patted her head and said quietly:

"You can't come with me. I'll cable when."

I could stay with father and -

"No! Here!" he said emotionlessly and walked on.

Ifollowed, still vaguely glad to follow. He took me into his garden. It was his hobby. There were no vegetables-all flowers.

"Most of them from Texas seed," he told me. "Getting 'em acclimated."

He metioned to me to remain where I was, and I did-without the slightest impatience. He went back into the house and called:

"Net!"

"What?"

"The automatic!"

Presently Nettie came out with an automatic pistol in her hand. He took it, nodded his thanks and walked to the rear of the little garden. I saw a target of heavy plank, faced with boiler plate, leaning against banked earth. He painted the target rings afresh with

That Store Made Me Think of low-Cold Thoughts

a brush he took from a can he kept behind the target, and then began to practice both drawing and firing quickly from the hip, and deliberately as at a French duel. He was a very good shot-not the hest I have ever seen, but very good indeed.

"I've learned to shoot with the sun in my eyes," he explained. Then I understood why he practiced.

"Look here, Walte, do you really mean to say you're going North to kill -

He interrupted me and, with a complete absence of heat, said:

"I gotter get the man that got my brother!"

"Yes." I agreed, "you've got to!

I could not help it-and I could not ask any more questions. A man told me that the only pale-blue-eyed Mexican he ever saw was by profession a bandit and never had the slightest trouble with his followers. They always obeyed him-no mutiny.

I left the Waites feeling that our friendship had never been interrupted. Nettle had begun to pack up his things. She did not stop packing long enough even to shake hands; but she said apologetically:

"I'm sorry I couldn't show you any more attention;

but, you see, it was -"Nonsense!" I said, "I didn't come to be entertained, but to see you. I'm very glad I came."

"Me too," she said. "Good-by."

"Remember me to your father and mother when you write," I called from the front steps.

She came to the door, smiled at me amicably, nedded and went back into the bouse.

Dinwiddie, the young man who had been detailed to act as my cicerone, was waiting for me at headquarters. He told me that Whitey Waite had received a letter, read it, and instantly went to the superintendent and said he had to have three months' leave of absence.

The superintendent began to explain that such a thing was utterly unthinkable- because it was absolutely impossible. Nobody could get the work out of the Jamaican gangs that Whitey could, and

"I'll speak to them," said Whitey. It settled it in

his mind. "Nobody can-and you know it," protested the super-

Then, according to Dinwiddle, Whitey just went up to his chief and said a few words in a low tone of voice. The superintendent jumped back and yelled:

"But you can't, celd-blooded -

And Whitey cut in, saying:

"I just gotter!"

"And," finished Dinwiddie, "I'm a goat if the super didn't say:

"'All right-damn it! All right-hell! All right-blankblank! But you tell the colonel. You know how anxious he is to finish that relocating work."

"And then Whitey said:

"'No need—I'll just tell my gang what they gotter do.'
"And then Whitey just goes to the gang of Jamaican niggers and says:

'I'm goin' No'th to-morrow. I reckon you'd better rustle some while I'm gone.' "The gang began to shake. I swear it. Then Whitey

says: "'You heard me?'

Public Ownership of Railroads, Waterways and Water Power

Continued from Page 5

moved, the capacity of cars and locomotives, the cost of rights of way, the classification of traffic, and the general customs, habits and methods of the people engaged in manufacturing, commercial and agricultural pursuits, that comparisons between privately owned railways in this country and publicly owned railways in Europe are of small value; but Germany, with publicly owned railways, and Great Britain, with private ownership, furnish an excellent demonstration of the comparative value of the two systems.

The total capitalization of the railways in Germany is \$109,000 a mile, as compared with \$265,000 a mile in Great Britain. The actual average passenger rate paid a mile is ninety-five bundredths of one cent in Germany and one and a half cents in Great Britain. The average freight rate a ton-mile is 1.41 cents in Germany under public ownership and 2.33 cents in Great Britain

ownership and 2.32 cents in Great Britain under private ownership.

Mr. Anthony Van Wagenen's book on Government Ownership of Railman's says:
"It costs \$5.72 to transport a ton of hardware from Birmingham to London, while the cost for the same class of goods over the same distance in Germany is about \$2.25. Cotton goods from Manchester to London cost \$8.76 a ton; in Germany, over the same distance, the cost is from \$4.86 to \$5.60. General machinery from Leeds to Hull costs \$6.03 a ton; in Germany, over precisely the same distance, \$1.09."

Referring to other conditions, the same authority says: "It may be said that these are not important differences; but what is important is that the German railroads must carry these goods over two hundred miles for about \$1.22 a ton, whereas in England it costs from twice to four or five

times that to earry it one hundred miles."

No people less abundantly endowed with natural resources than ours could ever have withstood the ecorpsous waste, plunder and larceny involved in the methods employed in financing the railways of the United States. If this reads like the emphasis of sverstatement, let it be boldly declared that statistical and court records prove more against private ownership of the railways of this country than any mere list of

nouns and adjectives can imply or set down.

An empire of 247,093 square miles—over 158,000,000 acres—of the public lands of the United States has been given to the rall-ways to aid in their construction and maintenance. This is a domain more than equal to the German Empire in extent. In the words of Secretary Lane, who furnished the figures as istely as January, 1914, to the Congress of the United States: "These land grants equal in area a territory as large as the combined areas of the New England States and New York, New Jersey, Pennsylvania, Maryland, Virginia and West Virginia." And Secretary Lane continued: "How much other public aid has been given to private railroad building, in the form of rash bounties or subsidies or guaranteed interest and principal on bond saues, cannot even be approximated with any degree of certainty."

Railroads Under Receiverships

In this connection Douglas County, Kansas, my home county, with twenty-five thousand population, has contributed more than half a million dollars in bonds and cash to aid the construction of railways in that county. Missouri contributed thirty-eight million dollars and received six millions from the railways, making the net loss to the state thirty-two millions.

the state thirty-two inillions.

In spite of these enormous public subsidies, in spite of high rates, in spite of the frequent control by the railway politicians of Congress and legislatures and courts, 735 railway companies, operating 136,156 miles of road and involving nearly eight billion dollars of stock and bonds, have gone into the hands of receivers. In other words, until agencies of the Government took hold of more than half of the reads, squeezed a part of the water out of them and compelled them to be temporarily honcest, they could not run successfully. The operation of railways under government receiverships has been surprisingly successful and furnishes an argument of no small value for government ownership. The actual

general manager of some of these railways under receiverships has been a Federal judge, not a trained railroad man.

Efficiency? Has not Mr. Louis Brandels, in his brief to the Interstate Commerce Commission, pointed out leaks of many million dollars, not to mention the assertion of experts he examined, who declared that three bundred million dollars a year could be saved to the railways by more efficient management?

Efficiency? Is it efficient management to kill or injure every year one trainman for every nine trainmen employed? Think of it! In nine years every trainman employed in the operation of railway trains in the United States would be killed or injured if there were no new men to fill in the gaps and share the burden of killings and injuries. And inefficiency is only one indictment of the American people against the railways.

Waste goes along as one factor of inefficiency. Waste is inherent in the system itself, waste that would be almost entirely eliminated by the mere fact of changing from private ownership to the unity of national public operation. For their legal departments alone the railways expended last year about twelve million dollars; and that sum did not include the salaries of many highly paid general solicitors and counselors. A large share of this expense would be unnecessary if a bureau of the Government, with its corps of assistants from the Department of Justice, had the management of the rail highways of the country.

The Cost of Getting Business

The Interstate Commerce Commission asserted recently that the railways lose annually at least fifteen million dellars by giving free service to industrial companies. This is not only waste, it is also a fraud on the shippers who are competing with such industrials.

simply for getting the husiness by their traffic departments, the railways are spending fifty-six million dellars annually. The soliciting that makes up the bulk of this expense simply enables one railway to take business away from another. For the most part it is pure waste. For the year ending June 30, 1911, the people, through the United States Government, paid the railways fifty million dellars for transporting the mails. In the same year the people, through the express companies, paid the railways seventy million dellars for transporting parkages. The railways middlemen profits in those transactions amounted to many million dellars.

The enormous profits made by the Pullman Car Company, enabling it to swell its capitalization from one million dollars in 1867 to one bundred twenty million dollars in 1910, are waste, chargeable to private ownership of the railways. In this country the railways pay the Pullman Company for routing sleeping cars over their tracks. In some European countries the sleeping-car owners pay the railways. So, also, are the great profits taken by private refrigerator car companies and express companies chargeable to waste. If the railway had owned and operated the Pullman, express and refrigerator-car companies, the enormous profits that these companies have absorbed could have been used to lower freight rates for the benefit of the public.

The total of these wastes runs between two and three hundred million dollars annually. Some of them cannot be stated in exact figures, because of the juggled accounts and the varying contracts the railways have with the allied companies.

I have mentioned larceny as one count in the indictment of the methods that have been so generally used in financing our railway properties. Is that too harsh a word for the almost countless repetitions of acts infinitely worse in their effects on general property rights and more criminal in their intent than most of the acts for which common criminals fill our jails and penitentiaries?

"Reliable authorities have stated," said Secretary Lane in his letter to a congressman, already referred to, "that the actual cost of construction of the Union Pacific Railroad was approximately fifty million dollars. The cost to the railroad company

N. 17, Uand Mch. 14, 14. of this construction was ninety-three and a half million dollars, nearly forty-three million dollars being taken in profit by the contractors and the Crédit Mobilier." A long time ago that, some one may say. Yes, it was; and railway high finance has not improved since then. Instead of the Union Pacific's beggarly plunder and swag of forty-three million dollars, the swag and plunder that wrecked the New Haven road in this present period has been estimated at two hundred million dollars. The Frisco's wreckage was brought about in the same time by the grafting of still unenumerated but certainly many millions. If such things he not larceny they are as flat burglary as was ever committed.

Through all the railway years the way is marked by such deals as these and by such so-called legitimate deals as Jay Gould's watering of the Erie to half a million dollars a mile; by E. H. Harriman's waterlogging of the Chicago and Alton, and by his use of the credit of the Oregon Short Line to traffic in stocks and bonds of other lines, and pile new millions on millions of fictitiously created wealth, on which the public pays interest. The space of a magazine article can scarcely enumerate the deals by which the railways of the country have been used to pile up ill-gotten fortunes instead of to develop the land for the people.

Even waiving every other advantage and need of government ownership and operation, I believe firmly that private ownership and operation cannot much longer perform the necessary function. I mean

Even waiving every other advantage and need of government ownership and operation, I believe firmly that private ownership and operation cannot much longer perform the necessary function. I mean that the present system will break down if it has not already broken down. I mean that the Government itself is the only organization strong enough to perform the transportation service adequately—as adequately as it will have to be performed to meet the demands of our commerce.

Mr. Hill's Prediction

Consider the statement made by Mr. James J. Hill, of the Great Northern and Northern Pacific and Burlington Railroads. It was made in an open letter to the late Governor Johnson, of Minnesota, in 1906, the year of a memorably disastrous car shortage. It was repeated in November, 1907, in an address by Mr. Hill to the Commercial Club of Kansas City. In that speech he said: "A year ago I said it would require five and a half billion dollars, or one billion one hundred million dollars, so one billion one hundred million dollars a year for five years, to make our railroad facilities equal to the demands on them. The figures are staggering, but twelve months have confirmed them and enhanced the difficulty of securing such investment. In the last year the railroads have raised in one way and another in the neighborhood of a billion dollars. Much of this has been obtained on short-time notes at a high rate of interest. Most of it has gone into terminals, renewal of old equipment and purchase of new, and other necessary improvements. It was a forced investment, the funds for which were raised not to make our railroads adequate to their task but simply to keep them at their present working level.

"It has been used to keep the wheels of

"It has been used to keep the wheels of industry from slipping backward, but there has been very little new construction. The needs of the moment were too severe for that; and, though substantially the amount of money suggested by me as indispensable has been collected and spent, the railroads have barely held their own and the future remains to be provided for. Not less, but in the opinion of competent judges perhaps fifty per cent more, should be spent annually for the five years to come."

That was more than six years ago, and the indispensable demands on traffic facilities have necessarily increased. On their ownshowing the private railroad companies are utterly unable to perform the functions that must be performed. If that is not true then they and their spokesmen must stand convicted of the grossest misrepresentation in order to force increasing rates to support new stock and bond deals.

The railways themselves fear their own deficiencies and the consequences of their own wrongdoing. They fought the Alaska Railroad Bill as they fought the Panama Canal, for they do not wish the proof given of what the Government can do in the way of railway construction and railway management, even under the most unfavorable conditions. The railways themselves have brought the government ownership issue to the front in seeking to head off that step by a persistent campaign of misrepresentation and one-sided discussion of it.

See What This Versatile Machine Will Do For You!

In these days of rising business costs, when stock must be moved more quickly than ever before to maintain your profit, when costs must be known and distributed more completely to insure operating economy, you must have some way to get the vital facts about your business quickly and surely when you want them. Details heretofare neglected must be studied, analyzed and turned to account.

The Wales provides an easy and simple way to do this,

By enabling your bookkeeper to get and give you information otherwise unobtainable or hard to get, it protects your interest and saves your own time and energy.

At the same time it saves money in your bookkeeping department by preventing mistakes and by doing away with bookkeeping drudgery. And it is so versatile—useful in so many ways—that it soon pays for itself in any business.

Some of the ways in which a Wales will pay for itself in your business are described in our recent booklet.

MOTOR TRUCKS

PACKING HOUSES

find in Federals their cheapest, most efficient delivery system

Probably in no business are delivery problems more difficult than in the packing of meat products. Deliveries must be prompt, efficient and regular; the loads, as a rule, are heavy; and the location of customers necessitates driving under all sorts of road conditions.

It is also true that hardly any other business has such a thorough accounting system, such a complete knowledge of delivery costs.

When, therefore, packing-houses in all parts of the country are discarding all other forms of delivery in favor of Federal trucks, it speaks volumes for the efficiency and economy of Federalized transportation.

Federal trucks, to any packer, will mean not only a considerably smaller investment in delivery equipment, but a very much smaller

We are prepared to prove this to your satisfaction by the experience of many other concerns in your line; and shall be very glad to go into your own delivery problems in detail.

Write for interesting booklet applying especially to packing-house delivery.

Federal Motor Truck Company

104 Leavitt Avenue

Detroit, Michigan

The experience of other countries - those having government ownership-has borne out the teachings of our own opposite experience. "The rapid extension of industry in Germany has called for a parallel development in the facilities for transportation, Consul Norton, writing from Chemnitz in 1907, reported. "In most respects," he continued, "this growth has been more harmonious and better adapted to meet the natural economic needs than has been the case in the United States under corresponding conditions. This is due in large measure to the fact that most of the railroad lines are under government control and to the consequent uniformity in management and

consequent uniformity in management and avoidance of unbealthy rivalry."

The square-deal effect on all railway labor, and incidentally on all labor, with one central management of the whole transportation system in government hands, would be a prodigious benefit of government ownership.

United States statistics show, as Professor Scott Nearing has set out in his Wages in the United States, that twenty-two perment of the market one and three-quarter mile.

cent of the nearly one and three-quarter mil-lion railway workers in the United States receive a wage of less than eight dollars a week. The figures are for 1909, but they have not changed sufficiently since more than to make up for the increase in the cost of living.

Fifty-one per cent of the railway em-ployees of the entire country receive less than six hundred twenty-five dollars a year. Only seven per cent receive more than a thousand dollars; and of the few high-priced railway men or operatives none receives more than all in that limited class would receive under government owner-ship, and probably none of them receives as

It is a real menace to the country that more than half of the workers in one of the most useful occupations in the world should receive less than a living wage.

Saving on Bond Interest

If it owned the railways, the United States Government could guarantee to every rail-way worker a wage that would at least way worker a wage that would at least support him and his family up to the stand-ard of the average American home. It would not get the money for this by level-ing down the wages of the high-priced, better-skilled operatives. It would get it from the savings represented by the lower rate of interest that the railways would rate of interest that the railways would have to pay on railway bonds, principal and interest guaranteed by the United States, as compared with the sum total of interest, dividends and surplus earnings the railways now pay to their stock and bond bolders; and from the savings of the vast waste that has been partly enumerated earlier in this article, resulting from inefficiency, the duplications of expenses, the traffic departments, the virtual rebates to industrials, the profits over the actual cost taken for mail transportation, express cartaken for mail transportation, express carriage, Pullman and refrigerator car service, and so on. Who shall state with complete accuracy just the number of bundreds of millions of dollars these possi-

ble present savings would represent?
Of the first item alone, consider that the earlies interests, dividends and surplus earnings for private benefit amounted to \$833,734,871 for the year ending June 30, 1911, as shown by the last published report of the Interstate Commerce Commission. Now in a letter read to the United States. Now in a letter read to the United States Senate by Senator Kenyon, of Iowa, on January twenty-first of this year, Mr. Clifford Thorne, of the Iowa Railroad Commission, states that the United States Government would have to pay in yearly interest on bonds representing the full present market value of all the railway securities, including stocks and bonds, \$419,-075,201. The difference between this latter sum and the \$833,734,571 now paid to private beneficiaries is \$414,659,370. Mr. Thorne's figures are based on a government rate of interest of three per cent; but, using a four-per-cent basis for railway bonds guaranteed by the Government, the saving would amount to approximately three hundred million dollars annually.

The saving, regardless of interest rates, in that one item would be vast, nor does all this offered present saving take into account the future saving. Here and now I can only indicate these. The "unearned increment" of land values in city terminals, country right of way, and so forth, are piling up hun-dreds of millions of "capital values" that the railroad rates under private ownership must also return interest upon. The other

The Smuggled Calabash

A Tale of Crime and Reparation

Jones of Philadelphia (not the Jones you know) had business in Detroit. Belon in turning he crossed over to Windsor with the fell notion of buying a swell calabah 220 bringing it back without paying duty.

He got away with it, with much less from than he expected. But Jones was affected with a conscience. He was sorry before in got to Mansfield and it was a contrite fuer who left the train at Broad Street States

At home his wife made it worse. She sail it sounded downright dishonest, and ever time the postman rang she jumped only terror at the idea of Custom mes. U.S. marshals, Federal prisons and things.

Poor Jones couldn't make that pipe take right. He never enjoyed smoking it -put n pleasure out of it. He almost gave it ave once, but instead he stuck a \$5 bill is at envelope and sent it to the Detroit Com-House, hoping that would ease his conscious

He had no sooner mailed his letter than in found that he wanted to smoke. He felche his tobacco but he had none, so he we'led

over to Harrison's less and asked for a portal and got it from lies on's tin.

He lighted up with trembling linger Would his comcies: money spent make the beautiful pipe tare a is should—as he had Oh, Joy! Oh, Blue

Oh, Rapture | Thepes tasted glorines, the sanuke was incompa-

able. He leaned back in his chair and and into a reverie of pure pipe pleasure. Sudden he roused himself.

"Harrison," he burst out, "would youl-lieve it? Now that I have repented and pul Government the duty I cheated it will all

this pipe, it gives me the sweetest, name. slickest smoke I over experienced."

And Harrison said, "Oh, forget it" This pipe got good because I gave you some for worth—if you had started in snobal Edgeworth you would be ahead the \$5 to

you just dropped down the mail chare." Now the question is, Was it conscious of Edgeworth that made Jones begin to color

We'll let you decide this by testing Edg-worth yourself, and we'll furnish free is. tobacco for a thorough test.

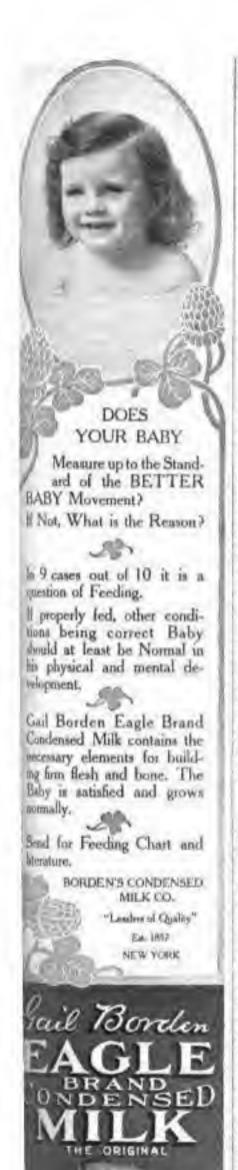

If you will send us your address and no dealer's name on a post card we will porpoa sample package for you to try. We will you to try Edgeworth for the same resethat you would want people to try any prouct that you had spent years in perfecting and that you made as well as you knew his So send and get your sample.

Edgeworth is made from the finest Borly that grows on the ground and comes is two forms-Sliced Plug and Ready-Rubbed,

The retail price of Edgeworth Rosh Rubbed is 10c for pocket size tin, 50c far large tin, \$1.00 for humidor tin. Edgewed Sliced Plug is 15c, 25c, 50c and \$1.00. [13] on sale practically everywhere. Mailed popaid where no dealer can supply.

If you want the free package, write at Larus & Brother Co., 1 South 21st Street Richmond, Va. This firm was established 1877, and besides Edgeworth makes served other brands of smoking tolxacco, include the well known Qboid-granulated plug-s great favorite with smokers for many years

To Retail Tobacco Merchants: 11 ye jobber cannot supply Edgeworth, Laris A Bro. Co, will gladly send you a one of the dozen (10 cent size) carton by prepaid panel post at same price you would pay jobbo-

"increases" that result from the great tractive power of locomotives and the vast increase in carrying capacity of freight cars—these benefits now inure to private parties instead of to the people, as would be the case if the public were the owner. With these increments piled up on top of speculations and excessive capitalization, is it any wonder that the following dialogue concerning the railways' present demand for increased rates took place in an Inter-state Commerce hearing! COMMISSIONER LANE: Is there any reason to believe that these increases would stop with the present increase if it should PRESIDENT WILLARD, of the Baltimore and Ohio: Increases in rates? COMMUNICONER LANE: Increases in rates; PRESIDENT WILLARD: No; I think not. think the tendency of rates will be to continue upward.

COMMISSIONER LANE: You think there will have to be a progressive increase?

PRESIDENT WILLARD: Yes, sir.

I wonder whether the tremendous importance of an increase in freight rates, with further advances in prospect, is generally appreciated. I fear not. Many regard the proposed increase of five per cent as a very slight matter; but the cold facts are: A five per cent increase for the Eastern roads, involving fifty million dollars, is but an opening wedge, that in the end will mean a general increase for all the railroads in the country, aggregating one hundred fifty million dollars. These increased charges will be paid primarily by the merchants, and finally, in the higher cost of food, clothing, shelter, coal, lumber, and so on, by the public. The most prosperous year for the railways was 1913. Their total income was the largest, and their profits would have been the greatest in history if they had used the same proportion of their revenue for permanent improvements and maintenance that had been expensive proportion of railways received. provements and maintenance that had been expended during preceding years. The excessive proportion of railway revenues invested in cars, engines, terminals, tracks and improvements during 1913 represents profits, but in the form of property instead of cash. There was not the slightest justification for the advance in freight rates demanded by the railways and refused by the commission in 1910 and there is now no institutional or an increase. The facts subjustification for an increase. The facts sub-mitted by the railway officials themselves condemn the whole scheme.

The Public Suspicious

There has been an immeasurable increase in the wealth of the world and we are en-joying comforts and luxuries undreamed of by our ancestors, chiefly on account of useful inventions and the advance from the cruder methods of transportation to the present system. These are the factors which have contributed most largely to the marvelous advance in our material civilization during the past hundred years. But are we come to an end of this advance so are we come to an end of this advance so far as aid from cheaper transportation is concerned? After the age-long forward march, are we now to face the other way and retrace our steps? If the cost of everything we buy, including transportation, is to advance, it cannot mean anything else but that we are nearing the end of the increase in the comforts and luxuries of civilization. And I for one refuse to believe that transportation cannot be made very that transportation cannot be made very much cheaper and very much better than it now is. I believe it can be made so under government ownership and control. I see

no such hopeful prospect otherwise.

Even if an increase in freight rates were as imperatively required as the railway people claim, it would be exceedingly difficult to secure the higher rates sought. The people are justly suspicious of the correctness of the arguments advanced for the proposed increase. They do not believe all the facts are in their possession. They think it is likely that the New Haven and the Frisco, and possibly other roads, need more money right now, but they are ex-ceedingly reluctant to furnish the added money in the shape of higher freight rates Under government ownership the people would know or could learn all the facts at any time. If an advance or reduction in rates were needed it could be easily made. In Beigium and Germany the fullest publicity is given regarding railroad rates and

The lovely lady of the little village

will win one of the 50 cash prizes Ansco Company offers-\$5,000 in all-for photographs of "America's 50 Loveliest Women." You know the lovely lady of the little village or the lovely lady of the big city. It is your duty to photograph her, or have her photograph taken and enter it for a prize in this nation-wide competition,

Every corner of the United States and Canada will send its loveliest women's photographs. Interest is tremendous. Bear in mind that the portraits chosen will be shown at Ansco Company's exhibit at the Panansa-Pacific Exposition, which opens at San Francisco, February 20, 1915.

\$5,000 for Photographs of America's 50 Loveliest Women

Fifty prizes! The first is \$500 - not one less than \$50. That should interest you, who know a lovely woman, be she a wife, a mother, a sister or sweetheart. Here is her opportunity for fame and year opportunity to win a prize! The Jury of Award, who will select the winners, has been chosen with great care. It will delight every contestant to know that it consists of

Your Ansco dealer will give you all sorts of interesting information regarding the contest, and will gladly supply entry blanks which name the few and very simple conditions; or write us if there is no Ansco dealer near you. This Ansco contest is open to everyone. There are no restrictions as to make of cameras, film or paper.

Contest opened May 1, 1914. You have not a moment to lose.

ANSCO COMPANY (Dept. D) Binghamton, N.Y.

Producers of Anaco, the amateur camera of profes-stonal quality: Anaco color-value film; Cuba, the paper that gives prints of rich, soft quality that never fade, and Anaco photo chemicals. Their value in producing superior results has been process many years.

finances. Is it any wonder that Mr. Bran-deis, in his brief for the shippers and con-sumers against the increase, said: "Let the consumer beware of the vicious circle of ever-increasing freight rates and ever-increasing

All this illustrates, too, the deceitful character of the arguments of private rail-way advocates. In one breath, when talking to those out of sympathy with the rights of labor, they say government ownership would make rullway employees politically arrogant and economically overpaid and lary. In another breath, when talking to the railway workers, they say the employees under government ownership would be underpaid, servile and afraid to unite und strike for their rights.

Strike for their rights.

The courtesy, efficiency and manliness of the employees of the Post-Office Department is a sufficient reply to such charges.

Would there not be a much greater incentive to diligent work in all departments of railway employment when the men were given a square deal than now when a preponderant proportion of the men do not surn a fair wage, and when most of the real benefits go to those who are not workers at all? Would there not also be a greater incentive in the increased safety to life

under government operation?

It is said that rallway service would not be developed to its full capacity without the incentive of private profits. The truth, proved over and over again, is that the governments of the world have to do those things they dare not intrust to the incentive

things they dare not intrust to the incentive of private profits. They have to chart the seas and light the shores to keep the ships operated by private owners for profit from being wrecked.

Block signals were opposed, and now steel cars are being opposed, because they interfers with profits. The Government of the United States built the Panama Canal under the direction of a man who was paid fifteen thousand dollars a year, and it will fifteen thousand dollars a year, and it will be operated for the world's benefit and convenience, regardless of profit. In Alaska, private railway building failed and the Gov-ernment had to go into that pioneer field. What public convenience or service that is in private hands has been run as efficiently and with such wide-awake enterprise as has the postal service, without regard to profit?

And so one might go on.

Mr. Andrew Carnegle said to the Ways
and Means Committee of the House of Representatives in the tariff hearing of 1908;

"Gentlemen of the Committee, allow me to "Gentlemen of the Committee, allow me to address you in one word: Figures will do nothing but mislead you if you do not apply your brains to such questions as these on which I address you." He said also: "There are more ways of liguring cost than there are ways of killing a cat. It is a simple matter of bookkeeping." And he added: "Well, gentlemen. I have told you over and over again that I do not judge by figures given by interested parties."

Capitalization Per Mile

And so, in keeping with that advice, I have laid the emphasis in this paper on the broader facts and principles involved—facts and principles that no clever book-keeping can get round. I have used figures only as they have taid their own unevadable story. And it is on the broad physical facts that the threaten records are notice. facts that the American people are going to solve this base between transportation for service and transportation as only an incident to profit. And let me say that the figures, too, yield to analysis and tell the same story as do the broad physical facts. They tell that the railways' capitalization in Europe is larger than the average capitalization here, because, not only do the railways there have to buy expensive rights of way through thickly populated regions, but the roads there have been brought to a far greater standard of efficiency and equipment than have the roads here.
The official report of President Arthur

Twining Hadley and others of Mr. Talt's Railroad Securities Commission furnishes ample evidence of this.
"The average capitalization of the rail-

rouds of the United States is about ninety thousand dollars a mile," said Secretary Laze, of the Department of the Interior, in a letter, dated January 19, 1914, to Congressman Houston.

"The 2042 miles of government owned and operated railroads in Canada show a capital cost to the Government of an average of \$47,237 a mile,"
Wirconsin made a physical valuation of

all the railways in that state and found the

present valuation per mile to be \$35,490 or June 30, 1911. The railways of Wisconsz represent more than an average in cost of construction and equipment to the mile as compared with the average cost per mile of all the railways in the country. In making their valuation the engineers in the employ of that state included within that valuation Wisconsin's proportionate share of the cost of the terminals in Chicago, St. of the cost of the terminals in Cheago, St. Paul and Minneapolis, and also of all the terminals in the cities within Wisconsin. They also made an estimate of the cost of reproducing all the railway lines in Wisconsin from absolutely new material, paying the present price for materials and rights of way, and found that cost to be \$44,597 a mile.

a mile.

The Union Pacific Railroad in Kansu is a high-grade property. The State Railroad Commission, under state laws, placed the physical value of this railway at less than forty thousand dollars a mile. The total capitalization of the Union Pacific System per mile is \$146,012.60.

Increases in Dividends

There are very few railways in the United States that are so well built equipped and managed as the Santa Fe. It has extensive and expensive terminals a Chicago, Kansas City, Los Angeles, Sar Francisco, Denver, Fort Worth, Dallas Houston and Galveston. It traverses the mountain ranges west of the Mississippi, are its cost per mile of construction and equipment is certainly higher than the average cost of all the railways of the country. In total capitalization of the Santa Fe amend to only \$58,346 a mile and its stock sells a to only \$58,346 a mile and its stock sells at the market at about par. It is well know that a large amount of the common stoc issues of the Santa Fe was used for promi-tion purposes and does not represent ou-paid into the treasury of the railway or un-

paid into the treasury of the railway or an physical property value.

After making fair allowance for depression in the value of care, engines, track bridges, buildings, and so on, on account-age, service and wear and tear, fifty the sand dellars a mile would be an extravaga-estimate of the reproduction value of the railroads in the United States.

Statistics show that the amount of ra-road stocks yielding dividends increase from \$2,668,969,896 in 1900 to \$5.781 250,326 in 1911, how the average rate dividend-yielding stock has increased fro 5.23 per cent in 1900 to 8.03 per cent 1911

1911, and how the average rate of returnial stock has increased from 2.39 per ce in 1900 to 5.43 per cent in 1911.

The figures on all the bodgepodge of rawill show the most glaring injustices, a surdictes and wrongs that most communitations of the said that all these evils will yet to regulation, the fact remains that the

to regulation, the fact remains that the have not yielded to regulation. Taxation? The railroads merely cha-it as one of their expenses that freight a

passenger rates must pay.

Franchise taxation? The courts to held, notably in the Consolidated Gas of that if the people tax a corporation in thise they have admitted its value. rate-making purposes

Court review of railway charges? We that is one of the chief weapons of the reway against the public. Mr. Justice Brewin deciding the case of Smith versus Ansaid: "If it be said that the rates must such as to secure to the owners a reasonable magnetic to the owners a reasonable magnetic to the owners as reasonable magnetic to the owners. ble percentage on the money invested. it be remembered that many things have a pened to make investment far in excess of actual value of the property—injudici contracts, poor engineering, unusually a cost of materials, rascality on the parthose engaged in the construction or unagement of the property. These and mother things, as is well known, are far that have largely entered into the invented with which railroad properties at charged." Contrast that record with clean, honest, efficient government coast. be remembered that many things have h clean, honest, efficient government const tion of the Panama Canal.

Regulation? Right now the railways trying to have the Interstate Comm Commission empowered to pass on all ! stock and bond issues, in order that as Rallroad Securities Commission warned as others have warned, their securities

have a practical guaranty of face value the United States Government. Regulation? No; it does not regulate in spite of the splendid service of the is state Commerce Commission and thele though able service of the several s

commissions. A few years ago, as some one has pointed out, everything was going to be made all right by allowing the railways to coperate, pool or unite with the interlocking directorates, under government superrision and regulation; but now everything is going to be made all right by breaking up railway cooperation and pooling and unity

tes. And so it has gone!

President Ripley, of the Santa Fe, and many lesser lights in the ruilway world are stating without reservation that govern-

ment ownership of railways is coming, and they are predicting that all kinds of disasters will happen when it does come.

If private ownership is a success, if regulation is effective and satisfactory, why is there such a widespread demand for government ownership of railways and no cenard at all for private ownership of parel post? Universally, railway systems have been founded by private capital; but today practically every country in the world, except the United States and Great Britain, have entered on the project of public ownership.

No railway system once taken by the Government has been permanently returned

to private ownership.
According to Professor Richard T. Ely:
"Our American railroads are incomparably nore in politics than the German railroads.

President Hadley, who is opposed to puls-lic ownership, says: "In judging the rail-road policy of Belgium by its results, all must unite in admitting that they are in many respects extraordinarily good." Travel in Germany is six times safer than in the United States, and it is fifteen times rate in Belgium.

ader in Belgium.

Mr. Acworth, the leading English author-ly, admits, as do other English authorities, that is spite of over three thousand regulaare enactments by Parliament in a country size laws are made to be enforced regulaton does not regulate. Private ownership in England emphasizes the tendency everystere under such ownership and control toward concentration of wealth; while pub-ic ownership and control, as in Belgium, Germany, Denmark and New Zealand, tend toward diffusion of wealth.

If the question were submitted to the voters of the United States, how many men and women would vote to turn over our pestal service and parcel post to the express companies or to the railways, or to Mr. Sockefeller or to Mr. Hill? A fair compar-ion of the Post-Office Department, where service is the end and aim of its methods. banagements and operation, with the railmay companies and their paraettical parior az and express companies, where profits are dint and service of secondary importance, vil be valuable to those who are unprejutied and interested only in the greatest god to the greatest number. Is there anything so blind and stupid as the familiar but arthinking statement made by defenders of invate privilege in this country that the roved by the postal service?

If Rockefeller Carried the Mails

Where did these critics of the postal service get the idea that this service compites unfavorably with railway service or with big business of any kind in private

In what respect does it compare unfav-stable? Not in price; if anything is self-stident it is the statement that if Wall Street financiers were running the postal up for a letter from Chicago to Liverpool or London would not be two cents, but

learer ten cents. Nothing in the world is more certain than that if John D. Rockefeller or J. J. Hill sere running the postal business, and if soybody were during enough to suggest that they extend free daily delivery to the lams, Mr. Rockefeller and Mr. Hill would Phythat the suggestion is ridiculous on its as: that any one should know that free fund delivery every morning could not pos-sibly pay; that it must result in a constant deficit and therefore is not even to be consdered by a same business manager. Free tanyroral mail delivery under private postal management would not be introduced in this country before the year 2000, if it were ever ptroduced.

The best proof, however, that the postal to loss proof, nowever, that the part of the last in the last of constantly declining charges at a three when the price of everything else has enamed; it is not in the fact that the

postal service is a real service and considers the convenience and the interest of the whole public first and profit afterward; it is not in the fact that, though constantly reducsing charges for postage, the service is con-stantly broadening, as in the case of free rural delivery. It is rather in the decisive fact that the postal service is the only big business that touches everybody in the United States against which is no general

Consider these remarkable facts a moment: Your mail does not go astray. It is not unduly delayed. It is brought directly and promptly to the very door of your

It is, considered as a system, satisfactory service. The American people are not slow to complain when things do not go right and they would raise loud complaint if the postal service were unsatisfactory.

To many government ownership seems new and strange. Even if it were new, that would not necessarily be a presumption against it; but, as a principle, it is not new. The Government that may regulate railway rates and service may own and operate railways if such ownership and operation be in the public interest. It is a principle always recognized by our courts that the railway right of way is a public highway, to ise used not primarily for the benefit of the owners of the railway but primarily in the interest of the people.

The Paramount Question

A railway company may get its property by condemnation proceedings. The prop-erty it gets and properly gets for its own use in this way was evidently not the prop-erty of the previous private owners in such a sense that they could do with it what they hose: In fact, no such property rights exist. Much less is railway-owned property the property of the railway to do with as they choose. Property acquired by the railways by condemnation proceedings may surely be taken over by the people collectively under similar proceedings. The public interests— the general welfare of the preamble to our Constitution-is really the only question involved.

The implication of the words general welfare is pretty wide. It is becoming increasingly clear to all our people that there is nothing that makes for the general welfare which the people may not do. We are hearing less often than formerly that the people the Government—may not do this or that which it is desirable in the public interest

Occasionally some belated person is heard to say regarding some proposed measure that it doubtless would bring benefit to the public, but that it example be put in force because it examples our form of government.

What is our form of government for? Do we exist for the sake of a form of government or is our Government in all its forms simply an instrument by which we may serve the best public interest?

In considering this question of government ownership of railways and of the municipal ownership of local public utilities, it should be remembered that the only really important question is the people's rights and interests.

We shall do well to keep steadily in miod the famous saying of Lincoln that "There are no rights against the rights of the people." Of course it must be understood all the time in this discussion that there is no intention of doing any injury to any one. It has always been recognized by our courts that to take over any property for a public or a quasi-nublic purpose. or a quasi-public purpose, at a fair rate of compensation, works no injury—no legal injury to the dispessessed owner.

There are two main functions of government—one is restraint, the other service.

Doubtless there should be as little restraint on individuals as possible, and none at all, except in the public interest; but who shall set limits on the service the Government. may render the people? Certainly no one except the people themselves. The limit cannot be set by any philosophical theory

of government. There are numberless sound and valid reasons not referred to in this paper why the public should own and operate railways, waterways and water power; but it must always be remembered in discussing this subject that the only way success can be assured is to keep these utilities absolutely free from politics, and apply the same business principles to their management which were used in the construction of the Panama Canal.

Two Great Efficiency Features make the PARKER JACK KNIFE SAFETY PEN Leak-Proof

You can handle a Parker Jack Knife Safety as carelessly as you like - the ink cannot ooze out. It can be carried upside down, right side up, or flat -- in a man's trousers', vest or coat pocket -lady's purse, hand bag or work bag-or tossed care-

lessly into a trunk tray. It is ready for use the instant you want it and positively will not leak. The Lucky Curve Ink Feed and Patented Ink Lock are the two great efficiency features that make the Jack Knife Safety Pen leak-proof. You will find it a wonderfully handy and loyal companion on your travels or summer outing. Geo. S. Parker.

Jack Knife Safety FOUNTAIN PEN

The Lucky Curve Ink Feed, borrowing nature's wonderful law of capillary attraction, draws the ink back into the barrel after you have finished writing, instead of allowing it to be pushed out by expanding air caused by the heat of your body when returned to your pocket, as with ordinary

fountain pens. Only Parker Pens have the Curved Ink Feed, which is the clever idea that prevents the leak and ink-stained fingers and linen.

The Patented Ink Lock shuts in the ink tight and fast so that even when the pen is carried bottom side up ink cannot get out.

The new Parker Press-the-Button Pen extends the usefulness of the Self-Filler

This new self-filling pen has a perfectly smooth barrel - no outside projections of any kind - nothing to interfere with your grip or impede writing. It fits snugly into your pocket

OUT-OF-DOORS

In the Junk Closet

THE most wholly delectable place in the bouse, as any outdoor man known very well, is that certain apartment, room or recepture usually by the real head of the nose called the junk closet. There is where your true outer stores much wealth of doth-ing, game, rifles, role, fishing tackle, foot-wear, cooking uterails, and the general gear war, cooling attends and the general gear to classifies among his chiefest treasures. You have such a place yourself althout dealst. It is full of interest, instruction and history. For instance when, just the other day, while logging at a bootlace on the top shelf,

you called down on your head a blackened and bactered lettle—the stewpor that ac-comparied you on many tours—it might to another have mented empty at the time. Not as to you! On the contrary it held many things. There is much that a welleducated stewpot can teach any man, savage or civilized, outdoors or ladeors.

Not long ago, for want of anything bet-ter, I went rabbit hunting with a man who had a nort of shark out in the country, where semetimes he did a little trapping or shooting or honing at this or that time of the year. We had walked hard and were hargry; so presently we repaired to the shark aforesaid to make us up a west. No

one had been there for some days.
We found a loaf of bread: very dry, and mens coffee berries. Besides, we had some rubbits. It does not sound like much of a resal. Perhaps our banquet del not cost us over ux cents a place; but, quite sutside the suddexy appearse, the point in he made is that it really some good to est, and, with no better equipment, you also, in a like case,

We did not have time in our hanting to scop to make a sice; so for the time we fell back on that American stand by, the fryingpun Armetican and susteful, just as the stewped is European and economical. Our rabbit was rather freshly billed, to be sure, but fresh corefed rabbit, when young, is good to est. The proprietor of the shack, one of those outdoor men who not naturally lake to doing things right, proved this to our contust mentalectors.

One Way to Cook Rabbits

He half a fire in the coolescove and beated up abundance of het lard in his frying-gam. Into the to put sections of the choicer gate of a graphe of rabbits, which in choicer rate of a recipit of raidsite, which in a low research were similing but and dis-posed to be golden brown to color. The point is thus in did not simply try he rat-tit and then take it off, more or less tough and strings. On the contexty, after it was need exclude in poured some water in, with the fried rabbit, put on the cover of the pun, and allowed it to stress for a few mo-ments. This is a trut worth remembering. It made the rabbit wery tender and secon-It made the rubbit very tender and seconmuch butter than it would have been if semply fried and left more or less promy.

Our rook had reured off seem of the gream infore pasting in the water, and now he pre-emission and thou and a tribe of salt, with the result that he falcented a very occellent gravy for the trade; catchill. Meantime in had rad some slore off the dry load and placed them to a stripping-poor, which is slart up to the over. To my own intelli-gence they did not some individual of bread, awinted to total.

ther must percently apened the over door and appreciated the alonely browning sizes of toroid wall water. "That if make her ten-derer," said by and so it did. The bread are very valuable and sweet, as was the rabbit. The point is that water and steam. are of one to building fresh rabbit or dry sterog with it puchage you have con yet rissorvers. What with these two thems and a good pot of colles, we would not have agreemented our barroast plates for ex dollars and to that is sure?

We led to tabling of street, regretting that we had not from to the time to overgallen that we had not from to the time overgallen that we had a feather a big time to that we make the control have a big that we have a big that we have a big that we had a begin the owner of the

" and on I get about set that ear

Since we could not have our stew at the time, it was agreed between us that we should devise meantime a formula for a real stew, to be executed in town the following day. It was so devised, formulated and executed.

And here we come to direct proof of the virtues of the stewpot proper.

We called our stew a Brunswick stew, using the name of a compound as famous as it is various, which seems to have come down from the past to the great good of those who hunt or those who like game. Properly speaking, it is a game stew. As to its dimensions, ours filled perhaps two-thirds of a three-gallon stew kettle. The compounding and cooking created great excitement in a certain household for the better part of a day.

We had, as it chanced, a squirrel, besides abundant rabbits. More squirrels would have been better; but in a hunter's siew of this sort you are to use what you have-ducks, rabbits, qualls, grouse, or whatever has fallen to your how and spear. Meat such as venison you can stew, but perhapin that case you will not get so delicate and tasteful a compound as we certainly discovered ourselves to own.

What Went Into the Stew

We put in our solltary squirrel, as well as the hind legs and saddles of about three rabbits, more or less, carefully cutting out the bloodabet portions and throwing away the flanks and most of the foreign. The remainder of the meat was washed clean while we took up the vegetable side of the problem

Into our kettle we poured the contents of one can of mock-turtle goup-real gree turtle would have done quite as well -a ran of tematoes, one of corn, one of red lodgey

of tematoes, one of corn, one of red indexy beans and one of green pens. We poured off most of the liquor from the pess, but added a quart of water to the contents of the kettle and then put in the meat.

Meantime other departments of the contents were active. We had about a pound and a half of bacon—salt pork would have been as good or better—and this was contributed as with a hunting knife, clean through to the rind, so that it fell apart in they cubes not over an eighth of an inch. tiny cubes not over an eighth of an inch across. Notice we did not dump these indiscriminately into the stewpot.

On the contrary we fried them thoroughly in the frying-pan and poured off most of the grease, leaving only sufficient grease thoroughly to fry three large and succulent onions, which gave off fragrams of exceeding excellence. The contents of the frying-pan next went into the stewart Some one thought it would be fine to put in plenty of salt; we so put in about three

Some one thought it would be fine to put in plenty of salt; we so put in about three tablespoonfuls. It was not too much. A stew needs plenty of salt. We also towed in a teaspoonful, I should say, of pepper. Nor was this all. The stew needed some thickening and richening. All the ingredients we had used —meat, bacon, vegetable and all—were first class of their kind and all—were first class of their kind. Fresh vegetables would have done as well no doubt, but we did not have them. Now we took about half or three-quarters of : pound of fine butter, and about a teacupts of flour, and mixed these thoroughly en a plate. The compound resultant, whateve it may be called, also went into the stewper

There seemed to be nothing else we could put in at the time; but a glance happening to fall on a bottle of table sauce, which stood near by, we put in a tablespoonful of that for luck—and it was an inspiration Added to the abundantly spiced nature of our can of mock-turtle soup, we now had a nea compound, the proc

of which was in the eating.

of which was in the eating.

It was now one-thirty by the clock. Reverently we placed our stew kettle on top of the stove, with a good steady fire benead it, of heat just sufficient to keep it simmering steadily. Then most of us went about the business. The pot was watched four time to time during the afternoon. Sometimes it was stirred to keep the flour for sticking to the bottom. It was only with sticking to the bottom. It was only will the utmost difficulty that the assistant als did the stirring could refrain from falling ence on the contents of the kettle, so appeal ing had its fragrance become within the

space of two hours. At seven-thirty that ame night we ate about a gallon of it. It

was delicious!

Take our word for it, if you make a stew on precisely the foregoing lines it will be a specess. Also, it will be a square meal. It vill be first aid to the injured and a balnced ration all in one. Fed on this manner I manna—or manna of manner, as they would say in New York—you shall go forth and prevail mightily in the land. As to that such a stew as this would mean to party of tired coonhunters at midnight's oly hour — Hush, man! Let us not peak of sacred matters!

Our camp cook, the hunter and trapper,

eclares himself of the intention to set up he Brunswick stew as one of the instituons of his shack, winter or summer. He iys that in the summertime they often atch a good many mud turtles in their nets, ad he is of the belief, in which I concur, that artle flesh will be excellent in one of these

irtle fiesh will be excellent in one of these lows. So would quail or grouse be excelmt; and in camp one could add beams or
ce, or such vegetables as offered.

Perhaps the tin of commercial mockprite soup is not ethical; yet, like other
methical things, it is mighty practical.
There is something in the high flavoring of
the tinned soup that makes the whole commentioned tasteful. Perhaps even half a tin of
the soup would be sufficient. For most
sets, however, the seasoning mentioned stes, however, the seasoning mentioned heve will prove very alluring. All of which matters very naturally come

your mind when your pet stewpot falls If the top shelf in the junk closet and lands

your head. What is the best stewpot for camp use? bylously the one you happen to have, ou may use an iron kettle or a Dutch oven a powder keg, or a square oilcan or lardse. Or, if you are lucky, you may have a aluminum kettle. Do not get a stewpan ith the long handle on the side, for you an neither cook so well with it nor handle so well. Only, remember that your fire so well. Only, remember that your free cooled sever be extreme and that your cooking of the stew must extend over several cars' time. Indeed, a good hunter's stew an imperishable and perennial thing ou may put fresh stuff into it every day ad keep it going throughout the senson if ou like. Do not burn the stew. Take your me about it. me about it.

For the enting of a stew a large tin cup is excellent receptacle, or a deep tin plate. to not try to make your own dishes out of ork and such stuff in camp. You might do but it is not necessary. Also, you can make fire by twirling a hard stick on a piece of ourd; but it is much simpler to strike a satch on your pants. This is a practical age.

A Thousand-Dollar Secret

As to that large wooden-handled fork and that long-handled spoon so often rought to mind, see that they rest by your reside; and when you are moved to fabriste a stew take the aforesaid long-handled. oon and bend the top of the handle into hook. Then it will not allp down into he kettle. This idea is known to but few not is worth at least a thousand dollars to

ny man. Do you remember the time in the mounins when you killed your first elk, the one ou had longed for those many years? And hen you came into camp long after dark, red and happy, leading your own saddle-orse with the elkhead lashed on it, do you of recall the fragrance which rose to your estrils where the camp fire was making ook was going about getting things ready, nce he had heard you coming? And do you remember that in the kettle

e had a stew of meat and vegetables hich he had put on that morning when ou started out? This perhaps was the our rifle against the spruce tree and loosned your belt at the close of the day. The iew and the coffee, and the grilled elk-ribs pasted in front of the fire-even the bit of

ver done in the frying-pan—something of memory—eh? What? And it all came back when the stew-ettle dropped and smote you on the occiphal portion of your cranium, nut or coco.

Nor was that all that happened. When
you were putting the kettle back on the top
helf whence it had fallen you knocked from ne of the hooks another precious possesion. It was fragrant alike in memory and fact, fragrant with the smoke of the camp

nd the memories of the open-your wekskin shirt.

It all depends on what you want to do. In church or at a directors' meeting or at grand opera a buckskin shirt is not particularly appropriate. The hunters' clubs of the great cities sometimes give buckskin dinners for the lark of it. These big gameclubs are now active and growing institutions in some of the larger cities—bodies such as the Hunters' Fraternity, or the Campfire Club, or the Boone and Crockett Club, of New York; the Lewis and Clark Club, of Pittsburgh; the Hunters' Fra-

ternity, of Chicago—and so on.

Most or many of the members of these
clubs will sneakingly admit the ownership of a buckskin shirt and confess inability to name a proper place to wear it in these modern days. It is the most impossible and yet the most impeccable garment of the

sportsman's trousseau.

For the Simon-pure incorrigible there is no smell in the world quite so fine as that of smoke-tanned buckskin. It is as imperish-able as attar of roses and far more sweet— the smell of the smoke that lingers with it. When the stew-kettle fell on your head, and when the stew-kettle fed on your head, and you stooped to hang up your wholly absurd, wholly useless huckskin shirt, you esuid hardly keep from pressing the shirt to your face and taking a deep, strong inhalation, if only for the sake of the pictures in it.

In the old days of the weekly funny papers of America one of the erstwhile lamous humorists wrote a story about the

famous humorists wrote a story about the man with the velvet mot. It was his allegution that every man, no matter what his station in life, had at one stage or other of his career either owned or yearned to own a velvet coat. Now that I recall it, I wore one myself when I was very young. Did not you? Therefore, as to a buckskin shirt, of course you have one, or want one, or are going to have one.

The Wonders of Buckskin

What a map of the nutdoer world hangs in the little junk closet! Here are rolls of buckskin from almost everywhere-Kostenai buck, white and fine; and Blackfoot bighorn, soft tanned; and Crow-tanned elk; and Microse mouse; and caribou from above the Arctic Circle; and other mouse from the Peace River country - what a waste of time there has been for some of us, to be sure! But who would part with any one of these useless rolls of buckskin, whether soft and white and odorous, or yellow-brown and rich in smoke? After a while—sometime one is going to make something out of one or other of these skins. Is it not true?

However, take buckskin just as an articie, as a fabric, as a product—an industrial product. It has not only history but exseedingly interesting history. Moreover, it has utility, even where it does not own the stamp of fashion. So far as I knew at the time, I was the first man of my acquaintance to have my shoemaker make me up over a regular last a pair of shoes built of moosehide, smoke tanned by the Croe Indians.

There was never a better pair of walking above made than those. Of course they would not turn water; but, made as they were with a flexible sole, they were the softest, coolest, warmest, dandiest boots I ever wore! I made a present of a similar pair to a friend in Winnipeg. They laughed at him—until winter came. He did not need overshoes. need overshoes.

Then again, perhaps you have noticed mudame, with her fine white boots to go with her piqué costume in the summertime-boots made by her own bootmaker over a private last. Being white, perhaps they make madame's feet look a little bit large; but even feminine vanity will condone that in view of the extreme case of wear, Her bootmaker has sold her buckskin, white buckskin, made by a white man, not worth the tenth of Indian-tanned buck, yet excel-

You can make your own buckskin if you are a regular woods rat. I cannot think of any accomplishment more utterly useless than an ability to make buckskin; but it is the utterly useless things of life that give us nearly all the fun we get. The best teacher you can have is an Indian woman. Indeed it is much better to let the Indian woman aforesaid do all the work of making the buckskin. No white man can really pitch a lodge so it will not smoke, or make buckskin of an even and permanent softness and color. It takes an Indian woman to do

Your Indian has no conscience and he knows the best buckskin is summer-killed doe. Buck leather from elk is not so good.

CAR with every refinement, ample in power, exquisite in line, and with the same relative proportions, on a smaller scale, as the famous Oldsmobile Six.

It is a car to delight the eye, for it has the same general appearance and body lines, and the same faultless finish as the larger car that has during the past season brought added prestige to the Oldsmobile name.

There is a carefully developed idea behind the production of this smaller Oldsmobile. We know there are thousands and thousands of customers waiting to buy this car,—customers who have long been looking for a light high grade, quality automobile, a car that promises all the distinction, beauty of design, refinement of detail, abundance of power, and general mechanical excellence heretofore characteristic of only high-priced cars.

Power in abundance. The motor is a unit power plant, three-point suspension, overhead valve type, all valves enclosed in Oldsmobile aluminum silencer. There can be no doubt that this car develops as much power in proportion to weight as any other four on the market.

Equipment complete, including Delco electric starting, lighting and ignition systems.

Ask for Catalog B, describing the Oldsmobile Four. There are many who prefer a six-cylinder car to a four.

We have been supplying the demand for sixes in increase ing number every year, and will continue to do so-with what we believe to be "The Greatest Six-Cylinder Motor Car Ever Produced."

Combination 4 or 5-passenger Phaeton, touring body type, \$2975; 7-passenger touring body \$175 extra. Limousine \$4300. Catalog A, describing the Oldsmobile Six, sent on request.

> OLDS MOTOR WORKS Lansing, Michigan

This haphazard expression is common among inexperienced motorists. It often brings costly penalties.

The motorist should never rest satisfied simply because he area no

You cannot spare time to frequently examine your wrist-pins and bearings. Nor can you, after each run, inspect your cylinder walls and piston rings for signs of faulty lubrication.

Every good automobile motor is built to stand abuse-for a time.

No matter how inefficient your oil is, your motor for a while will "seem to work all right."

But high fuel bills often point to power-waste-sometimes directly due to incorrect oil.

And the poorly-lubricated motor which "seemed to work all right" too commonly is headed for the repair

Lubricating oil, to prevent powerwaste and premature motor wear, must have two qualities.

- (1) Its body must be suited to your feed system, piston-clearance, bearing design and many other important factors which differ with different
- (2) Its quality must give full protection to the moving parts under the heat of service.

How can you make sure that your inbricant to correct in budy and high in quality?

A sale, scientific guide will be found in the carefully studied recommendations listed in the Lubricating Chart, printed in part at the right. Each recommendation in this Chart was made after a careful engineering analysis of the car's motor.

For a number of years this Chart has been the standard scientific guide to correct lubrication.

A copy of our complete Chart will be sent you on request.

On request we will also mail a pamphlet on the Construction, Operation and Lubrica-tion of Automobile Engines. It describes in detail common engine troubles and gives their causes and remedies.

The various grades of Gargoyle Mobiloils, purified to remove Iree carbon, are:

Gargoyle Mobiloil "A" Gargoyle Mobiloil "B" Gargoyle Mobiloil "E" Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

It is safest to buy in original barrels, halfbarrels and sealed five and one-gallon cans See that the red Gargoyle, our mark of numulacture, is on the container.

For information, kindly address any inquiry to our nearest office. The city address will be sufficient.

(OMESTIC BRANCHES: Pulladelphia

New York Minnespoise

Chicker Pilitabungh.

Moose makes far better leather, especially for moccasins. If there were any antelopes left you could even use their hides. The whitest and softest buckskin, for so we still must call the native product, was made from the skin of the mountain highorn. That was the skin of which the Indian women fifty years or more ago made their finest dresses, genuine works of art of much value today—the sort that once were covered with the now priceless teeth of

It was marvelous how white the leather was often made by these Indian artisans. Today in the Far North, north of fifty-five, you may go into an Indian's dirty tent and, by proper inducements, find at length, hid under the ragged blankets or odds and ends scattered on the floor, a bag inside of which is a snow-white skin of caribou leather. That is the sort the Indian women use for the tops of their fancy moccasins. They smoke it then; but if they are using it for an ornamental band or flap they leave it snow-white, embroidered with fine silks or oreamented with heads.

I do not know how they make this white tan; but very probably they do it by repeated washings and wringings and rub-bings. Perhaps they use a little soap. I do

hings. Perhaps they use a little soap. I do not think they use any alum.

In general, Indian-tanned buckskin means the yellow-brown smoked article. Perhaps you remember grandpa's buffalo robe. It was sort of dark colored on the inside and it was split up the middle and sewed together. That meant it was a genuine Indian-tanned robe, the best ever made. A large buffalo skin was too big for the Indian woman to handle well in tanthe Indian woman to handle well in tanning: so she split it, tanned the two halves, and then sewed them together with sines thread, the same sort of thread that Lizette, a woman of the Loucheux, on the Mackenzie, has used to sew her white caribou these

Laughing Water tanned her buffale bides by the same process she used on elk or sheep. The only ingredients she used were sheep. The only ingredients she used were braites, muscle and patience; beyond a little smoke, that was all. And the greatest of these was patience. Of course the buffalo robe retained the hair. It was stretched flut on the ground, flesh side up, and then scraped, pared and chipped thin by the Indian weman with her little hone or iron-edged hoe or scraper, a tool you could never learn to use, but which in her hands did magic. She did not salt her buffalo hides and she never had seen alum, that hape of and she never had seen alum, that hape of good for often used as a ready aid in ama-teur tanning. She simply used patience and musele, and maybe smake.

The Indian Woman's Art

In buckskin proper the hair must be removed, of course. If the Northern Indian is making a caribou coat for warmth the hair is left on and the hide is tanned as the old buffalo hides once were. For moccasin or shirt leather, used for tobacco pouches and the like, buckskin proper had to be made. The first thing in the making was to get the hair off.

The savage tanner had no vata. She

knew, however, some running stream or muddy pond. Her first step in getting the hair off a hide was to bory it in the water or in the mud for from three days to a week. Usually in four or five days the hair would slip off readily. Then Laughing Water would take her buck hide and throw it over a low or pole, and working from the neck a log or pole, and working from the neck down, with the grain of the hair, either with her little iron hoe or with the back of her butcher knife, which she used as a graining tool, would remove every trace of hair literally with neatness and dispatch.

Sometimes round Chippewa camps I have found great heaps of deer hair, and it felt coarse and gritty, as though it had ashes in it. I suspect that ashes were added to the water to effect the slipping of the This was not necessary or typical in the Indian camp. Usually the process was to bury the hide in clean water.

From this time on, savage and civilized tanning lose all likeness to each other. The white man uses tanning liquids and produces leather. Laughing Water uses nothing of the sort and she produces buckskin, which is not leather at all. There is no remance about leather; you cannot grow enthusiastic over it. It is something dead. Buckskin, however, is not something dead but something alive. All its original chemis-try is still there. All the fibers are there, only they are broken, so that they are permanently sollened.

Laughing Water takes her buck hide now and reverses it on the beam. Now the begins to scrape on the flesh side. This is work of art and may be a work of genia for some Indian women are noted above on their skill in dressing hides. Here is the operation essential to the success of the Indian tan—all the integument must be removed, all the horny spots taken out, all the flesh removed. Working over the bear or perhaps more often flat on the ground and quite often with the hide head in and quite often with the hide laced in a frame, Laughing Water keeps on patiently, skillfully, with her scraping tool of this or that shape, until the flesh surface of the hide is even and soft. She may do this n one day or in several.

Perhaps the hide now has been a week a the tanning. Laughing Water is in a hurry about it. If she were tanning a bear hide in all likelihood she would lace the hide in a pole frame and use it as she would a buffalo hide. Sometimes Laughing Water spreads the buck hide across ber knees and at risk of limb or finger, trims at this or that spot which does not suit her. The Gra-Ventre squaws were said to be the most particular hide-dressers of the Rocky Mourtains. Be sure the essential application of their art was in this part of the tanning or that immediately following.

The hide is now a rather ragged-looking article, but it is not parchment or rawhide. It is becoming soft. Laughing Water now calls in the neighbora. They twist and pull the hide every way, drag it round a lodg-pole, throw it over a thick sinew rope and saw it up and down, and do all sorts of things to break the fiber of the hide—that is to any price it its investigable spain. is to say, give it its imperishable quality. It takes muscle and patience to do the Perhaps in the Far North you may have sen small apruce trees with their tranks pend iarly hewn into triangles, sharp-edget. Here was where the women dragged mos-hides back and forth to make them soft.

Tanning With Brains

The last stage but one of the Indian tanning operation had to do with the permanent softening of the hide. Laughing Water took the skull of the deer or other animal whose hide she was tanning, split open with her little hatchet, and took out the braies. She now rubbed a thick cost-ing of the crushed brains not on the flest side but the hair side of the hide, where the grain was most open. If she were tanning s large bear or buffalo hide she might have a pot of mingled brains, liver, scrapings and grease; but the real secret of the Indian tal-is animal brains and nothing else. Laugh-ing Water allows the brains to dry into the hide slowly in a cool place; she never leave it in the sun or near the fire.

After the brains have dried in the hide it again rubbed, twisted, stretched and draw-until it is thoroughly soft. The brains do not leave it greasy, but pliable. They have some peculiar property all their own. The property was discovered by the American aborigine long ago, no one knows how Laughing Water accepts no substitute. There is nothing else just as good. At any stage up to this time it has been

quite possible to wash the hide clean will soap and water or with water alone, then wringing it and stretching it and rabbing it quite dry. There cannot be too much rubbing and twisting and stretching. No white man will take the pains to do it right but Laughing Water has done it correctly and she knows that nothing now remains but to results the hids.

but to smoke the hide.

There were different ways used in smoking buckskin. Sometimes a heavy hid would simply be thrown on top of a flat-roofed frame of poles, six or eight feet about the fire. The best buckskin was not made in this way, however. Probably Laughere Water would make a little pole tepes and stretch two or three hides round the littfire in the middle of it, reversing the haras they colored. She used whatever for she could get for this, but soft or punky wood made the best smoke.

Of late years it is to be confessed the Indian women of the reservation very often use a barrel as a smokehouse—that is le say, they knock out both ends of a barre and stretch the hide over the top end, over a little fire built on the ground. This smal-ing is kept up carefully and evenly, and much of the beauty of the buckskin depoon the thoroughness of this part of the

tanning.
At last Laughing Water looks on the work of her hands and pronounces it go-Then, some day, she sits down to make a

buckskin shirt. No white man or woman can make a buckskin shirt—yet the Indian woman is imitative of the whites these days; so very likely she cuts out her buckskin shirt on the pattern of an old flannel shirt she has ripped open. It opens part way down the front and is fastened with buttons very likely, the sort Laughing Water can very likely, the sort Laughing Water can find at the trader's store. She will also execute a little collar for the shirt. Perhaps she will make it double-breasted, like a fireman's flannel shirt; in which case, if Laughing Water is a Chippewa squaw living near civilization, she will execute on the bosom the head of a large buck with flashing eyes. Then she will sell it to you for twenty-five dollars.

twenty-five dollars.

The buckskin shirt proper of the old days was simply a tunic, collarless, and not opening in front more than just enough to allow the head to pass through. Sometimes there was a little flap, which buttoned across the neck. Of course no buckskin shirt is entitled to be called such unless it has fringed seams. When the Indian woman, having rolled over her knee the threads perhaps made of the back sinews of the buck himself, began to do her wonderfully neat and accurate seamwork, she let into the seam the edge of a strip of fine leather, which was cut into

narrow fringes.
You would not love your shirt so much if it were not for these fringes across the shoulder seams and down the arm seams. Why did the savage artist put them there?

Why did the savage artist put them there? It was to protect the seams against wear and the weather. Perhaps some heartless civilized squaw has sold you a shirt sewed with thread. It is bogus. The fringed shirt with sinew thread is the only real article. How much is a good buckskin shirt worth? Perhaps five hundred dollars. My favorite is a Crow shirt for which I paid eight dollars twenty years ago. In museums you will see Blackfoot or Cheyenne warshirts of the old days which would be cheap at one hundred or two hundred or cheap at one hundred or two hundred or three hundred dollars. It was by no means the case in aboriginal life that all garments were worked down to one utilitarian pattern. There were artists, designers, persons of style, persons of quality, dandles and

Perhaps the native woman who made one of these valuable old warshirts for her one of these valuable old warshirts for her lord and master would be engaged on it many weeks. The strips of twisted ermine had to be made and let in. The little brass cylinders and pieces of shining metal had to be affixed. Broad hands of colored porcupine quills must be executed to adern the front, where was to lie the phylactery of eagle bones or the like.

Styles in the Yukon Country

Perhaps you may read about how to tan buckskin or how to make a buckskin shirt; but the white tailor does not live who could take two thousand dollars and make one of those old warshirts to save his life or his honor.

So, you see, buckskin may have considerable history and considerable romance hidden in its smoky folds. If you can get a genuine Indian-tanned and Indian-made buckskin shirt today, made on honor by an artist, do not begrudge your twenty or

twenty-five dollars.

Buckakin has more warmth for its bulk and weight than any cloth in the world. An old plainsman will tell you the warmest way to wear your buckskin skirt is inside your trousers. The Indian did not wear his so because he had no trousers, only leggings. His shirt was the tunic proper, and this is the type of the plains and the Rockies. In the extreme Northern country, among the the extreme Northern country, among the Chippewaians or the Loucheux, the cont shirt seems to be more popular, a garment open all the way down the front. This type revails in the Yukon country also today. cannot say whether it was the ancient fashion of the garment in those latitudes; but probably it was not.

There was no native product of more barbaric and interesting splendor than the oldtime warehirt of the buffalo tribes of the West. Today their glory has departed. They wear flannel shirts, and if they sell

you moccasins those are made of beef hide. The moccasins you buy in Eastern Canada of the trade as moose, and which are sold in most of our American sporting-goods stores as mouse, are in nine cases out of ten made of beef hide. They are smoked and look Indiany; but they are spurious. They do not rub soft after wetting.

A piece of genuine buckskin, whether in

shirt or moccasin, will wet through like paper, stretch like rubber when wet, shrink like flint when left to dry, and yet rub soft us a glove if you take care of it when drying. My own favorite buckskin shirt has been drenched in many a snowstorm, but it is as

soft today as ever. The best buckskin shirt for a white man has no ornamentation whatever beyond the fringed seams. As to museum value, bonce, quills and beads come first, and then the more modern silk embroidery of the mission girls. You can see these at all the Northern fur posts, clear to the Arctic Ocean. The bendwork on the Yukon side of the Rockies is more profuse and rather handsomer than that on the Mackenzie side. Considered as a work of art and beauty. however, the finest burkskin shirts obtainable today come from Fort Nelson, on the Liard River.

Buckskins Too Good to Wear

These artistic garments-and they are indeed things of beauty and not merely examples of barbaric ingenuity - are made coat or jacket shaped, edged with for down the front and at the wrists, and with one or two bands of for, usually beaver, round the wrists or arms.

Across the shoulder-yoke, down the edges of the front, and round the wrists are broad bands of stained porcupine quills. This is the most expensive of all the Indian ornamentation and the most beautiful as

There are still a few women at Fort Nelson who can do this quillwork handsomely. There was one family at Fort Wrigley, on the Mackenzie, related to the Fort Nelson workers, I think, who also could do it beau-tifully; for we must see that this is the work of artists not many in number. I have seen such shirts sell at from thirty-live to fifty deliars. The women who made them would not get five cents an hour for the time they put on them. They are beau-tiful garments, but rather too fine and good for human nature's daily use on the trail. They are to be put on when the priest comes, or when there is a grand haptizing, or when one is a-courting. The post trader may have noe, but he will not be apt to wear it very often. work of artists not many in number. I have

This porcupine-quill work was used by some of the plains tribes, but they did it coarsely as compared with the Liard prod-

uct. Apparently only the small, fine quills are used. The best dyes are the native vegetable ones.

All this fancy work, however, is part of such history of the savage races as now has to do with contact of white and red life. Perhaps in your junk closet you have more

than one buckskin shirt. The older they are, the better. And it is your oldest one, the one with little orna-mentation, the actual hunting tunic made perhaps twenty or thirty years ago—the one with the imperishably fragrant smell of the smoke still lingering in it—over which you hesitate as you hang it up once more in the junk closet.

If you are a very sloppy man, and a lot of us are a heap sloppier than we admit, per-haps you linger over it just a moment or so and look at it thoughtfully. Like many another thing near it connected with the life of the open, it was a product of evolution, the work of an artist. It has thought in it, and history, and romance, and suggestion, and education too.

In short, of the entire household this is the very one apartment, room or receptacle where precisely the best things may be found. And they are classified as junk! Ah, well—and very well! Let it be so. All art is junk, in the same fashion of speech. You cannot really use a pirture, but you can enjoy it.

Why it is so rare

A skin you love to rough is rarely found because so few people really understand the idea and its peeds.

Begin pow to take your skin seriously.

You can make it what you would love to have it because, like the cest of your hody, your skin w continually changing.

As the old skin does and new forms, you have an opportunity to make the new skin what you want it to be.

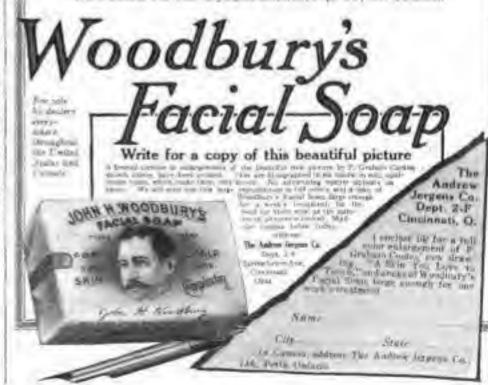

Make this treatment a daily habit

Just before retiring, work up a warm water lather of Woodbury's Parial Suap and rule it into the skin gently until the skin is saferned, the pures specied and the lace tools fresh and clean. Rises in cooler water, then apply tald water the rudder the latter—for a tall minute. Wheneren possible, esh your face loca few minimus with a piece of kee. Always dry the skin thoroughly.

Ow this treatment persistently for ten days or two weeks and your alth will-how a marked improvement. One Woodbury's regularly there-alize, and below long your skin will take on that four leature, that greater freshings and charges of "a skin you live to touck."

Woodbury's Vacual Snage in the work of a skin specialist. It costs 25c a casize. No one besitures at the price after their first calor. As a matter of fact, it is not expensive, for it wants from two to three times as long as the primary some. True off the illustration of the cake below and put it in your pure as a reminder to get Woodhary's today.

In Canada. The Wordbury preparations are now manufactured also in Canada, and are on sale by all Canada of register from coast to coast; in-lating New foundbard. If you fee to Canada, when answering our offer below address The Andrew Jergens Co., Ltd., Dept. 2-F, Perth, Ourario,

THE LETTERS OF WILLIAM GREEN

Of the Return of the Prodigale

DEAR AUNT: Hennry Begg and me are back again from spenden a week in cump verry brown and sunburnt and a grate apetight from outdores life witch is mostly eaten and sleepen and playen round in the woods with nuthen to warry about eckscept the bishup's butter witch has laded away as

a hoy's wurries genrelly do. Hennry's muther was offle glad to see him again and could hardly reckonize him becaws he was grone so mutch in a week and

su was mine. Hennry and me went to camp the day after we got your swete letter full of sim-pathy with a little scoalden and five dollers witch about eavend it up Hennry said. The five dollers ficket it so we did not

haffto walk the atten miles home for witch we were verry grateful and we had a little munney left over but we could have walked

If it was nessary.

We spent a doller extra besides our bored for gelly and pickles witch made us verry poplar in camp and a high standen among the buys who elevated Hemmy capter of the Wood Rangers for too glasses of current gelly and fore pickles.

It was a grate onner to be capten of the Woud Rangers with a star on your cots made out of haffs tomatto can flattend out and easy wurth that mutch goldy and pickies Hennry said and I could ware it sumtimes in the afternoons when Hennry was sleepen it off in the tent frum too mutch

dinner as hore sumtimes do.

One reesen our muthers were glad to see us back was becaws Hemry and me did not tell them about goen to the camp for a week and there was no way to rite frum the camp and so it was too days before enceybuildy found it out ware we were after looken in all the dry wells and emty barns for us but we were not in enny of them witch wurried our parunts quite a little and thay forgot all about spoylen the butter witch was a little

about spoylen the butter witch was a little
thing beside of not knowen ware two boys
went for a cupple days and nites.

Nouylen a cupple pounds of butter is not
so verry important beside of probily losen
two boys don't you think so?

Hennry's and my father was quite eckscited by our not commen home all nite and
the necket day and not finden us in enny of
the dry wells or emty barns and no cricks
to be drounded in so it was a grate misstery
to them. to them.

Henory ment to leeve a note in the only put so his muther would find it in the morn-en tellen them not to warry because we would be back in a few days but he lergot would be back in a few days but he fergot it on account of the hurry getten started and it was ton days before they found the trale of us witch was quite a releaf to them when Hennry's father came to the camp and found us all rite economy for circum shurts witch was may to ficks by senden sum frum home but we did not need meany close becaws of beein in swimmen a grate deel of the time and not waren mutch but pance the rest. punce the rest.

But a boy's muther thinks if he has claim shurts he is all rite but it does not warry him as mutch as it does her. It was a fine week in camp and sleepen on a mattruss full of corn husks but now and then a corncob in your back only maken you roll ever a little and not enny dammidge.

Received of not haven claim about it was

Becaws of not haven cleen sheets it was not nessary to wash our feet every nite after goen barefoot all day witch was a grate re-leef to us and did not seem to be enny harm to us frum not washen.

Hennry's stummick trubble witch he had the last time he est only haffa wottermellun and sum grene pares was all gone the furst day and he would not know he had enny stummick at all eckscept for ware it all went at meeltime.

Hennry said it would take a pretty good size wottermellun to scare him now even if it mite be a little grene witch thay sumtimes are but a boy will tackle one engyway.

Hennry said it must be a grate thing to ritch and have a bad stummick and go country every summer for pleshure boy liven in a town of too or three erd people is appto miss a grate deel of quantry for witch we ulto be verry al to you for senden us the munney

Henry and me got home all rite eckscept for pance a good deel worn out frum only one pare in the woods a week suntimes swimmen in them and suntimes climben a weathers in them and suntimes climben a tree and suntimes goen through the black bury bushes and uther things witch are more than one pare of pance will stand but by walken in the house the back way and beein careini we manuidged to make them bold together till we got home but it was a tite squease.

Henry and me went in the back dore and gave the Wood Rangers' warhoop to supprize them witch we did and our mathers came out and hugd us tore pance and all and cride and never throo up the bishup's butter witch was a grate releef to Henory

It was quite a long time getten us cleen became of goen barefoot so mutch and needen quite a lot of scouren after the wurst of our feet was acraped off and then solved for a cupple bours in but wotter supesuds to

get the rest of it off witch it finally did but did not look like the same fete afterward. Hennry and me also brought home quite a lot of woodtix witch we did not know about till afterward and were a little sore

but nother servis.

Hennry's and my mother bornt our pance in the kitchen fire for supper and a cupple of our sburts for dinner neckst day witch would hardly hold together to wash after looken them over.

Henry's nose was quite hadly pealed off frum the hot sun on it and his lip crackt open a little and one car blisterd and his other thum cut on a tin can not the one partly blone off and black and bloo in sevrel places from small assidunts and his back quite sunburnt down to ware the top of his punce would be and one of his hig toes smasht a little from a rock fallen on it on

the bank out fishen.

But he had nutben the matter with him ecksorpt those.

After his mother put sum cold creme on his nose and sum vassylene on his ear and sum on his lip and rubbed sum on his back and tide up his thum and put a politice on his toe he was reddy to eat his supper and go to bed as well as he could from so meony things rubbed and tide on but it onley takes a little wile for a boy to beel up and he is all

I was so anishus to tell you all about Henery I forget almost to tell you about Henery and me finden a woops nost in a tree out campen.

It was a verry strange thing and Hennry and me did not know what it was when we found it furst but alterward we found out.

Hennry let me carry it furst and it was verry old and dead looken but afterwurd it came to life in a grate menny difrunt places when Hennry and me opend it to see if it was ennything inside of it witch it was a grate meany of them all of witch hurried out as quick as we opend it.

Hennry and me had been in swimmen with only our pance on witch was mutch.

wurse for us becaws it was more room on us for them to lite.

A woop is a grate deel like a bee only be does not make bunney but uther things he seems to du about as well. When thay lite on you it is a verry hot and sharp pane and a hunderd of them tryen to lite on you at the same time is verry ecksciten for a boy who is just out of swimmen with onley short pance on and not verry mutch of them.

It was a grate supprize to Hennry and me and one wosps' nest will last you for a long time if you see the neckst one furst.

We slapt them on the frust pretty well but we could not slap them on the back and after runnen quite fast for a ways we came back to the crick again and dived in head furst and stade under as long as we could commen up verry slow and careful.

None of them seemd to be able to dive

witch was luckey for as but a good menny were buzzen over the wotter and daren us to come out on the bank witch we did not.

After a wile they got tired of waten and Henry and me came out and lade in the mud all curvered up witch was the furst rumfurt we had since we met them.

Hennry and me did not tell ennything about fieden the worse' nest to the uther

tops because we were tired when we got tark and did not feel mutch like talken but it was a grate day for Hennry and me and motily we will not forget it as long as we are and all the places were thay lit on as we set quite gone down yet.

I gest the wosps is about all the campen you would be interusted in and Hennry and me are both grateful for haven on as mutch take as we had.

Henry and me are pretty bizzey since or came back organizen the ball nine for any games this summer.

Henry and me know a place ware we can get good hall soots for boys for a tey sense and the best made but plenty good enough for is. We can eather ware our own shoes or play harefoot witch would not be so much expense.

Hennry and me are goen out collecten the week and see how mutch we can raze among our parunts and other people itemry and me know.

A good menny peeple would be glad to gwakworter apeace and be invited to the furst cupple games free. Hennry said whoever gave us the most munney the nine would be named after them this year witch is a fine chance for sumbuddy don't you think so?

Sumbuddy could have a grate onner for maybe a doller and probily a grate menny people will be ankshus to get it when thay find out about it.

find out about it.

Hennry said Uncle William's Winners
would be a grate name but you never can
tell.

If the boys should feel like railen it after Uncle William ast him if he would acksoept. The name would last all the yeer.

Hennry and me send mutch love and are verry happy over the way everything came out and the butter appears to be all blone over witch we owe all to you.

Your affeckshunate nephew,

WILLIAM GREEN.

P. S.—Maybe a haffs doller would get the name of the ball nine but a doller would be almost shure.—W. G.

J. W. Falry.

WHAT NEXT?

Promotion Scouts

THE promotion scout is a very recent a development in the management of a large corporation, the business of the acout using to find among the employees those also are best fitted for promotion. A fundian railroad is among the first to attempt this experiment. None of the employees other than the high officials know also the security of just what methods he takes to get in touch with the men; so yemployee may have company business with him any day without suspecting his dentity.

Though it is the duty of the scout to be in the watch at all times for efficient employes, and also, in a lesser degree, to each for causes of complaint, the greater put of his work is not at all haphaxard, lesses of availability for promotion are tale up for every employee by his superior, in these records give the tip to the scout to further investigation.

If any statement is made in the record

If any statement is made in the record that as employee is not available for promount for some reason or other, the employee solitied of the fact and is permitted to lie with the report any comment he may waltomake; and the comment may attract the attention of the scout to his case.

Smalling Balt

The old belief of fishermen that some feb can smell bait further than they can see it has recently been proved positively tru in the case of dogfish, and a smelling bait for lish has now been invented. The proof of a dogfish's ability to detect the war of dinner was given recently before a meeting of the American Society of laborates.

An investigator reported that when the tetrils of the fish were plugged up it could attieted the presence of food. When food we placed near and the right nestril of the ist plugged, it swam to the left looking for too, obviously because the smell of food assurance to the left.

This evidence, however, was not needed by the inventor of the smelling bait, for he wild on the old belief to this same effect. It had it simply a soft-rubber imitation is made hollow so that it may be filled ith fish oil. The oil is allowed to leak out lovly and so notify the fish that an attraction dinner is at hand.

The Sixth Sense

THE belief of some people that they can always detect the presence of a spider the same room with them, and of other cople that they can tell when a cat is near, rousing a lively controversy abroad; and stentific study of the supposed ability as been undertaken by psychologists.

One scientist has advertised for persons

One scientist has advertised for persons the believe they have the strange powered are willing to be tested. The existence may such sense is denied by many sciential who ascribe it to the habit of noticing time a guess is correct and taking and many such as the failures. Others to expected that it may be true and due and detection of a faint odor.

Paint Alarms

FIRE-ALARM paint is coming into use abroad. At ordinary temperatures the paint is light red, but when heated it becomes darker. Long before it reaches the temperature of boiling water it becomes black. On cooling it returns to its original shade.

The principal use found for it is in painting machinery parts that are liable to overheating. An attendant needs only to glance at the machinery occasionally to know whether it is executively hot. It has, however, another application—to give warning of threatened fire.

Smoke Monitors

THE smoke monitor is an ingenious new device to serve notice in the manager's office of a factory or office building that the smokestack of his plant is pouring out black smoke. In many cities the smokemaisunce laws make the owner liable to a fine if his smokestack gives out heavy smoke, which is enough to make the manager interested in the performances of the chimney. Within certain limits the production of heavy smoke means a waste of money by improper firing under the boilers; so in many plants the shade of the smoke interests the main office.

The device is simple enough, being based on the fact that a spark of electricity cannot jump so far through heavy smoke as it can through clean gases from a coal fire. A small current of electricity is kept constantly jumping across a gap in the chimney, the jump being one that the spark cannot make in clean gas. When the smoke becomes black, however, the spark cannot make the jump and the electricity takes another path. When it takes this other path it will ring a bell in the manager's office or light a red lamp there, as well as one in the fireroom to warn the fireman,

Testing Fatigue

A MACHINE to show just how tired a man is after a light or a heavy day's work is now proposed by a noted French scientist as the best means for deciding what hours of labor should be fixed for each trade. Many tests on postmen, printers, typewriters and men following other lines of work that require moderate muscular effort have shown that the machine he uses can detect fatigue with much accuracy.

The apparatus is one common enough now to physicians—a device to record blood pressure. His experiments show an increase of blood pressure with increasing fatigue, an additional check on the results being furnished by another blood test.

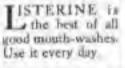

Having demonstrated that fatigue can be detected with fair accuracy in this way his next step is to find a standard of fatigue that would constitute a fair day's work—in other words, to find the number of units of increased blood pressure that would result from a normal working day.

His preliminary results showed that the amount of fatigue for an eight or ten hour working day varies considerably in different trades.

LISTERINE

not unly cleanies and purifies the mouth, and neutralizes breath odors, but is an important factor in the preservation of the teeth. For over 30 years it has enjoyed the coundence of physicians and dentists.

Sense and Nonsense

His Son's Father

GENE BULGER and Ruth Grute, the little daughters of two New York newspaper men, print a paper of their own. It is called The Bugle-Star and it appears weekly

called The Bugle-Star and it appears weekly and, in the form of manifolded type-written copies, has a growing circulation in the Washington Heights district of Manhattan. William Collier was playing at the Criterion Theater. In the supporting cast were his wife and his twelve-year-old son. During the engagement the younger Collier gave a box party at a Saturday matinee for Miss Bulger and Miss Grute and some of their small friends. After the performance the little fellow served tea upon the stage the little fellow served tea upon the stage for his guests and altogether it was a gala

In the following week's issue of The Bugle-Star the following note appeared under the head of Dramatics:

"William Collier, Junior, the greatest boy actor on the American stage, is starring at The Criterion in a new play which was written especially for him by one of our best-known authors. His work is wonder-ful from start to finish. His father, whose name is also William Coilier, is in the troope tran."

Erin Go Higher

CHAUNCEY OLCOTT, the Irish actor, was to play at the Tabor Grand Theater, in Denver, and in view of the popularity of the coming star the management advanced the price of parquet seats from a dollar to a dollar and a half.

The first man in line when the box office opened for the advance sale was an elderly Hibernian. He laid down two silver dollars

on the shelf.

"Give me a couple of good seats for Chauncey," he said.

"One dollar more, please," said the boxoffice man.

"Why so?" demanded the patron suspiciously. "I never paid mure's a dollar to see Chaucery before."

"Yes, I know," said the ticket man, "but you see Dave Warfield, who is a Hebrew actor, is playing up the street next week at two dollars. We thought if a Jewish comedian was worth two dollars, an Irish comedian ought to be worth a dollar and a half."

"Is that so!" snorted the customer. He snatched his silver back and slummed a wrinkled five-dollar bill down instead.

"I want two tickets," he roared; "and don't you give me no change hack out of that five-spot neither, young man. If a

that five-apot neither, young man. If a Jaw is worth two dollars Chauncey is worth two and a half, and not a cint less."

No Such Name

PAUL ARMSTRONG tells of a friend of his, an exceedingly deal man, who was being introduced to a young soman. The young woman was pretty, but she had a strange mann. Her name was Dinglefugle. "Mr. Smith," said the mutual acquaint-ance, "this is Miss Dinglefugle."

The deal man cupped his hand behind

"Floor pardus out," he said, "but I'm hard of hearing. What did you say the mann was!"

"Miss Dieglefunde."
"I'm antally sorry," coursement the afficted one with a strained and partial disease in his eye; "but I haven't enought it yet."
The other man raised his vectors bout.
"Miss Directed give" he bland.
Resignedly, hopelessly the deal resultance his book his bond.
"It's no use," he mid; "sorteds the Linglefunde to me." "Miss DingleIngle,"

Open or Clased?

JUST as a large Irish bicyclore scalled into a water-front salson in San Franchico trouble broke out In the buck room. There were sounds of outles, of blows, of chains being overturned and of crockery smaching.

The newcomer's eye brightened. He moletoned the palms of his baces after the approved stevedure's faction, hitched on sleeves and started for the reur. Then,

"Motor farments," to inquired softly, the a private fight or the kny-

White Elephants

ALITTLE girl walked into a grocer's store at Bayside, Long Island, and ordered a nicked's worth of animal crackers.

The clerk was in the act of putting the purchase in a paper sack when the small patron halled him.

"Are there any elephants in those animal crackers?" she inquired.

"Oh, yes," said the clerk; "lots of ele-phants."
"Then please pick them all out and put 'em back in the box again," swiered the customer. "My little brother is afraid of customer. "

The Value of Illiteracy

A NEWLY landed German immigrant who A could speak broken English applied for the job of janitor of a flat-house in New York. The owner of the building was impressed with the candidate's earnestness and appearunce, but when he found the German could neither read nor write he was forced to turn him down. Nevertheless, he liked the young foreigner's looks so much that he helped him to get work in a construction crew and took pains to keep in touch with him for a

At the end of four years the German walked in on his former benefactor. He was well dressed and cleanly shaven. He explained that he had been so busy he had not had time to acquire even the rudiments of an education, but he now owned a thriving grocery business and bad saved some

"How much money?" inquired the Assertean.

The German drew out a bankbook and showed that he had upward of ten thousand

showed that he had upward of ten thousand dollars on deposit, drawing interest.
"Good heavers!" said the American.
"Fritz, I congratulate you. You're a wonder! You can't write your own name, and yet in four years you're made this much money all clear. I wonder what you would have made if you could read and would?"

The German thought a moment.
"A janitor," he said.
The chief merit of this story is that it is cuaranteed as true by the man who saw the bankbook,

The Canny Andy

AS HERBERT COREY tells it, be went to a dinner once where Andrew Car-

negle was a guest.

"After the cating was over and the speech-making had started," said Corey, "Mr. Carnegie reached to his pocket for something and pulled out a handful of small change.

A direct was from him and full on A dime got away from him and fell on the floor, and at the first chance Mr. Carnegie gut down under the table and looked

for it."
Did be find it?" asked one of the audience to whom Corey was narrating the incident.

"Did he find it?" echoed Corey. "He found fifteen cents!"

The Daly Drive

THE late Pete Duly, whose memory is still green wherever theatrical people gather, was a great hand for staying up late. He never went to bed as long as there was anywhere else to go.

In the seft dawn of a June morning he emerged from an all-night cafe on Lower Broadway and climbed into a hansom, fillng it to everflowing, for he was a very

large man.

"Where do you want to go, Mr. Daly?"
Inquired the cabby. All Broadway cabbies knew the big comedian.

"Anywhere," marmured Daly drowsily.

Then an idea struck him. "Drive me to the Polo Grounds," he said.

The cab jugged north, bound for the ball ark, six miles away. An bour later the driver halted his horse outside a high board fence, climbed down from his perch and shook his slumbering fare by the elbow.

Here we are," be said. "Where?" inquired Daly, half opening

one eye.

At the Polo Grounds. Where'll I drive

"Drive me round the bases," sald Duly, and went back to sleep.

Pushle Cut Dut FARE

ON ACCOUNT OF A LADY

"Some fight tomorrow night," said

"Some fight tomorrow night," said
Split-tooth tentatively.
"Those big hams?" said Faraday. "No
chance—I could lick 'em myself."
"Naw—not them. Whitey and Sammy."
"Oh!" said the sporting authority.
"Yes; if this grudge-fight talk is on the
level it ought to be a hummer."
Split-tooth grinned knowingly.
"Don't worry," said he. "It's on the
level all right."
"How do you know?"
"Never you mind how I know," said

"How do you knew?"

"Never you mind how I know," said Durkee mysteriously. "P'lessional jealousy! Where do you get that stuff? You're supposed to be wise. You've been round and seen a lot of things come off. What is it that makes most of the trouble between pais, eh? What is it that makes a man want to lick his best friend? P'fessional jealousy? Bah! Ain't there no other kind of jealousy?"

"You don't mean to tell me there's a

"You don't mean to tell me there's a skirt in this!" said Faraday, pausing in the

act of spearing a pickle.

"You've been asleep at the switch a long time, but you're waking up now," said Split-tooth. "A skirt! You've said it all. Pity you didn't know about it before you wrote that bunk about p'fessional jealousy. Gee! That handed me a laugh!" Durkee

Gee! That handed me a laugh!" Durkee moved away from the counter.

"Say, come back here!" Durkee paused uncertainly. "Come here!" repeated Farsday. "You don't mean to tell me that Whitey and Sammy busted up over a girl?" "I don't meant to tell you nothing, said Split-tooth. "Do you think I want to get in had with a couple of lowbrows that have got me shaded on the weight?" "Oh, come on!" pleaded Faraday, "I'd treat it as confidential—honest, I would. I wouldn't tell a soul where I got it."

"Nothing doing!" said Split-tooth firmly. "Why, you got a nerve to ask me! You eat

"Why, you got a nerve to ask me! You eat here a good deal—you could 'a' seen it with your own eyes. Faraday struck the lunch counter with

his open hand. "The girl at the cash register!" said he.
"Go to the head of the class!"

"What's her name?"

"Myrtle Schmidt. "How old is she?" "How old is she?"

"Nineteen—say, what are you trying to do? Interview me? Nix! You've seen her, ain't you? Brown eyes, kind of dark complected, weighs about the feather-weight limit, been working here about two months — You ain't going to write anything about this, are you?"

"No—of course not!" said Faraday with sarcasm. "I'm just gathering this information for the census bureau!"

"Well," said Split-tooth with a sigh, "if you're going to spill it in the paper it ain't

you're going to spill it in the paper it ain't my fault. I can't stop you. All I ask is that you leave me out of it—see? I don't mind tellin' you a few things you ought to know-out of friendship—but I don't want no comeback. I can't go on the floor and mix with these rough-and-tumblers, and I ain't going out of my class to oblige anybody." "Mum's the word!" promised Mr. Fara-day. "Now then, how did it start?"

Pighting Sammy Dugan sat on a rub-loing table in one of the tiny dressing rooms underneath the bleachers of the boxing pavilion, swinging his heels and listening to the roar of the multitude. From time to time he inclined an ear to the earnest words of the Dis-and-Dat Kid, his chief

second and adviser.

"Now remember, Sammy, don't git mad!
Never mind standin' toe to toe an' sluggin'
until somebody drops. Let Whitey fight
dat way if he wants to. Wear him down
wit' dat left an' den wham him wit' de right.

wit' dat left an' den wham him wit' de right. Remember your reppitation, an'
The door banged open and T-bone Riley entered, a thundercloud on his brow. He beld a pink sporting extra in his hand, which he thrust under Sammy's nose.

"You're a fine pair of mutts—you and Whitey!" said he. "Look what you done!" Sammy glanced at the paper and his jaw feli. A double row of black type three col-umns wide smote him with all the force of a blow between the eyes.

DUGAN AND WILSON TO BATTLE FOR LOVE OF BEAUTIFUL GIRL!

"Wha-what's this?" stammered Sammy, aghast.

"Mighty innocent, ain't you?" sneered T-bone. "I'll tell you what it is! It's my notion of a dirty trick! Here's a girl that's all right in every way—behaves herself like al right in every way—behaves dersell the a lady, never mixes up in nothing and ain't looking for publicity. A couple of burn fighters get to quarreling over her and be-tween 'em they cook her up a press notice like this. Listen while I read you a sample." T-bone cleared his throat and read as

follows:
"The little god of love will referee
tonight's battle between Fighting Sammy
Dugan and Whitey Wilson, erstwhile friends, but now bitter enemies and rivals for the hand of Miss Myrtle Schmidt, a petite bru-nette beauty of this city.' Wha'd'ye think of that—eh? 'Rivals for the hand!' Say, do you think she'd marry either one of you

"Marry!" gasped Sammy. "Nothing like that. And they've even got her name! Oh, if I can get the fellow who spilled this,

Riley, I'll murder him!"
"You're aure you didn't?" questioned

"I've never mentioned her to a soul!"
cried Sammy. "What do you take me for?"
"Well, somebody spilled it," said T-bone,
"and now it's all over town. Whitey says
he didn't do it" he didn't do it.

'I wouldn't put it past him to do any-

thing," said Sammy.
"That's what he says about you."
"He does? Oh, wait till I get bire in the ring! Say, Hiley, do you think she'll be sore?"

"Sore!" T-bone laughed unpleasantly.
"No: she'll be tickled to death to have her name mixed up with a couple of cheap fighters! A nice girl wouldn't mind a little thing like that at all! I baven't seen her. She's on the late shift tonight; but I'd advise you to keep away from the joint until she cools out."

Half an hour later Sammy Dugan and Whitey Wilson stood in the center of the ring, blinking in the glare of the arclights, intensibly listening to the referee an honest, conscientious soul who droned monotonously about many things, some of which was new.

Said Sammy, glowering at Whitey: "What did you get that put in the paper

Said Whitey to Saromy:
"I didn't. You did it yourself—nobody else knew."
"You did!"

"I didn't!"

"You're a liar!" "You're another!"

Said the referee, extending his arms and diving between the combatants: "Here! None of that! Can't you wait till the bell rings?"

Thus, with an added cause for grievance, they waited for the clang of the gong.

The honest and conscientious referee said it was a draw, and three thousand lay brethren applauded that just decision wildly. Then they fell back in their seats, hoarse, hysterical and happy. For once a grudge fight had justified its press notices. As a matter of fact, there was nothing else for the referee to do. With both men on their feet at the end of the battle—dazed, battered and staggering, but still on their feet-he had no choice.

He could not have awarded a decision on scientific points. There were no scientific points. He could not have declared either man a winner on aggressiveness. Both had been as aggressive as wildcats. In the matter of knockdowns honors were fairly even. Whitey had taken the count six times and Sammy five. As to punishments inflicted, there was little to choose. Sammy had a broken nose, but Whitey had last a touth. Sammy's mouth resembled a badly bitten damson plum, Whitey had a mouse under his

left eye. Sammy had a lump on his jaw, but Whitey had a split lip. "And as for blood," said the referee, rue-fully regarding his soft white shirt, the tween 'em they shed enough of it to free Ireland!"

No sooner had the two soggy gloves been hoisted in the air than Sammy dashed out at one angle of the ring and Whitey hopped through the ropes at the other, thus violating all tradition. After a drawn battle it is customary for the gladiators to linger as long as possible, leaving the ring separately in order that the appluase may be sustained.

The "Ash Wagon Argument"

Free Sprinkler Systems

WE INSTALL automatic sprinkler systems free, usually taking as our compensation your insurance savings of a few years. After these savings have paid for the sprinklers and paid us our profit, we give the system to you.

And we will further give you the option of purchasing the equipment at any time during the life of the contract, at a reduced price.

Sometimes the merchant or manufacturer argues that he prefers to wait until he can put his own working capital into a sprinkler system. This is called the "Ash Wagon Argument." For, almost invariably, he lets une year after another slip by. He goes on paying the insurance companies for a sprinkler system without getting one. He goes on without protection. Almost every week some man who is procrastinating, is caught by a fire and his going business is demoralized.

Economizing

with the Comptometer

The Comptometer represents the truest kind of efficient economy-the kind that actually saves time and labor and prevents mistakes. The saving of time and labor due to the phenomenal speed of the Comptometer can be readily measured, but the value of its accuracy is simply incalculable.

It was a revelation to the executives as well as to the office loves of a large beet sugar factory, to find that all the additions, extensions, divisions and deductions of the annual audit, were easily made in 17 hours on the Comptometer. It had taken them 112 hours with other equipment.

It was a further revelation when the Comptometer disclosed figure

errors which had resulted in overpayment on purchase invoices amount ing to over \$500.00 - invoices which had been gone over and checked by three capable mental extenders.

Then came another revolution when they were shown by the Comptonies test that in 25 pages of mentally figured. statistical work requiring divisions acmester to 5 planes, only one stem our of the lot was correct to 5th place.

These are real experiences—not imaginary cases. They can be emiltiplied by the thouse to prove beyond the shadow of a doubt that the Complements to use of the most radule factors for efficiency and morning in accounting that is beaute to the harinus sould today.

THESAPERDAY

HILLUSTPHIA, PENNA.

Two such precipitous exits were never before witnessed in that arena. "Say, you gottn have dat nose fixed up." said the Dis-and-Dat Kid to Sammy in the

dressing room.
"Plenty of time," mumbled the dis-figured gladiator. "I shaded him in every round, didn't I?"

On the other side of the partition Whitey's handlers belought him to allow them to reduce the mouse by the simple and expedient method of lancing it with the blade of a

"Tomorrow!" said Whitey impatiently.

"Where's my pants?"

It was a great race and Sammy Dugan won it by half a block. He burst into Riley's place out of breath, disheveled and perspiring freely. Split-tooth Durkee grinned behind the coffee boiler, and Myrtle stared storily over the cash register. She had put on her hat and cost, and her bag dangled from her wrist. Her nose and eyes were suspiciously

red.
"They give it a draw," panted Sammy,
"but I win a mile! Say, I want—to tell
you—I didn't put that piece in the paper.
It was Whitey did that—and—"
This declaration was interrupted by the
secused, who buried himself into the room,

also becaused, who buried himself into the room, also brenchless and perspiring.

"Don't you believe him!" he cried.

"S a lie!"

"Oh, you're both here, are you?" said Miss Schmidt coldly. "Well, I just want to tell you one thing: I wouldn't waste my time on boodlums like you. I wouldn't look at you outside of this place. I wouldn't speak to you! You're trash, that's what you are—trash!" Her voice grew audenly shrill. "The idea of you dragging me into the newspapers like this—a couple of lowdown hoodlums like you! My flancé is gaing to be in town tomorrow. He's a brakeman on the railroad, and he's bigger than both of you put together. Just wait till he catches you—that's all!"

She had stepped round the end of the counter and now swept out into the street,

counter and now swept out into the atreet, banging the door behind her. The battle-scarred gladiators looked at each other blankly. After a time they became aware of Split-tooth Durkes, who was grinning at

them from a safe distance.

"She's quit her job," said Split-tooth cheerfully—"Says she couldn't hold up her head in this joint again. And say, if what she tells me about this brakeman is right you better leave town now. He's bigger'n

Sammy and Whitey exchanged glances of deep concern.
"If that's the way it is ——" said Sammy

"We better stick together," said Whitey.

"We better stick together," said Whitey. They shook hands.
"We can lick him if he's as hig as Jim Jeffries!" said Sammy.
"You're whistling!" said Whitey.
They shook hands again.
"You're a tough hird, Whitey, old boy!" said Sammy. "I'd rather fight a champion than take you on again."
"I never got such a lacing in my life as I got from you," said Whitey, thoughtfully stroking the mouse under his left eye.
"Say, what started it anyway?" asked Sammy.

Sammy, "Why," said Whitey, "Split-tooth, over there, he said that you was knocking me to

"He told me the same about you," said

Summy. They considered the situation gravely,

turning this information over and over in their minds. Then they looked at Split-tooth, who squeaked and backed suddenly into a pile of plates, sending them crashing

"Nix! Nix!" he begged. "Ain't we al-

"You go round one end of the counter and I'll go round the other," said Sammy. "He can't get away," said Whitey.

When T-bone Riley dropped in he found Saginaw in sole possession of the premises, which bore every appearance of having been

which bore every appearance of having been visited by a cyclone.

"What's happened here?" asked T-bone, estimating the damage with a practiced eye.

"A whole lot of things," said the night cook: "Your cashier has quit. Sammy and Whitey are friends again. It was Splittooth that got that piece put in the paper. He's in the Receiving Hospital."

"Outside of that every little thing is all right!" asked T-bone.

"So far as I know," said Saginaw.

"Fair enough!" said T-bone Riley.

the curse of this country, if he were to act stherwise. Am I right?

"You are right, senator," Hicks an-retred. "I am for the people, and I believe I can serve them best as a Democrat." "Good!" exclaimed Paxton, slapping licks on the shoulder. "Now come in and tale a little dictation."

take a little dictation.

Hicks went in with his notebook and pendle, pulled out the shelf on one side of he senator's desk and waited.

Paxton lighted a cigar, fussed over some

"Politics," he began presently, "may be separated into two grand divisions: Practical politics and impractical politics. Fractical politics is the kind that wins, inpractical politics is all other kinds. Paragraph.

Politics has many aliases. It is rarely practiced under its own name, except by has who are designated as the unscrupu-ion bosses and their henchmen and heelers. all others who engage in politics so engage lecture some unendurable condition of rational or local affairs demands their groupt placing on the payroll in order that thee abuses may be corrected. Paragraph. "Next to getting on the payroll the im-pertant object of politics is power. Power

entant chiect of politics is power. Power important, because if you have power you can get the money. At any rate you can get others in the way of getting the money, and no politics is a success unless subbody gets it. Paragraph.

"Politics makes strange bedfellows. All eminations and associations you perscally make are excusable, because you crariably make them for the good of the people. Paragraph.

"Always be unselfish in politics. For exemile, if called to choose between two often always take the office to which you on be elected, even if it be the lesser one, for any salary at all you can get is better that any salary, however great, that you tan any salary, however great, that you unset get. Paragraph."

Ensot get. Paragraph."
Exton stopped, puffed a little at his dgr and then began again:
"The greatest asset of the politician is the people. Paragraph." It is well to remember that though the scole may not always be right, they are assedingly numerous. Paragraph.
"Every politician should observe care-sly what the people think they demand, by demand that thing instantly, stridently

any what the people think they demand, in demand that thing instantly, stridently sol continuously. As the people pay atsention to politics for only a few weeks each year, and the politician pays attention to politics all the time, it will soon fall out that the people will come to think the refirms they demanded and you took up are really reforms that you demanded and they took up. Payagraph.

tok up. Paragraph.

"Never refer to the people as the people. Always call them the plain people. The great bulk of the people are so plain they like to be told of that characteristic restantly. Likewise, they dote on being held up as the bone and sinew of the nation.

Paragraph.

Always be in sympathy with the wrongs of the people. Never make a speech without referring to the great toiling masses. The great toiling masses like publicity for their greatness and sympathy for their toil.

Paragraph.

"The great toiling masses would be mighty uncomfortable and unhappy if they had nothing to kick about; so if there are no outrages on the body politic think up a few threatments. Paragraph.

"The secret of successful political oratory to tell the people what they already know. If you thunder at them for two hours that botesty is the best policy and virtue is its own reward they will consider you a patriot and vote accordingly; but if you elucidate a new political or economic theory they will say you are trying to sell them out and probably will think you are a crook.

Paragraph.
"Money has no place in politics except. to defray legitimate expenses. Money is expended illegitimately in politics when you are caught expending it. Wise politicians tover expend money in politics themselves. by get some one to do it for them. Then, detection comes, their hands are unsullied and their motives cannot be impugned."

The senator stopped again and relighted he cigar. "That's all for now," he said. "What is it?" asked Hicks—"a speech of an article or what?"

"Neither," replied Paxton. "It is merely an epistle for the aid and guidance of any aspiring young man who desires to become

aspring young man was desires to become
a successful politician."

"What shall I do with it?"

"Oh, make a few copies and keep one for
yourself. It might be of use to you some
day, for it contains the condensed wisdom
of thirty years of dealing with the people
in public life."

Hicks looked in the Congressional Directory, and found that the representative from the Rextown district lived in Rextown. He went over to that etatesman's committee room and introduced himself to the secre-

tary of the representative.
"I'm T. Marmaduke Hicks," he said, "assistant secretary to Senator Paxton."
"Glad to meet you, Mr. Hicks," the secretary responded. "My name is Duffield, James R. Duffield. What can I do for you?"

for you?"

"Oh, nothing much," Hicks replied, "but a friend of mine out home is thinking of locating in some Middle Western rity and he wrote me and asked me if I knew anything about Rextown. So I thought I'd drop over and see you and get some points about the place."

"It's a good town," Duffield replied, assuming the tone of a booster. "It's the best town in the Middle West and it is growing by leaps and bounds. It has the best water, the best climate, the biggest buildings, the most complete street-car system, the finest park system, the greatest hustlers among the business men, the most expensive horses. The greatest hand clearexpensive homes, the greatest bank clearexpensive homes, the greatest bank clear-ings of any town of its size in that section. It also has the biggest jobhing houses, and it's one of the largest mill and factory towns anywhere in the Middle West."

"What's that?" asked Hicks—"a big mill and factory town?"

"One of the biggest," boasted Duffield.

"Why, our factories."

Why, our factories — "
"How do the men in the factories vote?"

"How do the men in the factories vote; asked Hicks, interrupting.
"Oh, they vote the Republican ticket. Paddy Ross, the hose out there, sees to that, Talk about Republican towns and counties! Why, Mr. Hicks, there hasn't been a Democrat elected out there since Hector was a pup, and Corliss County is unanimous for the G.O.P. every crack out of the box."

of the box."

"What is the factory vote—how much of the total vote, I mean?" Hicks asked.

"About half, I guess," Duffield replied; "maybe a little more."

"How many Democrats are there in Restown?"

A thousand in round numbers perhaps.

"Still," continued Hicks, who saw possibilities, "If that labor vote should get away from you and go with the Democrats once, they would be able to clean you up, wouldn't they?"

"Sure!" assented Duffield: "but there

"Sure!" assented Duffield; "but there isn't a chance—not a chance. Paddy Ross holds that vote for us, and Paddy will hang

on to it too, you can bet on that."

Hicks asked a few more questions, listened impatiently to another panegyric about Rextown, thanked Duffield, and hurried back to Senator Paxton's office.
"Senator," he said, "that town of Rex-

town looks pretty good to me. I was talk-ing to a young fellow from there, Malcolm's secretary, and he tells me it is a big mill and factory town and that the labor vote is about half of the total."
"Well?" interjected Paxton.

"He says there are about a thousand dyed-in-the-wool Democrats too, and there ht come a chance, on son national issue, to shift that labor vote. Then I'd win.

"Such things have been known," commented Paxton, to whom this situation was no news. "How are you getting on with no news. "
your law?"

"I'll have my degree in February. The examiners will allow me credit for the time I studied back home with Judge Smith, and then I can take the examination."

"Can you pass it?"
"Pass it?" and Hicks laughed. "Why, senator, all my studies have been directed to that end. I have inquired carefully into such principles of the law as will come up in that examination.

PATENTSWANTED

WANTED - AN IDEA! Who can think of parent! Printed your ideas, they may bring you weight. With he "Needed Invention" and "then to Get Vento Patent and Vento Memory." Ratheopie & Co. Ches. 187, Patent Asterney, Washington, D. C.

"I see, and such real knowledge of the law as you will eventually have you will obtain after you are out of law school and a member of the bar?"

"That's the idea," Hicks replied. Hicks applied himself for several weeks, secured his degree and took the examination. He passed by a narrow margin. Senator Paxton told him he would fix it so he would be admitted on motion to the Rextown bar, on the strength of his District of Columbia certificate, and Hicks swaggered about the boarding house be-cause of his new distinction. Also be let it be known generally that, notwithstanding his association with Senator Paxton, he had concluded that the Democratic party more closely approached his ideals as the party that had the interests of the plain people at heart, and that he had decided to cust his political fortunes with the Democracy for that reason. Paxton and Madden chuckled and everybody else predicted Hicks would

and everybody else predicted Hicks would soon lose his job.

Hicks sent for the Rextown papers and read them carefully, familiarizing himself with the names of the people most men-tioned in their columns. He gained a smattering of the local politics of the place and informed himself, as well as he was able, concerning the characteristics of the surrounding country and the intricacies of the city government.

the city government. Paxton talked with Hicks frequently about the plan, never going so far with him as he had with Madden, but, by skillful reference to the manners and methods of men in Congress, impressing on Hicks the basic political fact that the general public cal gullibility of the people as a mass is a natural and legitimate political asset. Hicks, on the other hand, though fully renvinced of the truth of this, both from what the senator told him and from his own what the senator told bim and from his own observations, sought to maintain, and did maintain—to his own satisfaction at least—the pose that he sincerely believed that the people needed his services, and that he rould work for them better as a member of the Democratic party. He sometimes combatted Paxton when Paxton was especially hitter and cynical, protesting that the people were not so easily fooled as Paxton thought.

Parton enjoyed this hugely, for it was evidence to him that he had not misread Hicks, and Hicks thought he was making the impression that what he had in mind was a means to gain a most desirable end, which, as he stoutly asserted to Parton, was the general good of the people, but which in reality was the immediate and continued moved of Hicks. As time went on Hicks he good of Hicks. As time went on Hicks beton had much amusement in planning the

details.
"How's the Paxton-Hicks coalition com-

"How's the Paxton-Hicks coalition coming along?" asked Madden one day.

"Fire!" Paxton replied. "Tommie has swallowed the bait and is trying to make me think he's only nibbling at it."

"He talks to me about it by the hour," said Madden. "I think he's beginning to believe be has a mission to go out and reform things. He's getting a lot of the genuine reformer's earmarks."

"Don't make the mistake of classics of

"Don't make the mistake of classing all references as bogus, Madden," and Paxton was very serious. "There are plenty of men who are earnest and sancere and honest and helpful in their efforts to eliminate a lot of abuses that have grown into our political and economic system. Not all of them are fakers by a long shot.

"I neconcile have the greatest respect

"I personally have the greatest respect The chare I detest are these canting, hypocritical, faking humbags we see round units such numbers. The great fault of our politics isn't graft or dishonesty, Madden, it's hypocretical.

it's hypocrisy." He walked back and forth across his

"Good heavens!" he exclaimed, "Loo round you. Put any one of nine-tenths of these hand-chakers and four-flushers under the seid test, and that one and all the rest will turn green in a second. Don't spare me. I am as bogus as the rest of them, only I admit it privately, of course, and they don't. I have been thirty years in public life, and I've made a fertune out of politics and secured a reputation, and am counted as one of the leaders of the Senate. Yet I'd be back home running a grocery store if the people hadn't made it so easy for me. They allowed me to bunko them, and I utilized my opportunities. Some day these people

(Cantinued on Page 53)

In fact, you will be money in pocket, fig-uring the many bours of time and labor you will save 52 weeks a year for many year. Not to mention the EASIER WORK, BET-TER FINISH, and LONGER WEAR of goods ironed. It will eatn its price over and over again.

like finished his work in the office, bade

Wathington friends good-by and left

Section to see his matter. Separate Sepator

"Good-by, Tommie," the separator said of before the train pulled aut. "good-by at good luck. Remember that from this are forward you are a tribune of the pro-A lifelong Democrat since day before corelay and a fee to the corrupt forces of mith and plutocracy. Above all, be sorted. The people must think you are in street, else you are lost. Here are a few outer thoughts I have jound down for you.

up me informed of your progress, Reharded Hicks an envelope, waved his and and walked away. Hicks found his will, arranged his baggage and opened to envelope. It contained a check for a busind dollars and this letter:

WASHINGTON, D. C., April 17, 1809.

"Der Hicks: Let me call your attention atte fart that certain trustitions and precerats in politics have been in vogue so long by they have the force of rules. Occasionly a politician arises who does not play the are according to the rules, but he can be indemned unsparingly as an unstart and magogue and the traditions and presseth thereby preserved.

Dress is an important tilling, and deand somewhat on the section from which we come Do not in any circumstances low yourself to overdress, especially as no are to make your appeal to the plain mpleto whom plain living and plain dress that marks of virtue. Went clothes milar in kind to those your published as or the bulk of them, but do not professionate the raine of a plan but and minute the value of a plug but and a of too dignified. Be familiar, but not soo

things your public carefully and he all they to all men, but be careful to be the nd of thing to each man that appeals he Lit particular man.

"For example, never take a drink with a clergyman and never fail to buy one for a ward boss. You are as good as the greatest citizen of your community and no better than the humblest one. Always remember that—when canvassing the district.

"There is ample precedent for the statement that no frivolous person ever gut anywhere permanently in American politics. It is well to be borne down by the seriousness of the situation and to assume an impressive manner of speaking. Do not allow yourself to be led into any public display of wit, and never by any chance make a public degeneratestion of a sense of make a public demonstration of a sense of humor. When stating your conclusions, state them with an air of finality that is observed when a justice of the United States Supreme Court hands down a decision.

"Neves fail to take active meaning."

Never fail to take active sognizance of any movement or issue or policy that is favored by the religious hodies. Align yourself publicly with the better elements, and go to church regularly. This will enable you to carry on, with much less danger of detection, the necessary negotiations with certain politically important

elements of your community.

"Always keep your promises. That is to say, always claim to keep your promises and always assert vigorously that you do keep them to the letter. An expert politician can find many ways for breaking promises—after he is elected; and after you are elected you have secured your reward and do not need votes for the time being.

"If you have an obvious thing to do, do it in a highly complicated manner. Befog every action. Never make a direct stafement on a matter of policy and never do.

ment on a matter of policy and never do a direct thing until you have carefully calcu-lated the consequences. Many a political career has been ruined by haste in such matters. You may have observed that the

trimmer usually lands.
"Do not be led at any time into telling
the truth about any political proposition.
Truthtelling in politics is the mark of the inexperienced politician, but he careful to lie skillfully and always remember just how

you lied.
"If you want a political place, induce several people to run for the same place. Do not select men strong enough to get the place—that would mess things up frightfully—but get expirants who can control a fow votes in the convention. This multipli-crition of expellation will help you atnot-ingly. Conversely, it will aid you to best

"Nover talk, always corder. That im-presses the people and looks like in the BOWNSHIPPE

"I leave these few final political principles in your hands, confident that you will discover their worth. These and the others have given you baye stood the test of time Physican he relied apers to be most useful. Kreys mit printed.

Firmy renounably if you need money. Good to k, and don't forget you are a life-time Democrat. Also, must important of all. to explose toke yourself seriously and the proble hiereise. "Hopefully,

"WHALAM M. PANTON."

Hicks had saved filters bundled dollars, and this added to the Paston thousand, gave him a working capital of twenty-five bundled dollars. Paston had secured for him a letter of introduction from a Demoeratic friend who knew Perkins G. Rolling. the Restown Democratic Juster, and he had a lotter to the First National Bank. He had written to his mother to have his father's law broke shipped to him, and he had in his truck his cartificate of admission to the Dutrict of Columbia bar, matty framed, also his law-school diploma and his picture of President McKinley

He arrived in Rextown on the morning of the second day, went to the Hotel Me-tropolis, which was the Liggest hotel in the place, and regulared: T. Marmadale Hicks. Washington, D. C.

Hicks know enough about the ways of small-town newspapers to understand that u man who registers in a small town from Washington, District of Columbia, is always considered as a potential newsgiver, and always is approached by the local reporters. Fifteen priorites after he was in his room a helling trought up the eard of Charles Biguall reporter for the Reatown Globs Ask hop to room up," His a said to the

heliboy, and Highall came.

"Mr. Huse!" he impured so he untered.

'You Mr. T. Mazmaduke Hicks."

visit - anything official, I mean? I thought possibly you might be in the government

"No," Hicks replied, "I am not a govern-ment official, although I have been more or less in touch with the workings of the Sen-ats for some time. However, I shall be glad to answer any questions you may care to put to me on Washington topics."

Bignall asked him about a pending measure and Hicks expertly analyzed it. Fur-thermore he discussed several other live topics understandingly and with a Demo-

cratic angle and gave Bignall a good story.
"Thank you, Mr. Hicks," Bignall said,
after Hicks had finished. "That'll make a corking interview. Give me a scoop on it,

will you?"
"What do you mean?" Hicks asked.
"Why, don't talk to the other afternoon

"Why, don't talk to the other afternoon paper."

"All right," Hicks agreed amiably. "By the way," he added, as though the idea had just come to him, "you might mention that I have decided to enter on the practice of the law here and hope to take an active part in Democratic politics."

Bignall laughed. "You've got courage," he said, "to come here if you're a Democrat. Why, this town is so Republican the Democratic can't get trusted at the stores. Old Perk Rollins is about all there is to the Democratic party here."

"Well, you might add then that the Democratic party in Rextown has been doubled in size and is now composed of Mr. Rollins and T. Marmaduke Hicks."

"All right," assented Bignall, "I've got to jump back and get this in the home edition. I'll take care of you."

Hicks kept his promise to the reporter by going out on the atreet and inspecting Rex-

going out on the street and inspecting Rextown. He found it a clean, lively city with good stores, good buildings, good pave-ments and a prosperous-looking people. He walked about until the Globe came but. His interview was prominently displayed on the first page. The opening paragraph read:

"Mr. T. Marmaduke Hicks, who has been identified with Washington affairs in an official capacity in the United States Senate, arrived in Rextown this morning to take up his residence here and enter on the practice of the law. Mr. Hicks is a well-known Democrat, and in discussing affairs at the Capital made the following comments in a reporter for the Globe." to a reporter for the Globe.

Bignall had written a very good report of his interview and Hicks was much gratified. As he entered the Hotel Metropolis the clerk, somewhat impressed, said: "Say, Mr. Hicks, there's been a reporter for the Leader round here all the afternoon looking

for you."
"Is that so?" asked Hicks easily. "I am sorry I missed him. If he returns I shall be in my room."

Then he went upstairs, after buying several copies of the Globe, cut out his interview and mailed one of the dippings to Senator Paxton with no comment. Two days later he received a telegram from the senator which said: "Congratulations. Apparently your face is turned toward the metning."

[TO BE CONTINUED] TO BE CONTINUED)

Outchining the Sun

LIGHTS that will outshine sunlight are new being tried for daylight signals on railroads and elevated roads in the belief that they can be made to give a clearer sig-nal than semaphores, which give their orders by the raising or lowering of oscillating arms. A gaslight or an electric lamp does not make much of a showing in the sun-light. When street lights of a thousand candle power each are tested in the daytime a passer-by would never know it unless he watched for it carefully.

Glass lenses, however, have been so developed in the last few years that for sig-nal purposes lamps can be made to defeat daylight. Daylight varies greatly, from bright sunlight to smoky murkiness, and it is this variation of daylight that gives the most trouble; yet daylight lamp signals are now being used on the new lines of one ele-vated railroad, and they are being tested for railroad use.

made a mistake in matters like this. Just he good enough to bring me the nippers from my bag in there; then you will take my card up to the captain and say that I

my card up to the captain and say that I desire his presence here at once."

"Well, sir, at that the old boy shoves up both hands and says:

"I beg you, gentlemen, let me have one word with you—just a word!"

"One moment, Doctor!' says Eddie. But it's no good, my man—you'd better take it gracefully; and remember anything you say will be used against you."

"The little guy puts his head down in his hands and begins to cry—he just cries. Say, it darn near made me sick.

"I might have known! he says. 'Oh, I might have known! But, officer,' he says, looking up to Eddie, 'you'll listen to reason, won't you? Oh, surely you'll listen to reason. I'll make it well worth your while."

"Where is it?' says Eddie quick.

"It's in my trunk in the hold,' he says, 'every cent; and to-morrow in London you'll have half of it if you'll just listen to reason."

"Doctor,' says Eddie to me. 'I sak you."

"Doctor, says Eddie to me, 'I ask you to make a note that this unspeakable scoundrel tried to bribe us. Are you aware,

scoundrel tried to bribe us. Are you aware, my man, that this infamy will only make it worse for you in the end? And besides, he goes on, 'it may be in your trunk in the hold, and then again it may not be.'

"'Oh, it is! I swear it is!' he says; and in a second he's down on his knees, with both his arms wrapped round Eddie's legs, begging and screeching for us to be reasonable. 'If you have any heart in you,' he says, 'I'll divide it fair and aquare. Show a little 'I'll divide it fair and square. Show a little

mercy when you see a man in the gates of hell! he says.

"Well, at that it flashed over me what Eddie's whole play had been; I don't have to have an office building fall on me.

"'Get up!' says Eddie, and lifted him by the callar back on to the seat.' Doctor,"

he says to me, 'I confess that in all my twenty-years career I have never come so near to sympathizing with a wrongdoer. Something in this man has truched me to the quick. I am sorry we ever took the case. I tell you frankly that if I saw any honorable way to manage it I should return and report failure to our employers and leave this poor wretch to enjoy his ill-gotten value."

gains." Half his ill-gotten gains, I put in quick; and I was going on to say some more, but Eddie kicks me on the ankle.
"The other half, he goes on, 'we could make restitution of to the rightful owners,

and leave this poor creature to his terment when repentance comes, as I am confident it will come. His own conscience will punish him more effectively than man-made

'At this the old boy goes dippy again, telling Eddie Heaven will repay him for his tender-hearted mercy, and a lot of stuff like tender-hearted mercy, and a lot of stuff like that, Eddie being greatly touched by it. But someway I have a hunch we ought to get action right there. I says, 'What's the matter with having the trunk up now and saving time?' But the old boy won't have it. He says he's in a nervous collapse, and though he feels moved to trust us, still we might play him false and arrest him anyway after we'd got the half that belonged to us. He wants it done on land, where he'll have a fair show. He's trusting us, he says, and why shouldn't we trust him?

"And Eddie's feeling so good over his work that he sides in with him and says it will be all right to-morrow. But that hunch

will be all right to-morrow. But that hunch of mine keeps working. They was some-thing about this lad's eyes I didn't like from the start. So I comes back and says he must have some of it there in the room, and what's the matter with kicking in with a little of it right now?

"'That's true,' he says, 'I have some of it here; and to show you gentlemen that I trust you I'll make a partial payment at

"So he unbuttons his vest and throws it. open, and there across the top was the two safety-pins like I'd said. Then he takes out some bills, and what do you think he done?

Well, sir, he hands us each a twenty.
"Say, you could have knocked Eddie
over with a match! He even lost his voice

for a minute. How would you have felt?
How would any man have felt? I says:

"And be just says: 'Why it's part of the money; I'm relying on your honor and giving it to you now, and I trust you to deduct it from your half in the morning. "Well, I was going up in the sir at that, but

Eddie just grabs me and says: 'Come on!'
"I took the two twenties just the same,
and I says to him: 'You do any of this four-

flushing with us tomorrow and you'll have your name in the papers!"
"Back to the smoking room for me and Eddie, him looking foolish and me feeling

pretty hot to think all our work was going for little or nothing.

"You can kick me, Doc," Eddie says, only you got to give me good on my system. I shot straight enough, but I got a mudhen 'stead of a canvasback. That old yap had all the earmarks of making a big getaway. I doped his physiology right, but not his caliber. I sized him for a cashler at the lowest, and here he's some chesp bookkeeper who's likely grabbed off three thousand dollars at the most! I never saw such a blow-up. Of course I had

never saw such a blow-up.' Of course I had to give Eddie good for working it up like he done, and I said so. 'And it'll serve the thief right.' I adds, 'if we take the whole three thousand for ours.'

"'Oh, I'm ton disgusted!' says Eddie. 'We'll be straight with him as long as he's been straight with us. It probably ain't his fault be didn't grab off more.' And right then I feel my hunch again. 'He may be square,' I says, 'but I don't like his looks a little bit.'

"It took me the longest time to get to sleep, account of this hunch of mine. 'Maybe it's only three or four thousand,' I says to myself; 'but, at that, he'd do us out of our half of it if he had the chance.' out of our half of it if he had the chance.

I ain't pertending to be any physiologist,
understand, but he looks crooked to me.

The last thing Eddie says is that he
couldn't ask the guy how much he'd took,
because we was supposed to know all about
it; and that it rouldn't be anything decent or he wouldn't have offered us only two twenties, which was the straight physiology of it and can't be wrong if you've studied it much, like Eddie had.

Well, we're up bright and early to land at Plymouth, and soon's we get dressed we're in to help our man. He only had half his clothes on and was all gone floory. His empty suitcase was lying on the bench, his clothes and things all over the place; and he was blubbering round that he had

and he was blubbering round that he had ought to shave off his whiskers. But Eddie says: 'Wait till you get to London; they might notice it on the boat.' So he says he will; but won't we help him pack his bag—him being so nervous and helpides.

"Eddie soothes him down and we both wedge the stuff into his bag while be dresses. And you can bet I saw they wasn't anything in that suitcase he could hold out on us, either, nor in his clothes, which I takes pains to band to him. We get all his shirts and things in and put his shaving shirts and things in and put his shaving things on top, like he saked us. Eddie was just fastening the bag when he looks up to the top shelf of the little supboard and

sees a bundle.
"What's that?' says Eddle.
"'Oh, that,' says the lad, 'that's just some old worn-out underwear I won't need any more; so I thought I'd leave it. But my initials is on it—will that do any harm?" "Sure!' says Eddie. 'They might trace you by it. You better let us pack it.' he

So we squeeze this bundle of flannels into the bag, too, which shows you how we was befriending the little dub.

Then we went down and had some colfee, and was out on the tender. We made the old boy pick out his trunk when it come down over the side and we stayed right by it, you bet!
"It's in a secret bottom I had made." he

says; 'and, dear me, I'll have to shave off my whiskers the minute we get in." He kind of chirked up, thinking about that. 'It'll make him it would sure change him a whole lot.

"He was so pitiful that we kept throwing the good cheer into him like he was a sick Just the same, that hunch of mine kept working, and I made a stiff bet with myself that he'd never get that trunk out of my sight till we'd got our money out of it. "The customs lads didn't keep us more

than a minute or two, and there we was in a comparement for London, the old boy saying over and over that he'll feel safe the minute he's shaved. We get in all right, and, say, he was that scared going out of the station we had to hold him up between us-looking for the hand on his shoulder, understand.

"We go to a quiet little hotel where Eddle and I always stop, and get the trunk inside. I stay by that while Eddle gets a room. Then the old boy grabs his bag sad

says: Now it's all right for me to shave

ain't it?

"And Eddie says:
"'Yes, for Heaven's sake go shave and
get it off your mind!"

"So he says: 'Will you come with me or watch the trunk till they can bring that up!"
"And I says: 'We'll watch the trunk if it's just the same to you."
"I think it's much better you do,' he

says; 'you can't tell who might be about.'
"And off he goes to the room to share while we waited for the porter that took hibbag to come back and get the trunk.
"It won't be much,' says Eddle—'cake and coffee for a week; but it was better they nothing."

than nothing."
"So we chin back and forth there (et about ten minutes, till I says:
"How about that porter coming back to get this trunk up?" So Eddie grab another porter and tells him to wrestle the same that I follow him right siens. trunk, and you bet I follow him right along

another porter and tells him to wrestle to trunk, and you bet I follow him right sleng "Eddie's waiting at the door of the room when we get there. 'He can't be in here, he says, 'because I've knocked!' So the porter with the trunk opened the doo with a key and, sure enough, so one i there. Just then along comes the fire porter and says our friend changed himind and went out the side entrance an off in a taxi with his bag about fiften minutes before. We was surprised at the naturally; but gee, I felt good we had ou trunk there! I knew he hadn't anything it his old suitcase. So the porter puts the trunk inside and we go in and lock the door and just look at each other.

"'I got it,' I says—'he was two nerves to shave himself, so he went to a barler.

"'More likely,' says Eddie, 'he say some one he knew and ducked out quier the another hotes. Poor little devil!" and lefall the etuff here. But we'll be squar with him. If he don't communicate we'take our bit out and leave the rest in the trunk here for him."

"'Well.' I anys. The won or any many trunk livel!' I anys. The poor in the rest in the trunk here for him."

"'Well.' I anys. The poor in the rest in the trunk here for him."

""Well, I says, like you or any ma would, I anys, like you or any ma would, I uin't greedy so long as I get a I want and what's fair and desent; but I want and what's fair and decent; but don't see how he wins a whole half of after he's left us here to do all the work Anyway,' I says, 'let's see how much a split and do the splitting afterward.'

"At that we pry the lock loose with poker and pull the stuff out of the trunk i get down to this here secret bottom."

Doc paused. Life died from his face color goes from the tropic sunset. I stared gloomily into the boulevard's ebbit tide.

"Well?" I said gently, for I saw that !

was stricken.

"Garsawng, porty moy ung other pot-tea!" he commanded in his best Franc

Then he turned weary eyes on me.

"You guessed the answer. There wan
any secret bottom; nothing but checlothes and things, and a few odds at
ends of paper that showed Eddie had beright at first. He was cashier of a bank one of them milltowns—and what do ye think he'd left with? Only a hand thousand dollars—that's all! In big hill How'd we know? Oh, we read it in the papers that same day. After fifty years strict integerty, the paper said. THE FLOATING LABORER

(Continued from Page 3)

live in; the vermin nearly ate me up!" "The food was so had that I got sick with it!" "The camp was filthy; I couldn't stand the smell!" "The meat was rotten! I was afraid to eat it. They told me the company paid for good meat, but the boss was taking his bit out of the contract."

And here is a passage from the experience of a young Hungarian immigrant. He had been a cooper in the old country, but found American methods so different

but found American methods so different that he would have to learn the trade over again before he could get work. He had lived by peddling, odd jobs, and the like, for a year, when he saw this sign in the window of an employment office: "Wanted, fifty men; free shipment; two and a half dollars a day." The story proceeds as follows:

"He applied at once and paid two dellars in advance for the job. He was shipped to a Southern coal mine, where he worked outside shoveling ground ten hours a day. He slept in the company sharty. He was not charged for the sharty, but paid two dollars a week for the bedding. He prepared his own meals, securing provisions from the commissary store of the company. He had to buy from the company. On pay day he discovered he was receiving only one dollar and forty cents a day. The only one dollar and forty cents a day. The charges for the employment office and for the bedding were taken out, and the remainder just covered his commissary-store debts. He did not know whether this job was a strike-breaking job ar not—only the boss would not allow the men to go away; he threatened to kill them if they went. So during the night he ran away and walked to Washington, and then finally to New York. He slept in fields or in empty barns. His meals he earned by taking odd jobs on farms."

From the threat of the boss it is easy to

es that this, as the Hungarian suspected, was a strike-breaking job.

Being a Russian, with a Russian's temperament and talent for subtleties. Speek believes strongly in what he calls the psychological background. He questions these men and gets from them showers answers on the strongly in the store answers on the strongly in the store answers on the store answers on the strongly in the store answers on the store and the store answers on the store answers on the store and the store answers on the store and the store and the store answers on the store and the store answers on the store and the store and the store answers on the store and the store and the store answers on the store and the store and the store answers on the store and the store answers on the store and the store and the store and the store answers on the store and the store and the store and the store answers on the store and the store and the store answers on the store and the store answers on the store and the store answers on the store and the store and the store and the store answers on the store and t points the ordinary investigator ignores. He finds, for example, that few if any of them are married—at least in the full sense of the term.

Ambitious Americans

Some married in youth, but deserted their families. Most have hoped at some time for that experience, which is the right of any normal man; most admit having known is youth some girl whom they wished to marry. They gave over that hope long ago. Homeless, lacking all opportunity to meet decent women, they take what feminine association they can get; and that association they find in and about saloons, which represent in their lives what his club, his lodge, his sitting room or his dancing class represents to the man of better luck or better abilities.

Speek has found, also, the psychological buckground for that drink habit we have lightly supposed to be the seat of all misery in the American laborer. The American is by tradition and environment rather than by nature ambitious. To the European peasant the order of society seems forever arranged by a superior power; that he should rise to a higher and more afficent social class is usually beyond his imagination. The American, on the contrary, has lived in the

land of opportunity.

The notion that any man may rise to the highest position by his own efforts has been dinned into him from the beginning of his education. As time goes on and be fails to rise, as starvation period follows starvation period, he drinks in order to revive this imagination of success that life has almost killed in him; and the fact that his losting place, his only expression of social life, is the saloon, does not bein him to cure the habit.

And this casual laborer of the type I have been trying to sketch figures in all our primitive industries. He furnishes the raw, human material for farming. The day has gone when the American farm hand was a stout young fellow who expected, after he had saved a little money, to stake out a quarter section of his own. The quarter

What Men Know of Motorcycle Tires

In Four Years One Has Out-Distanced All

In 1910 the first Goodyear Motorcycle fires were sold. In 1911 the output multiplied itself by 32. In 1912 rates were 139 times greater than in 1910. The 1910 figures were multiplied by 183 in 1913.

And this year, three out of every four new motorcycles sold will carry Goodyears. For this tremendous gain there is but one answer—super-service proved by these thousands of tires.

115,000 Motorcycles This Year

That is the number of motorcycles that will be Goodycar-equipped in 1914. What better evidence could there be of the superiority by which men have come to know and prefer Goodycars?

Remember, too, that Goodyear Mo-toncycle tires have won and held every world's record for speed and durabil-ity. It is not enough simply to make a good tire. There must also be the Goodyear knowl-

edge by which these tires can excel under every good Rival makers say "Just

sections are all taken up. The farm hand is now a casual laborer, working hard during the plowing and planting seasons, tramping or reeting until harvest time, working at bonanza wages for a few weeks during the harvest-and, when that is done, living as best he can during the winter.

Of like habits are the men who construct our railroads, dig our big irrigation ditches, cut our timber, load and unload our freight at the lake ports. No one can venture a guess at their number, but it must run into the millions; and of these millions few, if any, ever hold steady employment.

This is an American problem. Europeans, it is true, know the casual laborer;

but he cuts no such figure in their society as in ours. Conditions there are settled; society has shaken itself together. Though they have periods of prosperity and depression, the variation is not so wide as in America. Then, too, they have broken and harmensed all their industrial resources.

When an American railroad suddenly decides to double-track an overland line; when the Government or a corporation undertakes a new irrigation system; when an era of building in our pioneer cities booms the lumber market—we have a mighty shift of labor, such as never occurs in Europe. When the double track or the irrigation system is finished, when a cessa-tion of building causes a drop in the demand for lumber, we suddenly throw back whole battalions of labor into the army of the unemployed.

Again, the psychological aspects of the problem trouble the closer-living European but little. The German, the English or the French isburer does not tend to wander. He sticks to his county, canton or department. In that district dwell the few less rempelent men who represent casual labor.
They loss their places when work is elack—they are the first to be laid off when hard times arrive; but somehow, with the help of relatives and mates, they tide over the sons of unemployment.

Batter Conditions in Europe

The district is home to them; they have those normal relations with women and family that keep a man sweet on life. They manage even to marry. They have, in short, some social ties other than those fur-nished by the seloon and the scarlet woman. Their curve of life does not necessarily run downward; though Europe knows the man who, by dint of irregular living and periods of loading, goes from unemployment to un-employability, that man is not typical them. So far as we can learn, he is typical with us. The problem, it is true, includes condi-

tions we cannot wholly escape. We still figure as an agricultural country; we are still engaged in developing our resources. Agricultural labor and such other primitive labor as ditchdigging, tracklaying and building need an open season. Our seasonal manufacturers, though they proceed most busily in winter, still cannot begin to ab-sorb the army of outdoor laborers made idle by winter. Slack masons have always been

and always will be.

What we can escape is the appalling loss of time in the busy season caused by our grievous and characteristically American failure in industrial teamwork. The Cali-fornian fruit crop is rotting on the trees for want of pickers at the very time when the ag-ricultural laborers of Kansas and Nebraska are resting between planting and harvest. Often the wheat of Kansas and Nebraska is dropping from the standing stalks at the very time when a decline in the lumber market has thrown an army of Northern lumbermen out of work.

Along a certain railroad, which connects Philadelphia and New York, lies a district of passably good agricultural land, un-broasn or abandoned. Why, in the slack spring or autumn, are not our unemployed

laborers clearing that land?

And what is our society doing that it permits the headless rush of labor to unprofitable fields? Ford, the automobile roan, announced last autumn his famous profit-charing plan. He remarked, in pass-ing, that he expected soon to enlarge his factory. The news spread through the West; ten thousand laborers, most of them without mechanical training, rushed into Detroit and settled on the town for the winter. San Francisco has been advertising her Exposition. The impression got abroad that there would be much work in San Francisco. For weeks the westhound brake beams and blind baggages were crowded; before the movement ended, the charity organizations

of San Francisco were unding out warnings to their Eustern correspondents.

Only last year, at a season when work was plentiful, a railroad wanted a large force for a fortnight's rush work. By promise or high of a steady job all winter it lured thousands of laborers away from the more profitable harvest—and discharged them all when the fortnight had passed.

fortnight had passed.

The case of John Smith, the floating common laborer, downed by social forces greater than himself to industrial ruin and premature old age, abould appeal, I suppose, to the philanthropy in us; but Christianity is still far from a working theorem to dealing with social forces. And the feeling to which we must appeal in trying to improve the lot of John Smith is enlightened self-interest. He is worn-out and unless for production at thirty-five; yet he has, on a normal expectation, fifteen or twenty more years of consumption left to bim.

In some way or other society must support him until the end. Further, half his working days up to thirty-five have been lost, not only to himself but to the world; and a lost day's work, as our copy books used to inform us, is the most complete waste we can imagine. If John Smith does not need those working days, industry as a

would have said that the trouble with John
Smith was a flaw in his education. Let us
teach him a trade; let us establish craft
schools. But the trades will absorb only so
many men; if John Smith had learned a
trade and prospered thereby he would
merely have pushed Jim Brown back into
unorganized ensual labor. We need common laborers just as much as we need
plembers, electricians and paper hargers.

No; it is a matter of businesses. Europe,
with a far less pressing need than our own.

Not it is a matter of beautwork. Europe, with a far ion pressing need than our own, has already put that teamwork on first. In this, as in many other problems of modern industry, we are far ishind those Europeans whose manarchie ineffections we were taught in our youth to despise. Let more, in another article, what Europe has done, and what we can do.

Editor's Note-This is the second of a series of artitles by Will Irwin. The third will appear in an unity teams.

Rain by Wireless

WEATHER control—rain ordered for mideight, day after to-morrow—may be a wireless victory in the next generation. Now it is weird and visionary: but Sir Oliver Ledge, who is in the top rank of living scientists, thinks it not improbable, and is now calling on his follows to begin wireless studies with this purpose in misd. The more there is discovered about the way wireless tolography works, the more it is evident that weather and wireless wayes are taugled with each other.

Almost every one knows that wireless telegraphy works better by night than by day and has peculiar jumps of efficiency at sunset. A wireless operator on shipheard in the far North found that during a display of the nurers borealis the northern lights were widely disturbed when he sent our wireless signals from his ship.

The growing theory concerning the way wireless waves follow the curve of the carth is, in simple language, that the apper layers of the air form a sort of magnetic cushion against which the wireless waves can bound along. Sir Oliver wishes to have experiments made by discharging very powerful wireless waves from kites under all kinds of weather conditions, in order to assertain whether the wayss will, under any conditions, make clouds condense into rain, or prevent them from condensing.

It is not to be expected, of course, that rain could be obtained from a dry sky, but normal conditions of the air would issue much opportunity for weather control if the theory should prove workable.

much opportunity for weather control if the theory should prove workable.

The total eclipse of the sun on a pain from Greenland to Persia next August is to be made the occasion for elaborate will be sent out from within the path of chadon and across the chadon, and the effect of the shadow on these signals should give more cleve to the whole problem.

OUVE observed, haven't you, that the Studebaker FOUR finish looks as bright and clear and line after a year's hard tree as in the beginning? That kind of finish fights off-depreciation.

What do we mean by that?

We mean it adds actual cash value when you sell the car and buy another.

We emphasize this finish because it typifies a score of operations on this FOUR in which Studebaker exactness goes far, far beyond ordinary practice.

Twenty-four operations produce this finish.

As many, and as linely and thoroughly done, as on the costlest cara.

Seventeen of them are pumting operations - with a sund blast first,

Why the sand blast?

F.O. R. Dutreit

To remove every impurity and make it impossible for the paint to flake.

Few cats - even among the highest priced - use this precaution.

You couldn't buy a better finish, no matter what price you pay.

Not only extra-real in painting characterizes this FOUR.

Scrupulous executes in every process, excess-caution in designing, steel-testing, heattreating, case hardening; special-care in stamping, drilling, machining, assembling,

Unite all these and you begin to understand why we feel justified in pronouncing this FOUR the best value in the world at \$1050.

> The Studebaker Proof Book describes and pictures the extensific precion of Studenteen manufacturing operations. Small for it.

AN AMERICAN VANDAL

"Behold, m'sieur! We are now approach-ing a wine shop on the left. You were most gracious and kind in the matter of luncheon. Kindly permit me to do the honors now.

It is a very good wine shop—I know it well. Shall we stop for a glass together,

It was the first time since we landed at Calais that a native-born person had offered

Calais that a native-born person had offered to buy anything, and, being ever desirous to assist in the celebration of any truly notable occasion, I accepted and the car was stopped. We were at the portal of the wine shop when he plucked at my sleeve offering another suggestion:

"The chauffeur now—he is a worthy fellow, that chauffeur. Shall we not invite the chauffeur to join us?"

I was agreeable to that too. So be called the chauffeur and the chauffeur disentangled his whiskers from the steering gear and came and joined us. The chauffeur and I each had a small glass of light wine, but the general took brandy. Then ensued a spirited dialogue between him and the spirited dialogue between him and the woman who kept the shop. Assuming that I had no interest in the matter, I studied the pictures behind the bar. Presently, having reduced the woman to a state of compara-

"M'sieur," he said, "I regret that this has happened. Because you are a foreigner and because you know not our language, that woman would make an overcharge; but she forgot she had me to deal with. m on guard! See her! She is now quelled! have given her a lesson she will not soon orget. M'sieur, the correct amount of the sil is two-france-ten. Give it to her and let is begone!"

I still have that guide's name and address and recovered to the present of the present o

n my possession. At parting he pressed is card on me and asked me to keep it; and I did keep it. I shall be glad us loan it o any American who may be thinking of sing to Paris. With the card in his pocket is will know exactly where this guide lives; and then, when he is in need of a guide, he an carefully go elsewhere and hire another

I almost failed to mention that before we arted he tried to induce us to buy some-ing. He took us miles out of our way a pottery and urged us to invest in its nide—to see that you buy something and beward to collect his commission from the sopkeeper for having brought you to the cop. If you engage your guide through se porter at your hotel you will find that reters you to the shops the hotel people ive already recommended to you, but you break the porter's heart by hiring arguide outside, independently, the guide sers you to the shops that are on his own ivate list.

A Transaction in Galters

Only once I saw a guide temperarily imped, and that was in Venice. The ies were leaky that day and the weather a raw; and one of the ladies of the party we pumps and silk stockings. For the otection of her ankles she decided to buy pair of cloth gaiters; and, stating her ention, she started to go into a shep that all in those articles. The guide hesitated moment only, then threw himself in her th. The shops hereabout were not to be sted—the proprietors, without excepsted—the proprietors, without excep-n, were rogues and extertioners. If dame would have patience for a few of moments he would guarantee that she what she wanted at an honest price, seemed so desirous of protecting her

t she consented to wait. n a minute, on a pretext, he excused self and dived into one of the crooked ys that thread through all parts of tice and make it possible for one who ows their windings to reach any part of city without using the canals. Two of secretly followed him. Beyond the first ning he dived into a shoe shop. Emergafter a while he hurried back and led lady to that same shop, and stood by, ling softly, while she was fitted with ers. Until now evidently gaiters had been on his list, but he had taken steps emedy this; and though his commis-on a pair of sixty-cent gaters could have been very large, yet, as some osopher has so truly said, every little added to what you have makes just a

licum more.

Indeed, the guide never overlooks the smallest bet. His whole mentality is focused on getting you inside a shop. Once you are there, he stations himself close behind you. reinforcing the combined importunities of the shopkeeper and his ussembled staff with gentle suggestions. The depths of self-abasement to which a shopkeeper in Europe will descend in an effort to sell his goods surpasses the power of description. London tradesman goes pretty far in this direction—often he goes as far as the side-walk, clinging to the hem of your garment and begging you to return for one more look; but the Continentals are still worse. A Parisian shopkeeper would sell you the

bones of his revered grandmother if you wanted them and he had them in stock; and he would have them in stock too, because, as I have stated once before, a true Parisian never throws away anything he cansave. I heard of just one-single instance where a customer desirous of having an article and willing to pay the price failed to get it; and that, I would say, stands with-out a parallel in the annals of commerce and

An American lady visiting her daughter, an art student in the Latin Quarter, was walking alone when she saw in a shop win-dow a lace blouse she fancied. She went inside and by signs, since she knew no French, indicated that she wished to look at that blouse. The woman in charge should her head, declining even to take the gar-ment out of the window. Convinced now, wemanlike, that this particular blouse was the blouse shedesired above all other blouses the blouse she desired above all other blouses the American woman opened her purse and indicated that she was prepared to buy at the shopwoman's own valuation, without the privilege of examination. The shop-woman showed deep pain at having to refuse the proposition, but refuse it she did; and the would-be buyer went home angry and perplexed and told her daughter what had happened.

Where Desdemona Never Lived

"It certainly is strange," the daughter said. "I thought everything in Paris, except possibly Napoleon's tomb, was for sale! This thing will repay investigation. Wait until I pin my hat on. Does my nose need powdering?"

Her mether led her back to the shop of the blouse and then the puzzle was revealed—for it was the shop of a dry deanest and the blouse belonged to some parron and

and the blouse belonged to some patron and was being displayed as a sample of the work done inside; but undoubtedly such a thing never before happened in Paris and probably

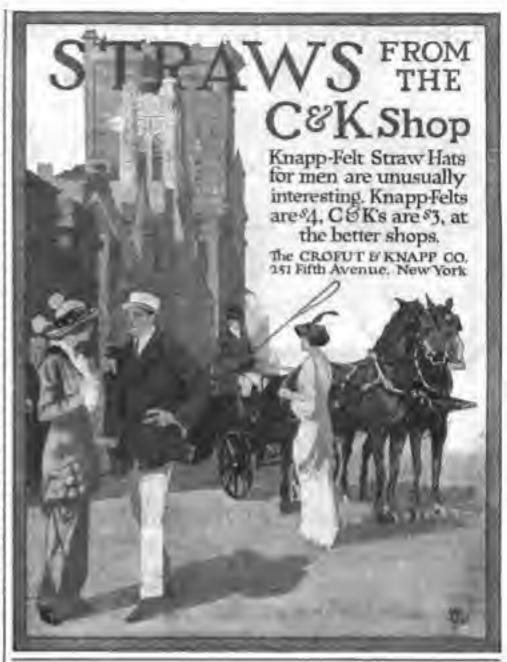

never will happen again.

In Venice not only the guides and the botel clerks and porters but even the simple gondollers have a secret understanding with all branches of the retail trade. You get into a long, snaky, black gondols and fee the beggar who pushes you off, and all the other leggars who have assisted in the pushing off or have merely contributed to the success of the operation by being present, and you tell your gondoller in your best. Italian or your worst pidgin English where

you wish to go.

It may be you are bound for the Rialto;
or for the Bridge of Sighs, which is chiefly distinguished from all the other bridges by being the only covered one in the lot; or for the house of Desdemona. The lady Desdemona never lived there or anywhere else, but the house where she would have lived, had she lived, is on exhibition daily from nine to five; admission one lira. Or perchance you want to visit one of the ducal luces that are These pulaces are still tenanted by the descendants of the original proprietors; one family has perhaps been living in one palace three or four hundred years. But now the family inhabits the top floor, doing light housekeeping up there, and the lower floor, where the art treasures, the tapestries and the family relies are, is in charge of a caretaker, who collects at the door and then leads you through.

Having given the boatman explicit directions you settle back in your cushioned seat to enjoy the trip. You marvel how he, standing at the stern, with his single our fitted into a shallow notch of his steering post, propels the craft so swiftly and guides it so surely by those short, twisting strokes of his. Really, you reflect, it is rowing by shorthand. You are feasting your eyes on

A Mere Veneer for a Union Suit

ENJOY A SEASON OF REAL UNDERWEAR COMFORT IN AN

COAT-CUT (Loose Fitting) UNION SUIT

An OLUS COAT-CUT UNION SUIT will repay a moment's thought with a whole season's comfort and satisfaction. Opens all the way desen the front. This coat-cut construction gives OLUS a genuine closed crotch, a closed back and a perfect fit from shoulder to crotch. Only one fabric thickness anywhere.

Made in all materials, including knitted. Prices \$1.00 to \$3.00.

Remember-If it isn't coat-cut it isn't OLUS.

OLUS ONE-PIECE PAJAMAS (As see and users) for hunging, resting and combretable of the same principle as OLUS Union Suits. Cost-out-closed cretch-closed back. He strings come losses. \$1.50 to \$8.90.

Ask your dealer for OLUS. If he cannot supply you, we'll need prepaid. Backlet as request.

To Dualize: —Your wholesaler carries OLUS.

the wonderful color effects and the groupings that so enthuse the artist, and which he generally manages to botch and boggle when he seeks to commit them to canvas; and betweenwhiles you are wondering why all the despendent cats in Venice should have picked out the Grand Canal as the most suitable place in which to commit suicide,

suitable place in which to commit suicide, when—bump!—your gondola swings up against the landing piles in front of a glass factory and the entire force of helpera rush out and saine you by your arms—or by your legs, if handler—and try to drag you inside, while the affable and accommodating gondolier boosts you from behind.

You fight them off, declaring passionately that you are not in the market for colored glass at this time. The hired hands protest; and the gundolier, cheated out of his commission, sorrows greatly, but obeys your command—at least he pretends to obey it; but a minute later he brings you up broadside at the water-level doors of a shop dealing in antiques, known appropriately as antichilar, or at a mosaic shop or a curio shop. If ever you do succeed in reachcurio shop. If everyou do succeed in reaching your destination it is by the exercise of much profanity and great firmness of will.

The most insistent and pesky shopkeepers of all are those who hive in the ground floors

of all are those who have in the ground floors of the professedly converted palaces that face on three sides of the Square of Saint Mark's. You dare not hesitate for the smallest fractional part of a second in front of a shop here. Lurking inside the open door is a husky puller-in; and he dashes out and grabs hold of you and will not let go, begging you in spaghettified English to come in and examine his unapproachable assortment of bargains. You are not compelled to buy, he tells you; he only wants you to to buy, he tells you; he only wants you to gaze so his heautiful things. Relieve him not! Venture inside and then decline to purchase and he will think up new and sub-tie Italian forms of insult and insolence to visit on you. They will have brass bands out for you if you invest and brass knuckles if you do not.

The Aristocrats of Venice

There is but one way of escape from their evertasting persecutions, and that is to fee to the center of the square and enjoy the company of the pigeons and the photog-raphers. They—the pigeons, I mean— belong to the oldest family in Venice; their lineage is of the purest and the most unde-filed. For upward of seven hundred years the authorities of the city have been feeding and protecting the pigeons, of which these countiess blue-and-bronne flocks are the direct descendants. They are true aristocrats; and, like true aristocrats, they are content to live on the public funds and grow fat and samy thereon, paying nothing in

return.

No: I take that part back—they do pay something in return; a full measure. They pay by the beauty of their presence, and they are surely very boautiful, with their dainty mineing pink feet and the sheen on the proudly arched breast coverts of the cock birds; and they pay by giving you their trust and their friendship. To gobble the gifts of dried peas, which you buy in little cornucepias from convenient venders for distribution among them, they come wheeling in winged battallons, creaking and cooing, and alight on your head and shoulders in that perfect confidence which so delights humans when wild or half-wild creatures bestow it on us; though, at every opportunity, we do our level best to hunt and harry them to death.

At night, when the moun is up, is the time to visit this spot. Standing here, with the looming pile of the Doge's Palace bulked behind you, and the gorgeous but somewhat garish decorations of the great cathe-

the looming pure of the progress what some-tehind you, and the gorgeous but some-what garish decorations of the great cathe-dral softened and soothed into perfection of outline and coloring by the half light, you can for the moment forget the fallen state Venice, and your imagination peoples e splendid plaza for you with the ghosts of its dead and vanished greatnesses. conceive of the place as it must have looked in those old, brave, wirked days, filled with knights, with red-robed cardinals and clanking men at arms, with fair ladies and grave senators, elinking brayes and hired assassins—and all so gay with ellk and sotin and glittering steel and spangling gems.

By the eye of your mind you see His Illuminated Excellency, the frosted Christ-mas card, as he hows low before His Eminence, the pink Easter egg: you see, half hidden behind the shadewed columns of the long portico, an illustrated Sunday supplement in six colors burgaining with a stick of

sniped peppermint candy to have his best friend stabbed in the back before morning; frend standed in the clack before morning; you see giddy poster designs carrying on firstices with hand-painted valentines; you ratch the love-making, overhear the noriging, and scent the plotting; you are an eventures to a slice out of the life of the nest sinister, the most artistic and the most

most annuer, the most artistic and the most nurierous period of Italian history. But by day imperious Casar, dead and am'd to day, stops a hole to keep the wind way; and the wild ass of the ninety-day but stamps his heedless hoofs over the spot where sleeps the dust of departed grandeur, shere steeps the dust of departed grandeur, by day the chug of the motor hoat routs rot old sleepy echoes from cracked and cranied ruins; the burnished golden freewed of Saint Mark's blare at you as with insen trumpets; every third medieval durch has been turned into a moving-large large, and the short keeping parapicture place; and the shop-keeping paraties bezz about you in vermin swarms and tere holes in your pocketbook until it is alone large, painful welt. The emblem of Verice is the winged lion. It should be the bill weevil.

In Rome it appears to be a standing rule thit every authenticated guide shall be a roint Socialist and therefore rampantly uniderical in all his views. We were in East during the season of pilgrimages. From all parts of Italy, from Bohemia and lingary and Spain and Tyrol, and even from France, groups of pessants had come to Emeto worship in their mother church and the bireard by the systems populated of their who bessed by the supreme pontiff of their inth. At all hours of the day they were pasing through the streets, bound for Saint Feir's or the Vatican, the women with kerticis over their heads, the men in their Sanlay best, and all with badges and tokens se their breasts.

At the head of each straggling procession soud be a black-frocked village priest, at the proud and humble, nervous and ex-ited. A man might be of any religion or of to religion at all, and yet I fail to see how brould watch, unmoved, the uplifted faces if these people as they dumped over the mobile of the Holy City, praying as they wat. Some of them had been saving up ill their lives, I imagine, against the comof this great day; but our guide—and se tried three different ones—never beheld his eight that he did not sneer at it; and on once did he fail to point out that most if the pilgrims were middle-aged or old, taking this as proof of his claim that the Churhnolongerkeptitshold on the younger

regie, even among the peasant classes.
The still more frequent speciacle of a nuching line of students of one of the holy olices, with each group wearing the dis-tivitive insignia of its own country—purple nose or green sushes, or whatnot—would take him to the verge of a spasm.

The Terrible Rollmops

Our guide in Vienna was the most stupid butan being I ever saw. He was probuildy ignorant on a tremendously wide ratio of subjects; really, he had a most complete reportoire of ignorance. He must the spent years of study to store up so much interesting misinformation. This pade was much addicted to indulgence in a peculiar form of twisted English, and at odd noments given to the consumption of a deliesey of strictly Germanic origin, known in the language of the Teutons as a Rollneps. A Rollmops consists of a large dilled number, with a pickled herring coiled round it ready to strike, in the design of the ntienake-and-pinetree dag of the Revo-"Don't monkey with the buzz saw! He tarried his Rollmops in his pocket and bequently, in art galleries or elsewhere, would draw it out and nibble it, while becaminating inaccuracies touching on pictures and statues and things.

Imong other places, he took us to the dest church in Vienna. As I now recolset it was six hundred years old. No; on aroud thought I will say it must have been ider than that. No church could possibly seems so moldy and mangy looking as hat church looked in only six hundred wars. The object in this church that interand me most was contained in an ornate case placed near the altar and alongide the relics held to be sacred. It did not suctly please me to gaze at this article; us the thing had a fascination for me; all not deny that.

It seems that a couple of centuries ago here was an officer in Vienna, a captain in talk and a Frenchman by birth, who, in midst of disorders and licentiousness,

lived so godly and so sanctified a life that his soldiers took it into their heads that he was really a saint, or at least had the making of a first-rate saint in him and, therefore, must lead a charmed life. So-thus runs the tale-some of them laid a wager with certain Doubting Thomass, also soldiers, that neither by fire nor water, neither by rope nor poison, could be take harm to himself. Finally they decided on fire for the test. So they waited until he also to those simple homes about the sold. alept—those simple, honest, chuckle-headed chaps—and then they slipped in with a light and touched him off. Well, sir, the joke certainly was on those soldlers. He burned up with all the spontaneous enthusiasm of a celluloid comb. For qualities of instantaneous combustion he must have been the equal of any small-town theater that ever

equal of any small-town theater that ever was built—with one exit. He was practi-cally a total loss and there was no insurance. They still have him, or what is left of him, in that glass case. He did not exactly suffer martyrdom—though probably he per-sonally did not notice any very great differ-ence—and so he has not been canonized; nevertheless, they have him there in that church. In all Europe I saw only one sight to match him, and that was down in the crypt under the Church of the Capachins, in Rome, where the dissected cadavers of four thousand dead—but not gone—monks are worked up into decorations. There are altars made of their skulls, and chandeliers made of their thigh bones; frescess of their spines; mosaics of their teeth and dried muscles; cozy corners of femure and pelvises and tibias. There are two classes of travelers. I would strongly advise not to visit the cryptof the Capuchins' Church—those who are just about to have dinner and want to have it, and those who have just had dinner and want to keep on having it.

The Tragedy of Two Bound Hands

At the royal palace in Vienna we saw the finest, largest and gaudiest collection of crown jewels extant. That guide of ours seemed to think he had done his whole duty toward us and could call it a day and knock off when he led us up to the jewel collections, where each case was surrounded by pop-eyed American tourists taking on flesh

at the sight of all those sparklers and figur-ing up the grand total.

The display of all those germ, however, did not especially excite me. There were too many of them and they were too large. A blue Kimberley in a hotel clerk's shirt-front or a pigeon-blood ruby on a fure deal-er's little finger might hold my attention and win my admiration; but where jewels are piled up in heaps like anthracite in a coal bin they thrill me no more than the

anthracite would.

A quart measure of diamonds of the averuge size of a big ballstone does not make me think of diamonda but of halistones. I could remain as calm in their presence as I should in the presence of a quart of cracked ice; in fact, calmer than I should remain in the presence of a quart of cracked les in Italy, say, where there is not that much ice, cracked or otherwise. In Italy a bucketful of ice would be worth traveling miles to see. You could sell tickets for it.

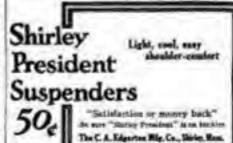

In one of the smaller rooms of the palace we came on a casket containing a necklare we came on a casset containing a necessary of great smoldering rubies and a pair of bracelets to match. They were as big as cranberries and as red as blood—as red as arterial blood. And when, on consulting the guidebook, we read the history of those rubies the sight of them brought a picture to our minds, for they had been a part of the wedding dowry of Marie Antoinette, Once on a time this necklace had spunned the slender white throat that was later to be sheared by the guillotine, and these brace lets had clasped the same white wrists that were roped together with an ell of hangman's hemp on the day the desolated queen rode, in her patched and shabby gown, to the Place de la Révolution.

I had seen paintings in plenty and read descriptions galore of that last ride of the Widow Capet, going to her death in the tumbril, with the priest at her side, and her poor, fettered arms twisted behind her, and her white face hared to the jeers of the mob; but the physical presence of those precious, useless baubles, which had cost so much and yet had bought so little for her, made more vivid to me than any picture or any story the most sublime tragedy of The Terrorthe tragedy of those two bound hands.

Editor's Note-This is the ninth in a series of articles by Irvin S. Cobb. The tenth will appear to an early number.

The Cadillac State of Mind

Doubtless you know what we mean when we speak of the Cadillac state of mind.

We mean the way that everyone—everywhere—talks and thinks and feels about the Cadillac.

That state of mind is the same today as it was yesterday, a year ago yesterday, and ten years ago yesterday.

It will be the same tomorrow and, no doubt, a year from tomorrow, and ten years from tomorrow.

But what a wonderful thing it is when you come to analyze it—this country-wide, world-wide unanimity.

It seems almost incredible that so many millions of people, who differ and disagree on a myriad of other subjects, should so strikingly, startlingly concur concerning one motor car.

This concurrence is not confined to the Cadillac clientele.

It is not confined to Cadillac owners nor to Cadillac dealers.

It is shared by owners of all kinds of cars, by dealers in all kinds of cars, and by makers of all kinds of cars.

And what is it they admit concerning the Cadillac?

They agree, unconsciously perhaps, in regarding the Cadillac as a car apart—a car not in any "class" excepting its own.

You must have had the evidence of this yourself, hundreds of times—in hundreds of different ways.

You must have heard a score of hot discussions concerning other cars stop short when some one said "Cadillac."

"Oh, well-of course-the Cadillac." You've heard that time and time again, haven't you?

Well, for every time you have heard it, the same admission of pre-eminence has been uttered a hundred thousand times.

In the face of such overwhelming tribute, how idle it would be for us to intrude our own modest praises of Cadillac characteristics.

How futile to enter our claims of supremacy which everyone concedes—which no one disputes.

How much better to refer you to your own city, to your friends-to yourself!

Even though you do not drive a Cadillac, you must know that you would surely not be the loser if you did.

You know beyond the shadow of a doubt that it is a good thing to be a Cadillac owner.

And some day, when you obey your innermost convictions, you surely will, if you can, become a Cadillac user.

THE LANTESCANE ROSES

(Continued from Page 18)

Persis sat down helplessly on the cabin couch. She felt fairly unequal to facing Tom with these in evidence. He could not possibly suppose the steamship company was an Italian landlord.

"Take them away and put them on the table," she added after an instant's thought. As the man moved obediently to do her hidding she stopped him. "Wait a minute!"
From the mass she chose a single flower.
"That's all, thank you."
She waited until he had left the room

before she opened her traveling bag, took out a volume of Browning, which she had been intending to read all the way, and carefully laid the rose within. Then she put the Browning back into her bag.

"That's the last of that nonsense!" she

said to herself with great decision. Even as she said it she felt a sudden rending of her heartstrings. All the whistles had stopped shricking and she became aware of slow pulses heating in the soles of her feet. The ship was moving. She climbed hur-riedly on the couch and gazed out through the porthole. The wash of a placid sea was the first thing she saw and, widening across it momently, a pier, a shore, Genoa, Italy itself, diminishing and slipping and fading from her view every minute, becoming faint, like the remembered perfume of a

By another day the salt breath of the sea had driven even the last vestige of that perfume away. And by another week Persis had ceused to sigh for a remoter shore and saw her own native land—any land at all, indeed—looming in her dreams as an ininitely desirable though too-remote possibility, which is only a way of saving that they ity: which is only a way of saying that they had the usual Christmas crossing and got in two days late, on Christmas Eve itself. Persis, with feminine forethought, had

laid in her atore of gifts abroad and tied them all neatly in ribboned packages during what might be called days of convalencence; but Tom had put his trust in Providence— "So like a man!" said Persis disapprov-ingly. Wherefore it was agreed between them that Persis should go straight to their spartment, while Tom dashed down to the office and tipped everybody in sight, thereafter stopping all the way up Fifth Avenue to lay in presents for innumerable sisters,

cousins and aunts.
"I'll be up for dinner anyhow," he said theerfully, putting Persis carefully into

their waiting car.

Then, beckening a taxi, he piled himself in, with all Persis' beribboned gifts for dis-tribution, and rolled away, a monument to American patience in the masculine and happy as only the returned American can be. The warmth of their pretty and luxuri-

ous spartment, all glowing with color and comfort and with many ingenious electric contrivances for yet more comfort, cheered even Persis' heart. Tom's mother had been over and even the dinner was waiting, ready to be served. Secure in the undisturbed privacy of Christmas Eve, Persis made herself happy in a luxurious bouse gown; and while she waited for Tom she amused herself by reading the cards on the piles of boxes and packages heaped in heart-warming anticipation of their Christmas return.

There was a pile of letters, too, and she began sorting these. One was from Janet Seabury, with the San Carlo postmark; she laid it aside to read first of all, and as she put it down she had a curious obsession. It seemed to her the room was full of the perfume of roses, yet there were no roses about. Her cheeks grew warm. Was it possible the sight of an Italian postmark could call up associations so vividly as to make her smell imaginatively?

She sniffed again. There were roses in the room—she was sure of it! Her questing eyes fell with sudden relief on a long paste-board box. That was it, of course! Somebody had sent her roses for Christmas; it happened every year. To make sure, she opened the box; and with the half-lifted cover in her hand she stopped to ask herself an absurd question: Would the roses be red? And then, as suddenly, she found herself supposing things. Suppose? And suppose? She lifted the cover, and stood gazing almost superstitiously at the con-tents of the box. The roses were re?—and there was no card. She rang for the sei ant. "When did these come?

They had come sometime that morning, the maid did not know precisely when, from one of the florists; the maid did not know which. The bell had been ringing all day, but she had understood the boy to say it was an order from Europe. The maid asked whether she should put them on the

"No," said Persis. "Put them"—she hesitated a moment—"in the drawing room," she concluded.

She felt troubled and a little excited. Was this what the count had meant by his enigmatic "Perhaps not—who knows?" Nearby attentions might mean anything, but attentions across an ocean could mean but one thing.

It secretly excited and pleased her to think this thing might be, even though she determined that, of course, she must not let it be if it really was. She must take steps to end it at once

Suddenly she remembered Janet's note. Janet was not a very perspiracious person, but she might accidentally drop some word. erale sat down, looking very much as she had looked in the Lantescane gardens, and tore open the note. She read it hurriedly, passing ever the "lovely hotel," the "quite too lovely view," and the "quaint atmos-

"She seems to have forgotten I have seen it," thought Persis with sarvasm-until she came to the "delightful terrace," when she began to read with intentness; "We take all our breakfacts and have

We take all our breakfasts and luncheons on it, and at present have it all to ourselves except for one gentleman, a Count Lantescane"—here Persis turned a page and, busting frantically for a context, finally chased to the fourth page-"whom I dare say you will remember, for he says he met you. I wooder you never mentioned him, as he is quite too charming, with the most speaking eyes."—Persis' lip curied slightly; "but perhaps," Janet soothingly offered, "you did not see so much of him as we do, for we are told he is very reserved. with strangers. He has the most wonderful old villa and garden, which he took me all over the other day, and the most won-derful roses! They have been in his family hundreds of years. And he simply over-powered me with them, which was a great compliment, as he does not give them to everybody. He is going to show me the family portraits."

At this point Persis let the letter fall. The Lantescape roses at their proudest never bousted anything to equal those in Persis' cheeks. Her eyes were bright and hard, her lips were scornful. So, then, he had been nothing but a vulgar firt, the vul-garest kind imaginable! No doubt he flirted with every American who came along. And her little Italian idyl had been the cheapest kind of incident.

She walked into the drawing room and glared at the roses. She should hate roses—red roses—as long as she lived! But the very force of her revolt caused it to spend itself quickly. Her anger suddenly failed her; she could have cried instead. She remembered the count's manner, al-ways perfectly respectful, and that Janet was undeniably a forthputting person; she might have exaggerated. She might have fosted herself on him, she might even have hinted that she would like the rosss those roses not given to everybody! And there was Genou, and the steamer; and here were the roses!

Everything in Persis struggled fiercely to maintain a hold on its Italian idyl. She was still struggling when the sound of Tom's latchkey sent her harrying into the hall; she could not meet Tom in front of those roses! Tom must not see that anything had happened.

She need not have worried. Tom was in such a state of paradisaical bliss, having breathed again the air of Broadway, that he would have been incapable of noticing anything unless it had been thrown at him. He had actually come up in the subway for fun, to convince himself he was really here; and he kissed Persis thrice over and smiled his way through the whole dinner like a guy and handsome boy. He had found everybody busy with his and her Christmas tree, to every one of which Tom and Persis had been invited; and every one had sent love. Tom congratulated himself gleefully on their quiet first evening at home.

"I told them all we'd make the rounds tomorrow if they'd let us off tonight," he

and the silver-mounted tortoise-shell cigar case from Naplea, and to lay beside her plate a small stamped and gilded leather case, the very sight of which brought up at once all the jewelry shops of Italy; and which, being opened, revealed a scarab necklass of beryl and cloudy amethyst. "Oh, Tom!" exclaimed Persix.

"Oh, Tem!" excisimed Persis. He brought his beels together and made

her an elaborate foreign bow.

"Ricordo d'Holio!" he said dramatically.

"I learned that much Italian anyhow; it was plastered over every blessed thing in that country."

"It's wonderful!" said Persis of the neck-lace. "Tom, you entravagent boy, you shouldn't have!" Her tore was curiously remoraeful.

"Oh, as for that, it's worth as many dol-lars here as france there: I showed it to a jeweler," answered her husband lightly. And you seemed to like it; I thought it

would remind you of San Carlo."

It did! Persis sat looking at the beautiful jewel, and it flashed across her perverse mind that it was precisely the typical gift of the rich American husband. She shut the case and looked across at her husband. He was lighting his after-dinner eigarette with a vast sigh of content.

"My, but it's good to be back!" he said. His eyes went happily from his wife round.

the room and came back to the restry table, with its shining lights, its sliver and glass. "But isn't there something I'm mis-ing?" Ris brows contracted in thought as he stared at the little ferny centerplece.
"I have it—it's the flowers! I knew there was sensithing unnatural."
"The flowers!" Penis repressed the

smallost start.

"Roses - red russel" repeated her hus-hand. "We've had them as long I feel quite lest without them. Besides, there ought to be some. I took particular pains — "With his usual promptitude of action he had already rung the heli." "Weren't there some flowers, Manton, from the florist!"

The footman would because but flow

The footnun would inquire: but Persis "Oh, you mean the roses? They are in

the drawing room."
"They did come; then that's all right. But why didn't you have them on the table? Weren't they all right?"

"Ob, yes," said Persia. "They were beautiful!"

She rose and slipped quickly into the other room; by the time her husband had juined her she had hereif thoroughly in

joined her she had herself thoroughly in hand. He contemplated the enormous hothouse beauties with satisfaction.

"Some rose!" was his langhing comment. "By Jove, I'd like to show them to His Highness, the Count! I used to tell that mun they didn't know a rose over there. I don't think Italy can give us anything on roses. Bot." he added tolerantly, "it's only fair to resomber that it's a matter of france there—dollars here. You could buy out the count's whole garden could buy out the count's whole garden with a few of these bunches."

"France and dollars!" repeated Persia mechanically. She was standing very straight and looking also very straight at her husband; there was a look of dawning intelligence about her. "And 'huy out the count's garden'! Do you do you mean that you ever did - that you did huy roses at San Carlo?"

at San Carlo?"

"Well, what did you suppose, my dear?"

asked Tom in some surprise. "You seemed perfectly stuck on the count's; it was a very cheap way of making you happy, surely. I just gave him a standing order for roses that first night."

"He just gave him a standing order for roses that first night?" repeated Persis' brain to her dully. "For roses, those family roses the count said"—quite honectly, it now appeared - "they did not give to every one.

"You knew he sold flowers, didn't you?" said her husband amiably, "He's as pooras poverty, like most of these old families; so he sells his fruit and flowers. Very arnsible of him too. I fancy I was one of his best customers this long while. Didn't you notice he seemed quite cast down when we came away? He supplies the hotel with vegetables in return for board, and sells his coses all through the Riviera, clear to Genou."

To Genou!" said Persis. "Why, yes!

so that's how -

"Yes; that's how. I told him to supply them all the way, as far as he could. He's got a little vineyard, as he said, up there, and he shipped roses to our hotel tou: that's how I was able to get them for you-

and on the steamer too."
"I see!" said Persis. She did—at last.
"Unlockily," added Tom, smiling at her, be couldn't whifi them over by wireless or cold-storage them across; so on this side it had to be hothousers. But I cabled the order so that you shouldn't miss your Italy too much at first."

There was a touch of unconscious wistfulness in the glance that sought his wife's face; that was what he had fexred mostthat she might miss her Italy. But she was looking fixedly at the roses. "I don't see why you never told me,"

"What? About the count? Why. I guess I just never thought of it," replied her husband. "You had the roses and you seemed to enjoy them—that was all that mattered, wasn't it?"

mattered, wasn't it?"

"You might have told me they were from you."

"Why, when you already knew it?"

"Haw do you know? How could you be sare I knew it?" persisted Persis.

"Why, you took them, didn't you? And wore them?" said her husband simply. Then a sudden illumination struck him. "You don't mean to say," he exclaimed with a laugh, "that you really thought the botel furnished them free and fresh, right along!"

Persis was stricken through and through by an absolutely new sensation—that of shame. It turned her hot and cold together. She looked at her tall young husband, with his unsuspecting clear sym, and vell after veil fell away from her own. She realized all at once that she had married a great gentleman—one not only incapable of imagining certain things, but who would not have believed them if they were taid to

him. In his world they simply did not exist.

And she had gone through Italy with him looking for—the count! That was what it came to; and, really, it was pathetic! Persis knew a wild pang of pity for her silly self—not for Tom; for nobody had been able to do him out of his Italy!

Together with this representant came an

Together with this perception came an enduring one of the vast difference between empty heads and full once. The foolish little confession with which she was preparing to salve her conscience became sud-denly literally too feelish for words. The count had been the least, as he had also been the worst and was haply to be the last, of her subjects for contrition, as she saw it

Accordingly she did the wisest thing in her power; instead of confession she walked straight to absolution —in the arms which, as though by unconscious habit, mrved to

take her in their sheltering clasp.
"Never mind what I thought!" she said with a huigh that was fully half a soh. "I've been several kinds of an idiot; but it doesn't matter—it doesn't matter one bit!" She gave herself a moment for the triumphant realization of that fact, leaning close

against the sheltering arms.

But there's one thing I do want you to know our three months haven't been entirely wasted?"

"Of course not! You're looking a lot better, Persia."

His wife glanced at him with a kind of

solving depair; then, to his intense aston-ishment, she buried her face in his waistonst. "Tem," she racialmed in a voice suited to this unusual action, "you are too delight-ful!" A still more smothered voice added: "Tom, I.—I didn't suppose you cared so much."

The arms about her tightened fusting-

"You didn't suppose I cared!" her husband repeated, and looked down at the buried head in passled wonder. He asked himself whether this was the effect of climate and he had unwisely brought her back too soon. "You didn't suppose I cared!" he reiterated in growing amaze-ment. "After all these years!"

No because of all those years!" came in a correctional murmur from the waistcoat; and Tom, even Tom, experienced a partial illumination.

The tiniest smile crept into his eyes and

the entsets of his mouth.
"What on earth," he asked dryly, "did you suppose I went on living with you for?"

"Oh, habit-custom-les consennees any old reason!" Persos answered with an effort at lightness.

Her husband took her chin in his hand and lifted up her lare, but her eyes refused to meet his; she had no intention that he should see the tears in them.

FFIELD SCHOOL FOR BOYS

Dispersion and Resident Course. It's hours from Modern buildings. Audien Endow-

HOBART G TRUISDELL, & M. Principal, State St., Connectical Liberary Institution, Juffeld, Conn.

"You little goose! Welt, you want to get that particular idiocy out of your noddle "I mean to," answered Persis merkly,

"preliminary to getting a few other things in." Hastily she followed up this weird statement, which was as near as she ever came to confessing: "Only, one thing. Tom—please, for a while, don't send me any more red roses! I—I'm sick to death of them!" she blazed forth with sudden

energy.

"Why, for mercy's sake, didn't you say so before!" gasped Tom. "You could have had any blooming thing you wanted—white, yellow, pink, blue! Just say the word. Anything to make you happy, Persia!"

He stopped bewildered. Persis was shaking he thought, at first, with tears; hut it was with laughter. Tom eyed this hysterical tendency sternly. "I don't want even blue roses, thank you," she said. "I don't want anything—

not anything but you-just you! Oh,

She stopped, because no word could express what she wanted to say, and because, also, she suddenly perceived there was no need to say it. The strength of that loyal arm about her, the twinkle in the blue eyes looking down at her, and the little length that ran through her husband's voice when he spoke—all told her that; and these things were more and more moving to her than a thousand romances, though all be

'Anything to make you happy, Persia!"

OUR CONTINENTAL POLICY

Cantinded from Page 20:

European Powers undertook that control they would never withdraw from the island. Mr. Roosevelt explained it as follows:

"Our own Government has always refused to enforce such contractual obligations on behalf of its citizens by an appeal to arms. It is much to be wished that all foreign governments would take the same view. But they do not; and in consequence we are liable at any time to be brought face to face with disagreeable alternatives.

"On the one hand, this country would certainly decline to go to war to prevent a foreign government from collecting a just debt; on the other hand, it is very inadvisable to permit any foreign Power to take possession, even temperarily, of the custom house of an American republic in order to enforce the payment of its obligations; for such temporary occupation might turn into a permanent occupation."

When citizens of a country are in danger or national honor requires it, however, a government must act swiftly and with

An insult to the flag may seem a slight thing to go to war about, but it must be re-membered that the flag is the emblem of the nation's honor, and insults to it cannot be overlooked. A high and formal courtesy is insisted on by all nations claiming the respect of the world.

No matter what the final result of affairs in Mexico may be, it is certain that our relations with other nations, especially the Southern republics, will be in some degree affected. If our intercourse with these governments is ultimately to become more friendly, and if in the end some plan of efficiently, cient and permanent cooperation is likely to be evolved, it will be a distinct advance diplomatic relations on this continent, Whatever the final result may be, however, we must in the end make our conception of the Monroe Doctrine, as an American policy, clearer and more definite.

It is, therefore, of the first importance that the people shall have a correct understanding of the exact limitations of this Doctrine. Governments are influenced by the pressure of public opinion, and this public opinion must be intelligent if the policy of the Administration is to be farsighted and

Abbott Detroit

Offers a Rare Opportunity

By Edward F. Gerber President Abbott Motor Car Company

I want 50 more dealers to handle Abbott cars.

I want men of character and responsibility, who will give the line added prestige.

I want men of ambition, with the ability to plan large undertakings and the energy to carry them out.

The purpose of this advertisement is to put before such men an exceptional opportunity for commercial and financial success.

My Unusual Plans

In November, 1913, I purchased a controlling interest in this company.

Prior to that time I was a retail dealer in automobiles. Thus I had first-hand knowledge of the dealer's problems. And I knew from experience that the success of any automobile concern is in direct proportion to the success of its agencies.

So I have set about to make sure of dealer efficiency. I have made extensive arrangements, for the benefit of Abbott dealers and users alike. First and foremost, I demand that Abbott cars give good value. I insist on this, to make sure of a ready market.

Then, I accept no more dealers than I can give personal attention. Even with increased facilities, I only want 50 more now.

I give each agency sufficient territory in which to operate profitably. And I see to it that dealers have the co-operation of every department in this institution.

Efficiency Throughout

My organization is particularly well qualified to render able assistance. From every standpoint it is a strong organization.

This company has been in existence five years. During that time it has put out 6000 machines. It has gone slowly and cautiously. It has built no model without first making sure of its mechanical perfection.

To manufacture Abbott cars I operate a splendid plant, with machinery of latest design. Experts are in charge of every department, to insure strict maintenance of a systematic manufacturing policy.

The engineering ability behind Abbott cars is of the highest order. Our designer-in-chief is recognized by experts as one of the leaders in his profession.

This man has designed and built 1000horsepower engines. He has designed and built motors, axles and electric starters. He has designed and built automobiles, power plants and machinery. Even our rivals concede his greatness.

Liberal Advertising

The Abbott publicity appropriation for the coming season will establish us in the front rank of advertised automobiles.

National mediums of wide circulation, such as The Saturday Evening Pett, will be used. I shall personally supervise this campaign.

Then I shall employ large newspaper space in the territories where we are represented. Millions of folders, circulars and catalogs will be distributed. Dealers will have maximum assistance in the creation of Abbott demand.

Financial Strength

Our resources are sufficiently large to assure the future conduct of the business along broad-gauge lines. Sufficiently ample to guarantee permanent service.

Here is a factory run on a strictly economical basis. Cost figures are kept scientifically. Overhead is reduced to a minimum.

Here is a factory practically without debt. It owes no borrowed money. Against it there are no bonds, notes nor mortgages. No watered stock exacts its tribute of disdends. Our equipment is paid for and clear, and we are operating with a clean financial slate.

A Great Proposition

This organization has given to the Abbott line qualities which make for success. Scientific engineering, appearance, comfort—these are built into every car.

Financial strength, service, advertisingall are generously provided.

And now I offer a line of four-cylinder and six-cylinder models, ranging in price from \$1785 to \$2290, with which the right dealer can compete with other makes successfully.

No other line, I believe, affords greater

A Certainty for You

Now I suggest that you apply this advertisement to yourself.

If you are in the automobile business and are not satisfied with present arrangements you have before you an opportunity to better yourself.

If you are not making financial headway in proportion to your efforts—this advertisement presents a chance to increase your profits.

If your line does not interest buyers and you find yourself losing sales—here are wonderful selling possibilities within your grasp.

Even if you are not an automobile dealer but are considering the business—it will pay you to investigate my proposition.

Our 1915 advertising campaign begins at once. So to get the full benefit it is necessary to act now. If possible arrange for a trip to Detroit and an inspection of our plant.

I invite correspondence from capable men. Please address me personally. I promise your inquiry immediate attention and careful consideration.

Edward F. Gerber, President
Abbott Motor Car Company, Detroit, Michigan

THE LAME DUCK

Views of an Innocent Bystander

WASHINGTON, D. C.

DEAR JIM: If so be the President shall select Mr. Frederick W. Lehmann, of St. Louis, as one of the representatives for his country at the mediation proceedings which, on the one hand, may have gone over Ningara Falls in a barrel by the time you get this, or, on the other hand, Blondired across those tempestatous waters on a tight rope—that selection will be a good thing and a kindly. Mr. Lehmann put in a couple of years here as solicitor-general in the Taft Admin-

seration, though a nominal Democrat; and we watched him operate with exceeding juy. His specialty is getting in touch. In early life he decided he must lay in a large and ascreted stock of information, and he laid is in. He first studied a few political al-manaes, and then took up the encyclopedias

and learned those from cover to cover.

It may be the President desired to have the mediation negotiations prolonged. If he did he chose wisely when he selected Lebmann, for, with the slightest encour-agency, Lebmann will exude information

and opinions twenty-four hours a day.

The boys up on the hill, who comprise our national association of lawmakers, are in a frightful stew about getting home to see how things are going in relation to their renominations. Various tentative dutes have been set for the adjournment of Conpress. A tentative date for the adjournment of Congress, James, is any date that is not O. K. d by Mr. Woodrow Wilson, President of the United States. His date is the only genuine date, and no substitutes will be allowed or recognized. As yet, his not response to the impassioned please for an adjournment has been the erection of a test and commodious tent in the back yard of the White House, and the announcement that he thinks he can be quite comfortable therein during the heated term.

Tenting in the White House Grounds

Congress bas no tent, albeit Congress ould go on the road as a circus any time and increase the revenues materially. Also, Congress has thirty-three secutorial reelection problems on its hands, and four bendred thirty-five similar problems pertaining to the House of Representatives. Congress has been in session practically time Mr. Taft made his justly relebrated reverse-English revision of the tariff away has yonder in the summer of 1909, and tack yonder in the summer of 1909, and has been in session continuously since Mr. Wilson came in.

It is the aggregated opinion of the legis-tarors that that man Wilson has no heart. He listens to their appeals for permission to

He listens to their appeals for permission to selourn and go home and get in touch with the boys and the girls—in the states where the girls vote—smiles in a surprised but interested manner, and asks softly:

"Why, is it possible you desire to go home before my program is completed? I certainly am astonished, especially as I have made my plans to remain in Washington until all my bills are laws. You do not want to go away before I do—now, do you?"

"Certainly not," they say, with forced Eyety. "We do not want to go home a minute before to-morrow night."

So far as the appropriation bills are con-

So far as the appropriation bills are conceroed. Congress can easily get away by but the appropriation bills are not the only ones. There is that little question of the repeal of canal tolls in the Senate, where there is no cloture, and where nearly every senator has a large gob of passionate protest or of dignified declaration on his chest. And just three pages to the rear is that collection of antitrust bills, which has been so maitreated by patriots with ideas—and without the same-that the collection now looks, reads, proposes or proclaims about as much like the original drafts as it looks and reads like a textbook on meteorology.

Various other little matters are pending. io say nothing of our Mexican muse; and every time the boys are brightened by the tope that an agreement for a get-away day may be reached they are immediately de-ressed by the knowledge that that tent is here in the back yard of the White House, and that the President can keep quite cool hit, and will-until he passes his bills.

It is a serious and perplexing problem with the legislators. They think they have done enough. They are willing the Senate should take its time, as it will, over the canal-tells fight; but they do not think they should be required to stay here and fumround with antitrust legislation, especially round with antitrust legislation, especially as there is a fairly good supply of that on hand as it is—and especially, further, as candidates are springing up against them back home almost every day.

That is a curious phase of our politics—the constant cropping up of new candidates. It should be printed in every newspaper in every state all the time that the only way for a state or any locality in a state to me.

for a state, or any locality in a state, to secure adequate representation In Congress is to select good men, send them to Washing-ton and keep them there. The new repre-sentative and the new senator gets nowhere. Experience and length of service are the only things that count in Congress.

Any state may secure a very important Any state may secure a very important place in Congress by sending good men and keeping them there. There was a time when lowa dominated the legislation of this country; and not se long ago Wyoming, with less total population than the apportionment law requires for the ordinary congressional district in a populous state, had one of its senators as chairman of the tremendously important Appropriations (1999). mendously important Appropriations Com-mittee, and the other as chairman of the great Judicisry Committee. Wyoming allowed her legislators to stay is office.

North Carolina's Position

We are about to have another example of this. North Carolina is soon to hold a commanding position. As it is now, in the Senate, Senator Simmons, from that state, is chairman of the Finance Committee, the committee of which Nelson W. Aldrich was

chairman for so many years, and Sena-tor Overman is ranking member and act-ing chairman of the Judiciary Committee. Over in the House, when Oscar Under-wood moves across to the Senate, as he will do next spring, Claude Kitchin, of North Caralina, will become chairman of the Ways and Means Committee and leader of the Democrate provided of course the Ways and Means Committee and leader of the Democrats provided, of course, the Democrats retain the House. In any event, in case the Democrats lose the House, Kitchin will be leader of the minority and racking Democrat on the Ways and Means Committee. Also, owing to the appointment of Henry Clayton to the Federal bench in Alabama, Representative Webb, of North Carolina, becomes chairman of the big House Committee on Judiciary.

This proves two things: The first is that if a state continues her men in Congress they will eventually get to the top, provided they are men of even average worth, and thus attain the power that will be of

and thus attain the power that will be of inestimable benefit to the state. The second is that Congress offers a good field for serious and honest endeavor, provided the people give the endeavorer a chance to try. All that is needed is attention to business

and an opportunity to serve, and the re-wards will come; which rewards, by the way, are greater for the constituents than for the constituted. The representative or the senator has to work, and work hard; and the state, owing to the position atthose results invariably are greater in direct ratio to the length of service allowed.

However, the ambitious boys back home do not think of this, and they are cropping up everywhere, while the men who want to be reflected are tied in Washington. The statesmen are sore. They want to go home. The only urbane person is the President, He assures them he has not the slightest objection to their going home—provided, of course, they will do a few little additional things for him that he desires to have done.

There was a dispatch in the papers the other day from London, which made a great hit in certain quarters in this city. It concerned a dinner or something, where Ambussador Page proposed a toast. That wasn't what made the hit, however. The joy-provoker was the last line of the dispatch, which said: "The toast was drunk

THE NATURAL QUESTION NOT TO ASK

(Concluded from Page 27)

though it was one of their revival meetings: 'Yas, suh!'—all except the big fellow, Roberts.
"'I'm gwine wif you, Mars Wee-yet!'

he says.

"No!' says Whitey Waite.

"Mars Wee-yet!" yells Roberts—and I'm blest if he doesn't dop down on the ground and begin to bellow like a kid.

"Go back to your work!' says Whitey:

ground and begin to bellow like a kid.

"Go back to your work!" says Whitely;
and that big buck gets up whimpering and
goes back. I wonder why Whitely is going?

Ite ian't taking his wife, you know."

"You might ask him," I suggested.

"What?" Dinwiddle actually yelled at
me. "Are you crasy?"

"I guess you're not!" I said mollifyingly.

"I guess not!" he emphatically agreed
with me.

I left for New York two days later. The next year I went to the Isthmus—this time with an official party. On the duck at Cristohal I ran across Waite and Nettie. He nodded calmly and held out his left hand. With the other be held a small handbag such as women carry at times. Then I shook hands with Nettie—in silence!

"Wall, how are you both?" I asked, with the cheerful imherility of all writers, which makes so many people wonder who it is that really writes their articles for them.

"Fine!" he answered.

I looked at her. I left for New York two days later. The

I looked at her. "We came to see the secretary of war," she youchsafed. "He's a friend o' his!" And she nodded toward Whitey to show we moved out of the way of a rushing baggage truck. This parted Whitey and me from Nettle.

When I left you last year you were ng — " I stopped because he nodded. golog -

"And the crowd answers like a chorus, as sough it was one of their revival meetings: it is, suh!"—all except the big fellow, obserts.

"I'm gwine wil you, Mars Wee-yet!" learness actually irritated me so that I asked bluntly: "Did you get him?"

For all reply he shifted the little hands at the little hands and held up his right. I saw the thumb and the foreinger pointing arranged.

ing upward.
The other three fingers were cut off at

The other three fingers were cut off at the first joint!

"Then ——" I began, and suddenly saw him watching me with that unblinking uphidian stare which made me think of puralyzed syelids and also of ice-cold thoughts concerning me somewhere behind the inscrutable pale-blue eyes.

He nodded, took the bag in his maimed right hand and rejoined Nettie.

I felt as though there were a dozen con-

I felt as though there were a dozen con-gented spots within me. These kept my curi-osity in cold storage until hours after I left

them.
It was the right hand—his pistol hand. The fingers were not chopped off or hitter. off. They were sliced off. Perhaps George's murderer tried cold steel. Whitey might have seized the sharp blade with his right hand and shot with the left—or perhaps Whitey himself used cold steel.
But he got his man. I knew he would But I did not learn how. I knew I should not.

should not.

Do I still wish to know? More than ever much more than you who read this, becau-knowing Waite, I rould dramatize so many

picturesque ways of losing three fingers.

But I did not ask for details—I did not dare! And if you do not realize why I did not dare I have not made you see White; Waite as I knew him. And if I have not made you see him it does not matter, after all, how curious you may be.

THE Far West and the Far North have produced acros pretty good men in their time. Well known in the old buffals days of Saskatchewan was Joe Beaupré, Jamed a thousand miles as the biggest eater in the North. Joe was not six leet tall, but he was a broad, deep, thick sort of man, with a hand like a ham and a stomach like tothing else in the world. He would ent an entire boxful of apples at one sitting and think nothing of it.

Once, having encountered a gentleman who thought be was some eater, Joe consumed fifty-three pounds of buffals meat in one day, and topped off with a raw turnip, a six-pound piece of pork, some lard and two lowes of bread. The best his competitor could do was thirty-seven pounds of

iter could do was thirty-seven pounds of

Besupre was so strong he never would fight any man for fear he should kill him. One day, while sledging on a narrow trail with an obstimate horse, he became angered, struck the borse on the head with his first and killed it. He loosened the harness and threw the dead animal on one side of the trail. He never really knew how strong he was. Once he was taken captive by the Indiana, but they were glad to set him free, warrior though he was, because he ate up everything they had. Beaupré died of rheumatism while still a young man. A great many stories about hig daily journeys done by dog drivers in the North

are heard from time to time. As a matter of fact there are more days when the driver covers twenty-five miles than when he covers fifty; but very probably there are authenticated instances where half-breeds have run from seventy-five to eighty miles a day behind a dog team.

Some of these men are superb specimens of manhood, and perhaps their stories lose nothing in the telling.

The ability of the Northern Indians and

half-tresis to park heavy loads is well known. These men have rather narrow am-bitions in life, and to be stronger than all his neighbors is fame for any one of them. It is well known that one half-breed, rather an old man, stood for ten minutes posing for some photographers, carrying on his

back seven sacks of flour, each weighing a hundred pounds. His legs trembled under him, but he was game.

The usual load on a portage is two hundred pounds, if the going is at all good. Men often carry six hundred pounds for a short distance; and they will pack seventy-five pounds all day, six days at a stretch for a dollar and a half a day.

Some of them will take on eighty-five pounds. The ordinary white man cannot carry forty pounds a day without great discomfort long before the close of the day. In all likelihood what is called a fifty-pound pack on the trail does not really weigh thirty pounds on the scale. pounds on the scale.

I have seen half-breeds, on a portage, play along with three or even four ancks of flour on their shoulders. Once a slender boy, not over seventeen years old, posed for his pho-tograph. He had on his back three sadd of flour, and on them another half-breed, whom he had invited to climb on top of

These men live hard lives. There are few doctors and no hospitals in the Far North, and the man who is injured has to take he chances. One man, now trying to make a living as a cobbler in a Northern town while running his trapping lines seventy-five miles from the nearest house, shot a hole through his foot with a rifle. It was aix days before he could get help. The strain proved very hard on his constitution. Again, we saw a half-breed on Athabast River will back his shirt sleaves and try in

River roll back his shirt sleeve and try is dress a wounded arm. A rifle shot had taken off most of the forearm and damage the elbow. Crippled though he was, the before any of us discovered that he had be!

On the same flotilla of scows was the transport master of a big fur company. He was a very angry man, because he had fallen from a cabin roof and broken his colle-

He had told his men how to bind it to as best he could, and was lying under an awning drinking gin and smoking—though he had to hold his pipe between his tori while he filled it with his good hand.

Fire in Missari Militi. Clab. 10 Lines Lat. A Stringell Sprinkler System Would Hour Sound Every Life. By Parting that the Fire at its base.

Today is the End!

Thousands of Business Men Are Tempting Fate When Fire-Safety Is Free

N spite of the warnings of a dozen holocausts, thirty business men perished in the Missouri Athletic Club fire.

In spite of the enormous number of businesses destroyed by fire each year, thousands of men everywhere are risking their steady going businesses on a mere chance.

They know that a Grinnell Automatic Sprinkler System in their buildings will absolutely prohibit a serious fire,

They know that such a system will sun pay for itself, through the sweeping insurance premium reductions it earns, and then pay them a handsome annual profit.

Further than this, many of them know that they can get this system through construction companies without investment. In such cases the cost is distributed over a number of years and met annually by the inturance savings.

Why don't these men jump at the chance to get a Grinnell Automatic Sprinkler System by one of these methods? Simply because they feel that fire in their buildings is as remote as Doomsday. They have never had a fire and think they never will. This feeling is almost a superstition with them. They can't see the fire hazards which they are told are the

cause of high premiums. Therefore, they regard them as a myth.

But yesterday's sawe of fire victims know now that hazards are actually sleeping fires, which awake suddenly, no man knows when, to deal destruction.

You may know it tomorrow. But today you are still in the thraldom of your old superstition.

You think you are immune from fire. And yet at this very moment, some man, somewhere, is watching fire consume the business efforts of his life-time.

And his insurance policy will cover only a fraction of his real loss. It won't bring back his customers, his organization, his good will, his markets, or any of his future plans for business expansion. His business tomorrow will never dawn. Fire has made Today the end!

That fire in your building is only asleep. Don't let it awake and find no one on watch. The chance is too great! The delay too costly. Fill out this coupon today, so you will not blame yourself later.

When you find out how soon your Grinnell System will pay for itself, you will want us to hurry the installation.

REDUCES FIRE LOSS 944.6. REDUCES INSUR-ANCE PREMIUMS 40 TO 90%.

When Beauty Was Sacred

Seven vestal virgins tended the ever-burning sacred flame of Vesta in ancient Rome.

Absolute cleanliness was one of their religious obligations. Their house, which was maintained by the state, contained baths of surpassing beauty and luxury.

A most important feature of the toilet, as well as of every great Roman household, was the use of fine oils apparently palm and olive.

The utter luxury of the Roman bath is today enjoyed by the more than two million women who use Palmolive Soap. In this delightful form, palm and olive oils are most perfectly blended.

Those who use Palmolive daily find there is nothing else quite like it for cleansing and soothing even the tenderest skin. It leaves the skin smooth, firm and white and protected against irritation.

Palm and Olive Oils alone give Palmolive its delicate color. Naught else is needed. The natural delightful fragrance is a veritable breath from the Orient. And the price is only 15c a cake.

Palmolive

Palmolive Shampoo

- the Olive Oil Shampon - makes the hair functions and healthy, and is excellent for the scalp. It rinses out easily and leaves the hair soft and tractable. Price 50 cents. Palmolive Cream cleaners the skin and adds a delightful touch after the use of Palmolive Scap. Price 50 cents.

Throughild Sumple Offer 1, thend rike of Paleonier, bettle of Shampea and take of Cream, packed in near sample package, all enabled on receipt of five two-cent atampte.

md as a new-minted dollar. In all these years she had never made an unprofitable pe. Her record was known over the whole world: "Follow the Mary Blount," was

sought to have felt very proud. But he was only twenty-one and very much in love, binstead he felt very unhappy. He was saying good-by to Hanleytown—how small hite houses looked already!—it must be for years and it might be forever. Why ivil hadn't he followed the impulses of his blood and married her and brought her

ho was he, to have concluded that she was too young for marriage, and to have set If up to play father and mother and brother and minister to the little wild thing heart was like a warm stove and whose face was like a rose? Mr. Tuttle." y-ay, sir!"

The first mate, a gray heard of fifty, baying shot a long stream of brown tobacco juice into the mu, crossed the deck amilting-

"A propitious start, sir,"
"Very, Mr. Tuttle."
"A fine lot of new nerward, sir. Some of our best families represented: not many of these modern soldiers and son-lawyers.

"On any of your voyages, Mr. Tuttle, did the number have his wife or his daughter along?"

"Yam, mir."

"How did it work?"

"Why, very pleasantly for all hands, siz.

Captain Haithway sighed.
"In ordinary excennataness a suilor lends a bondy life. Mr.

The young raptain's romanos being well known to everybody almard the Mary Blount, Mr. Tuttle averted his face and prelified his head;

"So much no," parened Cap-tain Haithway, "that the ex-reses into which he is carried by short liberty are resultly under-

"If a sailor's excesses," said Mr. Tuttle, "were spread out gver the whole autotance of his life, instead of being lumped here. and there like cald butter, there would be no more moral more

"And you believe in wives salling with their husbander"

"Floridy, sir -Excuse me, sir, what did you say?"

"I think I marked to say that I wished I had discussed this with you wanter, Mr. Tuttle." "I don't wish to intrude upon

your private thoughts, or, But believe mo, sir, there isn't a mon abourd this ship who doesn't feel for you, sir."

"She is so young," exclaimed Captain Halthway, "and his no mether. I have put her to board with a most excellent old woman; but three or four years, Mr. Turcle. three or fally yests is an agonizing

length of time. I wish to heaven I had brought her with me."

An hour later the cabin boy, Bowers, a great blushing lad of sixteen, approached the master.

"What can I do for you, my lad?" "You can let me have the key to your stateroom, Cap'n Haithway. I want to turn down the bed's put things to rights."

"Is the door locked? I didn't lock it. I haven't got the key."

"Maybe I'm wrong, sir. I'll try again."

He returned in two minutes.

"The door is locked, sir."

"Well, I'll see about it presently. You can find something else to do."

Captain Haithway stood for some time longer, his eyes upon the low coastline that had swung between him and Hanleytown. Then he shook himself and went below. He had a picture of her in his stateroom, and he wanted to look at it and kiss it. He had

"Not in This World! Not to This Life!"

angrily and exclaimed: "Who the devil has locked this

He drew back with the idea of bursting the lock with his shoulder, when a key was heard turning in it and the door awing open. His first insane thought, on seeing who stood in the narrow decreay, was that the disquerrectype be had of her had come to life. Then a great trembling seized him.

"I had to come," she said. "Say that you won't send

me away.

He just stood and looked. Then he spened his arms, and as they closed, his voice breaking, he cried: "Not in this world! Not in this life!"

The wind had gone down with the sun, and the six whale ships in close company were now merely drifting. It looked as if they would have to anchor for the night.

"Mr. Tuttle."

"Ay-ay, sir!"

"There is a stowaway aboard."

Mr. Tuttle scrutinized his master's face closely. Then a smile trembled at the corners of his mouth.

"You don't mean "She had locked herself in my stateroom, Mr. Tuttle.

I can't send her back now, can I?'

No. sir."

"As we have no minister -"You forget Mr. Lightfoot, sir."

"Mr. Lightfoot?" "Yes, sir. He is going out in the Admiral Colt as a passenger to Henelula."

Captain Haithway's face brightened immeasurably. "I will be obliged to you, Mr. Tuttle, if you will lower a boat, and invite the Reverend Mr. Lightfoot to come aboard. You will also be so kind as to invite the captain. of the Admiral Colt and the other captains to join us at dinner."

"With the greatest pleasure,"

AS MR. TUTTLE had said, the men forward were a fine lot. But even oak is not proof against rot. The oldest man forward was also the strongest and potentially the most able. But he was one of those perverse men who cannot be content with their own wickedness. If he wasn't undermining some one's natural instinct toward virtue he

But for the shortness of his legs Crandle would have been a giant. But for the fact that his nose had been turned permanently to one side and flattened by some terrible blow, he would have looked like Neptune before that god's beard turned gray. The history of his evil deeds when ashore followed him from ship to ship. He was known to the police of every sesport he had ever visited. To the reverend gentleman who conducted the Seamen's Mission in Honolulu he was a most odious memory.

He loved an argument, and the Scriptures themselves furnished him with his most offensive sacrileges.

And he was a sad cross to Mrs. Captain Haithway: Perhaps the child, so wild and wayward before her romantic marriage, had something in common with him-an inherent love of escapades, mischief and turning other people's preconceived notions topsy-turvy. Perhaps she felt that if she had been a man, with a man's opportunities for going downhill, she could have been just such a man as he was. For we are apt to hate and denounce most vigorously those very qualities in which our own nature participates. It is the dishonest man who cries out most loudly against dishonesty; it is the sinner himself nearly always who flings the first stone.

Bowers, the cabin boy, an excellent boy in his way, but overgrown physically and undergrown mentally, was the first of the ship's company to fall under the spell of Crandle's plausible tongue. It was like the moth and the flame. Every time Bowers went near Crandle he got singed, until these wings which float youth and innocence were no longer strung enough to carry him. He lost the strong grip which almost all New England boys of that day had upon religion. He learned to regard the commandments as expedients for controlling large populations rather than as stepping stones to the salvation of individuals.

"And why," Crandle would say, "did Moses forbid the people to cut pig? 'Cause in hot countries pigs is poison. Why did he order the doctors to use sharp stones when it came to cutting off legs and arms? 'Cause in those days the only other thing they had as would cut was copper, and supper spells gangrene. When you allow that old Mose had horse sense, you are talking; but when you advances that he had any religion in him you talks like a woman or a sky pilot. Why did Solomon have three hundred wives and Captain Haithway's only got one-us he boasts about? If God's God, His thoughts is immutable, being right first clip out of the box. If it was right for Solomon to have three hundred, then it's wrong for the old man only to have one; or else God has changed His mind. And if His first idea was wrong, I denies him a Godlike mind; and how do I know He ain't a-going to change again? Mehbe He'll hold out next for a baker's dezen. Boy, you take it from me marriage nomericals ain't got nothing to do with God. They has to do with human nature, which is the same as dog nature, and climate

And in the end the hoy Bowers went gloomily about the ship, full of doubts, wondering if goodness was only cowardice after all, if all men were really devils in their hours. if expediency was the only basis for laws which he had been brought up to look on as divine; and, like the average boy, inclined to aggression and the shattering of myannian, and almost persuaded that dolls are stuffed with sawdoo.

What is happening to that poor boy?" asked Mrs. Haithway one night at dinner, the sfore-mentioned luny having just left the cabin. "He looks as if he had lost his last friend, Mr. Tuttle,"

"I think he is beginning to lose his first illusions," said the mate, "at his age!"

"Which is only a shade less than mine, Mr. Tuttle."

"Boys are always younger than girls at the same age. Some one has told him that the moon isn't made of green chosse. Just now be doesn't know whether to believe that or not. Once he is roovinced one way or the other, be'll be all right again and go about laughing and blushing and

upsetting things as he used to."
"It's all that Crandle," exclaimed Mrs. Haithway. "Bowers can't keep away from him. I shall give him a piece of my mind!"

"Crandle?" ber bushand asked.

"I shall tell him."

"I wouldn't interfere with the men too much." "Your ship's in my house. And I shall make

it dean from ceilar to garret!" Captain Haithway regarded her with a wonderful pride. And then he turned to Mr. Tuttle.

"But it beats the Dutch," be said, "how the girl that everybody said didn't even know how to cook or darn stockings turns out to be an A-number-one housewife, that spolls her husband for ever sitting down to a bad meal again and with the smallness of the stitches she puts into his mending."

"How," asked Mr. Tuttle, "is the troussoo coming on?"

"When I came abourd," said Mrs. Haithway, "I had nothing but the things I had on. Now I've got six changes and three dresses, and I'm beginning to knit stockings like mad. Chanler is the best knitter before the mast, and I got him to give me lessons. And then"-here she beamed with excitement-"don't let them know that I know, please; but a little bird told me: the men are making me a wedding present. It's a great sea-cloak of blue for the cold latitudes. It has a bood lined with haby seal-one of the men had two skins in his chest-and it's to be all

embroidered up and down with pictures of ships and and and whales. And Shattuck has rigged a lathe and be any ing the buttons out of whale teeth, and each button is to scrimshawed with bouquets of flowers in blue and red; green and inlaid with mother-of-pearl.

Mr. Tuttle, already in the men's secret, asked her is she had found out. She laughed aloud,

"One day I saw Chanler looking at me with his eyes! of tears. I said: 'What's the matter, Chanler?' And said it was nothing, only I reminded him so of his in 'darter' as he left at home—same eyes, same nose, a height-why, he'd bet a hat we was the same mean round the shoulders, and before I could say Jack Robins the old hypocrite had snatched up a piece of rope's ent

taken the measurement he wanted."

"You never told me of this. "Oh," said she, "I knew there was something is wind; so I went to Crandle. I said: 'Crandle, they me Chanler is a most exemplary husband.' Crandle to 'Him a what?' 'Yes,' I said. 'He was telling me about little daughter.' 'Chanler,' said Crandle, 'ain't muri As for a daughter-well, when he gets shore leave be out for the nearest botanical garden in the company of resident clergyman, and if he ever found a little duck in the cabbage patch I ain't never heard tell about it. was lying to you, ma'am, that's what Chanler was do And if I know the man, he's readin' his Bible ut ! moment in the hope that God will overlook the sin."

And then she told them how in similar wise she! found out about the color of the cost, the embroidery, lining of the hood and the buttons. For it seemed that q every point her taste had been artfully consulted.

At this very moment the starboard watch was esting dinner on dock. Shattuck had finished two of the buts for the clouk and was exhibiting them.

ONE day they took a sperm whale that stowed siz barrels of oil. The cutting in, the trying out and subsequent cleaning up took the "heart out of a week," Crandle put it, and in subtle ways affected the future the whole ship's company.

"De You Want to be a Cabin Boy All Your Life!"

In the encounter with levinthan, Edmonton, the boatterer, who first fastened to him by a noble throw, was rescutly so caught in a snag of the swiftly running line o which his iron was attached that his left forearm was reled almost to the bone. With the line slipping overoard and the boat tearing along at ten or twelve knots, aging and plunging, the bow-oar improvised a tourniquet nd saved Edmonton from an immediate and painless eath, so that later he might succumb to the forture of lood poisoning.

As a result of this accident, Crandle, the most experinced man forward, was promoted to be houtsteerer in

dmonton's place.

During the cutting in Mr. Tuttle slipped from the itting-in platform and burt his side, not, it was thought the time, very seriously. But events proved this diagnosis be sadly mistaken.

With the inside history of Crandle's promotion Mrs. aithway had something to do. She had been looking pale d drawn for several days, and during a short spell of rfectly calm weather had complained of feeling seasiek; erefore her husband could deny her nothing.

"The more his record has od in his way," she said, he worse his record has His wickedness isn't stubborn but what a litresponsibility and alittle ross might heal it. And, sides, it will bring him where characters are onger and better formed an in the fo'c's'le. He'll under your eye, and if u can't make something his strength and courage, o I'm wrong and all the stains who have kept a down were right." After thinking this over hile, Captain Haithway t for Crandle and told a of his promotion. for once the fo'c's'le apter had his breath

en away and was at a for words. Presently managed to say: "I'll to do my duty, sir." the youthful captain led and shook his head.

"I wish you would say 'I will do my duty,' not 'I'll try,'" said he. "You are one of those men who do what they please with their lives."

Crandle said nothing, and Captain Haithway turned on

his heel and then turned back.

"By the way," he said, "you owe your promotion less to me than to Mrs. Haithway, Crandle. She would be bitterly disappointed if it didn't turn out well. She believes that you will from now on be a good example to the men, both affout and ashore."

Crandle cleared his throat in a percentorical way, blinked his big agute eyes, and said nothing.

"You may move your belongings alt immediately." Crandle darted forward, and spying Bowers called to him:

"Boy," he said, "have you read that book I loaned you?"

"I haven't had a chance yet."

"You bring it to me." The boy went and came.

Crandle took the book in his immeme hands.
"I got another book," he said, "will do you more good 'an this one."

It Lauked us if They Woold Hore to Auchor for the Hight

"What's that, Crandle?"

"Mr. Bowditcher's Navigator."

And as a first attempt to do his duty, Crandle turned and tossed the book into the sea. Later on that same day his collection of colored prints, purloined from various sailorheavens up and down the world, followed it. Later still Mrs. Haithway seized an opportunity to congratulate him on his promotion.

"I have you to thank, ma'am," said he.

"I am putting my money on you," she said guyly, "and I hope you'll try to do your duty."

"But I ain't a-going to try."
"Oh. Crandle!"

"I'm going to do it."

There was that in his repressed but powerful voice which sent a thrill through them both.

"I believe you," she said; "and I thank you!"

WHALING ship, unless full of oil or for some press-A whallend some, does not attempt to sail the shortest line between two points. In a voyage that may last five years

time is of very little value. In good whale-pasture a ship will cruise north, south, east and west by day, as suits the whim or the instinct of her commander, and lie to at night. She is not designed with any view to expedition. She is almost as square forward and aft as a sawed log. She is built with very thick timbers and planks of very heavy stuff; after a few months her buttom becomes rank with sea-growth; and her steering gear, very slightly improved upon that which sufficed for Noah, cannot hold her to a straight course for more than a minute at a time, Sailors say that in hell there is a punishment for those who have lived in too much of a hurry: it is always to be trying to get somewhere quickly in a whale ship.

Sutting With a Blunt Knife

By Maude Radford Warren

HE following is the autobiography of Thomas Barrows, which he related some dozen yoars after he was gradu-

from college: hen I left college and went to work I

such habits of playing, so little interest in business, and ittle notion of how to apply myself to it, that my ations in the practical world were precisely like cutting a blunt knife when there is no excuse for the blade not g sharp. I know now that I was a typical college boy. ne way my home life was typical—that is, my parents ght I was the brightest and best-looking chap in the munity, and they made silent and constant sacrifices we me the advantages they never had.

y father had not gone to college; he had been pitched into the world at fifteen to earn his own living, and tever education he got after that he picked up himself. ind, therefore, an exaggerated idea of the importance final education. Every personal disadvantage he had ld to the fact that he had not been fully educated, had forced to stick at his work too closely to mix with le and use what schooling he had and acquire more

was really an attractive, lovable man; but, because ever grabbed the center of the stage and forced people ten to monologues, he thought he did not know how set men-was not a mixer.

ras a mixer from the start of my schooldays. The way ered from my father was that where he had diffidence consideration for other people I had conceit and check. er laid my ease and my popularity to the fact that getting higher education. I remember once when I college Freshman, and some friends called. I talked ily to them and played and sang some college songs. e say when they went away they said to each other I was a fresh cub, pushing my agreeable parents into ackground; but after they had gone, and I had retired e dining room to bone up enough French to keep

myself from flunking, I heard my father say proudly to my mother:

"Marian, that boy can meet people better at his age now than I can at my age. It's because his youth is being prolonged, and he's getting from books and his teachers and classmates the kind of education that makes a man broad - that fills him with such resources that he can handle

uny situation life may put up to him."

Well, all I got out of the speech was that my parents were sensible enough to appreciate me. I never doubted that their estimate of my powers was correct. I was quite sure I could dominate any circumstances in which I might be placed, because I was used to success. It never occurred to me to question whether or not the successes I had enjoyed were worth while. It sufficed me that I had always got whatever I had gone after and always expected to. As to that education of which my father spoke, I do not think I ever spent ten minutes thinking about it.

My father's notion was that I was in touch, through books and teachers, with the master ideas of the world; and that when I finished my course I should be well fitted to survive in any hard struggle for livelihood. My notion of my college course was that I must do enough work to case in each class, so that I might end up with a sheepskin. It was considered something of a disgrace not to be able to graduate; but it was not considered a disgrace for a fellow to avoid real education, as I did-always provided he were avoiding it for something he considered better worth while.

What we collegians considered better worth while was social leadership and ataletic leadership. Usually they were the same thing. Next after them came leadership in the affairs of the mind. There were among us a few boys

and girls who were what we called charkswho swallowed knowledge as we social leaders lapped up the adulation of our fellows. When we heard these people recite in class, answering the questions in which we

failed and even presuming to discuss knotty points with the profs, we respected them; but, as a rule, we did not ask them to join the fraternities and scropities. Sometimes we did; but usually such students were without the social graces-more concerned with books than with people. They were after what was going to count in their future work. I and my kind were after a good time. We admired them - but we would rather have been the fullback or the shortstop.

And I am sure they envied us too. I am sure that many a girl-grind wished she had been born pretty and fluffy, and the sort that would be chosen to lead the grand march, rather than the person she was. I am sure, too, that many a man who made a recitation to an admiring whisper from the male idlers of "Gosh! Hear the spiel!" would far rather have had a fraternity boy whisper: "Say, old hoss, don't forget the jamboree this eve!"

I was a leader, because I was a halfback, and because I sang in the glee club, and because I could tear off lowcomedian stunts in dramatics-because I could imitate the president giving a talk in chapel, and the dean of the women walking across the campus, and a dog and a cat having a fight on top of the fence of a German and an Irishman. If there was anything ornamental and attractive and utterly futile-so far as the real business of life was concerned-that thing I could do. One of my stunts was making smoke-rings about the size of doughnuts. I cannot count the number of hours I spent practicing that accomplishment and the amount of nicotine my system absorbed before I was a past master in it.

They say that often a frivolous youngster, sidestepping away from education during his first college year, settles down to business in his Senior year. He begins to apply

himself hard, and to try and relate what he is learning to the serious business of life; but my serious business in life during my Senior year was still the husiness of having a good time.

About the spring of my last year I did a little reflecting. It was not to the effect that I was wasting my father's hard-earned money; that I had ruined a new suit of clothes in a fraternity house scrap; that I had spent a lot of time talking nonsense to girls whom I should never see after the year was past. No; my reflections merely were to the effect that time was galloping by and that all too soon the dear old friendships would be over—I should be graduated and

have to fend for myself.

Plenty of fellows—some of them the grinds had fended for themselves in college; but I was not one of them. My father had five thousand a year and I was his only child. When a candid uncle asked how it was I did not get the schulastic bonors which accrued to the classmate who looked after my uncle's furnace, my father replied that I was in so many things besides my work that I could not be a specialist. He wanted me, he said, to be developed in all directions. I should have to specialize when I was in business.

As I had shown no taste for any particular profession it had been decided that I was to enter the business in which my father was. He was the head designer of a stationery firm; and as the management liked him he hoped that he should be given a small partnership some day; and he had been promised that a place should be made for me. It would be a small place; but my father said that a man of power could rapidly forge ahead in that firm, and that the smallness of the beginning was nothing—it was the power of making good that mattered.

Just before I was graduated the management of the firm changed. The new partners were men who did not know my father. He was kept on, because that had been a stipulation of the old partners, who had valued him; but most of the other heads of departments went, and it was made clear to my father that the old

patriarchal days were over; that not only need he never hope for a partnership, but also that any jobs of importance the firm gave away would be given to relatives of

My father's chief regret was that he and I should not be working in the same place. He had no doubt that such a brilliant youth as myself would soon find his opportunity. Neither had I. Probably I saw myself cruising easily along the highroad of the world, while various jobs raced up to me and offered themselves for my importion. I to choose the most profitable and doubtless the easiest; but that was not the way it worked out.

My father had plenty of friends; but when we came right down to it, not a great deal of business influence. Not very many five-thousand-dollar-a-year men are able to land a big job for a young, inexperienced fellow—and it was a big job I was after. Father made many inquiries, but his influential friends generally had sons or pephews of their own they had to take care of.

"Don't get impatient, Tom," said my indulgent dad.
"We can afford to allow you a little time in which to look round. I'm not in favor of your falling into the wrong job through imputience of results."

A Self-Made Electrician's Opinions

HE NEED not have counted on my impatience at first. It was still summer-time and I loafed along with my friends, as I always had in the summers; but in the autumn a change came. I used to visit the buys in the fraternity house; they welcomed me—but with a difference. I was a graduate and therefore an outsider. I was a brother, but of a past generation. I was not on the football team any more car in the glee club nor in the dramatic club. Moreover my friends began to say to me:

"What! Haven't landed anything yet?"

I woke up to the fact that playtime was over. I thought
I was thoroughly awake—but I was not. Even my experience of the next few weeks did not do more than shake
the first vells of drowsiness from my eyes. I set out to find
work for myself, taking as my first medium the advertising
columns of the newspapers. I answered over four hundred
advertisements of all kinds, using every precaution to
make my replies as businesslike and convincing as possible.
I sent out over seventy typewritten applications—for
which my father paid—to picked addresses. I made
innumerable applications in person. In almost every case
I was met by the same latal question:

"What do you know about our business?"

If I did not know something about his business the prospective employer did not seem to care how fine my personal qualities were, or how excellent was my mental

"Did You Try to Find Out How Impertunt a Costomer This Clark to?"

espacity, or how promising my real. He would not even give me a chance to show what I could do. Many of these men told me I was too old—I was twenty-two. They wanted young men in their teers, who would be cheaper, last longer, and, not having college training, would be more easily reduced to mere cogs in the business machine.

Among the manufacturers particularly I soon found out that what an employer wants is not a man of theory, but a man of brains who has had an unusual amount of experience, who knows the state of the art thoroughly, and who understands all kinds of tools and what they are capable of doing. This seems to be the only kind of man who is regarded us of any arount in a manufacturing business.

My experience in getting turned down merely led me to believe that it was bard for a young fellow capable of big things to get a start. I was sure there was plenty of room at the top and that I was fitted for the top; the difficulty was to break in. Usually I was turned down with dispatch, but one self-made man, an electrical engineer, turned me down with the trimmings of a long speech.

"I don't want any young fellow who has been trained in a technical school," he stated; "I don't believe in them." I replied that I had not had a technical school training that I had had simply the four-years course in college.

"That's a little better," besaid; "but still, young tellow, you are four years to the bad. I'm surry, for you look as if you had the germ of a brain. When I make electrical engineers I do it in this way: I select boys of sixteen or seventeen for machine-shop apprentices. I watch over there to see that they are the material for good machinists, and I weed out the wrong ones. Those that have unusual ability I put in training for electrical engineering.

"I give them a year at benchwork and one at toolwork, shifting them round considerably, so that they can get the knowledge of that part of the work which is required to make of them good electrical engineers. Then I put them in the testing department for half a year, in the drafting department for half a year, in the erecting department for a year, and in the operating department for a year.

"While they work in this way they are surrounded constantly by an electrical atmosphere, and they will alsorb through observation and association nine-tenths of all the knowledge they will need to have regarding electricity. Meantime they can study at night school, so at the end of five years they will be fairly good electrical engineers—and, at that, they will have half a dozen more years of work in them than the college man."

I listened to this politely but skeptically, and as the engineer was a judge of men he saw my disteller. He leaned forward in his chair and discharged a long forefinger at me.

"Young man," he remarked, "I can see that you are a

believer in the technical colleges. There are close to one

including universities that have special departments devoted to technical training. Let us say thirty thousand boys take these courses and ten thousand of them leave these schools each year. What becomes of them?

"Don't you see that there would have to be

hundred and thirty of them in this country

"Don't you see that there would have to be
an enormous demand in order to provide place
for the large number of young men supposed to
be trained for the higher and better positions."
I could tell you of hundreds of chaps who have
real merit, and who after six or eight years of
higher schooling are glad to be hired for twenty
cents an hour, which is the same price that othe
men get who haven't had the schooling.

"There is a big electric company in this (it) that takes boys from these technical college and gives them two years in the testing department, starting them for the first six months a twenty cents an hour, and giving them—towar the end—twenty-seven and a half cents. The boys are then taken to the engineering department, where they start in at about the same pathey have been getting in the testing department, and there they spend two years. Maybe they are twenty-seven years old by this time. They will be lucky enough if they can go out an get three dollars a day."

A Start in the Valve Business

"AND why should they get more? They at still far from being electrical engineers, it they aren't machinists; and a good electric engineermustbe a machinist. They have halo experience in creeting or operating; they lose nothing about roots—knowledge that is necessary to emible them to make estimates. It is you, young man, I don't believe in the combination of four years of mental activity in colles with two years afterward of practical shopwed in the student course, calling largely for physical exercise. It isn't the most effective methal for training commercial, designing and construction engineers. It falls to give the necessal insight into the practical side of electrical engineers.

neering and into the proper relation of the economic force

of an industrial organization.

"Shop-practice courses at college can give at best but slight idea of the real industrial situation. Considering to limited equipment of colleges and the brief time they or allow, they can initiate the students only in a very good way into practical processes, and give them but a speakle acquaintance with machines and materials.

"Besides, considerations of the elements of time is money in carrying out practical work are entirely neglecte at college. No one can assessed in industrial life who is not a hard-and-fast appreciation of economic values, young man can't get a conception of these values under he has an extended experience in practical work in whitime and money play leading parts. You're not grapp what I'm telling you, young man, though I've spent a sefortune of time on you already. So, get out!"

I get out, carrying away merely the impression that did not want to be connected with any kind of engineers work, and also that the big engineer did not believe college men simply because he was self-made. All the san I continued to find that those employers who did belie in college men somehow had no place for me. I was a blind as to what was the matter with me; but I was far in termsfortable in my mind, for all my other friends assumed have good positions, with plenty of chance for promotion I know now that most of them were bluffing—but, still to had something to bluff on.

It was my father who at last landed me a job. He is held to his theory that it would be a tragedy for me to started on the wrong job; but he now said that one way knowing the wrong job was trying it and leaving it had a friend who was with a firm that manufactured valued steam-fittings. This friend, Mr. Burton, was head the brass-valve department. He knew I was looking to position; and, though his firm did not care much for college-bred product, Mr. Burton engaged me as a de in his office at fifteen dollars a week.

I should have been thankful—and, in a way, I w
I had no desire to sponge on my father any longer. This
an allowance from him while I was in college seemed us
quite a different thing from taking it while I was not do
anything—not even making a pretense at studying; but
I left my suburban home on the Monday I started and
felt a good deal of mortification. My dreams had took
to the stars—and here I was a clerk! As I walked do
Canal Street before turning west to the office I might be
noticed the bordes of eager and even hungry-booking in
hanging about the windows of the labor-employment us
cies; but I merely felt sorry for myself.

Our office was in the same building with our shops as I passed up the stairs to my new work I could had

ming and clash that bespoke the labor of hundreds of ; but of what they were making I knew and cared ing. I knew Mr. Burton well, for he was a neighbor irs. He was a fine-looking man, with shrewd, kind blue red cheeks that somehow added to the genial look is face, and a pointed beard that gave him a slightly essional air.

is expression, however, was far from being that of the groom, and, for all his gentle manners, any one who a judge of men would have seen that my new manwas not in the least to be trifled with; but at that time

is not a particularly close judge of men.

expected Mr. Burton would start me off with some sort oiel and he did, but briefly. He said that any man had it in him to rise could rise with this particular pany, and that the best way to get on was to make elf as familiar as possible with the manufacturing and cings of the firm; and that, above all, I must realize eriousness of business. The steady thinking man would m; the flighty or indifferent one would be left behind. wo or three times he repeated that phrase—the seriousof business. If only I had listened to him with my e mind—really grasped what he was trying to impress with-I might have saved myself some humiliations; I merely gave him the specious attention I had rded my professors. I had come to him as a stop-gap, also there was nowhere else to go, and I was not in the interested in the work. All I cared for was the lifteen in a week-the pittance, as I called it privately.

Getting Broken to Harness

R.BURTON, first of all, took me downstairs and showed me the workings of the timeclock. I did not like to be hered: I hated the democracy of that timeclock, even igh the manager himself had a number. Then he took brough the shop, from the foundry to the plating room. ight to have interested me. I ought to have felt the ficance and even the grandeur of what I casually cod at: but all I saw was a confusion of belts and shafts, th seemed to me to shadow their blackness on the swashed walls.

saw flying aplinters of steel, one of which struck me on cheek; grimy faces where, nevertheless, pallor showed dark eyes gleaming out of them stolidly, scarcely ring at us in order not to hinder the piecework.

I saw countless parts of valves dropping from machines or resting in great boxes, and I did not ask a single question about them. I saw long double boards, with rows of brass hooks, on some of which order slips were impaled; and I did not know or care that they were there to save the foreman elerical work. I merely felt that after all I was lucky in that I was not born to work in a shop.

My work was to write out orders and do other small details of cierical work. I had a desk between two cierks who did the payroll work and the cost work. The sunniest corners of the room went naturally to the manager, the assistant manager and the stockkeeper; but I had a good place and plenty of light. The work was easy; I mastered it at once, and I suppose I had a corresponding contempt for it. I soon became friendly with the other clerks in the office. They were not my sort exactly, but plenty of my classmates had not been, either, and yet I had got on with them.

As I have said, I had a gift for mixing. Presently I got used to my situation. I missed the freedom of movement of the college, where my closest confinement had been an occasional three hours in a laboratory, always with the privilege of moving about. It bored me to be on duty from eight until five-thirty; but I had an hour off at noon and after a while I did not mind the routine. Having a job I lifted up my head among my fellows once more, lied about the pay I was getting, brugged about my chances of promotion, called on girls and went to parties. In short, I was once more exactly the same joyful drifter I had been in

At the end of the first month I was called to Mr. Burton's dunk.

"Tom, this won't do!" he said briefly. "You have been

late four mornings this month."

"Yes, I know," I said, feeling that I must smooth him down exactly as I had smoothed down my professors. "I take the seven-twenty. When it gets in on time I'm here on time."

"I take the seven-fourteen," Mr. Burton said crisply. "Twenty-four days out of twenty-eight I get to the office six minutes ahead of time; but that keeps me from being late four times. If I can do it you can. Your position ought

to be just as important to you as mine is to me. That's all!"
I retreated to my desk feeling aggrieved. Two or three nights a week I went to parties or to the theater or to the fraternity house. It was not always easy to be at the

station by seven-fourteen-six minutes. looway between seven and eight is always a help. I was doing the confounded firm a fewer anyway - it was not every office that could have a college man like me at to berk and call; but for all my inward grantiling I took the earlier train. Perhams I subconsciously realized that I was lucky to have work at all. Soon after I was made a special order clerk; and, though this was really no promotion, somehow I felt as if it were,

Pro-ntly I paved the way to a serious reprimand. A customer sent us a valve specifying a certain repair he wanted made, which would cost about two dollars. The foreman saw that it

would be useless to make this repair unless other work were done on the valve, which would bring the cost up to five dollars. Without consulting the customer I told the foreman to go ahead with it.

When the valve went back the customer objected. to the price. We had to write several letters before be was at all placeted, and even then the firm felt it would have to absurb the extra cost. Mr. Burton took me to task.

'You showed very poor judgment in that matter, forn," he said, "and a high-handed way that it is not our policy to take with our customers."

"Why, I figured I'd be saving time for the customer." I said glibly; though, as a matter of fact, I had not done any real figuring at all. "It would have taken two or three days if we'd written to him. Besides, the work had to be done."

"That's not the point," Mr. Burton said. "If you

I Went for a Long. Cold Walk and Did Jome Hard Thinking

sent your overcoat to a tailor and told him to put on new braid and buttons, you'd object if he sent it back with a new lining you hadn't asked for. If you're going to stay with us, Tom, you'll kindly try to take your work seriously."

I smarted under that, I knew I had blundered, and for a few days I read over every order with the care that a nurse gives to a doctor's instructions. Then I blundered again. I suspect my mind was on a trivial honor that had come to me that morning - a song I had written had been incorparated in the college songbook. I was thinking of going to the fraternity bause that night to be congratulated.

A Walk and a Turning-Point

AN ORDER came early in the afternoon from a customer, which was what we call a breakdown job. The man telegraphed that a valve on a high-pressure line in his manufacturing plant had broken, and he wanted one sent to him by express at once. I went to the foreman and asked him whether he could get the job out that night. He said he could not possibly, but he would have it ready before noon the next day. I took the word to the shipping department, The manager happened to be there and he inquired the name of the customer.

"Clark, I think," I said.

"Not the Clark-Ralston Company?" he said.

"I-I don't know," I replied.

"You come back to the office," he said grimly. We went back to the office. Mr. Burton looked at the

telegram; then he stared at me.

Did you try to find out how important a customer this Clark is, or why he wanted the valve on his high-pressure line, or what the consequence would be if he didn't get it?"

"No, sir," I said. "I went straight to the foreman."
"Well, you go back to the foreman," he said.

The foreman said he had not understood it was the Clark-Raiston Company or that the valve was to be sent by express, or he would have rushed it. By a little overtime work, he said, he could get the valve off that night.

Mr. Burton started in then and there to give me the talk that was the turning point of my life. He explained that the Clark-Raiston Company were most important custumers; that the very warning "breakdown job" ought to have put me on my mettle; that the company's shop was running with a great number of men; that it was a high-pressure plant, and that they must have had to shut down part of their plant until that valve was in shape.

He said that if the valve bad not been sent until the next y-which was Friday-it would have arrived on Washington's Birthday-which was Saturday-and that would have meant two idle days. He said I had handled the situation with the stupidity and inexpertness of a child of ten. What more he might have said I do not know. Luckily for me the head of our firm sent for him.

I did not go to the fraternity house that night. I went for a long, cold walk and did some hard thinking. For the first time I realized how utterly worthless I was. I did not show as much skill as some of the clerks who had scarcely gone through the high school.

For the first time I saw that my college education had, so far as business was concerned, got me nowhere. I had not learned one thing in college that I had been able to apply to my present work. I had felt above my work-had

FREDDY ET CIE

COMO NACIDAD NO ALTON

T 1S always a perplexing question how to provide for younger sons, and the immediate relatives of the Honorable Freddy Foulkes had forfeited a considerable amount of beauty sleep in connection with the problem.

"My poor darling!" the Marchioness of Glantyre sighed one day, more in sorrow than in anger, when the Honorable Freddy brought his charming smile and his graceful but unemployed person into her marning room. "If you could only find some congenial and at the same time lucrative post that would take up your

time and absorbyour spare energy, how grateful I should be!" "I have found it," said the Honorable Freddy, with his cherubic smile. He possessed the blond curling hair and artless expression that may be symbolical of guilélessness

or the admirable mask of guile, "Thank heaven!" breathed his mother. Then, with a sense that the thanksgiving might, after all, be premature, she inquired: "But of what nature is this post? Before it can be seriously considered one must be certain that it entails no loss of caste, demands nothing derogatory in the nature of service from one who I need not remind you of the fact that your family must be considered."

She smoothed her darling's silky hair, which exhaled the choicest perfume of Bond Street, and kissed his brow, as pure and shadowless as a slice of cream cheese, as the young man replied: "Dearest mother, you certainly need not."
"Then tell me of this post. Is it anything," the Mar-

chioness asked, "in the diplomatic line?"

"Without a good deal of diplomacy a man would be no

good for the shop, but otherwise your guess is out."

Doubt darkened his mother's eyes. "Don't say," she exclaimed, "that you have accepted a club secretaryship? To me it seems the last resource of the unsuc-

cessful man." "It will never be mine," said Freddy, "because I can't keep accounts and they wouldn't have me.

"I trust it has nothing to do with art," breathed the Marchioness, who loathed the children of can-

vas and palette with an unreasonable loathing. "In a way it has," replied her son, "and in another way it hasn't. Come! I'll give you a lead.

There is a good deal of straw in the business. "You cannot contemplate casting in your lot with the agricultural clusses? No! I knew the example of your unhappy cousin Reginald would prevent you from adopting so wild a course. But you spoke of straw."

Of straw-and flowers-and tulles."

"Flowers and tools! Gardening is a craze that has become fashionable of late; but I cannot calmly see you in an apron, potting plants."

"It is not a question of potting plants, but of potting customers," said Freddy, showing his white teeth in a charming smile.

A shudder convulsed Freddy's mother. Freddy went on, filially patting her handsome hand: "You see, I have decided, and cone into trade.

If I were a wealthy cad I should keep a bucket shop. Being a poor gentleman, I am going to make a bonnet shop keep me. And what is more-I intend to trim all the bonnets myself."

There was no heart disease on the maternal side of the house. The Marchisness did not become pale blue and sink backward, clubching at her cursage. She rose to her feet and boxed her son's right car. He calmly offered the left one for similar treatment.

"Don't send me out looking uneven," he said simply. If I pride myself on anything it is a well-balanced appearance. And I have to put in an appearance at the shop by

He glanced into the mantel mirror as he spoke, and, observing with gratification that his immaculate necktie had escaped disarrangement, he twisted his little mustache, smiled, and knew himself irresistible.

"The shop! Degenerate boy!" cried his mother. "Who

is your partner in this -this enterprise?"

You know her by sight, I think," returned the cherub coolly. "Mrs. Vivianson, widow of the man who led the Donesster Fusiliers to the top of Mealie Kop and got shot there. Awfully fetching and as

clever as they make them!" "That woman one sees every-

where with a positive procession of young men at her heels!"

That woman, and no other." She is hardly

"She is awfully chic, especially inmourning."

"I will admit she has some style." "Admit, when you and all the other women have copied the color of her hair and the cut of her sleeves

for three seusons past! I like that!" Freddy was growing warm.

"When you accuse me of imitating the appearance of a person of that kind," said Lady Glantyre in a cold fury, "you insult your mother! And when you ally yourself with her in the face of society, as you are about to do, you are going too far. As to this millinery establishment, it shall not open."

"My dear mother," said Freddy, "it has been open for a week."

He drew a card from an exquisite case manner gold. On the pasteboard appeared the fallow Inscription in neat characters of copperplate:

> FREDDY ET CO. COURT MILLINERS 11, CONDOVER STREET, W.

"Freddy and Company!" murmured the and parent as she perused the announcement.

"Mrs. V. is Company," observed the son wa epice of vulgarity, "and uncommonly good a pany too. As for myself my talents have at last in scope and millinery is my metier. How often you have that no one has such exquisite taste in the arrangement flowers.

As you, Freddy! It is true! But --- "

"Haven't you declared over and over again that have never had a maid who could put on a mantle, ago fold of lace, or pin on a toque as skillfully as your owner.
"My boy, I own it. Still, millinery as a profession.

Can you call it quite manly for a man?"

"To spend one's life in arranging combination is off other women's complexions—can you call that was for a woman? To my mind," pursued Freddy, "It has only occupation for a man of real refinement. To me Beauty with beauty! To dream exquisite conthat shall add the one touch wanting to exquisite on or magnificent middle age! To build up with deft tool a creation that shall betray in every detail, in every chi

the hand of a genius united to the soul of a lover, and reap not only gold but glory! Would this not be fame?"

"Ah! I no longer recognize you. You do not talk like your dear old self!" cried the Marchioness.

"I am glad of it," replied Freddy, "for, frankly, I was beginning to find my dear old self a bore." He drew out a watch, and his monogram and crest in diamonds scintillated on the case. His eye gleamed with proud tri-

SHOUTH BY JUST PRINT, NOW YOU

umph as he said: "At twelve I am due at Condows: Come - not as my mother, if you are ashamed of my sion, but as a customer ashamed of that bonnet Glantyre was dressed for walking-"which you out have given to your cook long ago. Unless you prefer your own brougham, mine is at the door.

The vehicle in question bore the smartest appro-The Marchioness entered it without a murmur whirled to Condover Street. The name of Freddy of appeared in a delicate flourish of gold letters and

judy decorated portals of the establishment, and the hardiss window contained nothing but an assortment plans, ribbons, chiffons and shapes of the latest mode, of a single completed article of head apparel.

The great was already blocked with carriages, the vestiproced, the shop thronged with a vast and everimports assemblage of women, among whom Lady latter recognized several of her dearest friends. She and she had not come, and looked for Freddy. Freddy al tamshed. His partner, Mrs. Vivianson, a vividly and elegant brunette of some thirty summers, assisted the or four charming girls, was busily engaged with se tould-be customers, not a few, who sought admission the inner room, the pale green portière of which hore in attention of embroidery the word atelier.

") a see," she was saying, "to the outer shop admisa spate free. We are charmed to see everybody who

in whome, don't you know, and show them whitest shades and shapes and things; but pertation with Monsieur Freddy - we age five shillings for that. Unusual? Man But Monsieur Freddy is Monsieur

bily; and we ask no more." "A born tradeswoman!" thought Lady lative as the silver coins were exchanged the colored silk tickets bearing mystic men. She moved forward and tendered a all crowns - and Freddy's partner and sin's mother looked each other in the w bes Mrs. Vivianson maintained un basile composure.

and then the curtains of the atelier parted and pretty woman came out

sky She was charmingly dressed and wore the most point of hats, and a murmur went up at sight of it. She strind out her hands to a friend who rushed impulsively not her, and her voice broke in a sob of rapture.

"lid you ever see anything so sweet? And he did it s sugge-one scarcely saw his fingers move!" she cried. he friend burst into exclamations of delight and a ers green about them;

"Winderful!"

"Estraordinary !"

Bodos it while you wait!"

"lot for curiosity, I really must!"

be a wave of eager women surged toward the green Three went in, being previously deprived of their

headgear by the respectful attendants, who averred that it put Monsieur Freddy's taste out of gear for the day to be compelled to gaze on any creation other than his own. And then came the turn of Lady Glantyre.

She disbonneted and entered the sanctum. A pale, clear, golden light illumined it from above; the walls were hung with draperies of delicate pink; the carpet was moss-green. In the center of the apartment, on a broad, low divan, reclined the figure of a slender young man. He wore a black satin mask, concealing the upper part of his face, a loose lounging suit of black velvet,

slippers of the same with the embroidered initial F. ad him stood, mute and attentive as slaves, half Enpretty young women, bearing trays of trimmings tery conceivable kind. In the background a grove

fingers moved like white lightning as he deftly wielded the feminine implement and snatched his materials from the boxes proffered in succession by the girls. "Black and white tips of ostrich falling over one side from a ring of cut steel," he continued in the same dreamy tone. "A knot of Point d'Irlande, with a heart of Neapolitan violets, and"-he rose from the divanand lightly placed the beautiful completed fairle on the Marchioness' head-"here is your bat, madame.

Five guiness. Good morning. Next, please!"

Emotion choked his mother's utterance. At the same moment she saw herself in the glass silently swung toward her by one of the attendants and knew that she was suited to a marvel. She paid her five guineus, made her exit, and returned home, embarramed by the discovery that there was an artist inthe family,

One thing was clear-no more was to be said. The Maison Freddy became the morning resort of the Smart World; it was considered the thing to have hats made while society waited. True, they came to pieces easily, out being copper-nailed and riveted, so to speak; but what

poems they were! The charming conversation of Monsieur Freddy, the half mystery that wiled his identity as his semimask partially concealed his fair and smiling countenance, added to the attractions of the Condover-Street

Money rolled in; the banking account of the partners grew plethoric; and then Mrs. Vivianses, in spite of the claims of the business on her time, in spite of the Platonic standpoint she had up to the present maintained in her relations with Freddy, began to be jeulous.

"Or-no! I will not admit that such a thing is possible!" she said as she looked through some recent entries in the daybook of the firm. "But that American millionairous girl comes too often. She has bought a hat every day for three weeks past. Good for business in one way, but had for it in another. If he should marry, what becomes of the Maison Freddy?"

She sighed and passed between the curtains. It was the slack time after luncheon and Freddy was enjoying a moment's interval. Stretched on his divan, his embroidered slippers elevated in the air, he smoked a perfumed

Bedriff at the recognition of which experience.

eigarette, surrounded by the materials of his craft. He smiled at Mrs. Vivianson as she entered and then raised his eyebrows in surprise.

"Has anything gone wrong? You swept in as tragically as my mother when she comes to disown me. She does it regularly every week and as regularly takes me on again." He exhaled a scented cloud and smiled once more.

"Freddy," said Mrs. Viviunson going direct to the point, "this little speculation of ours has turned out very well, hasn't it?"

"Beyond dreams!" acqui-

esced Freddy. She went on: "You came

to me a penniless detrimental, with a talent of which nobody guessed that anything could be made. I gave that gift a chance to develop. I set you on your legs, and -

"Me rolld! You don't want me to rise up and bless you, do you?" said Freddy with half-closed eyes. awfully, you know, all the same!"

"I don't know that I want thanks, quite," said Mrs. Vivianson. "I've had back every penny that I invested and pulled off a bouncing profit. Your share amounts to

a handsome sum. In a little while you'll be "I shall never do that," said Freddy with feeling.

"Marry and leave me-perkaps," went on Mrs. Vivianson. A shade swept over her face; her dark eyes glowed; the lines of her mouth bardened.

Keep as you are!" cried Freddy, rebounding to a sitting position on the divan. "Where's that new Medici shape in gold rice-straw, and the amber crèse chiffon, and

NAME OF STREET OF STREET

the orange roses with crimson hearts?" His nimble fingersdarted hither and thither, his eyes shope, and his cheeks were flushed with the enthusiasm of the artist. "A tuft of black and yellow cock's feathers à la Mephistophélis!" he cried; "a topaz buckle, and it is finished. You must wear it with a jabot of yellow Point d'Alençon. It is the hat of hats for a jealous woman!"

"How dare you!" cried Mrs. Vivianson; but Freddy did not seem to hear her he was rapt in the contemplation of the new masterpiece. And as he rose and gracefully placed it on his partner's head Miss Cornelia Vanderdecken was ushered in. She was superfuly beautiful in the Ivory-skinned, jetty-locked, slender American style, and she wore a hat that Freddy had made the day before, which set off her charms to admiration.

She occupied the sitter's chair as Mrs. Vivianson glided from the room, and Freddy's blue eyes dwelt on her worshipingly. To do him justice he had lost his heart before he learned that Cornelia was an heiress. Now words

escaped him that brought a faint pink stain to her ivery cheek.

"Ab!" he rried impulsively. "You are

raining my business!"
"Oh, why. Monsieur Freddy? Please tell me!" asked Miss Vanderdecken with naive curiosity.

Because," sald Freddy, while a bright blash showed beyond the limits of his black antin mask, "you are so beautiful that it is tor-

ture to make hats for other women-since I have seen you." There was a pause. Then Miss Cornelia's bangles clashed and her silk foundations rustled as she turned resolutely toward the divan.

'I can't return the compliment," she said, "by telling you that it is torture for me to wear hats made by any other man since I have seen you; for other men don't make hats, and I can't really see you through that the you wear over your face. But -

Cutting Down Some Staple Unnecessaries By James H. Collins

GETTING RID OF THE SMOKE FROM THE FACTORY CHIMNE

Caretereness and Ignorance are Juid to be Responsible for Sinuty Per Cant of the Warst Smake

THE business world has now set seriously to work to eliminate by better management a number of unpleasant things connected with its affairs that—only yesterday—were considered unpreventable. Industrial accidents make up the largest item, and the next largest and most expensive seems to be smake.

Many years ago a few eathetic critics raised objections to the emoke from the factory chimney because it was not beautiful, and the very idea was new to the business world, which was astonished and could only retort that emake from the factory chimney meant presperity - more wages and profits; more goods and comfort for everybody. Smoke from the factory chimney was really a form of human happiness - and there could not be too much of it. In the United States a great national election was won on the platform that abundant black smoke should

pour from all factory chimneys.

By and by the opponents of smoke found a more practical objection - that it was immensely expensive. Some startling facts were collected. Smoke-measuring devices were made and the fall of soot was reduced to figures.

In London it was found that about six hundred and fifty tons of soot fell every year on each square mile of the city, doing damage estimated at twenty-sis million dollars a year, with a fuel wante of a million more. And that was only an everyday matter-for a London fog. which is only smoke out of the higher regions dropped down into the city by atmospheric conditions, could cost as much as a million dollars a day in delay and

In Pittsburgh careful estimates indicated a yearly loss of ten million dollars, chiefly in damage to clothes and buildings, cost of washing, painting, papering, replacing of corroded metal, damage to merchandise, artificial lighting, and the like,

In Chicago the smodge bill was figured at forty million dollars a year; in Cincinnati at one hundred dellars for each family - and so on.

Numbers for Smoke Clouds

FINALLY Uncle Sam's experts made a national estimate, placing the emoke loss by damage and waste at a round half billion dollars yearly -or seventeen dollars for every man, woman and child in all our cities and

When ideas have any vitality at all they grow. By this time the business world itself admitted that smoke was not beautiful - except in a symbolic way - and the bill of costs was not disputed.

"What are you going to do about it?" maked Busi-"How are we to run our plants without making

The answer was, smoke laws, smoke inspectors, smoke fines, smoke preventers, and other measures designed to cut down smoke production. Much was accomplished. Big industrial plants partly cured the smoke evil by matent stakers or better methods of firing hoilers; improvement, not elimination.

Hundreds of little plants continued to make smoke in the small quantities that went to produce the great aggregate. Household chimneys continued their business at the same old stand; and the extent to which they are responsible for the smoke exil is shown very clearly in Landon, where it is estimated that more than half the coal used is burned in household grates—smoke has been an issue in London for five hundred years at least.

The inspector could not cutch such offenders; and there were other muokemakers who, though anxious to reduce

Ejection Was Wen on the Platform That Abundant Black Imute Sheald Pear From All Factory Chimneys

their contribution, bad to face great difficulties rail becometives furnish a large share of a city's amois instance, yet could not be fitted with mechanical str or fired to eliminate smoke to the degree possible in industrial power plant.

Worse yet, it was found that the smoky chimnel not cause so much damage as the one apparently so less. Exact tests were devised by which the hope looking at smoke through an instrument, could gi figure rating as number-one smoke or numbersmake or whatever it might be. But the chimney ducing dense number-three amoke for fifteen min

calling out the impector and bringing down a fine found to cause far less damage from soot and cinders the innocent-looking stack producing a light our two smoke all day; for, though the latter was confor to the law, its daily output of soot might be enorg

Smoke Washed But Not Ironed

IN OTHER words, when smoke was taken up seri it was found to be as many-sided as other modern iems; but today the whole business world has its a tion directed toward smokeless production, and several different directions the real article seems act to be coming.

One way of dealing with smoke that yields exp results is turning round the old proverb and in recognizing that where there is fire there will alway some smoke. This point of view leads the engine stop trying for smokeless combustion and see wh something cannot be done with smoke after it has

There are the smokewashers, by which smoke an industrial plant is forced through water spray cleansed of its solid matter. About one per cent caal burned under boilers with the best equipms automatic stokers will pass out of the chimney a and tiny cinders. To the average citizen's eye. chimney looks clean, because there is little of the co roud which he regards as smoke; but with a plant ing a couple of thousand tons of coal daily, located heart of a city, there will be a daily deposit of from twenty tons of soot and cinders constantly raining on the neighborhood and causing complaint,

The smokewasher removes all this objectionable and, though it may be costly to a corporation! quantities of water necessary must be purchased certainly economical to the community. And the direct advantage to the company that warrants !! penditure; for a large electrical corporation in the considers the washing of its smoke one of the forms of peacemaking between the public and low

This kind of smoke treatment naturally less attempts to do something useful with the wasting even in a small plant installed at a railroad round to wash the smoke from a hundred locomotive to half a ton of washings weekly, while a big power

"I got no use for that guy," said Bologna ruptly. "Not that I'm knockin'."

lebnny nodded approval. Goldie looked ignant as she rearranged a fold of her gray e waist.

'I tell you, kiddo," said Johnny, "he ain't re on professional ethics. I was tellin' ne Willetts how certain acts has been alin' an' usin' our material, an' how I had wyer after the parties, an' that killin' was good for 'em - an' he the same as defended An' he's too fresh, ain't he, Fred?" He laughed right out after me remarkin'

t the chooser who was passin' out your steps might be his company, for all we could tell," said Bologna. "I'm pictous of him. We don't know where he come from-te's a million Western acts. We don't know what or who

But you do know he's scored a personal hit an' it's got r angora, don't you?" cried Goldie. "Lionel's nice an' ibly artistic, an' I wouldn't 'a' had half the light an' ie to my work if he'd never joined. I see values truer

That guy entered this show as property man; an' e he's got a little part he thinks he'll tunnel under me, the next thing grab you for a partner an' git some adway bookin'," said Johnny; and the waitrees ried to the kitchen to notify her associates there that redheaded actor was angry.
Now you're talkin'!" said Bologna, unessily avoiding

lie's scorching glance.

I see Miss Duffy buntin' me; so I'll ask you to kindly se me," said Goldie; and she trailed her black satin into the hotel office, where Daisy Duffy was telling the that there was no place like dear old New York.

airy had a small and wrinklish face and the greaset was never entirely out of her eyebrows. There was narily a gap in the back of her hodice, proving the ations of her reach; but she wore such modish wraps such excessively split and pegtopped skirts, and had a profusion of gold cords and tassels depending from olf, that small details were unimportant. Persons ous of her acquaintance must expect to hear of her rce and her difficulty in finding number-two shoes-it not all skittles, this having little feet. She catalogued ta simply; things happened with Daisy either before ter her operation.

e put an arm through Goldie's when the latter had put handsome seal coat, and they went out together, as y people commenting on Goldie's bright hair and clear skin as on Daisy's tassels and pink fur leg-muffs, ned to protect the wearer against a January wind and

p-split costume. Ie's fussin' over Lionel, as though the poor boy was a inal," confided Goldie; "but I sha'n't stand naggin', if we are engaged. Would you?"

By Helen Van Campen

"I Mit Their Euroed Leader in the Exe!"

"I'd just let him say what we'd do and then I wouldn't do it," courseled Daisy. "You didn't go and tell about Lionel writing the song to you? Don't you! Redheaded men are mean at best, dearie; so he's only being true to his

"He forbade me goin' to dinner with a very old friend. The party's a jeweler and as highminded us can be!"

"A woman would be mad not to show a little kindness to a jeweler," said Daisy. "I should get to training Trippit in a burry, or he'll be impossible; for they grow that way when you give in to them. Wouldn't you hate to live in one of these feenchy-weenchy towns? It gives me the creeps to think of it."

"Yes, they're extremely bick; but then they don't realize it. I s'pose," said Goldie. "We better be hikin' for the theater. I do hope Johnny doesn't make any threats against Lionel! It seems like all we draw in this world is

The company playing one-night stands through New England was called by the profession the Trippit and Duiley Road Show. Theatrical critics in the towns booked described it as two-dollar vaudeville. The owners of musical shows with large casts and heavy expenses called it any harsh name that occurred to the defamers. Charlie Levy, the backer in New York, had visited only the receiving tellers of his bank since the opening week. It was a money-getter.

Trippit and Dailey drew the one salary that was considered high in times when the most ordinary act received pay on an extravagant scale. Everybody doubled by working in the Dancing Carnival, which formed the last half of the show. The company carried a few special drops and set pieces, but they were able to use house scenery to an extent that helped to keep the bills at a low figure.

Goldie always got the star dressing room, Johnny the pext choice, and the other artists squabbled over what was left. It was a dancing show, arranged to meet the demand of the moment; and the feeling of the performers toward each other was as pleasant as was usual where many temperamental persons in the same line of work played two shows a day, contending bitterly for favor.

Lionel Lamotte had been recruited in Boston. The show's secredited property man had developed rheumatism.

and cried off on six weeks of one-night stands; and Lionel, briefly explaining that he was a Western professional out of work, offered to be property and baggage master, and to play a small part in the "revue" for thirty-five dollars a week. He modestly said that he could dance, play the violin and piano-and if the manager wished he would write his own part. He was hired, and Sam Josephs, the company manager, declared him the material of which hig-time acts were made. Lionel told inquirers that his mother had been connected with the theater; and so she had - as scrubwoman to a San Francisco stock bouse, where big-eyed, curious Lionel filled her buckets and wrung out soiled cloths as he listened and learned,

A property man who had been with Réjane taught him to build the most intricate properties, and a stage curpenter whose wife was an ex-ballering often took him home to dinner and a dancing lesson. The theater's first violin wanted to make a musician out of him, and they would work together at a plane from midnight to loggy dawn. Lionel had to take naps in the dressing rooms between bucketfillings. The property man urged him to study for the drama; the ex-ballerina was certain that he could dance a path to fame; and the violinist, fearful of the grind of dreary hours in a theater orchestra if his pupil played no lietter than himself, sadly bade the boy decide without advice.

Lionel thereupon became a barker for a circus sideshow, sending money to his mother with such regularity that she scrubbed no longer. He played in a restaurant orchestra in Los Angeles, then went out with Smoke's Mustadonic Minstrels, playing a violin in the orchestra, doing the press work and taking tickets on the gallery door, and taking trombone—for ten dollars weekly.

These various employments occupied him until he was twenty, when his mother died, leaving him a collection of musty photographs, a ribbon worn by Fanny Davenport. and her famous signed letter from Pete Dailey, in which he inclosed two dollars for the washing of some shirts.

Lionel set his face Eastward, croming three states with a dog and pony circus, and another with a medicine show to which his oratorical gifts were valuable. He rode the brakebeams of an overland train into Chicago and was uninjured by the extensive airing. He was twenty-one before he got to New York; and its higness, and the stone wall that successful performers and busy booking agents, and managers whose business was done only through agents, seemed to form against one lone boy, cowed him thoroughly. He registered at an agent's office and became so used to the clerk's snifflsh cry, "Nothin' for you today!" that he dreamed it, and would have fainted from amazement had the clerk ever admitted that there was anything for him, on that or any other day!

The Trippit and Dailey Company did not hear of these vicimitudes, for Lionel had learned not to mention failures. He had twenty cents when a stagehand, who was a Native Son and because of it had been assisting this other Californish, remarked that the show at his bouse that week needed a property man.

"I guess I know too much about too many things and not enough about any one of 'em," Lionel later told Goldie, who answered:

"Then specialize in one an' git somewhere! What do you like best?"

"Drama," said Lionel; and Goldie confided that she had ways felt that, with time to study, emotional drama would have claimed her.

She suggested a few changes when he brought the part he was writing to her. They rehearsed a little secretly. Lienel forgot the vivid beauty of Vera Kelly, of the Sisters Kelly, and his plan to ask Vera to a fine dinner as soon as his finances permitted the feast. What a privilege—to be on friendly terms with a real star! And the star was young and blonde and pansy-eyed, with plump arms and a white throat rising gracefully from plaited lace ruffles or severe round necks of velvet gowns that were of the most alluring colors. Her nails had the bright pink polish considered modish in vaudeville, and he liked to watch her many rings flash when she moved her fingers.

Vera Kelly's little nearseal jacket and her inevitable white waist and brown skirt, with heavy-soled tan shoes, disgusted him after he had walked with Goldie, delightful

In velvet or silk crêpe, and twelve-dollar shoes. Goldie had a different set of rich furs or a splendid coat for each day of the week; but she was not proud or above talking to persons lacking similar wardrobes. And when he said that one with her sympathy, and her power of characterization would have been at the very top in drama, she asked quite humbly whether it were too late to try.

"Oh, why don't you? Give yourself a chance! What's vaudeville?" cried Lionel, with the memory of the agent's clerk amarting. "You're above these people and you owe

it to the world to take your proper place.

"An' I bet I could git an' audience goin' if I was in the legitimate," said Goldie; "but I simply never knew a single person who could put me next to the game. An' it's six nights, an' in some only Sat'd'y matinée - though others have Wednesday too; but that's only eight shows as against fourteen with us. An' look at the rep they git if they're a real hit!"

They rehearsed often; and Manager Josephs, when the bit was interpolated, wrote the backer to try and catch the show one of these days and watch Goldie Dailey and the new kid. Lionel was making a little part stand out. He was able to ask Vera to dinner now; but she ate alone, for Lionel was thinking of his art and of Goldie, who listened avidly

us he limned a grunder destiny.
"I'd just have to lift myself from the vulgarians an'
give my whole soul to the work," she said. "Maybe it was evil influences made me a champion buck dancer imtead of a dramatic actress, an' you were sent to guide me, Lionel! But if I did cut loose from the two-s-day where would you think I'd develop quickest?"

"Far, far from all this," said Lionel vaguely; and as soon as they separated he pendered the matter.

Goldie must retire temporarily and seek the lonely spaces, whence she should emerge triumphantly capable of interpreting the works of the masters. And suppose Lionel Lamotte wrote the play that first displayed her genius? He had done Smoke's press work, and composed speeches that sold innumerable bottles of an Indian tonie, for the medicine show. He would invade the lonely spaces with her - one more could not really disturb the slience. Write? With Goldie near, he could write plays that would startle press and public! Goldie did not consider Lionel as nee sary to the realization of her ambition until he outlined

the plot of a play. Then she saw his worth.
"I like you lots, Lionel; but us to bein' ever anything more, why, nothin' doin', for I'm engaged to Johnny, an' I s'pose we'll keep on, though if I see I can do good in drama I sure will leave the net, even if he does git peeved," said she. "Mona Morton's a toe dancer, an' her bushand's a legit.- though, at that, he's as dull as a fruit knife, un' I don't see how she endures him! Those combinations ain't unumual, though, an' we could both live our lives. Time'll

"Trippit is a weed compared with the fragrant flower of your talent," said Lionel, much encouraged; and when Goldie was not looking he wrote the remark down to use in the play.

She sighed. He was a hundsome weed! Fresh-colored, thick-framed and strong, and as light-footed a dancer as the slimmost man could be, Johnny was physically attractive; while Lionel, lean and small, his complexion the bus of a picked chicken, was not. But Lionel had remarkable eyes. They were large and black and talkative, and their homage was inspiring. Goldie thought of them as she strolled to the theater with Dulsy. Entering, they heard the stage doorkeeper saying:

"Yes-no one allowed back without an order from the front, so I put her out; an' then I found this paper.

She's been lookin' at your snowshoes."

"An' this here's notes on our mowshoe dance—Gee! It's one the chousers, an' she's got away on us!" exclaimed Johnny; and the doorkeeper added that the woman had been talking to the show's property man. Goldie followed Johnny to the property room in search of Lionel. Daisy and Bologna the Juggler went also.

"What's he doin'?" demanded Bologon, hearing a

eer sound.

Johnny flung a door open, discovering Lionel Lamotte intently practicing what Trippit and Dailey's billing described as an eccentric dance. The sunwahous were real: and as Lionel was unfamiliar with the hitch used by the team he had tied the thongs in a bunglesome way, confining his beels instead of leaving them free. He was awkwardly trying to execute a step; and, caught in a silly position, he flushed and endeavored to get out of the facing.

Will you take off them shoes or will I bust you right on your bever?" shouted Johnny, and Bologna deemed

his language temperate.

"Oh, Johnny, you mustn't! Stop, now!" warned Goldie; and Lionel said:

"I only put 'ern on to me how they felt, and I apol-ogize. Ain't that sufficient?"

"Performers coppin' other parties' tricks are gittin' pretty numerous—not that I mean parties here—an' again p'rupe I do," said Bologna, bulging his wide chest with a tremendous breath.

Johnny coldly seked about the strangs woman and Lionel as coldly replied that all he knew was that he had told her she must not touch the snowshoes, whereat she had laughed and left.

"Mr. Lamotte ain't a chooser, an' I don't see any harm In him tryin' the snowshoes on," said Goldie. "If I don't care, Johnny needn't. Now let's git made up an' leuve Lionel be. You come on with me, John. D'you hear me?"

Johnny murmared hoursely as Goldie led him off. Dainy encouraged Goldie with a wink. But Bologna lingered: and he said to Liousi:

The chooser that makes notes on my turn'h be drove out of this land! Git me?"

"No, I don't and I don't propose to hear your views; so get me on that point!" said Lionel hotly. "What's the matter with you fellows in this troupe? Are you scared of having some of the fat cut out of your parts? Looks tike it."

Bologna rumbled that if he did not have to make up he would show some people! And Lionel, setting the enow-

shoes outside, shut the door on the juggler. The Sisters Kelly had opened the performance; Gene and Fanny Willetia, society entertainers, were now on-Daisy Duffy and her Different Danzers, six girls who were useful in the revue, were hastening into their costumes. When the Happy Harmonists, four gentlemen who sang ballads and danced, succeeded the Willetts, Goldie was in an entrance, clad in a jaunty suit of white satin cost and

tight knickers, trimmed with ewansdown, with a awanadown cap. All her diamonds adorned hands and breast. Trippit and Dailey's new act was a winter setting, and the team entered on anowebses over a drift of property snow. Then they danced-and the feat had put another bundred on their weekly

salary. Goldie dreamily watched Billy Gruff, of the Harmonists, doing a burlesque tagge with the act's lanky

"Have to set this bunch on fire to heat 'em up, gasped Billy as he danced near her, and Goldie smiled as the sudience finally decided to clap. She was still smiling when Johnny, bearing the snowshoes, appeared beside her.

"Goldie, will you please be a little less realistic with that Lamotte today?" he pleuded. "You don't want the comp'ny to see me have to lam him, do you?"

"Sacrifice my art to your jealousy? I'd be ashamed

They Weitzed Off to a Clamur That Brought Them Out to Toke Jie Bows

to give the public less'n my very best," said Goldie vir ously; and Johnny retorted:

"It's you draggie' him up. He can't do you a lick

good, kidda!"

Didn't he sit out in front, movin' from A to R, so's git the effect an' tell me if I had enough red on after w switched from blackface? You never done it! An' I wo let his an' my actin' suffer for any one!"

"Be sure it is actin', Goldie-others ain't so positiv

be said darkly.

As they worked she thought with anger of his requi What effrontery in a man who opened the Dancing Carn with Vera Kelly, dancing the Brazilian Tango and Maxixe, and concluding the offering by holding Vi-languorously supine on his arm, while he gazed ards: into her black Irish eyes!

When she finished her turn Goldie changed quickly to white dress she wore in the Carnival. A maid fluffed her shining bair. She was ready for the revue, and at callbuy's shrill Time! she took her place at the foren table, in what was presumbably a colorful vision of night life of Broadway. The Kelly Sisters were back of

All performers sat on gilt chairs arranged in a semicir with tables between the chairs. It was a restaurant wit dancing platform, and the drop rose on Johnny, nor ordinary evening clothes, in altercation with a comtaxical driver who had pursued him from the street comedy policeman dragged the chauffeur off and John seated himself at a table across the stage from Gol Daisy's dancers unobtrusively filled in at the tables. action was rushed-Gene and Fanny Willetts doing time and turkey trot; Bologna, the Terpsichorean Juggle America's supreme novelty-tossing first oranges, t cannonballs, while he jigged merrily and caught the nonballs on the back of a hefty neck.

After each number the stage audience clapped to hands and yelled, and the comedy policeman, who Billy Graff, of the Happy Harmonists, danced out to what they meant by it, which delighted the real audie on the other side of the footlights. The policeman h look earnestly into Johnny's face, then display an enoma star and attempt to arrest him, which fed Johnny to trick of suddenly standing on his hands, and on them de ing a buck at such speed that the policeman could

maintain a hold on him.

While this continued, a youth with long black hair. black eyes enlarged by the lavish use of make-up, mo slowly from table to table, until he faced Goldie. Wildramatic cry, she held a hand to her heart, and the 300 commenced a wailing tune on the violin he carried. audience laughed as she fell under the spell of his more perhaps they wondered how she could, for it was pe orre- and the player crept steadily closer until be bear over and she leaned faintly back. A final note and his # clutched her! But she repulsed him with a look of her

at gradually faded as he played again, retreating, quarting, retreating, until she rose, dazedly following be sent sinuously between the tables and made his exit. Goldie glanced defiantly at Johnny as she returned to goous applause. She waltzed to meet Lionel, who entered m the opposite side, playing a gay tune as he waitzed ward her. She had to tantalize him, eluding him as they ed up and down, Lionel sawing frantically, the orchestra reding with him. He threw down the violin and Goldie hed an instant; then each danced alone, dipping, gliding, onel's great eyes beseeching, his arms imploring, until abruptly bent, when he kissed her-and they waltzed to a clamor that brought them out to take six bows and give an encore.

He'll be expectin' to be featured next-the way he's eived," said Gene Willetts to Johnny, who said shortly:

'I'll fenture the long-nosed mutt!"

foldie and Johnny danced together in the finale, singing t stirring number, Good-Night Rag, with the company ging and duncing back of them. Trunks were rapidly ked and street clothes hurried into, as they were due in ther town for the night performance. Goldie and Daisy it in a cab to the station, while the others walked or rode the street cars. Vera Kelly leitered behind her sister z, who was wedded to Billy Graff and too busy with a all Graff boy to worry over Vera. Lienel was still in the ater, attending to the trunks in his capacity as baggage-

Lionel, would you like me to wait for you?" asked Vera. dly; and she blushed with shame when he said:

Not today — I've got my play to think of, you know."
Oh, I hate her, when she's got Trippit and then takes

-I hate her !" said Vera agely, and she went out the blustery March d with a tear in each keye, and later declined nind little George Graff le his marmma took a nap he train.

No one does anything nean' I'm goin' to do the e!" said Vera sharply; Billy Graff whispered to wife that she had not a the same girl since that g had joined.

oldie motioned Lionel to of her seat, though she Johnny coming along aisle. One of the Hardista informed the train luctor that Lionel was manager, and chuckless a general as the conducpatiently waited for el to become les ensed with the fair visage

oldie. I'm workin' on the big e in the third act toin my head, of course; I've got it doped out t," Lionel was saying. en there's got to be the own for the emotions, a smaller punch again the finish. I suppose clod of a producer'll pargue us out of a fourth but I'll never give in. you vote with me, ie. It's killin' to think

e delay while you'll be vin', when we might be puttin' on a two-year run yes ondon later. A play with real merit will go, over there." had already spoken guardedly of having been-is a a pupil of Madame Réjase; and he mentioned the sique of acting with an case that convinced Goldie of

ound judgment and vast experience.

I I hadn't run into you I might have been a plain ler all my entire career!" she marveled. "Now listen! b'lieve I could jump right out an' do emotional this very minute! Naturally some people have to be ed, 'cause they don't understand stage business an' n't any presence; but I got that, an', oh, Lionel, you imagine how I long to be on a stage completely alone old a house by the spell of my art!"

Ve could go on without the trainin'," said Lionel, highly

ght up; "for I ___ Eh;"
"ickets! Tickets!" said the conductor.

'hat guy ain't our manager! He's only the property " said the voice of Bologna; and Goldie was discond at the presence of Johnny and the juggler in the seat. "Mercy! Do you's pose they heard?" she asked agitated whisper, and Lionel mumbled while trying

ik as though he was keeping still: lo! Just sat down-couldn't have."

"If we're interruptin' anything put us next an' we'll blow," said Johnny. Goldie did not reply. Occasionally Bologna whispered steadily to Johnny. Goldie and Lionel remained silent.

"Them keepin' so quiet now's a tip they was discussin'

secrets before we come," Bologna opined.

"I heard you, Fred Bologna: an' the next time you want sumpin mended, or your money kep' for you so you won't gamble it, you can ask others to do it!" cried Goldie. "I got the privilege of talkin' over my business with parties work with, sin't 17"

"All I contend is, you're misled," said Bologna. Goldie turned again. Jehnny's chin was protruding; and that was ominous, for when that chin was stuck belligerently outward he was ready to promote trouble.

SAY, Lionel, you change seate an' let him sit with me," was the suggestion that made Lionel rise, loudly announcing that he had a little writing to do. He went to the half seat at the end of the coach without a word for Vera Kelly, who looked up hopefully as he approached. The six Different Dancers bade the Happy Harmonists note how quirkly Johnny took the varated space.

"If I riggered that whifet was tryin' to steal my honey he'd be bounced out of this troupe," said Johnny, stroking

Goldie's hand with large, warm fingers.

"It ain't a case of bein' stole, dearle. Am I or am I not allowed personal liberty? Women sin't slaves!"

"Engaged ones oughts ignore all other parties," said

Johnny; and Bologna, interested, said from the rear:

"True for you, John! One's plenty for 'em."

he could shave his absurd little black mustache, and that would improve him. Still, looks were not essential to art and it was weakness to think so.

"Who does this little baby love?" queried Johnny; and she said with a pang:

"Oh! I-I-s person ought to think of their art."

"Walden next stop!" bawled a trainman, and the company crowded into the aisle.

Remember who put you where you are, Goldie, You're

"My own talent put me here," Goldie thought resentfully, and at that moment Lionel poked a folded note at her. While the train was slowing for Walden she read:

"He cannot appreciate you like me. Will find you soon as I get the trunks over. You are the sunshine of the life of your Lionel."

It was on mauve paper and peculiarly scented. The odor was different from that with which Lionel perfumed his handkerehief. Johnny sneered at him for using any; but Goldie and Daisy, discussing it, decided that the perfumery was only another indication of Lionel's refinement. Goldie put the note in a pricket of her mink coat as Daisy whispered:

"What was he writing, dearie? He had the raptest look!" Bologna pushed by the ladies as Goldie fumbled in her pocket. He had reasons for haste, for hidden in his capacious hand was Lionel's mauve message, abstracted by the juggler as soon as Goldie deposited it.

"It's gone!"

"You must have dropped it, dear!"

"Oh, Daisy, s'posin' some of 'em find it!"

"Swear you never set eyes on it," said Dulsy.

Some one called out that the woman who had been making notes on Trippit and Dailey's act in Newtown was in the next coach; that Johnny was seeking her and would hire a detective if he missed her - and he requested Goldie to unpack his theater trunk if he was

"Be culm, dearest lady!" begged Lionel, rushing up as Goldie stood uncertainly on the platform.

"Calm? An' our original stuff that we evolved with our hearts' blood-for, b'lieve me, it's no frolic to create new dancin' steps, Lionel-our stuff bein' peddled over the land by pirates?" said Geldie, near to tears. "We'll invoke the copyright law, though! That staff's protected, she'll find! Oh, if I just get my hands on that dame!"

"Think of the future only. These things ain't worth your cryin' over," unid Lionel; but Goldie retorted:

"Don't talk foolish, Lionel! I'll see that woman behind the bars yet, an' so'll Johnny. Oh, it's originate an' originate, an' then find dubs coppin' it!"

Lionel went blithely through the main street of Walden, halting under arc-

lights to scribble on a sheet of scented mauve paper that was one of several he had found in the property room at Newtown after the unknown woman had disappeared. Ho kept them because he liked the fragrance. While writing to Goldie a wonderful plan had come to him. Instead of searching the pitiably inadequate ranks of leading men for one who would not be constantly trying to overshadow Goldle in the great drams, he would play the part himself! Goldie should have the fattest lines and the thrills that wrenched tears from enthralled audiences.

And when the play was done, with actors hastening into street clothes, Lionel Lamotte, the world's youngest actormanager-playwright, would escort his beautiful star to the Lamotte limeusine; and as they rolled away toward Broadway he would lay his all at her feet and ask whether she preferred the Little Church Around the Corner or some town where there was no bother over a license.

He saw a dim light down an alley and turned in, and was then yanked roughly from the limousine of fancy to the stage door of fact by hearing:

You the Dancin' Carnival's prop'ty man?"

"I am, sir," replied Lionel. And one of the men on the steps said: "Leave us glim your union card."

(Continued on Page 50)

"Fred Bologua, will you quit bornin' into my business?" "Maybe you wouldn't be droppin' your stuff s'much if you rehearsed instead of tellin' Johnny how to floor-manage me! I think you're a lot too flip!"

"He means it friendly," defended Johnny.

Belogna became melancholy, and Goldie smiled and shrugged as on the cover of her tin make-up box she heat the chorus of a ballad that Lionel had dedicated to ber.

"You only need to give a guy like Lamotte the once-over to git him tagged," said Johnny, "But listen, Goldie,

you're my kiddo, sin't you?"

He masterfully slid an arm about her and she had a sudden desire to forego the drama, remaining an untrammeled vaudevillist, who might dance down the spotlighted years with Johany. They had intended to walt until more money was amassed and then take out a show of their own like the Duncing Carnival, and have all the profits for themselves, instead of working for the backer and paying booking commissions to the syndicate; but when Johnny headed his company she would be charging three dollars to the West-the East would not pay it - and riding in her private car. And the Lionel whom Johnny scarnfully termed a whiffet was to write plays round her unique talents. Perhaps Lionel would be less is thy when he was older. Anyway,

THE WAR REPORTER

By SAMUEL G. BLYTHE

THE leisurely and literary war correspondent is of the past. He is done, down and out. The Spanish War made him groggy. The Russian-Japanese War put him on the ropes, and he took the count in the Balkan War.

Long ago the war reporter tilled his shoes, as will be demonstrated in Mexico if occasion arises. Moreover, so far as this country is concerned, the best war reporters do not go to war. When I say best I mean best in a news sense. That is what a reporter is for-to get news. That is what people desire to have about a war-news. War news is not descriptions of scenery, or speculation on strategy, or recital of brave deeds, all excellent and interesting when they get over the wire. War news is, first, whether we won or didn't win; and, second, what it cost us in blood to win or what we lost in losing. It is well enough to detail, in such picturesque diction as may be, what was done; but that isn't the main point. The main point is-Did we whip them? And how many were killed and wounded?

Therefore, whatever may happen in Mexico—and there's no telling what will happen as this is written—the hest and quickest news will come, not from the writing men at the

scene of hostilities, but will come from the writing men at the seat of government, at the national headquarters of the army and the navy. That is the way it worked in the Spanish War, and that is the way it has worked thus far in this Mexican affair. The reason is simple enough. News is no good upless it is printed. I know a roan who sat for four hours at Key West with the news that the Maine had been blown up in Havana harber bettled in him. He was the only man in the United States who had the information. Think of the splash he might have made if he had sent that news North. He didn't, however. He waited for the official dispatch from Captain Sigsbee, and after that where did the news, the information for the people, come from? It came from Washington reporters, of course.

Mind you, I am not saying that special commissioners, and sob sisters, and word pointers, and persons with literary reputations, and professional war correspondents, and all such are not excellent newspaper properties when a war is going on. Not that. They are, and more power to them, on the broad general theory that it is the business of the writing people to book the editor people whenever they get a chance. What I am saying is that the news of this war, if it is a war, will be provided by the war reporters, not by the special commissioners, or the novelists, or the poets, or the other literary men that will flock to it. The news will be sent in by the men whose trade it is to send in news.

The Passing of Percival Piffle

ALSO—and watch the development of this prophecy—you will not find in this Mexican trouble—if so be there is more trouble than there has been—you will not discover in the columns of your newspapers one-tenth of the special and so-called literary stuff that decorated those pages during the brief progress of the Spanish War. When that little struggle broke we had not been at war for thirty-five years, and there was an entirely new crop of editors and managers in charge of the newspapers, a crop of editors and managers who knew nothing of war save that it is big news, and they were crazy for it.

The signed-statement treak had developed a few years before that date. The sole idea of the editors on many of the newspapers seemed to be to have the story of a news event written not by a man who knew news when he saw it, knew how to get it and how to handle it, but by somebody who had written a passable short story or had put out a book or something of the kind. Most of the stuff was incredibly bad, considered from a straight newspaper viewpoint. But the editors thought they were giving character to their papers by printing a sloppy story written by Percival Penden.

What They Reed at the Front

all over the first page as a special mark of enterprise, instead of printing in the prominent place the news sent in by Bill McGinnis, regular reporter, and putting what Percival had to say in agate on the market page, where it belonged.

The signed statement craze was a manifestation of a curious sort of editorial annihilations. It was explained to me once by its inventor in this way: "I am anxious to have my newspaper the medium whereby the persons who are encelered authorities shall express their views, opinions and conclusions to the public. I want my newspaper to be the vehicle of transmission. I want to be identified, as owner and editor of this newspaper, with these men." You see, he wanted to benefit by the association.

That was all well enough in its way, if the signed statement had been confined to such expression; but it wasn't. It degenerated to a struggle to get into the papers signed statements from almost any person with a name, whether the person had a statement to make or not, and still further degenerated to a plane where, when a burglar was arrested, a signed statement from the burglar, the burgled, the policeman, the mayor, the indignant taxpayers, the leading minister, the leading soubrette, and the poet of mark at the moment were printed, and the facts about the crime incidentally put in—if there happened to be space.

When the Maine was blown up, and for some years before, we were right in the middle of the craze. Signed statements were the newspaper thing. They were all the editorial rage. So the big newspapers, having a war and not knowing exactly what to do with it, cut loose and hired special commissioners by the dozen, and bought boots, and put up jungle printing preses, and fired off, with big gobs of expense money, all sorts of persons who could write, or who couldn't write but thought they could, or who had written, or who had been in the public eye in some manner, and announced in large type that the war would be reported for them exclusively-always exclusively a trained corps of experts in tatting, mandolin playing, bridge whist, poems of passion, popular fiction, realism, buck-and-wing dancing, ragtime, science of war, tactics, taffy, and so forth, and that no expense would be spared.

Well, that part of it was correct. No expense was spared—that is, no expense for the editors and managers. Some of them are not through paying Spanish War bills yet. I know of a case where the thrilling pictures of a war he didn't see by a special commissioner cost his editor and manager \$1900 a column for each column printed. Coal was fifty dollars a too, and boots were a couple of hundred dollars a day, and cable tolls were high, and, all in all, when the editors and managers who were crazy for a war, and secured all these special commissioners at an enormous

expense, totted up, they for the expense had indeed to enormous, that permanent culation results had been and you haven't heard as those editors or managers bing for war since. Any timeditor feels as if we must to with somebody, he goes to files and gets out the expelials for the Spanish affair, shricks for continued personal continued continued

The result has thus far ! and the result will continu be, in case there is war, there will be fewer special: missioners at the seat of and that the work of go the news back home wil mostly done, not by mili experts or naval experts or tlemen with literary rep tions, but by regular repo whose business it is to get news back home, and who i how to do the same. And said, a good many of those ular reporters will be no ne the war than the State, Wa Navy buildings in Washing Nevertheless and not withit ing, they will furnish a proportion of the facts, such flub-dub as there me will follow in due course the word artists on the bei ent spot, or as near there prudence dictates, but note away that the regular repo cannot be asked to inform what has been going on.

There were not many wires at the time of our War, or many quick presses, or any such developme the science of getting newspapers quickly on the st Hence a number of men made reputations as war i spendents, and deserved them, for they had time, : story was a story until it appeared in print. Now and a story only until the moment it gets into the news resome newspaper. The methods of transmission are a feeted and the competition is so keen, that the what ress of reporting a war depends on success in getting a and the failure of reporting a war comes from the los wire. Consequently, the men who will be most use this contingency will be the men who know how to wire and what to do with it after they get it, and no men who have to think their thoughts before they ca them adequate expression, and who lack that report faculty of thinking their thoughts and giving them o sion at one and the same moment,

The Stories Printed in Red Ink

TOU will observe on the part of our great newspa I sort of dignified repression when it comes to or this war, provided there is a war, as it is necessary to: this day and date. There will be some special resioners, of course, but only some; not all can be in to leave home by offers of large sums of money and the ing out of the lure of glory to be gained. You will fin the men who send back the news of this war will b who are reporters first and literary persons a had s not men who are literary persons and nothing else. far be it from me to cast any aspersions on my calling if I were an editor of a newspaper, or director of a association, I'd rather have Bill Sheppard, or I Harmon, or Skipper Merriweather, or Charley Mi son, or any one of fifty other boys I could name at if of war for me, than all the novelists and poets abo be induced to attach themselves to the army in the the ships in the water.

So far as the lure of glory goes, that is where the breaks up of general debility. There were probable hundred American writing men of all kinds in the 51 War, and if you will tell me the name of one gain secured any enduring reputation out of that affair II it all back. The conditions won't let them. There chance for a George Alfred Townsend, or a Whitelist or a Nordhoff, or a Joe McCullough in these days of tins and wires. The long and leisurely story doesn't in time for the first edition. It is held over for Santaread by a few. Whereas the bulletins of the report printed in red ink and absorbed by the million.

That was never better illusmated-this difference between the di and the new-than on a certain ecssion during the Balkan War, Iso Englishmen saw a big engagerest. They were the only two writin men who did see it or, to put it a grother way, the only two who as it and had a chance, or made munre, to get in a story about it. the of these Englishmen was a war arrespondent, a big, talented man ett a great gift of style. The other ma a reporter. They got wires emittaneously. The literary man store a wonderful story of the enprement. He began with some empliyestuff that was great. He proceeded toward the battle in picanswe and vivid language, telling gaphically of the events that led to is ergagement and painting a fine picture of all the welter of this prebeingy to the battle. Just before he may got to the battle and the must it his paper in London was empelled to go to press.

The reporter, being a reporter, satisfalisatory with the battle. He fin) waste any time on a descripion of the events leading up to the

eggment, but he jumped, bing! into the event the other weakled up to. The result was that while the opposition special London had an excellent piece of descriptive writar, his paper had the story of the battle on the same soring, and the second half of the other man's story, which was a great piece of description, was printed on the by sher the regular reporter's story had thrilled London sub la facts and its clear, crisp, masterly narrative.

The Helplessness of Men at the Front

Of COURSE these men were both trained newspaper waters. Most of the special commissioners are not, see of them may have had a little experience on newspaper, but the great bulk of them were hired, and are held because they have reputations as writers—not newspaper, but fiction writers and other kinds of writers. All the best conditions surrounding them they were at a great handleap when stacking up against reporters who now how to write a news story; but with most wires someoned by the navy and the military, with incredible hardships to be suffered and hustling to be done to give and get stuff away, they simply blew up. This so the case in the Spanish War, in the Russian-Japanese is and in the Balkan War. If there is war in Mexico it all to the case in the Mexican War. It is all in the day's

not for the reporter. He as a job to do and he does a Taesperial commissioner, with special commissioner, not needs be special, and not up by not being any-less except a drag on the world.

Moreover, since the hitemiss days of our Spanish in, when there were as my correspondents in Cuba ad adjacent there to as there ers volunteer majors and threb-which means an traum number - the perms in direction of warfare ave tightened up, and have speed regulations and rebictions that make war reerting most difficult, and of a game for the literary prespondent. Methods of thing have changed, too, th the introduction of highevered and long-distance its, and the wireless, and I that. A battle line now so he forty miles long. In to Russian-Japanese War by let the correspondents a section of a battle here hi there; but if they had ren them free rein no man old have seen more than a hute portion of any en-Timent. In the Balkan as most of the correspondinever saw any fighting I say kind. They were stely in the rear.

Howard Banks, Private Jecretary to Jecretary Daniels, Passing Out War Raffetins

A high military authority told me in London, a year and half ago, when they were talking of fighting Germany, that in the event of that war they wouldn't have any correspondents along at all; and our own War Department, as shall show presently, has based regulations that make the man who has accuss to the news in Washington of more importance to his paper, in a news sense, than a man who is somewhere in the rear of the fighting line. In Cuba, during the Spanish War, cubies that could be used freely were miles and miles away. Think of the difficulties that will ensue in Mexico if our army should advance on the city of Mexico. The army will need the wires for long periods. Individuals must be restricted in their dispatches so all may have an equal chance. In one case, in the Balkan War, they allowed the correspondents two hundred words each. Imagine a special commissioner trying to tell a battle story in two hundred words. Why, he'd need more than two bundred words to get in all his capital I's. However, a good reporter can tell a lot in two hundred words, and, in a race for a free wire, be'll beat a special commissioner three miles an hour, and have his story in the home office before the special has finished writing "By Peter P. Punk, author of Wars I Have Caused, My Experiences in Battle, and so forth."

Returning, therefore, to my original proposition, let it be said that the men who have thus far sold the American people what has been happening in Mexico have been, not the special commissioners and the literary lights, but the reporters, mostly the reporters in Washington, and in conjunction therewith the reporters in Mexico. That was what happened during the Spanish War, and during the Boxer troubles in China when we had an acute interest in this country. The word painting came from the front, but most of the news came from the Washington reporters. And that will continue to be the case.

It works out this way: The commander-in-chief of the army and mavy is in Washington. The head of the War Department is in Washington, and so is the head of the Navy Department. The men in the field and on the ships are operating under the direction of their generals and admirals, and the generals and admirals are, in turn, operating under the direction of the heads of their departments in Washington, the Secretary of War and the Secretary of the Navy, who must report to the President and Commander-in-Chief. The generals and the admi-

rais, and their subordinates in the field and on the ships, must necessarily be in close touch with one another and with headquarters. Wires are needed for the transmission of these reports. The military authorities in a war are the supreme authorities. It is of more consequence to them to have their superiors know what is doing than to let the newspapers know, and as most battles are fought and most movements made in regions where the wire facilities are not so great as they are between Washington and New York, the men in the field and on the ships use the wires first for official reports and the transmission of news to their superiors in Washington, and then let the reporters have them.

How Napal News is Given Out

SUPPOSE there should be a battle in Mexico City. The first real news of that battle—real news—whether we won or lost and how many were killed and wounded—would come to Washington to the War Department and the President. If a reporter on the field were exceptionally lucky be might get a flash through, but the first real news would come to Washington. There it would be given out, and the Washington men, with scores of wires at their disposal, would harry it to their papers, and presently the full stories would come from the field. Details are always interesting, but the main facts are usually embodied in the

official reports, and, as it stands now, the official reports are handed out quickly and frankly and freely.

Take the incident at Vera Cruz, for example, or go back further than that and begin with the Tampico flag affair, There is a small room in the Navy Department called the press room. This is the hendquarters for the men who report for their newspapers and for the press associations the happenings in the Navy Department. There is a telegraph room in the Navy Department and one in the War Department, and all messages intended for the Secretary of War or the Secretary of the Navy come direct over those wires. As soon as that story broke the wires became jammed with reports from the men in command in the southern waters. Also the Navy Department and the War Department became immediately vitalized into places of intense activity.

The first news was navy news. Secretary Daniels put an officer in charge of the wires, and detailed Lucien Howe, private secretary to Assistant-Secretary Roosevelt, and a former newspaper man, to prepare and give out the war bulletins. This the procedure: A direction

Secretary of War Garrison With the Semipaper Men Gathered About Bis Best for the Afternoon Interview

from Admiral Mayo, say, was received. The officer in charge read it, transmitted a copy of it to the man it concerned and to Secretary Daniels, and handed a copy to Mr. Howe. A number of expert typewriter operators were on duty at all times. They rewrote the dispatch as prepared for the papers on the necessary wax sheets, and an electric mimeograph machine turned out copies at great speed. These copies were taken immediately to the pressroom, where the reporters were waiting for them, and as quickly put on the wires for the newspapers represented by the reporters.

If anything required explanation or comment, these reporters could reach the men who could explain or comment, and that explanation or comment was hurried away too. This service continued for twenty-four hours a day, and was organized in the War Department when it cume the army's turn at Vera Cruz. Then, too, the Washington reporters were in touch with the White House and the office of the Secretary of State and with the happenings

This was the first news, and this will be the first news in the event of war. Soldiers and sailors are capable bulletin writers and get their facts straight, but naturally they do little story writing. Necessarily, also, what each Washington reporter received was identical with what each other reporter received. Interpretations and comment and significance depend, in all cases, on the capability of the reporter and the soundness of his sources of information, and can be individual; but the news-this first news-was the same for everybody and will be.

The fact that this first news is identical, both in form and in extent, is what makes the necessity for reporters in the field with the army and on the ships with the sailors. The newspapers are not completely standardized as yet, and they require individual treatment, and use their individual sources to supplement this official news. Also, there may be instances where the headquarters in Washington will deem it advisable to withhold certain facts as a matter of policy. Hence the big newspapers send men of their own to the scene of operations, and ask them to report what they see and hear to supplement these official bulletins and the later and more detailed dispatches given out by the Washington departments.

The Washington war reporters have two advantages: They are able to get what has happened before the men in the field can send it in, because the military authorities have first use of available wires, and also can censor, if they choose, what the field men desire to send. Of course the departments can and do cemor their official disputches before they give them out, but not in the main details, not in the important news, not in casualties and not in general results. Then again the Washington reporters are in a position to get, before the field men, information of what action is intended, except so far as actual operations dictated by the exigencies of the local situations are concerned. For instance, they probably know that a general has been ordered to advance, but the field men are the ones to note how he advances and what he does after he has gone forward. This information is not always available, and not even generally available, in case of hazardous operations or when foreknowledge would be to the advantage of the enemy. But, all in all, an expert Washington reporter can keep in rather close touch with what is going on and what is intended, and he has the tremendous advantage of being in a place where he can tell his newspaper, and through his newspaper the public, of the course of the events of the day, because he has plenty and unimpeded facilities for getting his dispatches away.

In contingencies like this the work is continuous. Officers in the field and on the ships send dispatches at all times of the night and day. The telegraph forces in the departments and in the White House are continuously on duty. There must be constant watch for news. The taking of a lown or the assault of a port may occur any time, and the news of it may come in at any time. Hence somebody is always on duty. The morning papers will take dis-patches until six o'clock on the day of publication, and the

evening papers begin demanding news at that hour a keep up the demand until late at night. The morning n come back to duty again in the early afternoon. The papers, with morning and evening editions, maintain wi that are up and in working order all the time. Thro, the medium of telephones the chiefs of the War and Na Departments are always on call for important communi tions, and there is a force on hand in the offices en

Under Secretary Daniels, who is a newspaper edihimself, the system developed this year is as satisfact as it can be, everything considered. Of course if papers could have it so they would get the dispatches it and give them to the President after they had finished w them; but unfortunately the President and the Secretar of War and of the Navy will not allow this. However there is not much delay, and if it comes to real war th will be less still.

The position of the man in the field is far more diffic-He is where things are happening, and his job is to get news to his paper. He is at the mercy of the men in a mand of the army to which he is attached, and subject stiff rules and regulations, recently made much stiffer. prevent any disaster coming to our forces through preture disclosure of plans. Moreover, battlegrounds are picked out because of their accessibility to wires and cal-Battles usually happen, not at a given point, but as tated by circumstances.

The job of the man in the field is to get the wire. T is the beginning and the end of it, the top and the h tom of it; the tremendous difficulty of it and the sole rev of it. Get the wire! It isn't of a particle of interest editors, sitting miles away and impatient for big first-p Sashes or for something to carry an extra, how the repor gets the wire or where he gets it. He must get it. If does get it, and beats the other papers with his story, il may pay his expense bills without cutting any items :

CALLY

The Story of a Perfect Gentleman BETTERSEA trem? who has been married

long enough to feel deeply gratified at be-ing mistaken for a maiden lady, smiled seraphically at the conductor, and allowed hemelf to be hoisted up the steps of the majestic vehicle provided by a paternal county council to convey pussengers - at a loss to the ratepayers, I understand-from the Embankment to Battersea.

Presently we ground our way round a curve and began to cross Westminster Bridge. The conductor, whose innate cock-ney bonhomic his high official position had failed to erudicate, presented himself before us and collected our fares.

"What part of Bettersea did you require,

sir?" he asked of me,

I coughed and answered evasively:

'Oh, about the middle.'

"We haven't been there before," added my wife, quite gratultously.

The conductor smiled indulgently and punched our tickets. "I'll tell you when to get down," he said,

and left us.

For some months we had been considering the question of buying a deg, and a good deal of our spare time-or perhaps I should say of my spare time, for a woman's time is naturally all her own-had been pleasantly occupied in discussing the matter. Having at length committed ourselves to the purchase of the animal we proceeded to consider such details as breed, sex and age.

My wife vacillated between a bloodbound. because bloodhounds are so aristocratic in appearance, and a Pekinese, because they are dernier eri. We like to be dernier eri even in Much Moreham. Her younger sister, Eileen, who spends a good deal of time with us, having no parents of her own, suggested an Old English sheep dog, explaining that it would be company for my wife when I was away from home. I coldly recommended a mastiff.

Our son John, aged three, on being consulted, expressed a preference for twelve tigers in a box, and we not again invited to participate in the delication

The Loading Object Proped to be a Small, Wet, Jaivering,

Whimpering Puppy

Finally we decided on Aberdeen terrier, of an age

nex to be nettled by circ stances, and I was instructed to commo cate with a gentleman in the North : advertised in our morning paper that A! deen terriers were his specialty. In course we received a reply. The advert recommended two animals—namely, Co Chief, aged four months, and Scotia's Pr aged one year. Pedigrees were inclosed, e about as complicated as the family tre the House of Hapsburg; and the favor o early reply was requested, as both dogs v being hotly bid for by an anonymous riin Constantinople.

The price of Celtic Chief was two guineus; that of Scotia's Pride, for reaheavily underlined in the pedigree. twenty-seven. The advertiser, who rea in Aberdeen, added that these prices not cover cost of carriage. We decided to stand in the way of the gentleman Constantinople, and having sent lack pedigrees by return of post, resumed

Finally Stella, my wife, said:
"We don't really want a dog with a ; igree. We only want something that bark at beggars and be gentle with be Why not go to the Home for Lost Dog Buttersea? I believe you can get any you like there for five shillings. We will up to town next Wednesday and see al it - and I might get some clothes as well.

Hence our presence on the tran Presently the conductor, who had lot pointed out to us such objects of local is est as the River Thames and the House

Parliament, stopped the tram in a cross thoroughfare and announced that we'll in Battersen.

"Alight here," he announced facetise "for 'Ome for Lost Dawgs!"

Guiltily realizing that there is man true word spoken in jest, we obeyed h and the tram went rocking and whizing of sight. We had eschewed a cab.

"When you are only going to pay shillings for a dog," my wife had pon-out, with convincing logic, "it is sally to

and pay perhaps another five shillings for a cab. It doubles the price of the dog at once. If we had been buying an espensive dog we might have taken a cab; but not for a five-shilling one."

"Now," I inquired briskly, "how are we going to find this place?"

"Haven't you any idea where it is?" "No. I have a sort of vague notion that it is on an island n the middle of the river, called the Isle of Dogs, or Barkng Reach, or something like that. However, I have no loubt

"Hadn't we better ask some one?" suggested Stella.

I demurred.

"If there is one thing I dislike," I said, "It is accosting otal strangers and badgering them for information they ion't possess-not that that will prevent them from giving If we start asking the way we shall find ourselves Putney or Woolwich in no time!"

"Yes, dear," said Stella soothingly.
"Now I suggest — " My hand went to my pocket. "No, darling," interposed my wife hastily; "not a map,

lease!" It is a curious psychological. et that women have a constitutional version to maps and railroad timeables. They would rather consult a alf-witted errand boy or a deaf rail-bad porter. "Donotletusmakeaspecacle of ourselves in the public streets gain! I have not yet forgotten the ay when you tried to find the Crystal alace. Benides, it will only blow away. sk that dear little boy there. He is oking at us so wistfully."

Yes; I admit it was criminal folly. A an who asks a London street boy to e so kind as to direct him to a Home r Lost Dogs has only himself to thank

or the consequence.

The wistful little boy smiled up at us. e had a pinched face and large syes. "Lost Dogs' 'Ome, sir?" he said surteously. "It's a good long way. to you want to get there quick?" "Yes."

"Then if I was you, sir," replied the lant, edging to the mouth of an alley-ay, "I should bite a policeman!" od, with an ear-splitting yell, bemished.

We walked on, hot-faced.

"Little wretch!" said Stella. "We simply asked for it," I rejoined.

What are we going to do next?" My question was answered in a most

credible fashion, for at this moment man emerged from a shop on our tht and set off down the street before He wore a species of uniform; and ablazoned on the front of his hat was e information that he was an official the Battersea Home for Lost and arving Dogs.

"Wait a minute and I will ask him,"

wid, starting forward.

But my wife would not hear of it. "Certainly not," she replied. "If we k him he will simply offer to show us e way. Then we shall have to talk him -about hydrophobia, and lethal ambers, and distemper-and it may for miles. I simply couldn't bear We shall have to tip him too. Let

follow him quietly.'

To those who have never attempted track a fellow creature surreptitiously rough the streets of London on a hot y, the feat may appear simple. It is reality a most exhausting, dilatory d'humiliating exercise. Our difficulty not so much in keeping our friend sight as in avoiding frequent and

expected collisions with him. The general idea, as they on field days, was to keep about twenty yards behind him; t under certain circumstances distance has an uncanny oit of annihilating itself. The manhimself was no hustler, ce or twice he stopped to light his pipe or converse with

During these in terludes Stella and I loafed guiltily on the vement, pointing out to one another objects of local erest with the fatuous officiousness of people in the foreand of hotel advertisements. Occasionally he paused to stemplate the contents of a shop window. We gazed ustriously into the window next door. Our first winv. I recollect, was an undertaker's, with ready-printed ressions of grief for sale on white porcelain disks. We I time to read them all. The next was a butcher's. re we stayed, perforce, so long that the proprietor, who s of the tribe that disposes of its wares almost entirely

by personal canvass, came out into the street and endeavored to sell us a bullock's heart.

Our quarry's next proceeding was to dive into a public house. We turned and surveyed one another.

"What are we to do now?" inquired my wife.
"Go inside too," I replied with more enthusiasm than I had hitherto displayed. "At least, I think I ought to. You can please yourself."

"I will not be left in the street," said Stella firmly. "We must just wait here together until he comes out."

"There may be another exit," I objected. "We had better go in. I shall take something, just to keep up appearances; and you must sit down in the ladies' bar, or the snug, or whatever they call it."

"Certainly not!" axid Stella.

We had arrived at this impasse when the man suddenly reappeared, wiping his mouth. Instantly and silently we fell in behind him.

For the first time the man appeared to notice our presence. He regarded us curiously, with a faint gleam of recognition in his eyes, and then set off down the street

Out of the Gray Down Leamed on Ecrie Meneter, Body Singed, Wagging Its Tall

at a good pace. We followed, panting. Once or twice he looked back over his shoulder a little apprehensively, I thought. But we plowed on.

"We ought to get there soon at this pace," I gasped. "Hello! He's gone again!"

"He turned down to the right," said Stella excitedly. The lust of the chase was fairly on us now. We awang eagerly round the corner into a quiet by street. Our man was nowhere to be seen and the street was almost empty.

"Come on!" said Stella. "He may have turned in somewhere."

We hurried down the street. Suddenly, warned by a newly awakened and primitive lustinet, I looked back. We had overrun our quarry. He had just emerged from some hiding place and was heading back toward the main street, looking fearfully over his shoulder. Once more we were in full cry.

For the next five minutes we practically ran-all three of us. The man was obviously frightened out of his wits, and kept making frenzied and spasmodic spurts, from which we surmised that he was getting to the end of his powers of endurance.

"If only we could overtake him," I said, hauling my exhausted spouse along by the arm, "we could explain

"He's gone again!" exclaimed Stella.

She was right. The man had turned another corner, We followed him round hotfoot, and found ourselves in a prim little cul-de-soc, with villas on each side. Across the end of the street ran a high wall, obviously screening a railroad track.

"We've got him!" I exclaimed.

I felt as Moltke must have felt when he closed the circle at Sedan.

"But where is the Dogs' Home, dear?" inquired Stella. The question was never answered, for at this moment the man run up the steps of the fourth villa on the left and slipped a latchkey into the lock. The door closed behind

him with a venomous map and we were left alone in the street, guideless and

doglesa.

A minute later the man appeared at the ground-floor window, accompanied by a female of commanding appearance. He pointed us out to her. Behind them we could dimly descry a white tablecloth, a tea cozy and covered

The commanding female, after a prolonged and withering glare, plucked a hairpin from her head and cetentatiously proceeded to skewer together the starcky white curtains that framed the window. Privacy secured and the sanctity of the English home thus pointedly vindicated, she and her husband disappeared into the murky background, where they doubtless sat down to an excellent high tea. Exhausted and discomfited, we drifted away.

"I am going home," said Stella in a hallow voice. "And I think," she added bitterly, "that it might have occurred in you to suggest that the creature might possibly be going from the Dogs'

Home and not to it." I apologized. It is the simplest plan, really.

IT WAS almost dark when the train arrived at our little country station. We set out to walk home by the short cut across the golf course.

"Anyhow, we have saved five shillings," remarked Stella.
"We puid half a crown for that taxi

which took us back to Victoria Station," I reminded ber. "Do not argue to-night, darling,"

responded my wife, "I simply cannot endure anything more." Plainly she was a little unstrung.

Very considerately, I selected another topie, "I think our best plan," I said cheerfully, "would be to advertise for a

dog."
I never wish to see a dog again," replied Stella.

I surveyed her with some concern and said gently:

"I am afraid you are tired, dear."

"No; I'm not."

"A little shaken, perhaps?"

"Nothing of the kind. Joe, what is that? Stella's fingers bit deep into my biceps

muscle, causing me considerable pain. We were passing a small sheet of water which guards the thirteenth green on the golf course. It is a stagnant and unclean pool, but we make rather a fuss of it. We call it the pond; and if you play a ball into it you send a blas-

phemous caddie in after it and count one stroke. A young moon was struggling up over the trees, dismally illuminating the seene. On the slimy shores of the pond we beheld a small moving object.

A yard behind it was another object, a little smaller, moving at exactly the same pace. One of the objects was emitting sounds of distress. Abandoning my quaking consort I advanced to the edge

of the pond and leaned down to investigate the mystery. The leading object proved to be a small, wet, shivering, whimpering puppy. The satellite was a brick. The two were connected by a string. The puppy had just emerged from the depths of the pond, towing the brick behind it.

Digitized by Google

"What is it, dear?" repented Stella fearfully.

"Your dog!" I replied, and cut the string.

777

WE SPENT three days deciding on a name for him. Stella suggested Tiny, on account of his size. I pointed out that time might stultify this selection of a title.

"I don't think so," said Eileen, supporting her sister, "That kind of dog does not grow very big."

grow very big."
"What kind of dog is he?"
I inquired swiftly.

Eileen said no more. There are problems that even girls of twenty cannot solve.

A warm bath had revealed to us the fact that the puppy was of a dingy yellow hue. I suggested that we should call him Mustard. Our son John, on being consulted—against my advice—by his mother, addressed the asimal as Pussy. Stella continued to favor Tiny, Finally Eileen, who was at the romantic age, produced a copy of Tennyson and suggested Excalibor, alleging in support of her preposterous proposition that

It rose from out the basam of the take.

"The darling rose from out the bosom of the lake, two, just like the sword Excalibur," she said: "so I think it would make a lovely name for him."

"The little brute waded out of a muddy pond towing a brick," I replied. "I see no parallel. He was not the product of the pond. Some one must have thrown him in, and he came out."

"That is just what some one must have done with the sword," retorted Elleen. "So we'll call you Escalibur, won't we, during little Scally?"

She embraced the puppy warmly and the unsuspecting animal replied by frantically licking her face.

However, the name stuck, with variations. When the puppy was hig enough he was presented with a collar, engraved with the name Excalibur, together with my name and address. Among ourselves we usually addressed him as Scally. The children in the village called him the Scalavace.

His time during his first year in our household was fully occupied in growing up. Stella declared that if one could have persuaded him to stand still for five minutes it would have been actually possible to see him grow. He grew at the rate of about an inch a week for the best part of a year. When he had finished he looked like nothing on earth. At one time we cherished a brief but illusory hope that he was going to turn into some sort of an initiation of a St. Bernard; but the symptoms rapidly passed off, and his final and permanent aspect was that of a rather budly stuffed lion.

Like most overgrown creatures he was top-heavy and lethargic and very humble-minded. Still, there was a kind of respectful pertinacity about him. It requires some strength of character, for instance, to wade along the bettom of a pond to dry land, accompanied by a brick as hig as yourself. It was quite impossible, too, short of locking him up, to prevent him from accompanying us when we took our walks abroad, if he had made up his mind to do se-

The first time this happened I was going to shoot with my neighbors, the Hoods. It was only a mile to the first covert and I set off after breakfast to walk. I was hardly out on the road when Excalibur was beside me, ambling uncertainty on his weekly legs and smiling up into my face with an air of imbecile affection.

"You have many qualities, old friend," I said, "but I don't think you are a sporting dog. Go home!"

Excalibur sat down on the road with a dejected air. Then, having given me fifty yards start, he rose and crawled sheepishly after me. I stopped, called him up, pointed him with some difficulty in the required direction, gave him a resounding spank and bade him begone. He responded by collapsing like a camp bedstead, and I left him.

Two minutes later I looked round. Exculibur was ten yards behind me, propelling himself along on his stomach. This time I thrashed him severely. After he began to how! I let him go, and he lumbered away homeward, the picture of misery.

In due course I reached the crossrouds where I had arranged to meet the rest of the party. They had not arrived, but Excalibur had. He had made a detour and headed me off. Not certain which route I would to?

The Sugition San Sight Underweath Sim on Sie Way to Cover

reaching the crossroads, he was sitting very sensibly under the signpost, assisting my arrival. On seeing me be immediately came forward, sugging his tail, and placed himself at my feet in the position most resevenient to me for inflicting chastisement.

I wonder how many of our human friends would be willing to pay such a price for the pleasure of our company?

As time went on Excalibur filled out into one of the most terrifying spectacles I have ever beheld. In one respect, though, he lived up to his knightly name. His manners were of the most courtly description and he had an affectionate greating for all, beggare included. He was particularly fond of children. If he saw children in the distance he would canter up and offer to play with them. If the children had not met him before they would run shrieking to their nurses. If they had they would fall on Excalibur in a body and rull him over and pull him about.

On wet afternoons, in the nursery, my own family used to play at dentist with him, assigning to Excalibur the rôle of patient. Gas was administered with a bicycle pump, and a shochorn and buttonheak were employed in place of the ordinary instruments of torture; but Excalibur did not mind. He lay on his back on the hearth rug, with the principal dentist sitting astride his ribs, as happy as a king.

He was particularly attracted by babies; and being able by reason of his stature to look right down into perambulators, he was accustomed whenever he met one of those vehicles to arable alongside and peer inquiringly into the face of its occupant. Most of the babies in the district got to know him in time, but until they did we had a good deal of correspondence to attend to on the subject.

Excalibur's intellect may have been lofty, but his memory was treacherous. Our household will never lorget the day on which he was given the shoulder of mutton.

One morning after breakfast Hilsen, accompanied by Excalibur, intercepted the kitchen maid hastening in the direction of the potting shed, carrying the joint in question at arm's length. The damsel explained that its premature maturity was due to the recent warm weather and that she was even now in search of the gardener's buy, who would be commissioned to perform the duties of sexton.

"It seems a waste, miss," observed the kitchen maid; "but cook says it can't be ate nohow now."

Loud but respectful souffings from Excalibur moved a direct negative to this statement. Eilem and the kitchen maid, who were both criminally weak where Excalibur was concerned, saw a way to gratify their economical instincts and their natural affection simultaneously. The next moment Excalibur was lurching contentedly down the gravel path with a presentation shoulder of mutton in his mouth.

Then Joy Day began. Excalibur took his prize into the middle of the tennic lawn. It was a very large shoulder of mutton, but Excalibur finished it in ten minutes. After that, distended to his utmost limits, he went to sleep in the sun, with the bone between his paws. Occasionally be wobe up and, raising his head, stared selectely into space, in the bone of a Trainlgar Square lion.

lay white and gleaning on the grass beside

roused himself and began to look for a suitable place of interment for the bone. By four-thirty the deed was done and he went to sleep onto more. At five he woke up and pandemonium began. He could not remember where he had buried the bone!

He started systematically with the rose beds, but me with no success. After that he tried two or three shrubheries without avail, and then embarked on a frantic but thorough excavation of the tennis lawn. We were taking tea on the lawn at the time and our attention was first drawn to Excalibur's hereavement by a temporary but unshalkable conviction on his part that the bone was buried immediately underneath the tea table.

As the tennis lawn was fast beginning to resemble a golf course we locked Excaliburage in the washhouse, where his hyenalike bowls rent the air for the rest of the evening, penetrating even to the dising room. This was particularly unfortunate, because we were having a direct party in head of a neighbor who had recently come to the district, no less a personage, in fact, than the

new lord-lieutenant of the county and his lady. Stella was naturally anxious that there should be no embarraments on such an occasion, and it distressed her to think that these people should imagine that we kept a private torture chamber on the premises.

However, dinner passed off quite successfully and we adjourned to the drawing room. It was a chilly Septembe evening and Lady Wickham was accommodated with a seat by the fire in a large armchair, with a cushion at he back. When the gentlemen came in Eileen sang to be Fortunately the drawing room is out of range of the wall house.

During Eileen's first song I sat by Lady Wickham. He expression was one of patrician calm and well-bred repositut it seemed to me she was not looking quite comfortable I was not feeling quite comfortable mynelf. The atmosphereemed a trifle oppressive: perhaps we had done wrong basing a fire after all. Lady Wickham appeared to note it too. She sat very upright, fanning heraelf mechanically and seemed disincioned to lean back in her chair.

After the song was finished I said:

"I am afraid you are not quite comfortable. Lai Wickham, Let me get you a larger cushion."

"Thank you," said Lady Wickham, "the cushion I have is delightfully comfortable; but I think there is somethin hard behind it."

Apologetically I plucked away the cushion. Lad Wickham was right; there was something behind it. It was Excalibur's bone!

IV

A WALK along the village street was always a gre event for Excalibur. Still, it must have contained many bumiliating moments for one of his sensitive disposition; for he was always pathetically anxious to mai friends with other dogs, but was rarely successful. Litt dogs merely bit his legs and big dogs cut him dead.

I think this was why he usually commenced his morniround by calling on a rabbit. The rabbit lived in a hat in a yard at the end of a passage between two cottage the first turning on the right after you entered the villag and Excalibur always dived down this at the earliest ages tunity. It was no use for Eileen, who usually took him on these occasions, to endeavor to hold him back. Eith Excalibur called on the rabbit by himself or Eileen on with him; there was no other alternative.

Arrived at the batch, Excalibur wagged his tail and or templated the rabbit with his usual air of vacuous been olence. The rabbit made not the faintest response, is continued to munch green feed, twitching its nose in a suprior manner. Finally, when it could endure Excaling admiring inspection and hard breathing no longer, turned its back and retired into its bedroom.

Excalibur's next call was usually at the butcher's in where he was presented with a specially selected and an unsalable fragment of meat. He then crossed the road the baker's, where he purchased a halfpenny bun, for shi his escort was expected to pay. After that he walked in shop to shop, wherever he was taken, with great dools and enjoyment; for he was a gregarious unimal and half

and behind or underneath almost every counter in the flage. Men, women, babies, kittens, even ducks-they

ere all one to him.

At one time Eileen had endeavored to teach him a few mple accomplishments, such as begging for food, dying this country, and carrying parcels. She was unsuccessin all three instances. Excalibur on his hind legs stood out five feet six, and when he fell from that eminence, as invariably did when he tried to beg, he usually broke mething. He was hampered, too, by inability to disguish one order from another. More than once he rowly escaped with his life through mistaking an urgent peal to come to heel out of the way of an approaching tomobile for a command to die for his country in the ddle of the road.

As for educating him to carry parcels, a single attempt sufficient. The parcel in question contained a mislaneous assortment of articles from the grocer's, includlard, soup and safety matches. It was securely tied up, d the grocer kindly attached it by a short length of string a wooden clothespin, in order to make it easier for

calibur to carry. They set off home.

e passes out of my hands.

Excalibur was most apologetic about it afterward, ddes being extremely unwell; but he had no idea, he slained to Eileen, that anything put into his mouth was meant to be eaten. He then tendered the clothespin i some mangled brown paper, with an air of profound mement. After that no further attempts at compulsory ication were undertaken.

It was his daily walk with Eileen, however, which introced Excalibur to life-life in its broadest and most mantic sense. As I was not privileged to be present at opening incident of this episode, or at most of its subseest developments, the direct conduct of this parrative

me sunny morning in July a young man in derical ire sat breakfasting in his rooms at Mrs. Tice's. Mrs. e's establishment was situated on the village street and s. Tice was in the habit of letting her ground floor to gers of impeccable respectability.

t was half past eleven, which is a late hour for the clergy reakfast; but this young man appeared to be suffering n no qualms of conscience on the subject. He was king an excellent breakfast and reading the Henley ilts with a mixture of rapture and longing.

le had just removed the Sportsman from the convenient trees of the teapot and substituted Punch when he ame aware that day had turned to night. Looking up perceived that his open window, which was rather small of the casement variety, was completely blocked by a s, shapeless and opaque mass. Next moment the mass ived itself into an animal of enormous size and suring appearance, which fell heavily into the room, and

Like a stream that, spouting from a diff. Fails in mid-air, but, gathering at the base, Remakes itself.

to its feet and, advancing to the table, laid a heavy i on the white cloth and lovingly passed its tongue ch resembled that of the great anteater—round a cold ken conveniently adjacent.

hour the curate ceased to be his own master.

"I suppose you are Mr. Gilmore," said Eileen.

"Yes. I have been here only three weeks and I have not met every one yet."

"I have been away for two months," Eileen mentioned. "I thought you must have been," said the curate, rather subtly for him.

"I think my brother-in-law called on you a few days continued Edeen, on whom the curate's last remark had made a most favorable impression. She mentioned my name.

"I was going to return the call this very afternoon," said the curate. And he firmly believed that he was speaking the truth. "Won't you come in? We have an excellent chaperon," indicating Excalibur, "I will come and open the door.

"Well, he certainly won't come out unless I come and fetch him," admitted Eileen thoughtfully.

A moment later the curate was at the front door and led his visitor across the little hall into the sitting room. He had not been absent more than thirty seconds, but during that time a plateful of sausages had mysteriously disappeared; and, as they entered, Excalibur was apologetically settling down on the hearthrug with a cottage loaf between his paws.

Eileen uttered cries of dismay and apology, but the

curate would have none of them.

"My fault entirely!" he insisted. "I have no right to be breakfasting at this hour; but this is my day off. You see I take early Service every morning at seven; but on Wednesdays we cut it out—amit it and have full Matins at ten. So I get up at half past nine, take Service at ten, and come back to my rooms at eleven and have breakfast. It is my weekly treat."

"You deserve it," said Elleen feelingly. Her religious exercises were limited to going to church on Sunday morning and coming out, if possible, after the Litany. "And how do you like Much Moreham?"

"I did not like it at all when I came," said the curate, "but recently I have begun to enjoy myself immensely." He did not say how recently.

"Were you in London before?"

"Yes-in the East End It was pretty hard work, but a useful experience. I feel rather lost here during my spare time. I get so little exercise. In London I used to slip away for an occasional outing in a Leander scratch eight, and that kept me fit. I am inclined," he added ruefully, "to put on flesh,"

"Leander? Are you a Blue?"

The curate nedded.

"You know about rowing, I see," he said appreciatively, The worst of rowing," he continued, "is that it takes up so much of a man's time that he has no opportunity of practicing anything else-cricket, for instance. All curates ought to be able to play cricket. I do my best; but there isn't a single boy in the Sunday-school who can't bowl me. It's humiliating!"

"Do you play tennis at all?" asked Eileen.

Yes, in a way,"

"I am sure my einter will be pleased if you come and have a game with in some afternoon."

The enraptured curate had already opened his mouth to accept this demure invitation when Excalibur, rising from

Eileen gave him her most entrancing smile and from that the hearthrug, stretched himself luxuriously and wagged his tail, thereby removing three pipes, an inkstand, a tobacco jar, and a half-completed sermon from the writing table,

> EXCALIBUR was heavily overworked in his new rôle of chaperon during the next three or four weeks, and any dog less ready to oblige than himself might have felt a little aggrieved at the treatment to which he was subjected.

> There was the case of the tennis lawn, for instance. He had always regarded this as his own particular sanctuary, dedicated to reflection and repose; but now the net was stretched across it and Elleen and the curate performed antics all over the court with rackets and small white balls which, though they did not hurt Excalibur, kept him awake. It did not occur to him to convey himself elsewhere, for his mind moved slowly; and the united blandishments of the players failed to bring the desirability of such a course home to him. He continued to lie in his favorite spot on the sunny side of the court, looking injured but forgiving, or slumbering perseveringly amid the storm that raged round him.

> It was quite impossible to move Excalibur once he had decided to remain where he was; so Eileen and the curate agreed to regard him as a sort of artificial excrescence, like the buttress in a fives court. If the ball hit him, as it frequently did, the player waiting for it was at liberty either to play it or claim a let. This arrangement added a piquant and pleasing variety to what is too often-especially when indulged in by mediucre players—a very dull

game.

Worse was to follow, however. One day Eileen and the curate conducted Escalibur to a neighboring mountain range at least, so it appeared to Excalibur and played another hall game. This time they employed long sticks with iron heads, and two balls, which, though they were much smaller than tennis balls, were incredibly hard and painful. Excalibur, though willing to help and anxious to please, could not supervise both the balls at once. As sure as he ran to retrieve one the other came after him and took him unfairly in the rear. Excalibur was the gentlest of creatures, but the most perfect gentleman has his dignity to consider.

After having been struck for the third time by one of these balls he whipped round, picked it up in his mouth and gave it a tiny pinch, just as a warning. At least, he thought it was a tiny pinch. The ball retaliated with unexpected ferocity. It twisted and turned. It emitted long, anaky spirals of some clastic substance, which clogged his teeth and tickled his throat and wound themselves round his tongue and nearly choked him. Panic-stricken, he ran to his mistress, who, with weeping and with laughter, removed the writhing horror from his jaws and comforted him with fair words.

After that Excalibur realized that it is wiser to walk behind golfers than in front of them. It was a boring business, though, and very exhausting, for he losthed exercise of every kind; and his only periods of repose were the occasions on which the expedition came to a halt on certain small, flat lawns, each of which contained a hole with a flag in it.

Here Excalibur would lie down, with the contented sighof a tired child, and go to sleep. As he almost invariably lay down between the hole and the ball, the players agreed

> to regard him as a bunker. Eileen putted round him; but the carate-who had little regard for the humbler works of creation, Excelibur thought-used to take his mashle and attempt a lofting shot, an enterprise in which he almost invariably failed, to Excalibur's great inconvenience.

> Country walks were more tolerable, for Eileen's supervision of his movements, which was usually marked by an officious severity, was sensibly relaxed on these days and Excalibur found himself at liberty to range abroad amid the heath and through the coppices, engaged in a pastime that he imagined was hunting.

One hot afternoon, wandering into a clearing, he encountered a hare. The hare, which was suffering from (Continued on Page 69)

Men, Wamen, Babier, Kittenr, Loen Ducks-They Were All One to Him

IDOLS OF THE KING

By WALLACE IRWIN

ILLUSTRATED BY M. L. BLUMENTHAL

And I says to me mate: 'Oh, dash me blue, He's so darned good that he can't be true!'"

II-SIR JOSEPHUS INDORSETH A DRY OCEAN

'Twas all in the reign of the good Wood-row— Set the type, Butter the pipe! The kingly trumpets began to blow With a toot and a blare and a Ho-men-ho! "Knights of the Square Table, come ye all For a Cabinet meeting in White House hall! And we must decide this very day In our justly famous impartial way! How to settle up, ere the next cockerow, The banks and the trusts, and Mexico."

Then up to the Cabinet Table Square
Many a chosen knight came there;
Sir Bryan the Juicer in pilgrim's mail,
Back from his Quest of the Holy Kale;
Sir Frank O'Lane of the manner hale;
Sir Hurleson;
Sir Garrison;
Crown Prince Expectant Lord McAdon;
Sir Agricultural Houston too;
Sir Redfield, wearing his whishers done
in the manner of 1881;
And, last but not least, the Lord High Chiefus,
Boss of the Admirals, Sir Josephus.

King Wood-row's face, it was fair to see;
King Wood-row's eye, it was keen to look
As he turned to the page marked 73
In the office file of the Domesday Book.
Come," he repeated; "it's time, you know,
To settle the trusts and Mexico."

Then quick
As the kick
Of the very Old Nick
Up jumps Jo;
Cries; "Whoa!"
Or, rather, "Yo-ho!"
Which is, I believe, the regular way
For a nautical man to begin his say.
"Mexico and the trusts, my eye!
We've settled so oft that they've gone plumb
dry;
But strike me hot
If I haven't got
Under my vest.
A topic drier than all the rest."

All cried: "Hear! Hear!"

Tix a subject dear

To every patriot beart "-loud cheer-"Being nothing less than that old-town-ball-

For He Got His Aviliating July Jen Visor From the Country Towar of the Relate Sov

Time-tried topic, Alcohol!"

Kind friend, refrain!"

Cried Frank O'Lane,

But up spake Jo in a time of rage:
"Who's running this editorial page?"
Silence loomed

And Jo resumed:

"To commonly known in the watch below.

That sallormen are a bit—you know.——"

He winked quite sly;

And a quick "Aye! "Aye!"

Bryan the Juicer made reply:

Bryan the Juicet made reply:

'I outlied once on the slip New York

The life preservers were made of cork—

The life preservers were made of A dreadful sign, Which indicates The way they dine

With their wild mesamates;
For where there are corks there are bottles—act
And where there are bottles—oh, mercy mall

"Right, my hearty!" Josephus cried.
"And it has not frequently been denied.
That the sign D. T. to the average crew.
Means more than the W. C. T. U."

Then spake the King: "Though I shun the no.
And I know that sailors too oft cut up ...
In a way we should certainly not abide.
At a White House tea by our ain fireside,
Yet isn't it true,

What authorities write,
That our boys in blue
In the heat of a fight
Oft win the day when they ought to lose
By the use of the drug that the low call Boxes

"Nay!" Sir Bryan made his moan.

"Never!" cried Jo in a thunder tone.
"That theory of yours exploded back
In the day when they sank the Merrimac—

(Continued on Page 57)

"For Jailors," Jaid He, "Jhould Live Like King"

Three-quarters bedsteads; plenty of light; Valet service day and night: Music with meals; Ferris wheels;

For he got his rollicking salt sea views

Josephus' mind was not stereotyped-

Not meaning offense to nur very own

King Wood-row on his royal throne— But I see no sense why a sallorman,

Shouldn't live at home on the ocean blue

As a first-class traveling man should do-

Being bred free-born, an American,

Nay, he dealt, belings,

With original things.

From the conning tower of the Raleigh News.

Though a printer's stone in youth he'd wiped,

" For sailors," said he, "should live like kings-

Till Pa Neptune, Rising Upward, Quaffed the Jen and Velled; "Houses!"

Banquets; movies— Just to prove he's Equal quite to the captain bright And better, by beck, than the midshipmite." So Sir Josephus, down he sat In his neat department, and straightway gas Clerks, stenographers, notary pubs. Second assistants and office dubs; And they quickly drew In a type tattoo

"Orders 6,000,022:
For every sailor who pulls a rope
Silk pajamas and scented soap;
Food like a toff:
Wednesdays off;
And to show respect, let the cannons roar—
Twenty-one guns when he goes ashore——"

Thus ad lib. ran the orders plain; So the common sailor who plowed the main Stopped plowing a while And said with a smile:

"Blest be ye,
Josephus D.!
Though ye don't know much o' the salt, salt sea,
Ye're awful good to the poor A. B.

THE FAKERS By Samuel G. Blythe

THE reporter from the Chronicle came round that night, and Hicks gave him an interview also, and secured a line t stating that he was to open law offices lextown. This reporter was Peter Farley, told Hicks his paper had Democratic sings inasmuch as it was largely financed Rollins.

Who is Rollins?" Hicks asked Farley. Why," said Farley, "he is a nice old p who made a world of money in the ber business. He has retired and now s crazy for free lumber. He's a low-I man, almost a freetrader, a statets man, and he believes in some Swiss key-business they call the initiative the referendum and in universal priies and all that sort of guff. He takes ics like he takes his religion, thinks the meratic party is called upon to restore nation to the principles of the fathers. a Grover Cleveland, adores Bryan, and up his money to keep up a sort of a ocratic organization. He meets the it on my paper, too, and gets his money's h by printing long screeds abusing the ublicans and saying kind words for iam Jennings Bryan and Thomas rson. He's the greatest letter-writer of a correspondence school, and is ys drafting platforms and circulating about his new political fads."

sort of a crank?" asked Hicks. so, sir, not a crank. He's a decent old whose passion is Democratic politics. one of the biggest stockholders in the Metropolis. He's always fighting the t-car company and our gang of grafting men, and is a fine, upstanding, publiced citizen. Better look him up if you're macrat."

shall," said Hicks. "I'll call on him

at morning Hicks made some inquiries about Rollins iscovered that Rollins was supposed to be worth half lion dollars, that he had no political ambitions himut was resolved there should be a Democratic party stown if he was the only member. He was state sitteeman for that party and generally headed the ess local tickets.

ks found Rollins in his office in one,of the local skyers. He was hunched up in a chair, writing a long to the editor of a New York paper in which he was ng out the utter lack of patriotism and the criminal ard of the rights of the people in a certain Republican. proposal. He was a small man, bald, with a smoothn, leathery face and deep-set eyes that burned with rvor of his partisanship. His desk was covered with xies of pamphlets which he had written and had had d at his own expense, and on his office walls there sictures of Thomas Jefferson, Andrew Jackson and m Jennings Bryan, and a facsimile of the Declaration ependence.

wdy," saluted Rollins as Hicks entered.

w do you do, Mr. Rollins-I assume you are Mr.

ur assumption is correct. Have a chair. What can

handed him his letter of introduction. "I am eks," he said, "and I take great pleasure in presents letter from an old friend of yours, Representative

ins read the letter, drumming with the fingers of one in his desk as he did so.

u're the young man who had the interviews in the

I suppose?" s, sir. 1 was interviewed when I arrived yesterday." ad to meet you. Hope McAllister is well. Democrat. rstood you to say, or did I read it in the paper?"

m a Democrat, and as I understand it you are the of the party in this city."

re than that, son, more than that. I'm almost all to the Democratic party in Rextown."

Il. I desire to join hands with you, to enlist under mner, to aid you in your fight against the entrenched rupt forces of Republicanism. ns looked at Hicks shrewdly. "You do, do you?"

D.** what reason?"

· the reasons I just gave you. I hope I may be

"Do You Mean to Juy You Have the Nerve to Take That Claim Into Court?"

Rollins whiatled. He got up, walked to the window, glanced out on the street, came back and drew his chair over to Hicks.

"Young man," he said kindly, putting his hand on Hicks' knee, "excuse me if I appear to be surprised. This rather takes the breath out of me. The idea of a lawyeryou are a lawyer, ain't you?

Hicks nadded.

"Well, the idea of a lawyer coming to a Republican hotbed like this and joining the Democratic purty-a lawyer, you know, one of those persons who always look before they leap into politics - the idea of that rather flabbergusts me. You know-" and he smiled a curious little smile at Hicks-"you know, my boy, there hasn't been a real, live recruit to the Democratic party in Rextown or Corliss County for five years, and we lost a lot of our fellows on the free-silver issue."

"All the more reason you should want me, then," suggested Hicks.

Sure, but it sort of paralyzes me, just the same. How long have you been a Democrat?"

Hicks knew this question would be put to him and he had prepared his answer.

"Long enough," he said rather oratorically, "to feel certain that this country is going to ruin under the maladministration of the Republican party, influenced as it is by special interests and controlled by corporate greed. Long enough to have faith that, through the medium of the enlightenment of the people, a return may be made to the principles and practices of the fathers, and our country saved from the rape of the plutocrats and the sack of the unscrupulous stock-jobbers of Wall Street."

Rollins' look of curiosity changed to one of admiration. "Good boy!" he said. "Good boy! Go on."
"I am a newcomer, as you know," continued Hisios,

most encouraged, "and I have a deep, patriotic interest in polities. I believe in Democratic principles. I am for the plain people, unalterably for the masses as against the corrupt classes. I know of your unselfish devotion to this high cause. I desire to join with you, to ald you, to fight with you, and eventually to assist you in redeeming this city and this state from these Republican abuses. Am I welcome?"

"Hooray!" shouted Rollies, jumping to his feet and clapping his hands. "That's the real McCoy! In a month I'll have you out making speeches. Are you welcome? Why, my boy, you are as welcome as an August rain after a dry spell in the Corn Belt. Welcome! Why you are positively providential. Let's talk things over."

They had a long conversation. Hicks soon discovered that Rollins was fanatical in his belief in Democratic principles, that he considered himself a sort of crusader against what he called "the mammoncontrolled party of special interests," meaning the Republicans, and that he was willing to spend his money freely, asking nothing but the fun of the fight. He went over the situation in detail with Hicks, told of his work and of the organization he endeavored to maintain, and explained how he was handicapped by the general apathy. Then he read Hicks extracts from several of his pamphlets. These proved to Hicks that, even though a fanatic, Rollins had a clear mind, good reasoning powers and un excellent command of simple and forceful language. He told Hicks of the local situation, dominated by the Republicans for years, working through a local boss named Paddy Rose, and explained how the public utilities-the street cars and the electriclight plant and the water works and the gasworks-could get anything they wanted because they kept Ross on their payroll and Ross was the Republican organization leader. Hicks' knowledge of general polities stood him in good stead. He was most polite and deferential to Rollins, and soon was on terms of friendship and implied association with him. His letter of introduction had established him primarily, and he completed the good impression himself.

As he rose to go Rollins asked Hicks whether he had any cases yet.

"Why, no," Hicks replied; "I arrived only yesterday, you know."

Well, how'd you like to take a case for me? An old repscallion named Jim Barkiss is trying to beat me out of a claim I've got on his property. Know anything about

contracts? "I've studied contracts," evaded Hicks.

"All right, here's the case;" and Rollins went off into a long recital of his difficulties with Jim Barkiss, telling an involved story of deals and mortgages and liens and payments and rebuttals to which Hicks listened in a daze.

"Get it?" asked Rollins. "Got it clear in your mind?"
"Perfectly," fibbed Hicks, who had no idea of what it

was all about.

"Good," said Rollins, "bere are the papers," and he thrust a mass of legal documents into the hands of Hicks. See what you can do."

Hicks took the papers and rose to go. "Good-by, Mr. Rollins," he said. "I shall see you soon and often and we'll reorganize and rejuvenate this Democratic party out here. Good day."

He put out his hand and Rollins took it. "Son," he said, "I don't know whether I'm playing fair with you or not in giving you that case. It's been in litigation here for a long time, and I got so mad about it that I just took it from the hands of my regular lawyer who was jockeying along on it. The lawyer on the other side is Jim Chittlings, a hard customer in a case like this, and you are young in the law, very young in the law,"

"Oh, that's all right, Mr. Rollins. I'll do the best I can. with it and maybe my youth will help me."

"Yes," repeated Rollins, "you are young in the law. Haven't you forgotten something?"

"No." Hicks replied, looking about, "I think not." Rollins laughed. "In that case," he said, "you are the oddest lawyer I ever came in contact with. You haven't asked me for a retainer."

Hicks in his confusion could think of nothing to say. He had forgotten the most important detail of the practice of his profession.

"Never mind," soothed Rollins, "I'll write you a check. It may come in handy," and he gave Hicks a check for a hundred dollars. That young man bowed himself out with his heart thumping, his brain reproaching him for his lack of business acumen and the check clasped tightly in his

T. MARMADUKE HICKS was walking on air when he went down the street. He arrived at the Hotel Metropolis, went to his room and looked lovingly at his check. It was his first legal fee. He examined the papers Rollins had given him, but could make nothing of them, so he put them in his trunk and went down into the lobby. He met Bignall again, and talked to him for an hour discussing the best location for an office and various matters of that kind.

He inquired about boarding houses and secured several addresses. Next morning he took his money and his letter to the First National Bank, opened an account, and called on Mrs. Hungerford, who kept a boarding house not far from the business portion of the city. The food and rooms at Mrs. Hungerford's had been praised by the banker to whom Hicks had the letter of introduction.

Mrs. Hungerford's boarding house proved clean and comfortable. She told Hicks that most of her boarders were of the hetter class of clerks and business women, with a professional man or two, and she offered him a rosm, in the rear on the third floor, for tifty dollars a month with meals. He engaged the room and moved in that afternoon and on the following day set about renting an office.

He besitated between two rooms. One was in a three story brick building near the post office, a former residence that had been built over into offices, and the other was in the Blanding Block, the biggest structure in Rextown. The rent of the first room was twenty-five dollars a month and the rent of the Blanding Block office was twice that. Tommie walked through the halls of both buildings. There were a dentist or two, an architect, a couple of insurance agents and five lawyers in the old building. In the Blanding Block there were rows of glass doors carrying in gilt letters the names of lawyers and business agencies of various kinds. It did not take him long to decide on the office in the Blanding Block, and he bought some furniture for it on the installment plan. That night he stood in the hall and looked admiringly at the gilt sign on the door of his office. It rend:

T. MARMADUKE HICES. ATTORNEY-AT-LAW

In a day or two his furniture was installed and his father's law books had arrived, accompanied by a letter from his mother expressing the hope that they might be used for the promotion of justice and truth and the welfare of the people. Hicks put them on his shelves, where they made a good showing, although most of them were reports of New York State and not of much consequence for local use. There were a few books of universal character. He gazed at these speculatively, wondered what was in them and what he might be able to do with them. He hung his certificate and diploma on the walls, took steps to have himself admitted on motion to the local bar, and after that had been accomplished, with the aid of Senator Paxton's letter and the influence of an old friend of his at the Rextown bur, he began the consideration of the Rollins-Barkiss case.

It was a complicated case. There were claims and countercisions and records of previous actions begun and dropped. Hicks studied the papers long, but could make little of them. His only conclusion was that Rollins claimed one thing and Barkiss another; the legal phases of the rase were entirely beyond him.

He spent some days puzzling over the papers, evolving schemes that had no legal foundations. It was all he had to do, except make three or four appearances each day in the lobby of the Hotel Metropolis, and drep in at the city hall and courthouse, with occasional visits to the probate court and the county clerk's office, where he simulated intense occupation and consulted records assiduously.

He knew so little law he could get no grasp of the questions involved. He ardently desired to make a showing, and felt he could get business from Rollins if he could win this case. On the same floor of the Blanding Block the offices of Johnson, Jacobs and Jones, the leading lawyers of Rextown, occupied half a dozen rooms. Hicks had called on these lawyers and they had received him with grave politeness and welcomed him to the city. He had noticed, at a desk in the corner, a man who had a big bulging forehead, wore glasses and was shabbily dressed, and who had a general air of being grateful he was permitted to sit down in an out-of-the-way place and read calfbound books.

Hicks inquired about this man and learned he was Gudger, a great student and a fine lawyer, but a periodical drunkard. He remained sober for two or three months and then drank heavily until he had to be taken to the hospital. He had no control over his appetite for liquor, and for that reason had no practice and no standing at the bar. But he knew the law, knew more of it than Johnson, Jacobs and Jones combined. So they used him when he was sober to help in the preparation of their cases and took him back after a spree, paying him a small salary and giving him the impression that they were his benefactors for allowing him to draw a few dollars a week and do most of the real work. round the place.

Hicks went into this office and spoke to Gudger. "By the way, Mr. Gudger," he said, "could you make it convenient to come into my office this afternoon some time? I have a little matter I desire to discuss with you."

"I'll go now," Gudger replied.

They walked to Hicks' single room. "Sit down, Mr. Gudger," said Hicks. "This is what I want to lay before you: I have been here but a short time, as you know, but many pressing matters engage my attention. Mr. Perkins G. Rollins has given me a small case that really I have not the time to handle. I was wondering if you would look

over the papers, prepare a plan of action for me and elaborate the points of law involved. Of course I shall compensate you, and it really will be a great service to me, for I am so busy I cannot attend to the preparation of the case myself."

Gudger looked round the room, with its array of useless law books, and at Hicks, who was endeavoring to give the impression of a mun rushed with his work. He smiled a little wan smile. He had just returned from a prolonged spree, was weak and trembly and had been severely

reprimanded by his employers. He needed money.

"Let me see the papers," said he; "I guess I can do it." Hicks gave him the papers, which Gudger noticed were the only papers in sight in the office. Hicks realized that, too, and instantly resolved to fix up bundles of legal-looking documents for place on his desk. Also he resolved to buy a file case and pot it in the room.

"I'll look them over," said Gudger, "and let you know

Hicks visited Rollins several times, talked politics with him and reported progress. He wrote several letters to Senator Paxton and spent a good deal of his time in the Hotel Metropolis, getting acquainted with the business and professional men of the city, who used the lobby and barroom and café of the Metropolis as a sort of downtown club. He found that the men who frequented the hotel-and they were most of the important men of the rity - drank a good deal of whisky, especially between five and six o'clock in the afternoon. Hirks was not an abstainer nor was he a steady drinker. He kept a little whisky in his room for such use as was needful, and though he smoked eigarettee he never amoked on the streets or in politic places. He refused invitations to drink rather impressively but was enough of a mixer to keep in the good graces of the rrowd, and he made many acquaintances who liked to hear him discuss affairs at Washington, and wondered at his easy familiarity with the great men of whom they read in the papers. Hicks knew all the famous statemen and gossiped about them intimately, never failing to bring himself into the foreground of whatever picture he was painting. Between times he considered the question of a church connection.

After a week's study Gudger came in with a package of upers in his hand. "I have examined that Rollins-Barkiss matter, Mr. Hicks," he said.

Hicks was writing a letter. He looked up and replied enpously: "Excuse me a moment, if you please, Mr. Gudger. I have a matter here I must close up."

Gudger, who had himself in hand again, smiled a llichering sort of a smile and sat down. Tommie wrote vigorously for a minute or two. He signed his name with a flourish, held the letter up before him and read it with evident admiration, and turned to Gudger. "My stemographer," he said, "is ill this morning and I am compelled to write a few of my most pressing letters by hand. I um sorry I detained you, but this is a most important matter."

Gudger observed that Tommie laid the letter aside without putting it in an envelope. "Take your time, Mr. Hicks,"

he sald, "I am in no burry."
"Ah," continued Tommie, turning in his chair, "did I understand you to say you have examined into that Rollins claim, Mr. Gudger?"

"I have."

Sorry to have imposed so trifling a matter on you, but am exceedingly busy. What do you find?"

"I find Rollins has a fair case. Barkim own him some

money, but it lan't clear just bow much. I have set forth the law on the point, have briefed the cases that apply and made a statement of the facts for you. I trust it will be satisfactory.

Gudger was pathetically eager. He needed the money Hicks promised him.

"Excellent, Gudger," patronized Hicks. "I shall look over the papers and reimburse you for your time and trouble."

"Thank you, Mr. Hicks, thank you," And Gudger went out

Tommie shut and locked his door and read the papers curefully. Gudger, good lawyer that he was and skilled in the preparation of cases, had handled this one in a most competent manner. He had made his statement of facts, his statement of the contentions of the other side, and he cited the law to uphold his own emclusions, cited it voluminously. It was an orderly, complete and illuminating presentation of the Rollins side of the controversy. Tommie spent all that day in studying Gudger's work. He had a retentive memory, and he learned what Gudger had written so he could recite it. Thus fortified he sat back to consider what he should do. He didn't dare to go into court, nor did he want to have Guilger appear for him. Beyond the words Gudger had written, Hicks had no knowledge of the law or the procedure necessary.

After thinking a time he went down the street to see his friend Charley Bignall, the reporter on the Globe.

"Bignall," he asked, "do you know James K. Chittlings the lawyer?'

"Sure."

"What kind of a man is be?"

"He's a big, beefy bluffer and gets away with it. He six sters along pretty successfully. He pretends to be a lawy and he doesn't know any too much law. When he tries case he depends on noise to pull him through. He door go into court much though. That would show him up. He the grandest compromiser we have. And he is always the money. Why?"

"Oh, nothing in particular. He's the attorney on t other side of a case I am interested in, and I wanted

know about him. That's all."

XII

AS HICKS walked back to his office that word "to promiser" constantly recurred to him. Why not to promise this? Evidently, from what Bignall told hi Chittlings was much the same sort of lawyer be was, w more experience, perhaps, but with as little law. knew Chittlings spent a good deal of time in the lob of the Hotel Metropolis, and he went there and look round. Chittlings was leaning against the cigar-case a loudly telling the bored cigar clerk of a recent exploit of t when he defeated a lawyer from the adjoining county is will case.

Hicks approached the cigar-case by easy stages, its ping at the desk to look at the register, at the newson to glance at the display of periodicals, and at the telepho desk to say a word or two to the operator. He stood a listened to the last part of the recital of Chittlings, laugh when laughing time came, and as Chittlings finid exclaimed: "That's a good one!" with evident appretion. Chittlings was pleased. He said a word or two sin the weather and asked: "Stranger here?"

"Ob, no," answered Hicks, "I am T. Marmaduke Hic lawyer, with offices in the Blanding Block."

Glad to know you, Mr. Hicks. I'm James K. Chittle and I'm a lawyer too.

"Chittlings?" repeated Hicks in pleased astonishms "James K. Chittlings? Why, I certainly am glad to m. you. I have a case, I think, in which you are my oppose and I am charmed to know I shall meet so cultured ag tleman and so learned a lawyer in the arena of the court

"What case is that?" asked Chittlings, "I don't re

your connection with any of my cases."

"Rollins vs. Barkiss." "Oh, that! Is Rollins at that again?" exclaimed Citings contemptoously. "That isn't a case; it's merd cut-hop.

"There are some eleven thousand dollars involve

Hirks protested with some warmth.

Chittlings looked at Hicks narrowly. Evidently eleven-thousand-dollar case was important to this you

"Look here," he warned, "you are on a dead card that claim, my friend. You can't collect it and you is "I think it would be well to leave that phase of

matter to the adjudication of the courts." "Do you mean to say you have the nerve to take t

claim into court?"

"You will be served with due and formal notice of intention at the proper time."

"You don't say! Well, so long. By the way," he ad as he turned to go, "where's your office?" "In the Blanding Block."

"I may drop in to see you some day. Good-by, gist have met you."

Two days later Chittlings came in, glanced round little room, with its sparse furnishings and its array of revised statutes of New York, smiled and said: "How Hicks. How's business?"

"My docket is reasonably well filled."

"Glad to know it. There are so many lawyers in horg it's bard for a new one to get a tochold. The

welves for business, and they've got most of it circle "I haven't found it so," Tommie replied, washing had a greater number of legal-looking documents on desk and resolving to get some more as soon as Chatti

"Say, Hicks," said Chittlings, senting himself and it ing a cigar, "how strong are you with Perk Rollins! H a smoke?"

"I never smoke,"

"Well, forgetting that, how strong are you with I Rollins?"

"What do you mean?"

"How much influence have you with him?"

"He is one of my best clients,"

"Well, if that's the case and you can work him. will the use of dragging this thing through the courts? it not compromise?"

Hicks straightened in his chair. "This is a case that of not admit of compromise," he said with much dignity-

"Den't it! Let me tell you, my young and callow fort there never was a case that didn't admit of compressi when the lawyers who had it wanted to fix it that way a there was anything in it."

"I do not so understand the theory of the law." He was most important as he said this.

"Well, you will so understand it if you want to make a ring at it. I tell you it's nonsense to drag this thing rough the courts when there are bigger things we might doing. Let's fix it up."

"My client has instructed me to sue it."

"Then get him to uninstruct you. Rollins is a good old up, but visionary, and Barkiss ain't worth a hoot, beyond certain point, for any lawyer to fuss with. Let's fix it."
"What do you propose?"

"Why, there's right on both sides. Barkiss owes Rollins me money, but not as much as Rollins says he does. I'll mit the first part of it. If we take it into court you can't the eleven thousand to save your soul; but you can get adgment for a certain amount if you are any good at the w at all."

"How much?" asked Hicks eagerly. Chittlings laughed. "That's for you to find out, if you

to law about it," he said.

Well, what's your proposition?" Hicks gave what he night was a good imitation of a businesslike question. You go down and see Rollins and find out the lowsum he will take. I'll see my man and find out how ich I can get him to give. Then we'll meet and fix it up."

'Fix it up?'' asked Hicks. "I a't understand. I am a lawyer, Chittlings, and bound by the

iles of my profession."
"Also I take it," said Chittlings uply, "you are bound by the essities of making a living. Run ng now and see Rollins and come wn to my office on the third st." Chittlings went out leav-

Hicks very indignant. de grew calm as he thought the tter over. He knew in his heart would be at a serious disadvanein court, having had no practice wa little in justices' courts back ne when he was a student. His tism urged him to go ahead with case and told him he could win williantly, but he felt inward givings. Occasionally he adted his limitations to himselfoften, but once in a while. He frightened at the prospect of ing a case against this big, noisy, fling lawyer, and although he Gudger's word for it that he some law and some facts on his t, he didn't relish the encounter. wanted to be surer of himself to be made his first public aprance. Besides, there might be it in the contention of Barkiss the didn't owe Rollins all of en thousand dollars. There was taide of it to consider. Also e would be a quicker fee, in ition to the retainer of one hun-I dollars he aiready had, in case compromise. And lawyers did promise cases. He knew that, s he went to see Rollins, who ted him cordially and asked what he thought of Senator sch's iniquitous tariff policy.

Inexcusable," Hicks replied, knowing what the policy was, ropped in to see you about that

tiss matter,"

What about it?" asked Rollins, was deep in a platform for the Democracy he intended to one at the forthcoming con-

Why, I was thinking I might pose that difficulty by a shorter e than recourse to the tedious esses of the courts."

All right," Rollins answered absently. "Do whatever st. Say, do you think the platform should begin with ging denunciation of the Republican party, or with a ment of the attitude of the Democracy toward the ession of the people and then the arraignment of the ablicans?"

l'ake up the cause of the people first by all means." "Suppose I could get you eighty-five sed Hicks. ired dollars from Barkiss? Would that figure be

factory to you?" Pshaw! They'd never stand for eighty-five hundred ls; that's entirely too long. My idea is about five sand words."

Dollars, I meant, not words, Mr. Rollins. I am speakbout the Barkiss matter."

The Barkiss matter? Oh, yes; what about it?" think we can compromise for a substantial sum."

"All right; go ahead. Don't bother me about that now. I want to get this pronouncement of political principles written. Listen to this anti-corporation plank."

Hicks listened politely while Rollins read what he had written as establishing the attitude of his party toward the monopolise fostered and owned by the criminal rich.

"That'll make them cringe, I'll bet," said Rollins. "Undoubtedly," assented Hicks warmly, "It is a great summing-up of the tenets of our party in that regardsimply great. If I can get eight thousand dollars, shall

"Oh, yes, yes. Don't bother me," protested Rollins. "Let's go over this tariff plans. The curse of this country and the workingmen in it is high protection. Let me read you what I have written."

And he read his tariff plank, which demanded an instant and scientific revision of the tariff along the lines of tariff

for revenue only.

As he finished Hicks applauded. "That's fine!" he cheered. "That's the most statesmanlike argument I have ever heard. You certainly are a master of words, Mr. Rollins. I am quite sure I can get seventy-five hundred dollars for you. Shall I take it?"

array of law books, more than Hicks had ever seen outside of a law library, and an inner room where Chittlings sat at a big rolltop desk. This room was well furnished. There were some leather chairs, a polished table piled high with papers bound with tape, a picture or two on the wall and a leather lounge. "Morning, Hicks," greeted Chittlings after Hicks had

gone through the formality of sending in his name by the office boy-Tommie resolved to have two rooms and an office boy, it gave an air of business and prosperity to a place. "Morning. Have a cigar. Oh, I forgot, you don't smoke. How are things?"

"I am very well, thank you," Hicks replied.

"Seen Rollins?"

"Yes. Have you seen Barkiss?"

"Saw him yesterday. What will you accept?"
"What will you give?"

"Oh, let's not haggle about this; it isn't big enough.

I'll give eighty-five hundred dollars."

"I'll take nine thousand."

Come off! I've got to get something for myself. Take it or leave it at eighty-five bundred and I'll get my regular fee from Barkiss and a split from you."

"A split?

"Yes, a split. You know what a split is, I suppose. If you don't, let me tell you that splits are the greatest discouragers of long-fought litigation in court this world has ever known."

"Do you mean that you want me to divide something with you?"

"Certainly, why not? You didn't tell Rollins you could get eighty-five hundred dollars, did you—didn't name a specific sum?"

Chittlings looked narrowly at Ricks, who felt that this big, bointerous man had caught him in a crime. He was chagrined and humiliated, for although he had underestimated to Rollins the sum of money he thought he could get in compromise, he hadn't gone so far with the matter in his own mind as actually to plan to give Rollins less in settlement than he received.

Hicks was horrified. It seemed to him that Chittlings had read his mind, had interpreted his action, had literally detected him stesling something. He was familiar in a way with illegal money transactions, and had heard stories of sums paid in Washington to expedite or retard legislation. The morals of the situation did not bother him so much as his apparent detection.

He looked at Chittlings, who was preparing to write a check. Hicks caught hold of the arms of his chair, steadled himself, licked his dry lips with his tongue and replied huskily: "Of course I mentioned no specific sum, but what difference does that make to you?"

"Just this difference," said Chittlings. "If I compromise this thing with you for eighty-five hundred dollars, which is a fair compromise, I'll give you a check for that amount and you'll give me a check for five hundred. Then you can deposit my check and pay Rollins seventy-five hundred dollars, or what you please, and we'll both make some money, for you can bet Barkiss will pay me my eighty-five hundred back, and another legal difficulty will have been compromised without recourse to

the tedious processes of the courts." Hicks rose, "Look here, Chittlings," he exclaimed, "I may not know much about the law, but I know something about the Eighth Commandment. That's plain larceny and you know it, and I'll not be a party to it."

Chittlings grinned.

"All right," he said, closing the checkbook, "have it your own way. Only let me tell you something-you'll never make five hundred any easier. Go ahead and suc and I'll be right on deck."

"That may be so," Hicks retorted emphatically, for he had regained his self-possession, "but I won't begin my career as a lawyer in this city by stealing five hundred dollars from Rollins or any other man. My price is higher than that, Mr. Chittlings, and when you get ready to talk business to me on a strict business basis, without any larcenous trimmings, I'll see you in my office. Here is (Continued on Page 60) my card."

"If I Can Get Eight Thousand Dullare, Shatt I Take 117"

"Eh?" said Rollins, blinking his eyes; "I thought you said eight thousand, a moment ago."

"Oh," Hicks suavely replied, "I said eight thousand tentatively. Seventy-five hundred is a sure thing."

"Well, get what you can. I must finish this platform and have it printed. Get what you can. Good day, Come in to-morrow and I'll read it to you again."

That will give me great pleasure. Seventy-five hun-

"Yes, yes," Rollins replied impatiently. "I'm going to give them a great blast on the currency question, a great blast."

XIII

HICKS called at the office of Chittlings next day. That exponent of the law had a suite of three rooms a reception room with an office boy at a desk, a second room where there was a clerk and a typewriter and an

Slow Grinding

WE HAVE long believed there should be some Federal control over the issue of railroad securities, and that the body in which that control should logically be vested is the Interstate Commerce Commission; but a reasonable method of exercising the control is very important.

The bill now before the national House of Representatives provides, in effect, that, before issuing any capital obligation, a railroad must apply to the commission; whereupon the commission shall send a ropy of the application to the railroad commission—or to the governor and atturney-general if there be no railroad commission—of every state in which the railroad "operates any part of its lines"; virtually inviting such states to participate in the deliberations.

This is all wrong. To be telerable, public control of railroad issues must be exercised with reasonable dispatch. There is hardly a week in a normal year when some road is not issuing capital obligations. To make every issue the subject of wordy, small-footed deliberations would create a condition as bad as the disease it seeks to cure. Instead of inviting the states to participate in the proceedings of the Interstate Commerce Commission the law should make the findings of the commission binding on every state commission that has jurisdiction in the matter.

The Interstate Commerce Commission itself is a rather overworked body. Its delay in deciding the application of the Eastern roads for a five-per-cent advance in freight rates shows that it needs accelerating rather than retarding.

In passing on railroad securities it ought to be given a free hand and every opportunity to act with reasonable promptness. The questions concerning any railroad issue are whether its objects are legitimate and whether bonafide value is received. Certainly the Interstate Commerce Commission may be trusted to determine those comparatively simple questions. When they have once been determined by a trustworthy public body, there is no valid reason for collateral or supplemental state proceedings.

The Socialistic Tendency

CERTAIN businesses are necessary to modern life. Railroading is an example. Cut off from rail facilities a man might be ruined, a community might perish. So, for years, the law has exerted a constantly increasing control over railroads. A railroad cannot discriminate among its patrons—it must serve all slike; and of late it can charge only such rates as the law permits.

Fire insurance is obviously in a different category. Broadly speaking, anybody who so elects may get along without it, assuming the hazard himself. And a fire-insurance company may discriminate at will among its patrons. Any company may refuse to write a policy on any risk and the law will have nothing to say in the matter.

The other day, however, the United States Supreme Court—by five to three, one justice not participating—affirmed the power of a state to fix the rate at which fire insurance shall be written. Admitting that fire insurance is of a personal rather than a public character, the majority of the court holds that, nevertheless, it is so charged with public that it is not involve the power to regulate it in

behalf of the public. We venture a lay and ignorant opinion that the court would have decided differently fifteen or twenty years ago—when it was holding, for instance, that the Sugar Trust was beyond the reach of the Sherman Law.

Socialization moves steadily forward. Every year the principle that the interests of society are paramount advances a step further.

The Wallace Researches

THANKS to the indefatigable industry of two Americans— Dr. and Mrs. Charles William Wallace—which has dug up the records of a venerable lawsuit and certain proceedings of a sixteenth-century Commission of Sewers, we now know quite accurately what sort of concern that Globe Theater was in which one William Shakspere was a stockholder, and within the walls of which the stockholder's relebrated dramatic pieces were presented.

relebrated dramatic pieces were presented.

For several years Doctor and Mrs. Wallace have devoted their entire time to the most painstaking search among the public archives for new light on Shakspere and his activities. They have already examined upward of three million official parchments.

It appears that when the Globe Theater site was leased by the theatrical adventurers two hovels stood on it. With the exception of some pands it was the lowest spot on Bankside, and the Thames overflowed it every spring. For a long time it had been used as a dumping ground for refuse—and a sixteenth-century refuse heap may safely be described as the real thing in the way of garbage. Shakspere's partners are sterrely commanded, "on pain to forfeit," to pull certain props and posts out of the sewer.

Imagination dwells foodly on that theater: standing ankle deep in the mire, with one grimy knee showing through the rent in her coarse woolen pettirons, her blouse split up the back, her hair in a snarl, and a muddy smudge on her cheek where she has just swatted a mosquite with a hand as heavy and as solled as a blacksmith's—but speaking, nevertheless, with the longues of men and of angels.

Her beautifully carved, gilded and upholstered sister of to-day would faint away at sight of her; and it would not matter much if she never cares out of the faint.

A Verdict

A MURDERER salisted the sympathy of a very rich man. His defense was that a dream irresistibly impelled him to assessinate his for. The rich patron, according to the newspaper report, "practically cornered the available expert testimony in the defendant's behalf, seven of the highest-priced alients of the city being put on the stand to support the dream theory." Elequent counsel quoted companionate poetry to the jury and the latter returned the following verdict:

"We find that the defendant committed the art charged in the indictment, but at the time of the commission of said act was an insane person, and since the commission of said act has permanently and completely recovered from such lunary."

The defendant may have "permanently and reempletely recovered from such lunary," but our criminal jurisprudence has not. Leaving the question of a defendant's mental modition to a lay jury enveloped in a ing of hired expert testimony majors a farce of what ought to be a rather serious matter.

The Plum Tree

ILLINOIS has one Democratic United States Senator and in all probability will presently have another. The burning political question in that state at this writing is whether that other shall be Roger Sullivan or some patriot whose Jeffersonian heart beats in truer sympathy with that faction of the party to which the present Senator belongs.

Chirago papers are pointing out—as an important factor in the solution of this question—that all the Federal and state jobs will be filled by nominees of the Jaction opposed to Sullivan. What makes the Sullivan Democrats mad—we read in a press report—is the fact that all the assistant district attorneys, deputy marshals and deputy revenue collectors will be selected by the foe.

In these circumstances, we suppose, the Sullivan Demoerats are the only persons who are entitled to be mad. The public, which pays the salaries of these Federal employees and depends on them for service, is presumed to be quite satisfied so long as its servants are sound on the grand question of opposition to Sullivan. Whether they can read and write is a secondary consideration.

Bonds Over the Counter

IN APRIL the city of New York sold sixty-five million dollars' worth of bonds at a small premium to a single hidder, who immediately resold the bonds to investors at a profit of some four bundred thousand dollars. The profit was legitimate enough, and the method of selling bonds

that nearly all cities and states employ is based on a proto the middleman. This method is to invite competit, bids and award the issue to the highest bidder. Almainvariably big investment banks and bond dealers is intmate touch with the investment market get the bonds an resell them to actual investors at a profit.

To avoid a middleman's profit the city must about competitive hids and offer its bonds over the counter at a upset price. In this New York sale there were two his dred thirty-two separate bids, many of them for small amounts and many at a higher price than the successful bidder paid; but no combination of other bids would have brought the city as much as the successful bidder paid though that price was less than actual investors readily paid immediately afterward.

Competitive bids almost invariably throw the bonds in the hands of middlemen. A city or state that wishes establish a direct market for its bonds must sell them on the counter at an upset price.

The English Telegraph

THE telegraph business of Great Britain, as conduct by the Post Office, results in a heavy annual loss, recent statement by Postmaster-General Hobbouse, quoting the London Times, attributes this loss "mainly to it sixpenny telegram, which costs eleven pence to transmand deliver."

A telegram of twelve words, address and signature bell counted as part of the message, transmitted anywhere Great Britain, costs twelve cents of our money. This very cleap. Naturally telegraphing is highly develop in England, the number of messages a head being near twice the number in the United States. That the twelvents did not cover the cost of the message was evide from the large yearly deficit; but it appears from the statement by the postmaster-general that the loss on extwelve-cent message is decidedly greater than had be supposed. He puts the cost of the message at twenty-original.

In short, the sender pays little over half the cost; to other half—or forty-five per cent—coming out of the pubtill. British citizens who use the telegraph frequently a a sort of subsidy at the expense of those who use it infquently or not at all.

The bulk of the telegraphing in Great Britain is or short distances, for which the cost of a message here twenty-five or thirty cents against twenty-two cents the but the whole cost here is paid by the sender of the mess, which seems to us the logical arrangement.

A Significant Difference

INCOMES of from fifteen to twenty-five thousand d lars will pay nine or ten times as heavy a tax under I new British Budget as they pay here. In round numbs lifteen thousand dollars will pay one thousand dollars to twenty thousand dollars will pay fifteen hundred dollars; twenty-five thousand dollars will pay two thousand dollars.

Yet the most significant difference between the Brit tax and the American appears with respect to what we moderate incomes. Generally an American income of thousand dollars pays only ten dollars tax. The Brit tax on an income a penny over five thousand dollars to be two hundred ten dollars; on an income of seven five hundred dollars it will be three hundred seventy dollars—instead of twenty-five dollars as here.

Two hundred and eighty million dollars is the estimayield of the new British income tax. When a governor comes to lean so heavily on an income tax it must tak stiff tell from incomes in the moderate class.

It is only a question of time when our Federal levy get down to incomes of a thousand or fifteen hand dollars; and the comfortably-off man—with an income, of from five to fifteen thousand dollars—will n something more than small change to discharge his duto the Government.

How it Works in Practice

AFTER two years' deliberation Massachusetts pased eight-hour law for workers under sixteen years of a Ruin of industry, displacement of young workers, incressynathful vagrancy and various other ills were predict

A canvass of the state shows that over ninety per of the children under sixteen who were employed before the law went into effect are still employed; that a major of the few children who were displaced have gone to subthat family hardships attributable to the displacem or curtailed earnings of youthful workers have been bligible; and that there has been no increase in your idleness and crime.

Crippled industries, beggared families and ruinet of dren have been predicted at every step in the director protecting youthful workers; but the predictions by come true.

WHO'S WHO-AND WHY

Serious and Frivolous Facts About the Great and the Near Great

Junear Like a Presonativ Riverer

HE time has now come to advert, in what it were not amiss to term well-dissimulated jocundity, to the Honorable James P. Clarke. of Arkansas, as genial and jovial a person as ever harbored a grudge for twenty years.

The Honorable Clarke, who wears an e at the extreme end of his name to distinguish himself, if such be necessary, from the Senator from Wyoming and the Speaker from Missouri, has just, as it appears, been returned to the Secate for the third time by an enthusiastic constituency and an excess of some seven hundred votes or so over the competing candidate in the primary, the same showing that the Arkansas projetarians hold their enthusiasm in reasonably measured check. Of course the face of the returns may be changed, but never the inscrutable face of the senator;

d it all goes to show that when those Arkansans are out it they can mask their enthusiasm to a considerable gree of obfuscation.

Some of the residents of that imperial commonwealth are ent to refer to the senator as Old Cotton Top-some of em. Others do not so refer to him. They refer to him herwise, those others do; but that is a local imus. The int is that even some of his constituents thus nickname e senator - affectionately, no doubt; for, as I have said,

certainly has a mild. d forgiving disposition, out the same as the position of a bear with sore paw, That, of arse, is not the reason the white-polled term intimacy. The senor's hair furnishes the st. They call him Old stton Top because his p looks like cotton, ed, being a joyous and dsome senator, he joysly and gladsomely es the appellation-st as he likes many aer things or dislikes em, as it may happen d generally does.

The senator first began exude gladness and e in Washington in 33, when he was the ppy hero of a most felicus occusion. He had m elected to the Senate, ceeding the late James Jones, and went on to ashington to take his it. The other Arkansas nator was the late mes H. Berry, who was nus a leg and plus the eem of all his colppened, as the story es, that Berry and trke had had political ferences, which were what they may have been, but which seemed to be organized a demagogue, a statesman, a politician and a human for nine hundred and ninety-nine years, so far as the genial Clarke was concerned.

Ordinarily when political enemies come to represent the same state in the Senate they forget the enmity for the few minutes devoted to the swearing in of whichever one of them is newly arrived in the arena. They go up to the rostrum together; and, though one may be hoping the other chakes and is willing to belp that desired condition along by use of such choking apparatus as Nature may have provided him with, the hoper stands smilingly by and watches the ceremony with a fine congratulatory air. Not so when the kindly Clarke was sworn in. He went up alone. There is a citizen who never forgives and who never, never

When it comes to expressing himself as to his resentments, or on any other subject, the senator conservatively can be called voluble, not to say fluent. You may have heard in your time orators who have talked rapidly and whose word-per-minute record was high. So have I, But when it comes to the rapid production of language every talker who could or can talk in a precipitate manner seems mute, dumb, silent and otherwise impeded of speech as empared to Clarke. That man's output of language is so terrifyingly great, so paralyzingly fast, that he is always from three to five hundred words alread of the comprehension of his heavers.

The Vocal Machine Gun in Action

HE TALKS so fast that the ordinary mind falls to grasp what he is saying. He sounds like a pneumatic riveter geared up to the highest speed. The words casende out of him. His language is always in a state of flood. His oratory breaks down every restraining levee. He speaks with celerity and velocity - he does that!

I should suppose it would be worth going miles to hear him telling one of his pet grudgess what he had in mind to say about him. Of course he would talk so speedily that one could not understand what he was saying; but it would be a terrifying spectacle-like Vesuvius in action or the Beehive Geyner blowing Its head off-and genially too; with all the geniality of a Bad Lands blimard!

There was that time in the Democratic caucus, not so long ago, when the senator was interested in a bill concerning cotton futures. He speaks for his bill—that is, I say he spoke for it, because speaking is the generic term for his performance. In reality he erupted for the bill. It was a great speech—the speech of a lawyer, an orator, a planter,

machine gun shooting language.

The senator battered his colleagues with argument, entreaty, defiance, praise, cajolery, demand, pleading, flattery and invective. The quicker-witted never were within six sentences of keeping up with him and the duller ones were whole paragraphs behind. The subject of his remarks was that he desired his bill indorsed by the caucus.

A time to vote had been set. He talked until that time, hich coincidentally was luncheon time also. As he finished he naticed various senators edging toward the door, thinking to burry downstairs and revive themselves with apple pie and other well-known revivers.

I want a vote!" he said.

Up rose Senator Vardaman, who has hair and language in equal profusion.

"I want a vote!" roared Clarke, for other senators were

"But," soothed Vardaman, "I am going to say a few words in support of the senator's contention ——"

"Sit down!" commanded Clarke in his most affable manner and his usual one. "I'd rather have a vote than all the speeches you can make in a year. Sit down!"

He has ideas of his own on many subjects. One is that people write too many letters. That is a fact. People do write too many letters and answer too many also. The senator's ideas on this epistolary subject can be comprehended in the succinct statement that he thinks ninety per cent or thereabout of the letters received by a statesman are not worth answering.

Most senators have clerks and stenographers and secretaries and other scriving appliances in their offices. Clarke has none. Answer letters or write them? Not James P. Clarke!

Every politician has his own system for obtaining and retaining the support and suffrages of his constituents. Most of them are directly opposed to the Clarke method; but that seems to have its merits, for when we come to look his career over we discover that he has been rather continuously successful in getting office. He began the practice of law at Helena, Arkansas, In 1879, but did not get the system into resultful working order until 1886, when he was elected to the lower house of the Arkansas legislature.

After that he went right along. He was sent to the state senate in 1885 and served until 1892, becoming president of that body in 1891 and ex-officio lieutenant-governor. In 1892 he was elected attorney-general for the state; and so well were his genial characteristics appreciated that they offered to renominate him. He declined, but could not stop the popular demand for him, and went into the governor's chair

in 1894. After he finished with the governorship he moved to Little Rock, resumed the practice of the law, and so increased his hold on the people that he was sent to the United States Senate in 1903, and has been there ever since, getting a reelection in 1909, at the close of his first term.

He had opposition in the primary when he ran this year for his third term, but at the time of this writing seems to be ahead about seven hundred votes and sure of another term. However, that is a mere detail.

The moral of this discourse is that if you are benignant and forbearing you cannot fail to get along well in the world, The submoral is that there have been occasions when certain persons, one of whom is mentioned herewith, have done fairly well by adopting another sort of attitude.

There is a lesson inculcated in this simple narrative with its duplex moral; but at the moment just what that lesson is escapes me entirely.

In the Watered Melen Patch

TRAVELING DE LUXE

Early, &r. Tell House, Colonia Santanani, Colonia

AFTER relieving me of eight dollars and a half, the jauntily mustached young man handed me a ticket, almost exactly the size of this page, which entitled me to one lower berth on the North Express from Paris to Berlin.

The journey is shorter by three hours than that between Chicago and New York when performed by the fastest trains—which, as the American railroads take some pains to inform you, are the fastest trains for that distance in the world. You leave Paris at a quarter of two in the afternoon and reach Berlin at half past seven the next morning, with a one-hour change of time during the night. The distance, in fact, is less by about three hundred miles than that between New York and Chicago.

Eight dollars and a half for the privilege of occupying a berth during a seventeen-hour journey seemed rather steep; but in addition to the berth I received an interesting piece of literature in the above-mentioned mammoth ticket. It was finely embellished with advertisements of hotels and steamships, and contained the following important official notice:

The fare for berths cannot be refunded if travelers are unable to make use of them. Reimbursement can only be obtained, after deduction of the booking fee, in event of berths being relet to other travelers for the same journey. If the carriage in which berths have been reserved does

not arrive at destination the company will only reimburse that portion of the fare for the journey not effected.

The company does not recognize any responsibility whatever with regard to hand baggage or any other object which travelers are authorized by the railway regulations to keep with them in the cars, and the conductors and other officials of the company have strict instructions not to accept any responsibility whatever under this heading.

Obviously, then, I must travel with manly self-reliance and not weakly depend on the company to take any particular care of me or my belongings. When the porter showed me to my expensive berth this is what I found:

The European Idea of Luxury

THE compartment was not over two-thirds the size of our Pullman compartments and rather less than half the size of our Pullman drawing rooms. A single seat ran along one side, occupying all the space on that side. Opposite the farther end of the seat, beside the window, was a shallow cabinet containing a folding lavatory, much like those in our Pullman compartments. It was fitted with a little shelf, which let down and made a reading table in front of the window.

The shelf was down when I entered the compartment. On it were a magazine and a couple of newspapers; also, the elbows of a stout blond gentleman, who was smeking a cigarette and looking over one of the newspapers. His bulky bug occupied half the baggage rack. In addition to the bag he carried a suitcase, which, just by a hair, missed being a steamer trunk. This suitcase stood against the wall opposite my end of the one seat, leaving only a few inches between my knees and its ponderous self.

The porter heaved my bag into the vacant half of the baggage rack and I sat down with one foot on each nide of my fellow-passenger's suitcase. Probably I looked a bit dismayed not because of the suitcase, but because I felt as though I had walked into a perfect stranger's bedroom. The blond gentleman who occupied the window end of the sent must have noticed my pained expression, for he smiled in the most friendly manner and mustered up enough

By WILL PAYNE

fragmentary English to express a polite fear that the suitcase was somewhat inconvenient for me. Unfortunately, he added, there was no other place for it.

I could see that at once. It was impossible to put it in front of him, for the little rabinet with the folding lavatory was in the way. It was impossible to put it under the sent, for all the space there was occupied by mysterious contrivances appertaining to the car. There was absolutely no place for it except in front of me; and I assured my unchosen bedfellow that nothing gave me greater pleasure than to travel with a stranger's suitanse figuratively clasped to my bosom. My companion, by the way, turned out to be a Swede and a very agreeable person after we had broken the ice and a great deal of language in establishing a more or less rudimentary means of communication.

An occasion soon arose. I wished to smoke, but my smoking materials were in my bag, and there was no way of getting at the bag except by climbing over my companion.

I may mention that this North Express is one of the crack trains of Europe, running from Paris to Berlin, Moscow and St. Petersburg, nearly all the way over government-owned railroads. Its accommodations throughout were about the same as those furnished me. The car was lighted by gas. At one end was a tiny toilet mom, marked for men, with no washbowl in it. At the other end was a room a few inches larger, marked for women, and containing a washbowl; but I soon discovered that neither men nor women paid any attention to the signs designating the respective sexes. Each compartment contained but one sext, and half the seats faced in one direction and half in the other. In other words half the occupants of the car rode backward, whichever way the train was going.

To be sure, half the occupants of all European cars must always ride backward. They maintain that riding lead; ward is quite as pleasant as riding forward, and presumably it is for them; but I suspect that the pullid woman who dashed out of a backward-riding compartment and raced to the end of the car, with a bandkerchief to her mouth, was of a different opinion.

This North Express, like other alloged trains do luxe in Europe, is an enterprise of the International Sleeping-Cur Company, a Belgian corporation that corresponds to our Pullman Company in that it has a virtual monopoly of the sleeping-car business on the Continent outside of Germany.

Its scale of prices and accommodations in general are well illustrated by the Paris Berlin instance. The distance from Rome to Paris is less by fifty miles or so than from Chicago to New York and the fastest train makes the run in twenty-six hours. The price of a single berth for that journey is twelve dollars. Across France, from Calais to Marseilles, a berth costs thirteen dollars. From Paris to Listen it is seventeen dollars.

This, you understand, entitles you to one berth in a small compartment that contains two. Once in a blue moon the other berth will be unsold and you will have the compartment to yourself; but the Belgian company is by no means addicted to running superfluous cars, and usually you will be boxed in for the night with a perfect stranger,

Europeans generally condemn the indecency of our standard Pullman cars, where a person has to undress with nothing but a thick curtain to shield him from the gaze of his fellow passengers. As to whether, on the score of modesty, that is inferior to being shot up with a stranger for a day and a night in a sort of double-decked dog brest I do not pretend to say, not being an expert on the subject but personally I prefer the curtain.

And there is no escape from your compartment. The trains de luxe have no buffet or observation car to while you may stroll for a change of scene. There is no smoking room, for everybody who wishes so smoke is supposed to so in his own compartment. When your legs becoming the summer of the carridor, where your fellow passengers have a squeeze by you in going from one part of the car to crother.

At mealtime, to be sure, there is the dining our and soon discovered that, unless you have the forethought forbid it, the porter invariably makes up your berth a soon as you go to dinner. Coming back from dinner the is nothing to do except go to bed, stand in the sure secrider or jump out of the window. Forbidding the personance up the berth would, of course, require a on agreement with the other occupant of the comparisons to the easiest way is to go to bed. Once you are in it, is tend in comfortable enough for a person whose principal dimensions are longitudinal rather than horizontal. It berth is longer than our Pullman berths and not overtentials as wide. How a really fat passenger could step one without hanging over somewhere is a mystery.

Big Prices for Small Comfort

To BE sure, this benevolent sleeping-car company to senson—that is, from January to the middle of Aprillarums a train to the Riviera for which it apparently make its best equipment. The compartments seem rather large and better arranged than in the usual cars. And is reserved France on this special train do luxe you pay twen dollars and a quarter—not for the train, but for a left from twenty minutes to three in the afternoon until the past ten the next morning. It is a very fast train, but of fast enough to catch up with the bill.

I used to think the Pullman Company pursued a poly that was tainted here and there by selfish motives: 80% comparison with the European sleeping-car monopoly. Pollman Company is a sunny-hearted Santa Class with no thought on earth but of the good it can do unto other for a rough-and-ready formula, you may say that is European concern charges about three times our Pullman accommodations.

Going to my twelve-dollar berth at Rome I found usual, a stranger already in possession, and at the wind end of the seat. His two suitcases and a bundle compact filled the baggage rack. His leather hatbox took at it little shelf by the window. His huge bag stood on the first and his two overcoats and an umbrella hung on the variant hat two overcoats and an umbrella hung on the variant hat two overcoats and an umbrella hung on the variant hat two overcoats and an umbrella hung on the variant hat two overcoats and an umbrella hung on the variant hat two overcoats and an umbrella hung on the variant happened hat two overcoats and an umbrella hung on the variant happened hat two overcoats and an umbrella hung on the variant happened hat the strength had been to be no place for my bag except happened hat the two two had been already and the time. There we have of the campany was justified in thinking a lavatory sat fluous. We rode backward and stood up in the compact stretch our legs.

Nearly all Europeans with whom I discussed the public the defended the arrangement of these sleeping on the ground that for a man and wife or two for traveling together the compartment is more pleasant our open cars. Unfortunately, however, travelers of always go in pairs; and in the United States a

traveling together can get a compartment or drawing room for far less than it costs to ride in one of these contrivances.

In France and Italy you cannot take a sleeping car unless you have a first-class ticket, and the first-class fare there is about half again what it is here. In Italy only hand baggage—what you can lug into the compartment and pile round on the rack, seat and your fellow traveler—is carried free; and in France you are allowed only sixty pounds of checked baggage.

As a typical instance, the distance from Rome to Paris is less by fifty miles than from Chicago to New York. The first-class fare is thirty-one dollars, the sleeping-car berth is twelve dollars, and the carriage of a trunk weighing a hundred forty-eight pounds is seven dollars—making an even fifty dollars for the journey de luxe, or about double the cost of making an American journey of the same length at the same speed and in considerably greater comfort.

Of course if this monstrous sleeping-car concern were transplanted to the United States it would have the President, the Cabinet, Congress, at least forty state legislatures, a united press and an outraged public down on its head within a fortnight. Neither its prices nor its alleged

accommodations would be endured.

As one illustration of its generous attitude, it informs you: "In the event of a passenger's being unable to travel the company will endeavor to relet the berth on due notice being given. Should the berth be unoccupied the holder of the ticket is not entitled to a refund of the fare paid. When a berth has been booked and a postponement of the journey is desired, the date of departure may be changed on forty-eight hours' clear notice being given before the schedule time of departure as originally fixed, and on payment of a second booking fee; always provided, however, that the company shall not have been compelled to refuse accommodation for the same train, this resulting in a loss."

Any one who knows the readiness with which berths may e canceled or changed in the United States will appreciate

he difference.

This sleeping-car company operates all over Europe, and only in Germany has any attempt been made to protect assengers from its exactions; in fact, apologists for the ompany say that its unconscionable tolls result partly rom requirements which the various state railroads lay on t—a sort of fraternal Robin Hood arrangement for the ommon purpose of plucking the tourist. They will tell ou in France that only Americans, Englishmen and lunation travel first class. However that may be, the general heory outside of Germany is that comfort in travel is trictly a luxury and to be taxed as such.

Pay and Take Your Chances

TENERALLY speaking, the classification of fares in J Europe is resorted to not as an index of comparative emfort, but as an index of comparative respectability.

For example, all the motor busses in Paris charge firstase fare and second-class, the former being three cents
of the latter two cents. Whichever fare you pay, you ride
exactly the same bus—but in one case on one side of a
artition and in the other on another side. An American
in discover absolutely no difference between the firstass ride and the second-class; yet it is a common thing
Paris to see a man stand on a street corner and let several
asses pass that are bound for his destination, each of
em having empty seats, but no empty seat of his class,
he is first class he will let a bus with empty second-class
ats pass and save his dignity. If he is second class he
ill let a bus with empty first-class seats pass and save
s cent.

So, also, on their railroad trains. Payment of first-class re does not insure you accommodations in any way perior to those you might get with a second-class ticket, site generally the first and second class compartments are in the same car. The first-class French or Italian compartment has seats for six people, three on a side, with an arm between the seats so that each passenger is assured his due space. It is a little wider than the second-class compartment, giving more foot and leg room.

The second-class compartment has one undivided seat along each side and is supposed to hold eight people. Invariably it is upholstered in a color different from that of the first-class compartment, which, after all, is the chief physical distinction between the two classes. True, if both compartments are filled to their capacity you will have somewhat more room in a first-class than in a secondclass; but the difference is hardly worth quarreling about

Your actual bodily comfort in either compartment depends entirely on how much room you have, and there is no certainty that you will not have more room in a second-

class compartment than in a first-class

For example, the most comfortable ride I had in France was from Boulogne to Paris. My ticket was first class; but, as it was a train to meet an English boat, nearly everybody else had first-class tickets. The porter dutifully conducted me to a first-class compartment that already contained four passengers and their bags, two of the passengers being women. As there was no sign to the contrary, I should presumably be permitted to smoke; but smoking in the faces of two strange and elderly ladies, whose faces somehow did not seem to go well with smoke, was hardly agreeable.

Farther on in the same car I found a second-class compartment with nobody in it and took possession. The conductor gently remonstrated with me for riding in a second-class compartment when I had a first-class ticket; but as I refused to move be gave it up with a resigned shrug of the shoulders which was eloquent of a long experience in dealing with American insanity. So I had the compartment to myself all the way to Paris and could never ask for a more comfortable journey. How much my social standing may have suffered I did not stop to inquire.

It was the social system and no idea of comfort that led to the adoption of compartment care in Europe, and it keeps that type in vogue. First-class pussengers must be carefully partitioned off from second-class, and second from third. Of course, having adopted that style of car. Europeans fatuously endeavor to defend it on the ground of comfort. They say their first-class carriages quite equal in comfort our parlor cars, but no impartial man from Mars would admit the claim. In freedom of movement and independence of other travelers our parlor cars have a decided superiority. You can sit in a parior car all day and hardly be aware that anybody else is on the train; but you cannot sit in a right little compartment with three or four strangers without being almost constantly aware of them. It is impossible for them to speak without your hearing every word, and one of them can hardly move without your knowing It.

Your first-class billet is mostly a lottery ticket as regards comfort. You are not invariably sure even of a seat. While I was in Paris a Irlend came in from Cologne. He had a first-class ticket, but until some one got out the only place for him was on a little folding seat in the corridor. True, in France you may assure yourself a seat by having one registered in advance for a fee of a franc. The regulation of the government railroad is that if the seat is booked by telephone, telegram or letter it must be paid for and taken thirty minutes before the train starts. If it is booked at least three minutes before starting time, but it is generally impracticable to register a seat except at the train's point of departure; in fact, it is not very often done anywhere.

Whether your compartment is first, second or third class, it is quite sure to be filled with as much hand buggage as it will hold, and everything, from a lewel case to a shoe-box. comes under the designation of hand baggage in Europe. Whatever a cab will carry and a porter can shove through the car window or door is entitled to transportation in the car. The reason, of course, is that the railroads everywhere charge for the checking of all but the smallest trunks, and some of them charge for checking any trunk.

A trunk that would be carried free anywhere in this country cost five dollars and forty cents from Paris to Berlin, four dollars and eighty cents from Berlin to Lucerne, seven dollars from Rome to Paris, and so on, which helps one understand why European trains are heaped with luggage. Of course the railroads there derive no profit from their baggage charges, so far as native travel is concerned, for the native traveler with a hundred and fifty pounds of baggage would distribute it among several ponderous baga and cases, and pile those up in the passenger car, where it would be carried free. If only native travel were concerned no doubt European roads would soon adopt our more convenient method of hauling baggage free in a separate car, instead of hauling it free in the passenger cars; but those roads catch a considerable number of Americans, who are addicted to the trunk habit, and from whom quite a profit is derived.

I should mention that a solitary traveler on an international sleeping car can avoid the unpleasantness of sharing his bex with a stranger by taking the whole compartment. "As a general rule," says the company's book of information, "a passenger desiring the exclusive use of a two-berth compartment must pay for two railroad tickets and two sleeping-car tickets." There are certain exceptions, applying only to first-class passengers. On the North Express, for example, one may have exclusive use of a compartment by paying one sleeping-car fare and a half; on the Paris-Barcelona Express, by paying two sleeping-car fares—in both cases only one railroad fare being required.

The Steep Fares of Southern Europe

THE minimum cost of travel by this de-luxe system, however, is quite high enough for ordinary taste without spending anything extra for more comfort. Outside of Germany and Austria-Hungary, to ride de luxe you must hold a first-class railroad ticket, and first-class fare is high sverywhere in Europe.

Excluding suburban business, first-class fare in the United States probably averages somewhere round two cents and a half a mile—though I do not know of any exact statistics on the subject, as all passenger business is usually lumped together; but over a large part of the most thickly settled portions of the country, which naturally produce the most travel, two cents a mile is the rule.

French railroad fares are based on a sliding scale, according to distance. If you travel five hundred kilometers you pay slightly less for a kilometer than if you travel fifty. For the longer runs it works out a little over three cents and a half a mile for first-class fare and a trifle under two cents and a half for second-class. The Italian schedule is pretty nearly the same. Your lirst-class fare, then, is about eighty per cent higher than in those regions in the United States where the two-cent rate obtains, and twenty per cent higher than where the three-cent rate prevails. Generally the first-class fare alone comes to decidedly more than our first-class plus Pullman. When you add a sleepingcar tariff two to three times as high as ours you find that de-luxing is a quite expensive luxury; in fact, like some other expensive luxuries over there, it is mainly for foreign consumption.

Of course all this applies to privately owned roads as well as to those owned by the state; in fact, as I mentioned in a former article, the finest train in France is on the state railroad, a new suburban service running twelve miles from Paris to Versailles. The aisle is in the center of

(Continued on Page 65)

UTTO BY THE PERMETS WHILE SAVEDAD COMPAN

The Grandaddy of Our Modern De-Lase Trains

By IDA MAY EVANS DISCARDS

BY THEIR signs ye may know them. The signs of a staidly flourishing small town of the Middle West are six. First is the tall red standpipe on the hill, which furnishes water to the town. Second is the prominent confirmed bachelor, more or less young, who sits in the real-estate or the insurance office his more hustling father bequeathed him and gives expectation to the town. Third is the leading druggist, who waxes fat under perennial suspicion of owning the most prosperous blind tiger between Kentucky and South Clark Street, Chicago. Fourth is the smart young wife of the leading merchant - he is not so young-who sends to Kansas City for flowers and a four-piece orchestra for her uffairs.

At these affairs-which, calling on Bertha M. Clay's word-palette for nid, can be described only by that verbul ocher, recherché-the brightest ornament is the prominent bachelor. And

there is always an indefatigable rumor that if this gentleman had cared to interfere the leading merchant would not now be host at the recherché affairs. The inner circles of the Ladies' Aid Society expect something to happen yet!

Fifth is the more or less pretty daughter of the leading banker. And sixth is the elderly maiden, who was kept company with for many years by one of the tewn's premising young men, finally dropped by him like a stale radish. and who since has given the old men and the little children something to talk about until Death-"the great silencer" claims them for his own.

Rudolph Warner sat in the neat real-estate office his father had bequeathed him and, with corpulent legs languidly crossed, looked out at Muin Street. Sixteen of his thirty-five years had been spent with languid crossed legs in a more or less interested survey of that thursughfare. At present the street and the air above were white snowsheets and hence not excitable to vision. Boredly Mr. Warner reached for a package of chewing gum on his desic.

With care he was selecting the pinkent fragrant stick when the door was flung open, letting in a slap of cold air and an oldish girl. Rudolph looked up, grunted "Howdu-doo?" and went on selecting gom.

And by that slighting reception Cora Kaley's slight social position in Januaville was defined - for, had it been Louise Brown, the plump blonde daughter of Brown, of the City National, Mr. Warner would have dropped the gum, uncrossed his corpulent legs in a twinkling and sprang up to brush the snow from Louise's brown plush-and-beaver coat -and this in spite of a faint distasts for Miss Brown's frequent incursions to his business quarters.

Bets had been on in Janusville for several years as to whether Louise would land Rudolph. And Janusville rather reproached him. Louise was a nice girl and almost. pretty. A trifle overweight, perhaps, and more than a trifle egotistic. But do you expert a wife to have no drawbacks at all? Yet, in the moment of repreach, Januaville felt a pride in harboring so fastidious a male.

And if it had been Mrs. James Todd, the elever young wife of Todd, of the Leading Drygonds and Ladies' Cloaks and Suits, Rudolph Warner would have scrambled up in half a twinkling, pulled off her sealskin coat and bung it on the radiator to dry, and arged the whole package of gum on her. When Mrs. Todd had been Lill Connors at the high school the adds had not been in favor of Louise. was pretty generally known that James Todd would have had hard sailing had not Lill been piqued by Rudolph's dilatorinosa.

The town blamed him severely. Lill was a nice girl and as pretty as pink plum jelly - a bit malicious of tongue and laugh, perhaps; but there are worse faults. And though James Todd made an excellent husband, being hard hit by the income tax and more than willing that the Weekly Democrat should have frequent occasion to accuse his wife of recherchéness - two virtues not often found in the same busband-Janusville was sympathetic to Lill.

But Cora Kaley poor, poor Corry! No one expected Rudy Warner or anybody else to spring gallantly up at

Care Had Seen Jinneed Into Inscites by the Fight

her entrance. When Kel Holmsted, four years before, left Jamesville and her, she had forfeited all claim to Jamesville's respect. Six years had Kel kept company with hertaken her to partise and the dances at the armory; eaten supper every Sunday evening with her and her mother. Then, when lengthened time made marriage expected imminently by Cora, her mother and the town, Kel discovered that Janusville offered only middling prospects to a young mun of his caliber. The best held out so far was the sociably pleasant but not lucrative clerkship in Mech's Cigar Store.

Most people did not consider Kel much, in spite of silky yellow hair and a handsome white forehead. His father was an unprosperous blacksmith; his mother was notorimus for her ragged dishts/webs. With such antecedents Kell was thought lurky to get a nice, steady, capable girl like Cora, who, hesides entertaining him in the six years, had worked a steady way from the rural school to Janua-ville's first grade; then to its third; then to penmuship instructor of all its grades. At least Janusville thought him lucky until he made it plain that he did not want her.

And immediately Januaville knew that it had known all along that Core was poor stuff. And my! she looked buts offer than twenty-four! Januarille hastily bunted dates for comparison and counted back. Her father had been dead nine years. Was she only fifteen then? Yes. Her mother had stretched the insurance money until Corry was old enough to teach. Well, anyway, she looked older. Kel lingeringly kissed her when he left and made her promise to write to him real often. Kel was good-natured.

Janusville waited eagerly. Bets in Meck's Cigar Store and opinions in the church puriors were ten to three that Kel Holmsted would run out of postage stamps, so far as Corn Kaley was concerned, before six months went by.

A week after he left, the white-goaterd postmaster reported one postcard. It said that a letter would come later; he was tired traveling on the train-excuse leadpeneil. Nine days later came a letter. Cura did not open while the mailman was at the gate.

Well, Janusville, whatever its failings, had perspicacity. A few bets were too extravagant, a few opinions too farfetched; but at the end of eight months Uncle Sam's mail service was not burdened by any missives for Miss Cora Kaley. The last that came was a tinseled view of Butte, Muntang. It hoped that Corry and all were well. He himself was enjoying

Janusville laughed dryly- in eigar store and in church parlor. Janusville did not know as it blamed Kel. Maybe she had been sort of pretty six years back - for folks who like that white-skinned sharp-chinned style. Once, in the gushy remanticism of the third year of high school, Kel, in a composition, had described her: "Hair like molting chony, eyes the soft gray of dusk, and cheeks of winsome apole-blossom pink-ton pale for red, too relorful for white." Every at the reference and reported - the next Friday night from it to Cora vi the countri hing at the time.

ficed that her nose was as When ! ook was separated from her sharp.

mouth by a temperish furrow-signposts of crankiness and old-maidhood. And her expression was strained - as though only a strong will held back spleenful outbursts. Janusville parents remem-bered how often in the past their offspring had complained that Miss Kaley was a cross old thing, always making scholars write their letters over.

Scorn is a freak weed. You never know when a big cros has grown to mature leafage under the surface of daily mentionings, ready to fling forth widespreading venture whenever that dry surface raked by an untoward hap pening. Cora held her hear high; but every one saw that she was soured and crank; and getting old.

And young Janusville de spised her, even though i labored under her instruc tion; but, though it despise her, it univeled, rubbed whimpered, erused and madits m's and o's as painstak ingly perfect as grubby, toll ing young fingers could make

them. Miss Kaley did not coax the young idea to shoot She tweaked its cars. Mean old thing!

Young Janusville was glad "her feller run off an wouldn't marry her! Who blamed him? Goah! She neve would believe a feller couldn't help gittin' inkstains all ove his copybook!" And young Jannavillo often yelled the sentiments after Miss Kaley on the street—whenever a adjacent alley furnished a chance to duck out of sigh before her gray eyes got the identity of the yeller.

Older Japasville said resentfully that she need not take her spite out on poor little innocent children, and suggests a change in penmunship instructor. The achool lear talked it over. Professor Blayne, who had been superin tendent for eighteen years, pulled at his graying mustache scratched his graying head with an impatient green peace and dryly advised that she be retained. She was con-petent. He and the board had been postered by seven ncompetents before her.

The beard was accustomed to take his advice. And of Mrs. Graham, with whom the professor had boarded the eighteen years, chirped breadcast that he said he had neve yet heard of a child dying of a tweaked cur. So Januavill laughed and good-humoredly decided that, since Corry ha to support her mother, it would be a shame to take th position away from her.

Poor Corry! they laughed it again; for Kel, meetin itinerant fellow townsmen, gave them to understand the he would never be back. Tell Cora she was perfectly in so far as be was concerned; and Kel gripped while he sai it, and added immediately that Corry was a good girl an a nice girl

"Nice old girl!" one fellow townsman had insinuale

Kel admitted that she was getting along in years. Seve or eight years and eighteen do not make twenty. Ke kindly hoped, though, that she would marry some a right chap. As for him, he did not care to settle. And h winked at the fellow townsman, who winked back; an then they had a drink together on the foolishness of ol girls anyway.

So, bearing all this in mind, it would have been foods to expect Mr. Warner to hop gallantly up and whish to snow from Miss Kaley's black cloth coat and small black felt hat. He merely looked up for her to state her business which she did with concine brevity. She and her moths wished to sell the cottage that had been their home so lan and she had come to list it with him.

"Leaving town?" uninterestedly asked Rudolph as b noted: "Six rooms; lean-to; cellar; big yard; some Hill Street and Fourth Avenue-nine hundred dollars.

"Maybe!" briefly watching his languid pencil A snowflake dropped from her hat and moltest on the side of her ness. With a black-gloved hand she irritably was it away. "Don't waste time!" impatiently. It was the same curt impatience of voice that was so efficacious in winning the levely curls of capital S from stiff, uncuring young fingers. "This is January; February, March. School lets out the first of June. I'd like it sold by April."

"Well, we'll do our best," lazily. Rudolph was addicted to the royal we. "But not more than a million people a ares are looking to buy in Januaville, you know!

Mr. Warner's pleasant smile stamped this as pleasantry such as the ethics of business courtesy entitled even Corry Kaley to. She did not smile appreciation of the merry quip. She looked Mr. Warner over, from his large, smoothcombed brown head to his large brown-leathered feet. Down in the third grade any eight-year-old wielder of the slippery penholder could have told him that such a look meant: "Don't you dare tell me that's the best you can do!" And the third-grader would have warned Mr. Warner to look out or he would get shaken until his chin jubbed a hole in his shirt.

However, Mr. Warner was not of the grades. He closed his notebook, yawned and unwrapped another stick of gum,

meantime tossing off politely:

"We'll miss you from our midst, Miss Cora."
"Will you?" Miss Cora's voice was dry. She added as he turned to go: "Mother heard at last week's meeting of the Ladies' Aid Society that the new barber was looking ound to buy. You might see him first."

"Why, yes; I will," agreeably. "I hadn't heard; but dare say he would be thinking of buying. Got quite a smily, I believe: and rent mounts up." And Mr. Warner houghtfully chewed up another crackling pink stick,

"I'll drop in day after to-morrow to see what you've tone," said Cors, and got briskly out before the startled Rudolph could tell her that real-estate business was not ransacted with such tempestuousness.

"Huh!" he grunted displeasedly. "Does she think I'm

whirligig?"

His displeasure was cut short, however. Mrs. James fold fluffed in, snowed-on, gay-eyed and breathless. She and passed Cora on the pavement, and the two had achanged the casual nods of women who came up from int grade together, but for several years have seen each ther only on Main Street and at church, "Oo-ooh!" she shivered.

Rudolph sprang up so speedfully that his gum slipped rom tongue tip to throat and he had to pause to cough it p. Then, with his bare hands, he whisked the snow from drs. Todd's sealskin coat.

'Why don't you stay home, where it is warm?" he

olicitously demanded.

"I came down to see you!" declared she; but it was not naffectionate declaration. It smacked of belligerency, and he took a chair with the air of a lady prepared for argusent. Mr. Warner sank back in his own swivel leather omfort and chewed gum industriously-one might almost hink uneasily. "I want to know!"

Mr. Warner rudely interrupted:

"If you want to know who's going to lead the grand turch of the dance given next week by the Civic Beauty lub for that darned old gladfolus bed in the public puare-why, I can tell you right at the start. It won't

"It will! You've got to! Why won't you?"

As the angry sentences burtled at him Rudolph Warner sibly cringed; but he defantly repeated: "I won't!"

"You shall! lease, Rudy 1" Mrs. odd entreated. No one looks so rumptious as you the head, espeally the last few MATH.

Her eyes, beautilly big and brown, rinkled as they eneated.

Rudy stiffened. uring the last few are he had taken iconsiderable flesh. e was not obtuse nd he did not cribe that twinkle admiration of his anly form. Lill id a mean habit of aking fun of folks their faces, which as one reason, ough nobody but udolph knew it, at she was Lill odd and not Mrs. arner.

"I won't!" flatly. For fifteen years re led every dogned grand march

this doggoned wn. And I've "You lazy

"I'm getting old and fat," imperturbably. "And Carl Lowry is de-lighted to take my place. I've spoken to him and it's all fixed up, my dear girl."

Lill regarded him sulkily. To her and Janusville the chief event of every year was the midwinter dance. Sheand others-began in July to plan a gown for it. James Todd-and others got pop-eyes every New Year at the mighty price tag one frail gown can carry. For months before and weeks afterward Mrs. Todd, as manageress, moved in a glamorous atmosphere of authority and style. She took a slam at the dance as personal.

"Carl Lowry," coldly, "couldn't lead his grandmother in out of the rain!"

"He took four tango lessons in Kansas City last week," insinuatingly.

She brightened.

"Did he? I must get him to teach me! But," this spitefully, "won't Louise rave when she learns her embroidered gold crêpe -

"She needn't," generously; "Louise goes with the lead."

Mrs. Todd laughed unkindly, considering that she and Miss Brown were dear friends.

"She's a nice girl," reproachfully: "and a sweet girl."
"Too nice for me, I sometimes lear," amiably. "And"— Mr. Warner hesdtated: but there were passages in the past that made for confidence between Mrs. Todd and himself-"as sweet as a fat apple dumpling."

"Shame on you!" Lill reproached; but she laughed. "If she'd lift those fat heels when she walks instead of sliding 'em slong!" Anxiously: "But you'll be in the murch? Please! I want it to be a bowling success this year!

Rudelph stretched fazily. He had heard her voice that ame want many previous years.

"Oh, I'll tag along somewhere," carelessly.

"With whom?" demurely. "If Carl has Louise at the

'Oh, I don't know-don't care!"

"Ethel Brake?" Lill's eyes were gulleless.

"Good Lord, no! Louise would have a fit. She thinks

Then the mest prominent bachelor of Januaville broke off in confusion, having said eight words more than he eared to say to Mrs. James Todd. Lill's lough rang.
"My dear man," she caroled, "some day you'll fail off

that fence you straddle so carefully. And oh, the bump you'll get!"

It was Mr. Warner's turn to sulk.

"Anyway, dances are a doggoned bore," he grumped; "and I wish folks with nothing to think about but clothes and places to show their clothes would give the town a rest for a while,

Lill huffily quit laughing.

"Well," tartly, "whom will you take? I don't know who's left, except"—she laughed, recalling whom she had met on the payement - "Corry Kaley.

"Maybe I'll take her!" sulkly. "Wouldn't she be surprised-and tickled?" Conceit plantered his sulks.

"She might turn you down!" careleasly,

Mr. Warner laughed.

Me's Drumme Bermere Fon Cut. Him Got With Corry Kaley!"

"No one ever yet refused me," he puffed, and looked straight at Mrs. Todd. She would remind him he was fat, yould she?

Lill's under lip drew up contemptuously against its mate. That complarency of conceit was one strong reason, though no one but herself knew it, that she was Mrs. James Todd and not Lill Warner. She looked straight at

"There is something in being careful not to give folks a chance to refuse you," she retorted sweetly. And as she left she reflected: "I must say I prefer James to him!"

"Must say I prefer Louise to her!" reflected Mr. Warner comfortably.

And then he rejoiced in that elever idea of using Corry Kaley to glaze a rasping social predicament. Good! He had not known his own brightness! From now on he would make a point of gallantry to the ineligibles of Januaville femininity. Next time he would take Miss Addicks, the rheumatic, wrinkled dressmaker. Louise could not say a word! Ethel could not say a word! Lill could not say a word!

And so a week afterward, while Janusville suppressed a emile. Corry Kaley stepped by his side in the grand march

parade. But since she was only Corry Kaley-a pitied bit of discard - there was no prelude of gallant flummeries such as are usual at such times. Had she been Louise, Mr. Warner would have engaged the livery stable's best hack two weeks beforehand, and would have seen that its cushions were dusted clean and its wheels washed spotless for Miss Brown's gold crepe gown to make the journey of three blocks that lay between the Brown mansion and the armory. Likewise with Ethel-except that he might have passed up the wheel inspection. And had it been Lill, he would have sprinted to speak first for the town livery's treasure of treasures, a second-hand taxicab. Lill was not too buckward to scream outright that she wouldn't put a

In Spite of the Gotrture You Could Have Heard a Pin Drop at That End of the Armory

The Meeting Place in Summertime

Is Around a Dish of Puffed Grains

Every morning, countless families are now meeting around a dish of Puffed Wheat or Puffed Rice. Some eat them with cream and sugar-some mix them with their fruit.

Every evening, legions again meet around Puffed Wheat or Puffed Rice in milk. At supportime or bedtime these dainty morsels form an ideal good-night dish.

At noontime, Puffed Wheat and Puffed Rice form the welcome luncheon. At dinner, they are scattered like nut meats over the ice cream. In the afternoon, girls use them in candy making, and hungryboys when at play eat the grains like peanuts.

The millions who do this know the utmost in a cereal-food delight.

The Perfect Foods

Prof. Anderson, in these puffed grains, has created the perfect foods. Here, for the first time, all the food granules are broken. Digestion can instantly act.

Inside of each grain there occur in the making a hundred million steam explosions. And the airy morsels which result are the bestcooked foods in existence.

They are foods for any hour. They never tax the stomach. And every atom of food value has been made available. No other method has ever created such ideal foods as these puffed grains.

Puffed Wheat, 10c Except in Puffed Rice, 15c West

In the hot days coming - when you want to save cooking - when you want cool foods, easy to digest-serve a wealth of Puffed Wheat and Puffed Rice.

Serve them as breakfast cereals, as dairy dishes. And use them like confections, for the taste is like toasted nuts.

Each puffed grain has a different flavor. But each is crisp and bubble-like and thin. Each is a dainty which everyone enjoys. Each marks the limit in good food.

Serve them both. Order a package of each from your grocer, then let the children vote on which they like best.

delicate white charmeuse satin train in a dirty seedy back for any man! But Cora

Rudolph waited until the night of the dance, until the dance was in full swing, undance, until the dance was in run swing, until couples were already taking their places
for the grand march, before he sought
Cora in that end of the armory which was
roped off for the mere spectators—the
hot polloi, as Mrs. James Todd termed them
in her high-geared moments.

Hart Lowry, only child of the leading
druggist, was more tolerant. He was a tall-

boned youth, with eyes like pale gobs of faded blue calcimine, whose gaudy neckties and gaudier footgear made up for Jannsville's lack of an art gallery. Jannsville knew very well that the profits of less becessary stuff than drugs procured that coetly gaudiness; but art is art, whatever its severe and only a few spiteful follows:

its source, and only a few spiteful folks discussed grand jury action.

Hart had once read a volume of Balzac clear through; and he held that the bourgeois had a right to live. "You gotta have different classes," he re-buked Lill, "or there wouldn't be no such thing as society

To which Mrs. Todd sniffed that she s'posed so; but she wouldn't dance on the same floor with any barber on earth!

Core was sitting with her mother and old Mrs. Grahum, who had given her bourders a four-o'clock supper in order that she might have plenty of time to squeeze into herblacketamine. Almost all Jannsvillewan grouped round. Miss Addicks in cracked, green taffeta; berapprentice scared in white lawn. Farther away the barber was stiff and tangue-tied in brown cheviot and brown piqué gloves; his wife, in light gray pongee, overskirted with shadow lace, tapped longing toes to the music.

The Baptist preacher was not there. He

was at home writing a sermon on the seductiveness of modern society; but Professor Blayne was there, in his Sunday shiny black hayne was there, in his sunday shiny black broadcloth, with his graying hair rumpled up because he had just run angry fingers through it when old man Haydy, beside him, got personal over the impersonal ains of the Republican party.

Rudolph made his leisurely way through the groups, nodding pleasantly at wrinkled Miss Addicks, who fluttered at the honor;

apologized for treading on Professor Blay ne's. wide black town in an awkward effort to avoid exacting Mrs. Graham's wide black-stardied know, sat down beside Cora and researched genially that he thought a deal was in process of making, and by the way, was there a cichern?

Dark broke off in a term motorey to old Mrs. Graham concerning the absolute un-regeneration of Louise Brown's fourteen-

"Cuteral Old-our comage? Yes-

"That egood," and Rudolph, And then, after a fling at the weather, another smile at Mus Addicks, a good evening to Cera's mother and another to Mrs. Ottobers, and a friendly nod to Protessor Diagra, he care-leady and carrially asked whether he tright

have the pleasure of Miss Cora's company in the march just forming, unless she were

already engaged.

In spite of the booming overtage you could have heard a pin drop at that end of the armory. Cora had half turned back to continue her conversation with Mrs. Graham. She jerked round in open-mouthed amazement. Her mother jumped. Except by a very natural temperishness, Cora had never betrayed that she writhed over Kola defection; but her mother had never attempted to disguise her maternal share.

Such defection is hard on a mother is a town where society and marriage call for Roman script. Was it possible that Corramight again be kept company with! You could bear motherly hope in her excited breathing. Professor Blayne quit talking and looked mildly amused. Under his graying motest acts there are remaind to have ing mustache there seemed to hover a mo-

ing mustache there seemed to hover a ungratulatory smile.

Old Man Haydy leaned forward to bear again what be had heard but could not believe he had heard. In his old peaked face was the light of avid curiosity.

Cora murmured "No"; but her mother gave her a push, and so did old Mrs. Graham. She stood up. Perhaps in that curious, eager, hoping atmosphere she judged it easier to accept than to refuse the careless, casual invitation. She partly turned, as casual invitation. She partly turned, as though in anology to some one of the group, or as though for permission. Her mother beamed it; old Haydy beamed; Miss Ad-dicks beamed; Professor Blayne beamed old Mrs. Graham beamed. A fine, faint pink came over her sharp-featured white face, softening her—making her younge, Rudolph Warner afterward remembered Or was it the proximity of wrinkled yellow Miss Addicks that rubbed off some of her ymara?

And he afterward remembered that she

had had on a very becoming dress.

Through the kei polloi of spectators and down the grand march, which was to Jaco-ville as the golden chariot races were to Rome in its prime, twittered amused com-ments; but the twitter was not hysterical. Every one—except perhaps Cora's mother—knew that Rudy did not mean anything. Every one, though, knew it in a different

grinningly over the breakfast table the next morning to his mother. And there would have been no significance attached by any one except perhaps Cora's mother—had not Lill Todd a week later been hard pressed to fill out the five pages of corre-spondence that friendship with a married schoolmate in Kansus City exacted from her monthly.

Like most talkative people, Lill loathed letter writing. She grouned at the labor of remembering interesting items and jotted them down in hodgepodge connection. And so, merely to start a page, she men-tioned that Rudy had Corry Kaley as partner in the grand march of the midwinter dance.

Jenny, the married schoolmate, remem-bered Cora as a pretty, self-contained girl-not as discard. She knew that Rudy Warner always led the grand march. She interpreted the news as significant, and passed it on with her interpretation. And so in less than two months, through the mouths and pens of five or six more or less inter-pretative people, it finally reached Kel Holmsted, who had wandered far and wide without locating the prospects that Janus-ville had not offered.

Kel was surprised. He had always pictured Corry as patiently teaching school and waiting until he should return—which he had no intention of ever doing. Why. Corry was old! She had been old when he left! Well! Well!

Now it happened that when Kel heard the news he had been homesick for some time—if a lazy, calfish, forlorn feeling is entitled to insult that decent, and word-And for some time he had rather resented the fact that Cora Kaley, so to speak, kept him from going bome. He had wished that she would move away so be might re-turn. He took the news of her engagement

to Rudy as a glad removal of a barrier.

And by jinget Corry had done well for berself! Kel had always trailed along in the pale orbit of conquest that lay outside Rudy's glowing center; and despits a very fair opinion of his own desirability, he knew that, matrimonially considered, Mr. knew that, matrimonially considered, Mr. Warner outclassed bim as Janusville's one taxicab outwheeled its hack. Corry was a lucky girl, by George! He would congratulate her! He wondered, though, what Rudy saw in her. She had been sort of pretty years ago, before she get thin and oidish; but no style—not a mite! Maybe, though, she had perked up. Well, anyway, he would go back; and he bought a ticket and started. and started.

Helena, Montana, where Kel happened to be when he bought his ticket, is a long journey from Janusville. So many days on a train gives you time for thought-doubledover, crimcross, labyrinthic thought. Kel's mind traveled the usual backing, circling, winding paths pursued by a certain grade of masculine mind when it learns that the fruit it threw away as specked or vapid has been picked up by a connoisseur and adjudged of rare delicacy

The first day, Kel framed congratula-tions to Corry. The second, he wondered, with mirth, how she had landed Rudy. The third, he wondered without mirth. The fourth, his mouth curied cynically. And all this time he had been under a delusion that she cared for hipself! He had even felt sorry for her. Huh! Guess no man need waste pity on a woman! What fickle things women are

On the fifth day Kel Holmsted wrapped himself in aggrievement, like an abandoned orphan. And this was the tenor of his thought: Oh, faithfulness! How art thou departed from this earth!

The sixth-why, certainly! He was the injured party-had been all those years! She wrote only two letters in reply to that last postcard, and a girl who thought any-thing of a man would have feared that those two might have miscarried and she would have written to find out whether he got them. What good coconst-cream pie her mother used to make every Sunday! Kel's mouth watered. Montana—the part he knew-was as shy of good pie as of coconut trees.

On the seventh day, however, Kel nobly and sadly decided not to interfere—unless his feelings overmastered him at sight of the guilty pair. Under the nobility of resolution lay a fear that his feelings would be unmanageable.

Meantime Rudolph had not sold the Kaley cottage. He was out of town a week or so, at home with a cold a week, out of town again for a few days. On his return he found a curt note. What had he done?

Rudolph wriggled. Really it was not de-cent—parading her misery like that. What if she was soured? It was not respectable to tell every one! He edged toward the door. First thing he knew, she would be edging toward him for sympathy. It was a relief to him that Professor Blayne should step in at that moment, with a hasty: "Got those test papers corrected yet?"

"Try to do something next month," she

called crossly after him,
"Won't if I don't feel like it," Mr. Warner childishly muttered to himself out on the sidewalk. "She's more dominosring than Lall!" Which, though Mr. Warner did not realize it, showed that Cora had risen considerably in his estimation. Never before had she been compared so honorably by

him or any one else.

He did not do anything that month-reason: Nothing to do; so he coldly told Miss Kuley some five times, when she waylaid him at his office or on Main Street. Jamsville was no more inclined to buy a cottage than to finance an expedition to the South Pole. Then he spent eight days in St. Louis.

The afternoon of his return Mrs. Todd met him in front of her husband's store. She was giggling. Her pretty eyes were aglow. Her face crinkled impishly. He laid her bubbling gayety to her new spring attire—a brilliant green broadcioth so low-necked that James ville had expected for a need to have the head expected for a week to hear she had pneumonia and was ready to say it served her right. He learned that her gayety was not self-inspired. "Have you heard?" she giggled. "Kel got back two days ago!" "Kel Holmsted?" uninterestedly. "Fiz-sled out there?"

zled out there?

"Oh, I don't know; guess so." as though that were of no importance. "But what do you think? He's grumpy because you cut him out with Corry Kaley!"

And Lill's laugh rang out in so earsplit-ting a cascade of glee that several chronic Main Streeters looked round and thought to themselves:

"There's those two together again! Jim Todd hetter watch out! Something'll hap-

Rudy stared uncomprehendingly at her. "What in Sam Hill are you talking

about?

"He heard about the grand march and thinks you and Corry are engaged." Again her thrill of mirth sent scandal down Main Street. Rudolph took the news as dumfoundedly as a hungry labouer would take a live chicken from his dinner pail in-stead of the expected hard-boiled egg. "What!" And then he laughed so hard

and long that the chronic Main Streeters and long that the chronic atain streeters edged up in a body to bear what it was about. And this is what they heard, as soon as Rudy could control his merth enough to articulate: "Well, what kick's be got coming anyway? Staying away all these years! Did he expect to find her ready to be picked up any time he came back'

Two Main Streeters burried over to the drug store to tell old Mr. Lowry, who chuckled it to Hart, who ran over to snicker it to Meck, who told Kel when he came into the eight store an hour later. Kel heard it injuredly, but nobly.

"I know I had no right to expect her to he faithful. I didn't expect her to. I know," hitterly, "what wumen are. I sent back word that she was to consider herself absolutely free." He reached into herself absolutely free." He reached into the case for a stogy. "I had no prospects." His martyr-sad voice gave the impression that only manliness held back the tears. Broken-heartedly he walked out, forgetting in his result to pay for the story.

in his grief to pay for the stogy.

After Lill gigglingly left him Rudolph had gone smilingly on his way, to be buttonholed a few yards farther on by Cora herself, who had seen him and had run across the street to intercept him. He

across the street to intercept him. He looked at her with amused interest. Was she elated over Kel's return?

And then Mr. Warner got a distinct shock. Either he had never looked closely at her before or Kei's return had transfigured her. The sharpness had left her face. She was actually pretty! Like Lill, she was gay in new spring attire-a bright blue mandarin effect unlike her usual oldish modest garb; but it was not her dress, or the color the March wind had whipped into her face, or the snap in her eyes, that changed her. She had an air of vihrancy, an animation - a pleasant animation that underlay her physical aspect. She seemed on tiptoe with life. She looked happy! Rudolph Warner was disgusted. All for that dub!

Travel on "A.B.A." Cheques

A. B. A." Cheques will relieve you of worry about the safety of your travel funds, simplify your calculations in foreign currency, save you the trouble and expense of exchanging money at frontiers and eliminate many of the petty annoyances which often mar the pleasure of a foreign trip.

American Bankers Association

Cheques

are accepted exactly the same as correscy by botels, radway and steamship lines generally, and by the best shops, in every part of the world. They will be carlied by any one of 50,000 banks.

They are safe for you to carry because your counter-signature - which identifies you - is requeed to make them good and because they may be replaced if lost or atrilen-

They are making travel money matters sale and cary for thousands of American tourists. They are the ideal funds for commercial travelers everywhere.

"A. B. A." Cheques are the only travelers' cheques acrepted under the law in payment of U.S. customs duties.

Get them at your Bank

Ask for descriptive booklet. If your bank is not yet supplied with "A. B. A." Cheques, write us for information as to where they may be obtained to your vicinity.

BANKERS TRUST CO., NEW YORK

US with which World's records are broken and new records made. MUNITIO It was U. S. Cartridges that won the World's Championship at Bisley, England, during the Olympic Games of 1908; that again won World's Championship at Stockholm, Sweden, in the Olympic Games of 1912; that won the Pan-American Championship at Buenos Ayres in 1912 and that in 1913 won a list of prizes so long that it requires a special folder to list them all. The reasons for this superiority are not mere technicalities which only experts can appreciate-they are as plain as the nose on your face:-

Our priming charge contains neither mercury nor ground glass. These materials are hard to mix uniformly-you can see that. Besides, ground glass is not a good thing to drive rasping along the delicate rifling of your gun. Next, ground glass absorbs 16% of the heat. Our primer materials, being themselves combustible, actually increase the beat of the flame.

This hotter flame gives a quicker ignition, and, as our priming is a strictly chemical combination, it always acts uniformly. The absence of fulminate of mercury in the U.S. Primer protects the brass cartridge case from becoming brittle and weak.

The Government makes only cartridges with a non-mercuric primer. World's Championship Rifle Teams habitually use U. S. Cartridges.

Send Postal for Interesting Historical Booklet, "American Marksmanship" United States Cartridge Company Dept. S. Lowell, Mass. Makers of THE BLACK SHELLS

"I heard the harber is still looking," she began, without preamble. "Don't you think you can do something with him?" Entreaty softened her usual tartness of tone. "I told old Mr. Elliot; but it seems the burber cut his chin one day and now

they don't speak."
"I don't like that," Rudolph objected-"listing the house with everybody else! Anybody would think you didn't rely on

Me!"

Kel's return might have charmed Corsinto a certain youth and grace; but her temper was only laid away, not discarded.

"Maybe anybody'd think shout right!" she snapped. "It seems to me that Janusville offers a splendid opening for a bright, live man!" And she flounced off.

"I suppose," choked Mr. Warner, "she that addled Kel Holmsted is brighter and more alive than me!"

and more alive than me!

He stamped to the burber shop. The burber was busy and told him to come back in the evening.

At the supper table that evening Kel's mother asked him rather uneasily whether he had seen Corry yet. She had not heard all that was being bandled about, but she had always felt that Kel was a trifle to blame in his treatment of Cora-

Kel said nonchalantly that he had not. Maybe he would drop round that evening. After all, he argued to himself, Rudy could not object to an ordinary call for old times' sake. He retired to his room and shaved. And if Iludy did object he would tell him a few home truths about treacherous friends. He hoped the fellow would be there. Supper in the Holmsted home and dinner

in the Warner home were served about the same time. Kel finished shaving as Rudy put on his overcoat to go down to the barber shop. The Kaley cottage was between the Warner home and the shop. Rudy came down the street as Ket went up the Kaley steps; and the imp of perversity or spite impelled Rudy to step up those steps right at Kei's beels. He argued that Cora would like to hear that the barber was amenable

to reason in the matter of cisterns.

Mrs. Graham was there. She had stropped in to sek Mrs. Kaley for some tomuto seed; but she, as well as Mrs. Kaley, knew what was what and they both clat-tered to the kitchen to be out of the way, And Professor Blayne, who had dropped in to discuss a school matter, best a quick retreat, his eyen twinkling, a decided smile howering under his graying mustache; though Cara, her face pink, pressed him

to stay. Evidently she had been expecting one or Evidently she had been expecting one or

Evidently she had been expecting one or the other. Rudy assumed that it was Kel. She had on a new low-cut blue silk dress. Kel assumed it was Rudy. She had fluffed her hair high and prettily. "For that dul-fer?" each resutally earlaimed. Theo from seven-thirty until eleven Kel related the past, present and future of Montana, boring Rudolph, who unsuccessfully tried to interject a synopsis of Janna-ville's doings, which bored Kel. At eleven o'clock Cora herself yawmed. Each took that yawn to bimed! and sullerly went home; and each, as he went, sullerly despised her and each, as he went, sullerly despised her tasts. That dub!

Either Professor Blayne or Mrs. Graham spread the news of the double call and its length. Between breakfast and dinner the next day Januaville buzzed with bets and opinions: and during the ensuing weeks not only Rudy Warner but all the town sat up and took notice that Corry Kaley was no longer the same woman. Somehow, sometime, she had gone back to the self-contained prettiness, the softer features, the kissable pinkiness of her girlbood. January ille rubbed its eyes.

Of course it was Kel's return—so most people declared which had transformed her and caused ber to buy gay new clothes that almost outsplached Lill Todd. It was no such thing, others protested. Rudy Warner was the man. Ever since he asked her to be his partner in that grand march, they now remembered, she had blossomed out like a primrose in the sun.

"I thought she looked terrible exect that night before he asked her," Miss Addicks said. "I was watching her and thinking it was a shume -

Old Mrs. Graham cut in with grim glee: "Well, the shame's biting Kel Holmsted now. They say him and Rudy pretty near came to bloom in Meck's Cigar Store the other night. Rel was flinging round hints about two-faced, double-dealing fat scoun-dreds; and Rudy up and told him the town had worked along without him for a spell and would like to try it again."

This Lubricant Puts the Kibosh on Friction

Oil or grease plus Dixon's selected flake graphite is as much better than oil or grease alone as oil is better than water.

Why? Because graphite gets at the cause of friction. No matter how highly polished a bearing may be, under the microscope it looks like the surface of a rasp file. Oil and grease cannot permanently fill up these roughnesses.

Dixon's selected flake graphite fills them, smooths them, makes a new oily surface that eliminates the grinding of this microscopic rasp. Heat or cold will not affect graphite. Pressure makes a graphite surface smoother. The harder it is used, the finer finish it develops.

DIXON'S Graphite Lubricants

Some motorists speak disparagingly of graphite. We don't blame them. There are makers of graphite greases who think any graphite is a good lubricant. The fact is, Dixon's selected flake graphite is the only graphite that will not pack or ball up, because this peculiar form of graphite will not adhere to itself.

Some dealers do not recommend Doon's Graphite Automobile Labricants. Why? Because they ran buy greases for 3c a pound and sell them for 25c. The profit is tempting.

We make high priced, high grade automobile lubricants. We sell only dealers who are in business to stay, who sell real service. They know and recommend Dixon's Graphite Automobile Lubricants. If you will go to such a dealer and buy a can of

Dixon's Graphite Grease 677 for Transmissions

you will find your car will run more monthly than ever before, grow constantly quieter and easily travel a mile or more farther per gallon of gasoline. Equally good for motor boats:

The Joseph Dixon Crucible Company Jersey City, N. J.

Established in 1827

Cora's mother grew proud, and she was Cora's mother grew proud, and she was much sought after. In response to pressure she told Miss Addicks and old Mrs. Graham—under the seal of secrecy—that she had heard Kel say one night as she passed the parlor door: "But I had no pres-pects!" And Cora had laughed: "And have you any now?" And Mrs. Kaley puffed with pride as she repeated what Rudy said the very nort night as the way are in pulled with pride as she repeated what Rudy said the very next night as she was again passing the parlor door: "I don't want to run the chump down behind his back, Corry; but that trifling, sappy, cled-pated booky isn't the man for you! Here for years other men haven't dared to pay you any attention because they supposed you belonged to him!"

Lill did not believe that last. She went to Rudy.

"That old girl —"
"I believe you and Cora went to school together," Mr. Warner coldly remarked; and then excused himself because the barber

and then excused himself because the burber was waiting to sign some important papers. "Well, I'll be — "Lill was too much of a lady to finish it.

Thoughtfully she made her way to a luncheon given by Ethel Brake, where Corawas the guest of honor. Ethel was surrendering gracefully. Louise had declined to come, however. She was indisposed. After the luncheon Mrs. Todd dropped in to call on Mrs. Holmsted. Kel was at home. Lill langued at him. laughed at him.

"I don't believe it!" she declared.
"What?" he mumbled, red-faced.
"That you refused to fight Rudy and won't must him face to face!"

Mrs. Holmsted sputtered: "Who said so?"

Lill laughed. Kel grabbed his hat.

"He won't say it again!"

Mrs. Holmsted began to cry:

"He'll kill him! Ob, that wicked Coru

Kaley!"

Ratey!"

Rudy was not in his office. The man next door told Kel that he guessed he had gone down the street. Kel traced him from Meck's Cigar Store to the drugstore, back to the cigar store, to the bank, to the barber shop, up the street that led to the Kaley rottage. And from office, cigar store, bank, drug store, barber shup and street, Janusvillers trailed after him excitedly. Some-

thing was going to happen!

And it happened right in front of the Kaley gate, which Rudy had reached on his glad, proud trip to deliver the barber's check to Cora. It was Saturday afternoon; so young Januaville was out enjoying the

warm spring air.

After lunchesn Cors had gone on to a teachers' meeting, and she was returning from it just as Rudy reached the gate and Kel came tearing down the street. By her side, chatting pleasantly about young Jannaville's brains and lack, walked Professor Blayne. His expression was beneficent until he glimped Kei harrying. It changed then to apprehension.

Rudy turned to see what had caused the change; and what he saw in Kel's face caused him to throw up his fists to meet it. The check fluttered to the pavement, where

The check fluttered in the pavement, where Professor Biayne later rescued it.

And then Rudy and Kei went to it. It was unfortunate that a hitching post and a hydrani, both of iron, should have been so near. The back of Rudy's head hit the hydrant; but in compensation Kei's spine later was bent round the hitching post. Rudy's fists landed in Kei's eyes. Kei's fists at the time were welting Rudy's ubdomen. Rudy kicked Kei's right calf until it was never the same again. Kel put a blow on Rudy's chest that almost mixed his two lungs into one. And two new spring suits lungs into one. And two new spring suits were bloody, torn affairs when Professor Blayne, furious and spluttering with his fury, jumped at the two fighters and yanked

"What are you fighting about?" he demanded, with a display of feeling that seemed to make their troubles more his business than their own.

Bloody and breathing hard, they involbeen stunned into inaction by the fight. Professor Blayne clutched them, regarding them quizzically while he said:

"I really do not see why you should batter each other up—on account of the young lady who is to be my wife!" His clutch re-laxed. He turned to Cora. "My dear," repreachfully, "you may remember that I begged you as long ago as last January to make it public -

"I wasn't going to have Janusville gab-bing over my affairs again," resentfully declared Corn.

Time Saver, Money Maker, Trade Bringer

In every trade—to be really progressive and up-to-date— you must have motor delivery. Your competitors realize this. Many of them already have supplanted horses with motors, Others are doing it every day.

Simply to have a motor truck, however, is not sufficient. The important thing is to have the sensible sized truck. Stewart 1500 pound delivery trucks are daily convincing owners in more than 65 lines of business in 100 cities that they are sensible sized trucks. Light enough to make fast trips over big territories economically. Strong enough to codure the severest service. Necessary for at least a part of the delivery work of every business.

Why not follow the judgment— is the leader to its field. It has stond board on experience—of motor wise up and has made good motor all condi-Stream owners? They have done the experimenting for you. To be guided

"I don't care! They needed it!"
In the Weeldy Democrat's column of personal mentionings the following week were the following items:

"Professor and Mrs. Blayne left immediately after the ceremony for Joplin, where Professor Hlayne has been offered the auperintendency of the schools. The bride's mother accompanied them and will make her home with them. We fear that Janusville's schools will feel their double loss."

"Mr. and Mrs. Brown, of the City National Bark, announce the engagement of their beautiful and charming daughter Louise to Mr. Studolph Warner, Januaville's most popular and prominent bachelor."

"Mr. Kel Holmsted has again departed from our midst after a brief but enjoyable visit with his purents. He avers that the West affere better prosperts to young mon than our staider vicinity. We wish him luck!"

THE LAME DUCK

Views of an Innocent Rystander

WASHINGTON, D. C. DEAR JIM: Every man who is eligible, and who has made any sort of start in national politics—and some who have made no start at all—carries in the back of his found the idea that some day something may happen which will help to make him President of the United States.

President of the United States.

It is a great thing to be President of the United States; for, saids from the momentary power, the office carries with it historical immortality—that is, for time without end every President's name will be carried in history as that of a man who was once chief executive of this nation, whether any other giory is accorded him or not. The name will survive.

Circumstances and conditions always declare who shall be President; and, more often than not, the man who is made President than not.

often than not, the man who is made Presi-dent because of any certain set of circum-stances and conditions has little or nothing to do personally with the creation of either. Occasionally, however, there comes a time when an opportunity arises that—if properly handled—will assist the man who so doals with it to attain that highly desirable resulting. This does not become the contraction.

position. This does not happen frequently, but once in a while it does happen. There is an apportunity of that kind in Washington right now, as I write this letter to you. It does not seem to me that it will be accepted; but it may. However, if the exactly right man had this opportunity there is no doubt be could do much toward making so great a name for himself with the people that the presidency would not be be-yord his legitimate ambitions and far easier of attainment than it otherwise would be.

I refer to the investigation of the affairs of the New York, New Haven & Hartford Railroad, now in progress before the Interstate Commerce Commission. That may be completed or adjourned before you read this; but it is in progress as this is written.
And not since Mr. Justice Hughes, of the
United States Supreme Court, investigated
the ille-insurance scandals in New York has there existed so great a chance for the making of a permanent impression of personal worth on the minds of the people as exists in this investigation, and what may follow it or arise out of it.

This investigation comes at a time when the people are peculiarly susceptible to its disclosures, and of a temper to demand not only stern justice for the men who wrecked

Porch Shades

While other people swelter in dining rooms you'll have appetite. While they toss in bedrooms you'll sleep calmly. Your nerves will be soothed, bathed into health by that great nerve specialist, Pure Air. You'll say, "Why didn't I think of that before?"

Vudor Shades let people see sur but not in. They admit air but exclude heat. Their light, strong wooden strips are lock-stitched together by fish-net twine that won't rist. They are reinforced by double warps at both edges, or if very wide thades by double warps at interruls throughout their width. So their durability is enormously increased. Vudor Shades, too, measure a drop of full 8 ft. when in use, while most other shades have a drop of only 736 ft.

Yet Vudor Porch Shades sell at a less price than competitive shades which lack the patented Fador special features. They're stained indelibly. Made in all shades—to harmonize with your house. From \$3 to \$10 will probably equip your porch. Send for samples for bungalows in special colors.

Warth to Koow

that road but also to exalt the man who secures that justice for them. It is the culmination of a long series of similar dis-ciosures that have made the people fighting mad over the methods used by the captains of high finance to enrich themselves without regard to the rights of others or to the laws of the land.

Ten years ago there was but slight protest over these conditions, and that encouraged the men who engineered them at that time to a feeling of security. Their successes were great. They were able to do about anything they wanted, and they began to think they could buy anything they wanted and buy anythody who might be of service to them.

Of course it is obvious that no bribing or buying could have been done had not the men who were useful consented to be bribed; and no buying could have been done if and no buying could have been done if there had not been men willing to sell. But that is not the point. The men who sold their votes and the men who took bribes were but a small portion of the public; and the men who bought them and bribed them, and weeked properties for their own gain, and watered stock, and set in beards of grafting directors and were attachy gain, and watered stock, and sat in beards
of grafting directors, and were utterly
remorseless as to whom they burt if they
helped themselves, were chiefly at fault,
because they had the means for bribery and
corruption, and used there; whereas all the
bribed and corrupted had were weak morals and that greed for money which made
the transactions possible both ways.

In this particular instance, ten years ago
the New Haven read was a dividend-paying,
bonorable and respected institution. It

honorable and respected institution. It was the New Englander's rock of safety. It was the field for investment for those who wanted to put their small moneys into some-

thing that would insure safety, permanence and a fair return. Then the wrecking began. Now the New Haven was not the only corporation in which this was done. For many years similar railroad processes had been curried on by men as greedy for money and the shutting off of competition as the New Haven crowd; and some knowledge of what had been going on began to get out among the people.

The Man on the Job

After a time protest began to become

After a time protest began to become vigorous. There were signs of revolt. That revelt presently became a revolution; and now, at this moment, there is an almost universal demand that the pen who so betrayed the people shall be punished.

Vengeance is what is wanted. The people of the United States desire to see all this corruption in high places and in high finance disclosed and the men who are responsible for it punished. There is no thought on the part of the people that these things could for it punished. There is no thought on the part of the people that these things could not have bappened if the people had not allowed them to happen. That is beside the mark. The people are always self-righteous. What they want now is punishment for those who are responsible for other similar disasters; and they are looking for principals—not for subordinates. They want generals—not licutenants.

The man who gets them, who punishes these men—puts them in jail!—will build fur himself a popular esteem and recognition that will not be hard to mold into a formidable movement for a presidential nomina-

able movement for a presidential nomina-tion. The people will consider him their friend and will help him get anything he

may want.

As the investigation is now conducted, the investigating lawyer is Joseph W. Folk, of Missouri, who is chief lawyer for the Interstate Commerce Commission. In a smaller way Mr. Folk once realized handsomely in a similar situation. When he was prosecuting attorney of St. Louis he uncovered local graft conditions in such a way that he was elected governor of Missouri on the strength of his work and the reputation he gained thereby.

Of course it remains to be seen whether

Mr. Folk is large enough for his present big task. It may not come his way to be more than the pioneer. There is a chance that the criminal prosecutions—if any arise—may go to some man now in the Department of Justice, or to some man in the city of New York, where indictments may be found. In any event some man has a chance, and a great chance, to establish himself in line for high promotion.

It was great while it lasted, Jim—this business of predactous plutocrating; but it is about over new.

Pavlowa dances to the music of played on her Co

New York, April 20th, 1914

Columbia Graphophone Company, Woolworth Building, New York City,

Gentlemen:-

Since I have been in your country I have been amazed to see the popularity of the talking machine record when used with the dance. This so excited my curiosity that I have made it a great study and think it is due you to say that Columbia instruments and Columbia dance records over all others have my unqualified endorsement.

I use your Grafonols and dance records in my rehearsals with complete satisfaction and find your dance records truly represent the very SPIRIT of the dance. Their tempo, rhythm, clarity and musical qualities simply charm me.

I am convinced that all who dance can get great satisfaction from the use of your Grafonolas and records.

Sincerely yours,

Am Folia

Vernon Castle writes: "I want to congratulate you on the excelare the best I have bested. I am using a Columbia Grand Grafsoola and Columbia Records at Castle House where they are attracting extraordinary attention. The records are played in perfect dance time and are frequently encored by our patrons."

4—Tango

(Instruction)

We have just issued Four Columbia Double-Disc Dance Instruction Records, each prepared by G. Hepburn Wilson, and each with a complete dance selection on the reverse side—and with any one of them your Columbia dealer will present to you G. Hepburn Wilson's book—"How to Dance the Modern Dances." If you don't locate a Columbia dealer, write to us and we will see that you are supplied. The lessons in the book seem to us the first practical instructions ever written.

The pictures that illustrate them were all posed by Mr. Wilson.

But with the book and the records you have the most successful teacher in New York right there with you. The instructions in the book are crystallized in the spoken directions that you hear on the record: the music is played for you with emphatic and faultless rhythm, and the tempo is counted for you before the music and with the music:—you have to dance.

Do you realize how very easy it is to find out if a Grafonola will give you pleasure enough to pay for itself? How willing every Columbia dealer is to send a complete outfit to your home, subject to approval; and how little it will cost if you are satisfied? This Columbia Grafonola "Jewel," for instance: \$35—and on small monthly payments at that, if you prefer.

Che Quest of Gold Light

Talks about MAZDA No.5

of a thing

WITCH on the current that causes an electric incandescent lamp to glow. What happens? You get light, but also heat. Since your eye is a special instrument particularly sensitive to light, since you read a book with light and not with heat, the more light that you get from your lamp the more satisfactory should be the result in every A light which is brilliant but red/

would represent the ideal of efficiency. Like astronomers who can tell you what metals are glowing in a star so distant that its light reaches the earth only after the lapse of centuries, scientists who specialize in illumination can tell you much about this ideal light. Each decade they approach their cold ideal a little nearer. Will the ideal ever be reached?

Whether it is reached or not, the incandescent electric lamp will grow steadily colder, steadily more efficient, thanks to the Research. Laboratories of the General Electric Company

In these laboratories a corps of picked men, each an expert in some phase of illumination, men who are in communication with the forement European investigators of light, are constantly at work. After many months of patient experimenting the art of drawing tungsten into a delicate wire was discovered in these laboratories. Thus it became possible to make the new filament which glows in the MAZDA lamp of today and which has mpplanted the aid curbon filament because three times as much light can be obtained for a given amount of current.

The Research Laboratories of the General Electric Company represent almost every brouch of technical knowledge—chemistry, metallurgy, physiology, psychology, physics, microscopy, engineering, optica.

In these laboratories, scientists conduct many researches along advanced theoretical What is the secret of the phosphorescent glow that enumates from certain marine animals and decaying organic matter? May not the cold light be similarly produced? Why ran the glow-worm shine in your hand and never burn your akin! What is the exact culor of daylight! Is the best artificial light a miniature sun or a body with a brilliancy not so white? Scores of such problems more be attacked in the quest of the ideal light.

But even more important commercially is research that gives promise of immediate

Not the name but the mark of a Service

Suppose that the chemists, for example, crassleady experiment-ing in the laboratories, discover a way of preparing an element so that it is able to yield much light without breaking down readily under the electric current. Then discovery may mean the birth of a new lamp, ne it may come to naught. It must be subjected to critical study by other scientists.

The physicist steps in with all his spectroscopes, his photometers, his analytical in-struments. He determines how much of the glow that comes from the new marerial is ight and how much is heat, in other words, how much more efficient is the new material than anything than far discovered, he estimates to a nicety what is the randle power of the new material for a measured amount of current; he devises better physical comditions for the material to perform its function. Next, the microscopist, perhaps, studies it with the aid of powerful lenues in order to fears how it withstands the pitting and the scoring arthur of the current.

Thus the new material is passed through tion, from engineer to engineer. If the discurry proves to be of commercial importance the General Electric Company transmits it to its own lamp manufacturing centers at Cleveland and Harrison and to other companies entitled to learn of it.

This constant research, this country effort to improve the incandescent lamp, this transmission of an important discovery from the General Electric Company countainte MAZDA Service. When you see MAZDA on a bulls, think not of the shisting lamp itself, but of the Service received by its particular authorized manufacturer, of the thousands of experiments that had to be preformed in his interest and your interest, of the hundreds of light producers that were developed and tested before one was finally selected and included in the MAZDA that you arrew into its inches.

Because the work of the Research Laboratories is never ended, MAZDA Service is continuous. As new discoveries are made that bring us a little nearer the ideal cold light they will be applied in making new lamps, which like their predecessors will be marked MAZDA. Hence MAZDA will always be found on the basest lamps evalved by MAZDA Service - a lamp in which the best scientific thought of the time is

FREDDY ET CIE

Continued from Page 9)

Her voice faltered, and Freddy, with a gesture, dismissed his lady assistants. Then he removed his mask. Their eyes met and Cornelia uttered a faint exclamation:

"Ob, my! You're just like him!"
"Who is he?" asked Freddy.

"I can't quite say, because I don't sow," returned Cornelia; "but all girls have their ideals from the time they wear Swiss pinafores to the time they wear fortycight-inrh corsets. And I won't deny"-her voice trembled—"that you fill the bill. My! What are you doing?" For Freddy had grasped his materials and was making a hat. It was of palest

blush tulle with a crown of pink roses, and an aigret of flamings plumes was fastened

with a Cupid's bow in pink topaz.
"Love's first confession," the young man murmured as he bit off the last thread, should be whispered beneath a but like this." And he gracefully placed it on Cornelia's raven hair.

Mrs. Vivianson, her ear at the keyhole of a side door, quivered from head to foot with rage and jealousy. Time was when he, a penniless, high-bred boy, had implored her to marry him. Now—her blood boiled at the remembrance of the half hint, the veiled suggestion she had made, that they should unite in a more intimate partnership than that already consolidated. With her jealousy was mingled despair! So long as Freddy and his hats remained the Inshion. the shop would pay, and pay royally. There had as yet occurred no abatement in the onflow of aristocratic patronage. To avow his identity-never really doubted-to become an engaged man, meant rain to the business. The blood hummed in her head.

"And you are really a Marquis' second in though you make hats for money?" she heard Cornella say. "I siways guessed you had old English bleed in you, from the tone of your voice and the shape of your Sagernals, even when you wore a mask, And it seemed as though I couldn't do anything but buy hats. I surmised it was vanity at the time, but now I suppose it.

She clung to the door handle and cotored as

Freddy, with real grace and eloquence, pleaded his suit.

My dearest!" said Freddy, bending his blond head over her jeweled hands. Cornelia! I will make you a hat every day when we are married. Ah! I have it! You shall wear one of mine to go away in on the day we are wed - the inspiration of a bridegroom, thought out and achieved between the church door and the churcel. What an idea for a lover! What an advertisement for the shop!"

His blue eyes beamed at the thought; but Cornelia's face fell.

I don't know how to say it, dear, but we shall never be married. Papa is per-fectly rocky on one point, and that is that the man I marry shall never have dabbled so much as his little finger in trade. 'You have dollars enough to buy one of the real high-toned sort,' he keeps saying: 'and if blood royal is to be got for money Silas P. Vanderdecken is the man to get it. So run along and play, little girl, till the right man comes along. And I know he'll say you're the wrong one,

Freddy's complexion, grown transparent from excess of emotion and lack of exercise, paled to an ivory bue. His sedentary life had softened his condition and unstrung his nerves. He adored Cornelia, and had looked forward to a lifetime spent in adorning her beauty with bonnets of the most becoming shapes and designs. Now that a coarse transatlantic millionairs, with soft shirtfronts and broad-brimmed felt hats, might step in and shatter forever his beautiful dream of union, bitter revulsion seized him. He feared his fate. What was he? The second son of a poor Murquis, with a particularly healthy elder brother! He looked on the chiffuns, the flowers and the feathers that surrounded him, and felt that the hopes of a heart reared on so frail a hasis were insecure indeed. Then his old blood rallied to his beart; and he rose from the divan and clasped the now tearful

Cornelia to his breast.
"Go, my dearest!" be said. "Tell all to
your father - plead for me! Do not write or wire bring me his verdict to-morrow. Meantime I will compose two hats. Each shall be a masterpiece—a swan song of my art. One is to be worn if —his voice broke-"if I am to be happy; the other if

I am fated to despair. Go now; for I must

be alone to carry out my inspiration."

And Cornella went, Then Freddy, sternly refusing to receive any more customers that day, set himself to the completion of his task. Before very long both hats were actualities. Hat Number One was an Empire shape of dead-leaf beaver, the crown draped with dove-colored silk, a spray of sere oak leaves and rue in front; a fine scarf of black lace, partly to veil the face of the wearer, thrown back over one side of the brim and caught with a clasp of black pearl set in oxidized silver. It breathed of chastened woe and temperate sadness, and was to be worn if Papa Vanderdecken persisted

in refusing to accept Freddy as a suitor.

But Hat Number Two! It was of the palest blue guipure straw, draped with coral silk and Cluny lace. In front was a spray of moss rosebuds and forget-me-nots; dove's wings of burnished hues were set at each side. It was the very hat to be worn by a bringer of joyful news, the ideal hat under which might be appropriately ex-changed the first kiss of plighted passion. On it Freddy pinned a fairylike card, white

and gold-edged.
"If I am to be happy wear this," was written on it; and on a buff card attached to the hat of rejection he inscribed: "Wear this if I am to be unhappy." Then he closed the large double bandbox in which he had packed the hats, breathed a kiss into the folds of the silver paper and, ringing the bell, bade a messenger carry the box to the hotel at which Cornelia Vanderdecken was staying, and where, millionairess though she was, she was still content to dress with the help of a deft maid and the adoration of a devoted companion. Then the ex-hausted artist fell back on the divan. Cornelia was to come at twelve on the

'Then I shall learn my fate!" said Freddy.

He drove home in his brougham and passed a sleepless night. The fateful hour found him again on his divan, surrounded by the materials of his craft, waiting leverishly for Cornella.

The curtains parted. He started up at the rustling of her gown and the jingling of her hangles. Horrar! She wore the somber hat of sorrow, though under its shadow her

face was curiously bright.

She advanced toward Freddy. He reeled and staggered backward, raised his white hand to his delicate throat, and fell fainting among his cushions. Cornelia screamed Mrs. Vivianson and her young ladies came hurrying in. As the stylish widow noted Cornelia's headgear her eyes flashed and joy was in her face. Then it clouded over, for she knew that Papa Vanderdecken had been coaxed over and Freddy was an accepted man. My reader, being exceptionally acute will realize that the jeulous woman had

changed the tickets on the hats.
"Not that it was much use!" she avowed to herself as she entered with smelling salts and burned feathers to restore Freddy's consciousness. "When he revives she will tell him the truth."

Freddy regained consciousness only to lose it in the ravings of delirium, however. He had an attack of brain fever in which he wandered through groves of bonnet shops looking unavailingly for Cornella. Then came the crisis; and he woke up with an ice bandage on, to find himself in his bedroom at Glantyre House, with the Marchioness

leaning over him.
"Mother, my heart is broken!" said the
boy—he was really little more. "The world exists no more for me. Let me make my

last hat—and leave it."
"Oh, Freddy, don't you know me?"
gasped Cornelia in the background; but threpentant woman who had brought about all this trouble drew the girl away.

"Even good news broken suddenly to him in his weak state," said Mrs. Vivianson in a rapid whisper, "may prove fatal. I have a plan that may gradually enlighten him." "I trust you," said Cornelia. "You have

"I trust you," said Cornelia. "You have saved his life with your nursing. Now give him back to me."
"Hosh!" said Mrs. Vivianson.

She had quickly dispatched a messenger to Condover Street, and now, as Freddy again opened his eyes and repeated his pitcous request, the messenger returned. Then all present gathered about the bed, the inmate of which had been raised on supporting pillows.

It was a queer scene as the shaded electric light above the bed played on Freddy's pal-

lid features, showing the ravages of sickness.
"Now!" said Mrs. Vivianson. She
placed the millimer's box on the bed, and 'reddy's feeble fingers, diving into it, drew

forth a spray of orange blossoms and a diaphanous cloud of filmy lace.

"Black—not white!" Freddy gusped brokenly. "It is a mourning toque that I must make. Let Cornelia wear it at my fungrea!"

"Cornelia will not wear it at your fu-neral, Freddy," said Mrs. Vivianson, bend-ing over him; "for she is going to marry you—not to bury you."

Drawing the tearful girl to Freddy's side.

she flung over her beautiful head the bridal veil and crowned her with a wreath of

orange blossoms.

And as, with a leeble cry, Freddy opened his wasted arms and Cornelis fell into them, Mrs. Vivianson, her work of atonement completed, pressed the offered hand of Freddy's mother and hurried out of the room and out of the story, which ends, as stories ought, happily for the lovers, who are now honeymooning in the Riviera.

Cooked or Raw

IS COOKING an error? Will the next diet theory call for eating raw food— though warmed if you wish it? The Lon-don Lancet has raised the question, and other medical journals have asked as well as answered it, because of the recent discovery that cooking destroys some of a certain tiny but very valuable substance in food, and that a lack of this substance is the cause of a number of diseases.

Apparently the answer is that people may eat cooked food if they wish to do so, but that they should eat a larger proportion of clean raw food than they sow do. Cooking does not make food more digestible, but it makes it look, taste and smell better, and so increases the stomach's enthusiasm for tackling the job of digesting a dinner. In the tronger thorough cooking is dinner. In the tropics thorough cooking is advised to kill any germs that may have strayed into the food and, to some extent. this is a purpose of emoking in temperate

This necessary substance in food appears in a number of chemical forms in exceed-ingly small proportions, and in most foods; and the various forms are called vita-mines. Some of them can stand thorough boiling and others cannot: but cooking at higher temperatures thun the boiling point kills most of there. It has been made clear very recently that an animal deprived of them will die: but it is not so clear how much is needed for bealth. Scurry, rickets and teribert are among the diseases attrib-uted to the lack of vitamines in food.

Potatoes are rich in vitamines, which explains the value of potatoes in treating scurvy, a fact long known. The investi-gators who are now studying vitamines may be expected to catalogue more diseases caused by vitamine deficiency before long. The theory has been suggested that a dis-ease like beriberi, which has been noticed oceasionally among prisoners in American jails, may be doe to a diet of food that has been cooked too well.

Vitamines exist in wheat bran in a pro-portion much greater than in the wheat itself, but this discovery adds nothing new to the old controversy as to the compar-ative merits of whole-wheat bread and white bread; for any vitamines in either, according to the latest study, are destroyed

by the baking.
Polished rice is now the accepted cause
of heriberi; and this fits in perfectly with the vitamine theory, for the vitamines are eliminated in the preparation of such rice, though boiled unpolished rice still contains some of the vitamines. Fresh milk and eggs are rich in vitamines, which may be one of the reasons for the high value of those articles as a dist for people suffering from lung trouble.

A Barrett Specification Roof was put on this building because-

the architect knew all about the different types of roofing and further knew that the National Biscuit Company were mighty particular people.

They had a big plant and they wanted it covered with a roofing that would give langest service at lowest cost.

Under such conditions the architect knew there was only Specification Roof, because it gives longer service at a square foot per year of serhe could specify.

twenty years or more with statements.

no maintenance cost. Many such roofs have lasted thirty years, one choice, namely: a Barrett Every permanent building, whether large or small, should carry a Barrett Specification lower unit cost (the cost per Roof because that means the most economical roof, and vice) than any other roofing one that will be free from leaks and maintenance.

This building is now covered Ask any first-class architect with a Barrett Specification about this proposition, and he Roof and it will probably last will verify all of the foregoing

Special Note

We advise incorporating in plans the full wording of The Barrett Specification in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested: ROOFING-Shall be a Barrett Specification Roof, laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement,

CUTTING DOWN SOME STAPLE UNNECESSARIES

Continued from Page 10)

will have ten or fifteen tons daily. Chemically these washings are good fuel, for they

contain more than eighty per cent carbon— are really fine coke dust.

Mechanically, however, it is not easy to utilize them, because the fine, fluffy residue fed to boiler fires would simply fly up the

chimney again.
As it contains lampblack and iron oxide, as it contains immediate and from oxide, some experts think it might be used for paintmaking; but in the end probably it will be pressed into briquettes by some economical process and used for fuel.

Smokewashing for the sake of cleanliness

rrew out of modern methods of utilizing gus from coke owens and blast furnaces in the iron business. Once this gas was sillowed to go up the chimney as smoke; but now, by elaborate devices for cleaning it from dust and other substances, fuel for power production in gas engines is obtained, as well as gas for burning in furnaces, under boilers, for illumination and for bousehold use, and such chemical products as tar and ammonia. Even the iron dust in the blast-furnace gas is gathered, briquetted and

In one great American steel plant the saving amounts to a quarter million horse-power, of which forty-five per cent is used to generate all the electrical power needed for the works, thirty per cent is used for brating the blast, and the rest for other purposes. There is a twenty-five per cent surplus, however, which will eventually be turned into current for electrical furences. In France some fifty towns are now lighted

by surplus gas from coke overs.
Even more thorough is the utilization of smoke from copper smelters—a peculiarly offensive nulsance where it is allowed to pollute the sir; for the fumes of copper ore, rich in sulphur, kill tress and crops.

In Tennessee there are two smelting plants that furn this obnaxious smoke into sulphuric acid which, in turn, is used to make fertilizer—superphosphate—from the raw phosphate rack abundant in that locality; but the intrinsies of the smoke problem will be seen when it is known that such treatment is possible only in a locality where the fortunate combination of raw materials is found. These plants are said to produce the cheapest indirect copper in the world; but for other smallers situated for from supplies of rock phosphate such a process is at present economically impossible. With the best intentions in the world.

however, and after all the big plants in a factory center have washed their smoke or turned it into gas-engine power or sold it as a hy-product, there must still be hun-dreds of smaller smokemakers to whom these methods are not possible.

Teamwork in Smoke Fighting

For the small smokemakers - little powerplants, railroad locomotives, steamboats, hotels, spartment houses and homes in a section where soft coal is used there are now two general rourses that can be fol-lowed: First, organization to spread better knowledge of combustion, better devices for power and heat production, and better firing, so that the black smokedoud may be reduced, at least. Second, the use of some amakeless form of power or heat.

The attuation to-day is one where the majority of small smokemakers are following the first course, making conditions tolerable until the second course is possible. rable until the second course is possible.

Teamwork has abelished far more smoke than all the inspectors, laws, fires and smoke-prevention devices. Automatic contraptions for eliminating smoke greatly outnumber the perpetual-motion machines and without reamwork are of about as much practical value.

When there is a strong public sentiment takes a little time to understand the complexities of the problem, instead of merely letting the smoke inspector classify the clouds through his umbrascope or interferometer.

Public sentiment leads smokemakers to take pride in good firing. Fuel is selected with technical knowledge: builers and furnaces are improved and kept clean; firemen are said better wages, trained in good firing and paid bonuses for results in power or heat that mean reduction of the smoke evil. Every smokemaker becomes his own inspector, installing some device that shows down in the engine room or office-the density of the smoke issuing from the top of a chimney at any moment.

Carelessness and ignorance are said to be responsible for ninety per cent of the wors, smoke, and at the same time the technical knowledge necessary in reducing the end is available to any community that has sufficient public spirit to get busy on broad constructive lines. In some places the smoke-impection bureau is now backed up by a smoke-prevention society of citizens on the lines of the famous one in Hamburg.

Germany.

In this latter society the members are chiefly owners of power plants, and they pay five dollars in year for membership, with five dollars more for each boiler. That entitles them to technical advice from the society's engineering experts, who hap in the purchase of fuel, try out smoke-prevention devices, inspect members power

prevention devices, inspect memors power plants and suggest improvements, and send round instructors who coach firemen is good stoking methods.

Of course the ultimate remedy for smole is the use of smokeless power and heat, and these modern blessings are coming much faster than is generally realized and in a number of most interesting forms.

There are the smokeless fuels, for in-

There are the smokeless fuels, for in-stance. Crude oil is one of them and is not stance. Crude oil is one of them and a se-widely available for power plants, icons-tives and ships, in the form for barning directly under boilers. New oilfields and cheaper transportation by pipelines and tankships have made it economically postble in sections where it was unknown a few years ago; and even where the first rock appears to be higher it may be quite as cheap.

New Smokeless Fuels

Petroleum residue contains not must more than half as many heat units as stran-coal; but what it does contain can be burned with less waste than coal, and smokedament is absent. Even where it is too costly to power, it is now the regular fuel for annealing furnaces and lesser devices that formely contributed their share of smoke.

Then come the coal-gas tars which have had an interesting history. Some years (c) the engineers seized on them as a promised fuel for smokeless steam raising because they were these steam raising because they were then abundant at two or three cents a gallon; but the automobile care slong and these tars were found to be ideal for making dustless roads—and their valuquickly doubled and trebjed. The experts however, have developed improved type of burners for utilizing tar under boilers and are putting at the disposal of power-plant owners a series of cruder tars produced in making water gas.

When the oils cannot be burned econom-

ically under a boiler they still have vert power-generating possibilities in all engine which work on the explosion principle; and the explosion engine is being developed in so many ways that it is now an immense

factor in smokeless power production.

This type of engine will run on almost anything that can be vaporized into an explosive mixture. Where an automobile explosive mixture. Where an automobile must have highly volatile fuel, like gasolite or alcohol, this engine by its peculiar prociple will volatilize heavy fuels like crudy petroleum, tar oils, petroleum residue and cressote oils. It has been successfully operated on coal tars and train oil, peanut oil, castor oil, animal oils; in fact it is widely adapted to operate with whatever fuel happens to be cheapest in the locality. Europe pens to be cheapest in the locality. Europe has utilized it as a source of power for years but in the United States its development just beginning, chiefly because coal has been cheap and could be burned wastefully.

ower is also generated by its producer engine, a type requiring more vol atile fuel but run on gas made burned smokelessly in a special product plant. Low-grade coals have been utilized and the gas-producer idea is being applied to sawdust, woodwaste, spent tanhars reconut shells, shavings, coffee and coophusks, olive refuse, cottonseed cake, in far-almost anything burnable that happens to be lying round the neighborhood. It is largely a question of how handy that siecollaneous something happens to be and

When a GMC representative tells you that we build a truck to fit your service, he means that we have not only the right wise, but, more important, the right power, either gusoline or efectric, to meet your requirements exactly.

GMC gasoline and electric trucks are designed with an understanding of what is required of a truck in your business. For, regardless of the kind of merchandise you handle, the size of load or the length of haul, there is a GMC truck built to do the work economically and well.

And you can feet confident that the right GMC truck for your business is high grade in every way — design, materials, workmanship, everything that goes to make a reliable, highly satisfactary motor truck.

Because of big production and low overhead expense. GMC trucks can be bought at prices that are meeting the approval of business men who best know motor truck values.

whether the fellow who wants cheap smokeless power knows enough to utilize it or to find somebody who will tell him.

Then there is the smokeless burning of finely powdered fuel. At a smelter there was a crude-oil burner in use consuming ninety gallons of oil an hour. That was equivalent to nearly half a ton of coal and was cheaper—and, of course, smokeless. A new burner comsuming powdered coal was installed and did the same work with only forty pounds of coal an hour and a reduction of cost. By burning coal in powdered form smoke was done away with, and forty pounds did the work of half a ton.

dered form smoke was done away with, and forty pounds did the work of half a ton.

In Sweden a railroad locomotive has been successfully fired with powdered peat on the same plan—a ton and a half of the peat giving results equal to a ton of coal burned in the codiogram way.

in the ordinary way.

Powdered-coal firing is now used in this country for cement works and smelting plants; and, with certain refinements, it will probably have a wider application. The chief drawback is rather a singular one, for the line coaldust is blown out of a nozzle under pressure and looks just like a gas flame in hurring.

In burning.

Practically nothing goes up the chimney, for the whole burnable substance of the roal is converted into heat almost instantly and the nahes are merely sing. Directed into rock or ore this force heat is ideal; but it is a welding flame, and when used under a boiler quickly hereaks down metal, firsbrick and the most refractory materials. However, it will surely be tamed and set to smokeless steam production in time, and will do its part in bringing about the

emokeless era.

In about the same state of development is the mechanical atoker for railroad locomotives—for years the queet of engineers and inventors—certain to cut operating costs, increase the power of locomotives, relieve human muscles of some of the hardest manual taker left in the modern industrial world, and do away with most of the locomotive smoke. Within the past year successful locomotive stokers seem to have here attained. Tests conducted on Eastern roads lead railroad men to believe that the problem has been solved.

Smokeless Cities of the Future

Our smokeless ritles of the future will be run by devices of this sort; in fact, they are run now with smokeless apparatus to such an extent that if to-morrow—suddenly—all the power necessary in operation had to be generated by the crude boilers and handfiring of twenty years ago, the clouds of smoke rising into the heavens would be more than a nuisance; they would be a calamity.

Practically all the research and invention in power production to-day is in the direction of smokelessness. Waterpower is harnessed to turbines, electric current generated and transmitted over systems of conductors that reach farther and farther from the source of power every year. The railroads of the very near future will be operated by electric current and their coul traffic must vaoish—for coal is to be made to give up its power before it leaves the mines. It will be distilled in coke overs of the regenerative type. Its gases and tars will be utilized to run explosion engines, and these will run dynamos—producing current for transmission to the cities.

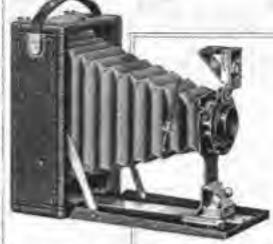

The coke will go to the cities for heating purposes, and heating will probably be on the central-station system, whereby all the work is done at a single plant and the steam piped to houses, hotels, apartments, stores, factories—or wherever it is needed.

While the electrical men have been busy the gas men have not been idle. Once on a time it was predicted that electric lighting must bring about the extinction of the gas industry; but the gas man has steadily refused to regard himself as a dead one, and in the development of gas cooking in homes and gas appliances for industrial purposes be has set the electrical man a brisk pace.

Together they are running a neck-andneck race toward the goal of smokelessness and that is the general goal toward which every other modern tendency in work and living is headed.

Editor's Note—This is the second in a series of articles by James H. Collins. The third will appear to an early number.

An ideal vacation camera, making 3¼ x 5½ pictures (post card size)

> for \$10.50

Leads in day-

Weighs only 29 ounces

Dimensions 231 x 411 x 711 inches

Covered with gennine grain leather

Film Premo Nº 1

A remarkably light, compact camera for pictures of the artistic 3A proportion.

Can be carried and used anywhere, and is so easy to operate that anyone who can read the simple instructions that come with the camera can make first-class pictures from the very start.

To load, merely open back, drop in Premo Film Pack, close back and all is ready. To change films for successive exposures just pull out successive film pack false.

This model is fined with a tested menuscus achromatic lems of the highest quality obtainable. The shutter is the new Kodak Hall Bearing with cable release, and the carners is fitted with two tripid anckets, reversible brillians finder, and is made throughout of the best of materials, by men who have spent their lives in carners making.

CUTTING WITH A BLUNT KNIFE

not thought it worth while to put in it the interest I had put in dramatics and football. I was in a fair way to loaf through life as I had through college-soldiering along until the day when my job should get disgusted with me and throw me. It almost looked as though that day had come already. I had, indeed, been cutting with a blunt knife.

The next morning I went to Mr. Burton and asked him whether I could keep my job.

He said he would give me one more chance, for my father's sake.

"Thank you, sir," I said. "Then, if I still hold the job, may I give it up temporarily and go into the shops? I've been all kinds of a fool and I want to begin over."

I don't know that getting your hands and face dirty is going to help you any more than sitting in the office and adding

figures."
"I want to do it for the discipline." I said. "There are some fellows in that shop never see the complete making stems who never see the complete object they are working toward. I am as stupid as they are. I want to get down and

"All right," he said.

For six weeks I lived in the shops. I got
seven and left at five-thirty, to work at seven and left at five-thirty, with half an hour for lunch. I made stems at one machine; I finished scupping nuts at another. I worked in the foundry, helping to mold by air-pressure or using the hand-rammers for old-style work.

I was in the milling room and the finishing shop, where I got a splinter of steel in my eye and had it taken out by my neighboring worker. I was in the assembling and testing room, where I had my forehead cut open by a valve that flew off. I worked in the plating and buffing room, and even

in the wrapping room.

I thought and are and slept valves. I gloried in the fact that the previous year the firm had produced two million and a quarter valves, which meant ten or fifteen million finished pieces—which again meant thirty or forty million operations. How I pestered the foreman with questions! I was

greedy for information.

When I get back to the office I had some practical experience, calloused hands, a chastened spirit and a greater greed than ever for information. I studied every detail of the business I could lay my hands on, from the organization of the different departments to the methods of checking the rates on the piecework tickets. No bit of knowledge was Ion great or too petty for knowledge was Ion great or too petty for me to go after, and no trouble it cost me counted. I no longer had time for evening frivolities; I was reading all I could get in books and technical magazines that bore on my busines

At the end of twelve months I was made a promise clerk, at eleven hundred a year. The promise clerk's work is this: When an order comes in that cannot at once be filled completely the promise clerk goes round to the foremen in the shope and finds out how the work for the various parts is going on and when it will be done, so that he can inform the customer.

What College Did Not Teach

He may have to go to several different abops before he can get the necessary promise for complete shipment. He may have to go to the foundry first for the casting promise; then to the milling room, where the castings are cleaned and milled; then to the finishing shop; then to the assembling room, where the valves are put together, and so on. The promise clerk has to have judgment; he must distinguish the relative importance of various orders.

After two years of that I was made stock-keeper — a really important position. I had to see that there was enough stock in the shop to keep it running and to keep the orders filled, and be careful not to have an overstock. My salary was fifteen hundred overstock. My salary was fifteen hundred dollars and I was worth it. By this time I had begun to see that in order to get on I must apply to business the biggest asset in my personality, whatever that was. I decided that it was my power of getting on with people.

Now, though I had got on with people, I had not thought very much about judging them. I began after this to try and size them up - to see the man behind his words and looks. The next step was to see how I could use this asset. I might have gone out on the road, selling goods; but that

was work which did not attract me. I went on studying and thinking, never losing a chance either of making myself useful to the firm or of developing myself in the business.

At last matters settled themselves. First was made assistant manager; and here my chances to size up people and to de-velop my judgment and easemtive ability were greater than ever. Finally—when I was thirty-live—I got my great reward. I was made the manager of the employment department, with a salary of four thousand dollars, which has since gone up a bit.

I, who used to give the glad hand to my

college friends, now use my gifts in another fashion with hundreds of foreigners. The adaptability I used to employ in imitating the cat-and-dog fight of the German and Irishman I now use in meeting the thou-

and daily problems of my department.

I have successed; but nothing I learned in college helped me to success, though I must say that a good deal I learned there has helped me in my leisure time. I do not regret having gone to college, but I do regret not having taught myself to work there. If I had I should have get on faster: I should have come out a sharp blade, so far as the business world was concerned. As it was I came out a dull one; and it took unnecessarily hard knocks and bard work to sharpen me.

If, when I was in college, I had put my

mind on what my future was to be, or had left before graduation to meet that future, I should now be ahead of where I am. I had good stuff in me and college ought to have brought it out before the business world brought it out.

I am going to send my buy to college, but am not going to keep him there unless he has sense enough to do what my old man-ager, Mr. Burton, advised - take his busi-ness, whatever it is, seriously,

In this competitive world a young man has to put himself to work with his playtime spirit squelched and his faculties sharpened -to make the most of the job.

Too Much Honor

WILLIAM COLLIER, the actor, has a VV twelve-year-old son and a country home at St. James, on Long Island. One day in the spring the youngster came to him and said that be had just been elected captain-manager of his ball club, and in view of the honor conferred upon him he desired to show his appreciation in a substantial manner. He thought it would be rather a graceful thing if he presented his teammates with a tent under which they might hold their business sessions and map out campaigns against the rival nines of the neighborhood.

So Collier, Sr., donated the tent and a table and a dozen camp chairs for furnishings, and provided a site for it on his lawn.

After the canvas had been pitched and the boys had assembled therein the demor slipped down to the back of the tent and hid there with his eye at a crack in order to hear and see how the boys conducted their meeting. He arrived just in time to hear

My father gave us this tent, so I move we elect him an honorary member. This motion was carried unanimously

amid applause.

The first baseman stood up.
"Mr. Manager," he said, "we need some uniforms regular uniforms. How are we

going to get them?"
"I move," said the chairman, "that the honorary member be permitted to buy the uniforms

By acclamation this motion also was adopted.

We need some new bats and a dopen balls and a catcher's mask and chest protector and a lot of gloves too," stated another voice.

"I move," said Master Collier, "that the honorary member be allowed to furnish those things.

There was not a dissenting voice among those present. "I think we ought to hire a big coach to

take us to the game," came a suggestion from the shortstop, That's right too," said the manager.

"I move that -It was at this juncture that the honorary member stepped round to the front and tendered his resignation.

Quantity Production

Studebaker engineers never lose sight of quality, quantity and price.

Their life work is to give the Studebaker owner the highest quality at a price as low as quantity production can bring it.

Studebaker engineers are also production experts; their work only begins with designing.

No man or set of men understands better than they do, the manufacturing economies of big production; or how to turn those savings into higher quality at lower prices.

They direct and oversee the scientific chemical and physical tests of raw metals and materials that result in rejection or acceptance.

They direct manufacturing; they insist on the utmost exactness in inspections; the most scrupulous care in assembling.

Their watchword is quantity production of quality cars-protect and perpetuate the good name of Studebaker.

That explains why we consider Studebaker cars the quality-equals of the costliest, though selling for hundreds less.

\$3,000,000 in Studebaker Machinery to Build Highest Quality at Lowest Prices. This huge hammer forges Studebaker consistants.

Were we to buy crankshafts from a parts communications, each would cost as twice as much as a class produced in our own large. So, although the equipment cost \$20,000, it myes each of 40,000 Studebaker owners half. the production and of this past - and gives him a better cranishable, because we specify the chemical analysis of the raw steel and, after larging, put the metal through our own

of Quality Cars

What is there in the Studebaker SIX that justifies us in saying it is the greatest automobile value in the world?

Setting aside the things which the eye can see — such as the ample seating capacity, the splendid electric system, fine finish and beauty of body — here are some of the internal values —

The full floating rear axle — its housing a light, tremendously strong Studebaker steel stamping.

Axle shafts so strong that one would support an 80 ton locomotive like a pendulum.

Each shalt so tough that to break it would require twisting through seven revolutions by a force equal to the weight of four tons at the end of a three-foot lever.

Camshaft, transmission and differential gears so hardened and toughened by heat-treatments that the sharpest file will not scratch, nor heavy hummer blows chip them.

Timken bearings throughout - which means even to the wheel hubs.

Springs that will stand 200,000 complete oscillations in a testing machine built to wear out springs—
as against 30,000 to 50,000, ordinarily accepted as good.

Two hundred forty-seven drop forgings - lighter and stronger than malleable iron castings.

A motor built complete in Studebaker foundry and machine shops — perfect in balance and alignment; a magnificent six-cylinder block casting.

We invite comparison with cars at any price to prove that the additional price buys no additional value.

Send for the Studebaker Proof Book, picturing and describing Studebaker processes.

THE MUTINEER OF THE MARY BLOUNT

(Continued from Page 5)

But the boats which put off from her to fasten to the whale are in a different rate-gory of shipbuilding. It was necessary for them to be swift, stanch and very buoyant. them to be swilt, stanch and very buoyant. When racing yachts were still square-rigged for the most part, the whale boat had already been developed along these lines to a point beyond which it does not seem possible to go. Thirty feet long, two men can lift her. Paper thin, the seas can no more crush her than they can crush a cork. Rowed by four men, there is many a power boat that could not catch her. And down the wind, under sail, in any sort of weather, there is no boat of her size so swilt or so sweet. As if all this was not enough, she is beautiful to the eye, as the Indian's cance is beautiful, as is the newest cup defender. is heautiful, as is the newest cup defender. And she has shared in more during deeds than all the great conquerors of history put together.

No matter what part of the seven sean you happen to be in, Cape Horn, if you have to round it, is always too near for comfort. Taking an occasional whale, rigrar-ging here and there, "smelling" for whales, the Mary Reunt drew at last into those dreuded and dreadful seas. Of the ship's company, those who were not furthwith seasick and sick of the sea could have been counted on the fingers of one hand-Cap-

counted on the fingers of one hand—Cap-tain Halthway, because there is no preven-tion like responsibility. Shattuck, Crandle and, oddly enough, the buy Howers. Crandle had taken the education of the last numed in hand and at the same time his own. For years the owner of a Bow-ditch's Navigator, taken over for a bad debt, he had never so much as dipped into it. One day he thundered at Bowers: "Have you read that Bowditch yet?" This was upon a calm and sunny day of

This was upon a calm and sunny day of

idling.
"I can't make head nor tail of it. And I don't see no use in it."
"Fetch the book."

Bowers (etched it. "New, then," said Crandle, "do you know where we be?" "Abourd the Mary Blount."

"Wherenboutsaboard the Mary Blount? "Why - just forward o' the try-works."

Crandle rulled his agate eyes heavenward, asking, and receiving, patience.
"Is what part of the ocean?"
"I dunno."

Crandle work his trains.

Crandle sank his voice.

"Now I wouldn't know if the captain hadn't told me. Now this here look tells a seaman how to tell where he is, how to

lecate where he wants to get, how to point for it and how to get them."

But the captain knows all that."

"So be does," said Crandle, again implor-

Tuttle—and who else? Not a living soul on this by nature. "So he does; so does Mr. Tuttle—and who else? Not a living soul on this ship, name of the mates, none of the boathenders, boatsteever or foremant hands, and unless you and I study this here Bowditch and get help on the knotty parts notody else ever will know. This book tells notedy else ever will know. This book tells everything that's known about the see and

about ships."
"Does it tell why a ship is always spoken

of as 'she'?"
"It does," said Crandle; "a ship is a weman because her rigging costs more than her holl. But that don't help us to find out where we are.

"It looks just about the same as where

"It looks just about the same as where we was yesterday."

"But the charts might tell us that where we are now isn't two miles from a hungry reef lookin' for a growin' hoy. Suppose sensithing imposed to Captain Haithway! Suppose he got bit in two by a whale? Suppose then Mr. Tuttle dies o' that pain in the side he's always complainin' of? Who'd them he to navier to the ship safe into port? there be to navigate the ship safe into port? I tell you, when I thinks of the abort lease a segmen takes on life from the Almighty it scares me. Do you want to be a cabin boy all your life? Do I want to die a boatsteerer that has risen from before the mast? No, sir, I don't. Now, then, we'll read this here book together. Two minds is better than one. And you just put this in your heart. You say to yourself: 'If there's anything that can be understood I can understand it.'"

Mr. Tuttle, walking as if walking burt, his face pule and hurassed, drew near and looked over the shoulders of the studious pair.

"Learning navigation? That's right. If I can help any I'll be glad to—glad to! There are never enough navigators on a ship by half. You never can tell what might happen. And when your chance comes you want to be ready for it. Look at Captain Haithway, rising in one voyage, by merit, by application, and by a series of unforesecable accidents and sicknesses from cable boy to first mate—on his first from cabin boy to first mate-on his first

from cabin boy to first mate—on his first voyage!"

"With all doo respects, Mr. Tuttle," said Crandle, "how is it that you never came to be master, stopped at the top of the ladder, you may say, and never climbed on into the house?"

"Why, it's well known," said Mr. Tuttle; "but if you don't happen to know I'll tell you—for the good of that boy's soul. I was first mate at twenty-three years of age. One night when you would least have expected it to come, the captain being ashore and we safe in a calm harbor, a hurricane rame, blown in from the heaven knows where. The work of savin' the ship fell to the second mate—" the second mate -

"But you was aboard, Mr. Tuttle?"

"Yes, my man, to be sure I was. I was blind drunk in my stateroom. Since that time," he went on solemnly, "I have never so much as wet my lips with liquor. But for all that no shipowner has ever cared to trust me with a ship. And quite right too!"

Mr. Tuttle turned away with an abruptness which brought his hand to his injured side, bit his lips and walked aft.

SHE was a picture in the great blue sea-cloak which the men had made for her. And she could never quite look her fill at the exquisitely scrimshawed buttoms or the droll effective embroideries. And the closk was voluminous, and kept her very warm and dry. She looked like a child masquer-ading as a woman, and indeed she was. Crandle, who in his reform, when sea

duties permitted, was much occupied with thinking, used to watch her by the hour from his sheltered place against the try-works. But it was from under bent brows that he watched, so that to a casual ob-

that he watched, so that to a casual observer it must have appeared that he was intent upon his knitting.

It was pleasant to see the great, savage-hearded seaman with the twisted and flattened nose engaged in so prosaic and innocent adiversion. He used, with asteady, swift clicking like that of a clock, a long and thick pair of ivory moddles, headed by buttons of blackest chony, into the top of each of which had been act a little sperm whale filed from mother-of-pearl. The yarns, blue and white, steadily came out of a sewing bag, a miraculous macting work of lines fishline, while the finished product was ever partially hidden by the cavernous paims of his hands.

These hands, rough, thick, hairy, cracked,

These hands, rough, thick, hairy, cracked, tarred and able, looked to be very dirty indeed, but the knitted yarns that came from their swift and sure handling were as clean as the day they were spun.

If the men asked him what he was making he gave them elusive replies. "It's a curtain to hang over the sun." They had not seen the sun for a week. "It's gags to put in the mouths of them as asks too many questions." "A nest for flyin' fishes." "A net to catch suckers."

But for all his watching of Mrs. Haithway, his pursistent knitting and the thousand and one calls of his profession, be did not neglect Bowers and the Bowditch. Bowers was with him so much that he must

have known what the long ivory needles were making. Indeed, porhaps in emulation of his idol, he had begun a slow and cumbersome work of knitting of his own.

The book might lie between them, kept men by weights.

open by weights. And with constant reference thereto they spoke in voices containing already glimmerings of understanding ing already glummerings of understanding of sines and cosines, of fixed stars and faise horizons. The whole ship's company took an interest in their progress. Mr. Tuttle, who grew paler and graver day by day, took a kind of feverish pleasure in answer-took a kind of feverish pleasure in answering questions and explaining difficulties. Captain Haithway loaned them his spare sextant, and worked over it with them until it was in perfect adjustment. The cook, of all people, presented them with a ledger.

all blank except for the fly leaf upon which some friend had written his name for him, and with a patent pencil which in his hands, as he natvely put it, would do almost any-

thing except write.

Those doubts and mysteries of adolescence which had so troubled Bowers, under the earlier spells of Crandle's teaching, had by the same teacher in his reformed mood been dissipated and laughed to scorn. Without directly taking back anything that he had ever said to the boy, the strong man was able to throw over those same sayings

was able to throw over those same sayings a new light.

The God of the Bible and of the preachers still met with his contempt, for he denied stoutly that God was God.

"It's as if a man who didn't know how to add or substract was to write a trigonomity," he said, "and pass it off on men more ignorant as hisself for genuine." But he affirmed Christ. "Maybe He was God," he said, "and maybe He weren't. But you never heard a strong man snear at him and said, "and maybe He weren't. But you never heard a strong man sneer at him and you never will. As for me, I don't sneer at God, I only sneer at the men who are so bumptious they think they can explain Him and hose Him. Here, let me show you." He took the boy's rude knitting, picked up the lost stitches with wonderful definess and expedition and returned it to him. "Try to get the feel of it in your fingers, same as a girl plays love music on the persame as a girl plays love music on the persame as a girl plays love music on the per-anna without havin' to take her eyes off her beau.

"Speakin' o' love," began Bowers.
"Well?" said Crandle, his agate eyes
roving toward Mrs. Haithway, who had
just emerged from the cabin on her husband's arm.

"Was you ever in love, Crandle—hard and fast, I mean?"
"Yes," said Crandle curtly.
There was a long silence.
"I often wonder," said Bowers at length,
"what bein' in love is really like. One man

says one thing; one man says another."

"It's like nothing," said Crandle, "that any man has ever said or ever will say, so what's the use o' talkin'? Some day you'll think you're in love, you'll think all the things you ever heard men, aye, and women say—well, you laugh and go shout your business, even if it burts. But another day you'll knew you're in love."

you'll know you're in love."
"And then, I suppose," said Bowers, "you have to go about your business just the

same."

"No," said Crandle, "then you have to do your duty, even if it kills you—and there's the captain's lady callin' me."

He stuffed needles and knitting into his sewing bag, and rolled swiftly aft on his strong short legs. He stood looking dawn into the bright eyes that peered up at him from the deep hood of the great sea cloak.
"Crandle," she said, "I'm just dying to

know what you're all the time knitting, so I just had to ask."

"Oh, cometimes one thing," he said,
"sometimes another."
"But right now, what are you on now?"
He covered the lower part of his face
with one hand and stood for a moment, reflecting. Then withdrawing the hand and disclosing a smile of almost bewildering gentlemes:
"Why," said he, "I'm knitting a blueand-white jacket for a baby."

It is a shock to any woman to learn that her first and greatest secret is common knowledge; but Mrs. Haithway's brave eyes never fell before the hoatsteerer's.

"How good you are at heart, Crandle," she said, "and how kind and thoughtful. Is it for my baby?"

"For yours," he said.

"Crandle?"

"Ma'ann?"

"Ma'am?"

"I love to think that you are knitting things for my baby. I'd love to think that sometimes you are praying for me. A woman at sea no other woman only men—she—she has her little fears, her silly little panies, Crandle."
"When it's my watch below," said Crandle, "and sleep gets me, so as I don't

Crandle, "and sleep gets me, so as I don't know what's going on in the world, then and only then I stop praying to God that

all will be well with you.

After a moment more, with no word spoken, he turned upon his beel and went back to his place against the try-works.

ACROSS the top of the ledger in which he was keeping the log of the voyage, Mr. Tuttle wrote at this time in large red

letters: Outward bound and still off Cape Horn.

Then, in black ink, the date and the following entry:

Regins with gale still blowing from the south-west, mixed with flurries of sleet and snow. Edmonton, a hoatsterrer, died of gangrens.

Then Mr. Tuttle drew in the margin a black coffin like this:

and then he went on deck to help them commit the body of Edmonton to the

deep.
Two weeks later the Mary Blount stagto nose about for whale in the pleasant to nose about for whale in the pleasant pastures of the South Pacific. Here she met presently with the B. D. Morgan, out of New Bedford, and now homeward bound with all her casks full and a fine lump of amberesis and se lock and here

with all her casks full and a fine tump of ambergris under lock and key.

The two ships gammed for half a day, the officers and men exchanging visits for talk, news, play and trade. Captain Haith-way wrote some letters for the Morgan to carry home; and received in exchange a letter from the captain of the Morgan to a Miss Smith in Honolulu. United States newspapers, months stale, were exchanged for equally stale copies of the Seaman's Friend, a highly moral sheet published in the Sandwich Islands. Crandle, who was made much of aboard the Morgan because of his dark and interesting record, returned from his visit the proud possessor of an oblong basket, woven in many colors from

island grasses.

This curiosity cost the wicked man several pounds of excellent chewing tobacco and a gaintiet of laughter. "He wants it to pick flowers in." they said. "He's going to give it to Pharaoh's daughter to find in the bullrushes." This shot in the dark was so close to the mark that Crandie scowled and the laughter stopped.

If the gumming of the ships was more profitable for some than for others, it was most profitable of all to Bowers. He went

most profitable of all to Bowers. He went aboard the Morgan, a blushing, overgrown hobbledehoy, and returned a young man inspired with hope and ambition, with a jaw for once tightly closed. "Why," he told Crandle, "the Morgan's second mate, Mr. Coffin, went out as cabin

boy. He took to Howditch same as you and me, and when his chance come, there he was. And I teld him how far we'd get, and he said he hadn't got near as far after overwhelming proof of his new friend's at-tainments. "And now he don't think no more of a false horizon than you and me thinks of bean soup. What's the basket

"Why," said Crandle, "I got some nice bits of wood put away—nara and ebony and such like—and I'm a-going to make a stand for this here basket, so's it'll hang fore and aft and smidships, like the binnacle lamps, and always keep an even keel no matter how the seas run. Then I'm going to take up contribuctions of hair from the men; soon as any one gets his hair cut I get the clippin's. When I gets enough I boils 'em in a kettle and skims off anything that comes to the top, anything in the animal or vegetable kingdoms, and then I takes the hair and dries it, and sprinkles it with orris-root and powder o' cedar, and then I makes it into a little mattress to fit snug into the bottem of the basket. Then I makes up a little set of bedclothes and a piller to match. And a bedspread outer that silk handkerchief I showed you one

day; and _____ do nothing to help!"
Couldn't I do nothing to help!" "With them butter-fingers of yours? ut, yes! When I holls the hair you can stand by to do the skimmin'

At this moment the speaker was interrupted by a great, loud, clear musical shout. from aloft.

"Blowo-ows-Ah--Blo-o-ows."

True to her reputation, the Mary Blount had smelt out a sperm whale, and far off to leeward in the dancing, dazzling sunshine her lookout could see it, loating, spouting and inviting its soul, an island of black watered-silk upon the blue. "Boy," said Crandle, "stow that basket in my chest. And fetch me some pitch to

rub on my hands. Something tells me that the first chance to put an iron in that there fish will be mine."

To enjoy the good things of life and not pay too dearly for them is the general human desire. We make our cigars so fragrant in aroma, so full flavored in taste, that they yield a maximum of pleasure; yet the blend is so mild that they are easy on nerves.

GIRARD

are not merely good cigars; their blend is unique and exclusive, and you will have to try them to appreciate them.

Girard Cigars are made in 14 sizes from 3 for a quarter to 20c. straight.

TIRE MILEAGE CONTEST

FOR EMPLOYED CHAUFFEURS

\$5,000 in PRIZES

WE invite our friends among car owners to encourage their chauffeurs to enter the Second Ajax Tire Mileage Contest, now in progress. The direct benefits accruing therefrom are more careful driving, proper care and consideration of tires, their proper inflation, greatly increased tire mileage life and lessened motoring cost.

The value to car owners of the recently concluded Ajax contest was fully demonstrated in the award of first prize to J. F. Gibney for driving an Ajax tire a distance of 16,783 miles on a Locomobile touring car; the average of 10,323 miles per tire made by the first 30 capital prize winners, and the average of 6,906 miles per Ajax tire made by the total of 208 prize winners.

For all information regarding the second contest, now in progress, address the "Contest Department." Investigate Ajax Tires, for they are better tires!

"While others are claiming Quality we are guaranteeing it."

More than a thousand young people have already earned scholarships largely during their summer vacations. Your boy or girl can do as well as they. Write for details.

BOX 575 EDUCATIONAL DIVISION

THE SATURDAY EVENING POST, PHILADELPHIA, PENNSYLVANIA

He turned and faced the captain. The latter's face was bright with ill-concealed

"Big bull," he said; "ninety barrels if he's a drop.

Crandle was rubbing his great rough salms together and a kind of shiver went through him.

"Not nervous, Crandle, I hope."

"No, sir. But it's the first chance I've had to show anything since you and her gave me a lift in the world, and it seems as if I couldn't wait to get at him, sir."

Captain Halthway laughed like a boy.

"You've whaled enough to know how much hurry there is! But we'll lower the boats presently—presently." And meanwhile, without a thought, they

were parting company with the Morgan. Every pair of eyes aboard the Mary Blount was peeled for a sight of the whale, and even Crandle's heart was stirring with those savage instincts of the chase that are more potent in man than friendship or greed or even love.

"Fluken!" he bellowed. "There goes

(TO BE CONCLUDED)

THE DANCING CARNIVAL

(Cantinued from Page 13)

"Haven't uny-I'm nonunion," said Lionel. "Move, will you? I got a lot to do inside.

"Well, we ain't workin' with no scab-see? So if you can't flash your T. M. A. card, this show's out o' luck, kid. Come on boys! Let the scab set the stage!

A transfer company's wagon blocked the alley as the striking stage crew left it, and Lionel, deliberating on the steps, heard the word scab repeated loudly. Then:
"Drop the baggage off right there, Andy, an' come on! You'll be in trouble with the Teamsters' Union if you don't."
The bump of a trunk on the paved side-

The bump of a trunk on the paved side-walk followed this threat.

"Here, you deliver that baggage at the door or we'll sue your comp ny " yelied Lionel, boldly dashing forth; but the trunks came burtling down, for Walden was

The stage crew walked off and the two transfer men stolidly unloaded, with Lienel violently impugning their uncestry. When the wagon was emptied they drove away, still silent under his taunts. The last trunk was Goldie's and the sight of it soothed Lionel. He dragged it through the stage door, then groped for the switchboard as there was no light. He located dressing rooms by the musty odors of grease-paint, and a trail of fresh cigarette smake led to the switchboard. He pulled out plugs by the light of a match and succeeded in illuminat-

ing the auditorium.

When he had the dressing rooms lighted he returned to the trunks in the alley and, for Goldie's sake, brought in her partner's trunk. Bologna's he left; but as Daisy was always kind he lugged hers to room number three. There seemed to be only himself in the theater-until he went to the front, discovering a youth yawning in the box office.

The youth said he could use the phone if he wanted to; so Lionel called the hotel selected for the company by the advance man. Manager Josepha had registered and gone out. Every one but Fanny Willetts

was out, and Fanny said:

"We're up in Charlie Benjamin's room
an' Gene's puttin' but towels on him while
I'm fixin' the medicine! Sick—my dear, he
et a canned crah in Newtown an' he like to
'a' died before we got him to bed! Oh, he
can't direct that orchestra tonight, Lionel, he's all in; an' we'll have to use the house leader for this once. I dunno where any one is! Goo'-by!"

Lionel carried in set pieces and trunks, and investigated the resources of the property room. It was seven-thirty. A non-union crew must be hired and the house leader informed that he must direct in place of the ailing Benjamin. The box-office youth declared that all be knew was that his father, the house manager, was in Fall River and had told him to see that companies got no more than their just percentage, and to take his clicker to the gallery door when the tickets were all sold. He did not know any sceneshifters or electriciansdid not know why every one was late. As Lionel furned Vera Kelly entered the stage

door, asking what was the matter.

"They never had anything over seventyfive-cent vod'ville over this circuit before, an' we blow in an' ask 'em two a throwan' the stagehands have struck 'cause I ain't union—an' Benjamin's poisoned— ain't that enough?" he grouned. "Not a soul to help an' this stage to be set—huh?" "I say, gimme a hammer an' tell me what to do," said Vera. "Nobody's killed yet."

Lionel was tacking scenery to battens and he accepted Vera's help apathetically. He reflected that, unless the performance could be given as usual, his enemies would have such cause to reproach him that Goldie might turn against him too. When Vera,

snatching a square of sylvan dell, tacked it upside down, he enarled:

"Now here; things can't be hashed up like that! Are you blind?"

She untacked, meticulously matching a painted tree to the half he had just put up. Weak tootles from the musicians' room

under the stage sent Lionel flying there. Then the tootles ceased, a faint cry of Scab! sounded from the alley, feet tramped out of the stage door, and Lionel roared:

You better beat it or I'll punch him

harder!"

"Oh, Lionel! What'd they do? What'd you do? Are you hurt?" screamed Vers; and Lionel, breathing like a winded dog. replied:
"I hit their cursed leader in the eye!

Sympathy strike now on. We got no music, no crew, no nothin'—as' I got to watch the trunks so they don't wreck 'em! That'll be the next thing."

With a stagebrace he was menacing three burly strikers when the Happy Harmonists came running to his aid. Gene and Fanny Willetta, Inez Kelly and little George Graf-scurried across the street, and the six Dif-ferent Dancers tempestuously detrained from a passing trolley car. All were willing to make up for having dallied by fighting to the death if necessary, and the strikers had retreated when Vera came out, bearing a

fire-ax.
"I'm comin', Lionel! I got an ax!" she shouted; but her sister Inex caught be

arm, exclaiming:

"Vera, you're makin' a fool of yourself about him! He's a nut over Goldie and you ought to realize it—and yet you don't. You'll never get him. Here she is now and

You'll never get him. Here she is now and you'll see where you get off at!"

Goldle was demanding the manager—house manager, then; or Johnny, or the electrician. Something must be done instantly! And she tartly asked Gene Willetts, the stage manager, why he was not doing it. "Here's Mr. Lamotte doin' ten men's work an' fightin' strikers as well, an' others merely stall round an' look wise!" she said excitedly. "Mr. Willetts, you get a gait on—d'you hear me?"

"Gene don't have to take no orders from you, Goldie Dailey," said Fanny Willetts. "Don'tan' won't—orwe'll closeright here!"

you, Goldie Dailey," said Fanny Willetz.
"Don'tan' won't—orwe'll close righthere!"
"Lionel, I'm dependin' on you, as people behave like perfect rummies!" said Goldie hysterically. "I own a piece of this show, an' the house is half ful; an' we don't knock our tour by givin' the money back!"
"I can set the stage an' work the lights—we can go without the spot for once," said Lionel, his heart leaping as his lady voiced her dependence on him; but Goldie cried:
"We gotta have a spot! I can't work

ber dependence on him; but Goldie cried:

"We gotta have a spot! I can't work
without one! And the orchestra — Oh,
heavens, what's to be done?"

"I'll chase a boy over for Benjamin's
address book. He must know some muscians here that ain't in a union," said
Willetts. "Buck up, Goldie!"

"Her insultin' you an' you stand for it!"
said Fanny Willetts; whereat her bushand

said Fanny Willetts; wherent her husband

Shut up! Goldie's all right."

"I can quiet 'em with a piano overture," proffered Lionel; and Goldie said:

"Lionel dear, I can't thank you here—it ain't the place; but when we're alone——She looked severely at Vera, who slunk away to dress. If Lionel could look at Goldle as he had, Vera thought that Goldle must respond by gladly giving him bet heart. Who could resist him?

The poor girl left raw splashes of red where the color should have been softly blended and tears made her rouge paw us-less. Lionel's black eyes were in her glas-instead of her own, which were as black. If she owned mink coats and jewels, bright

yellow hair and fine gowns, would be like ber then? It was not fair for Goldie to lure him with her pursy eyes. For the first time Vera wished berself a blonde.

"You keep on an' you'll be sick," warned Inet, putting the small Graff to bed in the tray of her trunk; but Vera said she did not care if she was - no one else cared, either.

"I'd catch myself moberin' over that kid!"

said Ioez angrily.

"He's older'n I am," said Vera; and she wondered why he had told her of the play he meant to write, and the great part in it that her personality would fit, and the din-ners they would have, and then forgotten

She had stopped exchanging letters with a rising young hoop roller, and in her mind she began to mother Lionel—to fret if his delicate throat was uncovered, and to plan for another season, when they would travel as a team, domestic and professional. She would take her Persis you a values table. would take her Persian rug, a velours table-cuver, some dishes and all her photographs out of storage even her encyclopedia.
One could make the dreariest one-night-

stand room homelike in a few minutes. She stand room homesize in a few minutes. She would cook a hot little supper for him after the show and stitch silk shirts for him that should be as fine as Johnsy Trippit's. Did he not know how headliners were — how they forgot as easily as he had? She clenched the hands, so ready to minister to Lionel, and tried to wish that Goldie would not flout

tried to wish that Goldie would not flout him and cause him suffering.

Because Johnny and the manager had come and urged her to dress while they settled and improved the situation, Goldie was in her room. She was thinking of Lionel. How versatile he was! Johnny had actually admitted that the stage was properly set, and that the dozen labors performed by Lionel were excellently completed. A male friend of a Different Dancer had viewed Lionel daring the strikers to had viewed Lionel daring the strikers to combat. He was a hero—and all for her! "Say, dearie, I had 'em fry a couple of

"Say, dearie, I had 'em fry a couple of those chickens, so's we can have 'em cold after," said Daisy, popping in. She wore a frizzy brown wig and a green-and-white chiffon dancing costume.

"Oh, goody!" said Goldie, powdering her aboulders. "It's so seldom they're restly nice—an' you could actually eat the legs of the one I had for dinner."

"Charlie didn't know of any pianists here. We might have to cut this data," said Daisy; and then she cried; "Hold on—she's not ready! Who is it?"

"Lemme in—I got to see her!" said the voice of Bologna.

voice of Bologna.

Goldie whisked a robe about herself as be entered. He was pule and his small eyes blinked, which with him was a sign of m-

"It's private," be said, blinking faster.

"It's private," be said, blinking faster.
"Daisy an' me got no secrets—for mercy's sake, speak!" said Goldie. "Oh, Fred, what is it? My grief, that woman pirate ain't put our act on? My, I'm chakin'!"
"Goldie," said the juggler hoursely, "prepare to git a wallop; an' if you hadn't rassed me when I had the pneumony I—but can that! I'm Johnny's pal, but I won't weaken on you—well, will you kin'ty smell these here. John found the woman, but she won't tell where her partner is. They're Bolton an' Bolton. Smell these here."

here."

"My letter!" gasped Goldie. Then she snatched at the mauve sheets in his fingers and Bologna allowed her to take them. Daisy smelled curiously. "Both the same, so far as I can tell," said she.

"Yup! They are," said Bologna heavily. "Here's the notes on the snowshoe dance, nicked up in the other theater. Here's a

picked up in the other theater. Here's a note wrote to Golfie by Mr. L. Lamotte on a double sheet turned inside out—an' he didn't notice that the inside's a letter."

The back of Lionel's message was covered with writing in a slanting, feminine hand. With growing borror, Goldie read it aloud:

Dear Mr. Smith: We have a swell new dancing art for the Australian-Oriental time, and think we ought to get two bundred, as my bushand has an original dance un snowshoes that is a big feature. We open with full stage-a winter set-and carry our own drop, and close in one with him duing a buck on his hands, while I -

"She's Jainting! Water—but don't spoil ber make-up!" cried Daisy; but Goldie sluded Bologua's arm, declaring: "No, I'm. not! Listen! Do you figger that Lionel joined merely to study our methods an' that the party in this is his wife?"

Bologna nodded.

Striking testimony to the economy and incomparable quality of L.& C. Hardtmuth's

'KOH-I-NOOR' PENCILS

I have noticed an advertisement of yours wherein you relate the experience of a user of "Koh-i-mor" Pencils who found one pencil to last seven years. I do not doubt it. Had my own experience not included the "Koh-i-noor." I tell you frankly I skould have doubted it. I use the 4 H. grade because I draft continually on very coarse paper. I used to get pencils at half the price, but they only lasted a week, and frequently fell short of that. The "Koh-i-noor" lasts me have months. Now it is a simple marter of arithmetic to show that your make yields me at least 400 per cent., and very probably 500 per cent, to say nothing about the saving of time in sharpen-ing the pencil. Further, I experience a pleas-ure in the velvety smoothness of the lead which is one of those little luxuries that add to the chances of good work. I get my pen-cils from the Lechertier Barbe, of Jermyn Street, S.W., but my sole object in writing you this is to endurse what the architect wrote you, and to say that "Koh-i-nour" pencils provided a man has the common gumption to use the proper grade for his work are infinitely cheaper than "cheap" pencils and vastly superior to work with. And another virtue—if one drops a "Kalt-inoor" to the Boor, and that point downwards, as, of course, they always seem to do-they do not break,

You can make any use you like of this. My only desire is to make a good article known, and to suppress the rubbish.

NOTE !- The paper used by Mr. England is of a very rough nature, and tests the pencils in the severest possible manner-

Fred Medart Mig. Co. St. Louis, Mis. "I told you his head was the wrong shape, dear," said Daisy. "The scoundrel?" "I ain't let John in on it yet," said Bologna. "He ain't fit for it—what with

no music an' Josephs goin' to give back the coin. It's heartbreakin'! An' our carryin'

that non-union pup along's responsible."

Goldie jumped up. She reached into a suitcase, withdrawing a revolver of useful

caliber.

"Quick—there's Linnel outside! Get him in here!" she hissed.

"No shootin"—I'll deal with him," said

Bologna, holding the door; but Goldie was smiling as she said she did not intend to

Bologns hoped she would never turn that revengeful smile on him! He summoned Lionel softly and the latter unsuspectingly walked in. Goldie had put the weapon

under a towel.

"We've tried every place and they're going to return the admissions," said Linuel andly. "Can't give a show without some music."

music."

"We're goin' to have music, Lionel Lamotte," said Goldie, and her tone was whiplike. To Belogna she continued: "Run an' tell Mr. Josepha that Mr. Lamotte says he'll play the whole show on the plane, an' to give back a single bone!"

not to give back a single bone!"

"Why, Goldie, I can't! I don't know the music well enough," faltered Lionel.

Daisy had slipped out. She reappeared and with much resolution displayed a revolver like Goldie's. Bologna was good.

Goldiersevaled her revolver, and she pointed to straight at light or the straight of it straight at Lionel as she said, still smiling:

"Study for drama in the 'lenely spaces,' will I." Australia an' the Orient, maybe! I admit I was fooled—any one is if they be-lieve in parties an' ain't expectin' een to turn out a perfect wretch! An' you was goin' to end by bustin' my show! "Goldie, hear me! Goldie!" cried Lienel; but Dulsy and Goldie shouted in unison:

Keep still?"

Lional shork, and it was scarcely a proof of cowardice, with two carelendy handled automatics aimed at him.

You'll play an overture, an' then you'll play the acts an' the revue; an' you got Trippit an' Dulley to recken with when you're done!" he was promised.

And, as if hurt, amazed and rendered alriect by events, Lionel was led out by Bologna, who reported that Josephs thanked Mr. Lamotte. Then the juggler borrowed Daisy's revolver and commanded;
"Hike! An' if you play any of my musi

wrong I'll bounce a weight on your boan!" Fifteen minutes after the advertised lour an impatient audience observed a thin, dark youth in evening clothes come out of the slide by the piano. He commenced a brilliant medley, in which Mozart and the countless Von Tilzers, Wagner and Berlin, Chopin, and Lionel's own works were reck-lessly ragged. The audience liked it, but their apprehation did not make the artist seem less melancholy.

The Sisters Kelly opened the bill, and Vera wondered why Goldie and Daisy were in opposite entrances, looking so strangely at Lionel. Inex became coraged when Lionel did not repeat the vamp of their second song, but Vera yearned to jump down and help him puzzle out the lead sheets. How could they expect him to play a hard show like this at a minute's notice? She was doing the Kelly Walk when she heard him say:

"Find out whether those guns are loaded!"

Vera could not answer until abe was again in the center of the stage. Then she queried us he glanced up because the dance had changed time: "Guna!"

"Yes, guns! Find out!" he said, almost in a whisper.

Inez did not hear him. She sent a hasty look at Daisy, whereat Duisy instantly and ullyan Vera danced toward the other entrance.

Was it Johnny who had a gun?
"Oh, who'd you mean?" she quavered;
and under cover of the music Lionel said: 'Look in the upper box an' see is that Sam Devine last season's d'rector for Smoke's Minstrels."

The act was finished before she could be certain. Then she nocided; and Lionel nodded back so significantly that Vera was sure Sam Devine had the guns and was seeking Lionel's blood! And why-why should Sam Devine want it?

Your bit's got to be cut, with him playin'," said Johnny, finding Goldie still on guard. The revolver was concealed under her white satin coat. The Razor that takes the H out of SHAVE 500 SHAVES GUARANTEED FROM 12 BLADES Auto Strop Strops Itself

MARK OWLT ST. THE O. & W. THUM CO., Grand Rapids, Mich.

"I'm glad it has," said Goldie through her little white teeth; and he was so gratified that he remarked:

"I'll give a feed after we're done—an' ast Lamotte. He's doin' swell!" The Happy Harmonists had four min-utes without music—sufficient rest to allow Lionel one cigarette. He signaled Daisy, who motioned assent. Bologna met him as he emerged from the slide. "Say! I miss three balls to work up ex-

citement, an' I got to be ketched with a crash for each of 'em. An' if I ain't—beware!" growled the juggler.

"So you knocked me with her, did you?" exclaimed Lionel desperately. "You're a

fine ——"
"Fred—time!" came Daisy's shrill voice, and Bologna berded Lionel back to the slide.
The planist had to lay half of his body on satisfactory crash when The planist had to lay half of his body on the keys to make a satisfactory crash when the Terpaichorean Juggler, in his fleshings and gilt boots, missed a few burnished cannonballs, then caught the rest on the back of a hairy neck, rolling them up and down powerful arms. Lionel's wrists ached from the unusual strain of continual playing; but when Goldie was on for the snowshoe dance be livened. She did a startling split on the big shoes, and while she faced him he pleaded, playing meanwhile:

"Goldie, what you accusin' me of?"

"Traitor!" hissed Goldie, smilling for the front rows as she rose expertly. "I'd rather be dead than dence that pantomime with you again! I was only comin' you along about the drama—never meant one word!"

Lionel, stricken, missed a rue. While Trippit and Dailey took their bows an unher—a non-union man discovered by Man-

usher—a non-union man discovered by Man-ager Josepha, who was operating the spot-light in the gallery—informed Lionel that a Miss Kelly had seen the gentleman in the box, and he had no guns.

"She got it mixed," said Lionel. "Tell her—no, tell him to take this front-row seat that's empty, behind me."

The revue was going on when a stout young fellow quietly occupied an end seat and, leaning over the rail toward the piano, said: usher-a non-union man discovered by Man-

"Hello, Li! What's comin' off, any way?"

"Hello, Li? What's comin' off, any way?"
Lionel missed another cue, then played two heats ahead for Johnny's buck with the comedy policemus. Goldie felt for the weapon hidden in her grown and Daisy determined to support her friend to any extent.

"That fat man's playin' for Lionel!" said Inex Kelly at the table in Goldie's rear.

Lionel was gone!

Goldie sat at a table placed so that the whole house could see her. It was her inalienable privilege as a headliner to be there. And Daisy, as the show's added attraction, was nearly as prominent. Neither of them could leave the stage; and if they did not apprehend Lionel he could excape. And what would Johnny say to Goldie for keeping the secret that Lionel was that loathsome thing—a chooser, with a wife of the same acquisitive nature? They might get away to Australia with Trippit and Dailey's act before they could be caught!

Bologna was doing comedy with Johnny and Billy Graff, and the ramedy was to be prolonged because the violin number was out; so he was helpless too. The substitute began the partomisne's music—be did not understand that it had been cut! Willetts, the stage manager, was wigwagging to him, and yet the man, with a little smile, calmiy

the stage manager, was wigwagging to him, and yet the man, with a little smile, calmly

and yet the man, with a little smile, calmly repeated the introduction.

"Get out on that stage an' dance or I'll crab this show so you'll cancel the rest of the territory," said Lionel in the entrance back of Goldie. "We'll dance now if we never do again!"

"Not with you.—I'll shoot! See if I don't!" said Goldie, athrill. Even a manager would have feared to order a headliner. The music was insistent.

"Shoot nothin!" Get out there or I'll

"Shoot nothin"! Get out there or I'll stop the piane an' put the whole works on the fritz!" said the ferocious Lionel in her

Goldie plucked weakly at her dress, but she dared not attack a man who was so plainly ready to smirch the record of the first two-dollar vaudeville company in New England. She tried to call to Johnny and found him motioning her to hurry, apparently pleased that he did not have to improvise comedy for another fifteen minutes.
"I can't—I won't! My work'd just be rotten an' metallic!" she protested.

Lionel's hig eyes glared and with a savage push he sent her from her chair. Then Goldie danced, revolted at herself, at him. at everything, but still conscious that when one owned a percentage of a show, and was

a headliner, too, sacrifices must be made When the audience recognized their zealous when the audience recognized their zealous planist in the dancing violinist who so energetically wooed the lovely blonde lady they gave him noisy applause.

"Lemme go! Lemme go!" panted Goldie as Llonel clutched her for their exit.

"Connin' me, were you?" he said hotly.
"An' then ready to shoot me besides!"

"Been la lite you're your mile counts he

"People like you'n your wife oughts be shot!" choked Goldie as they walted up and down later, to which Lionel said. astonished: "Wife! What wife?"

The dance was too strenuous for further conversation. When they waltzed of locked in each other's arms Vera gave a moss. She understood that something was wrong between them, of course, but it looked to be as though a reconciliation had been effected This was a mistake.

The clasped ones unclasped and rusted out to take their earned plaudits. Sam Devine gayly played the balance of the show, Lionel sat moodily at a table as one of the stage guests and the drop fell while they all danced Good-Night Rag.

"Goldie, you got to explain that crack about a wife!" said Lionel, facing the company as the curtain thudded down.

"Chooser!" screamed Goldie, queenly despite perspiration. "I depise you for one—also with a choosin' wife—an' for lyin' about your old play!"

"I ain't married an' never was, an' I never chose nothin'. An'I can write a play but it won't be for you!" cried Lionel.

"Pro'bly you never lamped this here before!" interposed Bologna.

"I won'tsend her any more," said Lionel. spurning his mauve note. The clasped ones unclasped and rusted

sparning his mauve note.

"But what's this all about?" demanded Johnny. "Me an' Fred found the weman who was stealin' our stuff, Goldie. Lamotte

ain't guilty."
"That there woman's this guy's wifeBolton an' Bolton," said Bologna. "He's
Bolton!"

Bolton an' Bolton," said Bologna. "He's Bolton!"

The company drew away from Lionel. Daisy warned her dancers from him as from a postilence. Inex Kelly declared that it did not surprise her a bit, but Vers stepped briskly forward.

"Him Harry Bolton?" she said contemptuously. "I saw Harry sittin' in the window of the Noble Hotel here tonight. He's no more like Lionel than I am. An'll Goldie Dailey's been after Lionel with gunsan' callin' him a chooser when he ain't, be ought to have the law on her; an' I say so, if she gets me canceled tomorrow—as tonight!"

"I—I truly beg his pardon," stammered Goldie. She looked appealingly at Johann, who winked at her as he suggested:

"Let's all have that feed I was talkin about—an' nix on the hard feelin's."

"Please! Please come. Lionel!" said Goldie. Her pansy eyes were very sweet but Lionel would not see them.

"I got a date with Miss Kelly," said he. "We're goin' to talk over my play!"

Music en Routs

NAT GOODWIN was sitting in the Lambs' Club one evening not long ago, when a friend who was in trade approached

when a friend who was in trade approached and offered him a cigar.

"Nat," he explained, "this is a new cigar we're just putting on the market. I wish, as a personal favor to me, you'd try it and give me your opinion of its merits. To introduce it generally we are making special premium offers. If you smoke five bundred of those cigars you get a silver-mounted safety razor. If you smoke a thousand you get a band-sewed traveling kit. If you smoke ten thousand of them you get a baby grand piano."

baby grand piano."

Goodwin lit the gift cigar and puffed at it gingerly. Then he laid it aside.

"If I smoked ten thousand of thesthings," he said, "I wouldn't need a piano. I'd need a harp." I'd need a harp.

The crowd laughed. Only one man, and English actor, sat silent and unmoved Presently be got up and moved away to a quiet corner, where he remained alone he some time deep in thought. The next do

he stopped Goodwin on the street.
"I say, Mr. Goodwin." he began with a chuckle, "that was a deuced clever that you said last night—about those cigars mean—frightfully clever! I've been muling it over in my mind and I get your mea'r ing. Of course, traveling about as you is a plane would be terribly in your was wouldn't it?"

'em! Heaven love 'em— To the turrets and the portholes, bearing boose and boose and boose.

Fell a splash of liquid thicker than Niagara flowing liquor— All along that line of battle such a gurgle,

such a spray!

Spurted lofty founts of sperrits from the con-

ning towers and turrets
Till Pa Neptune, rising upward, quaffed the
sea and yelled: "Hooray!"

And they say, from so much calloused waste of stimulating ballast. That the ships rose many feet, sir, up above

the water-line;
While the ships' hands made endeavor to play up; "Farewell Forever!"
But the fishes warbled; "Welcome!" as they bicouped through the brine.

Whales and dolphins, sharks and sculpins started in a greedy gulpin' And they acted most peculiar for a week

or even more; And near Newport's naval station was a temperance delegation

Who went seimming, tasted somethingand refused to come ashore!

But, in Washington, Josephus to the King smiled blandly: "Reef un!

Now's the time to start a war, Sire, and our tary il do it right. That's my rule, Sire: Irritate 'em and you'll

quickly elevate 'em To the maximum efficiency—they're mad enough to fight."

IV-LAST CHANCE CHANTEY, CHANTED BEFORE THE KING BY SIR HAM LEWIS, SOMETIME LAUREATE

Thus said the Lord of the Battleships and Admirals,

Speaking in the officers, all quaking in their shoes:

"Lo? the rules have passed away In the drought of Temperance Day That our Party may be strengthened, shall I gather up the boose?"

Then up spake the tars of the battleship Connecticut:

Connecticut:

"Plague upon the burricane that blows us nought but dry!

Now that war's begun between us.

Kill old Bacchus, murder Venus;

And there's nothing but a hymn book now to make us fight and die."

Then said the stokers on the good old collier

Jupiter, Balancing their scuttles, which were former full of beer:

"We who warmed the engine thuds Dipped our beaks smid the suds— And the proper place for water's in the builttub once a year."

Then up sang the ghosts of the heroes of

Then up sang the growts or the nerous or antiquity:

"We fought with Drake and Farragut; we followed Nelson's log; Bullets broke our gallant hones. As we stood by John Paul Jones.— Was it up to these commanders to deprive

us of our grog?"

Loud roared the souls of the Spanish-Yankee VETERADS:

"Have a heart, Josephus! Kindly harken to our views: When we thrashed 'em at Manila

There was little sursaparilla Drunk that night in celebration as a sub-

JAMES S. KIRK & CO., 346 East Austin Avenue, Chicago, U. S. A.

A dismal holiday or a bright one?

Are you planning to while away all of the golden hours this vacation? Thousands of bright, active young people, away from school or college, will idle away the summer simply because they have nothing particular to do with it. The Saturday Evening Past has something very particular to suggest to you and something even more particular to offer you for doing it.

All of you can turn these weeks or months of idleness toto shining dollars by accepting our invitation.

To any young person or, for that matter, to any older one, we will pay a liberal solary for looking after our renewals and for introducing our publications to new readers this summer, besides a commission on each order sent. Your only investment is the whole or a part of your spare hours. Last summer hundreds of young men and young girls had a happy summer and full pockerbooks as a result of accepting a similar invitation made then They will do it again this year and you can join them if you wish to do so. A letter of inquiry will bring full details and everything necessary. Address.

But 526, Agency Devences

The Fakers

(Continued from Page 23)

Chittlings laughed. "I admire your principles," he said, "but don't think much of your judgment. Good day."

Hicks went unsteadily down to his office. He sat for an hour wondering why he had juggled the amounts with Rollins as he did, and could give himself no reasonable or rational explanation. It seemed to him that Chittlings had gone into the very inner recesses of his mind and dragged out the knowledge of some subconscious impulse he had. He couldn't understand it, and he

was abushed and ashamed.

He saw Rollins several times during the next fortnight and talked politics. That fervid Democrat, immersed in his writings and his organization work, did not refer to the Barkiss claim, nor did Hicks. He devoted himself to discussion of the principles voted himself to discussion of the principles of Democracy and to inquiry into the chances of a new member of the party for getting a nomination. He didn't put it exactly that way, for he did not want Rollins to think he had an ulterior motive for his inquiries. He approached the subject from various angles, asking about former campaigns and the men who had been named for the offices. Nominations, he found, went begging. It was hard work to fill the ticket.

ticket.

"I'll put you on for something next election, if you like," promised Rollins.

"Oh," protested Hicks, "that would be too presumptuous on my part. I couldn't think of it."

"It'll be all right," assured Rollins. "I can guarantee that. I had a run for every office in this part of the state, from dog catcher to state senator and member of Congress, just to make the ticket whole. I'll fix it all right. It won't be any trouble. We'll be glad to have new blood. Of course," he added, "you won't be elected to anything, so it won't interfere with your work."

work."

Hicks didn't like that, but he remembered what Senator Paston told him and decided to play the waiting game. It had become known be was a Democrat. The banker, Pendleton, spake to him about it one day. "I hear you're a Democrat," he said. "I am, a Jeffersonian-Jacksonian Democrat," Hicks replied with much fervor. "What's the object?" asked Pendleton. "The object? I don't understand you." "I mean what's the joker in it? How comes it that a young man lights in this Republican community and begins the practice of law and affiliates with the Democratic party, when there is no slimmer, more hopeless political outfit in this Union? Why not be a Republican?"

"Mr. Pendleton." Hicks replied with a pained note in his voice, "I have faith in Democratic principles. How could I bring myself to abandon those principles for a most territorary.

myself to abandon those principles for a mere temporary advantage to myself? Principles are higher than men, Mr. Pendleten, higher than anything else, to my thinking. I am a Democrat because I believe in the tenets of Democracy, and for

"Excuse ms," bagged Fendleton gravely;
"I didn't know but you might have political ambitions. Most young lawyers have,

"My only ambition," spouted Hicks, "is to serve my country and my party, humbly fighting in the ranks to correct the great abuses the present maladministration of government affairs has lastened upon us." "I think," said Hicks to himself as Pendleton left him, "that will hold him for

Hicks sensed difficulties, nevertheless He knew the big business interests of the city and county, the interests that provided the bulk of the law work, were solidly Republican. So too were the banks, with the exception of one, a state bank in which Rollins was interested. He had thought be detected antagonism to his Democracy once or twice when talking to business men, and he soon discovered that in communities like Rextown men take their politics seriously and are partisan even to the distribution of their business favors, although exceedingly conpartisan when there is anything in it for themselves. He considered this end of it carefully and wrote to Senator Paxton about it, who sent word back to him to hang on and not be discouraged.

Hicks secured some minor cases of one kind and another, and established a considerable collection business. He had an insistent way of approaching delinquents

Why soak them and pare them? It brings only brief relief.

Blue-jay will relieve the pain instantly. It will end the corn completely, and generally in 48 hours. It is doing that to about one million corns a month.

The chemist who invented Bluejay solved the corn problem.

Apply it, and the corn is forgotton. It will never pain again. Cently the Blue-jay then loosens the corn, and in two days the corn comes out:

No pain, no trouble, no annoyance. And that corn will never need treatment again.

Old-time methods will not do this. Blus-jay is the modern method that will do this. It has done it for sixty million corns.

Prove this tonight,

Blue-jay For Corns

What kind of a trunk have you; will it last through your next trip?

If it is an Indestructo, you are sure that it will last for at least five years of the hardest kind of service you can give it.

That's our guarantee; five years trunk service, regardless of what happens or how far you travel.

But if you are going to buy a new trunk, what style have you in mind? Have you thought of a wardrobe trunk? A trunk that will enable you to keep your clothes hung up throughout the entire trip as smooth and wrinkleless as they are in your closet at home.

The choice of the right sort of a wardrobe trunk is most important when you consider the tremendous strain to which a wardrobe trunk is subjected.

Indestructo wardrobes embody the famous Indestructo construction and are the strongest wardrobe trunks made.

The box is made of six-ply hardwood vener, strong as a safe. The interior is built to wear. The clothes hangers will not break.

For your own protection avoid wantrobes built to sell at a price.

Remember! You get what you pay for. Every Indestructo wardrobe is made to wear indefinitely, and we guarantee five years of service.

If your trunk is last or damaged of any cause whatsoever, we will replace or repair is free of charge.

If you want trunk service you will buy indestructo.

If you are after low price and the short life that goes with it, let Indestructs alone.

We believe we are morally responsible to our customers for every trunk we sell. Each article is exactly as we represent it.

and a still more insistent manner of letterwriting, and he had some success with the deadheats of Rextown and the surrounding country. He bought a second-hand typewriter and wrote his letters on that, and invariably put at the bottom HML-H, to convey the impression he had dictated the letter to a stenugrapher whose initials were "H. M. L." Sometimes when he wanted to simulate a great press of business he wrote at the bottom of his letters: "Dictated but not read by T. Marmaduke Hicks," and signed the useful initials "H. M. L." to these announcements. He had seen that on a letter he received and it made a great impression on him. So he used it whenever he thought it would have effect coming from him.

effect coming from him.

He went to church regularly, and was impocrable in his enduct and unremitting in his efforts to make the acquaintance of men he thought might be of use to him.

He joined the good government association, the municipal league, the civic purity society, and one or two general literary and culture clubs. Twice he read papers at general meetings of the associated charities, papers he had carefully paraphrased from chapters in a book he had found containing a report of a national convention of these organizations, and these papers had been quoted, briefly, in the local papers. He had cribbed from his material skillfully and was halled as a young man who had high ideals. He dehated joining various fraternal organizations, but decided to hold that in abeyance until he saw what effect such affiliations might have on his political ambitions. He wasn't sure about this and gave the matter considerable study.

Meantime he had toned down his attire to some extent. He never by any chance allowed the harber to cut off much of his hair. He thought seriously of raising whisters, but finally decided he wouldn't, as he was rather proud of his facial lines and considered himself to have a serious and studious look that whisters possibly might destroy. However, he realized fully the decurative effects that might be attained

with a carefully nurtured beard.

He saw Rollios frequently. That arsiable patriot was deep in a controversy with Colonel Cirero Carstairs, a former representative is Congress who had nothing to do but try to make people remember he had once been a statesman in Washington. Material matters did not bother Rollins much, although there were periods when he regularly visited the bank in which he was interested and dipped into its affairs. Rollins and Hicks talked of the fundamental principles of Democracy. Hicks had acquired a vocabulary of Democratic expressions that helped him amazingly, and be kept Rollins in a perpetual state of szaktation by skillful flattery. He had become acquainted with and had cultivated half a dozen other Democrats who were of consequence in the city, and he was soon taken into the inner councils of that flimsy organization and consulted about contemplated action and policies. Most of the men with whom he talked, aside from these Democrats, couldn't understand why a young lawyer, interested in politics, should ally himself with the Democrator in a city like flextown; but Hicks held his pose steadily. He americal his adherence to the Democratic faith, putting forward on every suitable occasion his utter lack of personal political ambition and his intense desire to do something for the common people.

He read the reports of the debates in

He read the reports of the debates in Congress after that body west into session, having asked the local representative to send him a copy of the Congressional Record. He had a quick and retestive mind and it wasn't long until he could make a fair Democratic speech. It was his custom to harangue his Democratic friends at their gatherings in the office of Rollins as long as they would listen. Bollins, who dearly loved that sort of thing, encouraged him, while the others heard him because Rollins urged them to. In this manner Hicks gained practice in political speaking. He took the Democratic contention in a debate at one of his literary societies one night, and by using the patter of the party and a variety of high-sounding phrases about the "rule of the people" and other desirable reforms talked his opponent down and befogged the judges to such as extent that he was given the verdict. Bignall printed something about this for him and gave him credit for "a masterly summing up of the principles of the Democracy."

THE WAR REPORTER

(Continued from Page 16)

but that is about all be will receive in the way of reward. There are no excuses for not getting the wire, and not much thanks for getting it. It is expected. If there is a wire anywhere round it is the business of the man in the field to grab it. If there isn't a wire he should string one. If it takes a day's hearthreaking ride to get to a place where he can send in a story, that is fine. Good boy, but harry right back and do it again. There is no business in the world that is conducted so much on the proposition. What you did to-day is very good, but the important thing is, What are you going to do to-morrow?

When they were fighting at Santiago very little copy came out of Cubu by wire. Most of the stories of the events in that campaign were cabled from various ports miles and miles away. The atmy and the navy needed what wires there were from Cuba, and kept them almost exclusively. Dispatch boats were used by the correspondents, and the game was heartbreaking. Imagine the situation in a possible advance on the city of Mexico. There are not many wires at best, and the struggle to get out stuff will put gray into the hair of many a man, as the failure to get it cut will make grayer many an editor who is howling for news tack boune.

The Japanese and the Russians took along numbers of correspondents with their various divisions, and left numbers of them away behind. They treated the correspondents with the utmost consideration, but they saw to it that they remained at safe distances from the actual warfare and the actual news. As a field for the operations of the war correspondent the war between Japan and Russia was distinctly a frost. So, tso, it was in the war in the Balkara. Not many Americans went to that war, but there were shock of English, German, Russian and French correspondents, and most of these never were nearer than thirty miles to anything of importance. The defeat of Cervera's fiset at Santiago was accomplished with not one-tenth of one per cent of the correspondents in Cuba saywhere near it, and if any special communicators went out anything about the lard battles that was worth more than passing notice I do not recall it.

Rules for Correspondents

So far as the war correspondent is concorred, his job is constantly getting more difficult. Our own War Department has provided a set of regulations that are in consonance with the present-day notions of relilitary people regarding what reporters aboutd and should not be allowed to do, largely the outcome of the rule-of-thumb methods that prevailed in the Spanish War, and in resulty based on the modern military idea of warfare and its newspaper treatment. "It is a fact," says the Secretary of War.

"It is a fact," says the Secretary of War,
"It is a fact," says the Secretary of War,
"that the press occupies a dual and delicate
position, being under the necessity of tratifully disclosing to the people the facts concertaing the operations of the army, and at
the same time refraining from disclosing
those things which, though true, would be
disastrous to us if known to the enemy. It
is perfectly apparent that these important
functions cannot be trusted to irresponsible
people, and can be performed only under
reasonable rules and regulations with respect
thereto."

That is the official army view. Of rourse it isn't so hard in the Navy to hold an impetious correspondent in check. He is on a chip, and he can't get off unless the commanding officer wants him to; nor can be get any dispatches off without permission from that official. A man with an army operating on land can roum about, if he wants to take the chance, and cannot be held in check unless he is put under guard, which might cause a howl about the liberty of the press. That is, a correspondent could so roum about to the old days, but not now. As it will stand if we get into a light with Mexico, he will do little rouning and less

There are various stipulations about credentials in the new regulations, and each entrespondent is compelled to deposit one thousand deliars in cush with the adjutantgeneral of the army, to be drawn against for equipment and maintenance in the field. In addition to this his employers must give bond for two thousand deliars more for good conduct in the field, which, in case his

conduct is not good will be forfeited and donated to some charity by the Secretary

There will be an official photographer with each field army. His films and plates will be sent to Washington, developed there, and prints will be sold to all comers at nominal cost. No professional photographer or moving-picture man will be received, nor can any photographers go in the guise of correspondents. Small hand cam-eras will be allowed, but the films must be sent to the field censor, who will send them to the eensor in Washington. These films will be developed in Washington and the uncensored pictures will be forwarded to any address.

There will be a chief ceesor in Washington and one censor with the hendquarters of each field army. All news or private dispatches, mail letters for publication, private letters, drawings, plans or photographs must be submitted to this censor before being sent, and cannot be sent unless ap-proved by him. No cade words can be used in private or public correspondence, and any portion of a dispatch the remove thinks has a double meaning must be rewritten if the censor demands this. Information concerning names of regiments or commanders, disposition of troops, state of the army's transports, the numbers of the sick, the extent of losses in any engage-ment or any other similar matter cannot be sent if the censor forbids.

No news disputches concerning any occupation or relinquishment of a position, any victory or defeat, and, in fact, any change in the army's disposition may be sent until after the official wire disputches announcing the event have gone to Washington.

The Much-Consored Press

There it is, you see "until after the official wire dispatches announcing the event have gone to Washington." That is why the bulk of the first news reporting of any war we may have with Mexico will be done in Washington, by men who are not at the front at all; and although these regulations were not in force at the time, that is why the bulk of the first news reporting in similar circumstances always has been done to Washington, for there official dispatches

always-take precedence over all others.

The censor controls the telegraph lines within the army, and these official wires are to be open to correspondents when not in use officially. The censor can limit the number of words that can be sent out by each correspondent and equitably adjust crowded conditions. A uniform is pre-scribed, and no correspondents can leave the army unless the War Department al-lows them to go. They must take the eath of loyalty, and must generally behave them-eaves and not leve to got anothers one or selves and not try to put anything over on the censors, or in extreme cases they may be put under arrest.
Thus does the War Department put an

additional crimp in the business of war cor-respondence as pursued by many emisson. persons who are most interested in seeing that the "By William J. Boogin," or "By" whomsoever it happens to be "By," is at the top of the column than in any other feature of the husiness.

To be sure this will give the special comnissioners ample time to compose polished pieces giving their opinions, and allow those opinions to be printed subsequently some time, if they pass the censor; but the news of this war will come from the reporters. and in these days of extras and extra-extras and double extra-extras there doesn't seem to be much hope for the development of another MacGanan or of another Archibald Forbes.

There will be plenty of them there, no doubt, but they will be ornamental rather than useful, and the reporters will do the work both in the field and in Washington. At that, owing to those Spanish War experiences and expenses, still painful to the revollections of the men who run the newspapers, it is quite probable that the number of distinguished literary artists who will be sent to be censored by some unfeeling army officer will be much smaller than in 1898, and for that reason the public may expect more news and less of that sort of thing so aptly illustrated by the opening line in a dispatch by one of our grandest little war correspondents, who started thus: "I always sing when I go into battle.

As Never Before

Men Are This Year Flocking to No-Rim-Cut Tires

Users Increase 55 Per Cent

There are more tire users — perhaps by 20 per cent — than one year ago. But Goodyear tire sales show an increase of 55 per cent. The difference shows that tens of thousands are discarding other tires for Goodyears.

It has been so for years. The better men knew Goodyears the faster our sales have grown. Now —after millions of mileage tests — Goodyears outsell any other tire in the world. Our one-day output often exceeds a whole month's production in 1909. And we are gaining new users faster than ever before.

The Court of Last Resort

This verdict comes from users—the court of last resort. It comes from men who have made their comparisons—hundreds of thousands of them. It comes from men who know tire mileage, for most cars have odometers.

Never will all men agree on one tire. Good and bad fortune, abuse and accidents have too much to do with tire service.

But Goodyear has won more, and is winning men faster, than any other tire. And no other evidence compares with that in denoting superlative worth.

The Four Winning Features

These four great features—found only in No-Rim-Cut tires—are the reasons for Goodyear supremacy.

We ended rim-cutting by a method we control. That method has never been approached. It wiped out for our users the chief source of tire ruin,

We saved blow-outs—the countless blowouts due to wrinkled fabric. We did this by our "On-Air" cure—an extra process which adds to our tire cost \$1,500 daily.

We fought loose treads—reduced this danger by 60 per cent. We did this by creating, during vulcanization, hundreds of large rubber rivets.

We made an anti-skid as smooth running as a plain tread. Made it double-thick and tough equipped with hundreds of deep, sharp, resistless grips. It is called the All-Weather tread.

No-Rim-Cut Tires

With All-Weather Treads or Smooth

These features have saved tire users millions. No rival offers anything like them. So men have bought No-Rim-Cut tires to get them.

Yet 16 Makes Cost More

These tires for years—because of these features—cost more than other standard makes. But multiplied output and new efficiency cut down our factory cost.

Now 16 makers ask a higher price—up to one-half more. And for tires which embody none of our exclusive features.

It's a curious situation. Once you had to decide if No-Rim-Cut tires were worth our higher cost. Now the question is—Are some other tires worth \$5 to \$15 more?

The facts are these. We are giving you the utmost in a tire. We give you four important things no other tire can offer. But we build up to 10,000 motor tires daily. And we sold last year at an average profit of 6½ per cent. Those are the reasons for present Goodyear prices.

If you want these prices and these tires your dealer will get them for you.

TRAVELING DE LUXE

(Continued from Page 27)

the car after the American fashion, and the top of the car above the backs of the seats is mainly open, giving a circulation of light and air, and an effect of spaciousness which no car that is divided into compartments can have. They even go to the length of separating first and second class passengers by nothing but a glass partition—perhaps a dangerous social innovation; and the rower third-class cars have center nisles and a more open arrangement overhead.

Undoubtedly a compartment to oneself, or to oneself and wife—when self and wife are on good terms—or to oneself and friend, is the most comfortable way to travel; but a compartment to oneself and three or loar strangers is quite a different matter. And oneself and wife can have a compartment or a drawing room in the United States for less than the first-class European

compartment costs.

There is nothing in particular about geverament ownership in this; for in France, where five-sixths of the railroad mileage is privately owned—under strict government regulation—and one-sixth is state-owned, conditions of travel are much the same on all lines. True, the best long-distance trains are not on the state road, but on the privately owned lines north and south of Paris. There is little significance in that, however, for the privately owned lines north and south have a much better passenger territory. To compare the North Express or the Riviera Express with service on the state road would be almost as unfair as to compare the hest trains between Chicago and New York with local trains in the Southwest.

As soon as you cross into Germany you strike something that is decidedly significant with regard to government ownership. Practically all the railroads there are sate-owned—not owned by the Imperial inversement, but by the several German states. The state lines of Prussia and Hesse are managed as one system. They give decidedly the best service in Europe, and at the lowest fares when service is taken into account.

To begin with, the German states are the only railroad owners in Europe that have made any attempt to rescue travelers from the international sleeping-car monopoly. That fact in itself would count very heavily in favor of state ownership if it were not for the other fact that state-owned lines elsewhere in Europe rather sick the sleeping-tar concern on than attempt to muzzle it.

Your Money's Worth in Germany

So, to begin over again, you must start with the fact that what sort of results you get from state operation of railroads depends on what sort of state is doing the operating. That Prussia does it with considerable success so open-minded observer will deny.

Though international trains running over Prussian lines carry the sleeping cars of the Belgian corporation, the Prussian road has its own sleeping cars for travel everywhere in Germany. They are good cars, too, better than those of the International concern, with compartments somewhat larger and more conveniently arranged. And the large are decided by lower

lars are decidedly lower.

For example, the journey from Berlin to Basel is only two bours aborter than that from Paris to Berlin. The price of a berth for the latter journey—International Company—is eight dollars and a half. The price of a berth for the former journey—Prussian sleeper—is three dollars and thirty cents.

That is not all the difference, however. The first-class sleeping-car fare of three dollars and thirty cents and a first-class railroad ticket—such as you are obliged to have when using a sleeping car in France or Italy—entitle you to the compartment all to yourself. To get a compartment to yourself from Paris to Berlin you must pay one sleeping-car fare and a half, or twelve dollars and seventy-five cents. Thus, the Prussian sleeping-car fare is roughly one-third of that charged by the International Company for equal accommodations; though even then the accommodations are not equal, for the Prussian cars, on the whole, are more comfortable.

Of course there is only one long seat in such compartment, so that half the passengers ride backward; but that is inevitable in European trains. On the Continent trains have a great habit of changing ends every now and then. You go into a station with the engine at one end and go out with

it at the other end. This may be for engineering reasons, but I assume it is primarily for the purpose of giving all passengers a chance to ride forward part of the time.

The Prussian sleeping cars are cheaper than our Pullman cars, accommodations considered, because the first-class ticket gives you the compartment to yourself. You can also have a sleeping car on a second-class ticket. It is exactly the same car and the same compartment that you would have with a first-class ticket—only with a second-class ticket you must share the compartment with another traveler if there is an applicant for the second berth.

there is an applicant for the second berth.

Take the journey from Berlin to Basel as a typical illustration: First-class railroad fare is seventeen dollars and fifty-five cents first-class sleeper, three dollars and eighty-five cents on a fifteen-hour journey, with the compartment to yourself. Second-class railroad fare is ten dollars and ninety cents; second-class sleeper, two dollars and eighty-five cents—making thirteen dollars and seventy-five cents for the same journey with another person in the compartment.

Of course you cannot get a compartment to yourself in the United States, for a journey of equal length, at the Prussian price; but you can get a berth for about their price.

Soap and Towels Absent

You will notice that the difference between the cost of a first-class sleeping-car ticket and a second-class is slight. The real difference is in the railroad fare. Their first-class railroad fare is rather higher than ours, but usually when they take your firstclass money they give you a good equivalent for it.

for it.

The German first and second class coaches are generally larger, roomier and heavier than equipment in the same category elsewhere in Europe. Their dimensions approximate those of American cars and almost invariably they have a modern leak—as though they had been built within

historic times.

The first-class compartments are quite as large as those in France and Italy, and carry only four passengers at most, instead of six. Thus, even though the compartment has its full quota, you are never crowded, and you can see a tangible reason for charging a premium to ride in one, though in most other European passenger cars the reason for charging a premium to go first class is not visible to American eyes.

There is, of course, the old question as to the comparative confort of a comparative chared with strangers as against an open car. I said a while up that in the compartment you can hear everything your fellow occupants say. I should have made an exception in case they whisper, as did a young couple that I took to be bride and groom, with whom I shared a German compartment for half a day. He whispered in her our; then she whispered in his earwith imnumerable little domonstrations of tender regard, for Europeans generally are so much franker than we are in giving rein to their feelings before strangers. No doubt I should have regarded the little idyl with patriarchal appraval; but, as they were not minding me in the least, and as I was over by the window and they kept the door into the corridor shut, and were, in a manner, between me and it, I was never more pervous in my life.

in my life.

Another time, taking a train at half past seven in the morning, the only vacant place where smoking was permitted was in a compartment occupied by a family party of three—apparently husband, wife and a brother. The lady was stretched out on one seat fast asleep. When she got up to make room for me I rather expected the family party to extract a doormat with Welcome! on it from their extensive luggage and spread it out for me; but, after all, we got on very comfortably.

There are some small incidental things an American might criticias. Of course one never expects soap in Europe, but the expectation of a clean towel, which seems so reasonable to us, is often not realizable on trains. The folding launtory in my first German sleeper was provided with one hand towel. I had occasion to use it soon after boarding the train; and, having used it, threw it on the floor, with an extravagant American idea that the porter would carry it away. What the porter did was to

fold it neatly and restore it to its original place. No doubt he judged that it was not sufficiently soiled, and very likely his judgment was better than mine. Certainly it

I found the toilet rooms in the first and second class German cars always provided with little boxes labeled Towels, but I was never lucky enough to find a towel in the box. What I did find was one of those venerable endless-chain affairs hung on a roller, which you pull round and round in the vain hope of discovering a clean spot. I will say for the International Sleeping-car Company that it sometimes recklessly puts three or four hand towels in the general lavatory at one time; but my experience was that when the dinner hour came round they had all seen service, and the porters have a mysterious way of disappearing that I never could account for. To be sure, wiping one's bands and lace on a handkerchief is no great hardship, but we do not regard it as convenient.

Like everything else in Germany, the curs are well plastered with signs convey-

ing instructions, warnings and prohibitions. Tacked up by the door of each sheping-car compartment is a sort of constitution and by-laws for passengers. Hereath is a sign to large letters to the effect that passengers must take care of their own sleeper tickets, as the conductor is not permitted under any circumstances to take charge of them. Every window all bears a compicuous sign warning you not to lean out the window. There are printed directions about opening There are printed directions about opening and shutting the doors and turning the lights on and off.

Sixty Centr' Worth of Fodder

Your dining-car menu begins with a page of instructive literature informing you what you may and may not expect, and in a general way setting forth your relations as a diner to the German state. It winds up with a caution not to spill your wine on the tablecloth, as wine soils table linen.

the tablectoth, as wine soils table linen.

This sign business, however, is an inveterate German habit. Every taxicab in Berlin contains the sign: "Do not put your fest on the seat cushions. Do not spit on the floor." The sign is no mere idiosyncrasy of the taxicab company, either, but an official matter on the same plate that bears the cab number. In every elevator there is a long official placard describing the duties of the elevator operator and the proper conduct for those who ride in eleproper conduct for those who ride in ele-vators. Sometimes the letter boxes bear an

official warning not to forget to stamp and address your letters before mailing them.

As a matter of fact, this amazing indulgence in signs is merely a harmless literary passion. You cannot heave a brick at the Kaiser or trespass on anybody's else rights; but, broadly speaking, nowhere in the world are you more free to go where you like and do what you please than in Germany. And in relation to travel I consider the signs an appreciable contribution to the passenger's

The dining-car service I may add, while on this leanch of the subject, is as good as that in the United States and rather cheaper, but that is not saying a great deal for it on the score of goodness. On about one train out of ten in our own country can you get a really good dinner. The others serve food. Just food is what the German and other European dining cars serve—plenty of it, to be sure, and no doubt nourishing, but with no demoralizing appeal to the palate. Except breakfast, the meals are served at a fixed hour and on the table-d'hôte rather than our à-la-carte plan. You take your seat in the diner at the prescribed hour and the prescribed courses are brought you in the prescribed order.

Here is a typical bill of fare for the midday meal on a German diner: Soup, boiled beef, boiled potatoes, boiled cauliflower, chicken, salad, apple sauce, butter, cheese. The price is sixty cents, which is less than the same quantity of fodder would cost on an American diner. That is all there is to

be said for it.

The German passenger service is un-doubtedly the best in Europe and the cheapest when accommodations are consid-Their first-class fare works out two and nine-tenths cents a mile, which is some what higher than the average rate in our country and nearly fifty per cent higher than the first-class rate that prevails in a considerable part of the United States; but ther first-class accommodations, on the whole, are better than ours, with the Pullman left out of account.

It is true they are not perfect. Price Collier, a warm admirer of Germany, records; "Not once but many times in Germany my first-class ticket found me no accommodation, and often, in changing from the main line to a branch line, not even a first-class compartment." In the United States, however, I have had the pleasure of paying first-class fare and standing in the aisle. Normally, in the matter of space allotted beats over the state of the state. service beats ours.

Their second-class fare averages a cent and a half a mile, which is under our first-class rate. Of course there is always a charge for a trunk if you are reckless enough to carry one. On the whole, they beat us in the matter of punctuality. Almost inva-riably the Prussian trains start on the min-ute and arrive on the minute: in fact, people who have traveled a great deal on them tell who have traveled a great deal on them fell me a late Prussian train is so exceptional so

to cause comment.

The Government operates the suburbar system at Berlin and does it very well. A friend who lives six miles out pays a dollar and thirty-five cents for a monthly second-class ticket which permits him to ride at often as he pleases during the thirty days. Riding twice a day, that comes to about two and a half cents a ride. For eighty cents he can get a third-class ticket and ride as often and as fast; but he must ride on a wooden bench. They are electrifying the whole suburban system now and will make decidedly better time when the electrification is completed.

In fine, when you compare Prussian rul-road management with that of other state-owned roads outside of Germany the success is dazzling. First and second class passenger service is decidedly better and cheaper. As to first and second class pa-senger service, indeed, the Prussian roads have nothing to fear from a comparison with those of the United States.

A good many students of the subject award them the palm and I shall by no means quarrel with that award; but the and second class passenger service is only a part of any railroad's business, and as to the Prussian roads it is a very insignificant part, as I expect to show in another article.

Fire in Water

FIRE in the middle of a tank of water instead of under a boiler is a new scheme in making steam for an engine. The idea is to save heat ordinarily wasted; for, with the fire in the middle of the water, every bit of the heat must work to heat the water, as there are no side paths by which it can

Keeping a fire blazing when practically surrounded by water is a problem that has been successfully solved. Gas or oil prop-erly mixed with air feeds the fire. To start the flame, the tank is first emptied and the vapor fuel forced in through a pipe that ends in a nozzle pointed downward. The vapor is lighted, making a roaring torch flame shooting downward in the middle of the tank. Then the tank is partly filled with water until the surface of the water is well above the nozzle, entirely covering the

The vapor fuel, of course, must be forced in at some pressure in order to prevent the water from putting the fire out. The water making ste running the engine. The steam, mixed with gas from the burning fuel, is led into a separate tank, which is a sort of storage bin

for the steam.

SCALLY

(Continued from Page 19)

extreme panic, owing to a terrifying noise behind it—the blast of the newest and most vulgar motor horn, to be precise - was bolting right across the clearing. After the manner of hares where objects directly in front of them are concerned, the fugitive entirely failed to perceive Excalibur and, indeed, ran right underneath him on its way to cover. Excalibur was so unstrung by this adventure that he ran back to where he had

left Eileen and the curate.

They were sitting side by side on the grass and the curate was holding Eileen's

Excalibur advanced on them thankfully and indicated by an ingratiating smile that a friendly remark or other recognition of his presence would be gratefully received; but neither took the slightest notice of him. They continued to gaze straight before them in a mournful and abstracted fashion. They looked not so much at Excalibur as through him. First the hare, then Eileen and the curste! Excalibur began to fear that he had become invisible, or at least transparent. Greatly agitated he drifted away into a neighboring plantation full of young phensants. Here he encountered a keeper, who was able to dissipate his gloomy suspicions for him without any difficulty whatsoever. But Eileen and the curate sat on.

"A hundred pounds a year!" repeated the curate. "A pass degree and no influence! I can't preach and I have no money of my own. Dearest, I ought never to have told you."

"Told me what?" inquired Elleen softly. She knew quite well: but she was a woman.

and a woman can never let well enough

The curate, turning to Elleen, delivered himself of a statement of three words. Eileen's reply was a softly whispered To

cheerfully, for she did not share the curate's burden of responsibility in the matter. "If you had not told me we should have been miserable separately. Now that you have told me, we can be miserable together. And when two people who who — "She hesitated

The curate supplied the relative sen-tence. Elicen nodded her head in acknowl-

edgment.

Yes; who are-like you and me-are "I see," said the curate gravely. "Yes, you are right there; but we can't go ou

living on a diet of joint misery. We shall have to face the future. What are we going to do about it?"

Then Eileen spoke up boldly for the first

"Gerald," she said, "we shall simply

have to manage on a hundred a year,"
But the curate shook his head.
"Dearest, I should be an utter cad if I allowed you to do such a thing," he said.
"A hundred a year is less than two pounds

"A lot of people live on less than two pounds a week," Eileen pointed out long-

Yes; I know. If we could rent a threeshilling cottage and I could go about with a spotted handkerchief round my neck, and you could scrub the doorsteps, corum populo we might be very comfortable; but the clergy belong to the black-conted class. and people in the lower ranks of the blackcoated class are the poorest people in the whole wide world. They have to spend money on luxuries—collars and charwomen, and so on—which a workingman can spend entirely on necessities. It wouldn't merely mean no pretty dresses and a lot of hard work for you, Eileen. It would mean starvation! Believe me-1 know! Some of my friends have tried it and I know!

"What happened to them?" asked

Elleen fearfully

"They all had to come down in the endsome soon, some late, but all in time-to

taking parish relief." "Parish relief?"

"Yes; not official, regulation, rate-aided charity, but the infinitely more humiliating charity of their well-to-do neighbors quiet checks, second-hand dresses, and things like that. No, little girl; you and I are too proud—too proud of the cloth—for that. We will never give a handle to the people who are always waiting to have a fling at

the improvident elergy-not if it breaks our hearts, we won't!

You are quite right, dear," said Eileen

tietly. "We must wait." Then the curate said the most difficult

thing he had said yet:
"I shall have to go away from here" Eileen's hand turned cold in his

Why?" she whispered; but she knew. "Because if we wait here we shall wait forever. The last curate in Much Moreham-what happened to him?

He died.

"Yes at fifty-five; and he had been here for thirty years. Preferment does not come in deepy villages. I must go back to London.

"The East End?"

"East or south or north-it down't signify. Anywhere but west. In the east and south and north there is always work to be done-hard work. And if a parson has no money and no brains and no influence, and can only work-run clothing clubs and soup kitchens, and reclaim drunkards - London is the place for him. So off I go to London, my beloved, to lay the foundations of Paradise for you and me-for you and me!"

There was a long silence. Then the pair rose to their feet and mailed on each other extremely cheerfully, because each other extremely cheerfully, because each sus-pected the other rightly of low spirits. "Shall we tell people?" asked the curate. Effect thought, and shook her head. "No," she said: "nicer not. It will make a spiendid secret."

"Just between us two, eh?" said the curate, kindling at the thought.

"Just between us two," agreed Elleen.
And the curate klassed her very solemnly. A secret is a comfortable thing to lovers, especially when they are young and about to be lonely.

At this moment a lessnine head, sup-ported on a lumbering and ill-balanced body, was thrust in between them. It was Excalibur, taking sanctuary with the Church from the vengeance of the Law, "We might tell Scally, I think," said

Eileen.

"Rather!" assented the curate. "He introduced us."

So Eileen communicated the great news to Excalibur.

You do approve, dear-den't you?"

Excalibur, instinctively realizing that this was an occasion when liberties might he taken, stood up on his hind legs and placed his forepass on his mistress shoul-The surate supported them both.

"And you will use your influence to get us a living wage from somewhere—won't you, old man?" added the curate. Excalibur tried to lick both their faces at once—and succeeded.

SO THE curate went away, but not to S London. He was sent instead to a great manufacturing town in the north, where the work was equally hard, and where Angli-can and Roman and Salvationist fought grimly side by side against the powers of drink and disease and crime. During these days, which ultimately rolled into years, the curate lost his boyish freshness and his unfortunate tendency to put on flesh. He grow thin and fathy; and, though his smile was as ready and as magnetic as ever, he seldom laughed.

He never failed, however, to write a cheerful letter to Eileen every Monday morning. He was getting a hundred and twenty pounds a year now; so his chances of becoming a millionaire had increased by

twenty per cent. Meantime his two confederates, Excalibur and Eileen, continued to reside at Much Moreham. Eileen was still the recognized beauty of the district, but she spread her net less promisenously than of ore. Girl friends she always had in plenty. but it was noticed that she avoided intimacy with all eligible males of over twenty and under forty-five years of age. No one knew the reason for this except Excalibur. Eileen used to read Gerald's letters aloud to him every Tuesday morning; sometimes the letter contained a friendly message to Excalibur himself.

In acknowledgment of this courtesy Exculibur always sent his love to the curate. Elleen wrote every Friday and he and Fileen well and together, rain or shine.

CHALMERS KNITTING CO. 3 Bridge Street, Assetordam, N. Y.

on Friday afternoons to post the letter in the next village. Much Moreham's post-office was too small to remain oblivious to such a regular correspondence.

The curate was seen no more in his old parish. Railroad journeys are costly things and curates' holidays rare. Besides, he had no overt excuse for coming. And so life went on for five years. The curate and Elleen may have met during that period, for Elleen sometimes went away visiting. As Excalibur was not privileged to accom-pany her on these occasions be had no means of checking her movements; but the chances are that she never saw the curate, or I think she would have told Excalibur

or I think she would have told Excelibur about it. We simply have to tell some one. Them, quite suddenly, came a tremendous change in Excelibur's life. Effect's brother-in-law—he was Excelibur's master no longer, for Excelibur had been transferred to Effect by dead of gift, at her own request, on her first birthday after the curate's departure—fell ill. There was an operation and a crisis, and a deal of unhappaness at Much Moreham; then came convalencement followed by directions for a secvalescence, followed by directions for a see vuyage of six months. It was arranged that the house should be shut up and the children sent to their grandmother at Bath.

"That settles everything and every body," said the gaunt man on the sola edy," said the gaunt man on the sols, 'except you, Eileen. What about you?" "What about Scally?" Inquired Eileen.

Her brother-in-law apologetically ad-mitted that he had forgotten Scally. "Not quite myself at present," he men-

tioned in extenuation.

"I am going to Aunt Phmbe," announced

"You are never going to introduce Scally into Aunt Phobe's establishment!" cried Elicen's slater.

"No," said Elleen: "I am not." She rubbed Excaliber's matted head affection-ately. "But I have arranged for the dear man's future. He is going to visit friends in the north. Aren't you, durling?"

Excalibur, to whom this strangement had been privately communicated some days before, wagged his tail and endexy-ored be look as intelligent and knowing as possible. He was not going to put his be-loved mistress to shame by admitting to her relatives that he had not the faintest idea what she was talking about.

However, he was soon to understand. The next day Edeen took him up to Lon-don by train. This in itself was a tremendoue adventure, though alarming at first. He traveled in the goard's van, it having been found quite impossible to get him into an ordinary compartment—or, rather, to get any one size into the compartment after he lay down on the floor. So he traveled with the guard, chained to the vacuum brake, and shared that kindly official's dinner. When they reached the terminus there

was much bustle and confusion. The door of the van was thrown open and porters dragged out the luggage and submitted samples thereof to overheated passengers. who tovariably failed to recognize their own

property and claimed to recognize their own property and claimed some one class. Finally, when the luggage was all cleared out, the guard took off Excalibur's chain and facetiously lovited him to alight for London Town. Excalibur, lumbering del-icately across the ribbed floor of the van, arrived at the open doarway. Outside on the platform he expired Eileen. Beside her stood a tall forum in black. stood a tall figure in black.

With one tremendous roar of rapturous recognition, Excalibur leaped straight out of the van and launched himself fairly and squarely at the curute's chest. Luckily the

"He knowe you, all right," said Elison with satisfaction.

"Re appears to," replied the curate.
"Afraid I don't dance the targe, Scally, old man; but thanks for the invitation, all the

Excalibur spent the rest of the day in London, where it must be admitted caused a genuine sensation—no mean feat in such a blasé place,

In Bond Street the traffic had to be held up both ways by benevolent policemen, because Excalibur, feeling pleasantly tired, lay down to rest.

When evenlug came they all dired together in a cheap little restaurant in Soho and were very gay, with the gayety of pro-ple who are whistling to keep their coarage up. After dinner Elleen said good-by, first to Excalibur and then to the curate. She was much more demonstrative toward the former than toward the latter, which is the way of women.

Then the curate put Eileen into a tail and, having with the aid of the commissionaire extracted Excalibur from underneathhe bad gone there under some confused impression that it was the guard's van again—said good-by for the last time; and Edeen, smiling bravely, was whirled away

out of sight. As the taxi turned a distant corner and disappeared from view, it suddenly oc-curred to Excalibur that he had been left

behind. Accordingly he set off in pursuit.

The curate finally ran him to earth in Buckingham Palace Road, which is a long chase from Sohe, where he was sitting on the pavement, to the grave inconvenience of the inhabitants of Pimlico, and refusing to be comforted. It took his new master the best part of an hour to get him to Euston Road, where it was discovered they had missed the night mail to the north. Accordingly they walked to a rival station and took

another train.
In all this Escalibur was the instrument of Destiny, as you shall hear.

VII

THE coroner's jury was inclined at the time to blame the signalman, but the Board of Trade inquiry established the fact that the accident was due to the engine-driver's neglect to keep a proper lookout. However, as the driver was dead and his fre-man with him, the law very leniently took no further action in the matter.

About three o'clock in the morning, as the train was crossing a bleak Yorkshire most seven miles from Tetley Junction, the curste suddenly left the seat on which be lay stretched dreaming of Eileen and flew across the compartment on to the recum-bent form of a stout commercial traveler. Then he rebounded to the floor and woke

up—unburt.
"Tis an accident, lad!" gasped the resonmercial traveler as he got his wind.
"5s it seems," said the curste. "Hold tight! She's rocking!"

The commercial traveler, who was mechanically groping under the seat for his boots—commercial travelers always remove their boots in third-class railroad compartments when on night journeys—followed the curate's advice and braces himself with his feet against the opposite seat for the coming benderersement.

After the first shock the train had gathered way again—the light engine into which it had charged had been thrown clear oil the track—but only for a mement. Suddenly the receing engine of the express left the rails and staggered drunkenly along

left the rails and staggered drunkenly along the ballast. A moment later it turned over, taking the guard's van and the first four coaches with it, and the whole train came to a standstill.

a standaul.

It was a corridor train, and unfortunately for Gerald Gilmore and the commercial traveler their coach fell over corridor side downward. There was no door on the other side of the compartment—only three windows, crossed by a stout brass bar. These windows bad suddenly become skylights. They fought their way put at last. Once

They fought their way out at last. Once he got the window open, the curate experienced little difficulty in getting through; but the commercial traveler was corpulent and tenacious of his boots, which he held persistently in one hand while Gerald tugged at the other. Still, he was hauled up at last, and the two slid down the perpendicular real of the reach to the dicular roof of the coach to the permanent

"That's done, anyway!" panted the drummer; and sitting down he began to put on his boots.

"There's plenty more to do," said the curste grimly, pulling off his coat. "The front of the train is on fire. Come!"

He turned and ran. Almost at his first step he cannoned into a heavy body in rapid motion. It was Excalibur.

"That you, old friend?" observed the curste. "I was on my way to see about you. Now that you are out, you may as

you. Now that you are out, you may as well some and bear a hand."

The pair sprinted along the line toward the blazing coaches.

It was dawn-gray, weoping and cheer-less-on Tetley Moor. Another engine had come up from behind to take what was left of the train back to the Junction. Seven coaches, including the lordly sleeping saloon stood intact; four, with the engine and tender, lay where they had fallen, a mass of charred wood and twisted metal.

A motor car belonging to a doctor stood in the roadway a handred yards off, and its Continued on Page 73)

owner, with a brother of the craft who had been a passenger on the train, was attending to the injured. There were fourteen of these altogether, mostly suffering from burns. These were made as comfortable as possible

These were made as comfortable as possible in sleeping berths their owners had vacated. "Take your seats, please!" said the surviving guard in a subdued voice. He spoke at the direction of a big man in a heavy overcoat, who appeared to have taken charge of the salvage operations. The passengers clambered up into the train.

Only one hesitated. He was a long, lean young man, black from head to food with soot and oil. His left arm was badly burned; and seeing a doctor disengaged at last he came forward to have it dressed.

The big man in the beavy overcoat

last he came forward to have it dressed.

The big man in the beavy overseat approached him.

"My name is Caversham," he said. "I happen to be a director of the company. If you will give me your name and address I will see to it that your services to-night are suitably recognized. The way you got those two children out of the first coach was splendid, if I may be allowed to say so. We did not even know they were there."

The young man's teeth suddenly flashed not into a white smile against the blackness of his face.

"Neither did I, sir," he said. "Let me

introduce you to the responsible party."

He whistled. Out of the gray dawn loomed an eeric monster, badly singed, wagging its tail.

"Scally, old man," said the curate, "this centerns, wants to

gentleman wants to present you with an illuminated address. Thank him prettily!"
Then, to the doctor: "I'm ever so much obliged to you; it's quits comfortable now."
He began stiffly to pull on his coat and waistcoat. Lord Caversham, lending a hand, noted the waistcoat and said quickly: "Will you travel in my compartment?

"Will you travel in my compartment? I should like to have a word with you if I

may." I think I had better go and have a look at those poor folks in the sleeper first," re-plied the curate. "They may require my services professionally."
"At the Junction, then, perhaps?" sug-gested Lord Caversham.

At the Junction, however, the cursts found a special waiting to proceed north by a loop line; and, being in ne mind to re-ester compliments or waste his substance on a botel, he departed forthwith, taking his charred confederate. Excalibur, with him.

¥711

FORTUNE, once she taken a fancy be you, is not readily shaken off, however, as most successful men are always trying to forget. A fortnight later Lord Caversham, leaving his hotel in a great northern town, encountered an acquaintance he had

town, encountered an acquaintance he had no difficulty whatever in recognizing.

It was Excalibur, jammed fast between two stationary transcars—he had not yet shaken down to town life—submitting to a painful but effective process of extraction at the hands of a posse of policemen and trans conductors, shrilly directed by a small but commanding girl of the lodging-house drudge variety.

drudge variety.

When this enterprise had been brought to a successful conclusion and the congested to a successful concentration and the companies traffic moved on by the overheated police-men. Lord Caversham crossed the street and tapped the damsel on the shoulder. "Can you kindly inform me where the owner of that dog may be found?" be

inquired politely.

"Yas. Se'nty-nue, Pilgrim Street. But e won't sell him.

Should I be likely to find him at horse

if I called now?"

"Yas. Bin in bed since the accident.
Got a nasty arm."

"Perhaps you would not mind accompanying me back to Pilgrim Street in my car?"

After that Mary Ellen's mind became an incoherent blur. A stately limousine glided up: Mary Ellen was handed in by a footman and Excalibur was stuffed in after her in installments. The grand gentleman entered by the opposite door and sat down beside her: but Mary Ellen was much too dazed to converse with him.

The arrival of the equipage in Pilgrim

Street was the greatest moment of Mary

Meantime upstairs in the first-floor front the curate, lying in his uncomfortable flock bed, was saying:

"If you really mean it, sir —"
"I do mean it. If those two children had been burned to death unnoticed I should

THE SIGN OF THE RED GERANIUM

A Great New Serial by William Carleton

Author of One Way Out, New Lives for Old,

Begins in NextWeek's Issue of

The COUNTRY GENTLEMAN

THE CURTIS PUBLISHING COMPANY

Independence Square

Philadelphia, Pennsylvania.

never have forgiven myself, and the public would sever have forgiven the company."

"Well, sir, since you say that, you-well, sir, since you say that, you-well, you could do me a service. Could you possibly use your influence to get me a billet—I'm not asking for an incumbency; any old caracy would do—a billet I could marry on?" He flushed scarlet. "I—we have been waiting a long silence, and the curate."

There was a long silence, and the curate wondered whether he had been too mirco-nary in his request. Then Lord Caversham

asked:
"What are you getting at present?"
"A hundred and twenty a year."
This was about two-thirds of the salary Lord Caversham paid his chauffeur. He asked another question in his curious,

abrupt staccato manner:
"How much do you want?"
"We could make both ends meet on two bundred; but another fifty would enable me to make her a lot more comfortable," said the curute wistfully.

said the carate westfully.

The great man surveyed him silently—wonderingly, too, if the curate had known.

Presently he saked:

"Afraid of hard work?"

"No work is hard to a man with a wife and a home of his own," replied the curate with simple fervor.

Lord Caverakam smiled grimly. He had more bornes of his own than he could conveniently live in, and he had been matried. veniently live in, and he had been married three times; but even he found work hard now and then.

"I wonder!" he said. "Well, good after-son. I should like to be introduced to your fiancie some day."

A TRAMP opened the rectory gate and shambled up the neat gravel walk toward the house. Taking a short cut through the shrubbery he emerged suddenly on a little lawn.

On the lawn a lady was sitting in a basket chair baside a perambulator, the occupant of which was simplering peacefully. A small but intensely capable pursemaid, prone on the grass in a curvilineal attitude, was acting

as tunes to a young gentleman of three who was impersonating a becometive.

The tramp approached the group and naked huskily for alms. He was a burly and unpleasant specimen of his class—a class all too numerous on the outskirts of the great industrial parish of Smallinghouses. The industrial parish of Smeltingborough. The

lady in the bashet chair broked up.
"The rector is out," she said. "If you go into the town you will find him at the Church Hall and he will investigate your

"Ob, the rector is out, is he?" repeated the tramp in tones of distinct satisfaction, "Yes," said Elicen.

The tramp advanced another page. "Give us half a crown!" he said. "I haven't had a bits of food since yesterday, lady—nor a drink neither," he added

orously, "Please go away!" said the lady. "You know where to find the rector." The tramp smiled unpleasantly, but made

no attempt to move.

"You refuse to go away?" the lady said.
"I'll go for half a crown," replied the
tramp with the gracious air of one anxious
to oblige a lady.
"Watch buby for a moment, Mary
Ellen," said Ellero.
She was and ellero.

She rose and disappeared into the house, followed by the granted smile of the tramp. He was a reasonable man and knew that

ladies did not wear pockets.

"Thirsty weather," he remarked affably,
Mary Ellen, keeping one hand on the
shoulder of Muster Gerald Caversham Gilmore and the other on the edge of the baby's perambulator, merely chuckled sardon-

The next moment there were footsteps round the corner of the house and Eileen reappeared. She was ellinging with both hands to the collar of an enormous dog. Its tongue folled from its great jaws; its tail waved memacingly from side to side; its great limits were bent as though for a spring. Its eyes were half closed as though to focus the exact distance.

"Run!" eried Eilsen to the tramp, "I can't hold him in much longer!

This was true enough, except that when Elsen said "in" she meant "up." But the tramp did not linger to discuss grammar. There was a scurry of feet, the gate banged and he was gone.

With a sigh of relief Elieen let go of Excalibor's collar. Excalibur promptly collapsed on the grass and went to sleep again.

BARRACKS AND BEGGARS

Wamen Unionding Cont in Berlin

cet- one of many such streets so narrow that no horse-drawn vehicle can get

rough it. With outstretched arms and a walking stick in one hand you can almost uch the houses on both sides. They are six and seven stories high and the sutswung atters in the top stories seem fairly to meet. The tiny shope on the ground floor piled with all sorts of goods, from cabbages to lace, and the street swarms with

T WAS Gambetta, I believe, who described the goal of militarism as "a beggar sitting beside a barrack door"; and in Gambetta's time militarism was merely

WILL PAYNE in its infancy. Italy has progressed considerably further toward that goal than any her European power. The little shop in Genoa was closed. It fronts upon a tortuous

are ever watching for any place where a tax will stick, and as soon as the spot appears a tax is promptly stuck on. Thus if you hire another servant or another clerk your

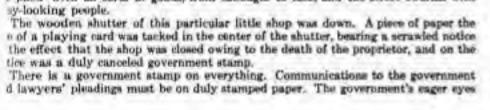

taxes go up. If you pay a little more house rent the government argues that you must have a little more wealth or income, and so moves your taxes up a notch. There is a tax on windows, doors, signs, a hearth tax and, of course, the octroi tax.

German Infuntry on Parade

Excepting Japan, Italy is probably the most heavily taxed country in the world; and it is by no means a rich country. It lives by close ersonomy. You see the pinch everywhere—in the country you see it in the painfully intensive cultivation, carried up stony hilbides on carefully constructed terraces; in town you see it in other ways.

One might say, for example, that the whole United States is anxious to get a better job, while all Italy is anxious simply to keep the job it has. Often that attitude cropped out in my talks with Italians. Several of them repeated substantially this axiom:

"If a man loses a good job here he's done for; he can never get another one. Hence a prevailing ambition to cement oneself to the job one has, which finds expression in various ways. The government, operating the railroads, telegraph, telephones and post, is a large employer of salaried labor and, in spite of amazingly low

Augpickers in the Streets of Paris

Where the Page Lius in an Italian City

Italian Treess Parading in Rome

pay, salaried government positions are much sought because, as is the case with governments almost everywhere, a man once in the employ of the state is practically never discharged and never promoted.

Discharging any salaried man in Italy is a serious and more or less difficult operation. After a journalist has been employed by a paper three months, for example, he acquires a sort of vested right in his jub. The management cannot discharge him except by paying him from three to twelve months' full selary, according to length of service and the position he holds.

All this, of course, reflects a poor country, living close to the margin, with limited opportunity. But with a third of our population, four per cent of our area and a fraction of our wealth, Italy spends more than half as much yearly as we do-regard being had to the central government in both cases.

The first tax is on land. As usual there are some gross inequalities; but including levies by the central goverument and by the province and communes, Italian land owners generally pay from a fifth to a quarter of the income from the land in taxes. Then there is a tax on buildings, which is based on two-thirds the actual income from factories and three-fourths the actual income from houses. On those proportions of the actual income the tax amounts to about sixteen per cent. Next there is a tax on incomes, except those derived from land. This income tax amounts to about twenty per cent, but is levied on only three-eighths of the income derived from government salaries and pensions and only three-fourths of the income derived from professions or from manufactures. Even at that it is high enough to induce heart disease in all objectors to our income tax.

How Bankruptcy Follows the Tax Gatherer

THEN there are the stamp and octres taxes, which touch all sorts of business transactions and virtually all articles of general consumption, the octrof taxes going mainly, of course, to the cities where they are collected. There are heavy import duties, especially on wheat. Finally, salt and

tobacco are government manapolies from which the state derives an important revenue,

"The way in which taxes press on the poor may be shown by the number of small proprietors sold up, owing to insbillty to pay fund and other taxes. Between 1884 and 1900 on fewer than two hundred and twenty thousand sales were effected for failure to pay taxes. mys one Writer,

In round numbers one bandred and twenty-five million dollars of this purifully extracted money goes to support the army and navy, while over a hundred millions more gues to pay interest on on enormous delic that was mostly created by past wars. Naturally the government finds it difficult to lay hold of

enough money to boild a new telephone exchange, when one is needed, and to improve its railrow

Military service, of course, is universal and compulsory. Every able-bodied male aged twenty must serve two years in the active army, then eight years in the active reserve with one month's training a year, then four years in the militia with a month's active training yearly, then five years in the territorial army with a month's training a year. The active army comprises about three hundred thousand persons, the active reserve about seven hundred thousand.

The Market of the Poor, Whitechupel District to London

The navy also is recruited by a compulsory service and comprises about thirty thousand men. Italy has fourteen buttleships and twenty-seven cruisers affoar or building.

Nowhere, outside of Japan, are taxes heavier. Nowhere. so far as I can discover, are they more cheerfully paid. Your army and navy are a tremendous burden," I

aggested fatuously to an Italian.

He was not connected with the army or navy or any other branch of the government, nor with an armament factory or a gunpowder trust. He was neither a plutecrat ner a chauvinist, but a modest, highly intelligent, welleducated professional man in middle circumstances with a growing family. Up to then the conversation had been progressing in the pleasantest possible way. But at that fatuous observation he shut his jaw hard, contracted his eyebrows, and shot a forbidding look at me while be declared with genuine pussion:

"It isn't beavy enough! Many Italians now living can remember the rule of Austria and of the states of the Church. They know from experience what sort of government there was in Naples and at Venice and at Rome - with France always sticking a finger into our affairs according to ber selfish policies - until Italians risked their last man

and last cent to govern their own country.

Vivid Memories of Austrian Misrule

FUGURATIVELY shriveling up, I tried to make myself realize that the shocking misrule of Austria and of the Papai States - the latter supported by Austrian bayonets-had actually been within the memory of men still living: that when the pineteenth century was well along, men were flung into prison by the score on a mere whim in Rome, that spies swarmed and assassination was the most conspicuous—and safest—form of political activity. Glad-stone does not seem far away from us. It was he who described the Bourbon rule at Naples as "the negation of God erected into a system of government." But you need to have the printed page at hand to make yourself resize that the Italian conditions which he wrote about were affairs of the nineteenth century and not of the twelfth. It

was only forty-two years ago that Victor Emmanuel, as the representative of the Italian people, entered Rome to make it the capital of a nation.

Remembering thes things naturally heat the blood, and I was almost ready to assure my Italian friend that if I were his countryman I, too, should be parsionately in favor of more regiments and dreadnoughts, even II we had hundred thousand peasants for nonpayment of taxes instead of only a beggarly 100 hundred thousand.

And that was my invariable experience when discussing man tarism in Europe, lt Italy you eatch that point of view. The very air is saturated with d Continued on Pagel

SUPERMAN FANNIE HURST

THE canker of the city is loneliness. It flourishes - so Insidious parudox—where men most now to now in subway rushes and live layer on layer in thousandenant tenement houses. It thrives in three-dollar-a-week ourth-floor back rooms, so thinly partitioned that the rumple of the rejection slip and the sales of the class oetess from Molino, Missouri, percolate to the four-dollarweek fourth-floor front and fuddle the plane selesman's vening game of solitaire. It is a malignant paramite, which ats through the thin walls of hall bodrooms and the hick walls of gold bedrooms, and eats out the hearts it ads there, leaving them black and empty like untenanted

Sometimes Love sees the To Let sign, hangs white Swiss rtains at the window, paints the shutters green, plants a ed of red geraniums in the front yard and moves in. gain, no tenant applies; the house mildows with the damp its own emptiness; children run when they puss it after ark; and the threshold decays. The heart must be manted or it falls out of repair and rots. Doctors, called

the watches of the night to suscitate such hearts, climb out bed reluctantly. It is a malady syond the ken of the stethoscope. One such heart beat in a woman's reast so rapidly that it crowded it her breath; and she pushed e cotton coverlet back from her morn, rose to her elbow and aned out beyond her bed into the rkness of the room.

"Jimmie? Easie? That you, mmie?"

The thumping of her heart anered her and the loud ticking a clock that was inaudible durg the day suddenly filled the ird-floor rear room of the thirdor rear apartment. The con-cual din of the street slumped to e intermittent din of late eveng; the last graphophone in the ilding observed the nine o'clock ence clause of the lease at someing after ten and scratched its it syncopated dance theme into e tired recording disk of the last ed brain. An upholatered chair, nk in the room's pool of darkas, trembled on its own tautened rings, and the woman trembled that same tautness and leaned ther out.

'Who's there? That you?"

She huddled the coverlet up under her chin and lay back her pillow, but with her body so rigid that only half her ight relaxed to the mattress; and behind her tight-sed eyes flaming wheels revolved against the lids. Tesrs i backward toward her ears like spectacle frames and iked into the pillow; a mouse with a thousand feet cried between the walls.

Essie? Jimmie, that you?" Fick-tock-tick-tock-tick-tock!

More tears leaked out from her closed eyes and found ir way to her mouth so that she could taste their salt. en for a slight moment she dozed, with her body at full stch and hardly raising the coverlet, and her thin cheek ped in the palm of her thin hand. The mouse scurried s light rain of falling plaster and she woke with her pulse mding in her ears.

Jimmie? Jimmie? Who's there?" l'ick-tock-tick-tock-tick-tock-tick-tock!

sobs trembled through her and set the bedsprings vibrat-, and she buried her head under her flat pillow and fell counting the immemorial procession of phantom sheep t graze the black grasses of the Land of Wakeful Hours lead their alcepless shepherds through the long postures

he night. Three hundred'n five: three hundred'n six; three idred'n seven; three hundred'n-Jimmie?"

key scratched at the outer lock and she sprang twoda from the bed, dragging the coverlet from its moorings. Jimmie, that you?

Sure, maw! 'Smatter?"

he relaxed as though her muscles had suddenly snapped, tense toes and fingers uncuried, and the blood flowed

I — Nothin', Jimmie; I was just wondering if that you."

No, maw; it ain't me-it's my valet coming home n a dance at his Pressing Club. You ain't sick, are you,

"Jay, Liston to That Trot They're Playth'! Come On, Sie; be a Sport!"

"No. What time is it, Jimmie? It's so dark."

"You been havin' one of your spells again, maw?"

"No, no, Jimmie."

"Didn't you promise to keep a light going?"

"I'm all right."

"Ouch! Gee-whillikens, maw, if you'd burn half a dime's worth of gas till me and Essie get home from work. nights we'd save it in wear and tear on our shins. I sin't got no more hips left than a snake."

"It's a waste, Jimmie-boy; gas comes so high."
"You should worry, maw! Watch me light 'er up!"

"Be careful in there, Jimmie! Stand on a chair. I got a little supper spread out on the table for Essle and her friend. You take a sandwich yourself -

"Forty cents in tips today, maw."

Forty omts!"

"Yeh; and a dame in Seventieth Street gimme a quarter and hugged the daylights out of me till my brass buttons made holes in me, and cried brineys all over the telegram, and made me read it out loud twice, once for each ear: 'Unhurt, Sweetheart, and homeward bound-Bill.' Can you beat it? Five cents a word!"

"Jimmie, wasn't you glad to carry her a message like that?"

"It's a paying business, maw, if you're lucky enough to deal only in good news."

A chair squealed on its castors, a patch of light sprang through the transom, and the chocolate-other bedroom and its chocolate-other furniture emerged into a chocolateocher half-light.

"Jimmie?"

"Huh?"

"I'm-I wish -- Oh, nothin'!"

"Ain't you feelin' right in there, maw?" "Yes, Jimmie; but-but come in and talk to your old

mother a while, my boy," "Surest thing you know! Say, these are some sandwiches! You must 'a' struck pay dirt in your sardine mine!"

"They're for her gen'I'man friend, Jimmie."

The door flung open and threw an island of light pat on the bed. In the gauzy stream the face on the pillow, with the skin drawn over the cheeks tight as a vellum on a snare drum, was vague as a head by an artist who paints through the sad film of a growing blindness.

"Ain't your cheeks cold, though, Jimmie? It's right sharp out, sin't it? And Essie with a cold, and in her thin coat! You you're a little late to-night, ain't you,

He drew his loose-jointed figure up from over the bedside, and his features, half-formed as a sculptor's head just emerging from the marble, took on the easy petulance of youth, and he wiped the moist lips' print off his downy check with the back of his hand,

"Ah, there you go again! You been layin' here frettin' and countin' the minutes again, ain't you? Gee, it makes a fellow some when he just can't get home no sooner!

"No, no, Jimmie; I been layin' here sleepin' sound ever since I went to bed. I woke up for the first time just now. I'm all right, Jimmie, only-only-

"Honest, maw, you ought to ask the company to put me in short-pants uniform again, day duty, carrying telegrams of the day's catechism to Sunday-school Classes!"

Don't fuss at me, Jimmle! I-I guess I must 'a' had one of them smothering spells, and I didn't wait up for Essie and Joe to-night. I'm all right now, Jimmie-all right."

He placed his heavy hand on ber brow in half-understanding

sympathy.

"Ges-whillikens, why don't you tell a fellow? You want some of that black medicine, maw. Yougee! - you ain't lookin' kinda bluelike round the gills, are you? Old man Gibbs said we should send for him right away if -

"No, no, Jimmie; I'm all right

"Look! I brought you a carnation one of the operators gimmeone swell little queen too. You want some of that black medicine, maw?"

"I'm all right now, Jimmie. It was just earlier in the evening I kinda had a spell. Ain't that pink pretty though! Here, put it in the glass; and gimme a French kiss. Always ashamed like a big baby when it comes to kissin', sin't you! Ashamed to even kiss your old maw!"

"Aw!" He shuffled his feet and bent over her, with the red mounting above the gold collar of his uniform.

"And such a mamma-boy you used to be before you had to get out and hustle-such a mamma-boy-and now ashamed to give your old maw a kiss!"

"Ashamed nothin'! Here, maw, I'll smooth your hair for you the wrong way like Essie used to do when you came home from the store dead after the semiannual clearings."

"No, no, Jimmie; these days I ain't got no more hair left to smooth."

"You look good to me!"

"Aw, Jimmie, quit stringing your old maw. How can a stack o' hones look good to anybody?"

"You do!"

"Your papa used to say so too, Jimmie; but in them days my hair was natural curly-little cute, springy curls like Essie's. The first day he seen me he fell for 'em; and the night before he died, Jimmie, with you and Essie asleep in your folding cribs and me little thinkin' that the next week I'd be back in the department clerking again, he took me in his arms and

"Yes, yes; I know, maw-but didn't the old Gibbs say not to get excited? Lay back and don't talk, maw. I can feel your heart beatin' 'way down in your hands.'

"You're all tired out, ain't you, Jimmie?-too tired to listen to my talk; but you're going to wait up for your sister's young man to-night, ain't you, my boy? wet your hair and smooth it down. You'll wanna see him, Jimmie."

"Fine chance." "Sure he's coming to-night, Jimmie. I got their supper all waitin'; and see, there's my flowered wrapper at the foot of the bed, so I can get up and go in when -

"Aw, cut out the comedy, maw! She ain't comin' straight home after the show any more'n a crooked road; and if she does he ain't coming with her."

"Jimmie, she promised sure to-night."

"Didn't she promise last night and the night before, and the night before that?"

"But this afternoon when she left for the matince, Jimmie, I wasn't feelin' so well; and she promised so

"Them girl ushers down there is too lively a bunch for her, maw. Ushio' in a theayter is next to bein' in the chorus—only——"

"Jimmie!"

"Sure it is—only it ain't so good one way and it ain't so bad another. This newfangled girl ushin' gets my goat unyways. It ain't doin' her any good."

"Oh, Jimmie, don't I know it? I hated to see her take it—her so little and cute and pretty and all! Night work ain't nothin' for our Essie."

"Sure it ain't!"

"But what could we do, Jimmie? After I gave out, her six a week in the notions wasn't a drop in the bucket. What else could we do, Jimmie?"

"Just you wait, maw! This time next year life'll be one long ice-cream soda for you and her. Wait till my dynamo gets to running like I want her to—I'll be runnin' this whole shebung with a bang!"

be runnin' this whole shebung with a bang!"
"You're a good boy, Jimmie; but a kid of seventeen ain't expected to have shoulders for three."

"Just the samey, I showed a draft of my dyname to the head operator, maw, and he's comin' up Sunday to have a look. Leave it here on the table just like it is, maw. You'll be ridin' in your Birdsong selfcharging electric automobile yet!"

She let her fingers wander up and down his cheek and across his shoulders, and into his uneven nappy hair.

"Poor Jimmie! If only you had the trainin'! Miss Maisis was up from the store today in her neon hour and seen it standing here next to my hed; and she thought it was such a pretty-lookin' dynamo, with its copper wires and all."

"You didn't lot her ----"

"No honest, Jimmie! See itain't been touched; I didn't even let her go near the table's edge. She wanted to know when I was comin' back to the store—she says the corsets have run down since they got the new head saleslady, Jimmie."

"If I'd 'a' been here I'd 'a' told her you ain't going

"Sometimes I - I think I ain't, neither, Jimmle."

"What?"

"Nothin'."

"When you get well, maw, then I ----"

"Then I'm going back on my job, Jimmie. Eighteen years—not countin' the three years your papa lived—at doing one thing sort of makes you married to it. I got my heart as set as always, Jimmie, on gettin' you in at the Electric Training School next door. If I hadn't broke down—"

"Nix for mine, maw!"

"Every day I sit by the window, Jimmle, and see the young engineers and electricians who hoard there goin' to work; and it breaks my heart to think of you, with your mind for inventions, runnin' the streets—a messenger boy—just when I was beginnin' to get where I could do for you."

"Aw, cut that, maw! Don't I work round on my dyname every morning till I go on duty! Wooldn't I look swell with an electricity book under my arm! I'd feel like Battling John drinking ten out of an eggshell."

"The trainin' school's the place for you, Jimmie. If you'd only take the dynamo over to the superintendent and show him where you're stuck, he'd help you, Jimmie. I been beggin' you so long, and if only you wasn't so stubborn!"

"I ain't got the nerve, buttin' in over there; it's for

fellows who got swell jobs already."

"There's classes for boys too, Jimmie; the janitor told me. Just go to-morrow and show your dyname. It won't hurt nothin' and maybe they'll know just what the trouble is—it's only a little thing, Jimmie—three times in succession it worked last night, didn't it? It won't hurt to go, Jimmie—just to go and show it."

"Nix: I ain't got the nerve. You just wait! I sin't got the trainin'; but didn't I sell my double lens the day after I got the patent? Didn't I make that twenty-five just like

battin' your eye?"

"The janitor says you was robbed in it, Jimmie."

"We should worry! Didn't we get a rockin'-chair and a string of beads and a tool chest out of it?"

"It ain't you worries me so much, Jimmie. Here, put your head here on the pillow next to me, Jimmie. My heart's actin'up to-night. It ain't you worries me—you're a man like your papa was and can hit back; but Essie—if only Essie—"

"You don't handle her right, maw; you're too easygoing with her. Since she went on her new job she's gettin' too gay - too gay!"

"Jimmie!"

"Just Tall Har Rearything's All Right - Everything's Comin' All Right for All of Ut"

"Sure she is. Like I told her last night when she came in all hours from dancing—if she didn't take that wor paint off her face I'd get her in a corner and rub it off

"I've begged her and begged her, Jimmie, just as hard as I ever begged you about the dyname, to wash her face of it. It's eatin' me, Jimmie—eatin' me! There wasn't a girl in the store that didn't envy that girl her complexion. Oh, Jimmie, it ain't the paint alone—it's where it can lead to."

"She seeds an old-time spankin'."

"Them girls down at the theayter where she works put them ideas in her head. It's only of late with her, Jimmie, Wasn't she like a little buby when I had her across from me in the notions?"

"She's gotta keep her face clean or I'll ----

"She needs somebody strong like her papa was to handle her, Jimmie. She's stubborn in ways, like you, and needs somebody older, my boy—somebody strong that can handle her and love her all at once."

"She's gotta quit sneakin' home at all hours. She don't pay no attention to me; but she's gotta quit or I - I'll go down and smash up that whole theapter crowd of 'em!"

"If she'd 'a' had a father to grow up under it would 'a' been different. He was one of the strongest men in the power house, Jimmie. Mechanics make strong men, my boy, and that's why my heart's set on you, Jimmie, takin' up where he left off."

"It's that job of hers, maw; it ain't no hang-out for her down there round the lights. She's gettin' too gay. I'll smash that ticket speculator to gelatin if he don't show up or leave her alone!"

"Sh-h-h, Jimmis! He's her young man: she says he's a upright and honorable young man, with intentions."

"Where she hidin' him then?"

"He—he's bashful about comin', Jimmie. Last night on her knees right here by this bed she told me, Jimmie, with her eyes like saucers, that he's said everything but come right out and ask her."

"What's the matter? Is be tongue-tied?"

"A fine fellow, she says, Jimmie up to date as a new dime, makin' from thirty to forty a week. Get that, Jimmie?

Forty a week! On forty a week, Jimmie, what they could do for themselves and for you!"

"I wanna look him over first. I knew a fellow in the game got forty a week and ninety days once, too,"

"Jimmie!"

"There's a bunch of speculators used to hang round the Forty-second Street telegraph office, with one eye always on the cop and the other always open for rubes. They was all hunchbacks from dodging the law."

"He ain't one of them kind, Jimmie."

"Then why don't he have a roof over his head instead doing sidewalk business?"

"Ticket speculatin' is like any other business, Essie says.

Profit is profit, whether you make it on a sheet of music, a
washboard or a theayter ticket."

"Then why don't he show his face round here, instead a runnin' her round night after night when she ought to be i-ome sleepin'?"

"I don't know, Jimmie, except what she says. I just live! like I couldn't stand her not bringing him to-night-like—like I couldn't stand it, Jimmie."

"Lay easy there, maw."

"They're young. I guess, and gotta have life; but I hy here with it in front of me all night, long after she ges home and is sleepin' here next to me as light as a dalay she's so little and pretty, Jimmie."

"I wanna get my glims on him ----

"What, Jimmie?"
"I wanna see him."

"Me, too, Jimmie. I wouldn't care much abox anything else if I could see him once; and if he is let

"That gang don't come big and strong. The

got big heads and little necks."

"The kind of fellow that would know how to bree; you when you get stubborn, and would put his had an your shoulder and not try to drive you. If he was a man like that, Jimmie, the kind you and Essenced, I—I'd stop fightin'; I'd fold my hands and so to God: 'Ready! Ready right this minute!"

"Ready for what, maw?"

"Ready, Jimmie, my boy. Just hands folded and

ready-that's all,"

"Aw, cut it, can't you, maw? I—maw, qui scarin' a fellow. Quit battin' your eyes like that-tryin' to flirt with me, ain't you, maw? Quit it, now! Lemme get you some of that black medicine—you're gettin' one of your spells. Just lemme run town stairs and send Lizzie Marks out to get aid mat Gibbs."

"No, no, Jimmie—don't leave me! Hold me my boy, so I can feel your face. Don't cry, Jimmis: there ain't nothin' to cry about."

"Cut the comedy, maw! I ain't cryic'. I'm

"Jimmie, are—you—there? I feel so—so heavy."
"Sure I am, maw—right here, holding you in my arasteel! There's the scar where old Gibbs sewed my face the time I got hit with a bat—feel, maw—see, it's me."

"What's that, Jimmie, on the foot of the bed - movin"
"See, maw - that's your flowered glad-rag. You"
go-goin' to put it on when Easie and her gen'l'man from
come in. It sin't movin'; I shoved it."

"Don't muse it, Jimmie."

"No; see, I emoothed out its tail - it's a such for years."

"Jimmle, you won't leave me? It gets so dark, and—the

"You couldn't pry me away with a crowbar, man! I hold you till you yell 'Leggo!' Lemme go for old Gibe maw; you're breathing heavy as a pump."

"No, no, Jimmie; don't leave me."

"Sure I won't; but you're all twitchin' and jumps maw. Just leave me run down and send Lizzie Marke him."

"No, no, Jimmie; I'm all right,"

"Sure, maw? You-you're actin' up so funny."

"It ain't nothin'—only I'm an old woman, Jimmie, A of a sudden I got old and firoke. It ain't the same in department, Jimmie, with Essie gone from the notes across the sisle. Always when we were overstocked in corsets she—she—Essie

"Aw, maw, you ain't talkin' straight. Lemme have "

"I'm talking straight, Jimmie. Ain't I layin' right be in your arms, and ain't my hair caught round one of yebrass buttons?—quit pullin', Jimmie! Essie's hair he bright, Jimmie. I can see it shinin' in the dark when he sleepin'."

"Some hair the kid's got! Remember the night took me and her to —"

"Sh-h-h-h! Ain't that them coming? Ain't it, Jimb I ain't equal to gettin' up, Jimmie. Bring 'em in home tell ——"

"Like fun it's them! Whatta you bet right now the bolding down a table for two at the Palais du Des Swell joint!"

"Oh, Jimmie!"

"I was kiddin', maw-only kiddin'. Open your eyes, msw. Gwan! Be a sport and open up! Remember, maw, when I was a kid, how I used to make you last and last, makin' a maise like a banjo-plunka-plunk-plunk-plunkplunka-plunk?"

Ym, Jimmie,"

"I knew I'd get a laff out of you-planka-plank-planka-

"Yes, Jimmie, my boy! Go on! I like to lay here and remember back. Essie was always grabbin' your spoon. I used to slap her little bands and -

Maw, open your eyes! Don't go off in one of 'em again." See, they're open, Jimmle! I can see your gold buttons dinin' and shinin' - I ain't elsepin'; I'm unly waitin'," "She ain't had time to get home yet, maw, They gotta

sick up programs and turn in lost articles and all," Put your arms round me, Jimmie. I keep slippin'." "Lemme run for old man Gibbs, maw. Please!

"No, no. Jimmie! Sing like you used to when you was a attle kid, Jimmie; I used to laff and laff."

Plunka-plunk-plunk-plunk!"

"Sh-h-h! There's the chimes - you won't never tell me the right time nights, when I ask year, Jimmie."

"It ain't late, may."

"Sb-h-h! What time is that? Listen!"

"It's early. Don't you count chimes, ma = - it's a sign where to count 'em, and Emin's got her thin juries on, Plunk! -

Stateh, Jimmie! One-two-three-four-five sixmyen-night-nine-ten-

See, it nin't late."

"Leren! You can't chest me, I hourd the best nee."

"Leven strendy? Well, whatin you know about that! Then chitoes is always ahead of themselves."

"Jimmin my hoy, quit playin" with your old maw."
"They'll be comin' ason now."

"Don't leave me, Jimmie.

"Sure I won't -- see!"

"Jimmle! Jim-nie -

"Maw! Maw, upon your sym! Mow darlin' plouse-

"Bing, Jimmie, like-a banjo."

"Flunka-plunk-plunka-plunk !"

On that last boom of playing the Stuyymant Thouser some its don't autward as the portals of a curious check By open on the lour, and women in for-collared, brocaded man, which wrapped them to the mides, and carefully revel amilia that Wattenn knew as well and Thackeray liny lim well, ateramed but into the white flage of Brown's say, their delicate lingers resting lightly on the tired arms. of tired business rasn, whose faces were like wood curving and whose wide white shirtfrosts covered their hearts Blo-slaba.

Almost hether the last limesome door had slammed and the last tired business man had left the light, compelling pressure of the delicate finger tipe on his arm, and turned his tired eyes from the white lights to the whiter lights of rail's and gold-leaf botels, the interior of the Stayvesant Theater, warm and performed as the interior of a jewel box. blinked into soft darkness. Small figures, stealthy especies of the night, guided down thickcarpeted sides, flashing their pocket searchlights now here, now there; inkling rows of velvet much against

velvet hactor, reaching for discarded programs and seat checks; gathering up the dainty débris of petals fullen from too-blown rosses, an occasional webby bandherchief, an odd

glove, a tibbus.

Then the dull red eyes above the fire exits blinked out, the mu of twilight deepened, and the anull searchlights dashed brighter and whiter, glowworms in a pit of right.
"For Pete's saless! Tell Ed to give back

"Glace the hallony over the orthones."

every time.

"What about us girls 'way up here in the shifted Whatta young about us, Ladu Pope player' bundenside in the gallery gode?

Chutm thename, I med to be in the chutes over at the Olympic, and ex nights out of the seek I carried water up the nides without a scop. Lankin' such rew in the sye too?" Like fun!"

Sure's my name's Luiu Pope! Me un' u. girl named Della Bradenwald used to play Ani-

mal or Vegetable Kingdom every entracts with the fireman." "Oh h h? Say, Lun, you mightte me what I found up here in Box E!

"Louve it to Essis Birdsong for a find! What is it this time—the diamond star the queen in E was wearin'

"A right-band, number five and a ball - white stitchin"." "Can you lim! it? And you ain't never had a claim yet. at the hos office."

"I knew my lines would break, Luin. My little trother Jimmie maw if you break a comb your back breaks with it, healer one this morning. Whatis you let now I begin to match every ment of my live left-hand gloves, without a claim from the office?"

"Lucky loats"

Conversation corved from gallery to bego but and from age to Indensy

"Gee! Look at this arrive butterfly! I seem it is her half when I steered her down the side. She could be stock on

'If You han't Like Our Company Ma and Hairy Can Munage to Warry Along Jemekow?"

something about this show third time this week, and not no paper neither."

Amisor, is R. Sadie? I'll trade you for the tortoiseshell one I found in C 4; unber if go swell with my hair."

"Whatta you bet she claime it?"

"Nis."

"Say, did you hear Wheelan familie her hig scene to-night? I was dozin' in the toyer and she tripped over log cue so hard she noke me up.

"I should say so! I was standing next to the old man, and he let out a line of talk that was some fireworke; he said a super in the mult seems could take her place and heat. her at pickin' up case,"

Ready, Sadie?"

"Yes; wait till I turn in one gent's muffler and a red curl,"

" Are you done up there in, Ende?"

"Yes; hut you needn't wait for me, Lao. If you're in a harry I'll eee you down in the locker room."

Seats slammed; laughter drifted; marchlights danced and flashed out as though suddenly doused with water; and the gold, crystal, velvet, and markle interior of the Stuyyeard Theater suddenly vanished into its iniminext wimple of blackness.

In the bare-walled incher room Miss Ensie Birdsong leaned to her reflection in the wavy mirror and ran a fine pencil line along the varyon of her eyebrows.

"In this right, Lou?"

"Swell! Your eyes look two shades darker." "Coch"

Miss Birdsong smiled and hencel closer,

"The girls all out, Lor?"

"Yeh; harry up and lemme have that mirror, Eur-Harry gets as glorn as glue if I keep him waiting."

Miss Pope adjusted a too-small but, with a too-long pheasant's wing sucked at a two-rakish angle on her brass-solored hair, and powdered her already powdered chesk bones.

'Here-you can have the mirror first, Loo, I-I ain't in a hurry to-night. You and Harry better go on and not wait round for me.

Miss Pope placed her long, hirdlike hands on her slim hips and slumped inward at the walstline; her eyes had the poculiar lambency of the blue fiame that plays on the surface of cognac and leaves it cold.

What's burtin' you, Eas? The whole week you been makin' this play to dodge me and Harry ! If you don't like our company, Eisle, me and Harry can manage to worry along somehow!"

"Ob, Lulu, it-II sin't that, and you know it." "You're all alike. Didn't my last cham, Della Bradenwald, do the same thing! I interdoored her to a gen'l'man friend of miss, a slick little doorman for a two-a day show, and what did she do? Scarl Alter the serond day it was Good-by, Leo-Loo! They went kitm' it off together and dropped me and Harry like parachutes.

Log darlin', honest, me and Joe just love goin' to dancin' with you and Harry; but - but -

"Then what's hurtin' you?"

"You Know All Righty, Missy, Why Ihe Wants You to Wath It - You End

"It's maw again, Loo. She looked like she was ready for one of her spells when I left; she's been worse again these two days and the doctor says we mustn't get her excitedher heart's hum, Loo."

"Say, I used to have heart failure myself, and I know a swell cure - Hartley's Heart's Ease. Honest, when I was over at the Olympic I used to go dead like a tire. Lend meyour eyestick, Ess."

"You'll laff, Loo; but she's daffy for me and Joe to come home after the show; she's never seen him at all,

"Oh, I gotta flashlight of Joe goin' to call on your old

"When maw and I was clerkin' the girls and fellows "When maw and I was clerkin' the girls and fellows that Loo; and, say, for fun! Maw was as lively as any of us in those days; and we'd have sardine sandwiches, and my kid brother used to imitate all kinds of music and actors; and we used to laff and laff until they'd knock on the ceiling from upstairs and muw'd pack the whole lot of 'em home. Why don't you and Harry come up to-night too, Loo? And we'll have a little

"Nothin' doin', Beauty, There's a Free-for-All Tange Contest round at the Poppy Garden to-night; and believe me, I wouldn't mind winning that pink ivory manicure set. All I gottn ask is one thing, Eas! Bring me a snapshut of Joe doing the fireside act!"

The glaze of unshed tears sprang over Miss Birdsong's eyes like gauxy clouds across a summer sky.

"I-that's just it, Loo. I can't get him to come. Sometimes I think maybe it's just because he's stringing mealong; and I-he-he was your friend first, Loo. Ain't he ever said anything to you about me-about aw, you know what I mean, Loo."

"He's stuck on you, girl. I know Jue Ullman like I know the floor plan of this theater.

"Honest, Loo, de you think so?"

"Sure! I knew Joe when I was making suteen duisies in a artificial flower loft on Twenty-second Street, and him and my hrother was clerkin' in a cigar store on Twenty-third, and running a nest little book on the side."

"A book!"

"Yes, dearie-a pretty picture book."

"Joe never told me."

"He ain't always been the thirty-dollar-a-week kid he is now - take it from me. Just the samey, you can thank me for interdooting you to the sharpest little fellow that's selling tickets on the sidewalks of this great and wicked city!

"I always tell him he ought to save more—taxis and all he has to have, that spendy he is!"

"Sidewalk speculatin' is a good pastime if you're sharp enough; and I always tell Joe he's got a edge on him like a

"Like a razor! Aw, Loo, you talk like he was a barber."
"Sure, he's that sharp! Take Harry now: he's as slick as a watermelon weed when it comes to pickin' a sheet of music with a whistle in it; but put him in a game like Joe's, with the law cross-eyed from winkin' and frownin' at the same time, and he'd lose his nerve!"

"It ain't a game, Loo. Joe says there ain't a reason why a fellow can't sell a theater ticket at a profit, just like Harry sells a sheet of music. Sidewalks are free for all."

"Leave it to Joe to stretch the language like a rubber band. His middle name is Gutta-Percha."

"He was your friend first."

"He la yet, Beauty-even if you have grabbed him. I like him—he's one good sport; but with Joe's gift for tongue work he could make a jury believe a Bowery jewelry store ought to have a habeas corpus for every body it enatches; he could rob a cradle and get a hero medal for it."

"I - sometimes I - I don't know how to take him, Loo. We've been goin' together steady now; and sometimes I think he - he likes me, and semetimes I think he don't."

"Take it from me, you got him goin'. I never knew him to take a five-evenings-a-week lease on anybody's time." "Six."

"Six! For all I know, you—you're keepin' things from me. Lemme see your left hand—whatta you blushing for, Beauty? Whatta you blushing for?"

"Aw, Los!"

"Say, how does this jacket look, Ess? Half them judges over there at the Poppy watch your clothes more'n your face."

"Swell!"

"Well, is this where me and Harry exit, Beauty?" "Yeh; you go shead, Loo. I-I'll tell Joe you and Harry

went on shead to-night."

"I gotta half bottle of Hartley's Heart's Ease at home, Ess. Tell your old lady to have it on me. Don't you worry, kiddo. I used to have heart trouble so bad I'd breathe like a fish at a shore dinner-and look at me now! I'll bring it to-morrew - a tablespoonful before meals."

"Good night, Loo. I'll see you Monday."

"Put on a little more color there, Ess, or you'll never get nothin' out of him. You look as scared as an oyster, Lordy, you can handle him easy! Lemme know what happens. S'long! S'long!"

"Gnod night, Lon!"

Miss Birdsong brushed at her soft cheeks with the pink tip of a rabbit's faot and the color sprang out to match the rose-colored sateen facing of her hat. Her lips opened in a faint smile; and after a careful interval she scrambled into her jacket, flung a good night to the doorman and hurried through the gloomy foyer,

No sham like the sham of the theater! Its marble façade is classic as a temple, and its dirty gray-brick rear openout on a cut-infested alley. The perfumes of the audi-torium are the fumes of the wings. Thespis wears a custommade coat of many colors, but his undershirt is sackcloth.

(Continued on Page 26)

Business at Judicial Discretion

By MELVILLE DAVISSON POST FONE could imagine human society suddenly confronted with the necessity of enact-

ing a criminal code and undertaking to do it in a single statute, he would be able to realize in a way what those who formulated the Sherman Antitrust Law attempted.

Mr. Justice Harlan tells us that at the time this law was enacted there was everywhere, among the people generally, a deep feeling of unrest. "The nation had been rid of human slavery -- fortunately, as all now feel -- but the con-viction was universal that the country was in real danger from another kind of slavery sought to be fastened on the American people - namely, the slavery that would result from aggregations of capital in the hands of a few individuals and corporations controlling, for their own profit and advantage exclusively, the entire business of the country, including the production and sale of the necessaries of life. Such a danger was thought to be then imminent, and all felt that it must be met firmly and by such etatutory regulations as would adequately protect the people against oppression and wrong."

In order to meet this condition it was necessary to formulate a law that would prohibit new wrongs not before this time defined in any statute. This was a tremendous undertaking—as difficult as though in the imaginary state the lawmakers were suddenly called on to formulate a

statute covering all the varieties of crime.

No state could have a general statute probibiting all crimes. That would leave the courts in every case to say what a crime is. No man would know how to conduct himself, and every man would be at the mercy of a prosecutor and might be haled into court for any sort of imaginary wrong. The absurdity of the thing when applied to our criminal procedure is at once apparent. Nevertheless, it was by a single general statute that Congress undertook to prohibit the new wrongs and to punish the new crimes against our commercial civilization.

Senator Edmunds, who drafted the statute, took the position that restraint of trade, like fraud, ought not to be defined, and that a general prohibition of it was sufficient. The first and second sections of the Sherman Law were

formulated to meet this new condition.

The first section provided that every contract, combination in the form of trust or otherwise, or conspirary in restraint of trade or commerce among the several states or with foreign nations, was to be desired illegal. And the second section provided than thouse one monopolize or attempt to monopolize conspire with any other pertoe several any part of the trade or mor, And states, and so on, should visonment. both sections provided a

It was a sweeping enactment against every restraint of trade and every attempt to monopolize—as sweeping as though a state had undertaken to prevent all wrongdoing by the enactment of a single statute prohibiting the commission of crimes. This law remained for a long time practically ineffective.

One of the early attorney-generals munidered it unconstitutional. It is said that he had been attorney for a great trust, and he advised the president under whom he served that it was unwise to endeavor to enforce the statute. Some attorney-generals were disindined to act, and the ability of others recalls Doctor Johnson's remark on a nobleman of his time who had been elevated to a high office: "His parts, sir, are pretty well for a lord, but would not be distinguished in a mun who had nothing else but his parts."

During the last year of McKinley's Administration it. was a complete dead letter, and it has been only under recent administrations that any effort has been made to enforce it. From 1897, however, the law had had a curious history. On March twenty-second of that year, in the Trans-Missouri Freight Case, the Supreme Court of the United States decided that this law applied to all restraints. of trade, and that the term "contract in restraint of trade" used in it meant every contract in restraint of trade and was not limited to the kind of contracts that were in unreasonable restraint of trade.

The great corporations of the country undertook to induce the Supreme Court to say that this law meant only unreasonable restraints of trade, but in plain terms the court refused to do so.

Having failed to persuade the court to change this law y judicial amendment, the great business interests went to Congress and endeavored to have the law amended so as to apply only to unreasonable restraint of trade or commerce. The Senate Judiciary Committee reported against this amendment. They said that so to change it would be entirely to emasculate the law and for all practical purposes render it magatory as a remedial statute.

And su the law remained until the Standard Oil Case and the Tobacco Trust Case came into the Supreme Court of the United States in 1910. The following year, in the decisions in those cases, the Supreme Court amended the law by inserting the word "undie" -- an amendment that Congress had refused to make and one for which the great business interests had all along contended.

By judicial amendment the court, in the case of the Standard Oil Company of New Jersey, interpreted the law to mean not that every restraint of trade was problished. as the net said, but "only undue restraints of interstate or foreign trade or commerce are pro-

hibited by the provisions of the act of July 2, 1890." And so by the decision in that case the rule of reason became the measure for the purpose of determining whether in a given case a particular act had or had not brought about the wrong against which the statute provided.

One of the ablest members of the court dissented forcibly

from this decision:

"By every conceivable form of expression," he said, the majority, in the Trans-Missouri and Joint Traffic Cases, adjudged that the act of Congress did not allow restraint of interetate trade to any extent or in any form; and three times it expressly rejected the theory, which had been persistently advanced, that the act should be comprued as though it had in it the word unreasonable or undue. But now the court, in accordance with what it denominates the rule of reason, in effect inserts in the act the word undue, which means the same us unreasonable. and thereby makes Congress say what it did not say - what, as I think, it plainly did not intend to say, and what, since the passage of the act, it had explicitly refused to say

"It has steadily refused to amend the act so as to tolerate a restraint of interstate commerce even where such restraint could be said to be reasonable or due. In short, the court now, by judicial legislation, in effect amends an act of Congress relating to a subject over which the legislative department of the Government exclusively has

Almost the dissenting justice persuades us to believe him right against the majority of the court. Even in the day when Lord Munsfield drank champagne with the with it was considered questionable taste to ask a court to reverse itself. "Does it not lessen the confidence of the public?" wrote the author of The Rambler. "Will not be who knows himself wrong to-day hope that the courts justice will think him right to-morrow?"

After this decision the law, which had been in the mogeneral terms, became wholly uncertain. The courts conhave said what restraint of trade was, as a matter of farperhaps; but whether or not there was undue restraint. trade was a great, vague question, to be decided in ever case. Moreover, the law would now seem to admit the certain kinds of restraint of trade were permissible. was as though a general statute prohibiting all crimes vanow amended to prohibit only undue crimes.

By this decision the Supreme Court not only assemthe prerogative of the national legislature and amende the law in a way that the national legislature had refer to do, but by this decision the courts were granted great latitude of deciding cases according to the economic

theories of the presiding judge—that is to say, the law was now so large and vague that every court could decide it practically as it pleased. Whether or not an act was prohiblted under this law became a question of the opinion of

the court trying the case.

The courts now sat under it as boards of control to determine how the business of the country ought to be conducted, and with no restraint on them except their opinion. They were no longer bound to enforce the penalties of the statute because a restraint of trade was proved. They must be convinced that it was an undue restraint of trade. They could apply the rule of reason and, having no precedent before them, the rule of reason could be any sort of measure they liked. It is said that the Duc d'Uzès, cherolier d'houneur to Louis the Fourteenth, being asked by the queen what o'clock it was, replied:

"What your Majesty pleases!"

Mr. Justice Harlan was not misled about the sweeping ffect of this decision:

"I have a strong conviction," he said, "that it will hrow the business of the country into confusion and invite videly extended and harassing litigation, the injurious flect of which will be felt for many years to come. When longress prohibited every contract, combination or nonopoly in restraint of commerce it prescribed a simple, lefinite rule that all could understand, and which could be asily applied by every one wishing to obey the law and ot to conduct their business in violation of law. But now t is to be feared we are to have in cases without number he constantly recurring inquiry, difficult to solve by proof, thether the particular contract, combination or trust avolved in each case is or is not an unreasonable or undue estraint of trade.

"Congress, in effect, said that there should be no restraint. f trade in any form, and this court solemnly adjudged sany years ago that Congress meant what it thus said in lear and explicit words, and that it could not add to the ords of the act; but those who condemn the action of ongress are now, in effect, informed that the courts will flow such restraints of interstate commerce as are shown

ot to be unreasonable or undue."

The Peril of Vague Statutes

CHARD II made the crime of treason so vague that in the first year of his successor an act was passed reciting: That no man knew how he ought to behave himself, to do, wak or say, for doubt of any such pains of treason."

Under the Sherman Law as it is new judicially amended se perplexities of the business interests of the country are ecisely expressed by the opening paragraph of this atute of Henry IV. The people do not know what straints of trade are to be prohibited. The business terests do not know how far they may go with such straints. They may go to a certain length - but what is it? Every business engaged in Interstate trade is conducted the peril of the opinion of the attorney-general. It is nducted at the peril of the opinion of the Federal judges. is the prerogative of the courts to say how the business the country is to be conducted, and what is proper and tat is not proper in restraints and monopolies.

The extraordinary situation has had no equal except the early history of the English-speaking people, when

the crime of high treason was thus indeterminate. Sir William Blackstone tells us that by the ancient common law there was "a great latitude left in the breast of the judges" to determine what was treason or not so precisely as there is to-day "a great latitude left in the breast of the judges" to determine what is undue restraint of trade.

Sir William Blackstone was not of the opinion that such a condition was one to be desired. The result of this great. latitude does not inspire us with confidence when we read

his comment on it.

"Whereby," he continues, "the creatures of tyrannical princes had opportunity to create abundance of constructive treasons - that is, to raise by forced and arbitrary constructions offenses into the crime and punishment of treason which never were suspected to be such."

Our history does not encourage us to believe that civilization will be advanced by setting up the judges as governors of public conduct and with latitude to say what or is not an offense against the public welfare.

Montesquieu said that to leave the crime of high treason indeterminate was alone sufficient to make any government degenerate into arbitrary power. Restraint of trade and the effecting of monopolies are the highest crimes against commerce; and yet this decision leaves them indeterminate, with a great latitude in the breast of the judges to determine what they are.

The old law writers said that as treason was the highest crime which - considered as a member of the communityany man can possibly commit, it ought therefore to be the most precisely ascertained. In order to resone the country from a condition of industrial slavery, as Mr. Justice Harlan indicated, restraint of trade was made a great statutory crime. Therefore, if it is the highest crime against our commercial civilization, ought it not to be the

most precisely ascertained?

We have not been without abundant illustration of the evils of leaving Federal statutes uncertain-their meaning at the discretion of the Federal judges. The litigation against the Standard Oil Company of Indiana is a conspicuous example. This company was indicted under the Elkins Law on ninetsen hundred and three counts charging that its product was hauled by the Chicago and Alton Railroad Company at less rates than those named in the turiff schedules published and filed by that company with the Interstate Commerce Commission.

The company was tried on fourteen hundred and sixtytwo counts and found guilty. District Judge Landis imposed the maximum fine on every count, making in the

aggregate a fine of \$29,240,000.

The so-called Elkins Law, under which this indictment was brought, was so indefinite that solody could say what it meant. No one knew from the language of the act what constituted an offense. Did it mean that the thirty-six payments for shipments constituted one offense or thirtysix offenses? Did it mean that every time a consignment of cars was moved that constituted one offense or that the moving of every car was an offense, or the moving of every barrel or gallon or pound of oil?

The case was taken to the Circuit Court of Appeals and was reversed, this court holding that the gist of the offense was the acceptance of the concession, irrespective of whether the property involved was carloads, trainloads or pounds;

and finally the case, after being remanded, was heard by Judge Anderson and dismissed.

The question of a bother there had been a definife rate published and filed before the interstate Commerce Commission had also perpirand the judgen. Judge Lands: was of the opinion there war no such rate. The Circuit Court of Appeals said: "The most we can say it that the question is one on which judges, after full discussion, might very reasonably disagree."

Judge Anderson said: "Therefore, gentlemen of the jury, if it is a matter about which reasonable men may differ or trained judges may disagree; the Court of Appeals says, after reviewing these papers, after looking them over and after consulting together, that they cannot tell what the rate is, that reasonable men might differ on that question, then, of course, the evidence is not sufficient to warrant you in finding that these papers establish that rate beyond a reasonable doubt."

If judicial discretion on indefinite statutes may extend from not guilty to a fine of twenty-nine million dollars, can we imagine any circumference to inclose it? Decision at the pleasure or at the whim or caprice of the court would have no more extended limitations. Surely such examples do not encourage us to leave the intent of a law to the mere

opinion of the judiciary.

When Judges Become Legislators

ME Senate Committee on Interstate Commerce, created ▲ in 1903, presented this idea with clearness and force: "The committee has full confidence in the integrity, intelligence and patriotism of the Supreme Court of the United States; but it is unwilling to repose in that court or any other court the vast and undefined power it must exercise in the administration of the statute under the rule it has promulgated. It substitutes the court in the place of Congress, for whenever the rule is invoked the court does not administer the law but makes the law.

"It is inconceivable that in a country governed by a written Constitution and statute law the courts can be permitted to test each restraint of trade by the economic standards which the individual members of the court may happen to approve. . . . It may be that the Supreme Court will be so enlightened and so alert that its opinion respecting what is due and what is undue restraint of trade will be in harmony with an awakened public conscience and a disinterested public judgment; but to fashion our conduct on that hypothesis is to repudiate the fundamental principles of representative government."

It is no reflection on our courts to insist that they restrict their functions to an administration of the law. The electorate will never be content to permit the courts to legislate for it to make laws for it. It will never permit the judges to sit as censors, to say how the business of the country shall be conducted, what are good and what are bad trusts, who shall be permitted to indulge in restraints of trade and monopolies, and who shall be refused those

desirable privileges.

One may object to this and yet believe that the judges are our most conscientions public servants. He may object to it and yet believe that there is virtue in the bench to make a man more upright than his fellows. We know that a great trust has sometimes made even a doubtful person honorable. A cutpurse once made a very good Chief Justice of England. True, he one day got a rather startling idea of rewards. Hearing that one of his old companions was in jail, he called on him and asked what had become of the rest of the gang; to which the prisoner answered;

"Alas! They were all hanged except myself and your lordship!"

Sir Matthew Hale considered that Parliament had acted with the greatest wisdom in keeping the judges within proper bounds and limits. Sir Matthew Hale and Sir-

BANTRY By ELMORE ELLIOTT PEAKE

T WAS finally decided, in salemn family concluse, to let Feater hastly out of bed, and he habited over to the him go to see the circus come in.

"Thank you, father!" said the bey fremulously. "Thank you, mether! I'll bring in two big armloads of wood so there'll be pleuty to get break/act with." And he vanished.

"He'll probably oversleep anyhow," remarked the Reverend Mr. Pettlgraw.

"Would it be just the equare thing, Homer, to let him oversleep?" naiced Alicia Pettigres. There was an edge to her voice which made her Imahand's bushy black eyebrows contract in displansure.

"I can't me that our permission to let him go abligation on to ranky wure that he does go," he answered in his sonorous, didactic, pulpit tone. "However, do se you please. The incident has already oceupard too much of my time." Whereupon he again opened the Homflotic Review to an essay on the Capartamehip. of Man with God, written by himself and now under perusal for the third time.

A couple of minutes later Foster, having linished his chores with

deight-of-hand dispatch, arounded over the board force in the back yard, crusing the alley, and austinusly approached the rear of a shanty which exhaled the odor of ancient cospsads. He approached cautiously, because it was the hence of a drunkard and he was afraid of devolutely.

Come on. Dad aln't home," called 5thb Habch, paining in the ignominious task of diling a rough of take from a rainbarrel at the corner of the house.

"I can go, Stub!" cried Foster exultantly. "And I got a fishin' line, too, to tie round my hig toe and hang out of the window, like you said."

"I guess you better not count on me," remarked Stub-gloomily. "I gotta fill these two tubs and then go clean up to Tallman's fer a wash, and I'll probably be so tired I'll

oversleep in the morning."
"Why, I'll fill the tube," volunteered the innocent Foster.
Stub affected hesitancy, and spat dark-brownishly.

"All right; but don't waste none or maw'll bawl me out for it. She's down to Carmichaela' for scap. Old Hubbs won't tick her no more. 'Try and git through before she gits back. If you do I wisht you'd bring in a scuttle of coal. I wouldn't sat you, but I spraint my wrist to-day."

Again he spat. Foster tried to ignore the dark-brown, for Stub had joined his Sunday-school class two weeks before and signed the pledge, which included tobacco. It was better to think of Stub's good points, for here was a boy who was not afraid of his drunken father, who knew the best cutfielt holes in Haymendow Creek, could outskate and outwreatle any boy in the neighborhood, went barefoot from April to October, elept away from home whenever he chose-often with tramps, so he said-and owned collectime of hirds' eggs, stamps, murbles and tobacco tags that even boys whose fathers were rich had to envy.

Indeed, in Stub's pressure Foster always felt his own tenitations keenly. In the first place his father was a preacher. Secondly, he had been named for a bishop. There seemed small chance for a boy named after a bishop. Nulsady over thought of rulling him Chick or Skinny or Reil or Shorty in the spirit that Stub was called Stub. Preachers who came to the parsonage for dinner, when ensing. they had to stop over between hand on his head: "Ah, Foster! After our beloved bishop! I hope you may tread in the footsteps of that great man.

For a glorious period, it is true, he had expanded under the diminutive of "Foss" among the boys. But, alas, two Sundays later he learned at church that Foss was the name of still another bishop. He lest an in his breast, but all the romance, all the squeezed out of "Fose," inguished and died. As for "Fossie," | like Flussie.

The objects in visibility when u v

g into ghostly -hline brought

The Other Rays. Tueling the Ritter Stute of Surv. Tramans in the State Works

harletalm, passed briefly at the resity jar in the purery and joined atur outside.

A rollin, was already caroling in the big sugar maple by the well, but the boys, visioning flow and tigen and eleprizers. heard it not, and pattered off in their turn best for the railroad yard. At the first corner they happened upon a third lay: at the next, upon a lourth and a lifting soil where they reached the yards there was a down to the equal.

"We'll give 'em the slip as soon as we kin," whispered Stub cunningly. "Them circus fellers wun't let a bunch like this come close enough to see nothin."

The circus, they found, had already pulled in; but their disappointment was mitigated by the fact that no activity was yet afoot. The big yellow cars splashed with red loomed like a dream city. The roustabouts, rolled in tarputiles under the wagnes on the flats, still slept. The curtains of the sleepers were still tightly drawn.

But soon all was changed. A man in shirtsheroes and battered derby hat stiffly descended the steps of the foremost sleeper and sounded a watchman's rattle. The roustabouts, yawning and stretching, came to a sitting posture; and in an amusingly short time horse and ponice were pouring out of the cars; wagons, cages, chariots and the steam calliops were shanted down inclines; and half the elephants were on the ground before Foster and Stub had discovered their whereabouts.

Elephants were a passion with Foster. His schoolteacher, the day before, had given a little talk on them, explaining the difference between the Asiatle and the African species. Foster remembered that the Africans had much larger ears, rougher trunks, three toes on the hindfeet instead of four and a bulging instead of a concave forehead. He even remembered their Latin names-Elephas asisticus and Elephas africanus. But he spoke nothing of this to his companions. Though a remarkably innocent boy, with the delicacy of a girl and the imagination of a poet, he had gathered some worldly lore. He had learned, for one thing, that all boys despise a superior boy.

He discovered, to his surprise, that all the elephants in the berd were Asiatics and their mahouts dark-skinned tiny, silky mustar fluffy turbans and buggy trousers. Even Maharajah, the big bull that had risked his life to save his haby from a focomotive-according to the billboards-was an Asiatic. Foster studied him with awe. He did not look like a fond parent. His little eyes twinkled wickedly; he swung his great trunk restinuely to and fro as if seeking that which he might destroy; and his mahout, bawling a strange lingo, incressantly pulled and predded him with a good,

"What do you keep punchis' him for?" Foster finally mustered courage to ask.

"Because he is an old devil," answered the Bengalesc. "Do not come too near or God Himself carnot save you. He has already kill one thousand boys, and he will kill a thousand more before

Foster, the credulous, was skeptical for once. Still he fell back a yard. At the same time he said: "No alephunt will hurt me."

He spoke so quietly, with such dignity and assurance, that the mahout looked at him curiously, "Why, little

Foster did not know why. He had spoken, as was his habit, like one in a dream. Indeed, at that moment he was dreaming that he was the greatest mahout in the world, just as he had often dreamed, with wide open eyes, that he was the greatest sea-captain, the greatest locomotive engineer. the greatest neroplanist in the world.

"Come nearer then, little sahib, if you are not afraid," continued the man, smiling. "Lay your hand upon him."

Even Homer Petti-grew's ateady heart would have throbbed

with pride much he have envisaged his son's soul at that metacts for Foster, impelled by a mysterious impulse that wak no account of four - for he was afraid - did step forward.
"Steady, Maharajah, steady!" said he, though his voice

as not quite spendy.

The grout beast extended his trunk and lifted the boy to the top of his head. Makunda Das, mumbling some kind of an inconcation, weaved his long, alim brown hands to and fro with a snaky motion; and it was in this fushion that Poster rode to the circus grounds a mile away, looking straight ahead, like the picture of Pompey entering Rome, while the other boys, tasting the bitter aloes of envy, tramped along in the dusty roadside weeds.

At the grounds a few of the pachydorms were impressed to butt wagons into position and help raise the "big top"; but most of them, including Maharajah, were staked of to one side, where they were served a breakfast of baled hay by their dusky attendants. The other boys were soon attracted elsewhere, but Foster remained with his beloved

Presently a white man appeared, smoking a cigarette. His hands and shirt were very dirty, he wore no suspenders, and his trousers sagged so low over his hips that Foster momentarily feared a disastrous slide. But the way that man handled elephants, kicking them about like bales of excelsior, without a goad, was a marvel. And the way be cursed the Bengalese about, though there seemed no occa-

sion for cursing, was fairly hair-raising. Suddenly he turned his attention to Foster. "See that bar'l, kiddo? Take them two buckets and go over to Aust Molly's yonder for water. When the bar'l's full you get a free ticket to the show this afternoon. Savvy?"

"Yes, sir," answered the boy. A free ticket was of no use to him. He never had attended a circus and never expected to. He had never even asked to, for his father believed that circuses were the devil's own device, and had said so from the pulpit only the Sunday before. Hence when he picked up the dirar canvas buckets, it was not a free ticket but Service that be was thinking of. Service, always with a capital S, was a thing of which he heard a great deal, both at home and st church. And it was now indeed a privilege to him to carry water to the great beasts which he had such a curious affection for; which so inflamed his imagination, transporting him in spirit to that strange land where the missionaries went; that land of terrible jungles, in which the tiger and the cobra made their lairs; where women and their babes into the Ganges, or flung themselves upon the husbands' funeral piles.

Yet as he trudged back and forth, back and forth between Aunt Molly's and the herd; as the dew dried from (b) grass and dust began to fly; as the sun grew bot, his and tired, his hands blistered, the hope was presently hore that if he sarned a ticket his father might let him use it. At and it was a very tiny thing; yet it wased rapidly in spengili and size, and ere long it had become a Belief.

flat that carrel! It was not a particularly large barrel to took at. The first two bucketfuls made quite a showing in the bottom. When it was a third full be was still fresh. At the half, though weary, his determination was still strong, an after that the waterline cropt up at a small's pace, until it assents as if the burrel must have some subterranean marketion.

Then Aunt Molly he didn't believe that to be ber real name—came out and told him sharply that she couldn't pure any more water. She added more gently—perhaps that a second glance at his drooping figure and flaming tor, all streaked with sweat and dust: "Heades, you're to little for such work. Why don't some of those lazy dress men carry the water?"

"Oh, they aren't luzy, ma'am," said he loyally. "They're being after the unimals and tents and getting ready for the parade."

House here in the nutskirts were scattering. The next sall was almost a block farther off, or two blocks to the sand trip. They told heavily on him, and after six rounds into the barrel housed as hig as a bogshead, and availoused in last load like the contents of a pint cup.

Then a tragic thing happened.

He was resting in the shade of a ticket wagon when a irrelegged, lean-shanked muliout approached the barrel, dippel out two candy-bucketfuls of water and carried them is an wephent.

Forter was no crybshly. He had been taught that all haviced tudes of life are sent by God for a good purpose, and are therefore, blessings in diagnise, he relief against which is ingratitude. But he was deathly tired, his temples that he and his paires burned like fire. So be burst into

"What's the matter now, but ?" presently demanded from with the preceriously slinging transers, as he in a nesh righteste and smitted two white jobs of smalls from is pose. "Quit the job, but ?"

"I can't ever fill the barrel, alv, if they keep dippen' out."

"You're seein' tidage, kidde. Nobesty's dipple out."
"Yes, they are, sir. A Hindu man dipped out two big
latests and watered one of the siephunts."

The man grinned. "Well, well! I'll see he don't do it upin," he promised, with a wink at a spectator, "So hade up! And remember; the hear't full or on ticket. If you don't want the job —."

He broke off abruptly at sight of a second spectator, a blic man with sharp, black eyes, dressed in a next gray of and a broad-brimpout gray has.

"Did this nam promise you a tirket for filling that berei?" he saked of Poster.

"Yes, sir,"

"Up to your old tricks again, shi" exclaimed the little on, and the cursing he thus gave the eigerette may reade in little's cursing of the Benguiss seem a very lame affair bled. Foster shivered for the little man's safety, but addy wrough the eigerette man shuffled off without a word. Then the little man down sequething like a check book from his pocket, signed his name, ture out a leaf and handed it to Fester.

"Here's your pass, my boy-good for this afternoon only. Now go over to that barrel and some your head and keep in the shade awhile. You look but. I've got a looy about your age back large, and I know what's good for boys that are bot."

Foster, thanking him engerly, obeyed instructions, though the period spent in the shade was the very shortest reconcilable with his conscience. Then, without waiting for the parade to form, he made a bestime for home, the proclose pass in his hand, his hand in his pecker, and his pocket pressed against his thigh.

His mother was in the kitches, paring potatoes for dinner. He told his story. If she perceived its pathos it was through maternal divination, not say art of his; and when he finished and asked falteringly if the thought he might go to the circus, she are and dwind he hands and said in a possibility quiet toos: "Walt here. I'll go up to your father" study and talk to him."

This was uniqueal, for the first role of the household was that Homer Pettigrew should not be interrupted during the marning bases steeps for organt matters.

If is mother was gone a long time, and when she came back she entered the kitchen softly and said in the sums strangely quiet tone, with a stiffness about the lips that made him worster: "Your lather will tell you himself at disposition."

When the lamily was seated at the lable Pettigree returned thanks for the food, unfolded his naphie, stuck it in his callar, curved the pot roset and served the places. Finites had an empty feeling itside, but it was not the emptions of hunger, in spile of no breakfast. However, at the parsonage you either ate or you left the table—if you were little; and as leaving the table was not to be thought of until his resource quanties had been answered, Finites picked up his knife and fork without during to glance at his father.

"Foster," said the latter at test, "your mother has related your experience to me. In giving you permission to see the circus come in I did not contemplate your going to the grounds. But doubtless you researcherstood me or you would not have gone. Now I have only this to may: I believe direases are wrong. I prouch against them; I advise my parishlessers to keep their children away from them. Naturally I have kept you from them, and should under ordinary circumstances, as a matter of course, furbid your going to this one."

He passed and drank a glass of water. He drank a great deal of water the only beverage, he was food of saying, when saling for a third or fearth glass out at discore, which God had made for man. Meanwhile, Foster's heart began to race.

"The present circumstances," continued his father, "are not ordinary. You have exceed a ticket. I hope I understand semething of what that means to you, so I am going to let you do as you please. I am going to put the matter up to your conscience. You know my riews. You know that I am older and when than you. You are old

All That Broomy June Afternoon Furier Jul on a Jump-Rest, Juner-Ferred But Transfers

enough to understand, in part, at least, the embarrassment which your going would put upon me and your mother. And that is all I have to say."

Foster, with his eyes upon his plate, swallowed a hite of bread that all but choked him. There seemed to be not room enough for it and the lamp in his throat at the same time. He thought of the Lodbetters, who had subscribed gone money for the new Methodist church than any other family. He thought of Eddie Preston, the Presbyterian reinister's sun. He thought of late of other people who always went to circusts. But he did not speak his thoughts; he had been taught not to argue with his father. What he did do was to rise with a white face, quite suddenly, run toward the hitchen, and from the floor call back:

"I want to go, father, but I won't go. And I don't want you to say you're glid, or praise me, or ever speak of it again," With which he fied.

Homer Pettigrew Imped from his chair with a black brow.
"No!" said Alicia, with flashing eyes, placing horself
between him and the door. "You took your fling at him
first about having no more to my."

All that drower June afternoon Foster set on a soap-box under the maple, soher-found but marine. The street was very quiet: not a buy passed. Humblehove dromed in the built/hocks. A broad of young oriotes overhead incomunity voiced their querulous, monotonous cries. Ever and anonthere liested to his ears, at the caprice of the shifting

sephyre, a strain of band music from the circustent, notened and etherentized by distance till one could almost imagine it the strumming of argels upon their golden barps. And at the lay window sat his mather, arwing — when the coulde-point was not idered through tears.

About six o'clock Stab Match hopped over the back fence, crunching an apple. "Go t' the show!" he mixed briskly.

"Father wouldn't let me," answered Foster

"Gee, it was fine! I'm goin' agin to night.
Then I'm goin' to see 'em load up, Tuey've get some new cars for the elephonic, and I beard one of the circus feliers say mebbe the elephonic wouldn't go into 'om, 'count of the smell of paint, and would have to be drug in with a rope. Mebbe your did would let you

go to that."
"No, he wouldn't, "said Fester hitterly; and he did not even resent Stub's contemptious "Geeminy crickets, what a piker!"

On account of his early rising Fester was sent to bed at right o'clock. But he could not sleep. The circus band music was even plainer than in the afternoon, and his restless mind, aided by the billboards, pictured the dazzling spectade, scepe by some

Then suddenly, for the first time in his life, be resulved to dessive his purents; to see the

leading of the circus.

He counted the clock strokes, and almost before the last, deliberate, mellow tense of ten had died away he was into his clothes and out on the porch road. Sliding down the currer post was but the repetition of a fundame (cot, and five minutes later he reached)

He Turned the Corner, Thinking Six Unwistdy Pursuers Might Shid.

THE ARGONAUTS

Sonny-By George A. Birmingham

ILLUSTRATED BY HENRY RALEIGH

T WAS late in November and it had been raining without cessation for more than three weeks—not vigorously, as I have seen it rain in New York and Philadelphia, but with a dull persistence, as it rains nowhere else except in the west of Ireland. Rain there seems—at certain, indeed at most seasons of the year - to be the normal thing, as if the genius that presides over the weather had turned on rain and then gone to sleep. The country was saturated and I, though well inured to the climate of Connaught, felt. that the pervading damp was getting on my nerves. I was dry in bed at night-I did not seem to be dry anywhere clse. I confess that my temper was bad.

John Cussidy met me on the road a mile from my bouse at four o'clock one afternoon. He was standing at the bottom of a muddy lane that leads up to the wretchedly poor cabin in which he lives. I realized at once that he was

waiting for me. I sighed.

John Cassidy is an excellent fellow—what we call a decent poor man-and I would do a good deal for him; but I did not want to do anything for him just then. I wanted to get home and change my sodden clothes. I had been tramping through the rain all day. I wanted but tea. I wanted tobacco. I wanted a deep chair in front of a fire.

John Cassidy also wanted something-something from

me. Therefore I sighed.
"I'd be glad," he said, "if your reverence would step upand take a look at herself-end maybe say a word to her that would do her good."

Herself was, of course, Mrs. Cassidy. It is in this way that we speak of our wives in the west of Ireland. It is, I think, a beautiful and respectful way of speaking of them. The use of the pronoun in this absolute fashion suggests that for each of us there is no other woman in the world. but only the one; and that is as it should be.

"There's a kind of weakness on her," said John Cassidy ("and it's worse she's getting instead of better.

I grasped at a ray of hope. I am, after all, a clergymannot a doctor. A weakness is a physical rather than a spiritual malady. I could scarcely be expected to cure ber. "Why don't you get the doctor if she's ill?" I asked.

I was standing in a pool of water, but that made very little difference to me. My boots had been sucked through for hours.

"I had the doctor," said Cassidy. "I had him four times and I paid him twice, and it's very little good be

Doctors are not of much use if you take them off the beaten track. In the face of a recognized disease-measles, pneumonia or appendicitis, something they can look up in a book - they make some kind of fight. When they come up against anything as vague and formless as a weakness they can very rarely

do anything.

"He gave her a bettle, I suppose," I said bitterly.

In Ireland we describe every medicine as a bottle-and we are beginning to lose faith in

"For all the good it did her," said Cassidy, "it might as well have been water that was in it; though I will my for that bottle it smelt powerful bad when you took the cork out

"I don't see," I said, "that I'm likely to be of much use.

"It could be," said Cassidy, "that if your reverence was to speak a word to her it might comfort her."

This was, of course, possible. I followed John Cassidy up the Lane.

On the way to the cabin h explained more fully the nature of the weakness.

"It's been coming on her," he said, "ever since the young lad went from us. Two years a 30 he took the notion into his hend that he'd go to Americaand he went."

I knew that. We had all discussed the departure of the Cassidys' son; but he had been gone two years and I had

My Mather Jupa Will Your Reserence Step Up to the Heure for a Minute?

seen Mrs. Cassidy meny times since. She seemed none the worse. Cassidy read my thoughts with that uncanny intuition which you often find among west-of-Ireland presents.

"At the first go off," he said, "you wouldn't have thought she minded no more than another would anyway; but the weakness was within, in the inside of her, and it's lately that it has begun to come out."

I listened to a list of symptoms. It seemed that Mrs. Cassidy had lost heart and no longer took any pleasure in life. She baked bread; she washed clothen; she fed the

pig but she did these things without zest.

"It's seldom ever I can get her to go as far as the town on a market day," said Cassidy; "and she doesn't rare if she never saw a neighbor woman or heard a word of what's

You couldn't get her to put a shawl over her head and go as far as the road-not if you was to offer her a fetful of gold for doing it."

This was plainly an evil case; but it seemed scarcely

likely that my words would charm away so lethal an apathy.
"You'd think now," said Cassidy, "that she was no more than able just to put the one foot in front of the

He whispered these words in my ear, for we had reached the door of the cottage and it stood open. I went in and Cassidy followed me.

Mrs. Cassidy was sitting on a stool in the chimney corner, crouching over a fire that had burned low. There was a great round pot at her feet, with glowing cinders underneath it and gray, ash-covered coals piled on its lid. In such pots the west-of-Ireland people bake their bread, and Mrs. Cassidy, no doubt, had a louf in hers; but she was not watching her pot.

I got arrustomed to the gloom of the house and I could see that her eyes were fixed on something beyond the pot, beyond the chimney corner and beyond the house itself. They had a long, sorrowful look in them. For a while she seemed unconscious that we were in the room with her Her bushand roused her,

"Do you not see," he said, "that his reverence is here! Will you not give him a chair the way he'll be able to take an air of the fire? He's wet through, so he is."

Mrs. Cassidy's courtesy overcame the weakness that was on her. She stood up and bowed to me with that air of quiet, unassertive dignity which the west-of-Ireland peaant possesses in common with the best-bred members of the English aristocracy. Neither squalor, on the one hand, nor the surroundings of the smart set, on the other, can rob a woman of this great-lady manner if it is born

Having bowed, Mrs. Caseidy drew forward a chair and wiped the seat of it with her apron.

"It's pleased I am to see your reverence," she said, either now or at any other time."

I sat down. John Cassidy gave me a meaning glance. and then said he was going out to see whether the young heifer had broken down the wall which separated her field from the petate patch. It is, I know, the habit of young heifers to break walls. The young of all species do it. I have heard of young girls -- but their doings are no concern

of mine. They may break all the walls of all the convention

without interference from me. Nor do I think that John Cassidy cared much whether his heifer had broken be wal or not. The potatoes had long since been dug. The ground is which they grow would suffer no harm by the incursions of young heifer. He was making an excuse to escape, so that I should be left alone to speak to Mrs. Cassidy the word which might do her good and help to remove the weakness that we on her.

For some time Mrs. Cassify and I sat in silence, one or each side of the fire. I looked at bo and noted a slovenlines in her attire that was new tome. She used to be a neat, trim words even when she was going alon the business of cleaning by house and feeding her pa

I noticed that the best wandered unchecked about to floor of the room. They pedec and scratched among the rdeon the hearth. They sprang " on the dresser, where this and jugs stood in rows. eiling for My Mont's Marte Up "

inless it were a chicken in delicate health, was ruthlessly driven from the door. Now Mrs. Cassidy was apalinetic.

It is only very good friends who can sit opposite ouch other without speaking. Silence is usually embarrossing to civilized people. I confess that our long silence began to embarrass me and it came as a relief when Mrs. Cassidy legan to speak. Her words fell from her slowly and scarcely semed to be addressed to me. It was rather as if she spike a monologue, telling to the broading spirit of her home the tale of her sorrow.

"It was three years ago that the fancy first took him. Before that he was always contented enough."

I knew she was speaking about her boy her son,

"His name," she added, "was Michael Antony; but it was Sonny we called him."

[waited, for I had nothing to say. There are scores of these sonnies, whose names are cally something else. The mother love that cleaves to the pet name is the same for all of them; so is the hearttrak for the mother.

"I don't rightly know," she wat on, "how the notion of America came to him first. You'd think he was contented enough. It wasn't that his lather was hard on him. The lad had no more to do than shut be seemed willing for. He had a decent suit of clothes to wear of a Sunday or a fair isy, and nobody denied him his share of any pleasuring there might be in it-the like of a mothall kicking, or maybe a dance at an odd time; but the notion took him and nothng would do him only to go to America. I was against it and to was his father.

Mrs. Cassidy retapsed into dence again. She seemed to lave forgotten my presence sltogether. Then suddenly tle looked at me and added a word of explanation - a patietically unnecessary word.

"His name was Michael Antony, but it was Sonny we did be calling him. Well," she vent on, "nothing would do him but to write to his Aunt Matilda, who's out in Pittsburgh and married to a man that went from this parish. I never seen her myself, but she was his father's sister. Sonny was always a good scholar and

he was well fit to write a letter to his aunt or to any other one. We kept him to his schooling regular, only when there might be a press of work at the bay or the like of that, so as he'd be wanted at home. It was always his father's wish and my own that he'd get good hurning while he couldand he got it. There wasn't a better speller than Sorny; and the way he'd write, a blind man could have read it?

The half door of the cottage was opened and two girls came in I looked tound and recognized the Caseldys' little daughters, children of twelve and features years of

age, with school extends over their arms. "North Kate," said Mrs. Cassidy, "your dinner's waiting for you and Susan's along with it. Will you six

down now and eat it? And, before you do, let Susy hoosh the heas out of the house. It's too bold those same hans

The children did as they were bidden, without speaking. Doubties they shouted and laughed elsewhere, in the school playground or on the roadside. Here at home they were elent. It may have been my presence that awed them; but I think that even the merriest child would have found it hard to lough in the house where Mrs. Cassidy assissaly mourned for Sunny, whose real name was Michael Antony.

When Mrs. Cassidy spoke again the bens had been driven forth and the two girls were sitting at the table,

with a howl of boiled potatoes between them.

"It was a month, or maybe a little more, before the answer came back from his sunt; but when it did come I was glad to see it. What she said was that it would be no use for Michael Aptony - bie name wan Michael Antony, though it was Sunny we always called him-that it would be no use for him to go to America. The times was bad out there, also said, and little likelihood of their getting better. Let the boy stay where he is, she said. where he has a living to get without working the flesh off his homm. Let him not gothere, she said, or else he'd be sorry for it after, Well, you'd think that would have contentral him and put the notion of America out of his head and so it did seemingly."

The hems, grown hold by long imputity, had made their way into the house again; but Mrs. Carridy was roused now.

"Norah Kate," she said. "will you and Susy put them bens out and yourselves along with the heast. Don't you see I'm talking to his reverence?"

Mrs. Cassidy, illormost good women, had small respect for her daughters. Sonny, I imagine had Sonny remained at home-might have sat out the visit of a bishop. His mather would buye considered. his presence an house to the highest reclesiantic but daughters, even though their fathers spoil tham, never stand. so bigh as once in the opinion of a good nother. Norsh Kate.

I Could Jee That Her Spix Were Fixed an Jonething Bound the Pot -

WITH THE DANCE

By Mary Stewart Cutting

OU must get your husband to join the class! The Watkinses are going to give a ball next month when they come back from the Coast; so we'll have to learn to dance

before that. If you don't dance nowadays
you're out of everything!" Mrs. Roberts spoke winningly. She shared the usual anxiety of the promoter of any suburban scheme: the more subscribers you got the less was the individual toll.

"Well, I don't know," said Mrs. Chander doubtfully. Her graceful head, with its ripply brown hair, drooped a little on one side; her clear blue eyes fastened themselves on the large marblelike orbs of the fashionably attired visitor. "I'd love to join, myself; but I've been trying for the last six months to get Preston to learn and he just simply refuses to. He says he's too old to begin again, with s boy nearly fourteen! But he never cared much for lancing anyway, and after what he saw over at Wickham -" Mrs. Chandor paused expressively.

ast summer --- " Mrs. Char Mrs. Roberts' face flushed.

"Too old! Why, Mr. Brentwood is more enthusiastic han anybody, and he's a grandfather! But I don't thinkto you!-that people-that is, really nice people-talk nuch about age any more. And these dances are so differ-

not from the waltz and two-step, which were so tiring."

She caught herself up deftly, and then continued: "I lon't mean by this that they're at all like the kind of thing

they have at Wickham; we all know what that set is! No; when the new dances are taught properly they're a very different thing. Little Emma Prankly, whom we have engaged to teach us, is the dearest creature; so inspiring! You were saying a moment ago that Mr. Chander was too tired when he came home at night-that's the very reason he should join the class. Emma Prankly says she teaches more tired-out business men than any others; the tonic effects are wonderful. Doctor Sayres himself told me the other day that if he could run in for an hour of dancing after a day of operations, and work off the strain, it would make a new man of him. I have insisted that my husband should join just on account of his liver; he's so pessimistic lately-business is so bad-that I can hardly

stay in the same house with him!" She paused, and then went on again:

"It's strange how husbands and wives differ on the subject! Now at the Iversons' it's Leslie who's crazy over dancing. Winifred says he tangues even while he's dressing. She feels that she can't take on another thing, what with little Matilda and the house, and changing servants, and the consumers' league, and all that interminable suffrage telephoning every evening. As she says, Leslie has only his business and his golf to think about. Life seems so simple for a man, doesn't it, in comparison with what it is for

a woman? I said to her: 'Winifred, you need relaxation!' Now do think of the ball and get Mr. Chander to join! You know you can if you want to."

"Oh, I'll try!" sald Elinor. It was the received cult among the married that you could always get a husband to do anything if you set your mind to it, with the suppression of that other fact that such success, when it did occur, was often more ismentable in its effects than failure. There is no sadder thing than a man forced unwillingly to his amusement,

If she could only get Preston to think that he wanted to

He was such a dear usually about doing what she wished, but when he became inert he had a sort of masculine ponderosity that made it almost impossible to move him. Yet, if he did not give in to the new order of things it was sadly true that they would be out of everything.

The town was steadily growing to be dancing-mad, not only as regarded the younger set, who were by right votaries of the art, but among the middle-aged, the heavyweights, people who had long been relegated to the seats along the wall, and who were now happily taking advantage of the door that opportunity, even at this late day,

held open for them. The Bannards and a small party, penetrating with a sense of reckless gayety into a dancing restaurant in town one evening to watch the show, had been quite taken aback by the number of solid elderly husbands and wives disporting themselves earnestly on the floor.

"Well, of course, when you think of it, I suppose they're never invited anywhere to dance," Lucia Bannard had stated; "so this is the only chance they get!"

There was, indeed, one young man and woman who seemed to be performing rather extraordinarily, with immense acrobatic muscle; but even they had soon stopped at a quiet signal from the proprietor. It was felt disappointedly that the gayety of the scene had been overrated; with, however, the saving thought that it was probably quite different at a later hour.

At home there were the elder Iversons, equally grandparents with Mr. Brentwood, though none of them was

at all venerable. Mr. Iverson, a semi-invalid for years, had become an ardent devotee of the cult; while his wife, delicately dignified, performed with delightful grace. When eighteen-year-old Tommy Atmore came home from college for the holidays, and it was whispered that he could dance the Bird Boomerang, or some such matter, all his mother's friends vied for his presence at their afternoon teas, coaxing him to give them lessons.

Even old Mrs. Crandall, who every one thought would be shocked, though she did not dance, benignly sought with her wrinkled fingers to fit the strains of Money Musk, the Blue Bells of Scotland and the limp and ancient Shells of Ocean Waltz to the exigencies of the new steps, until in self-defense her daughter-in-isw procured a phonograph. It had come to that pass, indeed, that every gathering, whether it began as luncheon, ten, dinner or bridge party, turned into dance practice before it was ended, though no two people danced the same way.

The very lift of the music, the bizarre ragtime and its gay kin that wouldn't let your feet keep still, had something inspiring that swept one out of the realm of orders to the butcher, and bills, and defective plumbing, and the long, sordid business day, and the monotonous round of suburban living; it gave a lift to the morrow. It was time, indeed, for Emma Prankly's competent instruction and for Preston Chandor to take lessons.

Elinor made up her mind to have it out with him that evening. She was one of those rare women who can differ from a man without being antagonistic; she seemed rather to wish to be convinced by him. She dressed herself with unusual care in a blue gown that he always liked, with a neckpiece of lacy white at her slender bare throat; she had always a characteristic daintiness that satisfied both the eye and the sense. Yet it had seemed to her sometimes lately as though her husband was getting into a habit of not quite seeing her; of just taking her satisfactory appearance comfortably for granted, without any fresh interest in the sight.

He himself, she noticed to-night as she looked at him thoughtfully, was getting a little heavier; his pleasant face was becoming somewhat set—he had an indescribable air of one growing wedded to the solidities of life. It was when the children were in bed,

after that racking study hour in which the helpful parent is reduced to pulp between the dictates of common sense and the Way the teacher says you must do it, that Elinor, as she was leaning against the arm of his chair, breached the subject of Miss Prankly.

"Dancing lessons! Why should I take duncing lessons?"
he queried carelessly, looking longingly at the book he
held; he was deeply absorbed in everything Arctic.

"Everybody's doing it, Preston. If you once tried to dance you'd be as crazy over it as the rest are."

"All the more reason, then, why I shouldn't try; I don't want to be crazy over it. I'd a great deal rather sit here with a book and you, dear."

"With a book and a pipe, you mean," she retorted gayly. "You don't know how much you're losing?" "Well, if I don't know it I'm not missing anything, am

"Well, if I don't know it I'm not missing anything, am I? See here, Elinor, it's no use arguing with me about it. I don't care who else dances—let them if they want to; but I'm not going to learn. I don't like it." His worried gaze became fissed on something beyond her, while she smoothed his kunst in hers. Mr. Chandor felt a restless repugnance to the subject hard to explain—a herce repudiation of the charms of the dance, which seemed as though it might develop some uncanny spell of fascination over his unwilling spirit if he did not hold out against it. "I thought we finished with this last summer." His eyes plunged into hers. "If you want to join this racket, just say so. I don't want to stand in your way if you'd enjoy it. I'll take you to every house the class is held in, of course, and come for you any time you wish."

"No-o-of" said his wife slowly.

The music called endearingly to her nimble feet—she would like to learn the steps correctly, but not without him. They had tacitly done things together, so far as

possible, since that first year or two of their married life when he had been lured into a series of chess tournaments, with two or three friends, with an ardor that threatened to shipwreck their wedded happiness—not that he loved her less devotedly, but that he could not understand how the bours passed while at that too-fascinating game.

One of Elinor's most harrowing memories later was connected with the time when a rook was missing from his beloved chesemen, and she had to confess that she had given them to the baby to play with when he was fretful, though she positively knew she had put them all back again. They had both comfortably become devotees of bridge afterward, until this dancing era struck in.

"Of course I'd love it, but I don't care to go off evenings without you," she said with a tender pressure that he returned. "I'll just wait until you want to learn too. We can join at any time!" And she kissed him.

"You Can't Get Anything to Sti Bean Quietly for a Game, Now That This Duncing Cross to Do."

She had planted the entering wedge anyway. She knew the matter was in his mind all that week; he showed her the little attentions that always manifested his thoughtfulness of her. On Thursday his long fingers unrolled from its wrappings a little green glass vase for flowers, which he had bought in a shop on his way out from town. On Saturday he brought that bunch of midwinter lilies of the valley, which almost meant more than any other gift to her, though his evenings were still exclusively devoted to the Polar regions: he was never interested in anything by halves. But on Monday night, when they were bestowed in their usual positions by the log fire, while the cold crackled at the window panes, he looked up ovcasionally from the pages with a strange expression to where she sat, with her work dropped from her hand, her lips parted, yearningly listening to the rollicking strains that intermittently reached them.

"Where does that music come from?" he asked. She looked at him with her whole soul in the glance.

"It's over at the Bannards'; they're having the dancing class there. Doesn't it sound just levely?"

"Oh, that's it, is it!"

Preston seemed to hesitate a moment; and then, still keeping one hand on the book, hitched his chair up close to bers, laying the other hand on her soft fingers as his fine eyes met hers tenderly.

Elinar's heart beat exultingly: her policy of silence and submission had been the right one, as she knew it would be; he could not help seeing how much she longed to be over there, and he never, never could really hear to deny her anything! How sweet he was anyway! How much nicer than any other man!

"Elinor --- "
She waited blissfully: "Yes, dear,"
He held her band a little closer.

"Now don't you think it's a—great—deal—better to be sitting here together comfortably than chasing round the floor like those idiots over there at the Bannards'? .

What have I said now! Where are you going? Whis under heavens is the matter?"

"I-I-I only have to go and get a spool of threat,"

said Elinor in a muffled tone.

And, after all, what was the use of giving up lope yet. This was only the beginning. Let him get used to the de.

11

THE defection of the favorite Chandors was a serious one in the little circle of intimate friends. It was not to be thought of that the two were to be no more one with the interests of the crowd. There was a tendency among the women to wonder that Elinor, dear as she was, had not more influence with her husband. Each had some instance to relate wherein her Will or Edward might have

to relate wherein her Will or Edward might has proved as recalcifrant if she had not exerted be powers; but there was a general feeling that the unnatural situation should be brought to an end a soon as possible. The young and lightsome Mr. Bannard approached Preston on the subject who going into town.

"What's eating you, Chandor? Waiting to be pressed to join the class? If I were you I'd brag Elinor on Thursday and get into the game like a

little man."

"Would you?" asked Mr. Chander setately.
Mr. Bannard's eye kindled reminiscently.

"We had a fine time last clip! You ought to have seen Roberts! He was working so over the tagthat he actually forgot to go across to the club!se his evening bracer. Miss Prankly's a great histteacher! I declare, though, I felt sorry for herstrugling over Will Crandall.

"That fellow's all hoofs—awful! He's cough
to break up the class. You could give him point
any time, Chandor. And his wife is almost as tal.
She can't get the hang of anything—dances like as
ice cart. I'll tell you, though, whom you want to
spiel with if you have the chance, and that's MaBantry."

"Mrs. Bantry!" Preston's jaw dropped; his exstuck out in wonder, "Why, she must week our two hundred!"

"I don't care what she weighs; anyhody who poler for a partner has a cinch. She's as light as feather on her feet—believe me! She dances has breeze; catches on to everything! All the mer as cruzy over her. She's not so bad looking, either, you come down to that."

"Mrs. Bantry!" repeated Preston with a wade that had not lessened. She was a woman who have tofore, by some inexorable, unvoiced law, had been relegated entirely to the society of other women. In man ever spake to her voluntarily, except in greating or farewell; even her husband was said to pastall his evenings at the lodge. Yet here she had one mysteriously into her own! Preston shook his best "I don't get you, Donald," he said with finally.

However, the next evening, Saturday, the Pasters and the Wilmers stopped in on their way to the "movies" to tell Mr. Chandor, with persuasive volubilit, not to be so foolish, but to make up his mind to learn the modern dance at once.

Gentle Mrs. Iverson and kind, motherly Mrs. Hreatwood on different occasions, coming out from town, sat down to him on purpose delicately to suggest how much it would make for his wife's happiness if he would only overous his prejudice enough just to try the dance—everybody we sure he would like it if he did—while he politely listered and smiled, and was most courteous in all the little way that women appreciate, but refused to commit himself.

Everywhere he was assailed by either argument or nitery, except from those husbands whose wives begithem, as a duty, to speak to Mr. Chander—an adjuncthat invariably reduces sensitive man to complete some

on the mooted subject.

Though be would not own it to himself, Preston of feel Elinor's clear blue eyes looking anxiously day by a for some expected change in him. Once be found her bying on a party gown and tiptoed out of the room make However, the climax to this state of things came of Thursday following: Mr. Chandor, on reaching him seemed to perceive the well-known signs of festivity in wife's attire.

"Anybody coming in to-night?" he asked casualle.
His wife looked at him without expression.

"Yes; the Bannards."

"I'll dress after dinner. I shall be glad to have a late auction once more. You can't get anybody to set the quietly for a game, now that this dancing craze is an

"Yes," said his wife in the same tone as before.

Preston went round upstairs afterward whistling and dressed, and her heart smote her; but even as he described by shaven and radiant of mien, there was that the sound of many people coming along outside, with sound of many people coming along outside, with sound of many people coming along outside, with sound of many people coming along outside.

THE SATURDAY EVENING POST

of skirts, tramping of feet, subdued voices, smothered laughter. When the bell rang Mr. Chandor, going to the door unwittingly, held it open to the icy air for a procession, doaked and hooded and overcoated over evening attire.

"We're taking you by storm, old fellow!" called Will Crandall, slapping his host on the shoulder.

"Got you now, Chandor! Got you now!" "Bringing the mountain to Mohammed, you know," said the elder Mr. Iverson, following up the chorus. "The whole class, Miss Prankly and all! No excuse for you now;

no excuse now! What do you say to this, Chandor!" "Why, it's fine!" said Mr. Chandor, smiling. "Awfully glad to see you all. How do you do, Miss Prankly? How do you do, Mrs. Paxton? Hello, Paxton! Make yourself at home. Glad to see you and Donald, Lucia."

His greetings went all along the line as the guests swarmed in and were handed over to Elinor. Her glance, arge-eyed, sought his in the interim as she whispered:

I hope you don't mind?"

"No, indeed!" he said, with what she always called his ompany smile, though she noticed afterward a peculiar

expression in his eye.
"I hear I'm to have the pleasure of teaching you this vening, Mr. Chandor," said Emma Prankly as they stood n the drawing room after the rugs and furniture had been emoved.

She was such a frail, palely smiling little person, and with such tiny feet showing below her short white skirt, hat it seemed almost pathetic that she should have all hose big men to work over.

"Why, it would seem so," said Preston gallantly. "Heen saching much today, Miss Emma?"

"Since nine this morning."

"Since nine! You must be worn out. Why, I shouldn't

ave a leg to stand on!"

"Oh, I never get tired dancing!" said Miss Prankly "It stimulates and it rith professional sprightliness. pothes.

"Oh I" said Mr. Chandor, staring. "Well, start off with he others if you will, Miss Prankly, so that I may see how ('s done, and leave me until later. Thank you!

The tall, stolid-looking planist, in a shirt waist and skirt hat looked as though carved from stone, was already at er place at the instrument, pounding away with long quicular fingers in startlingly marked rhythm. An air of xcitement and gayety pervaded everything. There was a adden rush of men toward the stout Mrs. Bantry. The comful of people resolved itself, with a few exceptions, sto plunging couples, slowly, advancingly pawing the round, with sudden unexpected turns and ennyolutions, bile Preston watched interestedly.

"Getting up your courage for the fatal plunge?" said heald Bannard hardily, pausing for a moment by his host. Hello, Elinor! Feeling good to-night?"

Yes, indeed!" returned Elinor.

"Doesn't Elinor look fine?" murmured Lucia. "She's happy, Preston, because you're actually going to be in all again. It's really been quite a deprivation to herour not being willing to learn. But, of course, that's all rer now."

"Oh, certainly, certainly," said Preston with a strained pression. "What is it, Mrs. Iverson? Thank you! It's ighty kind of you to be so pleased about it."

The music suddenly stopped short; the floor, which had been full of long-armed gentlemen rhythmically propelling ladies before them like perambulators, became emptied.

Miss Prankly, amid a Wort of conversation. clupped her hands for allence.

"I'll take the beginners now. Mr. Roberta! Mrss Barker! Mr. Chauder! Mr. Chandor, if you'll come over and stand Burn

A churus arous:

"Chander! Chander! Chandor, it's your torn

"Cercainly," said Mr. Chandor. He stepped forward and then stopped full way across the room, slightly puling, as one struck with a sudden thought. "If you'll suname to while I run down and look at the fur-

"Where is Mr. Chandor?" some one asked vaguely full an hour later, in a pause of the music.

"Mrs. Chandor, where's Chander?" "Mrs. Chander, where's your husband?" "This isn't fair!"

"Why, he's still down in the cellar working over the formers," said Klinor, opposing with a worried expression; there were lines but ween her ayes. "He says it was exactly out - in this westley, two, when everything edglet freeze? He's had to make a fresh tire and he says he doesn't dare lower it. Mr. Bustry is down there with him. They're sitting in front of the furnare anothing. He's so covered with subswither he couldn't come up here again anyway. It really was out! It's ar very unfortunate; but-

She could almost hour how the incident was being commented on after the assemblage had left the house! She was secretly weeping all the time she wangetting undressed.

Yet, in spite of everything, she still logest.

III

NEITHER she nor Preston and one moral about the affair that hight or the next morning, save that he briefly hoped the guests had enjoyed themselves. But the next night, being the last of the month, Mr. Chandor came home somewhat late. He klased his waiting family sketchily, with no interest in the process; and, though the nightgowned Lucile flung her arms round his neck violently with her feet off the floor, he detached her only automatically. His face looked baggard; his brow was brooding.

"Have you had a hard day, dear?" his wife ventured

when they were alone. "Not especially."

"Oh! How is Mr. Trainor getting along?" Mr. Trainor

All His Mother's Friends Vied for His Presence at Their Tous

The True Was Standing Growing Sunsings, Mad

"He's doing very well, so far as I know,"

Your tooth husn't been troubling you, has It, donr? This terrible weather is so trying!"

'No: It ham't been troubling me.

He had been standing up by the mantelpiers, but now he flung himself down suddenly into an armchair, looking at her with dark and harrowed gaze

"I tell yes I've had about enough of this danning busiess, Elleur. It's all very well to be budgered at every tack and turn by the wormen of rourse a man has to take that, and I hope I can stand any ordinary chaffing as well as the next one; but after that racket you let me in for last nightnever felt like such a foot? to have everybody to-day taking me to task for disappointing my wife-I call that a little too much! If there was anything that would drive you a thusmand railer from the whole business it would be that."

"Your yes, indust!" said Elinor-

Her blue syss chouled; she put one arm recod his neck as one who would defend him against the world, though he stiff hald neary from her as he went on:

"I'm sorry you are disappointed, Elinor; but ----

"Oh, I'm not really!"

"I'll do anything else on earth that you want, dear; but, for heaven's sake, call a halt on this. I'm worn out with it; it's got on my nerves!"

He let bimself be drawn into the warm circle of her arms,

his eyes, however, still looking beyond her.

"No, no, dear; we won't say another word about it," she murmured soothingly. What did it all amount to anyway?

His gase returned to her vaguely.
"I was talking to Kelmer to-day." Kelmer was the chess enthusiast of the past, with whom Preston still occasionally had a game at long intervals. "He wants me to come to his rooms to-morrow evening; I'll be out on an early train though. We think of getting up a three weeks' tournament. with Brayton and Phillips. You don't mind, do you?"

Chess! Was that allure getting its fatal hold on him again, after being so long driven away by the social charms of auction? For the life of her, Elinor could not put any warmth into her "No."

She got up and walked away from him; and he let her go, unknowing that she went, his mind already disporting itself clarifyingly among gambits.

The thought clouded everything for Elinor. She knew she was cross to the children and everybody the next day, with nothing to look forward to at the end of it and with a series of solitary evenings looming grimly ahead. But at eight o'clock the telephone rang. Lucia Bannard's voice halled her:

"We want you to put on something and come with us to the dance at the clubhouse, over at the Ridge. Donald says Preston stayed in town; so you're alone. . . . Goodness! You know perfectly well he'd want you to go. We're all going over in the Iversons' limousine. . . Yes, you can. We'll be home before he gets back anyhow. . . . Oh, come on! Be a sport! . . , then; we'll stop for you in half an hour."

There was a delightful, excited scramble on Elinor's part in getting into her new low-necked light-blue chiffon, with the help of Ellen the maid; the children, excited too, were standing by as she bent a tall loop of white and spangles into a slender upstanding ornament for her lovely

brown hair. She was bundled into her wraps in time to be helped down the slippery steps and into the festive car, which

(Continued on Page 57)

The Mutineer of the Mary Blownt

POR once anyway intuition proved truly prophetic. It seemed for a while as if Mr. Tuttle's hoat would be the first to fasten to the whale; but Minch, his boatsteerer, a man of experience and cool judgment, put a little too much right hand into his throw, with the result that when the point of the harpoon struck the whale the weight of the great arm-thick oak pole from which, rather than from the brawn of the boatsteerer, it. receives its impetus was not directly behind it, but turning forward upon it like a lever upon a fulcrum. The bright point dipped into the buttery blubber, and then twisted out with a noise like tearing wet paper. And the whale sounded—that is he stood solemnly upon his head, waving his tail that was twenty feet from tip to tip, and then went straight down without splash or commotion, much as an express elevator in a tall building drops from the seventeenth floor to the street.

From this fiasco two things resulted immediately: Eighteen men manning three lovely hoats laughed and jeezed till they were almost sick, while the six menmanning the fourth boat maintained for a time a gloomy silence and then began to curse. That is, five of them did. The sixth was Mr. Minch himself, and he began to curse and explain.

Then the boats scattered, each being placed where in the judgment of its guid-

An hour passed—an hour and fifteen minutes; then very auddenly Crandle, erect and preternaturally alert in the bow of the waist boat, yelled "Stern all!" at the top of his lungs, and as the boat shot backward, seized a harpoon from the rack and buried it with all his force into a hill of shiny black that had risen, you may say, almost in his face.

ing spirit the whale was most likely to

And then there happened a thing almost unique to whale fishing. In the whale's mind astonishment at being so suddenly hurt, just when he expected to enjoy himself, seemed to predominate over pain. In nine hundred and ninety-nine cases out of a thousand he would have bolted, run off with several hundred fathoms of line and given the men in the boat a ride to which even a first ascent in an aeroplane would seem tedious and uneventful, and all this and much more besides before there would have been even a ghost of a show to kill

him. On the present occasion the whale remained without motion for perhaps a minute. During that minute Crandle-though this was really the fourth mate's prerogative-reached for a lance and drove it into the whale's vitals.

The lance with which whales were killed before the invention of tonite bombe is an appalling weapon. The cutting end, certainly as sharp as a dull razor, is shaped like a lilac leaf. It is on the end of a shaft of soft iron as thick as your little finger and five or six feet long. It receives its impetusfrom an oak pole four or five feet long and as hig round as a man's leg below the knee—a real man's leg—plus the whole power of a very strong man's arms, back, shoulders and loins, all working with the rhythm and swing of a professional golf player.

And that blue-leaf point, with its dazzling edges, having reached out the whale's great blood reservoirs—the cailed vessels a foot in diameter — where they lie five feet below skin and blubber, rips and slushes them until there is set up so copious and violent an escape of blood as would turn

the machinery of a sawmill.

And so it was that harpooning this whale and sending him into his death flurry, instead of being separated by a space of hours, were almost simultaneous. Except for backing away new and then, so that leviathan might have a clear stage for his death scene-a furious, thunderous, devastating swimming in a circle, a great raining and spattering upon the sea of anguish-blown blood, and an awful lashing in the air and crashing upon the water of the prodigious flukes-there was nothing for the men to do but look on, and wonder and whisper to each other somehow they always whisper when the whale is dying-that they had never seen such a thing before.

Once I threw a pebble against the -pebbles, sand, whole side of the hill began to

By GOUVERNEUR MORRIS

The Bay Bouers Mode Her Dut to be the Missing Whate Beat

then great boulders, and at last a forest tree, its surfacefeeding roots appearing to clutch and grosp for support like the hands of a man who has slipped on a steep roof. And seeing the havor that I had wrought with one small weakly thrown stone, I felt something of the awe that these men must have felt when five minutes after Crandle had first thrown the harpson the whale lay dead, belly up upon the sea; two bundred thousand pounds of flesh and tione, of fat and oil and ivery - a black island with a reck-bound coast, in the lea of which they might have ridden out a storm, and against whose weatherside the waves would have broken and been tossed heavenward in foam.

The men felt as David must have felt when, nerved to the combat and ready to give his life, but very nervous, doubtless, and full of fear, he saw the sturined Goliuth drop in his tracks, and leaping forward harked off his head before the gight could come to life again.

There was a long allence. Suddenly, and as it were from the heavens, there dropped a snow-white sea bird, that perched cockily, like an English sparrow, upon the whale's belly and began to tear at it.

"Rey, you! Get out o' that!" shouted one of the men. For he had an interest in that whale and did not propose to be robbed without protest.

But Crandle had turned his head toward the Mary Blount, which was now hearing down upon them; and it seemed to him that he saw a little figure in dark blue that waved a handkerchief and said: "Oh, well done! Well

At this moment Mr. Tuttle's boat care up, and the discomfitted Minch called to Crandle:

"Say, what happened to him? Did you spit on him?" "Why," said Cranile, "we fold him about you trying to stick an iron into him, and he laughed himself to death."

Minch opened his mouth savagely, and so remained some time, being unable to think of the words which the moment seemed to require. But finally he closed his mouth, shook his head a couple of times

and then began to smile.
"I guess," he said, "if there was any
drinks in this here part of the world they'd

be on me.

Crandle's eyes stole once more toward the Mary Blount. And he saw that she was nearer - nearer.

Toward the dead whale he felt a certain friendship, for in his hour of opportunity it had played into his hands. And he knew that little by little the fame of his exploit. would spread all over the whilets' seas. and would be spoken of with swe and envy wherever boutsteerers gather and compare notes.

His mind began to be flooded with wild and selfish thoughts. He would rise higher and higher in the world. He would be master of a ship. Captain Halthway-oh, semething would happen to him; something always did happen if you wished and wanted hard enough. And to whom then, in her hour of need, would that blithe spirit in the great blue sea-cloak turn for comfort and support?

And be saw himself retired into a brick house, four square to the winds, having white columns in front. And at the back a summer house crowned with the figurehead of a ship, and having upon the roof a flat space with a hand-rail, to which he could ascend with his telescope and his children, to show them the ways of the stars in heaven and of ships going in and out of barbors

And there drifted into his mind, beforging its clear workings, thoughts of men washed overboard in times of storms. and no questions asked; of razor blades smeared with verdigris, by which men shaving at sea have been their own mecutioners; and ways and means of death, violent and subtle, moved through his mindlike a Mardi-Gras procession through a village street, each memory or invention as it were a scene done to the life and exhibited upon a float.

But three days later, the whale having been stripped of his valuables and turned over to the sharks and sea birds, and the Mary Blount having been scraped and scoured till she was once more as clean at artists in cleanlineas could make her, be

got some pieces of fancy woods out of his capacious wa rhest and began to fashion a little shipshape stand in which to swing a baby's cradle. And with the tail of his eye he took up with the boy Bowers the study of navigation at the point where they had left off.

CAPTAIN HAITHWAY?"

"I'll be obliged if you'll step into my stateroom a moment, sir."

As a matter of fact, the misnamed room in question already rentained Mr. Tuttle, so that Captain Haithesy could do no more than thrust his boyish head in at the door. He found Mr. Tuttle examining his sore side with the sid of a sesman's mirror and such light as filtered through ton

thick prisms of glass let into the deck above.
"Something badly out of kelter, captain," said Mr. Tuttle. "It is getting sore to the touch, sir. I have called you in to prescribe for me."

Captain Haithway shook his head ruefully.

"Perhaps one of the men has had experience in a her: of this kind.

"Something inside must be damaged," said Mr. Tutte, and he drepped his arm so that it covered the sponge shaped pinkish stain over his ribs.

"You feel much pain?"

"When I move suddenly after resting in one position of a long time. But there is constant discomfort.

How would it be if you went to bed for a few days and tried a compress, something to draw out the inflammation "I think it would be a good idea, if I can be spared

"That will be all right, unless something turns up." "Thank you, sir."

"Turn right in now, and I'll get out my book and make a positive according to prescription."

Mr. Tuttle reached for his nightgown and pulled it over is head.

"You're very kind indeed, sir."

"Not at all. The sooner you're well, the better for all lands."

"I want to speak of that too. I can't get rid of the teling, sir, that I am in a very had way. If anything appeal to me you would be left without any officer who merstands navigation. Crandle, however, and Bowers are taking good progress in Bowditch. I was going to suggest that you take them in hand, sir. Practice them with the minument and let them work out your own problems as

they arise. That Crandle is a very able man."
"I'll give them lessons," said Captain Haithway briefly:
but it's because I like to help men who are ambitious,
and not because I think you are seriously sick."

He turned on his heel, and Mr. Tuttle, a ghost of a smile on he lips, finished undressing and slipped into his bunk. Here after a gingerly twisting and turning, he found the position that was easiest for his hurt side and closed his

Thereafter, weather and duty permitting. Crandle and severa came to Captain Haithway every day at noon and served practical demonstration in the art of navigation. But on the third day Mr. Tuttle dressed and came on deck, as because the resting and poulticing had helped him, but because he was too sick of idleness and solitude to endure them any longer. He pretended that he was better.

Crandle had been impatiently waiting for a word with

"Mr. Tuttle," he said, "some of us as knows the ropes a high has made our calculations, and it's the unanimous quint that if we was to quit this here standing off and mand head for Honolulu, we'd just about fetch there in line."

"But we are in the midst of very fine whale country, tractle, and what do you mean by fetching Handulu in time?"

"I mean, sir, that when a woman's day of fear comes she ught to have women about her. You could put it to the nater, sir. You could tell him that in a straight run from

here to the islands he'd be as likely to get his full of oil as by ruising in these here waters, which you'll admit haven't move anything but blacklish see we atruck into 'em."

"Captain Haithway has to thek first of all of his duty to its owners."

"If you was in his boots, Mr. Tuttle?"

"Good gracious!" exsized Mr. Tuttle, and he thated like an old maid.

"Frankly, Crandle, I bould—I mean I'm afraid I bould—head for the neurest ring-in bospital, and if there was any blind men aboard is and them aloft to watch or whales."

"Every man in this old oftom has an interest in the stch, same as the owners, and if we're willing to thumb whoses at a whale or two, tere can't be much harm in 'aptain Haithway doin' the me."

"It won't do any harm to sind him," said Mr. Tuttle. And he did. But Captain laithway sighed and said: The best catch the Mary lount ever made was in these sters. My duty is as plain the nose on a man's face."

"Whales change their pasire from year to year." "Get behind me," said

aptain Haithway, smiling.
"The men will be disapinted, sir. Mrs. Haithway's
silare is in the heart of every
an on this ship."

"God bless them all!" said a young man with feeling. But I must do not duty."

But I must do my dety."
"We've seen nothing but acklish —"

And there interrupted him im the lockout a great joyis cry: "Blows! Blows! 1. Blo-o-o-ws!" "Where away?" cried the captain.

"Off the larboard bow, "bout three miles, heading northerly."

By this time Captain Haithway himself was running nimbly slott.

"Sperm? Are they sperm?"

"Ay-ay, sir-a gam o' them."

Crandle turned to the boy Bowers, his Neptunesque face lighted by a sudden smile.

"If we followed them whales for days and days and they held as they hold now, we'd come pretty close to fetching up in Honolulu."

Bowers consulted the chart, which lay open between them, held down by weights, and presently nodded. "That's right," he said. "Why?"

Crandle winked one eye very alowly.

"When the captain of a ship wants the ship to go one way and the men want it to go another, what do you call it?" "I don't know."

"You call it a difference of opinion. But when the men make the ship go their way, you call it mutiny."

And he began to chuckle darkly.

Late that afternoon the great bodies of two built whales buy alongside the Mary Bloom, and the work of cutting-in was begun in the dunk and carried on by the light of the try-works and of flaring torches.

At daybreak there was a short pause for hot coffee. Captain Haithway remarked to Mr. Tuttle:

"I have never seen men work with such spirit."

"Crandle's responsible."

At the same moment Crandle was pouring a cup of coffee into his capacious mouth. The liquid was so hot that it scalded him. He only laughed. And he wiped his mouth with the back of his hand, leaving a long, dark smear of oil and soot. And he reached for his cutting-in spade, remarking to Shattuck: "Damn these here delays!"

12

AGAIN the Mary Blount sighted whales in a northerly direction. This time, however, she did not come up with them; nor were they seen by any one but the men in the lookout, from one of whom, just as Captain Halthway

was going aloft, there came the cry, "There goes flukes!"
which means that a whale, in leaving the light of day for
the dark depths of the sea, has stood more or less upon his
nose and waved his flukes in the air.

These whales then sounded and were not seen again till nearly dark. They were at that time still swimming in a northerly direction; but they were no sooner seen than they were lost sight of, owing to the sudden falling of the tropic night. But the Mary Blount held on after them, hoping to raise them again in the morning, which as pure lack would have it she actually did—or others just like them. For Captain Haithway himself saw this gam and directed its pursuit from aloft.

The whales were loating along, and the Mary Blount, thanks to a steady breeze off the larboard quarter, actually gained upon them.

But the boats were no sooner lowered and skimming in chase, leaping over the little waves like so many happy flying fish, than something frightened the wholes—gallied them, as the saying is—and they began to swim as if they really knew where they were going and were in a hurry to get there, so that in a few hours they had put the rim of the world between them and the eyes of men.

"We're drawing out of the good country, Mr. Tuttle," said Captain Haithway.

"A whale is a whale wherever you fasten to him."

"Very true, Mr. Tuttle, so we will keep her as she is till morning. We picked those fellows up once: If we've any luck we'll pick 'em up aguin."

The next morning there were no whales in sight. Captain Haithway held on till about noon. Having then taken his reckoning, he found the Mary Blount far to the north of where he could not but feel that the best interests of her owners and his own conscience required her to be.

"We must back-track, I think, Mr. Tuttle,"

"Very good, sir."

"Kindly give the necessary orders."

Crandle was in the lookout with the fourth mate. These, perceiving that the course of the Mary Blount was being radically altered, consulted together in whispers. Then Crandle, his face shining with a strange light, stood upon tipton, and shielding his eyes with his hand and gazing in the general direction of the Hawsian Islands, bellowed

at the top of his stentorian

lungs

"Bic-o-ows! Bic-o-ows!"
Then he spoke to the fourth mate.

"Pinch me when it's time to see flukes."

A few moments later, as Captain Haithway began to essme aloft, the fourth mate pinched the calf of Crandle's leg, and Crandle bellowed:

leg, and Crandle bellowed:
"Flukes! Flukes! Theregoes flukes!"
"What are they?" came

from the captain.

"A lone buil, sir."
"How was he heading?"
"Northerly."

"Keep a sharp watch and let me know the moment he breeches."

"Ay-ny, sir!"

If these in the plot to carry Captain Haithway far from that path in which he felt the foot of duty belonged ever besitated or were hurt by their consciences, a sight of Mrs. Haithway's face only served to strengthen them in what among themselves they called the mutiny of the Mary Blount.

Mutinies up and down the long courses of sea history have sprung up, with all degrees of violence from all kinds of reasons. Men have mutinied because there was too much beef; because there wasn't enough; because there were maggots in their biscuits; because there were wheels in their brains. They have mutinied for love of had women and for hate of good men; and for the opposites of these they have mutinied. But never before, nor since, methinks, were the roots of a mutiny so deep set in chivalry.

She had a lovely face, and she believed that all men were good. And in her eyes at the

There They Found Him, the Suby Asleep in His Great Tender Army

time, burning stronger each day, was that light which more than beauty or charm kindles manliness in a man's heart. And it must have gone a great way with the doubtful that, in spite of the heat which grew and grew, she still clung, whenever a cool shadow of excuse presented itself, to the great blue seacloak which they had made for her, and which she loved because they had made it.

For her each day had its surprises. Mysterious packages with her name upon them, scrawled, well written, staggeringly printed or just hoped at, appeared mysteriously upon the cubin table, until with tears in her grave eyes she told Mr. Tuttle to tell the men that she felt as if every to-day was her birthday and that every to-morrow

was going to be Christmas. Even her husband must not be present when she opened her packages. She could not bear that he should see her cry, even for pleasure and grutitude; and cry she would a great deal.

For between the little shirt for the haby that is to come and the little shirt for the baby that is gone there is an awful kinship. Littleshirts they made, and in their blind ignorance of such matters they made little drawers besides. And little socks of many-colored wools and some of silk. And there were long swaddling clothes made of fine linen shirts that had been laid by against the coming of some rearing spree ashore. And there was a doll of sperm ivory, which is finer than elephant and not so prone to split. She had a face like the full moon, with eyes of black ebony and lips of red coral, and hyacinthine hair cunningly carved. And her arms could be bent at the elbows and shoulders; her legs at the hips and the knees. She was naked as the day she came from her maker's hands, and she lay in a bathtub carved from a length of she-walrus tusk.

From another hand came a rattle to match the doll; and there was a work-

ing model of the Mary Blount in a glass bottle-the blocks ivory, the planks beefbone and the rivets copper. There were scarves, clouks, vests, caps, shoes, buttons, blocks, an ollskin coat, an infinitesimal sou'wester. And there were rings of amber and ivory to cut teeth upon. And one man had beaten a five-dollar gold piece into wire and made a pair of safety-pins, each set with an abalone pearl, which pearl, as all men know, makes up for being less valuable than the Oriental by being more beautiful. And there were many silver safety-pins, and other gew-gaws, beaten, whittled and filed from coin silver. There was a chain to go about the baby's neck, a bangle for its wrist, a ring for its finger.

And when she had found out from which of the men a certain present had come, she sent for that man, and held both his great rough hands in here while she thanked him.

WITHOUT luck, the mutiny of the Mary Blount could never have been brought to a successful issue. Very far now from any grounds which would have been acceptable to her experienced and superstitious owners in a prospectus of a voyage, she fell in from time to time with real whales; enough, at least, to keep clear of suspicion those ghostly leviathans which the lookout men were always sighting from aloft - when most needed - and which were always unattainable, like will-o'-the-wisps, dancing

Why a Man in His Jensey Should Deliberately Pince Himself in Ja Satridal a Situation Was Ditacts Barand Rim

alties have been urging us. And eight hundred barrels of oil is really remarkably good at this early stage."

So good," said Mr. Tuttle, "that if I were in the lookout I should be inclined to keep my eyes shut. With this wind we should drop our book in plenty of time. And though I am on what I led to be a generous lay, I should deplore the delay of cutting-in so much as a porpoise,

No more whales were sighted, and the Mary Blount, crowded with sail night and day, made heroic progress for a whaleship. Optimism prevailed; even from Mr. Tuttle's drawn and suffering face that fated, driven look which it wore of late vanished for whole hours at a time.

Only Crandle, now a mainstay in the help of navigation, grumbled, and was ever turning his eye from the blunt and clumsy lines of the Mary Blount to the graceful, mist-drawing lines of her whale boats.
"This wind may hold," he would say. "And again it

may not. And maybe the day of fear will some at the appointed time, and maybe it'll come sooner. If I was Captain Halthway I'd put her into one of the boats with plenty o' necessaries and make a runaway of it. Best come best, we'll be a week makin' port. But one of the boats would cut that time in two; and if I was the master, and the woman was mine, I'd make her out it in three,"

That very night the wind failed them, and in the dawn anxious eyes looked forth upon a flat and grossy calm that

ahead over the blue, and drawing the guileless Mary Blount nearer and nearer to the wise doctor and the efficient nurses of Honolulu.

At last a time came when even in Captain Haithway's mind there was no longer a question of turning back. And his wishes no longer colliding with his duty, he shaped the vessel's course direct for Honolulu, or rather he atood by with help and admiration while his pupils, Crandle and Bowers, shaped it for him.

"At a pinch," said he to Mr. Tuttle, "those two fellows could navigute the ship. Another week and I would guarantee it."

"I thank God for it," said Mr. Tuttle, "And I may tell you, sir, now that your decision is formed, that I have been in despair about myself. But the feeling that we shall be in port among doctors before very long gives me new hope and courage both for myself and for you."

"They will put you right in a jiffy," said Captain Haithway with all the optimism of youth. But Mr. Tuttle only smiled ruefully out of the corner of his mouth.

"The Mary Blount," continued the captain, "is keeping up her reputation for luck. Even the

whales are on our side. They seem to have led us where all our other neces-

smelt of fish. The sun rose, a vast copper disk without rays or the power to dazzle; but with it no wind rose, he even the least breeze; only a blast of heat, without weigh or power to propel, like that which streams from the opdoor of a furnace.

And now rose overpoweringly the smells of a whaleship of oil and of bilgewater, and of hard-working men pariet for many months into close quarters. And it seemed at each hour saw a new myriad of cockroaches born into the world; so that the whole ship rustled with them, a a church rustles when the ladies come to service in this Sunday silks.

The sky was neither blue nor gray. It had a day and indefinable color, an impenetrable quality. That aming jewel, the sun, gave light and appalling heat, but was myless and unblazing like the moon, its vast outline clear and sharply demarked, as if a place had been cut out of the into receive it; it was more like a flat inlay than a sailing

Said Crandle to Mr. Tuttle, his face dark, prophete and strangely moved as if with fear:

"It sin't any too early for hurricanes. Have you looke ut the glass?"

Mr. Tuttle nodded.

"And what was it doing?"

"Falling, Crandle-falling very fast." Crandle's eyes wandered to the whale boats.
"Too late!" he said.

EITHER there was no cloud in the sky, or the whole to was a cloud, even in texture and thickness from bring to horizon. At a few minutes before noon the sun which had been growing less bright, as if the salt air were tarnising the copper, withdrew itself from men's sight. Town! one o'clock swift-moving ranges of water at long introdbegan to roll in from the western horizon, now accessed in the eyes by a straight line of inky black between the si and the seu. The surface skin of the sen, smooth and sitappeared to be stationary; only rising, as it were, and stretching like an elastic cloth to let the rollers pas under and then contracting and dropping back into place. in too, that staunch sea castle, the old Mary Blount, needs let the rollers go under, and dropped when they had passed She suggested an awkward old woman learning to skip ros-But sometimes when she dropped heavily on her feet a you may say, she smashed through the thick surface it? and squirted white water in all directions.

The black line along the western horizon thickened as climbed toward the zenith, and appeared to be new throughout its whole length and height. A sea bird one out of the west, and went by at incredible speed is may nificent long curving swoops, to the right, to the left lier some pastmaster of skating doing the outer edge.

From the opposite direction came a school of personthe schoolboys of the sea, putting forth all their may alous powers of swimming and leaping, the sooner to amwith the coming storm and play their wild see game : the thickest of it.

Nobody knew just when the insettude induced by the heat and the strong smells of the ship changed into a of stern, electric excitement. It was about the time was Captain Haithway ordered his wife to go below. Six in within the hour visited every part of the deck, and pure the time of day with each of the men in her please! friendly manner. And she had clapped her hands about with pure joy at sight of the sea birds flying past. And in had taughed at the incontinent haste of the porpoise get into mischief.

She knew that there was going to be a blow. Well at good: it would be like those masty times off the Horn. It one lived through them, and came on deck again and us the sun. Just before she went below she stood for a live minutes talking to her husband with great animosmiling up into his face; and he laughed down at her as gave her shoulder a playful shake, as one chum should

(Centinued on Page 46)

THE FAKERS By Samuel G. Blythe

OR the next year things went quietly for Hicks. He maneuvered with the Rollins-Barkiss case, using Gudger to help him postpone a court trial, wrateoccasionally to Senator Paxton, and received much guest advice from him and some congratulations as to his progross, which apparently satisfied the senator.

There was to be a special municipal election late in April to fill a vacancy or two on the board of aldermon and to elect a city recorder in the place of a Republican who had died.

him one day.

"A little over a year." "Well, you've gained your residence then. Which upe of these places do you want? You can run for abbreman or for city recorder."

Hicks hesitated.

"Go on," urged Rollins. "You haven't a chance to be elected, but you ought to do something for the party. something to show your loyalty.

"All right," assented Hicks, "I'll run for recorder." Rollins smiled. "Picked the biggest sounding one, didn't you?" he asked.

"Oh, my dear Mr. Rollins," protested Hicks, "you must not view it in that light. I merely said recorder because that seemed to be the most appropriate. An alderman, you know, is a sort of a personal representative of his constituents, and I have been here such a short time. Of course, though I feel I am fully capable of discharging the duties of

member of the board of aldermen, it seemed to me
"Forgive me, Hicks," said Rollins; "I was only joking.
Of course you can have the nomination for recorder. It's six of one and half a dozen of the other.

Hicks was disappointed that he was to be more inated by committee and not by convention, but he wat notices to the papers of the committee muching and made a speech of acceptance that got him respectful notice in two papers and some goodnatured chaffing in two others. The content was perfunctory. Nobody took interest in it. Hielatried to vitalize it by active campaigning, but was not successful in stirring up much interest eliber for himself or for the issues involved. He had his marrow in the papers two or three times during the short ampaign, and swore privately, but laughed pul-

icly, over a fling the editor of the Leader look at him as "our newly acquired Demosthenes whose vocabulary is as ibundant as his hair and whose ideas are is scarce as his whiskers." At the election dicks was snowed under.

"Just a necessary party sacrifice," oothed Rollins. "But you wait. We'll est them yet. The truth is mighty and nust prevail."

Then came the presidential campaign of 1900. Presdent McKinley was renominated at Philadelphia and Villiam Jennings Bryan named again at Kansas City. Rolins was a delegate to the Democratic convention, and eturned to Rextown fired with enthusiasm for the Peerless eader, as he invariably termed Mr. Bryan, and anxious o organize a fight in the district and get out every Demoratic vote. He had abandoned the free silver idea as an ssue, but not as a principle, and he was ardently an antioperialist and talked for hours to Hicks about the crime f the American occupation of the Philippines and all the ther phases of anti-imperialism.

He urged Hicks to prepare himself to go on the stump. licks was entirely willing, and mentioned his prospective ampaigning when he wrote to Senator Paxton.

Soon afterward he received this letter in reply:

WASHINGTON, D. C., August I, 1900.

My dear Hicks: I am glad to learn of your progress, and icated by your numerous letters, and I trust that you ill continue unfaltering in your championing of both the elfare of the people and the cause of the Democracy, in hich, as you must now think, the hope of the people lies. It seems to me eminently fitting that you should go on ie stump for the Democratic candidate, Mr. Bryan. bough it is my deep-rooted conviction that Mr. Bryan ill be no more successful this time than he was before, you e a Democrat, and as such must be regular and enthusi-

tic in your support of the candidates.
You have had some small experience in campaign senking and are about to enter again on that phase of

Will you pardon me if I presume to set down a few tiorns that may be of value to you?

Let me repeat to you that the great secret of successful olitical speaking is to tell the people what they already Never venture on any uncharted oratorical seas ive them the old, familiar stuff, and they will approve and plaud; but if you try to tell them what they do not 10w they will view your efforts with cold suspicion.

He conventional. Avoid new expressions. It is the acme of folly to refer to a working man otherwise than as a herny-handed son uf toil. If you speak of the flag other-wise than as the star-spangled banner, you will be intro-ducing an innovation that will be unwelcome and probably will react against your party on election day.

It is imperative that you should never view except with alarm nor point except with pride. Furthermore, you must always assert without fear of successful contradiction, condemn in unmeasured terms, challenge the statement, shy your castor in the ring, issue a defi, lock horns with, stamp as unworthy, measure swords with, hew to the line, declare it is a deliberate and malicious falsehood, show neither fear nor favor, remark in passing, nail the lie, have your attention called, demand to see the tooks, turn on the light, insist the rascals shall be turned out, give an accounting of your stewardship, make clear the issues, express sublime faith in the wisdom, patriotism and justness of the people, and say this is the greatest Republic on which the sun ever shone.

As you are a Democrat you may go as far as you like with Thomas Jefferson. Also uphold the Constitution, lambaste the trust octopi for hours and hours and assault the money devil and Wall Street and Lombard Street. It is always safe to jump on the criminal rich and never neces sary to name names. The broad, generic term "criminal rich" will answer, and you can got an hour out of that topic

Soak all trusts. Again it is unnecessary to name names and you need not refer to the trusts that employ men in your district, and perchance may be contributing to your party funds. As you have factories in Rextown, you must be strong for union labor and the rights of workingmen. When you get out in the country never fail to call the farmers the hardy yeomanry who are the bulwark and safeguard of the nation.

Always refer to "the ladies, God bless 'em," and throw in a few flowery sentences about the children who are the future guardians of the safety of the Republic.

Choose your anecdotes carefully. Do not use any new ones. Tell the good, old, time-tried ones, and you will get

our laughs at the proper places. Do not be sarcastic, for the people will think you mean what you say, being of a literal turn of mind.

Again, the people, the dear common people, are the most fruitful topic in the world for political eloquence. They need constant attention and tribute. Any politician who neglects the people will be neglected by the people. They know how good they are—the people do—and desire to be teld about it constantly.

Careful attention to these details, unceasing assaults on the citadels of privilege and plutocracy as maintained by the Republican party, and long interpretation of the Democratic platform, with some kind words about the Fathers and the dear old Constitution, will give you ample nuclerial. You won't make any votes, but you will get practice that may be useful.

Yours, for our alture and our fires,

WILLIAM H. PAXTON.

Rollins insisted on paying the expenses of Hicks, and Hicks spoke once or twice a week at the smaller meetings in various villages and hamlete in Corline County. He was put on at several meetings in Hextown as a filler-in, and when Mr. Brynn came through in October met the candidate and was greatly taken with him as an earnest and sincera man, and accompanied him on his special car for a few miles after he left Rectown. Hicks secretly felt he should have been allowed to speak at the Bryan meeting, but Rollins told him he must creep before he could walk. Hicks salked a little, but Rolling smoothed him out, and Mr. Bryan helped by asking Hicks to introduce him at a five-minute stop he made at Grandsburg, fifteen miles from Rextown, where he was to address the crowd from the end of his car-Hicke thought out a fire speech.

He stepped proudly forward: "Fellow citizens of Grands-isarg," by largar. "In these days of Republican misrule, in the midst of this Republican debauch of corruption —."

Sometanty palled at his cont-tails.

"Introduce him," sold a hourse youre. "You ain't making this speech."

Hicks cleared his throat. "Fellow citizens," he began again. "In these days -

"Bryan! Bryan! Bryan!" joiled the crowd, "Who in thunder are you? Bryan! Where's Bryan?"

Bloke raised his hand impressively. "Fellow citi-

"Bryan! Bryan! Bryan!" shouted the impatient

Mr. Bryan came forward. Hicks saw all would be lost unless be burried. "Fellow citizane." he shouled, "I have the honor to present to you the Great Commoner, the Peerless Leader, William Jennings Bryan."

Bryan's secretary shouldered Hicks saids and Bryan plunged into his speech. Hicks was much depressed. He had hoped to make a nest little talk of about a minute and a half. As he went into the car he saw Joe Feiker, a Washington correspondent he knew, who was traveling with the party.

"Hello, Hicks!" ealuted Felker. "What are you doing

"I am engaged in the practice of the law in Rextown," Hicks replied. Felker introduced him to the other correspondents and Hicks took Felker aside and said: "Say, Felker, do me a favor, will you?"

"Sure, if I can."

Fix it with the other boys so my name will go in the dispatches."

Felker laughed. "All right, old top," he said, and he was as good as his word. Even the press associations carried the important information that T. Marmaduke Hicks introduced Mr. Bryan at Grandsburg, and Hicks was highly elated, for he knew his name would be printed in most of the newspapers in the country that afternoon and the next morning.

Election came and Bryan's defeat. The Democrats in Rextown and Corliss County held their scattering own, but that was all. Rollins was much cast down. He had hypnotized himself into thinking the Democrats must win, but Hicks had been under no such delusion. He thought they had done very well in their district.

"Well," said Rollins dolefully, "we've got to take up the fight again. Right will triumph in the end, but I certainly did think we had them beaten. We had all the arguments

"Yes," Hicks replied, "we seemed to have everything on our side but the votes. However, our time will come. I am sure of that. The people cannot remain forever blind to their own interests."

"I don't know," mourned Rollins; "I don't know. Seems to me as if the people of this country would rather see through a glass darkly than stand out in the sunlight. I thought we had them beaten."

"Oh, well," consoled Hicks, "we'll get them yet. The people must and shall be aroused."

"I reckon so," said Rollins sadly, as he started away: "but we've got to get a bigger alarm clock than

we've had yet."

Business had been fairly good with Hicks and he had not been obliged to draw on Senator Paxton. He lived frugally and was careful of his money. He decided to run down to Washington for a couple of weeks, and wrote to Mrs. Lake to save a room for him. He arrived in the Capital late in November, planning to be there for a few days after Congress began its regular sessions in December. After he had been to the boarding house, where Mrs. Lake welcomed him effusively, he went up to see the senator.

"Why, Hicks!" shouted Madden, as he entered the familiar offices. 'Glad to see you! How are you?

How are you getting slong?"
"Fine!" Hicka replied. "I'm the greatest little upholder of the undying, but somewhat unappreciated, principles of the Democratic party you ever saw. Where's the chief?" "Inside. I'll tell him you are

here." Madden went in and came out almost immediately. "Goright in," he said. "He's anxious to have a talk with you."

"Hello, Tommie," said the senator. "How's the junior member of the firm of Paxton and Hicks, purveyors of the uplift to the toiling

"Couldn't be better, senator. You are looking well too."

"Yes, Hicks, I feel well, although the cares of the body politic and the woes of the people oppress me fearfully st times. However, I am cheered up by an occasional opportunity to put over something on them. Rather walloped you this time, didn't we?"

"We lost," said Hicks, "if that is what you mean; but

we are right, and right will prevail."
"Correct," exclaimed the senator. "Right will prevail in the end, but not, I hope, until we have secured all we need. Still, it isn't necessary for you to maintain the pose in here, you know. As you might say, I am on to your CULTYES.

"In that case," Hicks replied, taking a chair, "I em pleased to inform you that, so far as I can see, I am doing well out in Rextown. I have become a leading young Demnerat. I am getting some law business. I am establishing myself in politics, and I am never faltering for an instant in my devotion to the people."

"That's right, Hicks; that's right. The people can use a heap of devotion; and, conversely, you can use the peo-ple. Tell me about yourself."

Hicks sat for an hour and detailed his experiences. Paxton listened intently, interrupting new and then with a wise comment or to make some instructive observation. As Hicks finished and rose to go, Paxton said:

"That seems like a pretty good start to me. You have identified yourself with the Democracy in good shape. You have acquired a standing. All you've got to do is to hang on, to continue your present tacties, to remain steadfast to your numerously announced principles, and you'll land all right. But it will take time, my boy; it will take

"I know that," laughed Hicks, "These great reforms cannot be accomplished in a day. Besides, what's time to me when the stake is so big? I have all the time there is,

you know."
"I guess you have, when it comes to that, and all the essential qualities for the part you are playing. By the way," he urged, "come up to dinner with me tonight and we'll have another talk."

Hicks raised a deprecatory hand. "Oh, my dear senator," he protested, "I couldn't think of that. News of the fact that T. Marmaduke Hicks, the leading young Democrat of Rextown, dined with William H. Paxton, the unregenerate boss of the rapacious organization of the plutocratic United States Senate, might get back home. I am supposed to loathe you, you know, and all your fellows, with an exceeding great loathing, and it surely would contaminate me to be seen in your company. The people wouldn't understand it, and would say I have been captured by the forces of Mammon."

Paxton looked at Hicks admiringly, "By George," he said, "you are even better than I thought. But come along. No one will be there but Mrs. Paxton, and she never tells anything. If she should tell all she knows about me I'm afraid there would be a forced vacancy in the Senate at my particular desk. Come on. You'll be perfeetly safe."

What Did You Juy Your Name 1s? At. Yes, and Where De You Line?"

"In that case," Bicks replied, shaking hands with the senator, "I'll be there at seven o'clock."

HICKS made a few visits the next morning and decided to take his luncheon with Mrs. Lake. As he neared the house he stopped suddenly and stared at a woman who was coming down the walk toward him. She was a tall, slender woman who walked with exceeding grace. Her face was white, markedly so, but her lips were even more markedly red. Hieks, knowing little of women's attire, still knew enough to realize that she was exquisitely gowned. Her stress was of a silky black material and clung to her figure in soft and shimmering folds. Her hat fitted perfectly into her charming costume. It was black, too, but there was a quilling of white about it that added to its chieness. A filmy veil, long and black, flared behind ber as she walked, and Hicks caught a glimpse of her throat, where her blouse was cut away, and of a jet necklace and long jet earrings. She approached Hicks with a slightly swaying motion that fascinated him.

He stood stock-still, staring at her. She came up to him, and still he stared. She passed him, apparently without knowledge of his existence, and he turned and followed her with his eyes until she went round a corner. Then, as if he were coming out of a trance, he said: "Jiminy, what a stunner!"

He walked slowly toward the house. There was something familiar about the woman, something that reminded him of a woman he had seen before. He had not been able to get more than a glimpse of her face, but her figure, her carriage, her general air of distinction and modishness stirred memories in him.

He stopped at the steps, and searched his mind. "By George!" he shouted. "It's Mrs. Lester!"

Hicks ran up the steps and burst into the house. He sought the landlady. "Mrs. Lake," be saked excitedly, "in there a Mrs. Lester stopping here?"

"Wby, yes," Mrs. Lake replied, amused at Hicks' eagerness; "Mrs. Lester has been here for more than a year. Do you know her?"

"No." Hicks replied: "but I remember when she was here before I went to Rextown, and I'd like mighty well to

"I shall be glad to present you. She is a charming woman, so cultivated. Foor girl," she continued sympathetically, "she has been bereaved since you saw her."

Somebody die?" asked Hicks. "Her husband. She is a widow."

"A widow!" exclaimed Hicks excitedly. Then in a

more solemn tone: "I am serry to hear it.

"He died suddenly, soon after they were first here. It was a terrible shock to her and she hasn't recovered yet. They were very devoted. She returned to Washington, where she has some friends, and she has been with us ever since. Of course as she is in mourning she is quite secluded, but we enjoy her charming conversation and her recitals of er experiences abroad. Why, Mr. Hicks, she positively

knows everybody worth knowing and as for travel-well, she has been just everywhere and she speaks are eral languages. Really, you would take her for a Frenchwoman.

"I noticed she wore black," mit Hicks, as if that were an achievement

on his part.

"Yes," continued Mrs. Lake. "and I must say she is the most handsomely gowned widow I ever saw. She looks charming in her weeds."

It was Friday, and that night w was the custom, everybody dressed for dinner. Hicks had his evening clothes with him, which he had not used much in Rextown. He shave with great care, brushed his har until it shope and spent half in hour polishing his nails and purpicing his hands. At half after in he gave his hair a few more pas, sprinkled a little perfume on himself, put some on the palms of tishands, gave a final admiring glans at himself in his mirror and west downstairs.

Most of the boarders were there. but not Mrs. Lester. Disappointed, Hicks wandered uneasily about examining the pictures he had see: a hundred times before, trying to be affable with those who remenbered him and looking constantly and eagerly toward the stairs; Just before the gong sounded de appeared.

Mrs. Lester stood for a moment posed on the bottom step. Shewere

a black satin gown that was exquisitely draped about by slim figure. Her cornage was cut low and her sleeves were short, displaying a milky throat and white, shapely arms Her fingers glittered with rings, and long, addly shaped ornaments of seed pearls depended from her ears. He face had a fushionable pallor, but her lips were red and there was just the suspicion of a shadow under her sys-Her intensely black hair was drawn flatly and tightly down across her ears, but had an undulated appearance for all that and extended out on her pale cheeks, where its black gave vivid contrast to their pallor. It was wound into a elaborate knot low on her neck. Her little feet were sked in black satin pumps with jet buckles. Her expression was that of discreet melancholy, of decorous but extreme fashionable woe.

Hicks was standing in the hall, his lips apart, his eye wide with admiration, his hands opening and shutting

nervously.

After a pause he started forward. "Mrs. Lester he began.

She gave no sign of recognition.

"Pardon me," stammered Hicks; "but, you see, I feltnaw-I have known-At this moment Mrs. Lake arrived, and relieved the situation

tion by presenting Hicks to Mrs. Lester. Mrs. Lester smiled a slow smile at Hicks and said it a

low, well-modulated voice: "I am charmed."
"Pleased to meet you," chattered Ricks, who has regained a measure of his self-possession. "I feel as though I know you, you know. I saw you once a long time ago at ! I have always remembered you."
"Indeed," she replied. "I regret that I cannot reme-

ber having seen you."

"Oh, it was about two years ago. I didn't meet you You were with your husband. I --- " An expression of pain passed over her pallid face.
"Oh. I beg your purdon," Hicks said hastily. "I forgot

You're a widow now, aren't you?" She made no answer, but sank gracefully into a chair-

"Pleased to see you again," hurried Hicks. "I felt sur we must meet again some day.

"Did you?" she asked. "How romantic!"
"Ob," Hicks protested, shifting from one foot to be other in his excitement, "not romantic, you know. Note: like that, of course. But I was so much attracted by you beauty and grace and all that, that I just couldn't to; being-being

She smiled up at him. "Being gallant," she said. Hicks grew four inches in his own estimation, which much

him a very tall man indeed. The gong sounded. Hicks feverishly sought Mrs. [4].
"Please, Mrs. Lake," he pleaded, "put me at her use won't you?"

"Why, yes," said that agreeable lady, "I'll have another chair placed there,

Hicks rushed back to Mrs. Lester. "May I have !" honor of escorting you in to dinner," he asked. "By pur good fortune I find I am to be at your table."

She bowed and said softly: "Aree plaisir, monsieur." Hicks didn't know what she meant, but as she rose he concluded she was willing and strode proudly by her side to the table, and as well as he could remember the polite details handled her chair and her draperies as he had seen

her husband perform those offices long ago.

Hicks broke immediately into a panegyric of himself, telling of his lucrative law practice in Rextown, his political activities, his fame as an orator. He diluted glowingly on his prospects, and wondered whether Mrs. Lester was joking him or complimenting him when she said little things in French from time to time. However, he decided she was complimenting him, as she seemed serious in her

"And where is Rextown?" she asked him.

"Rextown," declaimed Hicks, "is one of the most beautiful and most prosperous cities in the Middle West." Once well launched, he made a long speech about the manilest beauties and the more manifest destiny of his place of

"And you are in politics there?" she said admiringly. "I should say I am. I am very active in the Democratic arty, and one of these days I hope to be elected to office." "Ma foi!" she said. "And you so young!"
"That's just it," urged Hicks eagerly: "I shall still be

here when the shift comes."

"What shift?" she asked. "The Republicans have verything in the country, haven't they?

"So they have, but my time will come. The people vill not bear this burden of oppression forever. They cill arise one of these days and sweep this corrupt gang of servitors of the special interests out of power."
"Then, I suppose," she said, "your

arty will come in and do the same hing over again. Il y a encore de que i

"Oh, no," protested Hicks, wonderng what the French meant, "not at he friends of the people"; and so it ent through the dinner.

Hicks had an engagement to meet fadden that night, but he broke it ithout compunction. Instead of secig Madden he followed Mrs. Lester to the parlor after dinner and tried monopolize her but did not succeed, r some of the others in the boarding cuse gathered round while Hicks ged inwardly at their presumption. he talked with vivacity and animaon, shrugged her shoulders in a most ocinating manner, made pretty little oues, and told of her travels in prope, of the personages she had et, of her familiarity with the nolity, of her knowledge and intimacy ith the great families of America. he discussed art with a knowledge sat seemed to Hicks to be complete, ad a comprehensive understanding music, knew about books and pecially the authors of the day, ad most of the time was so far above se head of Hicks as to force him to t in silent wonder at her vast range

information. She gave the impression that she id spent much of her life in travel, ed her familiarity with the great suses of England, France, Germany id Russia was astonishing. She lked knowingly and shrewdly of ends and stocks and "the market," d this portion of her conversation ade Hicks even more interested an he was before. She rippled along om one topic to another, interlardg her sentences with foreign expresons and exclamations, and she had effective way of stopping, after e had used one of those expressions, translating it, with a little grimace impatience with herself for using it. "Really," she said, "I have passed much of my life abroad it is second ture to me to lapse into French or ussian or German. Those languages, pecially the French, are so much are expressive than ours, don't you ink?"

She turned her eyes on Hicks as she ced this, and Hicks assented readily d said he had often been discoured at the poverty of English. He pretted he had no French or German Italian, and resolved to buy a rase book and become a linguist.

There was not an international marriage for fifteen years with which she was unfamiliar. She talked of Fifth Avenue and Newport as if she had been reared in the one and lived every summer in the other,
"When I was visiting in Newport," she would say, and

then give a lively account of some great function she had attended. She was perfectly familiar with the English nobility, and it seemed from her talk that she had been an honored guest in every castle in that island.

At ten o'clock she rose to go, with many apologies for having run on so. "I hope," she added, smiling radiantly

at Hicks, "I have not bored you."

"On the contrary, Mrs. Lester," asserted the gallant Hicks, who had not taken his eyes from her pale but animated face once during the evening. "On the contrary I have been charmed, more than charmed. It is a great heror and pleasure to have met you."

She bowed, and after a moment's pause, glided out of the room. She turned for an instant at the door, smiled bril-

liantly again, said "Box soir," and was gone. Hicks went up to his room in a whirl of delight. He felt ure he had made an impression on Mrs. Lester; recounted to himself every look ahe guve him, every smile; told over to himself her various perfections - the cataloguing took a long time and went to sleep filled with the hope of a better acquaintance with this charming; cultured woman.

ALYS DE MOUNTFORT LESTER was been in a small town in Pennsylvania. Her father was a doctor with a good practice and her name was Alice Jennings. Her

mother was a refined, educated, quiet woman and the

Her Expression Was That of Discreet Melancholy

family one of the best in the village. Alice was sent to a fashionable school when she was seventeen, and ran away and was married to Hugo Lester before she had completed her second term. Lester was of English descent and his father had been rich, but at the time of Hugo's marriage was in financial straits. Hugo had been educated beyond his intellect. He was a gentleman of polished manners, and he had expected always to be rich and to live in luxury and at ease. He took his wife to his father's house and they lived there for a few years. Then the father died, leaving the son and his wife a big house and a correspondingly hig mortgage, and nothing else.

Lester was forced to go to work, and he had no ability for work nor any adaptability. He attached himself to an old friend of his father's in a secretarial capacity, and after a year or so of this was appointed to a clerkship in the State Department at Washington. Through influential friends he was given a position in Paris, and he and his wife spent two years in France. While there he, being of good birth and alded by his wife, secured some commissions in Russia. Germany and Italy, and they traveled in each of these

Alice Jennings was a clever girl. From the time she began to evolve from the flapper state she held herself to be better than her associates in the home village and better than her family. She was an only daughter, spoiled by an indulgent father, and she had no difficulty in overriding her mother. She had a passion for clothes, which she indulged as well as she was able, and a talent for making her resources go further than any other girl in the village or at the school after she went away from home. She loathed the small town in which she lived, read the social news in

> the papers, even when she was just coming into her teem, and early displayed a fondness for exalting berself, by claiming acquaintance with those above her in social standing, that later became a positive genius for this sort of self-appreciation. She married Lester because she thought he was rich and had social position.

> She was smart at school and had a fondness for languages, but was entirely superficial in her studies. From her earliest childhood she was a chatterbox. She talked unceasingly, but brightly, and was clever enough to deal with subjects in her conversation concerning which she had a slight knowledge. She never, either as a child or as a woman, touched any but the high places in her talk. She was intensely egotistical and longed for admiration. She had a great skill in dress, and a full knowledge of her own good points and of how to accentuate them.

> Her husband had little money, but she made the most of that. She had a genius for finding out desirable places to live that were within their means, and always insisted on rigid adherence to the conventionalities. She never falled to dress for dinner, nor would she allow her husband to appear after six o'clock in any but evening clothes. Their public attitude toward one another was one of exceeding and formal politeness, and she always strove to create the impression that they had much more money than they did have. In reality the Lesters got along well together, for Lester was a dull, listless, complaisant man, awed by the brilliancy of his wife and not daring to oppose her. His only talent was eleverness at cards. He was an expert bridge-whist player and his wife was almost his equal.

> She could sing a little, play the piano acceptably, and she had a most resultle talent for visiting. Indee she was a professional visitor and she was a useful guest. She and her husband were ever ready for bridge, and both could dance well. She was always faultlessly dressed in the latest mode, had an inexhaustible fund of small talk and was continuously in good spirits. The climbing hostesses who invited the Lesters to visit them, thinking the Lesters were of the set they aspired to enter, were always sure they would have one pair of guests who would carry themselves with the utmost rigidity of polite

(Continued on Page 36)

SIM'S SUDDEN SOTNESS

OWENA GOLLOP, first pulling her blue sunbonnet forward out of decent regard for an exceptional complexion, stepped from the moist, sloppy backporch into the glare of the sun. She carried a large basket of tightly wrung clothes, her strong, nicely rounded arms and sturdy young back making nothing of its weight. Stopping before the newly stretched line she began to work with a brisk energy quite out of keeping with the heat of the summer morning. In a very few minutes a lazily flapping and swaying screen of various form and color extended from post to post.

The trumpet vine that covered nearly one side of the old brick house was in flower, and among its gaudy blossoms a pair of humming hirds poised and darted uncertainly. Rowens's eye caught the jewel gleam of their green and ruby plumage and she paused to watch thero. Her expression was at once amused and exasperated.

"What's the matter with you-all?" she murmured, addressing the tiny creatures. "What for are you foolin' round, wastin' time that-a-way, pickin' an' choosie'? If you'd use your beaks more an' your wings less you'd be bigger birds."

One ruby-throat, after a prolonged hesitation, disappeared in the honeyed depths of a big red bloom. Rowens laughed as she turned away. "Made up your

mind at last, did you?" she said.

A little cloud of dust arose above the sumac-crowned banks of the bending road, and soon a light wagon drawn by a team of small sleek mules came into view. From behind the porch trellis Rowens saw it approaching, and, straightening up from her washtub, wiped her hands upon her apron and reclaimed some strands of auburn hair that straggled from loosened pins over her flushed cheeks. At the same time she glanced at her reflection in the looking glass that hung over the wash bench for the convenience of the men folks.

Mrs. Gollop, a large, fair woman with a pronounced Roman nose, called from the kitchen at that moment.

"Hain't that Sim Hoisington a-comin' up the road, Rowenn?

"I reckon it is," Rowena returned.

"He a-comin' here?"
"I don't know." To herself in a lower tone Rowena added: "I reckon he don't either."

In fact, as she spoke the mules slowed from their sharp trot into a walk, were urged into a trot again, checked, and in front of the gate actually came to a standstill. The driver, after an undecided half motion toward descent, resumed his seat, leaned forward and flicked the off mule with his blacksmake. The team darted forward with a jerk and the whole equipage went rattling down the road at a pace that speedily-carried it round the next bend and out

"My land!" called Mrs. Gollop from the kitchen. "What's makin' you laugh that-a-way, gal?"

"Sim," answered Rowenz chokingly. "He's gone on to

"Sim!" her mother repeated with withering scorn. "You might as well have said you wasn't laughin' at nothin'. You hurry and get that washin' not in time to help me with dinner. Berkley Pendleton aims to be here about noon."

"You'd better fix some kind o' spoon vittles then," said. Rowena calmly. "His teeth ain't what they used to be."

She loosened her dress at the throat and peered through the lattice at the road, which was obscured for nearly half a mile past the bend by a windbreak of trees. Beyond the trees it made a gradual ascent, midway on which was situated a substantial looking farmhouse. After a little a good-sized dot, which was the light wagon and team, emerged from the treebelt and began to climb the hill. Rowens watched narrowly, her brows knit and her remarkably firm mouth set tightly. For a moment or two she breathed a little quicker; then her expression relaxed and she laughed.

"Well, he didn't stop to see Miss Lisbeth Minnick either," she said.

Once past the farmhouse on the hill, the light wagon went smartly along, and in half an hour it rolled into the town of Fairfax and stopped at Jim Allen's store. A tall. well-built, brown-haired young man of twenty-three or four got out, tied the mules to the long hitching rack and went into the store.

The storekeeper's eyes twinkled behind their spectacles and his humorous mouth twitched at one corner as he greeted his customer.

"Howdy, Sim."

"Howdy, Mr. Allen," returned the young man in an agreeably modulated drawl. At the same time a quick brilliant smile illumined his good-looking face. He felt in his pocket and produced a written list. "Here's some

By Kennett Harris

Well, Daggene It! What for Did Ike Ach Me to Jtop if Joe Bida's Want Hol!

tricks Aunt Hitty allows she wants," he said, giving the storekeeper the paper. "If you'll put 'em up right away I'll wait an' take 'em right along. I'm sort of rushed to get back to some lencin' Ab an' me has got to do."

The storekeeper smiled, focused his spectacles on the list and read it through. "Hum!" he remarked. "I reckon that's all clear enough and plain sailing."
"I reckon it is," said Sim in a relieved tone. "She

knows what she wants, Aunt Hitty does." He spoke

"I'll put 'em up right away, Sim," said the storekeeper. "Set down and smoke a good seegar-if you've got one about you."

In the course of ten minutes he had the articles packed neatly in a cracker box. "Nothing else, Sim?" he asked. "Yes," answered Sim; "I want some nails. About thirty pound I reckon-tenpennies. That's all."

Allen turned to execute the order, but suddenly stopped, his eyes twinkling again. "What kine o' nails do you reckon you need, Sim?" be asked.

Tenpennies," Sim repeated.

"I know," said the starekeeper, "but as to the nails now-do you want common, ord'nary nails or do you want. these yer wire neils? Some likes one kine and some likes the

A very curious change came over Sim's face, his smile faded, his jaw dropped slightly and his brown eyes stared blankly beyond his questioner. Presently he said with almost pathetic anxiety: "Which would you get, Mr.

A discussion as to the respective advantages of common and wire nails followed, during which Sim veered from one to the other as the storekeeper adroitly urged him. At last

"Dogged if I know," he said. "I reckon I'll have to study on it some. Mabbe after all a rail fence — Tell you what I'll do, Mr. Allen. I'll take this yer stuff of Aunt Hitty's now and I'll see what Ab thinks about the

He shouldered his box and went out hastily. The storekeeper chuckled and the laugh was echoed by two men who had entered the store a few minutes before - a lean, slabsided, ropy-necked individual of middle age, whose long, intensely black mustaches had a melancholy droop; and a stockily built young fellow with an aggressive air and a quick, chailenging eye.

"Sim's havin' a right smart o' trouble about that fence of his'n," remarked the elder man. "He commenced for to start on it about a week ago, but he hair't got, as you might say, started yit."
"How's that, Berk?" inquired the storekeeper with

flattering interest.

The lean man cackled and hoisted himself stiffly to a seat on the counter. "First off, Sim figgered on building a rail fence," he explained. "Then Perry Spencer one along and argued for a hawg-tight bo'd fence, and sin allowed he had the right of it. At noon Ab, Sim's hard man, allowed that with eight-inch stuff ten dollars a thousand at the mill, and a bad road to haul over, ho'ds would be mighty extravagant, specially when the rule wouldn't cost nothin' but the work. Sim owned up a did look that-a-way, and him an' Ab was grindin' that axes when the schoolmaster come up an' showed him by figgers how shiftless an' wasteful a rail fence was, what with the lap at each end of the rail an' the jog that put a four-foot-wide strip of good co'n land out of business. Since then Sim's been hesitatin' atween a barb-wire a a stone wall an' a osage hedge; but seems like he's wat: back to the ba'd idea."

The less man cackled again with great enjoyment and a touch of malice. "Sim got along tol'able well while his mammy was round to tell him what to do," he resumed; "but sence she died and his Aunt Hitty west to keep house for him, the farm's run down right small Mis' Hitty, she's a manager as far's the house goes, but she hain't got the knowledge of outside like old Mic Hoisington had, an' Ab he ain't keerin' how little no done. He's willin' to wait till Sim makes up his mind.

"Well, they tell me Sim's right popular with the rail anyway," said the storekeeper. "You've hearn talk if that kind, Ben?"

Ben Faster, the stocky young man, frowned. "Sal poodle dogs popular with the gals," he growled.

"Seems like they're all took with Sim," the sterkeeper went on musingly. "Don't matter whether they're black-eyed an' sort o' languishin' or whether they're red-haided an' hustlin'. Namin' no names I'w noticed that myse'f."

Foster's eyes rolled savagely, "I wouldn't name to names if I was you, Jim Allen," he said menacingly, "he

less'n you want trouble."

"Me want trouble?" smiled the storekeeper innocenta-"Shucks, Ben, that's the last thing I aim to have. I reser you must be a-skeered I was goin' to any suthin about asbeth Minnick. Now there bain't no need o' that You're too techy. Look at Berkley here. If I happen to pass a remark about -

Beridey Pendleton interposed. He was pulling his lost mustaches nervously and red showed on his cheekboor through his sallow skin. "Jim Allen," he remomerated there's sech a thing as too much coddin'. There's sech jects that a man don't keer to be codded about. You've right smart of a codder, we all know that, but you hals? likely to he'p your business by cyarrin' it too far. I em in here to get your prices on a bill o' goods. I didn't curfor to be codded."

"My land, Berk!" ejaculated Allen. "Ain't yeu alitte mite previous. I leave it to Ben here if I so much s mentioned Rowena Gollop. Don't you holler before you's burt, Berk, nor you either, Ben. Lemme see that bill of

goods you was talkin' about."

By the time that Pendleton had come to an agreement with the storekeeper, Sim Hoisington was at the brown the bill overlooking the Minnick farm and already feels uncomfortably conscious of the impending necessity making a decision. He could see in the Minnick yards woman's figure that he recognized a slight, tall for that moved with languid grace, unpinning clothes from line. It was Lisbeth Minnick, a maiden on whom Sm thoughts had dwelt more or less for a year past. Set thoughts had vagabond tendencies, roving at the direct of his artistic eye wherever beauty bloomed along List Turkio; nevertheless, Lisbeth had entertained the longer than any other young woman, excepting perhaps Rowena Gollop.

He checked his mules, reconsidered, and was ducted them on again when the girl called to him. The war stopped and he waved his hand, "Howdy, Lisbeth, How

all the folks?" "Tol'able," returned Lisbeth. She walked to the len with an easy, deliberate movement and rested her arm the capboard.

"Better come on in an' stay to dinner," she invited

ber dark eyes were more cordial than speech. "I'm in a kine of a rush right now." Sim share

"You're in a rush most of the time, seems like," pouted Lisbeth. "Well, why don't you come up Sunday afternoons once in a while?"

"I'd sooner come when you're a-feelin' lonesome," Sim declared boldly. "Sunday afternoons I take notice you've got your porch all cluttered up with Ben Fosters and things. I seen Ben in town a while ago."

"I seen him last night," said Lisbeth. "He ain't afraid I'll bite him, like some folks."

"I reckon he don't need to be," Sim bantered. "I'm ort o' skeered he'll bite me, though, the way he looks at me." "He won't be here tonight," Lisbeth suggested.

"I s'pose you'll be feelin' mighty lonesome then?"

"N-huh!" She shook her head and smiled.

"Then there won't be no need of me comin'," said Sim. "No special need of it, Mr. Smarty," she flashed. Don't come if you don't want to." She turned her back m him and walked to the house with unusual briskness, shile Sim sat in his wagon looking after her, the blank tare in his eyes and his mouth half open. Presently he ighed and gathered up his reina.

'An' I'd jest about made up my mind to stay to dinner," e muttered. "Jiminee, she's a spunky little piece!"

He had no strain put upon his powers of determination s he approached the Gollop place. He had hardly turned be bend when he descried Rowenz walking to the front ate with the evident purpose of speaking to him. He as particularly glad at the sight of her too. Somehow he vas always glad to see Rowena.

She was good to look at, for all the plainness of her busiess-like checked gingham apron and the ugliness of her upbonnet. The apron did not cover those well-rounded hite arms of hers, and, facing her, one could penetrate be depths of the bonnet with an admiring eye and disinguish the little moist curls of copper-colored bair that y against her creamy, fine-textured skin.

She carried a package in her hand. "Give that to Mis' litty, Sim," she directed. "It's the quilt pieces I promised er." Then: "Why didn't you stop this morning as you

as passing?"

"Plagued if I know," Sim replied in some embarrasement. I did come mighty nigh it, but -I didn't see nothin' of ou round. I was disapp'inted too. I hain't seen you in coon's age, Rowena."

"You might have seen me at meetin' Sunday," she minded him. Sim's embarrassment deepened as he

ammered something about a change. "You a-goin' to jine them Meth'dis'?" she asked.

"I d'know about jinin' them," he faltered. "I was jest talkin' with Preacher Williams the other day and he rt'nly put up a good argument for the Meth'dia' folks. allowed it wouldn't do no harm to 'tend their meetin'." "Huh!" remarked Rowena. "I hearn that you aim to ste for Bud Watta for sheriff," she went on. "I hain't made no promise," said Sim. "Bud come to

e the other day an' we talked politics some, an' it seems ce to me Bud's right well qualified an' -

"An' a black Republican," Rowens supplemented.

"Well, there hain't no use bein' hidebound, Rowens," pleaded Sim. "Co'se I've allus been a Democrat." Rowena began to laugh, "Oh, Sim, Sim!" she eried;

"ain't you right sure of any livin' thing?"

Sim took courage from her relenting. "I certainly am," he declared. "I'm right sure there hain't the heat of you in seven counties. I wisht you felt the same way about me that I do about you, Rowera."

"Well, you can just bet I don't," sald Rowena positively, but still smiling. "Put your mules up an' come in

to dinner, Sim. It's about ready."

Sim was about to comply when the sound of wheels made him turn his head. Another light wagon had driven up and stopped before the barnyard gate some yards away. Berkley Pendleton got out, swept off his broad-brimmed black wool hat in elaborate salutation of Rowens, and then opened the gate and drove in.

"I reckon I won't stop today," said Sim stiffly. "Aunt Hitty's lookin' for me. You've got company anyway."

He added the last remark uncertainly, and looked at Rowena as if he expected protest.

"Jest as you say, Sim," the young woman answered composedly. "Some other time then mabbe."

She nodded in a friendly manner and left him. "Well, daggone it!" exclaimed Sim. "What for did she

ask me to stay if she didn't want me!" He picked up his whip and cut quite viciously at the shirking off mule. "Daggone it!" he repeated with emphasis.

He turned the package over to Miss Hitty, and when she had checked the groceries with her list he asked a question that had been vexing him:

"You aim to take in the dance at Prothero's tomorrow night, Aunt Hitty?'

Miss Hitty looked at him with surprise. She was a stout, almost massive, woman well into her forties, with a double chin and a chronic shortness of breath; but her heart was young.

Wall, I recken I do," she replied with some asperity. "I allowed it was all settled you was to take me. You haven't been askin' no gal to go, have you?"

"No," Sim replied with a sigh. "I didn't know but-Shucks! There hain't no gal I'd want to take.

"Did Rowms say anythin' to you about goin'?" asked

"Not a word," her nephew answered. "I reckon Old Man Pendleton will beau her though. He's there to dinner now. Seems like he'd be thinkin' of somethin' else than shinin' up to young gals."

He spake with some bitterness

"If you're a-talkin' about Berkley Pendleton, he's a long ways from bein' an old man yit," said Miss Hitty Indignantly. "Old Man Pendleton! He ain't no green, sup-haided boy, but Rowens Gollop might do a heap worse than Berkley an' I reckon she knows it. All that s'prises me is he don't look round a little more afore he takes up with her."

Sim turned on his beel and strode from the room. "These yer women!" he muttered. "There's Lisbeth miffed about nothin', and Rowens -1 wonder if that

"Lemme Fix it for You. It's a Turr'ble Presty Tix"

old skeenicks --- " He whistled a moment or two thoughtfully. "I reckon I'll go see Lisbeth to-night. I d'know though. These yer women! A fellow cain't never tell where to find them."

Meanwhile Berkley Pendleton was entertaining the Gollop family with an account of Sim's fence and the nail incident at the store. Mrs. Gollop laughed very heartily. Rowena laughed not at all,

"It's a mighty small thing to pick on," observed the young woman with a contemptuous look at the smirking widower,

"You hesh!" commanded Mrs. Gollop. "It's a mighty ser'ous thing when a young man hain't got no more backbone than an angleworm. I don't hold with shillyshallying, an' I never thought you did neither, Rowena. "I can most generally take a stand and stay sot,"

Pendleton boasted.

"So can a mule," said Rowens. "But I reckon by the time Sim's as old as you are he'll have a heap more sense," she concluded ambiguously.

Prothero's was en file. The east wing of the big house was ableze with light, a beacon to Little Tarkio up and down the valley. Buggies, spring wagons and farm wagons formed a long line against the fence outside, and within a

large representation of the beauty and chivalry of Atchison County mingled in the mazes of the dance, tripping, floating, jigging heel-and-toe, gliding, thumping, stamping and whirling in saltatory ecstasies. Three sets at one time-and they might have made it four at a pinch. Brownnecked lads in the bravery of Sunday diagonals and stiff linen, their hair slicked to a marvel; elderly bucks shaven to the quick and redolent of the silvered cachous that they carried in their vest pockets; lasses, plump and rosy, in glorified gowns of virgin white and many ribbons; matrons, normally staid, gamboling with kittenish abandon; little pig-tailed girls even, shrill and active débutantes of eleven and upward; and dancing, every one of the twenty-four!

They danced to real tunes in Little Tarkio-Turkey-in-the-Straw, Whistling Rufus, Georgia Camp Meeting, and the like. Mat Bingham played thern. Seated on a chair that had been placed atop of a stout kitchen table, the gangling, raw-boned Orpheus of the Bottoms sawed them out indefatigably, the broad sole of his cowhide boot slapime on Mrs. Prothern's well-accured de Standing near him, Prothero, the red-bearded, burly host, called, roaring the changes in a voice hat made the windows rattle, patting juba with his big hands, and now and then singing in a sort of mellow bellow: "Gents, honor your partners! Swing your partners! Right hand to partner and grand right and left!"

Sim bent to Lisbeth, not ungracefully, and scraped his right foot behind him in the approved fashion; then, advancing, he clasped her slender waist and at the exact note of the music swung her cleur off her feet with astonishing ease.

"I cert'nly hate to let loose of you, Lisbeth," he murmured ardently as he set her down.

"I Hate to Let Loose of You"

A Distinguished Invalid

WE FEEL safe in assuming, at this writing, that you have not heard anything of the United States Senate during the last few weeks. We ourselves had so completely lost track of it that its existence had passed from memory until an inquiry from a valued correspondent brought it to mind. Hasty search through the newspaper files of the last fortnight yielded no clew to its whereabouts or condition; but a wire to Washington brought trustworthy information that we gladly pass on to the public.

The Senate, it appears, has been suffering a prolonged fit of hysterics. The patient, it may be recalled, has been in nearly continuous session for several years. Cut off for that long period from all healthy contact with the normal interests and activities of American life, shut within itself and stewing in its own juice, it got into a very unhealthy state—probably somewhat comparable to that of the Indian mystic, who rivets his attention exclusively on his own great toe until he loses all sense of reality and lives wholly in hallucinations.

Some time last winter—nobody seems to remember exactly when—President Wilson demanded the repeal of the provision granting free passage through the Panama Canal to American coastwise vessels. The result of this fresh demand on a nervous system already reduced to an extremely weak, disordered state was to throw the patient into hysterics.

We are happy to hear that the case is far from hopeless. For a complete recovery, all the patient needs is to go home, mingle with people who are normally conditioned and productively engaged, look over the busy, fruitful country, and so recover a sense of proportion. Five months of this treatment will make it quite fit again.

Foreign Trade

THE convention at Washington to promote foreign commerce of the United States enipcided with a Treasury statement that showed a balance of trade against us for the first time in some years. In April our foreign purchases of merchandise exceeded our sales by ten million dollars, and for three months before that our favorable balance had been steadily declining. We owe Europe somewhere round fifty million dollars a month in interest, insurance, ocean freights, tourists' expenses, and so on.

To trim the ship we must sell at least that much more goods than we buy. When the monthly trade balance fulls below thirty millions we are certainly going into debt. Probably it takes fifty millions a month to keep us even. The latest Treasury figures are a bint to push foreign trade.

Amenities With a Club

WE DO not believe there is any good reason why the administration of our tariff laws—this Underwood Law quite as much as any of its high-protection predecessors—should provoke so much irritation and resentment. Time out of mind this Government has regarded the foreign manufacturer who ships goods to the United States as

a presumptive ruseal. That attitude may be warranted by sound business principles, but the frankness with which we avow it is poor policy.

We want foreign trade and we cannot have it on one side of the ledger only. Irritation and resentment on the part of European sellers must be an obstude to our dealings with European buyers. We have claimed the right to send our Treasury agents into the shops of foreign manufacturers to examine the books, not only with regard to factory prices of articles shipped into the United States but with regard to any other matters the agents might be curious about. We have asked foreign governments to confer on our Treasury agents a power to inspect books and cross-examine manufacturers which those governments do not claim for their own agents.

There is no question that our Treasury agents abroad have in certain instances behaved in a truculent, overbearing manner. Foreign manufacturers have been exasperated to the point of asking their governments not to take part in our Panama Exposition.

And all the while we are exerting ourselves to establish friendly relations with these same people on the selling side. In the administration of our tariff laws there is a teach of uncoutbness that intelligent merchants would not tolerate in their business relationships. A little more urbanity, please? It pays.

Free Exchange

A PRINTED notice that a small sum is due in the city of New York contains the following injunction: "If payment is made with an aut-of-town rheck ten cents must be added to cover rust of exchange." This reminds us that in no other country, the commerce of which is comparable with that of the United States, is a man penalized for paying his dolds.

Free or virtually free exchange is a cardinal feature of every sound banking system. The idea is to make getting the money to the place where it is due as cheap and easy as possible. There may be some excuss for charging exchange on a recentry check; but, at least, a check on a bank in a clearing-house city ought to go at par in any other clearinghouse city, for virtually no expense attaches to collecting it.

There is a good deal of speculation as to just how far the new banking system will make collections free. It should make them absolutely free among cities.

Crocodile Tears

PROPITS of the St. Louis and San Francisco syndicate, it appears, did not amount to thirty million dollars, but to a considerably smaller sum; yet the road is now bankrupt. The Rock Island has defaulted on bond interest. The New Haven is making little above operating expenses and fixed charges. The injury the gross mishandling of these three great properties has brought on the American railroad situation in its broadest aspects is bardly calculable.

Is anybody really responsible? Can the managements say to the collective security holders and to the public, which is vitally interested in sound railronding, "Awfully sorry we landed you in this mess, old top; we'll try not to do it again!"—and let that end it?

Trackless Traffic

WE EXPECT to see a time when the amount of freight moved by mechanical power on highways will exceed that moved on tracks. There is no question that the freight movement on highways already exceeds that on tracks.

The first item in railroad traille, as reported by the Interstate Commerce Commission, is agricultural and animal products, amounting to two hundred million tons. Nearly all of it was hauled in wagons to the railroad station and distributed to consumers in wagons. A large part of nearly three hundred million tons of manufactures was hauled in wagons. So, throughout the list, the railroad baul generally implies a wagon haul at one end or both ends. And there is a large freight movement by wagon that does not get to the railroads at all.

Everybody knows that wagon haulage, on a broad view, is vastly more expensive than rall haulage. Investigation has disclosed numberless cases in which the cost of hauling a given article two or three miles by wagon exceeded the cost of hauling it many times that distance by rail. Formerly trackless haulage meant animal power; but the development of gasoline and electric motors within a few years has provided a means of haulage without tracks which, under favorable conditions, is much swifter and cheaper than animal power.

The first condition is, of exerce, a good roadway—hard, smooth and well maintained. In cities where pavement provides a good roadway mechanical power is steadily supplanting bornes for trackless haulage. With good roads in the country, there is no reason why a great part of the trackless haulage should not be performed by mechanical power, with a large total saving of time and money.

The rural freight route might well move a great part of the farm's products to market and fetch back most of the

farm's supplies; in fact, an expert on the subject by predicted that within a few years a considerable part if what we now regard as main-line railroad freight traffe of move over highways by mechanical power, even for log distances.

For the achievement of that condition the first requisiis a complete network of good highways.

Great-Grandfather's Politics

THE legislative union between Great Britain and leland—which was repealed the other day by the time passage of the Home Rule Bill through the House is Conmons—was established in the first year of the sineteent century.

As to the means by which it was forced through in Irish Parliament: Twenty-eight Irish peerages were mated, six Irish peers obtained English peerages, and twent others were moved up a rank in the peerage — most of the honors being bestowed by the government as bribs out rewards for services in passing the bill for the union. The English Government bought outright eighty Irish has oughs, returning one hundred sixty members to Peisment, and paid a million two hundred thousand parth a cash for them—which sum, with rare humor, it added to the national debt of Ireland; so that Irishmen have been paying interest on it ever since.

Members of Parliament who would not vote for minwere bribed by offices and honors to resign in order the their places might be filled by those favorable to min-Twenty-three practicing barristers voted for union. Tenyears later six of them were on the hench and eight other had received high honors under the crown. Thirty-arburristers voted for union in the bar debate of 1799. The years later only five of them were unrewarded.

Just before leaving Ireland, Cornwallis sent over use England a list of fifty promises of places, pensions, less appointments, and like rewards, which he had made a consideration of support of the union, but which, up to the time, had not been fulfilled by the English Government.

Lecky, from whose history the above is compiled add"It is scarcely an exaggeration to say that everythin
within the gift of the crown, in the church, the army the
law, the revenue, was uniformly devoted to the great object
of carrying the union. From the great noblemes, we
bargained for their marquisates and ribands, from the
Archbishop of Cashel, who agreed to support the union as
being promised reversion of the See of Dublin, the virus of
corruption extended and descended through every fire
of the political system, including crowds of obscure are
who had it in their power to assist or obstruct addresse
on the question."

The Wage Puzzle

THE Bureau of Labor Statistics reports that wage in the hour in the cotton industry of the United State advanced fifty-one per cent from 1900 to 1912. The salmost exactly equal to the increase in price of food it is same period—that is, the food consumed in an average workingman's family as reported by the same bureau; at that table produces a pleasing sense of proportion collabore. But we turn over to the woolen industry and find that wages have advanced only thirty-four per control which seriously disturbs the balance. Then we proceed to the silk industry and discover that wages have advanced just nineteen per cent, which upaets the balance altogether.

We seek an explanation in the turiff, and learn the woolen manufactures have been enjoying a protection equato about ninety per cent, and cotton and silk only fifty lifty-five per cent. Yet wool wages have gone up only about two-thirds as much as cotton wages, and the latter has gone up nearly three times as much as silk wages.

These figures deal, of course, with the increase in varduring the last twelve years, not with the actual rate a wages; and we might explain the discrepancy on a position that silk labor was well paid a dozen years are but we remember the silk strike of this year, in which the hands bitterly contended that they are not well paid and now. Probably it is a question of organization.

Here Comes the Bride

SHE comes breathless, perspiring and more or less distrieled, pursued and surrounded by some well-dressed male and female rowdies who throw rice and coule's a her, while their clamor announces to the passengers lowering in the station or looking from the car windows that has has just been a party to a ceremony which some allfushioned folks regard as having a rather sacred character or at least as being of a peculiarly tender and interes-

It is well known that in several more primitive contactions of a frank ties marriage is attended by demonstrations of a frank trude sort, which, however, have a certain robust valid but we could never understand why a marriage before well-conditioned and presumably at least half-editional Americans should be made an occasion for public bots of

WHO'S WHO-AND WHY

Serious and Frivolous Facts About the Great and the Near Great

The Speech That Stuck

CUPPRESSED speech is one of the most distressing things that can happen to a person of oratorical tendencies. Though not ordinarily fatal, it never fails to produce so dour a view of life on the part of the speaker who contains but cannot contribute the sundry gems of cratory which clog him that he becomes a hopeless pessimist and bewails the loss of the faculty of proper public address-but not the lack of public address, which would ctamp him as singularly nonobserving of the proceedings of the day-or sets him on a chase for an opportunity for verbigeration and makes him a village pest.

You can see how it is yourself. A man is an oratormost men are, or think they are-most political men, that s and he has thought up a fine percration, or a few choice paragraphs, or an entire speech. His system is encumbered with these words. He must needs unhamper himself of them in order that he may be happy, and in order that he may bestow happiness and learning and reason, or flubdub, on others. Though he may have abundant opportunity to discourse in other language, of which he ordinarily has a full supply, there comes no fortunate moment to him where this particularly impending speech fits in; and he makes his weary and, no doubt, rhetorical way up and down the world, vainly hoping for an opportunity that will fit the eloquence congested within hirn.

It is a sad fate—a sad fate and a piteous! If the apropos hour does not arrive he goes to his grave a broken bally-hooer, conscious until the last that, had the hap been provided, he would have been hep, and mourning for the loss the world has sustained because these words were left to burn within him instead of being thrown, blazing, into some great forensic crisis.

Hence, to escape this lamentable end, the man who suffers from suppressed speech uses the most extraordinary efforts to attain a position or a place where he may rid himself of what stews and stagnates within him, and at least add to the gayety if not to the store of knowledge of the universe. He works and struggles and wanders and toils, seeking for the moment and the amelioration, pausing at nothing; rising after each defeat to press on to the goal where fate shall be so kind as to allow him to get it off his chest.

Take the case of Henry Vollmer-typical, if ever a case was typical-the case of Henry Vollmer, which so aptly and illuminatingly illustrates my point. For thirty years, up to about three of the clock on the afternoon of the nineteenth of March, 1914, Henry Vollmer had spread himself over Iowa and the neighboring territory, a gaunt and gasping victim of suppressed speech. He had one in him he could not get out. He suffered tortures-tortures! And he rushed from Allamakee to Pettawattamie, from Winnebago to Appanoose, up and down, crisscress and catercornered in Iowa, to find the perfect conjunction of the time, the place and that concealed and eloquent communication. Without result, ladies and gentlemen.

Surcease From Suffering at Last

DO NOT, I pray you, think I convey here the mesning or the intimation that Henry Vollmer, in his progress throughout Iowa, did not find ample opportunity for speech. He did. He spoke whenever he was asked, and oftentimes when he was not asked. So far as making speeches is concerned, there never yet arose an occasion-personal, political, economical, or having to do with any other phase of human activity, emotion, thought, knowledge, endeavoror conjecture-when Henry Vollmer was not ready with a speech; nor is there such an instant now. All that is needed to get Henry Vollmer to make a speech is the merest hint-the wave of a hand, or the slight inclination of a head, or the wink of an eye-and he will make one or two or three. The most minute provocation will set him going. and it takes an ax to stop him!

That is not what I am trying to say, however. He will speak, and he has spoken and does speak. Moreover, he will quote. It is well within the bounds of eneservative statement to assert that Henry Vollmer can give almost any person of your acquaintance a handicap of two full acts of any Shaksperean play, say, and beat that person to the final curtain by several scenes. Moreover, he will do his quoting with great declamatory effect.

You see, he is by way of being a lifelong student of declamation and elocution. He began early. They say that when he was a mere toddling child his spirited rendition of "Mary had a little lamb" was the pride of the entire neighborhood. As he progressed and, on Friday afternoons in the schoolhouse, ripped into "Ye call me chief; and ye

A Chronic Victim of Suppressed Bioquence

do well to call him chief"-and so on-the farmers all came. in to listen and appland, except at such time as the corn crop demanded their attention to the exclusion of patronage

He made his first political speech when he was aged seventeen. He was then a Democrat, as he is now; and he mounted a convenient rostrum and defended the immortal principles of Thomas Jefferson in such a manner that the almost solid Republican neighborhood concluded he would come to no good end. Since that time he has made political speeches and all other kinds of speeches; and not long thereafter he became aware that he was gradually becoming the custodian of a speech that could not possibly be emitted save at a moment not only opportune but auspicious.

It was no sudden growth—a thing, rather, of deliberate development; slow, but sadly sure. Phrase by phrase, metaphor by metaphor, simile by simile, that speech grew within him, crowding him in the speech cavity, urging for utterance almost suffocating him at times. He strove to find a place for it, but none was found. He sought on every rostrum and on every stump for the proper surroundings and the right audience for this masterpiece that was jammed into a conglobulate mass of flowers of language in his interior. None came!

He was doomed to wander over the face of Iowa, searching for surcease and finding it not. The speech stuck! He could get it neither out nor off.

So presently it came to him that the only proper place for the utterance of that speech, which was clamoring within him for a chance to ravish the ears of men, was in Congress. Congress! That was the solution! There, in the House of Representatives, in that forum of free and untrammeled discussion, debate and denunciation, would be ample, adequate and appropriate surroundings. The great men of the nation would be suditors. The galleries would be crowded with eager citizens, came to listen to this wonder of words—this marvel and model of magnetic manifestation. The reporters would send it in all its tralatitious glory over myriad wires into the homes of the people.

Congress was the place-Congress! And he ran for Congress, seeking to relieve himself of this burden of suppressed speech. He ran for Congress; but-alas, for the lack of consideration of the hardy Iowans for the sufferings of a fellow creature!—he was beaten. He did not get

the votes. They kept him at home. And again he began his search for the opportunity, delivering many speeches-

but not, of course, the speech.
Years passed. Henry Volimer was still obsessed of his speech. Try as he might, he could not fit it to the circumstances that environed him; but he did not despair. Henry Vollmer did not despair! He kept the faith and the quest. Also, he kept the speech.

Then came a vacancy in Congress from his districtonly a few months ago this happened and all these years Henry Vollmer had been awaiting-nay, seeking-his chance!

He secured another nomination to Congress to fill this vacancy, and he was elected.

What did Henry Vollmer do? How can you ask? , He hopped on the first train for Washington, presented his credentials, and was sworn in. Then, hursting with the speech that had struggled within him for expression for such a weary space of time, he got up on about the second day of his service and turned it loose.

I cannot give it all; but here is the section that hurassed him most for delivery—the slug he had treasured so long in order that its ripe perfection might not fall on anappreciative ears, or be spoken in a theater inadequate ta its verbal requirements and dignity—here is the choicest gem from Hank's long-cherished speech:

The rolling prairie between the fortieth and forty-fourth parallels of north latitude, which is folded in loving embrace by the limpid silver of the Father of Waters on the cast and the tawny gold of the Big Muddy on our western slope, is the Garden of the Lord which, in the liquid rousic of the Indian tongue, was appropriately named "lows—beautiful land!"

And what was the result? Being a truthful chronicler of events, I can only say—much as it pains mo—that his bearers mostly laughed!

Proof Positive

THE late Arthur McEwen used to tell of an Irish friend of his who made the statement that the sun is composed of loe and proved it.

"Th' sun do be made av ice," he said.

"Tis not!" contended a hearer.

"Tis so; an' I'll prove ut t' ye. Wuz ye iver in th'

'I wun.

"Wez yez at th' twenty-three-bundred Bvil?"

"I wur.

An' wuz it hot?"

"Hot as th' divil!"

"Well, thin, go out an' have a luk at th' tops av the mountains yonder-all covered with ice an' snow. The nearer to the sun it is, the colder it is; an' the farder away, th' botter. Th' sun do be made av fee!"

Telling It in Latin

CERTAIN Mississippi statesman was once a member A of a state constitutional convention at Jackson. He was much more devoted to poker than to his duties as a constitution maker, and he lost regularly each night more than the state paid him each day for his labors.

One morning, after a hard session over the poker table, he met a friend and began denouncing himself for being such an idiot as to remain in Jackson where his expenses were so high.

"What's the matter with you?" asked this friend, who was from a back county and who was sulting down most of his pay. "What ails you? Ain't you gittin' your per diem

"Yes," the poker player replied," I am getting my per diem per day all right; but the trouble is I am not getting my per noctem per night!"

Suffering by Proxy

SENATOR HUGHES, of New Jersey, was worried to distraction by the importunities of a person who had a grievance against the Interior Department.

The senator called up Secretary Lane, who had been worried by the same person.

"Will you listen to his story?" asked Hughes over the telephone.

"I will not," Lane replied.

"Well, then," urged Hughes desperately, "will you appoint some one to bear the story?

"Yes," answered Secretary Lane, "I appoint you," and he rang off.

Superman

Miss Birdsong stepped out of a gold-and-mauve hallway, through a grimy side door and into an area as black as a pet; and out from its blackest shadows a figure rose to

ment her.
"Joe!"
"Yeh; where's Loo and Harry?"

"Yeh; where's Loo and Harry."
"I dunno; they—they went on."
"Hurry up, Beauty. I ain't so much of a favorite round this theater that I can bask in this sunny spot."
"I didn't mean to keep you waitin' so

"I didn't mean to seep you long, Joe."

"Believe me, you're the foist little girl I ever hung round an ushers' exit for."

"Honest, am I, Jue!"

"Surest thing! The stage door is my pare and for nothing short of beadliners, neither. I gotta like a girl pretty well to hang round on the wrong side of the foot-lights for her. Sweetness."

lights for her, Sweetness."

"Jos. I—I wish I knew if you was kiddin'."

"Kiddin' within !"

They emerged into the white shower from a score of architett; and Mr. Joe Ullman, an apothesses of a classy tailor's dearest dream, in his brown suit, brownbendered silk bandlerchief nicely apparent brown durley hat and tun-top shoes, turned his bullding from and for-terrier syes to the north, where against a fulvous sky the Patals du Darse spelled itself in ruby and omerald incondensants with the carefully planned effect of green moscilight feating

"Jus," she dragged gently at his coat, sheve and a warm pink spread out from under the area of rouge; "Jus, you know what you promised for to-night?"

"What, kidder Thecky's my limit, I'll

tast you 10) the meter gives out."
"You have promised so long, Joe. Come

albow, her incertitude vanishing behind the filmy cloud of a smile.
"All right, Joe; to-morrow night, sure. You walk as far as home with me now,

"Bless my soul! You ain't going to leave me at the church, are you!"
"I gotta go right home, Joe,"
"Gee! Why didn't you tell a fellow? I could have tied up ten times over for a Saturday night. There's a little dancer over at the Orpheum would have let out a six-inch smile for the pleasure of my company to-night. Gee! You're a swell little snort—nix!" sport - ux!

"Come on in for ten minutes, and if you're right good I'll shoot you home in a taxicals just as quick as if we went now. Just ten minutes, Sweetness!"
"No more, Joe!"

"Cross my beart and bet on a dark horse-just ten minutes!"

She smiled at him from the corners of her shadowed eyes and stapped into the tessellated foyer.

"Satisfied now, Mr. Smarty?" she said, smiling at eight reflections of herself and swaying to the rippling flute notes and violin phrases that wandered out to most them. You're all right, Sweetness!

Within the Sheban elegance of the overlighted, overheated, overgilded dining and dance hall, his pressure of her arm tightened and the blood ran in her veius a searing

"Gee! Look at the jam, Joe!"
"Over there's a table for two, Sweet-right under them green lights."

It's the insides

Padlock that makes the name Yale so valuable on the outside!

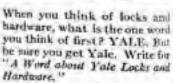

Look for the name Yale on all padlocks-and on all other locks as well.

There is a Yale lock made for every locking purpose - from simple Yale locks for chests, trunks and cabinets, to the convenient, burglar-proof dead-locking night latch, the sturdy padlock, and all the way to the wonderful bank lock.

Every Yale lock and every piece of Yale hardware has the name Yale on it. It is not a Yale product unless it has.

Have you a shubtful lock or any outside door? If so, don't trust it. Back it up with a Yale Night Latch. No. 44, here illustrated, is a burglar - proof deadlocking

> Other lumishings bearing the Wilson (Breig mark of quality mehide Shirts, Gloves, Hosiery, Suspenders, Nockwear, Handkerchiels, etc.

Wilson Bros Combinette Pajama

Licensed under the

Klosed-Krotch Patents

Another new wrinkle in closed crotch conduct. A oper-piece palante. No discovering. Whilst breeken. Easy to adjust. Convenient. Dignified appearance. Has assess patented closed crotch as above. In wh. well-partnersed labrics—\$1.50 and up. At your jurnisher's.

Chicago Wilson Cros

"Say, whatta you know about that! There's that same blonde girl, Joe, we been seein' everywhere. Honest, she follows us round every place we go her and that fellow that was dancing up at the Crescent last night—remember?"

They drew up before a marble-topped table, one of a phalanx that flanked a wide-open space of hardwood floor, like coping round a sunken pool; and his eyes took a rapid résumé of the room.

Good crowd out to-night, Sweetness. They all know us too."Yes."

"Wanna dance and show 'em we're in condition?

"No, Joe."

The music flared suddenly; chairs were pushed back from their tables, leaving food and drink in the attitude of walting. A bolder couple or two ventured out on the shining floor space, hesitant like a premonitory ripple on the water before the coming of the wind; another and yet another. And almost instanter the intricate mate of a crowded floor-women swaying; men threading in, out, around.

What'll you have to drink, Sweetness?"

"Lemonade, please.

"I know a better one than that."
"What?"

"Condensed milk!"

"Silly! I just can't get used to them bitter-tasting things you try out on me." "You're all right, little Lemonade Girl!"

He leaned across the table and peered under the pink sateen. Its reflection lay like a blush of pleasure across her features and she kept her gaze averted, with a pretty malaise trembling through her. "You're all right, little Peaches and

Cream."
"You-you're all right too, Joe."

"You mean that, Sweetness?"
"I mean it if you mean it."
"Do I mean it? Say, do I give a little queen like you my company eight nights out of seven for the fun of kiddin' myself

along?"
"Iknowyou don't, Joe; that's what I keep

tellin' maw."
"Sittin' there screwing your lips at me like that! You got a mouth just like—just like red fruit; like a cherry that would bust all over the place if a bird took a peck at it."

Her besom, little as Juliet's, rose to his words, and she giggled after the immemorial fashion of women.

Oh, Joe! Honly-ifonly-ifonly-

"If only what, Sweetness?

"If only -

"Aw, I can't say it."
"Whistle it then, Sweetness."
"It don't do us no good to talk about these things, Joe. We we never get any-

"What's the use o' talking then, Sweetness? Here's your lemonade. I wish I was ness? Here's your lemonade. I wish I was in the baby-food class—"put my seul I do! Look, Sweetness; this is the stuff, though, Look at its color, will you? Red as a moonshiner's eye! Here, waiter, have that siphon; I might wanna shoot up the place."

"You promised, Joe, not—"
"Sure; I ain't goin' to, neither. Did I keep my pool promise? Ain't heard a ball click for weeks! Will I keep this une? Watch! Two's my limit, Peaches. I'd swear off elsepin' if you wanted me to."

"Would you, Joe? That's what I want you to tell may when—"

you to tell maw when -"Aw, there you go again! Honest, the minute a fellow feels hisself warming up inside you begin tryin' to reach up to the church tower and ring the bells."

"Jee!" "Sure you do,"

"You make me ashamed when you talk

Then cut it, Sweetness. Come on; let's finish out this dance."

"It worries her so, Joe. She asks and asks till I—I don't know what to say no more, when I see her wastin' away and all. I—I don't know!"

"Don't leak any tears here, Ess! This gang here knows me. Ain't I told you I like you, girl? I like you well enough to do anything your little heart de-sires; but this ain't the place to talk about it." this ain't the place to talk about it.

"That's what you always say, Joe; no

place is the place."
"Gee, ain't it swell enough just the way we are—just like it is, us knocking round together? I ain't your settling-down kind, sister. You're one little winner and I like your style o' sweetness, but I ain't what you'd call a homesteader."

"Sure; I mean it. I like you well enough to do any little thing your heart desires; but I never look far ahead, Hon. I'm nearsighted."
"What what about me?"

"I ain't got nothing saved up—not a dime. You tell your dame—you tell her we—we just understand each other. Huh? How's that? That's fair enough to all, ain't it?"

"Whatts you mean, Joe? You always say that; but please, Joe, please tell me

what you mean?"

"Listen, kiddo! Say, listen to that trot they're playin', will you? Come on, sis; be a sport! To-morrow night we'll talk about anything your little heart desires. Come on; one round! Don't make me

"Aw, no, Joe; I gotta go." "One round, Sweetness - see, I'll pay the heck. See, two rounds round and we'll light out far home. Look, they're all watchin' for us—two rounds, Sweetness, just two rounds!"

"One you just said, Joe."One then, little mouse.

They rose to the introductory titillation of violins; she slid into his embrace with a little fluid movement and they slithered out on the shining floor. A light murmur like the rustle of hirds' wings went after them and couples leaned from their tables to watch the perfect syncopation of their steps. His eyes took on the sheen of mica; the color ran high in her face and her tipe

"They sit up and take notice when we slide out, don't they, little one?"

Yes. "Some class to my trotting, ain't there,

"Some class to my trotting, ain't there, Sweetness?"

"Yeb. Look, Joe; we gotta go after this round—it's nearly twelve."

"Twice round, Sweetness, and then we go. If we ain't got the profesh heat on that Argentine Dip I'll give ten orchestra seats to charity and let any hox office in this town land me for what I'm worth."

"Joe!"

"Aw. I was only kiddin'. They got as

"Aw, I was only kiddin'. They got as much chance with me as a man with Saint Vitus' dance has of landing a treut. Gee, you're pretty to-night, Sweetness!" "Sweetness yourself!"

"Peaches and Cream!"

"Come on, Joe; this is twice round."

"Once more, Sweetness - just once more! See, you got me hypnotized; my feet won't stop. See, they keep going and going. See, I can't stop. Whoa! Whoa! Honest, I can't quit! Whoa! We gotts go round once more, Sweetness, I just can't stop!"

"Just once more, Joe."

At one o'clock the gas flame in the hall-way outside the rear third-floor apartment flared sootily and waned to a weary head as the pressure receded. Through the opacity of a sudden feg the formal-lased door faded into the gloom and Miss Essie Birdsong pashed the knob stealthily inch by inch to save the squeak.

"Plunk - plunk - plunka - plunka - plunk -plunk ! Essie?"

plunk? Essie?

"Sh-b-h! Yes, Jimmie—it's only me.
Why you makin' that noise? Why's the
light burning? What's—

"Essie! Essie, is that you and—"

"Maw dearie—you—— What's the
matter? You ain't sirk, are you? What's—

"Timmie? Please, what's

what's wrong, Jimmie? Please, what's

She stood with her back to the door, her face struck with fear suddenly, as with white forked lightning, and her breath coming on every alternate beartheat.

"Maw! Jimmie! What's the matter? Is may sick again?"

The trunsitional falsetto of her brother's

voice came to her gritty as slate scratching slate, and cold prickly flesh sprang out over

"Don't come in here! You-you and your friend stay out there a minute till maw kinda gets her breath back; she-she's all right-ain't you, maw? You and your friend wait just a minute, Ess."

Me and . "Yeh; both of you wait. Nothing ain't wrong it, maw? There, just lay back on the pillow a minute, maw. Gwan; he a sport! Look, your cheek's all red from restin' on my shoulder so long. Lemme go a minute and bring Essie and her gen'l'man friend in to see you. Gee! After you been waitin' and waitin', you—you ain't goin' to give out the last minute. There ain't nothin' to be scared about, maw. Lemme go in just a minute. Here it is, maw;

What Thief Steals 20% Your Efficiency?

AFTER five years investigation, the U. S. Army discovered that the pointed shoe is that thief.

And they adopted a shoe of the Educator type, which, it has been proved, will save that

20% of energy.

If you have a headerlie or cold your officiency is at least 20% heliow par. In whichency is at least 20% helow par. In like manner, if you have come, busions, ingrowing nails, flat font—the ills which, pointed shoes make—you are worth only about 90% of your real fighting self. Get your whole family (men, women, rhildren) into roomer, good-looking Educators—today. \$1.35 to \$5.50. See that EDUCATOR is branded on

the side. That name guarantees you the correct orthopsedic shape which allows your feet to grow as nature intended.

"Freak Shoes Make Frantic Feet'

is a new book in which two New York orthopædic specialists tell you hew to walk, and how to have straight-hourd, healthy feet. Simple Isoguage. Free, Send for a copy today. Leading shoe stores everywhere sell Educators. If you have any trouble

finding them, write us.

don't break it-seven years' bad luck for smashin' a hand mirror. Here; you look swell, maw-swell!"

"Tell him it ain't like me to give out like this. Take them bottles and that ice away, Jimmie—threw my flowered wrapper over my shoulders. There! Now tell him, Jim-mie, it ain't like me." "Surest thing, maw. Watch me!" He emerged from the bedroom suddenly,

his face twisted and his whispering voice like cold iron under the stroke of an anvil, and Essie trembled as she stood.

Jimmie! "You-you devil, you! Where is he!" She edged away from him with limbs

that took root at every step and she must tear each foot from the carpet. "To-morrow night he's comin', sure, Jim-mie; he couldn't to-night, he—couldn't." Jimmie's lips drew back from his gums as though too dry to cover them.

"You-you streetrunner, you!"
"Jimmie!"

"You-you-you-"
"Hush! Keep quiet, she'll hear you, Jimmie.

"You devil, you! You've killed her, I tell you! I've been holdin' her in there for two hours, with the sweat standing out on her "Oh, Jimmie! Jimmie! Lemme run for

old man Gibbs; lemme

Oh, no, you don't! Lizzie Marks downstairs is gone for him -- but that ain't goin'

to help none; what she wants is you you and your low-down eneaking friend; and she's goin' to have him too.

"He's gone, Jimmie. What—"

"You can't come home here to-night without him—you can't! You better run after him, and run after him quick. You can't come home here to-night without him. I tall you! Whatte you can't that a home here to high the thim. it—huh? Whatta you going to do? Quick! I tell you! Whatta you going to do about

She trembled so she grasped the back of a chair for support and team trickled down

I can't, Jimmie! He's gone by now he's gone by now—out of sight. I can't!
Please, Jimmie! I'll tell her! I'll tell her!
Don't—don't you dare come near me! I'll
go, Jimmie—I'll go. Sh-h-h!
"You gotta get him—you can't esene
here to-sight without him. I ain't goin' to
stand for her not meing him to-night. I—I
don't care how you get him, but you ain't

out like this. Tell-

"Yes, maw-we're comin'. Joe's waitin' down at the door. I'll run down and bring him up; he be's so bashful. In a minute, maw darlin'!"

She flung open the door and fled, racing down two flights of stairs, with her steps clattering after her in an avalanche, and out into a quiet street, which sprung echoes

of her dying feet.

After midnight every pedestrian becomes a simulacrum, wrapped in a black domino of mystery and a starry ephod of romance. A homeward-bound pedestrian is a faun in evening dress. Fat-and-forty lears from her window to hurtle a can at a night-selling cut and becomes a damond learning. yelling cat and becomes a damonel leaning out from the gold bar of Heaven.

In the gloom of the street occasional silhouettes hurried in silent basts; and a string of shop lights, she could distinguish the uneven-shouldered outline of Joe Ull-man and the unmistakable silhouette of his

She sobbed in her throat and made a cup of her hands to halloo; but her voice would

not come, and she ran faster. A policeman glanced after her and struck the asphalt.

A dog yapped at her tall heels. Even as she sped, her face upturned and her mouth dry and open, the figure swerved suddenly into a red-lighted doorway, with a crescent burning above it; and, with her

eyes on that Mecca, she pulled at her strength and gathered more speed, The rescent grew in size and redness, and its lettering sprang out; and suddenly she stopped, as suddenly as an engine jerking up before a washout.

CRESCENT POOL AND BILLIARD ROOM OPEN ALL NIGHT

And her heart folded inward like the petals of a mounflower.

Stretched to the limit of their resilience, the nerves act reflexly. The merest second of incertitude and then automatically she swung about, turned her blood-driven face toward whence she came and groped her way homeward as if she were blind.

Tears hot from the geyser of shame and pain magnified her eyes like high-power spectacle lenses; and when she reached the dim entrance of the cliff dwelling she called ome an edge of ice stiffened round her heart and her feet would not enter.

A silhouette lurched round a black corner and nigragged toward her, and she held herself flat as a lath against the building until it and its drunken song had lurched round another corner; a couple hurried past with interlinked arms and their laughter was as light as foam. More ellhou-ettes—a flat-chested woman, who wore her sharne with the conscious speciousness of a prisoner promenading in his stripes; a loutish fellow, who whistled as he nurried and vaulted up the steps of the Electric Institute three steps at a bound; an old man with an outline like a crooked finger; a shawled woman; a cab lined with vague faces, with streamers of laughter floating back from it; and, standing darkly against the cold wall, Essie with the tears drying on her cheeks and her whole being suddenly galvanized by a new thought. A momentary lull in the drippy stream-

let of pedestrians; she leaned out into the darkness and peered up, then down the aisle of street. A shadow came gliding toward her and she stepped forward; but when the street lamp fell on the cold eyes and cuttlefish stare she huddled back into her corner until the steps had receded like the stick-taps of a blind man.

Two women in the professional garb of

Two women in the professional garb of nurses twinkled past, twittering each to each like sparrows; a man whose face was nar-row and dark, betraying in his ancestry a Latin breed, kept close to the shadow of the

With her finger nails cutting her palms, she stepped out from her lair directly in his path and clasped her hands tighter to keep them from trembling.

You - please!

He gisneed down at her yellowish face, with the daubed-on red standing out frankly, tossed her a sneer and a foreign expression, and brushed by. She darted back as though be had struck at her, and panic closed her in.

A young giant, tall as a Scandinavian out of Yalhalla, with wide shoulders and a wide stride, and heavy-soled, laced-to-the-knee boots that clattered loudly, ran up the steps of the Electric Institute, and she flashed across the sidewalk, ber arm reaching out.

"You-please!"
He passed, with the street lamp full on his smiling mouth and wide-apart, smiling eyes, one foot in the act of ascending, after the manner of tailors' fashion plates, which are forever in the casual attitude of mount-

ing stairs. You-please! Please -

"Aw, little lady, go home and go to bed.
This ain't no time and place for a little
thing like you. Here, take this and go
home, little girl."
She arrested his arm on its way to his

pocket, her breath crowding out her words and the stinging red of shame burning

through her rouge.
"No, no! For Gawd's sakes, no! It'smy mother

He brought his feet down to a level. Your mother? "Yes; she's sick-maybe dyin'. I-please-she wants to see somebody that

"Please! That ain't nothin'. It'll be only a minute. Just kinda say things after me and don't let her know-don't let her know that I-I ain't got any young man.

Don't let her know!"
"You poor little thing, you—shaking like a leaf! Lead the way; but not so fast, little lady—you'll give out."
She cried and laughed her relief and

dragged him across the sidewalk; and every step up the two flights she struggled to keep her hysterical voice within the veil of a

whisper.
"Just say everythin' right after me.
"Just say everythin right after me. You—you're my young man and real sweet on me; and we're going to get—you know; everythin' is goin' to be fine and my little brother's going to the Electric Institute, and everythin's goin' to be swell. Be right lovin' to her, sir—she's so sick. Oh, Gawd, I ——"

"Don't cry, little girl."

"I ain't cryin'."
"Careful; don't stumble."

"Don't you stumble. Can you see?
The landing's so dark."
"Yes; I can see by the shine of your hair, little lady."
"Sh-h-h-h!"

The door stood open at the angle she had left it, and by proxy of the slab of mirror over the mantelpiece she could see her mother's head propped against her brother's gold-braided shoulder and the bright eyes shining out like a gazelle's in the dark. "Essie?"

"We are here, maw-me and Joe." She threw a last appeal over her shoulder and led the way into the bedroom; her com-

panion followed, stoeping to accommodate his height to the doorway. "Maw dearie, this is Joe." "Joe! It ain't like me, Joe, not to get up; but I just ain't got the strength— to-picht. Joe." to-night, Joe.

He bent his six-feet-two over the bed and smiled at her from close range.

"Well, well, well! So this is maw dearie!"
"That's her, Joe."
"This won't do one bit, maw. Me and

the little lady's got to get you cored up in a hurry—don't we, little lady?"

"Maw dearie, Joe's been wantin' and wantin' to come for so long."

'For so long I been wantin' to come,

maw dearie; but —"
"But he's so bashful. Ain't you, Joe?

bashful us a barahee."
"Bashful ain't oo name for me, maw. I'd

sby at a baby."

"Honest, maw dearie, he's as shy as anything."

"If I wasn't, wouldn't I have been up to

"If I wasn't, wouldn't I have been up to see my little lady's mother long ago— wouldn't I? Ain't you going to shake hands with me, maw dearie?"

She held up a hand, as light as a leaf, and

he took it in a wide, gentle clasp that enveloped it. "Maw dearie!"

Her violet lids fluttered and she lay back from the gold-braided shoulder to her pillow, but smiling. "I like your hand, Joe; I like it."

"I want you to, maw."
"We I was afraid, Joe, I wouldn't, you never comin' at all. Shake it, Jimmie, and

see.
'It's a strong hand, like your papa's was,

Essie. Shake it. Jimmie. I feel just like cryin', it's so good. Shake it, Jimmie."

Across the chasm of youth's prejudice Jimmie held out a reluctant hand.

"And this is the big brother is it, little

lady?"
"That's what he calls hisself, Joe-he

calls me his little sister."

"He's gotta be a big brother to her, Joe;

s so-so little."

"Shake, old man; and take off that grouch. Over where I live a fellow'd be fined ten cents for that scowl. If we got anything to square, you and me'll square it outside after school. What do you say to that, may dearie? Ain't it right?"

"Jimmie's tired out, Joe." "Like fun I am!"

"He's been proppin' me up all these hours so I could breathe easier-plunkin' and doin' all his funny kid stunts for his old maw, Essie—plunkin' like a banjo, and plunkin'. I liked it. Sometimes it was like I was floatin' in a skiff, with your papa, on Sunday afternoons in the park, Essie. I liked it. He's all tired out-ain't you, Jimmie, my boy1"
"Naw!"

"He's sore at his sister, Joe. But he's a good boy and smart! You wouldn't believe it, Joe; but when it comes to mechanics be—he's just grand!"
"Aw, cut it, maw! I ain't strikin' to make a hir."

make a hit. "He's only tired, Joe, and don't mean

nothin' he says. "Naw; I'm only tryin' my voice out for

grand opery!" "You're a regular sorehead with me, nin't you, old man?"
"Aw!"

"He ain't easy at makin' up with strangers, Joe; but he's a smart one. See that on the table? That's his self-chargin' dynamo; it's a great invention, Joe, the junitor says. You tell him about it, Jimmie."

"There ain't nothin' to tell."
"Don't believe it. Joe; the janitor's a electrician and he says -

"See! There it is, Jos."

"Aw, I don't want everybody pokin' and noein'!"

"Lemme have a look at it, old man. I know semething about dynames myself. Say, that looks like a neat little idea. How does also work?"

"See—you generate right down in here.
See? She worked that time, maw."
"Jimminyeracks! Where'd you get your juice and — Well, well! Whatta you know about that? Don't even have to reverse. I guess that storage down there ain't some stunt!"
"San Jimmin we hear! I talk you it was

"See, Jimmie, my boy! I told you it was a grand invention. Hear what Joe says!"
"Say, kid, you bring that—take that over to the Institute to-morrow. I know a fellow over there'll protect your rights and work that out with you swell." "See, Jimmie, your your old maw was right!"

"Aw, the generator don't always work like that only about four times out of six. I'm kinda stuck on the "Say, kid, what you wanna do is protect.

your rights on that, and-and bring it over take it over to the Institute. You'll give 'em the jolt of their lives over there. I know a fellow's been chasin' this idea ten years, and you're fifty per cent closer to the bull's eye than he is

"Heur, Jimmie! Hear, Essie! Just like I been sayin'. I been beggin' and beggin' kim, Joe; but he he's so stubbern; and

Aw, maw, cut it, can't you'l "He's so stubborn about it, Joe."

"There's no use tryin' to force him, maw; but he's gotta good idea there if he handles it right.

Aw, she ain't finished yet-she don't work right.

"That's what I'm tellin' you, kid. What you need is a laboratory, where you've got the stuff to work with and men who can give you a steer where you need it, and -

"I'll go over with you. I know a fellow over there—he's the guy that helped Kinney win his transmitter prize. You'll give him the jolt of his life, old man. Huh, kid? Wanna go over?" He placed his hand on the gold-braided shoulder and smiled down. "Huh? You on, old man?"

"Aw, I ain't much for buttin' in places."
"Are you on, Jimmie? It's your chance,

uld man.

"Jimmie! Jimmie, my boy, I ____"
"Aw, I said I was on, didn't I, maw?"

"Sure, he said he was on, maw dearie.
Shake on it, old man!"
"Jimmie! Jimmie, my boy—honest!—
it's just like your papa was talkin'! Don't leggo my hand, Joe. Layin' here with my eyes shut it's just like he was talkin' hisself. He's he's like your papa was, Essie, hig and strong.

"Yes, darlin'." "Is that the doctor? Is Lizzie Marks

come back? Is that -

"No; not yet, maw."
"You're all tired out, Essie haby, aren't
you? Look at your little fare! Go wash it,
haby, and cool it off before old man Gibbs

"It sin't hot, maw."

"He brought you into the world, Essie baby, and I don't want him to see it - to see

"I'm all right, maw. Lemme stay by "Go wash your face, Ess. Maw says go wash your face."

A dustless Tarvis-treated Road, Middletown, R. I.

A cure for dusty roads-Tarvia

DON'T you often find the fun of a ride or a walk through the country marred by the dust?

Aren't there days when you are fairly choked with the clouds raised by passing automobiles, your shoulders white with dust, your clothes all but ruined?

And haven't you seen that dust float over the lawns into fine homes, making the verandas uninhabitable and ruining costly furnishings?

And did you ever notice how rain on a grade gullies out the side of the

macadam, making it rough as the rocky road to Dublin, necessitating costly repairs?

By way of contrast, how would you like to live in a township that bonds its mucadam with Tarvial

The roads then are dustless, mudless, smooth - the air is pure and clean—the adjacent lawns green and fresh, and you can ride or walk in comfort.

What's the use of paying taxes to maintain roadways that not only create a nuisance but don't stand the stress of modern traffic?

If your town isn't a Tarvia town yet, why not get after the local road authorities till they make it one!

There's economy as well as civic beauty in tarviated roads.

Buskless regarding the Tarvia treatment free on request.

Keeping Things Cool

TEVER again need you buy ice for any purpose. The little machine on top of the refrigerator and the cooling radiator inside have solved this vexing problem.

When equipped with the Germania System of Refrigeration, your refrigerator will preserve food perfectly for weeks in pure, dry airuniformly cold - at any temperature desired, down to zero.

The Gershania System does away with the ice man entirely, and eliminates the many consequences of impure ice. It is impossible for mold to form even on cooked loods in the cold, dry air produced by the Germania System.

The Germania System makes pure ice for the table, fereres ices and parfaits, and couls the water pipes. The price of installation is reasonable, and the cost of operation is only 6 to 10 cents per day.

Cold storage experts agree that meating repetables and other foods can be most satisfactorily preserved at a point just above freezing, in air that is uniformly cold and dry, and where the temperature does not fluctuate.

Are you able to maintain a aniform temperature in your refrigerator? Do you get the temperature as mid as should be?

The distinctive features of the Ciermania System of Refrigeration are these t

The Germania System produces dry, cold air, by collecting and treezing the natural moisture in the atmosphere. It maintains any wei/form temperature desired, down to zero. You can regulate the degree of cold to suit your requirements.

The Germania System, as here illustrated, is based on the same principle med in cold storage plants, in large packing houses and in the most mostern hotels, where foul study must be kept for weeks, - because this system of dry air refrigeration has been proved most efficient and must economical for keeping perobable foods in prime condition.

The Germania System is the result of

twenty years' effort to produce a simple, compact refrigerating device at a low cost. It can be easily installed in connection with any refrigerator -either on top of the refrigerator or in the base-

It is silent and automatic in operation. There are no valves to twist, no adjusting nothing to get out of order. Start ne stop it by turning a switch. It is lit-exally "food-proof".

This system is to be operated 6 to \$ hours per day. Our small size remilence machine has a capacity equal to 350 lbs. of ice every 24 hours,

We make larger vises for apartment houses, hotels, clubs, smitatisms, gro cers, butchers, druggists, florists, and all others requiring economical and efficient refrigeration.

Send For This Book

Whether you discre the Germania System for your noidence or place of features, or wish to become the general representative of this company in your city, it will pay you to mad the very interesting task—" Keeping Things fixed Wilhert Lee.

Please 60 cet and send the coupen today. You'll get the took by every mad.

"You shut up, Jimmie Birdsong—it ain't your face!"

You know all righty, missy, why she

"Maw, he keeps fussin' with me! Jimmie, please don't.

"Aw, I ain't neither, maw. She's al-ways peckin' at me. I - I ain't mad at her; but I want her to wash that - that stuff off her face."
"Jimmie!"

Her lips quivered and she glanced toward the stranger, with her lids drooping over her eyes like curtains to her shame; and he amiled at her with eyes as soft as spring rain, and his voice a caress.

"Go, little lady. You're all tired out and too preity and too sweet not to wash your face and—cool it off."

"She's gotta go or I'll get her in a corner

and rob --- Honest, the minute we make up you begin pickin' a fuss aguin.

"Oh, my children!"

"Oh, there she goes off again! Why don't old man Gibbs come? Lay her down. Just she can't breathe that way. Look! Her hands are all blue like. Hold her up,

Her hands are all blue like. Hold her up, Joe; Oh, why don't old man Gibbs come? She's all shakin'—all shakin'!

"No, I ain't. What you cryin' there at the foot of the bed for, Essle? It ain't no time to cry now, darlin'. It's like it says on the crocheted lamp mat your papa's aunt did for us—God is Good! Where is that mat, Essle? I—I ain't seen it round for—so—long. God is good! God—is—good! Where is that mat, Essle?!

"It's round somewheres, maw. It's old

"It's round somewheres, maw. It's old and worn out in the ragbag, maybe."

We'll get it not, Emir. "Yes, maw

"Promise, Essie!"

Sure, maw; we'll get it out and keep it out.

"Oh, Joe, why did you keep us waitin' and waitin'? She's so little and pretty. Look at her dimples, Joe, even when she's cryin'. The prettiest girl in the notions, she was; and I - I been so scared for her. Joe.
Why did you keep us waitin' and waitin'?"

Me and the little girl was slow in getting here, maw; but we—we're here for good now—ain't we, little lady? Little lady with the hair just like maw's!"
"She gets it from me, Joe. Her papa based to say her hair was like the copper trim-

mings of his machines. Such machines he kept, Joe! His boss told me hisself they were just like looking-glasses. Essie, come

classer, darlin'.

"You won't forget the lamp mat, will you, darlin'—the lamp mat?"

"Oh no, maw. Oh, maw, you sin't mad at me? Please—please? Honest, maw, your little Essie didn't know!"

"Maw knows we didn't know, little lady.
She ain't mad at us. She's glad that everything's going to be all right now; and you
and her and Jimmie and me are ——"

"Oh, my children!" the sick water murmured. She smiled and slipped be fingers between her daughter's fan and the coverlet.

"Look up, Essie! I feel so light! [5eel so light! It's like it says on the lampman just like it says, Essie."

"Maw! Maw darlin', open your eye!"

"Maw!"

"Haw!"

"Here, Jimmie, lend a hand! Lenne hold her up—so! No: don't give he uty more of that black stuff, Jimmie, old ma-Wait till the doctor comes. Let be is quiet on my arm - just like that; and hatel me that ammonia bottle there, Essie, the a sweet little lady. See there! She's origing round all right. Who says she up't coming to? Now, maw—now!"

"Joe, don't leggo me!"

"Sure I won't, maw dearie."
She warmed to life slightly and the tears seeped through her closed eyes and sie fet of his supporting arm down the length of he

"Joe! Essie, that you?"
"Maw darlin', we're all here."
"Don't cry, little lady. See, she's coning out of it all right. Here, gimme a fit. Jimmie. See there! She's got her brank

all right again."

They laid her back on the pillow and de-

folded her hands lightly, ever so lightly, like lilies, one over the other. "Children! Children, I'm ready." "Ready for what, maw? Some more black medicine?"

"Just ready, Jimmie, my bey! Her. Joe; hold my hand. It's like his we.

Joe; hold my hand. It's like his we children—big and strong."
"Aw, maw! Come on! Perk up!"
"I am, Jimmie, my boy."
"Perk up for sure, I mean. Gee, no: there enough to perk about? Look n or and Eas—enough to give a fellow the William pipin" at each other like sugar'd met in their mouths!"

"My Jimmie's a great one for team he inter, Joe.

"And look at me, maw-sin't I going to take my dyname over to the Institute? And ain't the whole bunch of us right here ten at the whole butch of yet look, maw-look at the two of 'em turnin' to sugar rull this minute from lovin' each other! And the limit? Look at us, maw-all here are fine as silkworms?"

"Yes, yes, Jimmie; that's why I feel a light. I never felt so light before. It also it says on the lamp mat, Jimmie—judlie-

"Oh, maw—ready for eure, my darling."
"Oh, maw—ready for what? Look at us, maw dearie—all three of us standing here—ready for what, dearie?"
"You tell 'em, Joe; you—you're hig and attract."

strong."
"1—I don't know, maw. I don't that
I—I know for sure, dearie."

"Ready for what, maw? Tell us, darling She turned her face toward them, a smile printed on her lips.
"Just ready, children!"

Sense and Nonsense

Choosing a Head

IN THE early days printers in most news-paper offices supplied the headlines for the items they put in type. Heary Cary tells a story of a man in a Milwaukee composing room who had a paragraph he did not understand.

He went over to the foreman and showed him the item.

"How'll I bend this?" he asked.
"Oh." said the foreman, "head it appropriately. Don't bother me with such questions."

So the next morning the item appeared in the paper headed: Appropriately!

The Goat

A NEGRO order in Georgia borrowed the rame and insignis of a popular white lodge without asking permission. The white fraternity promptly went into court with a restraining order. The issue was extract on appeal to the bighest court of the state, where the attorney for the plaintiffs appeared to ask that the injunction be made permanent. He was addressing the

"Why, if your honors please," he stated citedly, "these negroes got our pass excitedly, words, our bailing signs, our secret work, our hadges, our emblems."

The chief justice leaned forward with I smile upon his face. "It would appear," he said, "that the also got your goat."

The Intelligent Newcomer

WE ARE credibly informed that Ex-lishmen are the greatest colonizer the world, the greatest sportsmen in the world, and the greatest outdoor people the world. Sometimes, out in the new parts of Canada, people are willing to are that. A Western hishop hired a new-corn Englishman to cook, as he was the only of in the party who could not cook, and ationed him to be sure to wash the me

It was an Englishman not yet across I water who wrote to find out about the proper outfit for Canada, and who inquire whether moccasins or snowshoes were garded as the warmer for lootwear.

It was an Englishman, on the Athabas River, who bored a hole in a floating low to let the water out. And yet anothe Englishman, when asked to set a water mark at night to determine whether at a the river was rising, carefully made a mare the water line on the side of a floating har-

On the whole, there seems to be a gree difference between colonizers and colors

BANTRY

(Concluded from Page 11)

Though the band was still playing in the distance, the loading of the service tents, side shows and cages had already begun. Before long the elephants arrived, and sure enough, as Stub had foretold, the big bulls refused to enter the new cars. Prods, commands, curses, tail-twisting were all in vain; the big brutes, squatting and waving their trunks, only squealed the louder, until finally lions, tigers, cockatoos and monkeys joined in the pandemonium, and Foster's hair fairly ruse.

Then out came the blocks and tackle. A team of horses was attached to one end of the rope; the other end was tied about an elephant's neck, and he was dragged up the incline like a bale of rags. This was exciting enough at first; but when the rope failed to break and none of the animals threw himself off the incline, Foster turned his attention

to the cows and calves.

These were drawn up in line like soldiers, some distance off, where they stood as motionless as statues, apparently asleep and quite content, even in the absence of a keeper, to let their husbands and fathers settle the row they had kicked up. Imme-diately in front of them was an old mill race and along the edge of this race ran a footpath.

and along the edge of this ruce ran a tootpath.

Now Foster, noting the absence of a keeper and still tasting his conquest of Maharajah, decided to walk down this path, which he did, passing within three feet of the big triangular heads and within easy reach, of course, of the trunks. He kept repeating: "No elephunt will hurt me! No elephunt will hurt me!" Nor did it. The goose flesh popped out on his budy. it. The goose flesh popped out on his hody, but nothing happened except, as he walked along, one wicked little eye after another slowly opened and stanted a gleam at him

and slowly closed again.

The last animal in the line was a corrugated old cow named Bantry. Foster had learned her name that morning, and now recognized her from a tattooed crescent on her left ear, which, according to Mukunda Das, was an insignia of Mohammedan royal rank. Mukunda had declared than Bantry knew more than most men, having had a century and a half in which to gather wisdom. She had been bought at an enermous price by the rajah of Mukunda's home province from a Sumatran sultan, and sold again by the rajab to Sellspaugh Brothers. The sultan had asked the enormous price, not only because of Bantry's intelligence, but also because of her remarkable attach ment to his little son, who had died at the age of ten. And Mukunda had added a sentence which thrilled Poster through and through: "Little sultan's little boy. "Little sahih looks much like

Now the mahout in addressing Bantry always used a word which sounded to Foster like "Bizzilla," and it never failed to ratch Bantry's attention. It was a fascinating word as it came histing from the swarthy man's lips. Foster had practiced it off and on all day until be had almost reached Mukunda's sibilant perfection; and at this instant, standing about five feet from Bantry, he was seized with an irre-sistible desire to try his pronunciation out

on her.

He glanced up the path. No one was

He glanced up the path. No one was coming. All the mahouts were still wreatling with the buils.

"Bizzilla, Bantry!" said he quickly, fairly whistling his z's.

His heart leaped as Bantry opened her eyes. But she, seeing only a boy and imagining, perhaps, that she had dreamed the words, sighed deeply and closed her eyes again. eyes again.

"Bizzilla, Bantry!" he repeated louder. This time the effect was startling. Bantry coiled her trunk underneath her mouth and advanced a step. Foster fell back three steps. She advanced three. More than this, every elephant in the line followed suit, executing a left-oblique as precisely as a rank of soldiers.

Dismayed but not frightened, and fearing only the circus man's wrath, Foster turned and walked rapidly away, expecting to close the incident. To his astonishment the elephants followed. Still cool, for he had no doubt of his ability to outfoot the clumsy beasts, if it came to that, he swung into a trot. Bantry did likewise. He let out a notch, but at the next street Bantry was padding along close behind him, and behind her was a line of ghostly forms, whose huge, columnar legs swung with incredible silence and swiftness.

Terror now winged his feet. He ran as he had never run before, not even on that memorable Halloween night when he had thrown a pumpkin against Crazy Sackett's door, and Crazy Sackett had suddenly risen up from behind a lilac bush with a bindgeon in his hand; or when Brockley's bull chased him across a pasture lot. Yet the stendy pluff-p'uff of Bantry's feet, like some one thumping a leather cushion with a feather duster, diminished not one whit in his straining ears.

He turned the corner, thinking his unwieldy pursuers might skid across the street weetry purious might said across the street and come to grief against a row of shade trees. But they one and all, down to the baby elephant in the extreme rear, made a beautiful turn; and it was now evident to him that Bantry, overlooking his resem-blance to the sultan's son, was bent on his

destruction.

The first refuge that occurred to him was home. But the awful image of those ten mountains of flesh being kurted against the parsonage, a frame building at that, quickly changed his mind. The same consideration deterred him from seeking safety in any other building, for he hadn't a doubt that the elephants would plow like a cyclone through even the First National Bank, which was built of stone und iron.

By this time he was flying down Malo Street. It had never seemed so wide ur so long. Lincoln's status in front of the courthouse looked a mile away, though only two blocks. A man the size of that statue, it flashed over him, could save him. But no man of any size was in sight, nor had be seen one since the beginning of his desperate

In the middle of the next block, however, he spied Hank Lovejay, the night watch-man, whom he recognized by his lantern. He knew that Hank carried a revolver, a huge one with a burrel like a gas-pipe, which, aimed at Hantry's forehead, would certainly close her mad career. Indeed, he remem-bered gransfully of hearing Hank speak of his weapon as an "elephant gan." Brenth was at too high a premium for him to call out fer help, but he swerved

him to call out fer help, but he swerved toward the aldewalk, relying upon Hank to perceive the necessities of his case. Hank, though a round-shouldered man, straightened like a ramrod, letting his lan-ters fall with a crash. But, also instead of drawing his elephant gun, he suddenly stooped, lifted a grating in the sidewalk and dove into the cellar beneath.

Foster darted into an alley. It was nar-row and paved with publications, which were usually damp and slippery—a good thing for an elephant to break a leg on. And if Hantry went down she would blockade the pussage against the others. But she did not go down; so halfway through the block. Foster wheeled into an intersecting alley, confident that this sharp turn, flanked with the corners of brick buildings, would prove

the undering of his foe.

But no crash of bricks, no thud of tenw of flesh, followed; nothing but the dreadful, regular pluff-pluff of all those pairs of cushloned feet, which he expected to hear until the day of his death. That, he feared, was not far off, either, for his heart was pound-ing fearfully and his lungs felt on fire. Then in a flash the way of deliverance

was made plain, which was to return to the yards and throw himself upon the mercy of the only men who could choke off the ele-phants. They would probably thrash him, to be sure, but their wrath was preferable to Bantry's.

He turned into Main Street again. His speed was falling off, and every mement he expected Bantry's anaky trunk to encircle his waist with an accompaniment of break-ing bones. But he reached the willows again, and with renewed hope mustered all

his strength for a final spurt.

Then he stuhbed his toe upon a root and fell! The end seemed at band. But Bus-try, squatting like a dog and throwing a shower of dirt as she plowed along on wide spread, stiffened legs, came to a stop with her great body looming above him like a balloon, and instead of trampling him to death, she reached between her forelegs with her trunk, picked him up and gently set him on his feet. Then she and all the others backed into line again, just as Poster had found them.

The next moment Mulcanda Das dropped out of a near-by tree, chattering like a monkey. Foster, suspecting that he was

swearing in Bengalese, made ready for a second flight. But the mahout flung him-self upon the ground and kissed the boy's "Little sahih! feet, murmuring: Little prince!"

"No elephunt will burt me," said Foster, simply because he was too astonished to think of anything else. He reached his room undetected; but

of course such an amuzing adventure could not be kept, even at the risk of punishment, and so he told his mother the rext morning. She grew fairly pale and kissed him. "What did Mukunda mean?" he asked.

She explained the doctrine of the trans-migration of souls, and said: "I suppose be thought the soul of the sultan's son had been reincarnated in you."

"Well, how do you know it ain't?" he demanded suddenly.

She started. "Why-1-1-it isn't necording to our religion."

She started. "Why—I—I—it isn't necording to our religion."

"But how do you know his religion ain't as good as ours!"

She let his "ain'ts" go unrebuked for coor. "My dear," said she, drawing him closer and smoothing his bronzy hair, "those are questions which even the wisset can't answer. Now we'll go and make a clean breast to father. I fear he will punish you."

"I don't care if he does," declared Foster boldly. "It was worth a whipping. And, mother, no man can ever make me cry

mother, no man can ever make me cry again when those elephunts couldn't."

Daylight After Dark

DAYLIGHT eyeglasses are now being perfected to enable the wearer to see the same color values by gas or electric light as those given by daylight. With such glasses an artist could continue painting after dusk, using artificial light entirely. Color matching is very unsatisfactory under artificial light, as every woman knows; but complete success in the development of these glasses will mean that stores will have such glasses for customers to wear when it is necessary to judge colors by gas or electric lamps.

From the cigar sorter to the diamond erchant, daylight color values are essential to a great many occupations. Scores of devices to obtain artificial daylight have been invented, many with much success, because there is a real demand in business for daylight. Almost all are designed to produce an artificial light as near like day light as possible, and then make the light more perfect by putting screens in front of the lamps to absorb from the light the color values not found in daylight.

So much light is absorbed by the screens, however, that the lighting value is reduced; consequently such artificial daylight outlits are usually inclosed in a cabinet or have only a limited amount of light—just enough for matching colors-and are not used for lighting a store, for instance. Recently some lighting equipments used in stores have been brought fairly close to daylight, but they hardly solve fully the colormatching problem.

The purpose of the daylight glasses is to rmit the use of ordinary gas or electric lighting and still give an opportunity for color matching. Instead of carrying pieces of goods to a window, the woman customer need only slip on the glasses to judge the colors. The method by which the glasses

do the work is the same as that of the arti-ficial daylight cabinets. The glasses have color acreens to absorb the light rays that are not found in daylight.

The fart that the screens are between the colors and the eyes, instead of between the light source and the colors, does not make

much difference. It is only necessary in both instances to have the light source include the light rays that make color visible in daylight. Mercury-vapor lamps are deficient in red rays, causing the green complexion effects that are so noticeable; so, with these glasses, it would not be possible to do the color matching under a mercury-vapor lamp.

These glasses have been developed in the research laboratories of an American lighting company. The examples they have produced use gelatin films to absorb surplus rays; but the effort has been made to manufacture glass that shall have the right absorbing qualities. These efforts have recently been announced to be suc-cessful; so, before long, artificial daylight glasses will probably be marketed.

Well Built Walls and Ceilings

Sometime you expect to build or remodel. Then you ought to know about BEAVER BOARD and its 41 advantages over lath and plaster for buildings of every kind.

BEAVER BOARD is a purewood-fibre product-light, strong, clean and wholesome.

It isn't a mere covering for wallsit's the whole wall, except the timbers to which it is nailed.

BEAVER BOARD is quickly put up, winter or summer. It resists the passage of heat, cold, sound, and suits new and remodeled buildings of every kind.

Visitors to Buffalo and Niagara Falls are cordially invited to visit our Bullalo offices and get a first-hand acquaintance with BEAVER BOARD quality, beauty and cooperative service.

BEAVER BOARD is sold by 8000 builders' supply, lumber and hardware dealers, in sizes to meet all your needs.

Write for free booklet "BEAVER BOARD and its Uses," and painted sample. Also for details of the free service of our Department of Design and Decoration and our Builders' Service Department.

Heavy Roads

Beulevards

Every-day tests of your lubrication. Try them on nearby roads.

How soon does incorrect lubrication show up?

Often in one short run.

Consider three types of roads:

Hills. You come to a sharp grade. With one lubricant you must drop to a lower speed. With another lubricant you can climb the hill easily.

Why?

Because the first lubricant is wrong in body. Compression and explosion escape past the piston rings. Power is wasted. If the oil is low in quality, you must also overcome excessive friction.

Only oil correct in body and quality will give you full power for the hills,

Heavy Roads. The conditions are very similar to those in hill climbing.

Sand, mud or "rough going" brings heavy strains to the motor.

Where an oil correct in body and quality carries the car along easily, an incorrect oil brings power-waste and excessive friction-drag. Overbeating is apt to follow.

Boulevards. Along level roads loss of power is not so often noticed.

But, even on the smoothest roads, only the correct grade of oil will give you full power and full mileage from your gasoline.

To compare the efficiency of any oil with that of Gargoyle Mobiloil, make this test:

Test, Select a steep hill. See how far you can go up on high gear with the former oil. Then clean out your motor with kerosene. Fill your oiling system with the correct grade of Gargoyle Mobiloils. Be sure that operating conditions in both cases are identical. Use the same test. See how much farther you go up the hill.

Use the oil specified for your car in our Lubricating Chart, printed in part on the right. A copy of our complete Chart will be sent any motorist on request.

On request we will also mail a pamplder on the Construction, Operation and Lubri-cation of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

It is sufest to buy Gargoyle Mobilolis in original barrels, half-barrels and scaled five and one gallon care. See that the red Gargoyle, our mark of manufacture, is on the container:

The various grades of Garpoyle Mubilistic purified to remove lice outlook are.

DOMESTIC BRANCHES: Detroit Philadelphia

The Fakers

(Continued from Page 21)

deportment and who would stay as long as they possibly could. Every fashionable woman she chanced to meet gave Mrs. Lester added capital for her future enterprises, for she was extraordinarily skillful in weaving into her conversation, in a most impresive manner, accounts of her intimacies

and of her previous entertaining.

Harassed by a small income she was a marvel at getting the worth of her money.

She knew where the hest could be obtained for the least price. Her clothes were al-ways in the latest mode, but the few close women friends she had were at a loss to understand how she did it. Her secret was her own skill at dressmaking and her vast adaptability to the mode of the moment. She never threw anything away. Every gown she had was in her possession for years. She had one trunk that was filled with old waists, old skirts, pieces of lace and all the ephemera of woman's attire. From these, with a little new added material, she could supervise her sewing-woman's efforts until she was gowned to the minute and for every occasion.

Her economies in dress, in lingerie, in all her adorsments were the marvel of those few who knew of her private affairs; and only a few knew, for she maintained her pose of wealth and social standing and adequate resources even to her most intimate

Her hats were the envy of her acquaint-ences. She was a milliner as well as a dress-maker, and she could browbeat the haughty proprietor of a fashionable hatshop into taking her materials and using them with a latest Paris model hat body until she ap-peared in a creation that cost her little and looked as if it were direct from France. Both in Europe and in this country she had coade a study of the shops. She knew the best place and the cheapest to get gloves, shoes, stockings, even down to batpins and bairpins. She had cheap, but effective, scametresses and milliners in every capital in Europe and in New York. So, too, with every article of attire. Always she was per-fectly appointed, even to the latest mode in jewelry.

She never by any chance were real jew-elry, except a diamond ring or two, but her imitation pearls and her imitation ornaments of every kind were of the very best and were bargained for and secured at the lowest outlay.

She were plumes on her hats when plumes were the Isshion, that looked as if they were just imported, though they had been in her millinery reserve stock for years. She could make over a fancy waist half a dozen times, and each time it seemed to have come. fresh from a Fifth Avenue shop. She brought one or two new gowns each year and perhaps one new hat, and each investment was the subject of worry and trouble for the tailor or dressmaker or the milliner for days, for she knew what she wanted, made every penny of her money count, and had a manner that was irresistible of bluffing the tradespeople into her way of think-ing and into carrying out her desires. She had had gowns and hats from famous Paris houses, and she had carefully preserved the name labels from these and sewed them time and again into her American-made ciethes. She never had a gown or hat by any chance that did not have a Paris label

She was tall, slender, with an excellent figure and masses of black hair. Her teeth were even and good and her hair of sufficient quantity to obviate the necessity for artificial amplification, even at the time when puffs were in style. Her complexion was pale but clear, and her skill with rouge amounted to wizardry. Her only object in life, aside from being entertained at that the world not be object to see that the world not be object. so that she would not be obliged to spend money for board, was to enhance her attractiveness in order that she might gain greater admiration. She was entirely selfcentered, and cared nothing for men except as she might use them.

She had the air of one born to the purple and dislained any but the most select society. She was affected in her conversation, her gestures, her poses and her walk. She had a smattering of many accomplish-ments, but was accomplished in none, and was clever enough to make everybody believe she was accomplished in all. She faked her familiarity with the foreign languages, her knowledge of art, music, books Petatorys | and fashionable sport and society. She read book reviews so she might talk intell-gently of books to bookish people, but she never read a book or a poem through. No subject of ordinary conversation but was familiar to her, to hear her tell it, and she even went so far as to dip into politics a bit in order to make herself agreeable to men. She knew the patter of baseball and golf and pelo and hunting, and, when away from the ball park or the finks or the hun-ing field, was expert in each. She could dance wonderfully well, and took up each of the latest dancing crazes as it came

along.

She had made berself a family crest. She had made berself a family crest, skillfully combining the good parts of half a dozen crests she had copied from books on beraldry in a public library, and insisted on putting "de Mountfort" into her name after she was married, and, after her first visit to Paris, had changed the commouplace "Alice" to "Alys," which, as she told everybody, was pronounced "Alicece," When she played cards she talked constantly of her European triumphs and commented on each hand with snatches of French or Italian or German. She had visited in Russia, having been invited to St. Petersburg by a woman she met in Paris, and on special occasions she used a little Russian—all she knew, but more that anybody else knew.

anybody else knew. She regarded her husband as a harmies adjunct to her enterprises, and was deco-rously sorry when he died, taking con-solation in the thought that she would look extremely well in mourning. She draped herself in black, but it was black fashioned into the most median creations, and her affectation of public woe was so well done as to stamp her as an actress of extraor-dinary ability. At first she put on the desp-est black, unrelieved in any particular, and used a pencil to accentuate the circles about her eyes and a powder to increase the paller of her cheeks, in order to give the impre-sion of deep, pathetic and hopeless grid Presently, however, her mourning began to take on various little worldly quirks, and to take on various little worldly quirks, not was lightened here and there with white and lavender to relieve it. However, she was of the complexion and hair and eyes to look particularly well in black, and being reconomical perforce concluded to make black the basis of her robing, inasmuch as when a woman gets her clothes organized for black or any other predominating colorit is much cheaper to continue reasonably along those color lines.

Mrs. Lenter knew, too, that there is

Mrs. Lenter knew, too, that there is something alluring in Inshionable weeks worn by a widow when the widow is over her first grief and is observing things—and men—out of the corners of her eyes. In explanation of her continued use of black she frequently and pathetically told people that: "Black is such a protection to a woman alone in the world." She was a calm, collected and exceedingly attractive

Her husband left her twenty thousand dollars life insurance. She threw herself or his friends and demanded that they invest this for her or tell her how to get enough income from it; and they came to her rescue and doubled the sum for her in one way or another. Her capital was carefully put into good dividend-paying stocks and gilt-edged bonds, and in the processhe learned superficially enough financial phrases to enable her to talk understandingly of finance to areaseum, which the ingly of finance to amateurs, which the people she met usually were. She had as income of about twenty-five hundred dollars

After the death of her husband she had returned to Washington, because she considered Washington an admirable base for her operations, which were to consist of living as comfortably and fashionably as possible, by the aid of her friends and her talent for visiting, with as little expendture of her own money as she could may age. She went to Mrs. Lake's boarding house because that was a high-class place of its kind, much better for her purposes than one of the smaller hotels, which were the only hotels within reach of her purse. She had it in mind to make another marriage some time, a marriage that would provide her with money to a reasonable degree, and with the position necessary to enable ber to take the place she coveted in official society. To this end she assayed every eligible man she met coldly and shrewdly, considering all men who were

unattached as prospects and investigating them with her two standards in mindmoney and position.

HICKS was much disappointed because Mrs. Lester did not come down to breakfast next morning, and hurried back that evening to meet her. Soon after six o'clock she made another effective descent

o'dock she made another effective descent of the staircase in another effective gown. "I should think," aniffed a straight-up-and-down wife of a representative, "that she would get tired of those theatrical en-trances and exits of hers, but apparently the never does, even if we do." "My dear Mrs. Perkins," protested the stonished Hicks, "how can you talk like hat? She is the most natural and unaf-ected woman I ever met."

ected woman I ever met."
"Then," commented Mrs. Perkins bitegly, "you haven't met many women. I uppose it impresses you because you are oung and fresh from the West, but I for

ne am tired of her continual pose. Peraps, though"—and she concentrated a
aleful gaze on Hicks—"she is putting on
atra frills for your benefit. She has been a
idow long enough now, I fancy."
Hicks affected greatindignation, although
te thought made him glow within. "Precaterous!" he exclaimed. "Her grief is nore, I am sure, and she has no idea of

nything of the kind."
"Have you?" asked Mrs. Perkins, look-ig squarely at Hicks.
"Not in the least," he hastened to assure

"I am simply attracted by her culture id churm.

"Well, then, take the advice of another oman who knows something about her x, and do not be deluded too much by that

"Why, the idea!" protested Hicks mely; but that was the only retort he uld think of at the moment. His mind d his eyes were on Mrs. Lester.

d his eyes were on Mrs. Lester. He discoursed at length to Mrs. Lester at night, and asked her whether she caldn't like to go to the theater with him. "I'm sorry," she said sweetly, "but I am il in mourning, you know, and never go t publicly. Indeed, I remain in my room st of the time, only occasionally visiting a most intimate friends here." Thereon she proceeded to tell Hicks, in what med a most casual manner, that those ands were the real leaders of Washington sety and persons of influence and dissety and persons of influence and dis-

"It wouldn't burt any to go to the thea-would it?" urged Hicks, thinking he tht have her to himself for a few hours ay from the others in the boarding house. "Oh, la la, I suppose not; but don't you ak it would be much cozier to stay here nk it would be much cozier to stay here I that than to go to a stuffy theater and a mediocre play? Our American stage o much inferior to the English stage, it you think? And as for the stage in is—ah, the stage in Paris!" She made ther gesture and lifted her eyes ecstatly. "There is no comparison. Such the interpretation of the emotions! I re the stage of Paris."

I shouldn't want a lady I know to see tof the French plays I've heard about," Hicks virtuously.

Hicks virtuously.

he laughed a tinkling laugh. "Oh." exclaimed, "you Puritans, you Amer-Puritans! Why, you must not impute id motives to the French stage. It is exemplification of art, of life—the wit life of the dear French people." te asked Hicks if he had ever been to Counédie Française or to the Otion.

Comedie Française, or to the Odéon, told of the gruesome plays of the Grand mol. Hicks, much abashed, confessed ad never been abroad, but hastened to he intended to make a tour soon, and d the first opening be had to change subject to himself. Hicks was thorly at home when talking about himand was lavish with his commendation s talents, his future, discoursing elo-tly on the political honors that were

tably in store for him. shall win," he declaimed, "for the le are mighty and must prevail." cs. Lester listened with a rather dis-

tht air. Once or twice she yawned iy. Hicks did not notice the yawns, cept along with his self-praise. ce when he stopped for breath Mrs. r. assuming a most interested air, was belied by a twinkle in her eyes, with a pretty seriousness: "Oh, Mr. with a pretty seriousness: "Oh, Mr. , I love to bear you talk. You are so st, so sincere, and earnestness and ity are so rare in these days."

She sighed, as if this lack of earnestness

and sincerity were an added personal woe.

Whereupon the fatuous Hicks plunged into another oration, which had his own earnestness and sincerity for a theme. "I think I may say," he began pompously, "that

Mrs. Lester had been looking for u chance to escape. This conceited young man was beginning to bore her. She saw Mrs. Lake, and excusing herself on the pretext that there was a matter she must talk over with her landlady, she wished him good-night.

She held out her hand impulsively, as it seemed to Hicks, and he grasped it and pressed it ever so little. She quickly withdrew her hand and went to join Mrs. Lake.

Hicks went out and took a walk, recall-ing her every word and look. Certainly she was the most attractive woman he had ever met, and a future spent in her company rose before his mind. He went to bed in a

happy haze.

Mrs. Lester was not at dinner next day, and Hicks tried to learn why, but with no success. Mrs. Lake said she had gone out to disc. He ate his meal in moody silence and wandered about the parlors and hall, wondering whereshe was and bemoaning the said fate that kept him from seeing her. Mrs. Perkins was sitting by the fire, and Hicks in desperation sat down beside her.

Mrs. Perkins had little use for Mrs. Lester. She had repeatedly been snubbed by that lady when she had endeavored to make some discoveries about Mrs. Lester's per-sonal affairs. Hicks ventured a few com-monplaces. Mrs. Perkins, knowing what was on his mind, waited for her opening. It came when Hicks, in what he deemed was a most unconcerned manner, said: "1. didn't see Mrs. Lester at dinner to-night."

Mrs. Perkins' eyes gleamed malevo-leatly. "No." she replied, "I suppose she

was out dining with some of her high so-ciety friends, leaders of the enclusive set." "She has many friends among the most influential people, she tells me," observed

"That's what she tells everybody," snapped Mrs. Perkins; "but you mustn't believe all you hear, especially when a widow who is trying to keep up appearances is doing the telling."

Hicks paid little attention to what Mrs. Perkim said. He was thinking of Mrs. Laster. After a moment's silence he saked: How old do you suppose she is?"

"That is a matter of conjecture," Mrs.
Perkins answered. "Judging from the
amount of European traveling she has done,
and the length of time she has lived in the
rastles of the nobility, she must be seventy.
Leoking at her under the shaded lights of this room she seems about thirty. If you rould get a glimpse of her in the morning before she is rigged up she might seem older than that. She says she is tweety-six and was married when she was seventeen."
I should say," ventured Hirks, "that

twenty-six or twenty-seven is about right." Mrs. Perkins changed her attitude.

"Sonny," she said not unkindly, "you'd better run right back home. You may do something foolish if you stay here."

She rose and left Hicks staring into the fire. He arknowledged to himself that he

was strongly awayed by Mrs. Lester, and hoped she liked him; but up to this time it had not been brought home to him that he might, under the influence of his stirred emotions, go further than he expected to. He had no intention of getting married. even if we remote a contingency arese as Mrs. Lester's consent to marry him, which had not occurred to him concretely, albeit there had been vague notious on the sub-ject in his mind. He was entirely interested in the career he intended to make for himself, and he pundered the things Mrs. Perkins had said.

Hicks was not a woman's man. He was engrossed with himself and his ambitions, and up to this time had not been impressed particularly with any woman, although some women had appealed to him because of their beauty and attractiveness.

Pshaw!" he said as he rose to go to his room; "what's the use of my getting ex-cited about this woman? It'll be ten years before I want to get married, and probably I'll never see her again after I go home."

But he couldn't dismiss her from his mind, and the fetching pictures she had presented were engraved on his memory

On the advice of Senator Paxton, Hicks. devoted much of his time to making himself known to the Democratic leaders in the Senate and House. He called on all the big

This Man Keeps the "Gas" in Gasolene and "Velvet" in Oil

S. F. Bowser, the active head of the great S. F. Bowser concern of Fort Wayne, gave the world the first self-measuring oil pump. Today this concern makes over five hundred different oil handling devices that solve the problem of oil storage, safety, utility, economy.

These range from efficiency equipment for the small private garage, to Bowser Systems for the country's largest or smallest Factories and Power Plants.

See the following application of Bowser equipment. Consider the saving in money-in time-in space-in oil-the saving of life and limb-all the results of this great Bowser idea that has so revolutionized the handling of oils of all kinds. Do you come within one of these classifications?

> Public, Private and Commercial Garages, Foundries, Power Plants, Printing Establishments, Stores, Paint and Oil Trades, Factories, Railroads, Dry Cleaners Establishments, etc., etc.

Safe Oil Storage Systems

In Garages

In the garage a Bowser Out-fit keeps the gasalers out of the danger zone. Keeps it full-powered. Climatic changes can't reach it underground. Its temperature is about constant. Can't vaporize or weaken. The as a pumped and piped any distance to the garage-right into the muchine chan full budied gasolone with every original onner of "punch." Auto-statically measured. No loss, no waste, no spillage, no theft.

Always beyond the reach of explosion,
And the cost is small. All sizes. Easily and economically installed. A Bowser System saves its own cost in oil, efficiency, convenience.

Also portable units for the Public Garage—both gasolene

and lubricating oils. Various sines. Each a money saver,

Garage Equipment

In Factories

From simple Departmental units to Individual and Centralized Oil Filtering and Circulating Systems. Save the oil. Save men's time. Save the machinery. Save your space—your money. Measure oil. Keep is clean. Make every man automatically careful and responsible.

In Stores

Beweer Systems keep gasolene, kero-scoe, paint oils, varnishes, etc., out of sight yet always handy. No oil con-tanunated merchandise. No leaving the store to log in oil. No lost profits through lost oil. No fire hazard. Just convenience, comfort, salety. Everything from the anuall Bowser equipment for the little corner store to the big departmental.

The Bowser System For You

Whether you have a garage, a store or a factory there is just the Bowser oil-and-moneysuring equipment for you. Learn about it-of the added efficiency—the reduced oil expense. The way to learn about it is simply to mark and mail the attached coupon. No cost, No obligation. If you have an oil problem, However has undoubtedly already solved it. Thirty years "Od problem" experience is yours for the asking. Send the coupon today.

men, and was twice invited to luncheon in the Senate restaurant by Democratic set-ators to whom Senator Paxton had introduced him. He had met most of the hig Democrats by the time he was ready to go Paxton congratulated him on his ability for making friends.

"You are getting on, Tommie," said the senator to him, when Hicks came in to say good-by. "Hostetter was talking to me about you the other day. He said you seem to be a most intelligent young Demo-erat, and well versed in the principles of the party. Grantley mentioned you too." Hicks winced. He had been in the com-pany of Senator Hostetter for an bour, and

that garrulous statesman had talked con-tinuously and ramblingly about his own scheme for currency reform, which he assured Hicks was a paraces, and the only one proposed, for the relief of the financial situation. Senator Grantley's conversation had consisted of three stacrato inquiries of

"What did you say your name is? Hicks? Ah, yes, and where do you live? Rextown? Very good. How are Democratic prospects out there?"

Bicks tried to answer, but the senstor was busy with a best of crackers and milk and did not listen, and after a few spoonfuls had been hoisted into his capacious maw, looked up and asked exactly the same things over again, and without waiting for further reply dived into the crackers and milk once more. He did not hear a word Hicks mid. Still, Hicks reflected, unless Senator Paxton was joking him, it was something to have these distinguished Democrats remember him at all.

remember him at all.
"I gained much inspiration from my
conversation with those statesmen," he observed.

served.

Senator Paxian looked at him kwenty,
"Oh, did you?" be asked. "Well, there
is where you have something on the rest
of us, who achieve nothing but a sense of
utter weariness when they talk. However,
that is a good sign. You take it all seriously,
or say you do, which smounts to the same
thing; for if you keep on saying you do you
will eventually. Remain in that serious
frame of mind toward your politics. You
cannot be a successful protagonist for the
new freedom of the people unless you are
continuously as intense and consecrated as new freedom of the people unless you are continuously as intense and consecrated as a ben that has been berenved of her eggs and is sitting on a couple of doorknobs. Good-by and good luck to you. Keep me informed. I'm always at your service." Mrs. Lester spent the week-and with some friends and Hicks delayed his de-cepture for a day to see her again before he

parture for a day to see her again before he left. He had talked to her as frequently as she allowed him to and, though he held his feelings in check, he was still under the speil of her many inscinutions. He had in-quired of Mrs. Lake about her age, being upperry because of the instrustions of Mrs. Perkins that she was not so young as she appeared, and Mrs. Lake had assured him Mrs. Lenter was not a day over twenty-

On the night of her return from her week-end visit, Hicks, seated by her in the par-ior, told her he was leaving the following

"Are you?" she asked, with an assump-tion of great interest. "Oh, I'm so sorry, Mr. Hicks. I have enjoyed your company

Hicks blushed. "I am glad to have been an instrument for giving you even the slightest happiness," he declaimed. She devoted herself to him for an hour,

arging him to re-count his ambitions and his prospects, said a low skillful things about herself, including the dropping of a hint or two of her financial standing, and, as she gave him her hand at ten o clock, besought him in a most ingenuous manner not to dismiss her entirely from his mind when he was out in Rextown fighting the fight of the people.
"Forget you!" repeated Hicks with as

much sentiment in his voice as he deemed advisable. "Forget you? Why, Mrs. Lester, ory shall remain with me

and shall be my inspiration."

She smiled radiantly at him and ran up the stairs, turning when half way to the top

the stairs, turning when neil way to the top
to wave a pretty hand at him and say
softly: "And wiedersoles!"
"I suppose she is worth quite a lot of
money." Hicks observed to Mrs. Lake at
lessklust next marriag.
"I suppose so," Mrs. Lake replied in an

extremely non-committal manner.

Hicks took a train at mon. That after-mon Mrs. Lester, stopping in the hallway

to say a few words to Mrs. Lake, brough

up the subject of Hicks.
"Has Mr. Hicks gone?" she asked.

"Yes, he left at noon."
"A nice young man," she thought, as she went down the steps leading to the street.
"Perhaps he will do some of the things he says he will. I'll keep track of him."

HICKS stopped at Salestown to see his mother, and spent two boastful days among his boyhood friends, telling them of his success in Rextown. He wrote an article about himself for the Beacon, which Editor Grandison promised to publish, and which caused Colonel Seth Howard to grow numbe in the face when he read it become purple in the face when he read it, because of the appreciative way in which Hids re-ferred to himself as one of the leaders of the

of the appreciative way in which Hicks referred to himself as one of the leaders of the
Rextown bar and prominent in politics there.

Hicks took stock of himself on the train
for Rextown, after his mother had hade him
a fond and tearful farewell. It would be
two years in April since he first reached
Rextown. He had made in fees for collections and in various young-lawyer way
about two thousand dollars, and still had
some of his original capital in the First
National Bank. He had acquired many
acquaintances and some friends. He had
established himself as a young man of good
character, was regular in his attendance at
church, and felt sure Rollins liked him.

With Gudger he had fought the Rollins
Barkiss case through a seemingly endless
acries of negotiations and had finally forcel
a compromise with Chittlings, because of
Gudger's superior legal abilities, for nice
thousand dollars. This sum Hicks had poid
to Rallins, and for his services Rollins gave
him four hundred dollars, in addition to
his retainer of a hundred dollars. Otherwise Hicks had not advanced much in the
law, but he never expected to do much at
his profession.

Chittlings was friendly. Hicks found him

his profession.

Chittlings was friendly. Hicks found him to be a man of considerable rough ability. He was noisy, even blatant, and he had note the was noisy, even blatant, and he had note the was noisy. He was noisy, even blatant, and he had non-too many scruples, but he made friends and kept them. He was a good mixer, dabiled somewhat in politics, was always ready to buy a drink or a cigar, entertained; good deal at the Hotel Metropolis, be renged to the clubs, and was the Rextowr type of a good fellow. He was a Repub-lican, Hicks heard Chittlings had under ground connections with Ross, the loca boas, and with the corporations, and the he helped "put over" things in the board of aldernoen that were wanted by the or porations. Chittlings apparently had or ambition for office. He was looking to money, and he had an income of five or si-thousand dollars a year, which was excelthousand dollars a year, which was excellent for a man in his position in Rextowns

that time.

"Hello, Hicks," said Chittlings one day when they mot at the Hotel Metropole "how's every little thing?"

"If you mean my health, I am well Hicks answered. "If you mean my lead ness, it is satisfactory."

"Haven't seen you in court much."

Tommle squirmed at this, "No," he replied, "I have been much taken wit outside matters. However, I have som important cases in preparation."

"Glad to hear it," said Chittlings hear ity. "Come and have a drink. Oh, I for got, you don't drink. Drop in and see a some day soon. I want to have a talk wit you. So long."

Two days later Hicks had nothing to it.

you. So long."
Two days later Hicks had nothing to di
He had been his hand-shaking rounds in written every letter there was an excuse? writing, and he went down to Chitting

Chittlings was there. "Howdy, Hick, its shouted, after Tommie had sent in a card. "Sit down and make yourself at bom Still busy with those important cases, reckon."
"Yes," Tommie replied, "they are on

pying the most of my attention.

Chittlings lighted a cigar with unness sary care, Hicks thought, as he watched a operation. When the cigar was burn to his satisfaction, Chittlings turned in chair, looked hard at Hicks and said course, Hicks, I know you haven't a rai

of any consequence in your office."

Hicks flushed. He clenched his fiss 15

jumped to his feet.
"Do you mean to say I am a liar? asked excitedly. "No, no," soothed Chittlings, "sit or and be calm. I don't mean to say you?"

liar, but I do mean to say you are a the (Continued on Page 41)

nd a presty darn good one, too, if anybody sould ask you."

"I don't understand," protested Hicks,
"Oh, yes, you do; sit down and cut out
te heroics. You know you haven't a case
orth while in your office—I know you
rren't and you know I know it."
"But

"But nothing! That's the fact. Now, sen, I've been watching you. Sit down; sere's nothing for you to get sore about, ve been watching you, and I have a proposition to make to you."
"What sort of a proposition?"
"A proposition to come into my office."
"On what basis?"
"As a partner with a small interest."

As a partner with a small interest." "How much of an interest?"

"That's a matter for future considera-n. How does the main plot strike you?" "I fail to see any advantage to myself in

"I fail to see any advantage to myself in the an arrangement."

"You do, do you? Well, listen to me de I'll put you wise as to several advantes. In the first place, you've got more than an insurance agent and you've is more self-confidence than a stock-mpany actor. You are moving round this vn and getting a good line of acquaintees, and you are playing an end of the ne that isn't in my organization."

"What do you mean?"

"I mean you have tied up with the

'I mean you have tied up with the irch people and I have taken the other to fit; you have joined the Democrats I I am a Republican; you are a good-ernment boy and I am in favor of bad ernment if there is anything in it for; you are on the reform lay and I am hithe gang; you are well calculated to applement and supplement the activities I. K. Chittlings, which is moved, and I.

saying, you are not much of a lawyer never will be. Now I ain't such a derful lawyer myself. But that doesn't ter any more with me than it does with. What I see in you is business-getting ity. I think with development you can good business-getter. You know how to a friends with people and keep friendly them, harring your conceit, for which

them, barring your conceit, for which ve you the palm over any youngster I met; and business is what this insti-

met; and business is what this instin needs."
But," said Hicks, "if neither of us is a
er, as you say," and he sneered in his
atyle, "what good will business be to
ven if I can get it?"
bittlings laughed uproariously.
My boy," he said, "there are many
gs you must learn, notwithstanding
firm idea you know it all. The sucof a law firm from a financial standiof a law firm, from a financial stand-t, doesn't depend on the amount of t knows. It depends on the amount of ousiness it can get. I can hire lawyers he platoon. I can get a dozen right in fown who know more law than you and ar will know, and get them for small too. They know the law, but they n't the faculty for getting the business, can't cash in on their knowledge. I levelop you into a business getter, and a show you how to hire lawyers, hire by the week for wages. There was time, for example, when you hired fer. Do you get me?" merely engaged Mr. Gudger because a busy with other affairs," Hicks pro-

ittlings laughed again. "Sure," he "but you hired him, didn't you, and lidn't fool Gudger and you didn't fool Still, in that transaction you showed tain nerve and a certain horse-sense made me look you over. Now, then, ru want to come in?"

in his mind while Chittlings talked. ould see advantages, but he didn't

se to be eager. 'Il have to think about it," he replied. h, all right; there's no hurry. Let me nt this angle to you, though: You are mocrat and I am a Republican. You church and I don't. You are taking

the people's end of it, or will when you know how, and I am for the money sale. Now, then, if we joid hands under my futelage you will develop into an asset in this business and we can play both each against the middle and get the morey. Had that occurred to you?"

"I must consider what you say:"
"No hurry. There's a good opening here.
Chitdings & Hicks. Sounds pretty lar, eb.

Hicks thought seriously of the proposition made by Chittlings. His first and most forcible objection was that Chittlings intended to call the firm Chittilings & Hicks. He could not justify that. In his apinion, any coalition must be known as Hicks & Chittlings, not only because it was more exphonings, but became he was the Hicks concerned. If he could get round that he decided the arrangement might have adventages: Although it pulsed him to admit it to himself he know his knowledge of the law was an alight as to he of no our in the straight-out practice of that profeslings' claim that lawyers can be hired by the week. He felt confident he could got business, by aid of his various civie and church connections, as well as by his sucknown cultivation of mon with business to bestow, and he decided it would be easier for this business to be carried through in a lawyerthe manner if Chittlings were there to look

Most of all be was interested in the hint by Chittlings that, one being a Democrar and the other a Republican, they muld realize two ways. There was something about that that appealed to him strongly-He didn't bother to analyze his own yo of such a proceeding, and it is doubtful if he could have analyzed it had be wried. Intrinsically the proposition appealed to Hicks. It suited his temperatures. It fitted his quality of mind and conscious. It was on all fours with his habitual practice. the second see quick and easy returns. He knew Chirtlings as a forceful/ellow, who stood resonably well in the constantly. More potent than all also, he figured that with Chirtlings to guide him he could attain quieter and better results. For after majors deliberation by decided he would not a first later than a fact that the could be small as a first later deliberation by decided he would not a first later than a fact that the could be small as a first later than puin Chittings, procided, of course, the firm's name was Hicks & Chittings. He must exact that tribute to his own impor-

He tailed with Resilies about Chirolings.
"What sort of a chap is ho?" be asked.
"All right, professionally and personally, for all I know," Resilies told him, "But he's a Republican.

"What difference does that make so lar-as his professional manding goes?" inquired

Hicks.
"None, Largonee" Rullins and: "not a bit. I recker, with the general public. But I bill you, Horks, there never was a Republican I would trust as for as I can throw a built by the tail. There's some thing in that treatmentate politics of their that makes me conjunious of the whole hit

and caboodle of them."
Histor jaughed. "Oh, Mr. Kollies," be

Hicks laughed. "Oh. Mr. Reillim," heraid, "Hear you are parting it too arrongly."

Not a left," represented Reillima. "Not a list. I'm nor helding up all Democrats as paragrons of parity, you understand, but I'd take my chances with one in a business deal somer them I would with now of those transform Republicate.

Hicks said: "I am considering a propastion to go you parents his with Mr. Chittlings.

"You're what?" shouted Holling.
"I say be has offered me a very layorable. business arrangement to join with him in the associated practice of the law." But he's a Republicat

"Certainly he is, but I fail to see how a business association with him will afford

my Demostary."
Rollinz shoot his head sadly. "You un't brunk pitch without being deti the stands.

"Oh, Mr. Holling, is isn't so had as that."
and Hirls talked for twenty minutes,
showing how it would be a good thing for the Democrate to have him in close touch with a Republican who was in turn in tourb

with a Republican who was minure in tower with Republican affairs.

"Well," and Holling finally, "maybe it's all right, but I have my doubte."

Hicke say Chittlings several times and they falled a little of the plan. "No horry," said Chittlings. "Trimb it over excelully It will be a good thing for you."

HAVANA AMERICAN CO., N. V.

The New Regal is the Thoroughbred it Looks to Be

Has roomy comfort for five people; weighs less than 2400 pounds, fully equipped, with a motor that develops 39 h. p. on brake test

HE new Regal has that look of locomotive strength and higness and go-forwardness that you like in an automobile. It's a

from your own front porch this summer, standing in the shade out in front of your own house.

The design has European smartness. There is beauty in the whole car, and beauty in little things. For instance, you'll wonder at first how you put water into the radiator, and then you'll see how it cleans up the lines of the car to place the radiator-cap under the hood.

You'll like the absence of clutter on the sides, because the side lights have been eliminated. The front lights have been made immer, so they can be "turned down low" for city driving, or when the car is standing in the streets at night.

You have been waiting, perhaps, for a sensibly priced car that won't look overloaded. When you get a family of five into this new Regal, everybody looks comfortable—there's none of that crowded, jammed-together, afraidto-breathe appearance.

The rear seat is 48 inches wide, broad enough for three large persons wrapped up for a winter ride. The doors are almost two feet wide—23 inches.

There is no danger of torn garments in entering or leaving the car, even for stout people. In front, the driver can enter from either side with ease.

The front compartment has plenty of comfortable working room. A longlegged man can drive the Regal without getting his knees up like a bicycle rider. You sound the electric horn with a button in the middle of the steering wheel. One man in the rear seat of the Regal can put up the new-style top by himself, and he can adjust all the side curtains in a minute, without leaving the car.

The Regal Company has heretofore built both underslung and overhung types of cars. The new Regal is an overhung, and will be built in one chassis only two bodies—built by tens of thousands.

A lot of underslung advantages are retained in this new car. The road clearance is greater than that of many bigger overhung cars. But there's a special spring suspension that makes the center of gravity low.

This insures two things—exceptionally easy riding, and exceptional stability even under road conditions that might spell danger in an ordinary car.

The New Regal is from 300 to 500 the lighter than most cars around its price—because pressed steel and forgings have been used instead of castings wherever possible. This cuts down tire bills and gives the engine less dead load to carry.

A \$3,000,000 Company with Seven Years of Known Success

Ten acres of factory space devoted to the manufacture of one chassis at one price. Quick service to owners assured by a world-wide dealer organization

It's a joy the way the Regal takes long, hard hills. The motor has developed 39 horsepower on actual brake test—a big engine, considering the reduced weight of the car. The whole motor head can be removed—letting you into the heart of all the cylinders for cleaning and adjustment.

The electric starter acts directly on the flywheel. It has no intermediate gears, therefore cannot clash or burr when operating. The Regal starter has from 40 to 60 less parts than any starting device which is not direct in its action. This means, of course, much less possibility of trouble.

The Regal starter is included in the price—\$1085—built right in and sold right along with the car.

Regal brake drums are 12 inches almost big enough for a car twice the size of the Regal. That's because when you need brakes you're apt to need them badly—you want them reliable, powerful, smooth, and quick.

Young fellows, doctors, business men, will warm up to the Regal Roadster. It is long and swoopy, and looks ready for rough roads, or ready to run alongside the best of them on the boulevard. There

is a lid on the whole back end. Raise it, and you will find space enough to carry more than the contents of an average trunk.

There is a \$3,000,000 company behind this new Regal car—a factory with ten acres of floor space and a capacity for 20,000 cars a year. And there's a factory personnel that's imbued with the ideal of right workmanship, from F. W. Haines, the President and Chief of Design, down to the youngest shop apprentice.

The man who buys a Regal car, if he ever has any trouble, will be able to replace a part without fuss or delay. The Regal service department will come through promptly and pleasantly—without charge when it's our fault; with a reasonable charge when it's not.

We will send you a book about the two Regals, touring car and roadster, if you write us a card. It will show intimate pictures of many interesting features of the new Regal—and there will be good reading for anybody who ever rode in an automobile.

These new Regal models are now on display throughout the country, and you owe it to your general store of automobile knowledge to go and examine them closely.

What You Get

Direct Electric Starter Electric Lights, with "Dimmer" Electric Horn Simplified Electric Wiring Removable Motor Head Gasoline-Saver Valves Extra Size Brakes - 12 inches Hidden Radiator Cap Left-Side Drive Center Control 300 to 500 lbs. Less Weight 112-Inch Wheel Base Unusual Foreign Design 23-Inch Tonneau Doors 48-Inch Rear Seat Adjustable Wind Shield One-Man Top Inside Curtains

TO DEALERS: The Regal Company is bigger than ever, and we want new representatives in every town and county NOW. This advertisement is the first in a big advertising campaign, which will create a large demand for Regal cars this summer. We have prepared a big, illustrated circular which outlines our new sales plans and describes fully the two new \$1085 Regals—touring car and readster. If you think you can sell Regal cars, write us, regardless of where you are. On page 8 of our circular is an article of special interest: "How YOU Can Sell the New Regal."

DESIGNATION OF THE PROPERTY OF THE PERSON OF

SIM'S SUDDEN SOTNESS

Continued from Page 23

"Behave!" whispered Lisbeth, smiling up at him. Very handsome and gallant Sim was looking. Rowens, dancing in the same set, thought so. His face glowing with animation, his brown eyes brimming with the spirit of mirth and his stalwart figure set off admirably by store clothes that mirarulously happened to fit him, he showed to unusual advantage. "Behave" was positively severe applied to such a cavalier. Yet Lisbeth might, unreproved, have said almost anything to anybody, looking as she did. Pink was the color of her frock, rose pink and white. Her dark hair was a triumph of fluffing and curling. hair was a triumph of fluffing and curling. Greatly daring, she had given her face and neck a touch of powder, and her full lips seemed of a richer crimson than usual. Then she were her mother's cameo brouch in its red coral setting, and two rings, and altogether she was the prettiest thing imaginable. Sim at the moment was clearly in that opinion.

He took her hand and pressed it, and ahn audaciously returned the pressure as they separated in the circling figure of the dance. Once and twice Sim touched hot, moist pairs and clinging fingers, hardly con-scious of the contact, and then a sort of electric thrill shot through him as he lelt the quick, firm clasp of Rewena's hand.

fle stooped to her car as she passed.
"I hate to let loose of you," he whispered.

And be meant it.
"Promenade all!" shouted Prothero,
and Sim had his partner on his arm again.
"Toyour seats!" He led Lisbeth, breathless "To your scats!" He led Lisbeth, breathless and blooming, to one of the chairs arranged along the wall and seated bloom! beside her, "You got over your mad at me, didn't you, Lisbeth!" he said tenderly.

"Shuch!" answered Lisbeth with a languishing side glance. "I wasn't mad with you. Sim."

"You wouldn't keer if I come over Sunday afternoon, would you!" asked Sim, pursuing his advantage.

"I'd like for you to come," said Lisbeth. "Your tie's slippin' down, Sim. Lemme fix it for you. It's a turn'ble pretty tie."
Sim brased forward and she drew the knot of it tighter and spread the ends. "That's

of it tighter and spread the suds. "That's better," she approved, surveying the result with her head on one side.
"Don't quit," begged Sim. "Mabbe you could do better yet.

A voice thick with hardly suppressed rage interrupted. "I rection you'll have to get along the way it is." Ben Fuster had come up and was sesseling at them bero-

"Next dance is mine," pursued Foster, addressing Lisbeth. His little eyes rolled fercely from one to the other, but Sim's attention had been distracted to the appusite side of the room where Rowens was

seased, for the research alone.

"Take this yer chair," said Sim, and before Fester could realize his rival's obliging offer Sim was at Rowens with a queer little smile. "Enjoyin' yourse'!?"

Sim made no immediate answer. His

eyes were bright with admiration as he looked at her. What hair she had! Not fused up, not a particle; but, Lordy, what a heap of it and what color there was in it.' And the little freckles trunched at the bridge of her rose; and the blue glints in her eyes like the flashes from dewdrops in the morning suo; and the blackeyed Smansthat were pinned at her breast; and the broome slippers that peoped out from her skirts! Talk about your pictures! "Cat got your tongue?"

"Yes, I'm enjoyin' of myse'l," replied im, "Particular well right now. Tain't no wonder I hain't been able to get near you fee the crowd. Rowens, I I reckon you never took a look at yourse'f in the glass this evenin', so you don't know how I'm feelin' this minute."

"No, I hain't no idea," said Rowena mischievounly. "Did Ben Foster scare you away from Lastech? You'd better watch out, Sim. Berkley Pendleton has got his eye on you now. Look!" Sim looked. Pendleton, splendidly at-

tiped, was standing near the door, pulling his long mustaches and frowning balefully.

"A jim dandy vest he's wearin'," Sim commercied indifferently. "Rowens, I've been thinkin' a beap of you since I seen you

"An' you've been thinkin' a heap of Lisbeth," mocked Rowena. "Don't blush,

Sim. I know you cain't he'p it no more'n I can he'p bein' red-haided. I don't like the way your necktie's fixed. Lemme tie it for you.

The evening was well along. Sim had danced three times with Rowena, three times with Lisbeth, and had just escorted Miss Hitty to a seat for which her late exertions in the Virginia Reel made her exertions.

especially grateful.

"Oh me! Oh my!" panted Miss Hitty,
mopping her perspiring brow. "Sim, for
mercy's sake get me a drink of water."

mercy's sake get me a drink of water,"
Sim obediently started for the kitchen, but at the door his path was barred by Berkley Pendleton. Berkley's expression was decidedly unamiable. There was a sinister gleam in his eye and red patches showed on his high checkbones. His words were fraught with deadly purpose and a perceptible odor of alcohol.

"I want to talk to you, Mr. Hoisington, sir," he said with severe dignity; "outside and now, sir."

Sim looked at him wonderingle. "Wall

Sim looked at him wonderingly. "Well,

wait until I get Aunt Hitty a drink," he said at last.

said at last.

Berkley awayed slightly and his frown deepened. "I've a partickler respect for Miss Hitty," said he, "and I'm a gentleman and know what's a lady's due; but in a case like this yer Miss Hitty's got to wait. You come along with me."

Sim hesitated, but Berkley took him by the arm and led him out of the bouse and into the barnyard. In the shadow of the barn he halted and released Sim's arm; then, backing a couple of paces, he suddenly jumped into the air and cracked his beels together.

Alighting, he snapped his fingers in Sim's face and took another backward step that

was almost a caper.

"I'm a rip-rourer," he announced impressively. "I'm cold p'isen an' red pepper.
I'm a cutter and a cyarver. I'm a tearer and a render!"

"Certainly," assented Sim. Then coasingly: "Le's us go take a dreach at the water trough, Berk. Freshen us up a right amart.

Mr. Pendleton disregarded the sugges-tion. "Bein' what I am, I aim to ask you a question," he went on. "Bein' what I am. I aim to have you arawer it. What may be your intentions with regards to Miss Processor College?" Rowens Gollop!"

It was evident to Sim that, whatever his potations, the man was in soler earnest. He meant to know. Sim considered, conscientiously considered, and found himself uncertain. After a pause he owned that he

"Dogged if I can tell you," he said.
"Sometimes.— No, I hain't made up
my mind as to intentions in no direction.
Mabbe.—"He pondered absently.
Berkley shook a long, bony forefinger at
him. "I'll tell you what your intentions
air," he snarled. "They're to keep away
from the lady I've mamed and stay kep'
away. I've got my intentions, which is
hon rable and sot, an' I warn you off. If
you cain't make up your mind to keep
away and stay kep' I aim to split you open
like a ripe melon." like a ripe melon.

He danced a step or two, and as for a moment be emerged from the shade of the bare, a knife flashed in his hand.
"I'm a rip-roarer," he chanted. "I'm a cutter and a cyarver! You made up your mind to keep away and stay kep??"
"I don't want no trouble with you, Berkley." Sim answered. "Don't act fooish." He eyed the grotesque, capering figure watchfully.
"You made up your mind."

"You made up your mind?"
"No," roared Sim. "Now, daggone you,
keep away from me or I'll hurt you."
Berkley jumped for him and Sim dodged.
Again the rip-roarer circled, and again
leared in with a virious swing of his know

leaped in with a vicious swing of his know that the young man barely avoided. "Try that again and I'll cuff you," Sim

warned him sharply.

Berkley tried it. There was an instant whirl of action, a sharp smacking sound and Berkley Pendleton toppled backward and Berkley Pendleton toppled backward fell with a thud in the dust and lay quit still. At the same moment there was a quick rustle of skirts, and a bulky form brushed by Sim and plumped down at the side of the prostrate man.

"I reckoned there was suthin' like the happenin'," said Aunt Hitty's voice in a tone of marked displeasure.

"You great big lummer, hittin' the pore man that-a-way! Ain't you —— Sim, I b'lieve he's daid!"

"I reckon not," drawled Sim, picking up the knife and tossing it away. "Some water's all he needs. He's stirrin' now." He went to the watering trough, where he found a pail which he filled and brought

"Now you clear right out," said his relative, dipping her handkerchief into the water and applying it tenderly to Pendleton's brow. "If anybody comes I'll fix up some story. No need o' you beln' here. What you say, Mr. Pendleton!" What you say, Mr. Pendleton?"
"I'll cut his heart out," mumbled

Berkley.
"Well," mused Sim as he walked away,
"it cert'nly does seem like I'm sort o'
fo'ced for to court Rowena now."

Just as he approached the house a man came out and advanced quickly to meet him. Stopping directly in Sim's path, with arms truculently akimbo and chin outthrust, this person spoke in a voice husky with emotion: "I've been a-lookin' for you, Sim Hoisington. You an' me has got to have a talk together."

nave a talk together."

Sim gaped at him. "What's pesterin' you, Ben?" he asked innocently.

"You air," Foster growled. He looked back over his shoulder. "Let's move over toward the barn," he proposed.

"I reckon if it's anythin' private we'd better go the other side of the house," Sim suggested. "It's right secluded in the orchard."

Sim suggested. "It's right secluded in the orchard."

In a few minutes the two came to an open space between the apple trees. There Foster whipped off his coat.

"You'll ketch cold," drawled Sim. "Cain't you talk just as well with your cost on?"

"I allow there hain't much to be said." Foster sneered. "You're almin' for to take my gal away from me, hain't you?"

"Lisbeth?" For the moment Sim's chiligation to Rowens was forgotten. He was not quite clear on the point. "Mabbe I am," he said, "and then again mabbe I hain't. I couldn't aznekly say, Ben."

"You'll quit shinin' up to her or you'll take a lickin right now," declared Foster. Again Sim reflected. "Why, as to that, I couldn't quit on no other fellow's say-so," he said slowly. "An' as for the lickin," he went on, "I don't keer to take that, Ben. I b'lieve I'd get right mad if you even started for to lick me."

Foster's reply to that was a swinging blow that took effect behind Sim's ear.

Foster's reply to that was a swinging blow that took effect behind Sim's ear, Sim staggered back, tripped on a root and went down. Instantly gathering himself together he dived at Foster's legs and heaved. Foster pitched over his adver-sary's shoulder and landed on his head, continuing the evolution in a partly involuntary somersault that gave him a chance to scramble to his feet. In the mean time Sim had regained his footing and, as he had predicted, lost his temper. The fight was too fierce to last long. It

was a pummeling match pure and simple—
"fist and skull," as the phrase went on
Little Tarkio. Evenly matched in strength
and activity as the two young men were,
the result was likely to be determined by their endurance rather than their skill, but in the end, when the two fell, Sim was uppermost and lost no time in taking advantage

of his position,
"Had enough?" he asked presently, suspending operations,

Foster wriggled feebly and gasped an

insult.
"I'll cert'nly give you all you want,"
Sim declared. He drew back his fist, but
beeitated before the helplesmess of his foe.
"Shucks! Get up, then, you crazy loon,"
he permitted, himself rising. "Want any

Foster, though tottering, was indomi-table. "I'm whipped now," he muttered through swellen lips, "but you keep away from Lisbeth or I'll wipe the ground with you first time I see you."

He picked up his coat and the two returned to the barnyard and the watering trough, where they laved the stains of conflict side by side. Presently Sim turned a bruised and serious face to his late

antagonist.
"Ben," said he, "I hate for to have trouble with you, but I reckon I'm sort of obliged now to keep right on with Lisbethkind o' fo'ced to.

Nevertheless it was not until Saturday, four days later, that Sim took any sort of action in the delicate situation. During that time affairs had become even more

complicated. Following the night of the dance Berkley Pendleton had called and taken Aunt Hitty to prayer meeting. He had met Sim and had made no hostile demonstration whatever during the uncomfortable quarter of an hour spent on the porch. The next day Aunt Hitty went to town and did some trading. That was Thursday. Sim and Abner, postponing the fencing, started haymaking that day, and from the field Abner pointed out the returning light wagon with Berkley Pendleton's saddle mule tied behind it and Berkley occupying a sest beside Aunt Hitty.

"Sort o' rushing things," commented Abner.

But at the yard gate Berkley resumed his mule and rode away.

Friday the hay claimed Sim's attention inexorably, but he was uneasily determined to do something. What? There was the rub! There came Saturday and the just.

"Herkley Pendiston is a comin" to Sec.

"Herkley Pendleton is a-comin" to Sun-day dinner, Sim, "announced Aunt Hitty after the noonday meal.

Her rather comely, entirely comfortable face was unaccountably flushed; her usual

breathlessness was increased so that her ample been heaved quite ternultuously.

ample besom heaved quite tigmultuously.

"I reckon I might as well tell you that Berkley and me aim to get married right soon, Sim. I hate to leave you, but I'm gettin' along to an age where I ought to get settled in life. I'll see about gettin' some-body to do for you though, Sim—if you cain't get no one yourse'l."

Sim went out to the barn and, after sending Abner to the field, sat down to think it over. What a world! What a puzzling, mixed-up mess! What did it all mean and who and what was right? Politics, religion, love—no straight, plain main road anywhere.

"Got to do somethio"."

He got up and began mechanically to

He got up and began mechanically to room and harness his sorrel driving mare. His mind still in chaos, he run his buggy out and backed the mare into the shafts.

In the same mental daze he got into the buggy and presently found himself on the road—to where?

He had told Lisheth that he would be up to see her and she would be looking for him. Also his manhood compelled defiance of Foster's threat. There was Pendleton's threat too. Under the circumstances it was unlikely that Berkley would make trouble now; still, the threat remained. Besides, he would have to pass Gollop's place—unless be turned off the road and made a wide circuit. Then he could stop at Rowena's on the way back.

So musing, he turned off the road—and within a mile he was on the point of turning back again. The mare decided the matter by speeding on, but not in the way Sim expected. She had covered another half mile when she shied at a blue sunbonnet that showed above the hedge, and by the time Sim had her under control Rowens Gollop was standing in the road swinging a pail half full of blackberries and laughing at them, "Travelin' or guin' somewhere, Sim?"

Rowens hailed him.

Sim beaved a sigh of pleasure and relief as he looked at her. "Jest a-travelin', Rowena," he replied, smiling wistfully. "Jest a-travelin'. I hain't never gain' nowbere.

She approached the buggy and lifted the pail to him. "Have some," she lovited. "They're right good. I'm a-gain' to make a pudden of them."

"I'd like for to taste the pudden," said Sim, as he helped himself to the fruit.

"I ain't goin' to give you no bid," she answered cruelly, and then went straight to the point as was her way. "So you was

the point as was her way. "So you was fightin' the other night at the dance, Sim? What was the trouble with you an' Berk Pendleton? Oh, don't hum an' haw! Tell

Sim looked at her. Her expression com-

elled a truthful answer.
"Well, Berk allowed he aimed to marry
"Well, Berk allowed he aimed to marry you and warned me off. He got kind o' rambunctious when I wouldn't agree for to stay away from you. 'Twan't nothin' ser'ous, Rowena." Sim pulled a handkerchief from his pocket and wiped his face.

"You didn't want for to stay away from me?" the girl asked softly.

"I cert'nly didn't," replied Sim with

particular emphasis.

"And you an' Ben Foster fout. What for was that, Sim!"

"Oh, shucks!" Sim ejaculated. He wiped his face again. "Twan't nothin." What for was that, Sim?"

The Howard Watch

THE predominance of the HOWARD Watch among yachting men illustrates some interesting conditions in American business and professional life.

There is in this country no exclusively yachting class, as such. Practically every American yachtsman is a man of affairs, who finds his greatest relaxation on the water, and who takes his HOWARD Watch. with him when he goes abourd.

The thing that makes him a yachtsman and an American disposes him to like the HOWARD Watch - with its fine traditions, its trim, racy lines, and its way of showing in clean American heels to the talent of the watch-making world:

The comberful character of the HOWARD Watch is that it meets were of so many different kinds and occupations no three own ground. Men in com-mence, in the sycholcal industries, in the professions, in official litr.

A Howann Watch is always worth what you pay for in

The price of each wards is fixed at the factory and a printed ticket attached from the 17-jewel (Justie reiter) in a Crewent Estra or Bon Estra gold-filled care at \$40, to the 21-freed in 18K gold care at \$170 and the Enware Howard musdel at \$350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to home.

Admiral Signbus has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U.S. Navy. You'll enjoy a. Deep is a post card, Dept. N., and we'll send you a copy.

We Want Your Boy

We desire to give him a chance to earn as much spending money as you are willing that he should have and at the same time get a lot of the sort of premiums which every boy wants. During some of his leisure time this summer he will have a splendid chance to earn his spending money and to get an experience which will be of inestimable value later in life. Thousands of other boys will do the same thing—in fact they are doing it now, selling The Saturday Evening Post and The Ludies' Home Journal. If he'll write to us, we'll tell him all about it.

We'd like to send to you a copy of a unique booklet entitled "What Shall I Do With My Boy?" It tells how a lot of parents have solved "the boy problem" and will give you an interesting half hour's reading if nothing more.

"Well, it—it was this-a-way," the young man stammered: "Ben took a notion I was shinin' up to Lisbeth Minnick an'—an' he warned me off."
"You didn't want for to stay away from

Lisbeth?" pursued the inquisitor relent-

Sim looked at her imploringly. She met his gaze and held it until he hent forward and took the hand that she had rested on the dashboard. Then a wave of color swept over her face, and for the first time Sim

saw her disconcerted.
"It's all scratched up with them briers,"
said Sim, and lifted the hand to his lips. 'I don't never want for to stay away from

"I don't never want for to stay away from
you. Rowers—but somehow—a fellow
don't sometimes just know—"
He stopped, for Rowers put a foot on
the step and leaped into the buggy. Her
face was rather pale than resy now and her
mouth was set. She clucked to the mare,
who started forward and set off at a
smanking trut.

spanking trot.
"Which-a-way we'd best go?" Sim
queried in a shaking voice, after a moment

or two of highly significant silence.
"Preacher Coles," Rowens asswered.
And at that Sim turned to her a face

"Mind your drivin"," cautioned Rowena.
"You know why I like you, Sim—well enough to let you run off with me this-a-way? In pose it's because your ideas are the way? Is posent a beendase your ideas are the same as mine. You're a hard-shell Baptist now and forevermore, and nothin' won't stir you the width of a rat's whisker. You're a rock-ribbed, dyed-in-the-wood Democrat, an' you don't scratch your ticket for Bud Watta nor pobody. You sold with a man makin' up his mind and stickin' right to it through thick an' thin an' whether or no-unless his wife sees some good reason to alter it. Is that right, Sinc, or "- Rowena's firm voice faltered a little here-"or would you like to let me

Sim's arm went round her and held her Sim's arm went round her and held her close as he urged the mare to greater speed, "You're right about everythin', Rowers," he said. "Gosh! I feel like a ton weight had been took off'n my shoulders. I want to whoop. Lordy, how I need you!" "Mind your drivin', Sim," cautioned Rowens, "Well, then, give me the reins."

THE MUTINEER OF THE MARY BLOUNT

(Cuntinued from Page 18)

affection for another. Then she saw Cran-

affection for another. Then she saw Crandle watching her from under hent brown, and she waved her hand to him.

Then she sent her soft trustful eyes upon little trips about and allow, as if to store her mind with pictures to look at during the long hours in the dull, eventless cabin.

Captain Haithway accompanied his wife below, and returned almost instantly dressed in his oilekins. He was no longer smiling, and he began to give orders that rang over the whole ship.

Till now only the major preparations for riding out a burricane had been taken. There was pienty of time, and the young

There was plenty of time, and the young man did not wish his wife to suspect the gravities and anxieties of the cituation. So a surgeon keeps concealed from the pa-tient's eyes the ghostly, clinking prepara-tions in the operating room. But now the Mary Blount became the scene of a hundred swift and eminous artivities. Life-lines legan to spread from point to point like a spider's web; everything movable went below; the pumps were tested. The nest of spare boats was swung between the main and fore marts, high enough to clear a strong man's bend, and strongly braced so that they could not swing amuric. What-ever might be expected to give under terrific strain was looked to and reinforced when

processary.

Of all the Mury Blount's great spread of canvas only one little patch was left standing. She lay broadside to the coming storm, rising to the tops of the rollers, and drapping with a sensel and squirting about of white water. Now and then she appeared as if she was nodding to herself, as much as to say: "This may be your first hurricane, but it isn't mine. I'm not afraid

WRITE TODAY of the second seco

MEAD CYCLE CO., DEPT. N-58, CHICAGO, HL. | head of the dead woman resting in his lap.

sigh running through her rigging, turned a little upon her keel and began to retreat. To the westward, from horizon to zenith,

the sky was one great amear of black ink; the sea was a field of snow.

And then, though it was still calm on deck for one long instant of time, the wind seized the Mary Blount by the upper spars and threw her hard on her side and began to drag her off. So in cave days your ancestor or mine may have seized his beloved by the hair, thrown her and dragged her off to his cuve.

From within the Mary Blount there came one prolonged cracking and smashing. She might have been a ship from the Orient deep in china and porceiain. Her one sail tore from its place with the noise of a cannon shot, and in a moment had disap-peared for to lesward, not in the sea but in the shot!

the sky!

And then, righting a little, the Mary Blount began to travel under her bare poles faster than she had ever traveled before.

It became dark as night. The yells and acreamings of the wind were as the voices of Lucifer's army sacking a city in heaven. of Luciler's army sucking a city in heaven. Of human sounds there were none. Even when one of the men—you cannot say at the wheel or the rodder, for the Mary Blount's steering gear was a Noah's Ars combination of both—had his whole aids stove in by an uncontrollable leap of the apparatus, the other man could not hear his cry of anguish.

Solid green water fell upon the deck in

long-drawn thunder. When this had slid back into the sea the hurt man was gone, and Crandle, his heard standing at right angles to his chin, had taken his place. No man on that ship knew when day

passed into night.

No man knew that in the captain's cabin, clinging to the leaping, plunging bed, a woman had ended her day of fear, and was entering all alone without help, without marry, as it seems, human or divine, upon her hours of agony.

It must have been early in the morning, ifferentiated only from the night by its greater blackness, that Captain Haithway went helpe. Only Crandle saw him gr, and only Crandle saw him crawl and stagger back to the deck. To Crandle for some time now it had seemed as if the main fury of the hurricane had passed.

It was rather a seeming, an intuition, than any setual phenomenon of physical diminution to which Crandle could have

He watched Captain Halthway drag him-self to the lee bulwarks, clinging to a life-line, and followed him with a bold, lawless glunce; for all night the seaman's imagination had been hanging upon the man who had been washed overheard. Having reached the mizzen-shrouds, Cap-

tain Haithway climbed slowly into them, and clinging tightly, looked down into the sen that now was distily far below his feet, and that now rose as if to strike him in the

You could have knocked Crandle over with a feather. Why a man in his senses should deliberately place himself in so suicidal a situation was utterly beyond him. It was with the idea of warning him of his peril that Crandle began to move warily across the deck; but it was with no such death the himself come presents to the idea that he himself came presently to the mizzen-shrours and began to look this way and that in the darkness to see if any one was watching him.

But each man on that ship was intent upon his own destiny. And in that dark-ness only the main shapes and motions of

things were perceptible.

A dozen men might be looking, and not he able to swear upon the book that the murder which they saw done was not an attempt at rescue.

Crandle looked up and could see his captain's face; could see it, could read the message of it like words in a book. It was the face of a man who asks for nothing but

The vessel rolled lower and lower; just as she glided into the first upthrust for recovery Captain Haithway merely let go with his hands.

Crandle had not touched him. Nay, the wicked man's hard heart had turned to milk, and those sounds which came from him, though no man could hear them in the howling of the wind, were dry solss of anguish.

After a little Crandle descended into the cabin. And there they found him at last, when the burricane had fallen to a gale, the

THU -

* EVENING POST, PHILADELPHIA, PENNA.

and the little baby for whom she had given her gentle and blameless life asleep in his great tender arms.

THE gale fell to a brisk, pleasant wind; the mountains of water became hills and the sun shone with delightful brilliance. Of the difficulties left in the wake of the burricate there was only one which seemed insurmountable to the men of the Mary Bloust. Damages could be repaired in a trice. Already the body of Mrs. Haithway had been sewn in carries and committed to the deep; there being among the men but one pair of dry eyes—those of him alone to whom her death meant everlanting sorrow. Mr. Tuttle had watched them slide her into the sea with a peculiar and marked interest. the sea with a peculiar and marked interest.

And he wandered if he, too, would be so buried, and how soon. A very sick man when the harricane began to blow, he could hardly keep his feet now, hardly lift the little prayer book to read the words for those who are buried at sea. Even if Mr. Tuttle should die, the ship's difficulties might well be surmounted—all but the one. How can strong men stand about and see a little haby starve to death? There was no provision for labous abourd the Mary illouet, and already little Miss Haithway was giving signs of incipient appetite.

"She'll be all right on water for twenty-four hours," commented a father of more than one family, "in' then she'll want milk,"

"Is there nothing we can give her?" saied Crandle angrity.

The father of families ahrugged his shoulders.

"We can keep her alive for a few days on biscuits 'n' water 'n' treacle 'n' water."
"For a few days!" And he booked down into the little alsoping face, lifting a corner of the blanket in which he had wrapped her. He went the length of the deck and back, heavy with trouble. Then his reving sym-came to half open a whale best and flamed with sudden boxe.

with sudden hope.

Mr. Tuttle had just finished working out

the position of the ship.

The starts seems to have been circular, Craedle. We are actually nearer Honolulu than we were.

"That's good. Then we'll save her yet. I want leave to go on ahead with her in one of the bouts.

Mr. Tottle pulled a doubtful face.

Mr. Tottle pulled a doubtful face.
"I'm a dying man. Crusdle," be smiled wistfully. "What becames of the ship with you game and one gone?"
"The rose will be proud to take that chance for this baby, sir. And besides, that there Bowers can keep the ship to a course till I make shift to pick her up again."
"We must promote Bowers. It wouldn't be for our contracts."

do for our only surviving navigator to be the cable loy. But you seem to have adopted this haby, Crandle?" "Yes," said Crandle. "And God help

me to be a good man!"

He lifted a corner of the blanket, and the man who was dying and the man who had just begun to live smiled with great tender-

"Takes after her mether," said Mr. Tuttle. "Yes, you may go abead in one of the boats. Crandle. It's the only chance for the laby. Put her in good hands. If you are short I have a little money. You have no doubts of finding your way?"

Then the sooner you start the better."

"Then the sooner you start the better."
"I'll pick you up again somewhere between here and Honolalu, Mr. Tuttle."
"You won't wait for us?"
"No, sir; I'll start right back. If I don't pick you up in twenty-four bours or so, why I'll know we've passed each other and I'll run back to port."

On the eighth day anxious eyes beheld against the first amethystine premonitions of land a speck of sail. And the boy Rowers, handling the late Captain Huithway's telescope with as much knowingness as if he had invented telescopes, made her out to be the missing whale boat, returning from

Honolulu with Crandle at the steering our.
The boy Bowers stepped below and threw open the door of Mr. Tuttle's stateroom.
"Hawasi's in sight, Mr. Tuttle, and so's Crandle."

Mr. Tuttle shook his head a little and smiled, but said nothing. Then he turned quietly on his side and with a long sigh of relief died.

The boy Bowers went on derk looking very white and crying a little. "Poor Mr. Tuttle is dead," he said, and gave orders to luff ship and was very smartly obeyed.

EASTMAN KODAK CO., ROURESTER, N.Y., The Kedah City.

Shirley Summer luxury for Monlders President Suspenders 50, "Satisfaction of money horse in section The C. A. Edgerton Mig. Co., Steine, HanTwenty minutes passed, and the whale boat was now visible in all detail to the naked eye.

Suddenly one of the men shouted: "He's

brought the baby back with him!"
Yes, he had brought the baby back, and
a sack full of island toys and a couple of
milch goats, and he had brought with him
Miss Bettle Paseua, from whose deep brown breast the baby was at that very moment drawing warm, delicious milk and a love, I daresay, of swimming and the sea.

"But ain't we going to have just one night sahore?"
"That's for you to say, boys. Now listen: If we visits Honolulu the owner's representative visits us. And we gets a new captain and a new mate. Do you want to risk that, after Captain Haithway and Mr. Tuttle?"

A night ushore still looked alluring.

"And," said Crandle, "he'd take the baby away from us. How about that?"

"What's a night ashore anyhow?" said Shattuck. "Only a headache."

"But," one of the men objected, "not taking the ship in to report kind o' smacks of mutiny."

of mutiny,"
Crandle bent his bushy brows.
"To me," he said, "the notion of losin'
my baby kind of smacks of hell. If we take this old bottom to the Indian Ocean where she's bound, and brings her back home brireful of oil, the sourcet owner in Hanley-town won't talk about mutiny—no, sir."

There were still murmurs in the men's voices and doubts in their eyes, when sud-denly there came from the stern of the ship the noises of a beby in a rapture of some sort or other.

"That settles it," said Shattuck, and laughter ran about the circle.

Then Crandle gave his orders.

"The baby and her nurse will have the captain satateroom and the run of the cable. You, Corning, as was raised on a farm, will have charge of the goats. One other thing: Miss Peasun has her faults, but she's left 'em all ashore. And the man that don't treat her like a lady will get treated like a doe!"

dog!"
"Beggin' your pardon for interruptin',"
said the man Corning: "but if I'm to have
charge of the goats I'd like to know what
I'm to give 'em to eat."
For once in his life Crandle looked very
foslish. And there rose at his charges so
great a rose of Homeric laughter that presently he was laughing too.

great a row of Homeric taughter that presently he was laughing too.

"Well," he said, "you can write home that, though you missed a night ashore, you all had fresh meat for dinner."

"Beggin' your pardon," said Corning.

"but how if anything was to happen Miss.

Passus and ne goats to fall back on?"

"How?" said Crandle. "I brought off snough preserved milk in the boat to raise a baby whale."

Three years later the old Mary Blount sailed into Hardeytown Harber with a record cargo of oil and a barrel of ambergris.

Mr. Bowers, late the "boy Bowers," finished writing the last entry in the log:

"Everybody excited about baby seeing America for the first time. The Mary Blount is heading for the Long Wharf. And as any one can see it plain as the nose on

as any one can see it plain as the nose on his face, nobody but a fool would take the trouble to work out the ship's position, and thank God for that. So ends this day. And all's well."

Did the owners of the Mary Blount have the law on Crandle formutiny? You should have seen their old Puritan faces peering into the barrel containing the ambergris!

(THE END)

Cheap Power

NATURAL steam coming up through the ground is a cheap power for run-ning an engine in the Northern Tuscany mountains. Lakes of het water in the vicinity of the steam holes contain much boracic acid, and a manufacturing com-pany uses the natural steam to run machinery for extracting the valuable boracic acid from the lake water.

The only difficulty in this pleasant state of affairs is that the steam itself is so highly charged with boracic acid that it would injure the blades of a turbine engine; so the steam is used to heat up an ordinary boiler, and the steam from the boiler is then used in the turbine. The steam is caused by volcanic action and comes up through blowholes at a considerable pressure.

The Motorcycle Tire that Won

Breaks All Records - Removes All Risks

In four short years Goodyear Motorcycle Tires have forged to the front. Today they are so far ahead that three-fourths of all motorcycles sold in 1914 will be Goodyear-equipped.

Men have come to know these motorcycle tires for what they are. Have come to realize their matchless value - shown by their longer life - their greater mileage - their utter serviceability under all road

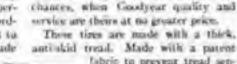

True Leadership

In this short time Goodyear Minorcycle Tires have won and held every road and track record. Such leadership can only come of master-quality -superservice. E. G. Haker's recent recordbreaking motorcycle trip, from coast to coast in 11 days and a half, was made on Goodyears.

Like Goodyear Automobile Tires

Since users have metered their mileage, Goodynac

leadership in the field of automobile tires has been all the more promounced. And the same inpate quality, the exclusive equipment, the expert knowledge all are

Business at Judi-CIAL DISCRETION

Concluded from Page 3)

against the industrial appression observed to be on the way. The oppression of the people by large combines in restraint of trade has been onerous and bitter. Small dealers have been driven out of business; huge industries have been joined; high prices have been maintained and a variety of oppressions have followed; and the con-dition of almost industrial slavery which the great judge saw on its way has arrived.

The wrongs that make this situation pos-

sible ought to be prevented by law. They are great wrongs and the laws against them ought to be drastic; but they must also be

These crimes against our commercial civilization ought to be catalogued and prohibited by specific acts; but when this course is proposed we are met by the suggestion that we have reached a point where the meaning of the law is generally under-stood by the rourts.

We are told that the wrongs against which the Sherman Law is directed cannot be suf-ficiently defined to enable them to be en-acted into prohibitory statutes, but that judicial interpretation has made it clear to the people what can and what cannot be

done under that general statute.

The argument does not seem convincing. If the decisions of the courts have now de-found the wrongs prohibited by this act; if they have defined them so that the judges now know what the offenses against the act are then surely these decisions have de-fined them so that we may catalogue them and prohibit them in terms of law. And if they are not sufficiently determined to enable us to prohibit them in terms in a statote, then they are not sufficiently defined for the courts to prohibit them in an administration of the statute as it stands.

Many Judges, Many Rulings

In other words, if the judges know precisely what acts are criminal under the gen-eral, vegus terms of the Sherman Law, then they can tell us what those acts are and we can put them into the law of the land,

Judicial explanation has not always made statute clearer to the common man. Learned opinions have sometimes reminded us of Lewis Carroll's exquisite example of

interpretation:
"Be what you would seem to be. Or, if you would like it put more simply, said the Duchess, 'never imagine yourself not to be otherwise than what it might appear to others that what you were or might have been would have appeared to them to be attention."

As the law new stands, every case must be decided for itself according to the rule of reason as interpreted by the presiding judge. There will probably be as many decisions as there are cases, and as many variations of the role of reason as there are individuals on the beach. Moreover, the attorney-general will be clothed with a power of discretion greater than any ruler of any modern dispotion. He may be in every instance a great, incorruptible patriot, but the admin-istration be represents cannot escape the pressure of public opinion.

What is if that corrupts the electorate of a country? Is it not the belief of certain interests that they may obtain some advantage, either by the enacting of laws or the administration of them? If the atterney-general and the courts are to say what are good and what are Ind trusts; what busitiese interests shall be permitted the privileges of a restraint of trade; to which uses the rate of reason shall apply or not apply then it will be to the advantage of these seeking the great privileges under this indefinite law to see that un administration favorable to them is resurred and that odges and lawyers with economic favorable to their enterprises are elevated

The people of this country believe thernseives to be the source of all authority. They are not willing to permit the judges either to make the laws or to sit as boards of control to determine how the people are to conduct their legities affairs. To do so would neter the mry supreme, with over the conduct authority and it would of Jegoco de power than republic.

You can if you dictate to an Edison Dictating Machine. It shortens working hours and adds to recreation hours.

The argonauts

(Continued from Page 13)

and Susy knew their place. They went out, driving the hens before them. Mrs. Cassidy took the loaf out of the pot oven and set it on the table to cool. Then she sat down again on her stool and went on with

her story:
"Seemingly he was contented enough
and had given up the notion of America
when he seen that his aunt was against him going. It was well pleased we were, His father gave him a calf for his own and I took care that he didn't want for a shilling in his pocket, so as he wouldn't be ashamed before his comrades—and them maybe spending more or less in the town after a football kicking or the like.

"Well, for as much as six months there wasn't a word out of him about America, and we thought he was settled down for good. Then one day, all of a sudden, he walked in on us, the same as it might be you walking in this minute: 'I'm off to America to-morrow,' says he. 'I've sold the young bullock'—it was a young bullock the calf was by that time—'and I have my passage booked; and there's no use your talking, for my mind's made up.'

"I knew well enough it was no use talk-ing, for Sonny was always terrible stubborn once his mind was made up. He wouldn't change, not if the King of England was to go down on his knees to him. He went the

go down on his knees to him. He went the next morning, sure enough."

"He'll be back some day," I said feebly.

"He'll not be back," said Mrs. Cassidy;
"or If he is I won't be here to see him. I turied one boy and I've lost the other. Is it any wonder my heart is broke in pieces?"

A poet—Tennyson, I think—speaks of the words of the comforter as "Vacant chaff, well meant for grain." I felt the truth of this description when I tried to ralk to Mrs. Cassidy. She felt the same thing, I suppose, for she cut me short.

"Never a word did we hear of him or from him from that day to this," she said. "I made Norah Kate write a letter to his nunt out in

Norah Kate write a letter to his nunt out in Pittsburgh, to know if she'd seen the lad. It was a good letter and well written, though North Kate isn't the equal of Sonny for writing. But what use was it? He hadn't been near his sunt—nor she hadn't heard from him. All she said was that America's a big country and Michael Antony might be somewhere in it without her knowing. It was Michael Antony she said in her letter, not knowing that it was Sonny we always called him, though, of course, Michael Antony was his name."

I plodded home that evening along the muddy road and my heart in me was as sorrowful as the gray clouds which hung low above my head. Mrs. Cassidy's trag-edy is the tragedy of Ireland. Their names are many, though we call them all Sonny. They go from us to a land that is very far off and we are left to grow old alone.

It was on Christmas Eve that I saw Mrs. Tassidy again. I did not mean to go to see her; but I was passing along the road and Norah Kate was watching for me at the end of the lane, as her father had watched for me a month before.

"My mother says," she said, "will your

everence step up to the house for a minute he way she'll be able to speak to you? For here's something that she wants to say

here's something that she wants to say. It had rained steadily day and night ince the last time I visited the Cassidys' touse. The lane that led to it was like a unning river. I picked my way from one arge stone to another. I crawled along brough deep mud beside the wall. Norah cate, barefooted and therefore indifferent, plashed gayly beside me. Boots and rousers are a curse! If we had any sense we should wear kills, as our remote areas. re should wear kilts, as our remote ancesors did, and protect the soles of our feet, ith sandals.

The yard outside the house was incredply filthy. The manure heap and the ignty had-if the expression can be used of hem - overflowed their banks. The thatch f the house was sodden and stained green a great patches. I expected to see worse esolation Inside.

I was mistaken. Mrs. Cassidy met me at he door. She was bright-eyed and alert. he wore a clean apron. A bright turf fire urned on the hearth. There were sprigs f holly in the jugs on the shelves of the

resser. You've had news of Sonny!" I said. "Well, now, you're a wonderful man, so ou are!" said Mrs. Cassidy. "How did you know that, when it's no more than an

hour ago that the letter came?"

"It wasn't hard to guess," I said. "A merry Christmas to you, Mrs. Cassidy!"

"I was sitting by the side of the fire," she said, "after himself and the two little girleens had their breakfast ate, the same as I'd sat many's the day—God forgive me! I see now that I oughtn't ever to have given in the way I did. Well, I was sitting by the fire and himself was out about the place. and the two girleens was playing them-selves, when all of a sudden Susy ran in on

"It was me and not Susy!" said Norsh

Kate.

"What matter the which of you it was?" said Mrs. Cassidy. "My own belief is it was the two of ye together—and says she: "The postman's coming up the lane." 'He is not!" I said. 'He couldn't be, for the lane leads nowhers but to this house—and who'd be writing a letter to one of us!"

"That was what I said: but I knew well

That was what I said: but I knew well that the postman was coming - and I knew that it was a letter from Sonny he had for me. I knew it by the way my heart was beating so as I could hear the noise of it with my ears—till all of a sudden it stopped entirely and I had to take hold of the table with my two hands, so as I wouldn't fall. That's what made me know there was a letter from Sonny: but I wasn't fit to go to the door to get it - not if I'd been given the crown of the Queen of Spain I couldn't have moved. Norah Kate got the letter." "Me, and Susy along with me," said Norah Kate.

She is a fair-minded child. She objected to being deprived of her glory as the first bearer of the news; but she was jealeus for her sister's honor too. Norah Kate and Susy together had taken the letter from the

"I seen by the stamp on it," said Mrs. Cassidy, "that it was an American letter; and as some us I seem that, the night of my eyes went from me and I seen no more. It

was Norah Kate read the letter."
"I did." said Norah Kate.
"Norah Kate's a good scholar," said
Mrs. Cassidy: "and well she may be, for
we've kept her regular to school: but sure it's small credit to her to be able to read Sonny's letter, for he's a beautiful writer. Would you like now, your reverence, that she'd read it for you? Mrs. Cassidy furnished in the boson of

her dress and drew out a letter, already crumpled with much handling already, I think, stained with tears of joy. I spared Norsh Kate the task of reading it again.

Sonny's handwriting is really very legible.
"'Decreat Father and Mother,' he wrote: This comes hoping to find you as well as it leaves me presently. Within is an order for twenty dollars. It's what I'd like to have sent before, only I hadn't till nownor I wouldn't write so long as I'd nothing nor I wouldn't write so long as I is nothing to send; but I've fine earning now and I've made good, which is what they say out here. I'd like you'd get something for the Christmas, and a cake or the like of that for Norsh Kate and Susy. And you needn't be alraid of spending it—for there's plenty more where this comes from."

"My father and Susy is gone into the town," said Norsh Kate; "and there's a grand doll, with a pink dress on her, in Mary Finnegan's shop, and it's to be got for Susy

"What signifies the doll, or the money either?" said Mrs. Cassidy. "It's the letter I'm thinking of. Go on with it now, your reverence. I'd never be tired listening

'The place I'm in,' Sonny wrote, would strike you as mighty queer, not being like what you're accustomed to at home. How's father? And how's the polly cow? And, hoping that you're keeping your own health, "'Your loving SONNY.""

"It was Sonny we called him," said Mrs. asidy; "but his name was Michael Cussidy: Antony."

"'P. S., I read. 'I didn't go near Aunt Matilda, for fear she might think I was wanting something from her, which is what I wouldn't take if she offered it to me after the letter she wrote saying it would be better for me not to come out. Hut I'll take a run down to see her some day when I'm through with the job I'm at. I want nothing from her now - thanks he to God! But it might be some time before I get going, for

Pittsburgh's a long way from this-farther than you'd think.

"Sonny was always terrible statibors and independent," said Mrs. Cassidy. "Since ever he was in his cradle be'd do what he thought fit and do it the way he chose himself. He'd not be under a compliment to e'er

I next heard of Michael Antony Cassidy— whom his mother called Sonny—under circumstances that made the rain-ewept, desolate Connaught land seem like a halfforgotten dream. I was in the smoking room of one of the great liners, crossing the Atlantic for the first time in my life, and Atlantic for the first time in my life, and full of cursosity shout the land I was to visit. In one corner of the room was a group of men playing some eard game I did not understand. At other tables sat more men, talking in a lazy, desultory way. There is no use talking rapidly on shipboard. Why shoot remarks at your neighbor when you have all day long with nothing to do except hand them to him quietly?

All by thomselves in the farthest corner of the room sat the only two men who seemed to be in carnest about what they

seemed to be in carnest about what they were doing. They were playing chem. Their absorption in the game must have created a kind of atmosphere round them that their fellow voyagers found distasteful. They were isolated and reveral seats were vacant near them. I sat down beside them, not because I care much for chess-it is a game that hores me—or because I wested to be earnest; but because I like to have room to stretch my legs and to spread my

I suppose, however, that their atmosphere influenced me when I breathed it. I watched the game without knowing or suring such about it; but I observed the players with some interest. They were noth young new. They both had eagerly intelligent fame. The fact that they were ant drititing after beer or codes encylmost me that they were Americans. Chem-players of any other nation drink either near or coffee while they play. Americans and on drink my thing except lead water or cocktails and souther one nor other is a possible druck while playing chess.

I guessed they were university men-Then I guest degain, making up my mind that they were business men, with ample between for gold. They were certainly accustomed to use their brains. They certainly lived a good deal in the open air.

The game came to an end before I guessed and more. Upon of the players knocked the nation out of his pipe and declared that he was gaing to bed. The other disclaimed shapers and his a cigar. We began to talk and—at all solvinets in the world—bit on American police.

Now qualities is not, in my opinion, a fit object for conversation anywhere. If you talk your own politics—the politics of your major land—you are sure to lose your temper or size the other man will less his. If you hale the polities of another nation you were not anally go to sleep, because all formers politics, being quite incompre-buselile, are dell. American politics is to me the deliest of all, because I never get anywhere one noderstanding it. Neverthelms it as American politics my keeneyed champlayer talked.

I hazared and gained nothing free his desire action of one party or the other. I forgot now which it was that he denounced. At last I sales my question. I call it mine because I have lisked it eighteen times of before Americans and got eighteen dif-ferent asserts to it. Why is there no labor party in America—no labor party that runs manddates in frank opposition to Re-publicate and 1 smoorats alike, as the Engand lakest party of poses both Conservatives

This is, I think, an intelligent question. There are in arrows in America immerses numbers of them. It seems und that they about he maintained with either of the old-established parties. My new friend pondered the answer for a minute. Then he gave me his arower -a clear-cut, logically complete arower, which did not satisfy me in the least.

'America," he said, "is a land of free

opportunities for all. Any man, no matter flow is short, may become rich.

"Lob of mendo," I said. "Look at—and—" I memed two worthy millionalms who happened to be on board our

"Well," sold my friend, "if a man thinks he's going to be nich-and every laborer in America thinks that-he's not going to help the other laborers to combine against

capital, is he?"
I suppose my face showed that I did not regard this as a satisfactory explanation of the failure of American civilization to produce a labor party. My friend went on to justify his general statement by queting

"I'm an engineer," he said, "and I'm in charge of a hig job away out in what you'd call the wilds. That section isn't settled much—just a law farmers scattered about; and my crowd fixed up in a little wooden town the company built for them. There are a couple of thousand of them—and a pretty tough lot they are—Slavs mostly, with a sprinkling of Italians. Scum!" He spoke the last word with a venom that

surprised me in a citizen of the land of human equality—the land that fought to secure the negro his rights as a man and a brother.

"Some time ago," he went on, "we had trouble with them—not a strike; it doesn't come to that—just trouble over some agreement the company made the men sign,

ment the company made the men sign. I'm not saying it was quite a legal agreement, for it wasn't; but it was good enough and nobody lost by it. Well, the trouble wouldn't have smounted to much if it hadn't been for a big, busky Russian—a sulky devil of a man who started about knifing the company's officers, chiefly me.

"I knew what was going on, but I didn't see my way to step it. I just slept with a gan handy and kept my eyes open during the day. I watched that Russian pretty close. You can't hisme a Russian, of course, for wanting to knife people. Murder seems to be the only way of getting the necessary reforms in their country, and this fellow wasn't long out of it. All the same, I didn't want to be an innacent victim."

I think my engineer friend showed a nice spirit in making excusse for the Russian.

spirit in making excuses for the Russian. "Well, one day the whole conspiracy just got bursted. There was a little frishman-the only one we had in the whole crowd, for the Iriah are a bit above that kind of work now. The Russian was making a speech one evening and the rest of the men were cheering him. He was a hig imate, well over six feet high. I was a football player when I was in college, but I don't mind owning that I should have thought twice before engaging in a scrap with that Russian.

"My little Irishman didn't think more than once. He walked right up to the

"My little Irasiman district them more than once. He walked right up to the Russian, and when he was standing in front of him he didn't reach up beyond where the top button of the Russian's waistoost would have been if he'd had a waistoost. 'Listen to roe now; son!' said the Irishman: 'Just you can the talk about knives and tille.' It's any wanted here.' The Kussian killing. It's not wanted here.' The Hussian kind of collapsed, and that was the end of our labor trouble."

"It's an interesting story," I suld: "but I don't quite see what it has to do with the curious fact that there's no effective labor party in America."
"It's get this to do with it: Cassidy ex-

ports to be a capitalist some day—and he doesn't want any Russian coming round and kniding him when the time comes. See

I did not even try to see it. The matter had ceased, for the moment, to interest me. My attention was fixed on the Irishman's

"Yes. And if you look out you'll see that name on the list of first-class passengers on one of these boats protty soon. He'll be down as having engaged a suite of rooms on B Deck."

"Was he by any chance called Michael Antony?" I asked.
"The men called him Mick," said my friend; "last, of rourse, that's common with all Irishmen. Now I come to think of it, I believe it was Michael Antony he wrote when he signed on as overseer. I made him overseer after he'd laid out the

"That," I said, "was probably last

It was -sure. But how did you guess?" "It was—sure. But how did you guess?" I happened to hear asother part of the same story from his mother," I said. "It was Sonny she called him, but his real name was Michael Antony."
"Sonny or Micky," said my friend, "the name will be worth baying on the buttom of a check some day soon. That little

Irishman will make good! He's got grit!"

ON WITH THE DANCE

Continued from Page 15

whirred off with a potent suggestion of down and switched on all the electric lights. pleasure ahead, while every one inside was

chattering at once.

"Oh, I never left any word for Preston in case he gets home before I do!" Elinor gasped once, to be reassured easily by Donald:

"If he's playing chess with Kelmer he won't be out until the last train anyway. We'll be bome before he is."

The ballroom, when they reached it, was brilliant with many-colored lights and bannered trophies round the walls; the floor was fine: the music caught you up and bore you away with it. In every corner, on the edge of the expertly whirling dancers, were

couples dauntlessly practicing steps.

Elinor had no lack of partners to encourage her pretty, graceful efforts; her little feet were untiring. If they did seem to flag for a moment the thought of how much Preston was enjoying his old chess lent fresh zest to the dance. She felt a growing strain of something a little hard in her—a consciousness of that beginning of separate interests when neither has any uniting sympathy with the elected pleasure of the other.

Rex Courtney, a very good-looking young man—at one time the bachelor pur excel-lence of the little married circle and back now for a visit after a long absence—com-plimented Eliner openly, with the privilege of an old friend.

"You just look sweet in this blue gown to-night. Mrs. Chandor: you haven't grown a day older since I saw you last! Let's have another turn. You'll be a great

little dancer if you keep on!"

She felt, as she caught a glimpse of herself in a mirror, that she did look well. Yet, underneath all her gayety and that little feeling of defiance and resentment against Preston, she had a sensation of loneliness at Rex Courtney's words. She was used to the background of Preston's deeper interest; she was used him to admire her. wanted him to admire her.

She longed for an impossible story-book adventure, in which, by some romantic happening, he should have been lured over here on the clubbouse floor also, and they should meet in delighted astonishment. But there was no story-book adventure-only the unpleasant one that when they left, much later than she wished, it was found that it had been snowing hard for some time.

The harrowing nature of that ride back blotted out all past enjoyment. The ma-chine clogged and stuck. The men, in dancing shoes and evening clothes under their long costs, worked to clear it, ankle-deep in snow; while the women inside shivered and lamented. Elinor a prey to

wild anxiety.

When Preston went into the sleeping, dimly lighted house and found her alsent he would not know what on earth to make of it! He hated her to do things without letting him know explicitly; he had at all times a masculine feeling of responsibility for her welfare, and he would be furious if he found that she had been stuck in the snew during this storm under what he would, of course, consider incompetent direction.

Oh, dear! This marriage was a stupid, disabling sort of thing when it came to the pass that, if you could not have any real enjoyment in the companionship of your husband, you could not enjoy yourself without him either.

It was half past two when the limousine got across the track by the railroad station, its lights dimly showing through the whirl-ing snow. The last train had come in over an hour ago. A few minutes more and she was on her own steps, propelled by Donald's aid. He turned the key in the lock for her and helped her brush off the snow in the vestibule before running off.

The house was as she had left it - the ight turned down low in the hall. Preston's rat and cout were not there. Was it possisle he had not come in yet? She went ipstairs with a beating heart, calling softly ven before she turned on the light.

"Preston! Preston! Are you here?" There was no answer. He was not there, the looked for a written message from Ellen, in case he had telephoned earlier; but there was none. After two o'clock and the not home yet! Had he gone out to look or her? But, of course, that was absurd.

She threw off her wraps, took off her vershoes and stood there irresolute, listenng. Perhaps after all he had fallen asleep n the sofa in the drawing room. She ran gazing about her fearfully in their brilliance.

The trains had been running all right-Rex Courtney had said so. As she stood here in her ball gown listening, with an eerie sensation, the color suddenly flamed into her face with relief - there was his step now, scrunching and slipping on the walk outside; and then here he was before her in his big overcoat, his dark eyes smiling

"Hello!" he said in what seemed pleased surprise. "This is nice; I thought you'd have been in hed long ago. How fine you look! What's up?'

"I've been over to the dance at the Ridge Clubhouse with the Bannards and the rest, in the Iversons' limousine. I thought you wouldn't mind."

"No; of course not," he answered.

"What makes you so late?"

"Why, to tell the truth, the evening passed so quickly that when I looked at my watch the last train had gone; so I come out by the tube and the trelley. Wait here a moment while I take a look at the furnace."

Elinor could hear him shaking and rat-

Elinor could hear him shaking and rat-tling away at it before coming up again to drop on the sofa beside her, his long legs stretched out before him. He was evi-dently tired, yet there was something un-usually alert in his expression, a light in the eyes he fixed on her that seemed to come from some pleased thought which gave a new outlook on the world. His wife, sitting there with her white neek and shoulders rising out of the blue chiffon folds, her round bare arms lying negligently in her round bare arms lying negligently in her lap, and the gauzy spangled ornament trembling in her brown hair, felt for him, in her turn, that suddenly quickening sense of admiration that puts new life into the apparent monotony of marriage; she had not seen him look so young for a long time.

"Did you win this evening?" she asked.

"Win what? Oh, we only played one game; it was a draw. Kelmer's cousin, Mrs. Anderson—I've met her before; she lives in an apartment near him—called him.

lives in an apartment near him-called him lives in an apartment near him—called him up about half past nine and saked him to bring some of his records over for her phonograph: so I went round there with him. They had some kind of an impromptu party on, we found when we got there. And whom do you think I met? I never got such a surprise in all my life!" He paused for emphasis. "Minnie Trip!"

"Minnie Trip? I don't seem to remember her." and Elipor blankly.

said Elinor blankly.

"Oh, yes, you do! She was a girl I went to school with when we lived near Minneapolis. I've spoken to you about her a hun-dred times. It must be twenty-five years since we've seen each other—she's been do-ing settlement work in Chicago. Well, she's just as little and rely-poly and red-haired and jolly as ever, with just the same dimples, and snap in her eyer hasn't changed an atom. I said: 'Well, Min, it's good to see you! Do you remember how you used to boss me round and make me carry your books? And she said indeed she did, and a lot of trouble I gave her too! Once she threw a rock at me and hit me in the eye because I tried to pull her curis. Oh, she was a case, I can tell you! Well, we had a good talk over old times. We were off in a corner by ourselves."

"That must have been very pleasant," said Elinor vaguely. It is difficult for even the most devoted wife to show real interest in her husband's schoolgirl friends, "Did you stay there the rest of the evening?"

Mr. Chander nodded. "Yes. They had some pretty good music a lot of catchy tunes, with plenty of spring to 'em. I took down the names of some. I told Mrs. Anderson when I first went in to count me out of the dancing. And then er and er and — Well! A smile of deeply interested reminiscence overspread his face. "Will you believe it? The first thing I knew, Min said:

"'Stand right up on the floor, Preston Chandor, and put your feet the way I show you. And before I could tell where I was she had megoing off down the room with her. It was a Hesitation something or other I don't know what you call it. There wasn't any hesitation about her, though! Min said I got it the first clip—so trouble at all! She kept me at it too."

"Did you try it with any one else?" asked Elinor in an even tone.

"Oh, I tried a few things with a couple of other women. There seemed to be a

Cool Comfort for \$9.00

For an amazingly low cost per year, you can enjoy, sommer after summer, the refreshing, zestful breezes of a Robbins & Myers "STANDARD" Fan. Can you think of anything for so small an outlay that will bring equal health and pleasure to the home—that will help you go through the sweltering summer months with so much natural vim and vigor? See the "STANDARD" dealer in your vity today.

You can estimated a "STANISARD" Fan with any electric light socket—move it from the most in room, wherever a broose is wanted. It asses less than half the current of an undinary electric light. Swift, allow, steady. Made in all styles—relling, desk, bracket, musillating, exhaust. Write for free Fan Booklet. It will help make selection easy.

".... I've often wondered why some writer hasn't had the courage to put down on paper a true picture of a man. I don't mean a storybook man or the man the poets sing about, but just a plain, ordinary, everyday man-the sort women come to know in the first five years of their married life; the sort of man who ordinarily passes for 'good'; a man with all the weaknesses and meannesses and selfabrewes of a man. We have pictures enough of villams, but there isn't half the harm in a real villain there is in a lot of everyday men. The women know."

pretty nice set of fellows there; one of them belongs to the Ivonia Yacht Club. But they're all dance-mad, every one of them! I told them that, after trying it for the evening pretty thoroughly, it certainly didn't get me; I essidn't see anything in it at all!"

"Oh, Preston!" His wile's fare, which had been spurkling, suddenly clouded over:

her blue eyes became moist. "Fact!" said Mr. Chandor. He pressed "Fact!" said Mr. Chander. He pressed her hand tenderly; and, with the luminous expression still in his eyes, he rose and went over to the phonograph. "I'm dog-tired; but I was just wondering whether we haven't one of these records here. Hello! I thought so. That sounds all right, doesn't it? Want to try this a little with me before we go upstairs, dear? I may as well get the hung of that Maxime however you pronounce (t—before I forget it. Walt untill push back the rug. Now!— What on earth's making you lough so?"

"Oh, Preston! You've got it at last!"
His face took on a reluctant, shamelaced

His face took on a reluctant, shamelaced grin as his arms, already round her, held her ewaying form upright. "Well, you certainly do look sweet to-night, Mrs. Chandor?" he said fondly.

The long-looked-for ball at the Watkins' home was in full progress. Everybody was, as usual, dancing differently to the same deliriously sweet strains: the long, loose-kneed Mr. Crandall and the elegant Mrs. Reberts seemed to be intermittently sink-ing to the floor, like Little Sally Waters; Donald Bannard, with little Miss Prankly swung lightly across one arm, cast off from his moorings and went with the tide; Pres-ton, linked to the saild yet aerial Mrs. Ban-try by a finger tip, pranced gracefully along toward her with the expression and mien of a turesdor as she whirled ever and anon-just ahead of him; while Elinor, under the expalse direction of Mr. Brentwood, forged answaveringly in a straight line down the onewaveringly in a straight line down the room. Occasionally the eyes of the husband and wife met in swift and bappy accord. Theirs was the next turn together—the best

Theirs was the next turn together—the best of all. Oh, there was joy in it!

"Greatest twosome ever invented," said Mr. Iverson, wiping his forehead under his white hair as he paused by kind, motherly Mrs. Brentwood, who never performed, but leved to see her bushand do so. "This danning craze scorns is get hold of us alleven me, who ought to knew better at my age. What do you suppose is the reason!" Mrs. Brentwood united.

"Dear me!" she remarked with apparent irrelevance. "How I longed to dance thirty years ago! And I didn't dare to acknowledge it because I was married and supposed to be beyond such frivolity. You see, so many times we grow old because

see, so many times we grow old because we're expected to do so. This, Mr. Iverson, is just the natural upspringing of that which never dies out in us while we are alive—and thut's youth!"

Planning for 2914

A THOUSAND-YEAR museum, designed to preserve exhibits so nearly perfect that they will not have changed in appear-ance when shown to Americans in 2014, is a recent addition to the American Museum of Natural History, in New York. Dust, light, insects and moisture are the constant cosmics of museum exhibits; so special atorage vaults have been built, which will keep all four under perfect control and in all probability preserve exhibits for one thousand years. The buildings are not ex-pected to last for anything like that length of time, but the system will do its work of preservation perfectly well until the time for rew vaults comes along. Dust and light can be kept under control by constant atten-tion; so the real problems of ideal preser-vation are measure and insects. The vaults save been built of concrete, with perfectly fitting air-tight metal doors, so that neither moisture nor insects can get in.

In the event, however, of insects getting when the vaults are visited, for instance provision is made to kill them off by filling the vaults with some deadly gas for a few hours occasionally.

Exhibits that are not very exciting now, but which will be genuine curiosities hundreds of years from now, are being storedmuch as Indian baskets, headdresses and scapors. Some of the buckskin articles may not last a thousand years, because the Indian tanners did not do sufficiently perfect work; but it is predicted that most of the relies will last that long in good shape.

"It Took Us 70 Years to Make It"

You have smoked many tobaccos original nated by the Pattersons. You have found them good. Now, won't you try "Whip,"

themgood. Now, won't you try "Whip," our latest blend—our masterpiece—the culmination of 70 years' experience in blending amoking tobaccos?

We believe "Whip' is the best amoking tobacco ever blended. Fifty years ago my father introduced the mellon liuriey leaf as a pipe tobacco. And it was we Pattersons that first produced smoking tobaccos without "the bite"—that first produced the resuly-rolled style of tobacco now so popular.

We believe that "Whip' is as notable as achievement as any ever scored by the

We believe that "Whip" is as nouble as achievement as any ever scored by the Patterson family.

"Whip" is milder than any tobecco you ever smoked—so mild that you can smoke it all day and night—so fragent and satisfying that you will want to keep your pipe going all the time—so bland and genile that there is never a bite it your tongue or a tickle of your throst, no matter how much you smoke.

Ask your dealer for a one-ounce can at "Whip" at 5c;, or a two-ounce can at 10c, and you can prove the wonderful smoking qualities of "Whip." It is also put up in handsome Pottery Patented Self-Moistening Pound Humidors.

Or you can place the burden of proof

*Barracks and Beggar*s

(Continued from Page 4)

An Italian puts it this way: "Knowing how Austria ruled this country, would you want her back here? Would you want France setting up one government at Naples and another at Milan?"

Well, decidedly you wouldn't. You'd

well, decidedly you wouldn't. You'd muster the last pezsant into the ranks and sell his last shirt for gunpowder before you would suffer it. You'd embrace "bank-ruptcy armed to the teeth" with both arms. And when you cross the border you find exactly the same attitude, only looking in a

different direction. The president of a flourishing French bank mentioned casually that his eldest son was about to begin two years' active service

in the army.
"Is it literally true," I asked, "that your son serves his two years exactly as a day-laborer's son does?"
"Exactly," he declared with emphasis.

"There is no escape from military service, and everybody serves exactly alike."

and everybody serves exactly alike."

"But in the case of a man of means and influence," I persisted, "isn't there some way of getting his son off—hiring a substitute or something like that—or having him serve on easier conditions?"

"No, sir!" he declared with a touch of indignation. "Rich and poor, famous and unknown, they all serve exactly alike. If my son should evade his military service he would be disgraced. He couldn't belong to a decent club. He would be snubbed. Even a decent club. He would be snubbed. Even f be were rejected on account of some phys-ical defect it would be a humiliation to him. I served my time in the army, and I remember how nervous I was when I took the physical examination for fear they would find some flaw in me. If I had been rejected it would have been a lasting regret

Two years out of the life of a youth just

at college age must be something of a handi-cap," I suggested. "Can be continue his studies while serving?"

"No," said the banker. "They keep him pretty busy. He has little time for say-thing except his military duties. It makes him about two years late in entering wee

him about two years late in entering pro-lessional or business life."

Remembering that a novice's military duties consist largely in scrubbing up every-thing in sight, from the doorstep to the officers' boots, I ventured to ask: "And you don't resent that? You don't wish it changed?"

"It is inevitable," the banker regiled.

"It is inevitable," the banker replied. "Now the government has lengthened the term of active service to three years. I was in favor of that, and so, you will find, were a majority of Frenchmen. Look at what they are doing in Germany, with their new regiments and this extraordinary war tax. If they arm, we must arm. It is the price of our life. France could not endure another Sedan, Germany hates us as much as ever. To disarm would be to commit suicide. France would become a mere pawn in a

game played by the armed powers."

And—while in France—that looks rather convincing too. Only forty-three years ago the Prussians held Paris and exacted a war indemnity of a billion dollars.

Getting Acquainted in the Army

Nearly all Frenchmen talk the same way A great many of them, in fact, defend mili-A great many of them, in fact, defend min-tary service on its own account. The phys-ical training, they say, is very valuable, conducing materially to the nation's bealth and stamina. You can spot a man who has served in the army by his erect bearing, forward-looking eyes and firm step, they tell you. And if you go out to Versailles when they are breaking in recruits you will sen that they do get good bodily average. see that they do get good bodily exercise. But if your son, aged twenty, should announce that he proposed to devote the next two years of his life to physical exercise, you would probably yearn to engage in a few physical exercises yourself, with himself as the object thereof.

Military service is warmly defended also on social grounds. The head of a large French business, who has traveled in the United States, observed:

I can understand how the idea of having a son serve in the army would strike an American, for your army is wholly undemocratic, while our citizen armies are the most democratic institutions in the world. Every body goes into them on an equal footing. One result is that we Frenchmen know one another in a way that you Americans

and the English never do. In New York you see a roustabout, a cab driver, a street you see a roustabout, a cab driver, a street cleaner, and you really don't know that man at all. You don't know his points of view; how he thinks about things; what his experiences have been. If you had served two years in the army with him you would know him and he would know you. On the boulevards, not a great way from here, you may see a shabby man selling newspapers. I see him every now and then. That man and I served side by side years ago. I know him; he knows me."

The speaker was beaming with enthusi-

The speaker was beaming with enthusiasm by that time, and I acknowledged that to know one's fellow men is certainly a good thing. But I went away with some mental reservations. Thereafter I noticed particu-larly quite a number of shabby, middle-aged larly quite a number of shabby, middle-aged men who were selling papers on the houle-vards, and I wondered what particular advantage they might derive from "knowing" various well-placed, prosperous gentlemen like my acquaintance. I could easily imagine the advantage to the prosperous gentleman. Coming out of his office in correct clothes and polished boots, and stepping into a cah that was going to take him home to a good dinner, he might well derive a distinct pleasure from recognizing with an affahle nod and smile his former companion-in-arms. But as the former companion-in-arms shuffled off to his kennel to gnaw a crust, what particular advantage to gnaw a crust, what particular advantage was there to him? And as to mutual understanding—after many years during which the one has been going in cabe to good dinners and the other grawing crusts in a kennel—I was dubious about that also.

Military Service Popular in France

Finally military service is defended all over Europe on moral grounds. At least a dozon men, first and last, emphasized the point that it taught obedience to authority; or, as one of them more accurately put it. "It teaches people that some must com-mand and some must obey." Probably that is a grand lesson—and immensely im-portant from the point of view of those who are so fertunately situated that in the na-ture of the case they will be doing the com-manding rather than the obeying. I haven't the least doubt that this aspect of the case powerfully commends universal military service to the well-placed and well-to-do. That universal military service gives em-ployers a great leverage upon some classes of labor was well illustrated in France when the government crushed a railroad strike by summoning the strikers to serve as

From whatever motives, nearly everybody seems in favor of the military sys-tem—when it comes to a real test. At the last French elections, in April, the former premier, who was responsible for lengthening the term of active military service from two years to three, was returned to the Chamber by an overwhelming majority and the whole program of increased taxation was indorsed.

Taxes are not trifling now. On army and Taxes are not trifling now. On army and navy France spends nearly three hundred million dollars a year, while interest on the coloseal public debt—mainly a heritage of wars waged in the last hundred years—consumes two hundred and fifty million dollars more. In other words, with forty per cent of our population and about that proportion of our wealth, France has to spend more than half a billion dollars a year before she gets round to any really useful objects of expenditure.

But notody except the Socialists really

But noticely except the Socialists really objects. They say France must keep more than six hundred thousand men under arms at all times and maintain a fleet of thirty battleships and thirty-two cruisers in order to preserve her national existence; that to disarm would be to commit suicide. Just as Italy points to Austria and France as a compelling reason for bankrupting herself with armaments, so France points to Germany.

"If you want to know how the French people feel about it," a Parisian observed, just stroll over to the Place de la Concorde and glance at the statue of Strassburg.

Of course I had glanced at it. Round the splendid square are eight great statues in honor of important French cities. The Strassburg statue is half buried under garlands and mourning streamers, and has been ever since Prussia took the city away from France.

hang the cost." The advertising manager, in his expansive, free handed

way, was going to send out one hundred thousand form letters on our best, lithographed, 18c a pound stationery. After a few kind words from me, he found a splendid paper, firm and fine in texture, with a quality feel and rattle, that costs less than 9c a pound, east of the Mississippl. We didn't save any money for he sent out twice as many letters instead. That shows what I have to contend

with. The paper is Hammermill Bond and the form let-

ters are pulling fine.

Send for a valuable book, "The Signal System," and for big portions of samples in 12 colors, including forms, letterheads, etc., suited to your business. Please mention your business and position.

"But why not stroll a little farther," I objected, "and glance at the Arc de Tri-omphe or the Vendôme Column, by which Napoleon commemorated the pleusant fact that he had licked the Prussians out of their

boots? Where are you going to stop?"
You find, in fact, that all this arming of nation against nation has its virile root in the hatreds begetten of past wars. France thirsts to avenge her defeat at the hands of the Prussians two score years ago. Just as reasonably Prussia, then, might have been thirsting to avenge her equally crushing de-feat at the hunds of the French three score years earlier. Italy must keep armed to the teeth lest Austria avenge her defeats of the middle of the nineteenth century; and if you go back a little way Austria owes a thrashing to every nation in Europe. In Berlin I was bidden to trot back to

Paris and take another look at that Strass-burg statue. Germans point to its peren-nial heap of garlands as proof of France's hatred for the Fatherland.

hatred for the Fatherland.

"Turn to the map and see our position," said a Berliner. "There is France on one side, Austria and Russia on another, and England across a hand's breadth of salt water which ber ships command—and all of them lemon-color with hatred of Germany. Do you think for an instant that we could disarm or dishand a single regiment?"

So I found it everywhere—always not only a convincing but an absolutely invincible reason for mastering in the last man and spending the last dollar. Comparatively lew Americans, I am satisfied, understand the feeling over there. To most of us

stand the feeling over there. To most of us their furious competition in armaments, adding regiment to regiment and piling tax so tax until peace has become far more costly than war formerly was, seems ridic-ulous or a bit insane. We are apt to think of it as something hatched in chancelleries and imposed upon reluctant people. But there is no doubt that a great part of the people themselves are in favor of it.

The only important opposition anywhere comes from the Socialists, and I doubt whether Socialist opposition gues much below the surface. For example, Germany last year had eight hundred thousand men under arms and a fleet second only to that of England, with forty-one battleships aftest or building and fifty-two cruisers, and was spending on army and navy about two hundred and fifty million dollars a year. The emperor then proposed to increase the peace footing of the army by a hundred and thirty-six thousand men, and to raise a special military contribution of two hundred

and forty million dollars.

Now anti-militarism is a cardinal tenet in the Socialist creed. The party has one hundred and ten granthers in the Relabstag out of a total of three tondred and sivery seven scarniers. The mentions had always vertex against taken for tellitary purposes. But we this proposal which one of the Secolar recoders the order as "the most momentum military all that a government ever dared offer a country," that voted outcommonly for the government.

I know of.

A few months later Germany was n agitated—for a fortnight—over the Zalincident. Military officers stationed in town of the conquered French provsuperseded civil authority and behaved very high-handed, not to say outrage manner toward some civilians. There a good deal of angry talk in the newspa about military despotism and saber. The Reichstag, by a decisive majo passed a vote of censure on the imperhanceller, which in England or Free would have brought an immediate dow of the ministry.

of the ministry. English and American newspapers as

English and American newspapers as discussed forthcoming changes of a per tous nature in the German constitution with the emperor reduced to a mere a leader, like the British king.

But the emperor simply shrugged shoulders. When I was in Berlin suffiction had elapsed for a sober second thou and every well-informed man with whe talked assured me that as a net result of Zabern incident the government where we have the Kaiser—was stronger than And a little later, when Russia ado measures that will work out an increaser peace strength by four hundred to sand men, the Kaiser could have had thing he wanted—that is, in the conting that there is anything he wants in the pleal way which he doesn't have now.

The German Income Tax

Those Russian proposals sent a through Germany which was percepeven to a foreigner. Men talked of not the way we talk of it here as somet very remote and conjectural, but as a of deadly imminence. Americans this war about twice in a decade, and then no very losen interest. In Europe think of it all the time. It is so much it air that Americans need live in any F pean country only a short time to get systems thoroughly impregnated wit. I talked with a good many American the have resided in Europe for some and found them, to a man, as much mitted to the militariat program as natives are—and always from the pointies of the country in which they are deciled. The American living in Londor the vital necessity to England of maining as many warnings as any other

ciled. The American living in London the vital necessity to England of maining as many warships as any other rations. Otherwise France and Russ Germany and Italy might shut off her supplies, starve her into submission month, and walk off with all her color The American in Paris sees that a disastrance would immediately sink to insignate among the nations, with a rolling and school of the American In Rome he sees that Atwoold reimpose her detestable rule the country, or Austria and France will in a norde of Cosacka across the test, indies the Kalser has a very validation of the Rome prepared for them, or Engelshing up German East Africa.

For each particular country there regent reason why it must not let up it reimpetition of regiments and dreadnout the people of that country believe vate for it and pay for it. Probably is no better test of a man's belief in a chan the cheerfulness with which he lay for it, and in that respect the Kacatraordinary military contribution brooff come interesting evidence.

of twenty-five hundred dollars would pay a total income tax of about one hundred and fifty dollars.

Now the special military contribution in-cluded, not only a tax on principal, but a supertax on incomes above twelve hundred and fifty dollars a year. Calculating on income-tax returns and other data, the government estimated that the total contribution would reach two hundred and forty million dollars, and in order to induce patriotic citizens to disclose their full incomes the government announced that if any citizen's return for the extraordinary contribu-tion showed a larger income than he had been reporting for the normal income tax the discrepancy would be forgiven him; the government would neither prosecute him for having failed to disclose his full income not attempt to collect arrears.

The result was that the first installment of the extraordinary contribution, which was expected to yield only a third of the total, yielded nearly two-thirds as much as the government had calculated upon getting from all three installments. It is true that immunity was offered for tax-dodging sins of the past, yet the citizen who disclosed a larger income than he had been paying taxes upon certainly knew that he would be obliged in the future to pay the regular tax on the full income, so it stands as an example of the German's willingness to foot the military bill.

The German business man speaks of his war taxes as insurance—that is, he regards the tax receipt as a policy of insurance that for another twelve months no British cruiser will shoot the roof off his warehouse

As in every country where military service is universal and compulsory, its physi-cal benefits are much extelled.

But the death rate in Germany, France

and Italy, where military service is univer-sal, is considerably higher than in England, Wales, Scotland and the registration area of the United States, where, comparatively

spenking, there is no military service.

The alleged physical benefits, however, are one of the mainstays of the militarist system. This spring a large and distin-guished delegation waited upon the prime nunister of England to urge the adoption in that country of compulsory military services on the Continental plan. Here are some of the arguments presented, as reported in the London Times:

Militarism in England

A manufacturer: "As the senior working partner in a firm employing over nine thou-sand men and boys, he believed that univer-sal military training would not disorganize business, though it would of course entail reorganization. Any inconvenience during the period of reorganization would not last more than one or two years and would be amply and permanently compensated for by the improved physical condition and general well-being of the employees." Sir James Crichton-Browne: "National

service is now absolutely necessary to com-plets our educational system and to insure the freedom of the next generation from many crippling blemishes and defects. Military drill and discipline during adolescence would enlarge the mental caliber of the nation.'

The Dean of Durham: "While visiting America he had beard again and again that the young Englishman was conspicuous among immigrants for his helplessness before the novel and bewildering conditions of American life. He could not but runnect that fact with the significant circumstance that of all Europeans entering America

probably the young Englishman was the only one who had never passed through systematic military training."

It is not difficult to read between the lines here. Military service is necessary because of the physical henefits which will flow from it; also as a powerful deterrent to various social aberrations, such as strikes to various spend aberrations, such as strikes and unearned-increment taxes, which are naturally distressing to elderly gentlemen in possession of pleasant jobs and comfortable

This English case illuminates the whole subject. A few days after the delegation waited upon the prime minister the government's supplementary naval estimates were presented to the House of Commons. They brought the navy bill for the year up to two hundred and fifty million dollars. The bill has been rapidly increasing year by year. Great Britain now has seventy-two battleships and one hundred and thirty-two CHARLES DE LA CONTROL DE LA CO

cruisers affect or building a ficet superior to those of any other two European powers. That has been the safety mark for Eng-land—a freet equal to any other two. But of late distinguished military men, headed by Lurd Roberts, have discovered that this great fleet is little better than a broken reed to lean upon unless it is complemented by a large, well-drilled standing army. Otherwise, what would happen? Why, in case of a war with Garmany the fleet might sink the Kaiser's dreadnoughts, but there England's military power would stop. She would be in the humiliating position of a dog that has breed a cut and can only sit at the foul of the tree and lurk,

So everywhere the military argument proceeds in a circle, or rather in an accend-ing spiral. The superor calls upon Germany to increme the peace footing by a bundred and therty thousand men and to ruse so extraordinary was fund of two hundred and forty million dellars by a supresent and sarry manner designs by a su-present effort, in order that the national existence of the Fatherland may be finally assured: Within a short time Russia brings forward plans to increase the peace footing by four bundred thousand men, involving an extraordinary expenditure of one hun-dred and dity-five million dollars, and France longthers the term of active military service by half. So Germany's relative position is what it was before the supreme effort was made.

There was no unional spectacle in Stock-icolm last February. Over curty thousand Smedish persons from all parts of the Smallsh passants from all parts of the singless test at the considers of the city, married through the streets to the royal palace and politicated the sing to increase the army. They were muchy all small farmers, some of them had traveled upward of seven bushed rolles; they were their best clothes and carried various emblance of their districts. They are the test, and much for the bill; yet this man is have been a voluntary, spontaneous demonstration truly reflecting the wish of the man of the people. of the mass of the people

The Ever-Ascending Spiral

And it is very easy to understand that And it a very easy to understand that was. The immunitation was inspired by that fluore had been massing troops in Francis direct within purchase of the Swearth border. Within a be-years those the search present have seen the fluor and the sample and bloody rate of the Cour extended like a prague over Fieldard, birding out every particle of rate and there. The Gay and Festive Claverhouse—An Extravaganza

LAVERHOUSE was just as wicked, and extravagant, and unprincipled. and good-looking, and altogether delightful as he could be. Everybody execrated and backguarded and loved him. He was a sort of reprehensible tot genial cyclone let loose in good society. He was all things that he shouldn't have been — at arce the joy and the curse of his stimates. Rich, handsome, two does from a title and unmarried. Black-haired, gray-eyed, large and a linguist. Idle, worthless and a popular parti. There you have our hero en silhouette, as the world in general knew him. As he knew himself was another matter. Very possibly very much another matter. Scientiate have not yet settled whether a man be more respontible for being than for having: more culpable as to stealing than se to curly hair; more praiseworthy as to postry than as to princely blood.

It happened-just acciden-tally fell out - that Claverhouse, the Honorable Ernest Claverhouse, to give him his full title, was born with no sense of respensibility toward anything or inybody. There lay the key to all his character. He never was shie to comprehend a social tandard that included the rights r pleasure of any other than invelf. Nothing in him made in try to attain to the possesion of such a comprehension, or it never struck him as in the stat needful. Successive nurses, overnesses, tutors and teachers shored hard to instil the missig quality, but they never suc-reded in the least. Neither the sot idea nor the soil necessary its growth existed. Their targe grew up just as he had 4 out, and lived for himself one, a creature as free from moral pullbacks as any wren elephant that was ever alive.

At thirty he had a goodly freer behind him and was still fite calm as to slashing along

thlessly. Then one fine day he fell fil, and was very fil. Fancy then if you can the clings of the famous specialist who artended him, when that same pompous and inderous practitioner decided that the only course open to him was to tell the good-impered—I said, did I not, that he was determiny good-impered—young reprobate at he must die!

They were in the luxurious quarters occupied by the young man, and the young man meelf was sitting up in bed, ghastly wolte, and with horrid stears live round his eyes d mouth. The room was well done in mahogany and yellow, and the specialist matched e room to a nicety. He sat on a chair and the nurse stead at the other side of the bed mand. Claverhouse's cosmopolitan vales, waited in the dressing morn beyond, and it is three o'clock in the afternoon of a late August day. The doctor was very quiet

By Amme Wormer

ILLUSTRATED BY ELABERTER P. VSDERWOOD

"I Might Just Laggers, Mirr. the Loading Out of a Cop of Fee to Four Mee, Watson."

and made the hard statement both kindly and carefully. He watched the effect with great attention.

Claverhouse didn't say anything at tirst, turning his hands up and scrutinising the pairos maticulously, and then arranging his sheet very county and precisely in one long, even fold across the bed.

"We all have to face many, hard facts in life," the destor added.

Claverhouse examined the radis of his pajaman and straightered the undergram seam of each above.

"Life is full of hard facts." went on the sitter at the bedside.

The invalid tipped his head round and looked at him. "You don't mean it really?" be said with great interest. "How did you ever find that out?"

The doctor did not color, but the outer end of one of his eyebrows just twitched a bit. In really be wanted to feel sympathy for an earl's nephers.

"And how soon may I expect my happy release?" the patient continued, evidently feeling that the burden of keeping up the conversation was now passed to him.

The ductor bit his lip.

"You don't expect one to be absolutely careless as to such a criding detail of my future, do you?" the young man went ou. "It will be conveniont for me to make a few plana. I usually go to Scotland for the shouting; but if I'm going to die first of course I'll give up going."

As this was latter August the farmers specialist felt quite sure as to the shooting, but he felt equally sure that the man sitting up to bed would not be on his feet to shoot.

"As to plane, if you take the greatest of care, the greatest of rare, observe," he said with precision of word and emphasis, "I

cision of word and emphasis, "I emproved and considered—"perhaps six months." It was in this way

that one of the greatest of modern medical man haped possibly to Inghton the gay and festive Claverhouse into a few stray hits of produces. He looked away as he spoke but having spoken be returned his eyes to the field of war, and was more than a little depressed to note that the decemed man was looking for his eigenste case. Abstinence from eigenvites was not of the chiefest of the modern of produce enjoined.

"Have con?" asked Chaverboose, swooping toward the case, which rested on a table by he aide. The swoop was also a part of the forbidden, and the medical man was subjected to further mental anguish in being forced to witness it.

"No, thanks," he responded briefly.

Claverhouse lit a rigarette and leaned back, puffing gently. "Six months, at marranged, as if striving to impress the fact on his momory. "Six months, or

August-September, October, and so forth, clear through to spring. If I take care?"
"That's where it is, you see."

"Hm!"

There was a silence. The nurse walked into the next room and returned with a vase of trailing vince which she placed on a cabinet in the corner. The cabinet looked Chippendale and was a cooler holding iced wines.

"Perhaps you'll have a drink?" the ill man asked suddenly. The doctor started slightly and shook his head. "Now I put it to you --- " posed Claverhouse, reaching for his monocle and applying it with great precision. "Now I put it to you, supposing I don't take care, eh?"

The doctor was quite prepared for that, considering as he did that such would be the likeliest course of both patient and malady.

"Any day," he said gravely. "Any day."

"Any day?" "Any day."

"And what," asked the man in bed, carefully folding his arms and grinning pleasantly, "what might you call taking care now?

This had all been explained, not once but several times; yet the doctor was patient. "Abstention from stimulants and excitement of all kinds," he repeated slowly.

Claverhouse nedded. "I quite understand. I quite understand." He dropped his chin and considered. Then he threw up his head, took the cigarette from between his lips, pitched the ash off upon the rug and smiled. "And so, if that's all, I think I needn't trouble you further. I mean, you know, you can go."

The famous specialist was totally unprepared for that; even though he did suppose that he, in common with all the rest of their little world, did know the man before him. But professional dignity is in itself a science, and his was well-grounded. He arose at once and his face expressed nothing.

"Shall I make a report to his lordship?" he asked. They both knew that he would have to so report, but he usked as

a matter of departing courtesy,
"What for?" snapped Claverhouse.

"It—it is customary."
"I don't come next," snarled the patient, replacing his cigarette between his lips and grabbing up the morning papers. "Report to Vivian Beck, if you feel so inclined.

"Do you desire that I make a report to any one else!" "I don't care what you do from now on," concluded Claverhouse, turning his back and opening a paper. "Suit

It may have been surmised that those about the Houorable Ernest must often have writhed in the effort to control their tempers.

The gentleman now leaving the room did not exactly writhe, but he had great difficulty in speaking quite calmiy when he came to the door.

"I trust," he said, pausing there, "that you will make every effort toward a temperate -

And then he was startled indeed. For Claverhouse, slamming over in bed, his eyes flashing, cried:
"Get out! Get out! Don't bore me any more!"

And then, flinging his arms across his eyes, he lay quite still and silent, while the doctor, offended mortally, stalked out.

WHEN he was gone and all doors had closed behind him, the man on the bed uncovered his eyes and said to the flushed nurse who stood now by the window, having returned from administering to the specialist such stray bits of attentiveness as she felt survive within her after the

last scene: "You leave the room, too, at once."

She went out again at that and Claverhouse called loudly for his valet, who came directly and stood by the bedside, smiling cheerfully.

"Conrad, you're the one joy of my existence."

"Yes, sir, Thank you, sir,"

"You heard all that old idiot said?"

"Yes, sir."

Slavonic devotion.

"All that tommyrot about my having to die?"

Claverhouse lifted up his eyes -lovely Scotch-Irish eyes they were, with long lashes striping their dangerous attractiveness - and gave a glance full of meaning into those other eyes meeting his, those good brown eyes of slavish and

"Conrad, my lad, we've no secrets from each other. I don't know whether I'm going to die or not; but so far as actually dying by itself is concerned, I don't give a damn. I've lived in lots of countries and I don't mind trying a new one any time. But"-he stopped, and then went on impressively - "there's one little matter that I want to set straight before I go, if I really must go, and that's a bit of work that will require a deal of planning. You'll have to help me; and the only way that you can help me is to do just what I've to do myself-launch out into the deep water and then go it blind and follow your own inclinations. I've been thinking for some time that something must be done, and since that old fool began talking I've been arranging what to do. You know me well, and you know

Would be Mis Junnesenr

the thought and care which I give to each detail of my life. I've given the same thought and care to this matter. I know just what I mean to do. I'd tell you the whole of it if I thought it would do any good; but it wouldn't. All that you need to know you'll know in good time, depend upon it. As for the rest, just remember that if I should let you into the whole secret you'd be bound to hash the game; and the game in this case is one that can't be hashed. It's one that at all odds must be put through successfully. Do you understand?"

The valet looked anything but understanding; but, as that was the look which his master liked to see him wearing and which he accordingly wore the most of the time, it

really didn't count for much.
"I'll do my best, sir," he pledged himself cheerfully;

and Claverhouse was satisfied.

"I'll warrant that you will," besaid, reaching for another of the forbidden eigarettes. "And now first of all I'll tell you what I want you to do. I want you to go and try to get hold of Captain Beck. I must see him as soon as I can. Do you think you can find him this afternoon and get him here?"

"I'll try very hard, sir."
"Good! And if you succeed, if he comes here, while he's here you'll take a taxi to Portland Place, to Wythe House. I'll have a note ready for Miss Wythe. I'll hand it to you when you show Beck in. If she's at home- and she will be, for we're all up in town for the same reason: to see whether I'm to live or die, you know - you'll give her the note, and she'll read it: and then I'm fairly certain that she and her maid will return here with you. You'll show them up. It's all part of my plan, and as I've always been a lucky dog I think that I can work the whole game through to a finish. I think so. Now go.

Conrad went.

Then the nurse came back into the room.

"I shan't need you for the rest of the afternoon," Claverhouse said in an incisive tone; "and I think that really I shall not need you at all any more. My man is much more useful to me. You can pack up and I'll write you a check for whatever I owe you. Fetch me my check-

The nurse, open-eyed and open-mouthed, shivered and obeyed. She was too glad to get away to cavil at being dismissed, however, as her main duty had been playing cards from midnight on when her patient couldn't sleep.

When the check was written Claverhouse smiled and looked about the room in an extremely pleasant manner.

"Now let me see if there's anything I want before you go! The doctor said that I must not drink; so put its whisky and soda by me. And-ah, yes-my portion I think that's all. Good-by!"

The nurse said good-by and went out. Of course in remained in the hall until she saw the valet returning, but Claverhouse did not know it.

He wrote his note; and then he smoked and real, we pleased with himself.

"I don't wonder that Madeleine worships me," be reflected, as he poured out a stiff drink. "I'm sun : change from the ordinary mortal. But she musta't love me any more." He finished the drink and poured out a second.

"No, no; she mustn't love me any more." He finished the second and poured out a third. "Curious creatures, girls," he observed, as he unfolisi another newspaper. "But then I'm curious too. The

thing is to -He ceased to think, becoming interested in his resting just there.

WHEN Conrad returned to say Captain Beck was coming immediately Claverhouse flung down in paper and looked really very well pleased.

"And here's the note," he said, shying it across the hed

III

"All written and ready and waiting, you see."
Conrad picked it up and asked if there was not some thing he could do for his master in preparation for the captain's visit.

"Oh, I don't know," said Claverhouse, reaching for the eternal cigarette. "Twist the chair round a bit perhaps-there, like that. I fancy there's nothing else. And now, a soon as he's here go on with that note at once. Don't low any time, for there won't be any time to lose." And then laughing in a good-looking, easy-going, riotous way that was all his own, he added: "I ought to have been a writer for the stage. I calculate my exits and entrances a prettily. 'Beck, left bedside front. Conrad, exit rear incr right." But I'll tell you one thing you can do before rosning along; and that is you might - I don't ask it, but you might-just fetch another bottle of whisky and a bulsiphon, for the doctor's prohibition has given me a most awful thirst."

Conrad looked a little bothered, but only a little and fetched the whisky.

"And do not ever forget or let me forget that I am to give up smoking," Claverhouse added, reaching for the matches now. "And, therefore, while you're out buy another dozen boxes of cigarettes."

Conrad bowed; and just at that instant Vivise Ber rapped at the door. The valet hastened to open to bin Then the cousin, who stood between Claverhouse and the gray-haired and tottering title of their uncle, the salstood also between him and his sitting-room door-a talhandsome, indignant and protesting image: for Vivia Beck bitterly hated the man who would be his success? he himself never had a son; hated him with all the intensity which may be postulated for a decent man who sees it a thorough-paced good-for-nothing the rival beloved of the girl whom he desires to marry. Vivian Beck loathed and despised his cousin as much as he hated him. He regarded him as unworthy the company of gentlemen. He promet him when he could avoid it; but he had come to-du. because the message had run that Claverhouse mut de and that he desired to see him.

He stood now halfway between the bed and the decmore than a little startled at the cigarette and the splea-

the smile and the gesture.
"You don't look as though you were dying," Weat Beck's face said for him; and Claverhouse, understanding perfectly, replied aloud with: "Too bad, isn't it?"

Captain Beck frowned and advanced a little.
"No, I won't shake hands," said Claverhouse, with auof his head forward; "for I abominate you worse the poison and know that you reciprocate. But sit!" is pointed to the conveniently placed chair and tossed in cigarette-case to that side of the bed.

"I didn't lancy coming," said Beck, standing wo straight and looking extremely forbidding: "but your >= put it up to me rather strongly. Said you were I repeated the doctor's opinion and all that."

You may as well sit down," Claverhouse into leaning back and arranging the sheet fold with his sertomed precision. "I won't kill you, you know," be on, lifting his brows whimsically. "Nor yet attack?" I prefer not to shake hands with you; but still I have at for you to do you a kindness. Won't you really sit de-You can go, Conrad."

Conrad left the room.

"I'll stand, if you don't mind," said Beck, folding arms. "I prefer standing."

"As you please," Claverhouse acceded. "Perbaought to stand, too, for I'm not overfond of you as already implied. But I can't stand unfortunately too beastly ill. So we'll meet on a half-and-half so Which reminds me: won't you have a whisky and will

"No, thanks," declined the captain. "But go on now. What do you want with me? You're seedy and have sent, and I want to know why."

Claverhouse, who never under any circumstances put himself out for any one, and whose main joy lay in the ingenuity with which he could torment, now poured himself out a glass of Scotch, diluted it from the siphon and drank it deliberately.

"Curious that she wouldn't have you," he said as he set the glass down; "isn't it now? Especially when you and I both know whom she would have and why she can't have him." Then he looked earnestly into his empty glass.

The blood mounted to Beck's face until his blond hair and mustaches appeared white against its crimson. The vains swelled high in his temples and the cords stood out in his neck. He was obviously furious. And his cousin was looking at him and noting every sign of his emotion.

"I'd like to love like that," Claverhouse commented

"I'd like to love like that," Claverhouse commented slowly; "but I never could. It isn't in me. I never felt anything take possession of me yet. I've never met anybody or anything that struck me as worth getting red about."

Beck said nothing, but bit his lip and slowly paied again. Clayerhouse reached for his cigarette case.

A wax match flamed, and he filled his lungs with the ragrant smoke of the rolled tobacco. "And now, Vyvie," easing back again and arranging the bedelothes about him arefully, "before I forget it let me ask you a question: Do rou remember the old place, Yewstones, that old, old nanor of our respected ancestors? The house where we used to have the larks when we were boys? How long since

ou've been there?"
Captain Beck said nothing.
"Is it empty or rented or what?"
Captain Beck shook his head.

"I've a reason for wanting to know. I've a goed reason. I've been thinking of the house this whole afternoon.

ou surely remember those walls not the paneled rooms. We used a drive the servants out of their eads, I recollect."

"Of course I remember the lace," the captain said then, it's closed years since, I fancy."

"Know nothing of its present ate?" "Nothing."

"Nothing whatever?"

Beck moved to the chair and it down. The conversation omised to be prolonged. "Yewstopes is vacant," he re-

"Yewstones is vacant," he reurned in an expressionless voice. It's been vacant for some time, believe that our uncle keeps a an and his wife in the lodge, to sen windows and build fires. I m't know that they do, however, d I know nothing else as to any

"You don't know whether it's bitable?"

"I said I knew nothing else, thing else whatever."

Claverhouse turned upon his llows.

"I'm going to give you ashock," said presently. "It will be etty difficult for you to hear it. s this: I've sent for Madeleine come here to see me. I have a ile scheme. It's quite a difficult atter, but I think it can be put rough. When she comes I want u to go in there and listen." pointed to the next room. hat's part of your work—to sit there."

'I'll do nothing of the kind," d Captain Beck indignantly, have no desire to play eavesopper."

Ie sounded unpleasantly

ighty and scornful.

"laverhouse poured himself out other peg. "You know you be pig-headed if you choose," said, stopping between swals to speak over the rim of his sa. "If I'd cut out drinking I smoking I could live long ugh to ruin all our lives. But k at me; I ruin no one. I am ag right on killing myself. It ildn't be playing the game for to live row."

Rot!" muttered Beck with

"Well, if you think so," said his cousin agreeably. "But don't speak in that tone again, for it goes near to making me angry. And if I fly into a rage I'm liable to drop dead. And if I drop dead, as things are now she'll worship me to the last day she lives. You know that as well as I do. Girls are like that."

Beck drew a very deep breath. "What do you want with her?" he asked sharply.

"I want to take her into my confidence," said Claverhouse, putting down his empty glass. "And I want to prove to you beyond the shadow of a doubt that I'm an upright and honorable man. The only way to make that clear is to let you hear Madeleine and me talk together. I give you the chance. You can take it or leave it, There's the room. Go in and listen; and maybe some time you will follow up the advantage it will give you by going in and winning.

"If you don't want to listen you can go out the other door at any minute. I'll never know how long you stayed. Suit yourself."

"Has Madeleine Wythe actually consented to come here to your rooms? or are you merely asking her to do so?" Vivian Back demanded.

"She is coming with her maid and my valet."

"You're a blackguard, Claverbouse, to let her do such a thing."

"The leopard can't change his spots," returned the ill man calmly enough; "but we won't argue. I know what I'm about."

There was a short, pregnant silence; and then the captain suddenly ruse and stalked through the door which Claverhouse had indicated.

"Hetter take some cigarettes with you," his cousin called after him; but the only response was a violently banged door.

Then Claverhouse shook the ash from his own cigarette and turned again to his newspapers. "That's one reason

why really decent fellows have such a hard time in this world," he observed cryptically to himself as he hunted for an article of interest: "they're made the way he is."

w

A FEW minutes later Conrad returned from his second voyage of good or evil omen.

"Well?" queried his master, looking over the paper.

"Miss Wythe and the housekeeper, Mrs. Wilson, are

"Miss Wythe and the housekeeper, Mrs. Wilson, ar here, sir."

Claverhouse smiled joyously. "Good. Bring Miss Wythe in at once and give Mrs. Wilson a chair in the sitting room where she can look out of the window. . . . And Conrad...."

"Yen, sir."

"Keep watch." Claverhouse indicated the inner room and raised his eyebrows. "Keep a good watch!"

"Yes, sir."

"But don't ever tell me what you see, unless I expressly ask. Mind that."

"Yes, sir." Conrad had approached the bed. Now he spoke very low. "Perhaps he's gone already, sir."

"Perhaps, but I don't want to know it if he has. I want to play my part naturally; and to do that I mustn't know too much."

"Very good, sir," replied the valet.

"And now hand me a hairbrush."

Conrad obeyed. Claverhouse brushed his hair most carefully, and again arranged his bed-sheet in one long, beautifully even fold.

"New you may fetch Miss Wythe, and stay within call." Conrad hastened to obey.

"Vivian," Claverhouse whispered to himself when alone, "you're a fool if you're not there. But it would be just like you to be a fool,"

Then he fixed his eyes expectantly on the door, which presently opened to allow Madeleine Wythe, tall, slender,

> lovely and thickly veiled, to be shown in by Conrad, who, having performed that service, instantly retreated and closed the door after him.

> "Well," said Claverhouse, extending his hand, "so you're here. Welcome!"

> She stood quite still, unwrapping herscarf. When it was all put back he saw that she was weeping.

> "It was very good of you to come," he said then quickly in a casual tone. "Sit down!" And he pointed to the chair which Beck had occupied.

But she did not sit down, going to the foot of the hed instead and standing there, her elbows upon the crossbar, staring hard at him.

"Oh, Ernest," she said at last,
"it can't be true what your letter
said. It can't be that the doctor
really knows. Persons do pull
through, even with the most awful
things."

"Sit down and we'll talk about it," said Claverhouse, speaking in a gentle, serious tone. "It's awfully good of you to come and you know how I appreciate it. Still, Madeleine dear, I'm afraid that all I wrote you is only too true. But . . . after all, what of that?"

The tears swiftly chased one another down the girl's checks.

"Ernest, Ernest --- " She could say no more.

Claverhouse looked troubled.

"Be a good girl and listen," he said kindly. "I shouldn't have sent for you if it hadn't been most awfully necessary, you know that; but now that you're here we mustn't waste precious time. You love me, don't you, and want to please me?"

She nodded, sobbing. "But can't the doctors do something? Can't you go somewhere and be helped? Can't——"

Claverhouse put his hand to his head. "Madeleine, I haven't much breath to talk and I never liked being interrupted. I've sent for you to speak to you very seriously. Will you stop crying and sit down in that chair and listen to me, or will you go away at once?

(Continued on Page 45)

"I Know a Girl Who Hax Professed to be Madly in Love With Me Far Ever and Ever Ju Long"

THE GENTLEMANLY THING

MR. ALBERT EDWARD HARTSHORNE was not a gentleman exactly, either by birth or education; but somehow he always felt that Nature had designed him for that state of being—so perhaps it is not to

he wondered at that this instinctive sense came to have an important bearing on his life. Still, he was not at all puffed up about it. He gave himself no airs; he wore no side on account of it—that is, in the days before the great adventure.

It began—this splendid and signal experience—during the first fortnight in September, at Sheercliffe-on-Sea. Almost as a matter of course Mr. Hartshorne spent the fourteen days' holiday, so kindly granted to him every year by the Palatial Insurance Company, at that fashionable watering place on the southeastern coast of Britain.

It was rather expensive, for everything was on a grand scale at Sheereliffe-on-Sea. including its prices. It was "a guinea a minute," in fact, as Mr. Hartshorne always said; but he stinted himself in cigarettes and picture palaces for fifty rather drab and uninspired weeks in order that he might enter his kingdom for one fortnight in the year.

And it was worth it every time to Mr. Albert Edward Hartshorne, as he had confided more than once to his admiring friend and colleague, Mr. Percy Burrows, whose democratic soul was entisfied with unlimited straight-cut and bird's-eye, and the female

society of Margate.

"Fact is, Bert," said Mr. Burrows, as he accompanied his friend in a taxi to Liverposi Street on the Saturday afternson of Mr. Hartshorne's annual departure for Sheer-cliffe-on-Sea—"fact is, Bert, you are a born nut! It's something in you—it's something you can't account for; but, right enough, it's there! I should no more think of taking a taxi for Sheer-cliffe-on-Sea than I should think of setting out for the moon on a motor bleycle! But, as I say, it's something that's there!"

Mr. Hartshorne did not take a first-class return, though he hesitated about even that.

It was second-class this time; but, with a rise of half a crown a week in his salary, due on the first of the following May, he had hopes of being able to afford even that next year.

It was when he had settled himself, with his Gladstone bag, his lawn-tennis racket, and his favorite novelist in an excellent sevenpenny edition, on the cushions of his compartment, and had exhorted Mr. Burrows to be good while he was away, that Mr. Albert Edward Hartshorne really began to live. As he moved out of the station a new aura enveloped his being. He inhabited a new heaven and a new earth.

After a very good tea at his boarding house—The Durdans, Rosebery Avenue—Mr. Hartshorne took his first constitutional that evening on the Marine Parade. In his new suit, so full of style and that indefinable quality called snap; in his well-polished brown abose, each displaying two inches of light green sock; in his new straw hat, with the ribbon of the Bagsworth Free Wheelers, whose colors were the same as I Zingari, except that they were worn the other way up; and twirling a small case with the abandon of one absolutely and completely happy—he was ready to welcome adventure with both hands.

This romantic feeling crystallized presently into an intense desire to speak to a girl. Mr. Hartshorne did not know a soul in Sheercliffe-on-Sea except his landlady, Mrs. Price, who had welcomed him as an old friend. And the longer he walked up and down the Marine Parade the more intense grew the craving for Jemale society that had so suddenly descended on him.

There was one girl in particular who had caught his eye. She was the real thing—that was the point to which the subtle laws of Mr. Hartshorne's being invariably began directing him—in her very plain but well-cut blue serge coat and skirt, and her very neat straw hat; with her Atalanta-like carriage—as his favorite novelist would have said—and her head held so proudly, with its air of smiling disdain. Yes; that girl, whoever she might be, was clearly, unmistakably it.

That was the kind of girl you seldom saw in Leadenhall Street, E. C. Romance was in the very salt of the atmosphere of this wonderful place. She looked so nice that he felt he must - he really must - risk it! As she passed him the third time she met his eye. He raised his new hat with By J. C. SNAITH

A Pair of Ciertaux Gray Ages Wont Literally Right Through Mr. Albert Edward Marthurne

its startling ribbon, a combination that in other glad and glorious fortnights at Sheercliffe-on-Sea had done remarkable things; he raised his hat with a studied grace of style and murmured:

"Nies evening-isn't it?"

And Mr. Hartsborne met with a rebuff. There was no doubt about it—a rebuff! A very firm and charmingly rounded chin came forward a little; a pair of really giorious gray eyes upened in a way that suggested a cobra unbooding itself, and they went literally right through Mr. Albert Edward Hartsborne. Yes; it was a rebuff—not a doubt about that.

Mr. Hartshorne sat down on the first seat he came to in order to collect himself a little. He must really be more careful. Every formight, as it came round, seemed to find him a little more ambitious. There was a kind of demon in him that urged him to fly at higher and higher game.

Two years ago he would never have risked such a fall!

He must not overdo it altogether; he must not lose entirely
his sense of proportion. Why, that girl was a regular outand-outer! Even the dash, the style, the address of an
Albert Edward Hartshorne—even the ribbon of the Bagsworth Free Wheelers might fail of impact on such unmistakable class.

Nay: it had been so undoubtedly. It had been one fair and square in the fare. Still, after all, a man of his experience should have known better than that. This was his fifth year at Sheercliffe-on-Sen—and be had behaved as poor Percy Burrows might have done, or any other mere Margate amateur. By Jove, he must remember where he was!

However, the band suddenly struck up on the Marine Parade. The Blue Bulgarian Banoukas, under the personal direction of Herr Stumer, the gifted chef d'orchestre, discoursed a really charming air from the latest musical comedy and Mr. Hartsborne at once began to feel good again. It would be easy to attach too much importance to the incident; and, after all, even a severe defeat at the beginning of a campaign does not necessarily mean an 1812.

11

MONDAY morning was the beginning of the great adventure. The incident of the girl in the blue serge coat and skirt was a mere produce to that immortal experience. And it began in the simplest way. Mr. Hartshorne had just had his morning dip and was feeling very good indeed. His hat was at its most dangerous angle; he was twirling his cane as Herr Stunetwirled the bow of his fiddle; he was ready to look the

whole world in the face and to bestow the glad eye on anything that wore a skirt—what he came straight on a dogfight.

In point of fact it was not a fight at all but it was fraught with such consequences at to aspire to that dignity on the pages of Mr. Hartshorne's history. An officious sort of terrier was bullying a harmless little Pekingese really doing it no hurt, but rolling it over a the sand and pretending to worry it, and so on. The little Pekingese was yelping a bit though it was not really being burt at all but the sight of heauty in distress was at any time enough to fire the chivalrous sould Mr. Albert Edward Hartshorne.

"Get away, you brute!"

He promptly gave the terrier a cut with his came and sent it off about its business. "Thank you so much!"

A very clear voice, with a slight note of fatigue in it, came to Mr. Hartsborne's ex-It was from within the precincts of a folding chair about five yards away, which Mr. Hartsborne in the stress of his gallant action had not noticed.

The tone was so unmistakably a little his extra that Mr. Hartsborne's first thought before he had time to envisage the occupant of the folding chair, was that it must proceed from the divinity of Saturday evening, whom, since his rebuff, he had twice gard on from afar—once at church, which he had attended in the hope of seeing her and halbeen rewarded accordingly, and noce to the pier, looking more of an out-and-outer that ever.

Mr. Hartshorne was disappointed however. The occupant of the folding char was a very ordinary sort of girl, about twelly two, and so plain that you might almost two called her ugly—except that Mr. Hartshow never called any young woman ugly; has be teeth stuck out fearfully, and her chir west

back a goodish bit, and her complexion was certainly set of the best. No; she was plain enough, but her voce we a little bit extra.

Mr. Hartshorne raised his heribboned hat impromed the then made a dive for the Pekingese, which was sitted in the sand doing no harm to anybody, and here the triamphantly to his mistress.

The mistress of the Pekingese received her property with quite a commonplace remark.

She merely tickled the head of that mildly above member of the casine race and said:

"Pore old feller!"

Nevertheless the complete detachment of this your woman's manner, and particularly her odd pronuncial of the word "feller," appeared somehow to speak to the co. of Mr. Albert Edward Hartshorne.

Involuntarily he lingered a moment beside the foliar chair. The occupant seemed suddenly to realize that is was standing there.

"Thank you so much!" she said, but with person a slightly greater suggestion of fatigue than when she had thanked him before.

In spite of this young woman's common place appears there was a subtle something in her manner that at a put Mr. Hartshorne on his mettle. A second time braised sloft the banner of the Bugsworth Free Wheeler this occasion with a suspicion of a flourish.

"Not at all!" he said. "Don't mention it. It so merely the gentlemanly thing."

Just as this young woman's mispronunciation of the King's English had roused the curiosity of Mr. Hartabe so his excess of modesty seemed to rouse hers. Very gare, she laid down the book she was reading.

Then she looked up at Mr. Hartshorne very intense and all at once her whole face, including those real unfortunate teeth, lit up in a slow but spreading and and unforgetable smile.

Yes, she was quite a commonplace girl, so far a went; and her clothes seemed to be designed to keep at tradition—very good and neat, and all that, but a really hardly any style at all. However, that smile and deep, so ardent, so searching, that it made quite at the on the young man. Moreover the possessor of the allowed so easy and so friendly that he was temperaforget his recent rebuilt.

Mr. Albert Edward Hartshorne did not realize it then, but he was at the threshold of the great adventure.

"BEAUTIFUL weather—isn't it?" said Mr. Hartshorne, shooting his cuffs.

As a matter of fact Mr. Hartshorne was not wearing cuffs that morning, but had be been wearing them be would have shot them undoubtedly; so it is well perhaps to give him the full credit of his intentions, which were certainly of the best.

Her eyes were blue and they looked up at Mr. Hartshorne very quietly but very kindly, and that subtle smile was in them all the time.

"Yes: delightful!" she said. The voice was still a little fatigued, though not quite so much so as it had been. "But September is generally full of good weather."

"Yes, at Sheercliffe," said Mr. Hartshorne easily. Conversation was one of his gifts. "Do you come here every

"No," said the occupant of the folding chair. "I have

not been here before."

This is my fifth visit." Mr. Hartshorne threw off the words so casually that he wished his friend Burrows could have heard him. The artist in his soul accisimed it as the perfection of style.

Really!" The occupant of the folding chair laid down her book, which was a novel in French by an author of whom Mr. Hartshorne had not heard.

'Do you read much?" he said, his eye falling on the paper-covered volume.

Yes, a good deal." Her promptness and her directness were not only pleasant, they were encouraging.

"I'm always glad when I run up against people with literary tustes," said Mr. Hartshorne. "I've got them myself."

"How interesting!" The voice was certainly a little fatigued, but it undoubtedly meant what it said. Moreover that odd kind of smile appeared to deepen and spread. Who's your favorite author?"

"Ob, I don't know" yes, the smile was charming if only those unfortunate teeth were not so prominent. "It

"ther depends on one's mood, don't you think?"
"Do you think so?" A slight note of authority came nto Mr. Hartshorne's voice. It was not very marked, but still it was there. He was on his own ground now and he elt that he had maneuvered for position skillfully. "I'm a reat believer in having a favorite author. I'm all for resser myself."

"Who?"

"Prosser. Big man! But there's Thackeray, of course. still, he's a classic."

"Which is your favorite work of Thackeray's?" She sas a plain girl, but really that smile had a regular pictureauteard effect.

"Oh, give me Vanity Fair every time! What?"

"I haven't read it."

She went down with a slump. Even her smile could not ave her from Mr. Hartshorne's scorn.

"Oh, but I thought that everybody --- " Mr. Hartshorne tried his hardest to suppress the note of patronage, but it could not be done by flesh and blood. However, he was tactful; and Noblesse oblige! was instinctively Mr. Hartshorne's motto. "But really, you know, you ought to read Prosser. He's -he's immense!"

What has he written?"

"I've got one in my pocket." Mr. Hartshorne produced Prosser. "It's not one of his best, but it'll give you some idea of what he

"It looks interesting." The fatigue was really very alight.

"You can have it if you'd like to read it. I've quite done with it."

"No-really! But thank you very much." It was a very polite refusal, but it was very firm, very definite; and it left not a suspicion of a wound-it was all done so meely.

"Well, if you won't - But it's every man's and every woman's duty to read Presser,

Mr. Hartshorne was almost in danger of becoming a little rhetorical, as was sometimes the case when he discoursed of literature and the drama, and the wind was blowing from the head of the pier.

Still, for all Mr. Hartahorne's ferver and in spite of Promer's literary eminence, the occupant of the folding chair could only be induced to take a perfunctory interest in Prosser. This was disappointing. She looked like a rather intellectual girl; but as Mr. Hartshorne almost carelessly threw off the names of half a dozen of Promer's undoubted masterpieces - names that should have been household words among people of culture-the suggestion of fatigue

returned to her voice, and the smile in her eyes -- in her really nice eyes - died down a little. Therefore, very reluctantly. Mr. Hartshoros decided to let go of literature. And yet it was strange that a person who was almost illiterate should

be reading a novel in French.

He would try the drama. She might be better there. She might even belong to the stage her voice was so good. in spite of a curious little lisp there was in it; but somehow he did not think the stage was her line. For one thing she was not good-looking enough, and her clothes did not suggest it either.

Do you go much to the theater?"

"Ob, yes-fairly often when I am in London."

"What is your favorite play?"

"I don't know-I like so many." She was frank to nalveté-her taste was so very inclusive.

"I s'pose you've seen East Lynne?"

No; she had not seen East Lynne. That was a setback. Inclusive as was her taste, it almost seemed as though the drama was going to do no better than literature.

"Oh, but you ought. Everybody ought to see East Lynne." Mr. Hartsborne was suddenly submerged by his dramatic sense. The wind was undoubtedly blowing from

the Americal the Arrival of a Mart Enthuelmetic Admirer

the head of the pier this morning. "It's simply great-so true to life and so fruity. I know that some people go in for G. R. Sims and Ibsen; but give me East Lynne every time."

Inspite of all Mr. Hartshorne's efforts, however, the drama seemed to languish too, and the conversation became, as it were, more general. He was at The Dur-dans, Rosebery Avenue, which was where he always stayed - because you could depend on the cookingand where the prices, for Sheercliffe-on-Sea, were quite moderate. Where was she?

She was staying, it appeared, at the Hotel Majestic.

"Oh!"

There was a brief bull in the conversation, Somehow Mr.

Hartshorne was not quite prepared for the Majestic. Her easy directness of manner and the simplicity of her attire had not suggested it. The Majestic was so exclusively for "the nuts" that Mr. Hartshorne's artistic sense reproved him at once for having made that statement about the moderate charges of his boarding house. Still, she might not have heard it. At least she did not allow it to affect the general accessibility of her attitude toward him - which, after all, was the reflection of his.

Almost at once, now that the murder was out in regard to this really rather commonplace girl, certain subtle forces within the soul of Mr. Albert Edward Hartshorne

took charge of him.

"Bert, my friend," they seemed to say, "it's up to you to put your best left first. You've got to rise to the Majestic." Immediately and quite automatically the Majestic wrought a change in Mr. Hartsborne's manner. His voice changed into a higher register; his aitches became a little more conspicuous; his vowels grew a little purer - somehow the streak of imagination in his soul was touched.

He was encouraged not obtrusively, but very kindly and gently and quite firmly to be autobiographical. Bagsworth was the home of his fathers. For the fraction of

> a moment he hesitated over this disclosure, having made one bad break already; but, after all, that pleasant suburb, less than twenty minutes from Waterloo, was nothing to be ashamed of though Park Lane, of course, would have had a better sound.

> Still, Bagsworth was not so had in its way. Yes; he lived there with his mother, who was a widow, and he was the eldest of five children. one of whom-his nister Helen-had died of messles at the early age of seven. His father was dead too - naturally, as his mother was a widow. His father had been an officer in the army. His own profession was the stock exchange; and his youngest brother, Harold, was reading for the bur.

> Mr. Hartshorne was quite simple and modest and pleasant about it all-just manly and unaffected, but a little stimulated perhaps by

"What regiment was your father in?"

"His regiment? Oh, I think it was the Guards."

Somehow the Guards seemed to come involuntarily. Prosser was always a great believer in the Guards.

The rather subtle blue eye gazed at him with its mild light. It was as if she would like him to be quite sure

'Yes, it was the Guards," he said with manly conviction. "I remember now."

"What was his rank?" The lisp grew a little more obvious in the very nice voice, but the fatigue seemed to be there no more. "His rank?" There was a moment's hesi-

tation at this rather superfluous question.

"Oh, I only know he wasn't a general." "He would have been had he lived perhaps?"

Mr. Bartsbarne Was Magnificently at Mis Lace

"Oh, yes, of course" - if habitues of the Majestic would be so very encouraging!-"I think he was a surt of a major or a colonel. Anyhow I do know "in a borst of candor-"I do know he wasn't a general.

In justice to the memory of Mr. Hartsburne piles it seems right to mention that before he had been gathered to his fathers his profession had lesen

that of a piano tuner. Therefore it was not to be wondered at that Albert Edward, blason, had suffered all his life from an effusion of the artistic sense. And it was impossible for one endowed with this inconvenient apparage not to feel that a piano tuner was a little out of the picture when It came to a matter of the Majestic. And he had no reason to doubt this agreeable young woman. She did not betray the Majestle on the surface. but to a trained observer there was undoubtedly a flavor of latent nuttiness about her. For example, she cut off all her g's. And anybody with even a superficial knowledge of Promer was aware that that was an almost infallible sign of blood.

"I s'pose you'll get some huntio" in the winter?" Mr. Hartshorne rnade quite a vicious cut with his cane at a perfectly harmless dragon fly that was performing some kind of autumn maneuvers in midair.

"Yes," she said quite modently: "I hope to get a little in the winter."

This was undoubtedly a she-nut per song- a nut-ess of the great breed, in fact. Really this thing promised to develop into something perilously like Presser in real life. The hidden forces in the soul of Mr. Hartshorne never stead to him as manfully as now, however,

"I s'pose" he made a second cut at the same harmless but irresponsible dragon fly "I s'pose you'll be goin' up to town for the royal weddin' at the beginnin' of October?"

He knew that for what it was - a real touch of genius. And how simply, how finely this nut of nuts from the Mujentle rose to it.

Ye-m," she said -"unfortunately. Will you?"

No; unfortunately Mr. Hartshorne would be there already. He was bound to return not later than Saturday week. Did he say he was in diplomacy?

No the stock exchange. The artistic sense was almost. tempted to forget the stock exchange now. Like the moderate charges at his boarding house, the stock exclusings was another had break.

After all" - as he made his third out at the still hevering dragon fly and for the third time missed it - "a regular five thousand a year don't you know! from vulgar commerce. Mr. Hartshorne was talking Presser without knowing it. in quite as good as fiddlin' with the peace of

The she-nut, her eyes round and starlike with entrancement, seemed to think pensively that it might be so.

MR. HARTSHORNE was to the midst of his social triumph when a rapidly advancing figure raught his eye. And very shining, very splendid it looked in Mr. Harishorne's sight as it moved in a dancing framework of green sea, golden smilight and yellow sand. A thrill of excitement passed through his being. It was the lady of the blue serge coat and skirt.

As she stopped so proudly and so daintily over the yellow usuals the Majestic was in every line of her. Yes, there rould be no mistake about that. In spite of the plainness of her attice, here was nottimes all compact.

Was it possible that this divinity would had the lady of the folding chair as a sister out? Indeed, it seemed most likely. Certainly she was coming straight and rather rapidly toward her, with a coat on her arm.

Mr. Hartshorne had quite a struggle to compose his fluttering heart. This was a wonderful moment in its history. The divinity was undoubtedly making a bee line for the folding chair.

A grave problem of the higher deportment was presented. o Mr. Hartsharps's mind. Should be draw himself up to his full beight and range abilt the burner of the Bageworth Free Wheelers, with a well-bred but slightly frome al air, as one of Promer's berow would have done undoubtedly by these commutic circumstances. Or would it be the more centlemanty thing us real life was in question - to ignore the incident of Saturday evening on the Marine Parade and appear and the inconscious of the fact that they bad Monther before? SVET COUNTY

or. Hartshorne's destiny never Part than in this emotional crisis. ses, but with one hand placed He

negligently on the top of the folding chair, as the divinity came up, clear-eyed, firm-chinned and haughty.

"Is this the cleak you meant, my lady?

The voice of the divinity was so astonishingly humble that Mr. Hartshorne could hardly believe his cars.

"Put it there, Wilkins. Thank you."

There was nothing more than that. The divinity was already returning whence she had come before Mr. Hartsborns could disrugage his faculties from the thrull and impact of the incident. And again she had taken no rognizance of Mr. Hartshorne's presence; but she had not lucked right through him this time. She had not looked at him at all.

It would be idle to deny that for a mement Mr. Hartsorne was a good deal shaken. The walls of his little world had fallen in, as Prosser would have expressed it.

Mr. Hartshorne felt that it would be wise to take his bearings a little before he went any further. So this commonplace nut-ess, with no complexion to speak of, and teeth that stuck out and a chin that went back a bit, was a title. Well, he was not altogether surprised. He had felt. that that eurious voice stood for something. But the divinity! She of the glorious eye, of which he had been dreaming ever since it had cut him dead, she was-she No; it couldn't possibly be so.

"Put it there, Wilkins. Thank you.

They were only six words altogether, but they were haunting him. Very nicely spoken too-no hauteur. But omehow the yellow sands seemed now to be slipping under Mr. Hartshoroe's feet. Already those six little words had emed to change his attitude to life.

It was a merciful thing the bancer of the Bagsworth Free Wheelers had not been raised aloft-even with a slightly ironical air.

All at once it occurred to Mr. Hartshorne that the hour had enme in which to draw out of action. He had borne himself with distinction, but somehow his conversational power had now deserted him in the oddest way. The polestar of his destiny, however, reenforced by recollections of Prosser, stood to him nobly, even in the order of his going.

"Well, I think I'll be gettin' a move on," he said, removing his left hand from the top of the folding chair with airy nonchalance. "Good marnin'! Very pleased to have met

Thereupon, in grim and deadly earnest, the banner of the Bagsworth Free Wheelers was literally flaunted in the sight of heaven and incidentally in that of the occupant of the folding chair. But Mr. Hartsharne was not allowed to escape so easily as all that.

By the way, do you mind telling me your mame? How nice the lisp was; and the smile, too, was very fascinating.

"Mr. Hartshorns." Even Presser would have approved the quiet dignity. "Mr. Albert Edward Hartshorne-but no relation to the late king."

It was his only private little jest - by royal letters patent as it were just to put strangers at their case. It never failed of its effect, and long practice emploid it to be so well done as to be generally admired. In this instance it might have been a little superfluous to put the occupant of the folding chair at her twee- she was so much at her case

already; but, all the same, tin glamour of her eyes seemed readily to approve it.

"Mr. Hartshorne, do you care to come to ten at the Majestico Thursday at half-past four?

For a moment Mr. Hartshorns felt a little dizzy, but he had the presence of mind to murmur that be would be delighted.

"That will be so nice. Goodby!" The yellow-gloved hand was raised in a truly Prosserian manner: a firm, decisive shake; a flatteringly unmistakable leavetaking. "On Thursday, half-past four. Ask for Lady Mary Cardew. Goodby!"

The banner of the Bagsworth Free Wheelers almost described a parabola in the eestasy of departure. Mr. Albert Edward Hartihorne walked on air for two miles along the yellow sands.

DEAR SYBIL: Please come to D a freak tea here on Thursday, and bring Dorothy and Paulice. I have found something priceses. Yours, Mary.

THURSDAY came at last and at last came half-past four; and exactly on time by the clock in the lounge of the Majestic agorgoously upholstered gentleman announced Mr. Halbert 'Artshorne.

There were five ladies to meet him. Also there was a gentleman-a very soft-spoken and quite nice-looking young chap if his teeth had not stuck out quite so much and his chin had not gone back quite so far. Still, be made himself very agreeable. He was called Cardew and he was Lady Mary's brother. Mr. Hartshorne was introduced to him at once; but Lady Mary was so busy pouring out the tea that she forgot to introduce Mr. Hartshorne to the ladies. Mr. Hartshorne was a little disappointed at this They were none of them beauties; still, he would like to have known them by name - not, of course, that it maitered particularly; he had so many other things to think of

Cardew's eye fell on the ribbon of the hat in Mr. Hartehorne's hand. His own, by a coincidence, was also adorned with the ribbon of the Hagsworth Free Wheelers, except that their rather striking colors were worn the other way up

"Do you play cricket much, Mr. Hartshorne?" said Cardew.

"No, not much. Bicycling's my game."

"You do have sugar, Sylvia?"

Really that lisp of Lady Mary's was charming. But it seemed -sias - that poor Sylvia was choking, and she had to be soundly beaten on the back by two of her companions before she was able to say that she did not have sugar but she had cream.

Mr. Hartshorne was magnificently at his case. There was omething about the atmosphere of this informal gathering that seemed to call for ease. Everybody was so friendly, so awfully nice to talk to. Not for a moment did the convenution flag; and the cakes and the bread and butter and the tea, which he helped Cardew most assiduously to hand round, were all first-class.

Yes, these nuts were absolutely the pleasantest people Mr. Hartsborne had ever met. Somehow they seemed to speak to his higher nature. There was a great deal in being a gentleman. One could appreciate all the finesse of these people - their agreeable voices, their charming friendliness. their quaint and unexpected little turns of speech. Somehow they made the Palatial and poor old Percy seem very far away indeed.

For instance, this chap Cardew, who frankly admitted that he had not read Prosser, but was no ashamed of his ignorance that he wanted to know all about him-this chap Cardew was in the Guards. He did not look the less like the Guards as the Guards had been represented by Prosser, but still, as Cardew was Lady Mary's brother, he was bound to take his word for it, even against the word Presser - not, of course, that he could ever have confessed this disloyalty.

er's regiment, Mr. Hartshorne said the pleasantly conversational Cardew.

"Oh, the Guards," said Mr. Hartshorne inclusively. "Yes: but which regiment?"

That rather had break of Cardew's came, of course, Carden's not being up in his Prosser. According to Prosser. if you were in the Guards you were in the Guards, and theh was an end of the matter. Prosser seemed to conside rather superfluous to trouble about which regiment set trivial details of that kind. The Guards were the Guardaccording to Presser.

"Which regiment did you say, Mr. Hartshorne?"

"Oh, the Guards!" said Mr. Hartshorne; and then, after an instant's reflection as Cardew seemed inclined to pass his question: "The cavalry, of course."
"The Blues, I expect."
"Yes; the Blues," said Mr. Hartsborne with decision

mered by promptitude.

Had Cardew expected the Greens or the Browns, Mr. Hartshorne would have been equally prompt and decisive. Cardew was making a bit of an ass of himself - how could whilp it, poor fellow, with a chin of that kind! But it all and of his not having given his nights and days to Proser, The poor chap almost conveyed the impression of not ming in the Guards at all.

Cardew looked so inefficient and unmilitary that it was had to think of him as in any way connected with the Braish Army; but then he was a viscount, it seemed. Mr. Barnborne, being a man of large views, thought none the some of him for it. Yet it accounted, no doubt, for his silk Her and his light-gray spats, and his general air of having

mi up a little too early.

And it was a blow to Mr. Hartshorne's passion for repetition not to have discovered Cardow's romantic status sdare he had addressed him as Mister quite a number of ires. That was, of course, an unfortunate lapse; but it wa not allowed to make any difference to Mr. Hartshorne's ending in the charmed circle. And, after all, it was really bely Mary's fault. She sught to have pronounced the apprient word "viscount" more distinctly when she had mediced him; as it was, Mr. Hartshorne was almost resard to take his oath she had not pronounced it at all. HIL if he had had any some confound it! he ought to law remembered that to be the brother of a little you are sund to be a title yourself.

"The car is waiting, my lord," a footman had said. Bappily these were broadminded people. They treated on unfortunate "Misters" of his as a thing of mought. Indeed, the announcement that the car was waiting was really the prelude to Mr. Hartshorne's coming triumph.

"Can I give you a lift anywhere, Mr. Hartshorne?" said

It was such a moment as only curses to a man ones in his life; but Mr. Albert Edward Hartshorne kept wonder-

Thanks," he said carelensly. "You can put me down, my lord, at the end of the pier.

Mr. Hartakorne was as calm as a church: yet somehow he knew that his whole being was raised just now to a higher power.

'Goodby, Mr. Hartshorne. It has been such a pleasure!" The shake of Lady Mary's hand was very definite, but altogether delightful; and the eyes, so full of merry lands, made him feel that she really meant what she said. But even this was not the end of the great adventure.

"Please give me your London address," she said. Mr. Hartshorne had not one of his own sards unfortunately. By a stroke of irony the only card he had in his pocket was that of the Pulatial Insurance Company, and he was constrained to write Number 6, Arcadia Villas, Bugrworth, on the back of that,

He apological very grantally for this makeshift, which was also treated as a thing of nought by those charming eople; and Ludy Mary's last words were that she hoped Mr. Hartshorne would find his way round to 1A, Grosvenor Square, some afternoon, when she would promise to be a little better acquainted with the works of Proser.

MR. HARTSHORNE turned up at the uffice on the Monday week in a pair of light-gray spats. Much needless comment was at once excited. The head of his department looked as if he wanted to kick him downstairs as soon as he saw them, and several of his peers suddenly

became quite aggressively witty and sereastic; but that is the worst of underbred people—they are so grievously facking in the true amenities of life.

Mr. Burrows, however, his faithful benchman and satellite, was not of these. He would not admit, in the presence of the most searching criticism, that the spats vere even an error of judgment.

They might be, Mr. Saunders, for you and me," said Mr. Burrows to one of equal standing in the Palatial as himself, over their midday sausage roll and ginger ale at the Bodega, at the corner of Throgmorton Street. "I'll admit that for you and me they might be going a bit far; but, you see, with Mr. Hartshorne it's different."

"Can't see it myself," said Mr. Saunders. "In my opinion

it's pure swank,"

"No, you are wrong there, Mr. Saunders," said Mr. Burrowa carnestly. "It's not swank at all in Bertie Hartshorns-It's something deeper than that,

"Don't believe it?" said Mr. Saunders, hiting rather cavagely at his causage roll. "I was at school with young Hartnborns, and he was always inclined to consider himself better than chaps just as good as himself. I know his mother lead once taught in a school, and all that; but I shall always maintain that spats are uncalled for in a chap like young Hartshorne."

However, Mr. Barrows still saw the matter in another

"No, Mr. Saunders," he said, "it's the wrong way of looking at it, to my mind. It's just a matter of what you happen to be bern. You may be a born musician, or a burn artist, or a born stamp collector. Well, in my opinion Bertie Hartsborne is a born swell."

During the next week Mr. Burniws' view gained ground in the office. A pair of light-gray spats were without precedent, except in the case of the submanager who, of

fact is to be a working mate to her husband, who has no asso in his scheme of things for a parasite.

Marjory Martin was a middle-class girl, reared as a fily M the field but born to be some sensible and fragrant outh flower, like Sweet William or mignonette. Marjory's arents had themselves had the sort of training that should ave fitted them to become wise parents. Neither of them ad known an easy childhood; they had to earn their own thug by hard work. They had received some rather burn buffets from life, which they had taken pluckily.

They began their married life with the determination to he will within their means, carry a good life insurance, id ave enough yearly besides to puy for possible illnesses.

Their young married friends thought they did not spend enough money for fun; older critics called them sensible. After Marjory came they were not quite so sensible.

"I suppose I've been extravagant to get this for Marery," Mrs. Martin said once, abowing her husband a filmy little dress; "but I never had any protty clother when I was a child. I well remember a little girl saying to ros: I saw you wear that dress you have on last Sunday in church! Haven't you more than one dress ! I hadn't, and I well remember the humiliation I suffered. I am going to see that Marjory looks as well as other little girls.

Whenever Martin bought an expensive mechanical toy for Marjory he justified himself on the double score that it

would be educational for the child and that he himself had sever had anything to play with except blacks and cheap marbles and a broken jackknife. If the Martins had put their psychology into words it would have gune something like this:

"We have made the most of ourselves with almost no advantages. If we had been used to nice surroundings when we were children we should have teen farther along now. Our child must go beyond us; and she can do that only when we give her a good start.

So Martin, on two thousand a year, gave Marjory, while she was in the early grades of the grammar school, as good an appearance as though he had had four thousand. He was able to manage it because they lived in a five-room flat where Mrs. Martin did her own work, even the washing. Yet she was careful to look well berself, so that the mothers of nice little children, with whom she wished Marjory to play, might see that she also was keeping up with the procession of rising Americans. By the time Mar-jory was in the late grades of the grammar school Martin was getting thirty-five hundred a year, and his daughter was taking leasons in dancing, musle and French moveration

One night Martin came home to dinner jubilant. His salary had been raised to forty-five hundred dollars-a long jump and perhaps the last he should ever receive. He did not mean to tell his wife until after the meal. Marjory had to be called twice to the table; and when at last she arrived her eyes showed unmistalcable traces of tears,

"What's the matter, provious?" her father asked her

Marjary's very pretty face became convulsed with grief. "Why, that nice new girl, Carrie Jenkins, came to see use to-day," she sobbed, "and she said; "Why, Marjor," why do you live in this tiry little flat? Why, I then from your clothes you'd have a nice house somewing

"Don't say 'why' so much," murmured Mrs. Martin mechanically.

"And then," Marjory continued, "then she said: 'Why, does your mother do all her own work? Why, my mother has two maids!'"

"She was a very rude little girl to make such remarks about the home of her hostess," Mrs. Martin said.

"I suppose she might as well say them as think them," Marjory sighed.

"Come, come!" said Mr. Martin. "Aren't you satisfied with what father and mother can give you?"

Marjory fled to his knee.

"Oh, yes," she said; "only I thought maybe you could give me more."

The Martins smiled at each other rather painfully across Marjory's head. Doubtless one symptom of the ability to rise was this fashion of demanding more from parents. Later, when the child was doing her home work on the diningroom table, the elders went into the living room and talked over their new possibilities.

possibilities.

"We've come to a place of departure,"
Martin said. "We save between four
and five hundred dollars a year over our
living expenses and premiums. With my
new raise, that means we have a margin
of from fourteen to fifteen hundred.
Shall we blow it in? You look pretty
tired to me. Marjory doesn't give you
much help round the house, does she?"

"Of course I have her dust and make a bed now and then," Mrs. Martin said rather guiltily. "Later on I mean to teach her to cook. She does housework hadly—hinders rather than helps; but I mean to have her learn—only just now, with all her school work, she really hasn't time." "She's a nice child," Martin said; "but——"

"She has her faults, of course," Mrs. Martin said; "and I suppose it's natural for her to want the things other children have whose parents have a scale of expenditure higher than ours."

"I've always meant that some day you should have a girl to do the housework," Martin said; "or a maid, as Marjory puts it,"

"It would be nice for Marjory."

"It all comes back to Marjory, I suppose," Martin agreed dryly. "I guess we've come to the parting of the ways, Maggie. We can go on as we've been doing and save so much that by the time I'm laid on the shelf we'll be able to gratify all reasonable and many unreasonable wants, and leave Marjory a few thousands. Or we can live up to every cent of our income—paying the premiums, of course—and then, when I'm retired, you and I can acrape along modestly on the income from the endowment policies, leaving Marjory, in the end, very little."

leaving Marjory, in the end, very little."

"It means," Mrs. Martin translated, "giving Marjory an absolutely unfettered youth. It means she need never be hurt at being left out of things because her clothes aren't good enough or because her home isn't good enough. Oh, Henry, I can't bear to have her hurt when there isn't any need for it! She'll have troubles, no doubt, when she is older; we can't ward off grief forever from her, but I do want her to be able to look back and say that the early part of her life was perfect!"

Off to a Finishing School

"NOTHING very joyful ever came my way until I met you," Martin said. "Then I forgot say bad luck I'd had. But I've got no assurance as to how much good luck life is going to bring our child. I only know how much happiness we can bring her."

Somewhere up aloft there must have sat a colony of ironic spirits, grinning at the sensible Martins. No voice whispered to them:

"You are going to make personal sacrifices so that you, a forty-five-hundred-a-year man, may have your child associate with the children of ten-thousand-a-year men. You are inducing in her a subtle dishonesty, because you are keeping up appearances that don't belong to you. For every comfort your child has, she will see among these ten-thousand-a-year children a corresponding luxury she cannot have. You will inspire in her a spirit of envy and climbing, a spirit of snobbery and false values. She will judge other girls by their clothes and homes, and the amount of spending money they have. She will use whatever graces of personality she possesses to ingratiate berself, not with children who are intrinsically worth while but with children whose material possessions are worth while."

Their own experience should have suggested to them:

"You want to guard your child from a youth as starved and joyless as your own was. You remember your own deprivations and the hearthurnings you suffered because other children had what you wanted; and the slights and

"I'll Jose Jomekew and Make Up That Money You Had to Pay"

humiliations you suffered from those lucider children—the very slights and humiliations your own child is now about to bestow on others. You should realize that what you suffered strengthened your characters, hardened your nerves, and made you the stuff that conquers the world. Without those deprivations you never could have known the happiness you have had in each other, for you would have unconsciously expected too much of each other; a fortunate youth would have made you exacting of life, and now you ignore all that this discipline has done for you and are about to sup the moral vitality of the person you leve the most."

The Martins moved to an eight-room spartment, for which they paid a thousand dollars a year. Six hundred a year had to be set saide for the premiums. As maid, Mrs. Martin found a woman in late middle age, not especially strong, who was glad to come at four dollars a week. She did only about half the work, but she was most unexacting, being willing to wear a cap and never demanding a cleaning woman or a washerwoman to assist her.

Mrs. Martin berself still did the washing by rocans of a suction machine, which required only some muscular pounding for ten or fifteen minutes. It never occurred to her that Marjory might have developed her own arm muscles by swinging the washer, and it would have offended Marjory's young dignity if she had been asked to do the work. Mrs. Martin often said jubilantly to her family that she and Mary achieved the results of a washerwoman, cook and houseman. When she said that, she merely thought she was proving berself a good manager; it never occurred to her that she was developing the already well-marked tendency of Marjory toward keeping up false appearances.

There were twenty-seven hundred dollars a year remaining, for food, light, clothes, amusements and incidentals.
Mrs. Martin made the living of the plainest, except when
guests were expected. An undue proportion of the money
went for clothes and entertaining. The Martins scarcely
questioned the wisdom of their expenditures, because Marjory was so happy. She expanded under the sunshine of
her larger life. The apartment was full of her gayety and
that of her young friends.

Marjory was both pretty and popular. Every door at which she knocked in her high-school days opened welcomingly. Her parents were always receiving compliments about her from the parents of other young people. Her teachers spoke of her pleasantly—not as a good student, for she was merely average when she was not below the average in her marks, but as amicable and well-mannered, and a pleasure to behold.

Marjory was eighteen when she graduated from high school. Martin had assumed that she would go to college. He was not himself a college man, and for that reason perhaps he overrated the value of college training. Such a pretty girl as Marjory was likely to marry; but he intended her to be able to earn her own living in case she did not marry and wanted some occupation, or in case she married hadly and might be obliged some day to take care of herself.

He knew that a college education would fit her to be a teacher; but shortly after graduation Marjory began to talk about a finishing school in the East, to which three of her special friends were going. Martin found that a year in that school would not be the equivalent of a year in college—that, in short, the school would give Marjory very little except that intangible thing rain; polish and the continued society of he friends. Moreover, it was very expensive; but, as Marjory pointed out, failer and mother had always managed somehow.

"I suppose," Martin said to his vis.
"that I could sell a bond; butif Martin
isn't going to college I think she out!
to stay home with you and learn supthing about housekeeping."

"She does know something," Mr. Martin protested.

"Oh, yes—how to handle a rinky dish and make salad dressing and fancy cake; but she's got no organize knowledge."

"I haven't wanted to hurry her," Mrs. Martin said; "she's so happy an there's plenty of time."

They gave Marjory a year in the Eastern finishing school and the case back with a remodeled accent, while she handled in a convincing fashion and with a very sophisticated manner. So had also acquired extravagant take in clothes and flowers and the niceis of the toilet, for she had associated with the daughters of millionaires, whose whims were always satisfied.

Their expenditures were such a Marjory, in her high-school days would scurcely have looked on as rediffi-Their connection with her ended when she went home; for them it had been

only casual, because their relationships had been made from babyhood. She had gained from them nothing but the content with her parents' forty-five-hundred-dollar bone, which looked like eight thousand.

Marjory was secretly ashamed of wishing that her faire had fifty thousand a year; but she could not quite mired her belief that she was born to a higher sphere than the on she occupied. Perhaps she was also disappointed teraire no rich young brother of her schoolmates had appeare to carry her off to her deserved sphere. She was so pretty and attractive, and so much admired by young men, that it was pechaps matural for her to think that the ideal leverideal in fortune as well as in character—must surely appear.

Marjory Falls in Love

HER parents observed her discontent. It was that that Martin began to question whether he had been we be letting her associate with young people so much between financially than herself. He proposed that she he so it once to learning to keep house; but Marjory begod to go to college instead. Mrs. Martin said she thought housebeeping would be too dull for Marjory after what she had been accustomed to; and that, besides, if she attended college at once she would still be in classes with some of her old friends, and could pick up her old life about when the had dropped it. Martin agreed that his daughter needs more education; and so Marjory had her way.

The girl, after all, had good stuff in her. She could at have lived with her unselfish father and mother without having absorbed something of their apirit. For all the mistaken training, they dally set an example of cocoststion for each other and of appreciation of certain fire line which their worship of the god of false appearance and not wholly destroy. It was because Marjory was the not thing, after all, that in her second year at college, we she was twenty-one, she fell in love with young Greek was a young man whose father had rather less than the Martins. After working his way through lege he had graduated at twenty-two from the engineering course, got work with an electrical company at two dalless day, and when he was twenty-six was receiving eighted bundred a year. It was then he met Marjory at a father bundred a year.

Almost from the first her other lovers ceased to name to her. Because the core of her really was sound, after a began to be attracted to Grover it mattered nothing to that he was not rich and that he had never been in and the exclusive societies of high school or college. She was knew that he was her man. Not being able to lorge a conce her acquired worldliness she assumed that, poor the was, he would soon be making plenty of money and the could easily keep up with her expensive friends.

The day had been when Marjory had said to here? The she would not marry any man with less than ten them a year—that she meant to marry some one who would refinancially considerably beyond where her father less but love made her lose what little practical sense sit about money. When her mother pointed out that Grossalary of sighteen hundred dollars was relatively than that to which she had been accustomed. Make replied that it was much more than the salary with the parents had begun.

When Mrs. Martin replied that she had been a good manager Marjory said she would learn to be. Words of warning pattered off her mind like shot off a sloping roof. She simply did not hear what was said to her; she heard only Grover's voice and saw his face. She was quite steeped in love and Grover.

"I don't know what we're going to do!" mourned Mrs. Martin to her husband. "I was so sure she'd marry a man with money! We never said it out loud, but that was really why we brought her up in the way we did. She herself has often said that it was just as easy to marry a rich man as a poor one."

"I'm not so sure but that it's easier to marry a worthless fellow than it is to marry a good fellow." Martin replied rather grimly. "I'm thankful that she's got some one as fine as Grover. He'll get on too."

"But eighteen hundred -

"Put Marjory in the kitchen at once," advised Martin. "If I were you I'd give the maid a holiday and drop all the burdens on Marjory. You and I could suffer a while if it were for her good."

Mrs. Martin saw the wisdom of the advice, especially as the engagement was to be a short one. She suggested her

father's plan to Marjory.

"Oh, mother," protested Marjory, "there'd never be lime for that, with my clothes to see to and all the other things to do! Besides, cooking for all four of us would be nuch harder than cooking for John and myself. I suppose 'll have to do my own work at first; but anything I don't tnow I'll pick up as I go along. Housekeeping can't be so ard; look at the easy way you've always done it. Besides, know a lot already."

"All the same," Mrs. Martin said firmly, "you've got to egin to take lessons from me at once. I ought to have

hade you do it years ago."

They did begin some informal lessons; but then Marory's trouseeau began to occupy her time, and her friends a bombarded her with showers and teas and luncheons nd dinners that Grover said he felt as though he were ot engaged just to Marjory, but to the whole social game. farjory was so excited and so tired that Martin told his ife to let things swing on as they were going.

"We've made a mistake with the girl - that's plain," he ild. "Now she and Grover will have to work out their wn salvation. The thing has got beyond our control."

Grover was so much in love with farjory that he thought her a maryel of impetency as well as of charm and muty. He was sorry he had so little oney; however, he never doubted but at the two could live and save on his dary. He had not thought much about penditures, but he remembered having sard his father say that no one ought to ty out for rent more than twenty-five recent of his income; so he told Marjory at he thought they must get a flat costg not more than thirty-seven dollars d a half a month. Marjory delegated e flat hunting to her mother, stipulatgonly that it must be within a certain rritory, new and pretty, and not too rk or too small.

Marjory's Incompetence

FTER weeks of wearying search Mrs. Martin found something that would for forty dollars - that is, it was in a id neighborhood and in a good-looking artment building, where the other flats ited for sixty dollars. Marjory's flat s cheaper because it was squeezed in at angle, and because, of the five rooms. only adequately lighted ones were the ing room and the guest room. Marjory s starting her married life with the ne false front the Martins had been

wing for ten years.

Many wedding presents were put into little home and Marjory's parents led whatever furniture was needed. ere was a final furore of entertainment, retty wedding, a brief idyllic honey on, the expenses of which were paid Grover's firm; and then Marjory and husband came back to take up the iness of living. She went into her little ae to find it well stocked with proviis, which her mother had supplied rjory accepted this start as she always epted good things—gratefully, but just hough they were hers by divine right. he Grovers had never talked over the ter of a wife's housekeeping allowance. ver merely expected to pay whatever Marjory presented to him. Marjory found out on their honeymoon

various dishes that Grover liked and had made a list of them. She felt quite businesslike. She resolved to deal with the butcher and grocer who had always supplied the Martins, "because," as she said regally, "they will know what I like." They did indeed; and as Marjory, ordering over the telephone, never asked what anything cost they

charged her top prices.

During that first month Marjory's girlfriends were always running in for luncheon or tea, and Marjory begged her mother for the loan of Mary, her mother's maid, to help her. Several postnuptial affairs were given the couple, and Marjory arranged several little luncheons and dinners in order to pay off the antenuptial obligations. She felt that she was being very economical, because she let her mother and Mary do the work in the kitchen on these occasions instead of hiring a caterer. Grover, very busy and too much in love to be quite clear-syed, thought Marjory was doing most of the work, because he saw her getting toast and cereal and coffee for their breakfast. Marjory herself scarcely realized that Mary was carrying the responsibilities which should have been hers.

The first of the next month the bills came in. Marjory had not done any financial thinking, but she knew that their expenditures must not exceed one hundred and fifty dollars a month, for that was all Grover had. She was appalled at the number and size of the hills, and angry, not at herself for being extravagant but at the scheme of things that did not allow Grover more money. The grocer's bill was seventy dollars; the butcher's, twentyfive; the milkman's, six; the florist's, ten; the baker's, three; light and heat, five; the cleaner's, four; the department store's, twenty; and the rent was forty. That made

one hundred and eighty-three dollars.

Besides, Marjory had been spending money for a cleaning woman, for curfare, for an occasional matinée, and for other sundries. She was pretty sure that twenty dollars must have gone in such ways. She was afraid to show the bills to Grover; she took them to her mother, with the remark that her tradespeople must have been cheating her.

In that moment Mrs. Martin realized the futility of the many sacrifices she had made in order to produce the charming finished product who was Marjory. She saw herself in perspective in an andless line of American parents who are hurting their young by an unwise tenderness. She had seen in Marjory what she considered her own and her

husband's best characteristics, improved on, and she had secretly boped to see Marjory carry out dreams and ambitions that had proved too high for herself.

Her own disillusions had taught her that the world cannot be a Utopia, and yet she had made an illogical Utopia for Marjory. She realized now she had hoped that, after all, Marjory had sufficient instinctive judgment to make her fit to be a poor man's wife. She felt a fear for her child's future happiness and a passion to help her. She wanted to teach her, all at once, to be wise, though she knew it was a task like sweeping away the ocean with a broom.

"The tradespeople haven't cheated you, Marjory," Mrs. Martin said severely. "It's your own incompetence. If you want to keep John's love you've got to learn to be the wife of a poor man. Don't toss your head! He won't consider inefficiency charming. If you're not afraid of losing his love, or at least destroying something of his faith in you, why don't you show him these bills instead of bringing them to me with the expectation that I'll offer to pay them?

A flush of shame, so deep that it hurt, reddened Marjory's face. For the first time she realized she was no longer dependent on her parents, but on her husband.

"I'll pay these bills," Mrs. Martin said, "because I don't want John to find you out. Your father would say you ought to confess, and so you should; but I don't want John to lose faith in your ability yet. You go over these bills

with me and I'll point out your mistakes."

Marjory sat humbly by her mother's side.

"You shouldn't have spent anything for flowers," Mrs. Martin said, "except fifty cents for a begonia in a pot, which would have lasted the month. I don't care if you did have luncheons; you cannot now afford the sort I used to give you-indeed, you can't afford luncheons. As to the cleaning, you should have done it yourself with bengine; you can't afford to consider your hands. As to the milk bill, it shouldn't be more than half what it is; get one quart daily and use the top of the bottle for John's coffee and cereal. You've no right to have sweethreads and squahs and tenderloin steak in your butcher's bill. Your light and heat shouldn't be above three dollars; you must have a fireless cooker and you must turn off the electric lights when you're not using them. You needn't go to the baker's at all. With all those new clothes, why do you need anything at the department stores? As to the grocer's bill, it's outrageous! My own wasn't over fifty for four people. Why do

you have out-of-season vegetables and fruits? The trouble with you is that you've not gone to market and looked things over; you've taken whatever they've sent at their own prices."

MUCH more of the same sort Mrs. Martin said, which left Marjory in tears, chastened and really convinced

that semething was wrong with her, "You go home to John," Mrs. Martin said, "and ask him for an allowance. He pays for rent and life insurance, five hundred and forty dollars a year. For carfare, lunches, clothes and sundries, he ought to have two hundred and sixty or a bit over. You ask him for an allowance of eighty dollars a month."

"Just about what the grocer's bill this month was!" Marjory said drearily.

"Yes," Mrs. Martin said; "and remember that out of that you'll not only have to pay all the housekeeping bills but you'll have to dress yourself, too, when your trousseau wears out. You'd better try to save a little each month. I'll give you my cookbook, and you must come over here every day with a list of what you've got in your ice box; and I'll help

"Don't buy a thing without consulting me. I'll do my best to make up for spelling you in the past."

When Mrs. Martin dropped her severe manner, kissed Marjory and drew her a heavy check, Marjory felt better. She went home determined to learn how to live within her income, and still somewhat depressed by the fact that mere love could not teach people how to live wisely; that they needed common sense too.

That evening she talked over the allowance plan with Grover, who was so delighted with her suggestion and her businesslike attitude that she felt too cowardly to tell him the suggestion came from her mother. He at once wrote her a check for eighty dollars; and she thought, with relief, that it would all be a clear saving, and that she could apply

Her Bande Were Sot In Well Kept, But Her Brain Was Kept Much Better

PINCH HITTING FOR

CUPID By Charles E. Van Loan LLUSTRATED BY ARTHUR WILLIAM BROWN

ATHER than have an argument about it, I'll admit there is such a person as Cupid and that he wears nothing much but a bow and a fistful of arrows, and does considerable reckless shooting. I haven't a thing in the world against him, because if he ever took a shot at me it went in his error column; but I do claim that Cupid doesn't know how to place his hits where they'll do the most good. I've got an outfielder on my payroll with the same failing and he's about as useful to me as a box of corn salve would be to a mermaid.

I'm a bachelor by choice - I did the choosing, if anybody should ask you but there's no law against a single man keeping his eyes open. I've seen a lot of things that have sort of prejudiced me against romance. I'm not exactly sour on the subject of matrimony, but maybe I'm just the least little bit "turned," as my mother used to my about the

If you listen to the buseball players, I wouldn't marry the best woman on earth. I don't go so far as to say that. Most likely the competition would be too keen for me and I couldn't make much of a showing. I've got to the point where my belt measures the same as my chest, a perfect forty-four all the way down; and I like to take things easy.

I've been managing a big-league bull club for so long that the smart-Aleck reporters call me the Methuselah of the National Pastime; but, even so, I'm better preserved than the married men of my age. I've only had a buil team to worry about. Maybe, if it came right down to it, I could still get out there and do a pretty fair job of third-basing; but I'm thankful I don't have to try. Young men for war; wise men for counsel. That's me-and I like my slippers and my pipe in the evening.

Getting back to this true-love proposition, it's the change of pace that makes it so dangerous. A man may be able to dodge the violent sort that hits like forked lightning, but what is he going to do with the kind of love that takes hold easy and hangs on like a lingering fever?

Another thing is that you never can tell who Cupid will send up to pinch-hit for him. You wouldn't think a drunken shoe drummer from St. Louis and an old fellow like me could play the little god of love without make-up; but we did it.

When our team visits Chicago we always stop at a cer-tain hotel. We've done it for years. It's the sort of place that advertises a room and bath for two dollars a day. They've got that room, too, and they'll show it to you if you insist. The management caters to follor from Omaha and Chillicothe, and the lobby is full of palm trees and imitation rubber plants and genuine rubbernecies; but we get a good rate and we always go there.

When you give a hotel a steady play you get to know the people who work round the place. For instance, there was Mary McConnor. Mary can the eigar counter and the news stand, and I guess she was on speaking terms with more big-league ball players than any woman in America, because nearly all the other teams stopped at the same house when they were in Chicago.

The ball players liked Mary. She knew what a box score meant and in a fanning bee she could hold up her end with anybody. She didn't get to see many games, but the boys always told her about 'em afterward and she had the inside dope on everything that came off, from Boston to St. Louis. We figured on getting the freshest news when we got to Chicago. There's some sense to a girl like that. If anything makes me weary it's a woman who tries to talk baseball but doesn't know the difference between a bunt and a bat bag.

Mary was a good mixer too. I don't mean anything wrong by that. She was the sort that you could josh with if you wanted to josh, and then she could turn right round and be serious half a minute afterward. She'd been handing out eigare and newspapers for so long that she had a pretty good line on men in general. She knew the best and the worst about 'em, and nobody fooled her very much. You couldn't put anything over on Mary, and I'll bet nobody ever tried it a second time. Of course a girl behind a counter in a hig transient hotel has to stand for a lot, berause she meets all comers; but Mary knew how to handle the fifty-seven varieties and the man who crossed the line got a call that was worth remembering.

The ball players were her favorites. I don't know as I blame her. Take 'em all

round, professional ball players grade as high as young jobs depend on their keeping straight. Men who drink and gamble and stay out at night don't last long in the big league. There's another point in favor of the ball playerhe's always just out from under a shower bath. A man who is as clean as soap and water can make him is likely to be clean other ways too.

Of all the ball players, I think Mary liked us the best. The married men used to show her the pictures of their kids and the youngsters told her about their girls back home. If I tried a week I couldn't say anything better about Mary McConnor than just that.

IT WAS in the spring of 1905 that Jos Bancroft came to us from some little league out West. Dahney, the veteran second baseman, began to go had in 1904 and Joe was the pick of the recruits the scouts dug up for me.

Joe was rather old for a recruit—a serious, quiet sort of a chap, not at all handsome, but solid and manly looking. Baseball was strictly a business proposition with Joe and it didn't take him long to demonstrate that he was the man to fill the gap. He was a great fielder, a sweet, natural hitter, and a streak on the bases

He was a better listener than he was a talker and his idea of a riotous evening was to sit up till ten-thirty playing checkers with the night watchman. Because he didn't have much to say, people got the idea that he was slow; but he could think fast enough on the field. Joe had real baseball instinct. He wasn't the helpless sort of player that always looks toward the bench when in a tight place. Joe didn't need anybody to do his thinking for him. If the hall was hit in his direction we could depend on him to whip. It to the point where it would do the most good; and the tighter the pinch, the steadier he seemed to be.

We made Chicago on the first Western trip and Bancroft was the man they all wanted to see. Some folksparticularly the Chicago fans-had been hoping that, with Dabney gone to the minors, we'd have a hole at second base that a lot of games would leak through. It's always nip and tuck when we meet that Chicago team.

On the opening day of the series Bancroft played as though he had a borseshoe in his hip pocket. Everything broke exactly right for him. He pulled off four or five circus stunts, started two double plays, cut off a run at the plate, and in the seventh inning he whacked out the triple that won the game for us. Joe was the man of the hour, sure enough, and the evening papers said that unless he was playing faster than he knew how we'd never miss Dabney.

That evening I was sitting in the lobby, close to the cigar counter. Mary had come on watch at six o'clock and most of us had been over to shake hands and say bow glad we were to see her again.

"Well, Chief," says she, "your new man delivered the goods. I haven't seen him yet. What does he look like?"
"He's no chrome," says I. "He looks a lot better on the

field than off it. Watch for a man about twenty-seven, with a hig head of hair and an undershot jaw. That's Joe. Don't try to flirt with him, Mary. He's bashful."

I think I see myself!" says Mary with a self.

Not many of the boys were round the hotel that night Some theatrical press agent with a dead show on his bank had invited us to go and alt in the boxes as guests of the management, and most of the players fell for it. I add because it has been my experience that they never give away any seats they can sell. A stage box for nothing usually means a punk show.

Along about eight o'clock Joe Bancroft came wantering through the lobby. Big towns were new to him is the days and he couldn't seem to get used to living in a hour-He anchored himself against a marble pillar at the end of the cigar counter, and he was standing there with his inpulled down over his eyes when the shoe drummer be-St. Louis came wabbling in from the cafe. The drame had been treating his expense account unkindly and we pretty well illuminated.

I don't know what he said to Mary, but I could selly her face that she didn't like it. I was watching for the comeback when all at once Joe Bancroft stepped over, by all the world as though he knew this fellow and was good to speak to him. Joe put his hand on the back of the drummer's neck and shut down on it with a grip that male be knees knock together.

No fuss, no scene; it was done so quietly that if I halo; been watching I never would have known that anything out of the ordinary was happening.

"Now then," says Joe, "you can tell this lady that y= n ashamed of yourself."

I could see him digging his thumb in under the drame ear. There's nothing I know of that hurts any worse that The drummer said he was ashamed-he would have

said anything about that time—and Joe let go of him. went weaving back to the café, rubbing his neck and tale: to himself; and Joe turned on his heel and faded on its

I managed to need a smoke about that time. "Well, Mary," I says, "you are still batting a thouse."

with my ball club. Even the new man is for you."
"What do you mean—for me?" says she.
"Oh, nothing," I says; "but what was Joe Burns doing to that drunk?"

"Land of liberty, Chief!" says she. "You don't == to tell me that was Bancroft! I took him for an let farmer."

"Give us time, Mary, and we'll train him. We're so had him since the season opened. He still wears details cuffs and made-up neckties."

"So he's the new second baseman!" says Mary. "Ishis regular speed? Does he go round defending being women and choking folks, and all that sort of thing

Not so you could notice it," I says. "He won't talk to the married women with the club and a skirt san him worse than the Miner's bean ball. But maybe, and I, "he saw something about you that took his fact."
"Nonsense!" says Mary. "Why, he never even loss

at me!" "Don't be too sure of that. Bancroft has got a ray " noticing things with the back of his head. The different

Digitized by Google

tetween what he sees and what other people think he sees will make suckers of a lot of base runners this season."

"Is he as good as poor old Dabney used to be?" question was just like Mary. She wanted to get a line on

him straight from headquarters.

"As good?" says I. "Why, the best day Dabney ever say he couldn't beat this fellow! Bancroft's a marvel that's what he is, a marvel! He's the sweetest infielder I've seen since—since -

Since you quit, Chief," says Mary. Confound it! That girl can usually tell what you're thinking about.

"If he's as good as all that," she goes on, "I'll have to keep an eye on Mr. Bancroft. Thank him for me, Chief; but please tell him not to do it again. He might get me in but with the boss. The man that he choked is a shoe drumner from St. Louis and he spends a lot of money in the liquae.

The shoe drummer, pinch hitting for Cupid, got on not have and then pulled up lame, as you might say. More out of mischief than anything else, I went in to run for tim. It wasn't any of my business, but I dropped in on Bancroft just as he was getting ready for bed.

The lady at the cigar counter would like to meet you," may L.

Joe suddenly stopped undressing with his shirt half over his head.

"Huh? What lady? Are you trying to kid me?"

"Tell it to Sweeney!" says I. "I saw the little squeeze play you put over on the souse. Nice work, Joe!"

Bancroft pulled his shirt off and sat on the edge of the

ted for a while, thinking.
"Oh, that!" he says. "Maybe you think I was grandenading, Chief; but I wasn't-honest! I don't even know what that girl looks like, but it went against the grain to tave that drunken lobster call her 'Dearie.' If I'd only hid him out in an alley somewhere I could have handed it to him right. I-I don't like his kind of folks, Chief. I was brought up to treat women different."

"You needn't apologize to me, Joe. It was coming to tim and he got it. And, as it happens, that young woman s a particular friend of mine; in fact, she's the friend of all visiting ball players. They don't make 'em any finer than the is. That was Mary McConnor, Joe. You must have heard of herr."

"Nope," says Joe, beginning to yawn.
"Well," I says, "there's a young woman with gifts. She nows more inside and lowdown stuff about the workings of this league than the National Commission. If there stould be a row in the dressing room in Boston to-morrow Mary would know all about it by the end of the week. She's got a line on every new man that breaks in. I'll bet he's got your batting and fielding average figured down to the minute."

No!" says Joe. "Well, what do you think of that? Must be quite a fan, ch? . . . Did she—say anything,

Nothing but that I was to thank you and she'd keep be eye on you after this. She's all right, Mary is; and if it was me she wanted to meet -

"Good night, Chief!" says Joe. "I'm going to turn out. the lights and go to bed now."

He did it too; but there was an arrow planted in him a foot deep.

DON'T know where people get the notion that true love can't be the real thing unless it breaks all the apond records. Maybe it's from the short stories in the maguzines that a man can read in twenty minutes, and in those twenty minutes everything in the world happens. Two young people start out on the first page as total strangemand at the end of the fourth page they go into a clinch.
"I love you!" says Harold. "Re mine!"

"This is so sudden!" says Myrtle-and it is too. Zing! Just like that. On the fifth page you get the orange blossom finish and the life sentence at the church-

Now in real life it's different. Not many men try to knock the cover off the first ball the lady puts over the plate. They want to wait her out and see what they're getting; they want to study her curves and her snap throw to first. That's the sensible system; but there is such a thing as a man being too deliberate and getting a third strike called on him. In a regular story Joe would have been leaning up against that right counter at daylight, waiting for Mary to come to work; but

this isn't a regular story—it's the truth. It was in the spring of 1905 when Joe gave the drummer the squeeze play. Along in September be got up nerve enough to talk with Mary across the counter. The last Western trip we made he shook hands with her and said he hoped he'd see her again. That was a lot for Joe to say.

In 1906 be began to look like a big leaguer off the field. He had some clothes and skirts made to order, quit wearing tan socks with black shoes, and threw away his two-piece red flannels. He bought a diamond from a gambler who was broke and needed the money - four jewelers had to look at it first - but he never wore it. He carried it round in his pocketbook, wrapped up in tissue paper.

Joe warmed up to Mary considerable that season. Once he almost asked her to go to a show with him. He told her all about the quarter section he was buying out West, how much it would cost to get water on the land, and how many crops of alfalfa he figured it would yield. Whenever we were in Chicago, if he wasn't hanging round the cigar counter he was off in a corner somewhere, pretending to read the newspapers, but really watching every move Mary made.

I teased Mary about him a little hit, but I never got much of a rise out of her.

"You let him alone, Chief. It's a real treat to know one man who means everything he says."

Yes; but he never says anything."

"He says enough. By the way, have you noticed how much better he looks since he's been paying some attention to his clothes?

Mary needn't have taken the credit for that. We all had a hand in it. It's no boost for a big-league club to have

They Didn'r. Know the Jhow Was Door-and Didn's Care Either

a star player who might easily be mistaken for a farmer dressed up in his Sunday clothes. The boys had been instructing Joe-teaching him bow to tie four-in-hands, and all that sort of thing.

At the gait he was traveling Joe might have come to an understanding with Mary along about the year 1942; but Father Time and another man cut in on his play and balled

Everybody knows what happens to infielders. They last anywhere from three to seven years, according to how old they are when you get 'em, and then their speed begins to When they quit covering as much ground as they used to and sharp-hit balls get by 'em without even s how-de-do? and when they can't beat out their own infield taps, the manager begins to look round for new blood.

Joe had four good years with us and the fifth season he began to slip a little. He was thirty-two then, which is quite an age for an infielder; and altogether he'd been playing basefull for twelve years. He was due, as we say. His fielding took a slump, his batting feil off about thirty points, he dropped away in stolen bases, and the whole machinery of the infield felt his slowing up and suffered. He was a heady ball player; he knew more about the fine points of the game than ever in his life; but he was a fraction of a second slower than he used to be, and in the big league the fraction of a second makes all the difference in the world.

It's all in the game, I know, and only the fastest and best men can hope to stay at the top; but to me the gradual slowing up of a great hall player is a tragedy. At first he won't admit it, even to himself. He tries to believe that it's nothing more than a temporary slump-something that will leave him in a few days. He doesn't think the manager has noticed it, but for fear that he has he works harder-tries harder; but it's no use. The best he's got left isn't quite good enough. When he gets overanxious and takes to fighting the ball and swinging at bad ones he has reached the last stage.

Some day he overhears a snatch of conversation in the clubhouse-something it wasn't meant that he should hear-or he picks up a newspaper and there it is, with a red beadline on it. The poor devil basn't been fooling any one but himself. His next stop is the American Association or the International, and after that it's a question: "Where do you go from here?" Cold blooded? Maybe; but it's

That season we closed at home. After the last game, when the skylarking was over and most of the boys had left the clubhouse, Joe came in from the locker room. I remember he had a key ring in his hands, and all the time he was talking to me he kept taking off his locker key and putting it back on the ring again, as though it was some kid's puzzle be was working with. I knew he wanted to say something and didn't quite know how to go about it. I hadn't opened my mouth to him about the way he was slowing up, for I could see he knew it better than I

"Chief," said he, after we had talked about the and the World's Series, and a dozen other subject

you'd better take a look round and get another second

baseman. I've been going rotten lately."

Well, you could have knocked me down with a toothpick! Usually a man who is about through has forty alibis and he's always going to play the game of his life-next season. Joe put it up to me, cold turkey, and I didn't know what to say to him. That was Joe's style-telling you what he was thinking about without putting any frills on it. As a matter of fact I had already arranged to pick up a few promising recruit infielders, but I didn't want to tell

Joe so.

"Things have been breaking bad for you," says I, stalling him along. "Take a good rest this winter. You'll be all

right in the spring."
"I don't know," says Joe. "I've been playing ball a long time, Chief. Maybe I'm due."

"Shucks!" says L. "Don't let it bother you."
"Just as you say"—and he put the key ring back in his pocket—"Just as you say, Chief—only I thought it was up to me to tell you."

THE next spring at the training camp I picked up Tom Roche, a second baseman from the Southern Association. He wasn't a Bancroft by any manner of means, nor yet a Dabney; but he was young, fast, aggressive, and not entirely solid ivory above the ears. There's a chance for a kid if he can be taught that he doesn't know all the baseball there is, and Tom was willing to learn. Personally he didn't make much of a hit with me, but I found out a long time age that I couldn't build a winning ball club on my own likes and dislikes. I'd sign the meanest man in the country if I thought he could help us win a pennant,

I hoped I wouldn't need Roche, but I wanted to have him handy in case Joe got any worse. It looked like a close fight in the first division and I wanted Joe's baseball instinct in there behind the young pitchers, even if I had to sacrifice a little speed to get it. Joe knew what was going on, of course; and how that fellow did work! He took off weight that had been on him for ten years, and he had the rubber kneading and pounding his legs for an hour every night. If sweating and massaging could have given him back his speed Joe would have been a lightning flash

He didn't like Roche any better than I did, but he let the boy alone and gave him every chance to make good on his merits. Often the recruit who is being tried out for an old-timer's job has a pretty poor time of it. It's an unwritten law that a veteran has a right to hang on to his job tooth and toenail, as the saying is; and Roche knew this and expected trouble with Joe. Tom had a chip on

his shoulder all the while we were down South, but Iosimply ignored him and went on about his own business On the train bound North for the beginning of the season Joe spoke to me about Roche for the first time:

"I see you took my tip and got a second baseman."
"He might come in handy," I says.
"Well," says Joe, "if that fellow is a better ball player than I am he's welcome to the job." There was quite: silence after that remark and then Joe closed the incident "But he ain't!" says he.

We had warm weather for the opening of the learn cason, which was lucky for Joe, and he started off at a fairly fast clip. He wasn't the old Bancroft by quite i considerable, but he was plenty good enough to keep Ton Roche mumbling on the bench.

On the first Western trip I had a long confidential that with Mary. I had heard the Gamecocks were fighting among themselves and that some of the outfielders had even been accused of laying down behind certain pitches. and I know Mury would have the straight of it. While we were talking Joe Bancroft came along.

"Hello, Mary!" said be, "Gee, it's good to see you again! How have you been?"

"Just about the same, Joe. I don't change much. And (Continued on Page 53)

HOW PLAYS ARE BORN

O KNOW how plays are born rather than how plays are written is the quickest way of understanding that look on life which is indispensable to successful playwriting. Behind it always is the instinct expressed of old and still symbolized by the comic mask-to report the actions of men and women: but to do it in such a way that the world men itself whitewashed of its ugliness, and tired children-so-called men and women-get relief from real life.

Tons of words are annually written and spoken on How to Write a Play; but it is not the How-it is the What of playwriting that should be mastered first. The trouble with the average How is that it is no more than it pretends to be. It tells how to cook the rabbit after he is caught. Granted that it is important for the huntsman. to be rightly equipped with gun, ammunition and marksmanship, what he really wants to know is, where's the What?

Technic in playwriting is simply individuality. That is the reason why nobody can beach it and nobody can acquire it by rote. One man's technic is another man's poison. There

is no one and all-sufficient technic of the drama. That structure which is truest to the plot in hand, resulting in the least amount of waste between thought and expression, is the best technic.

To the practical playwright, writing and rewriting his material are the least of his labors. It is not necessary to warn him not to pad out an insufficient main plot by the introduction of a weaker subplot; to avoid stage asides, empty stages, superfluous butlers, dialogue that does not send the story forward; and to observe the necessity of conflict of characters or ideas, and similar laws.

It is the conception and birth of the basic idea of a play strives for. Once he gets his inspiration, the making of the play consists in thinking out its development from the fundamental idea. Pen may never be put to paper until the play has acted itself out in the playwright's mind. Then writing becomes the mere recording of a play already born.

Twelve years ago J. M. Barrie made an incident in Scottish life, which he had actually witnessed in Kirriemuir, into a one-art play. A young Scatsman was so ambitious for learning that every night he would break into the house of a parvenu neighbor and steal three hours' use of the books in the library. At the end of his studies each night be would leave the house- and the books - as he had found them. As a one-act play without a title that character sketch lay in Barrie's desk for six years. Then A. E. W. Mason, Barrie's friend, came up for Parliament.

By JOHN D. WILLIAMS

The Canr's Ballet Master Tanshing Girls the First Steps in the Cornearine Ballet of the Sthombra Theater

The playwright accompanied the novelist throughout the hustings—not as a speaker, but as a spectator. It was a novel experience for Barrie. He saw in action not only his friend Mason, but Lloyd George. At sight of the member for Merthyr Tydfil baranguing the multitude, with a Welshman's burr, the dramatist suddenly remembered the young Scotsman of his one-act play. The two figures began to blend. The nameless one-act play, six years after being laid away, began to write itself in his mind into a four-act comedy.

During the rest of the electioneering his dramatic instinct was not only seeing but playseeing; for the direct result of Barrie's little trips about the hustings is Lloyd George or, under another name, John Shand, Member of Parliament for Glasgow, in What Every Woman Knows,

To the scrupulously methodical Pinero such a haphazard method of playwriting would be unthinkable. Pinero gets his fundamental idea or incident, reflects on it for from six to eight months, and writes the play from beginning to end in two months. The pages of a Pinero manuscript, written in longhand, go direct from his desk to the printer. Proofs are made, and these are corrected for errors in spelling and punctuation. The play is then printed and bound in the form of a book for private circulation. Its text is never changed. The play may begin with an abstract idea. English middle-class hypocrisy. or, as in the following, a concrete incident.

One morning, during a-wall through the streets of residential London, Sir Arthur Pinere saw a woman, in evident deperation, rush out on the balow. of a flower-decked house in Mayfair. It was clearly her intention to throw berself to the street below; but she was stopped and saved from such a death by two men-one yours. the other middle-aged-who reached the balcony as quickly as the woman. The three figures soon returned into the house, disappearing from viewbut not from the playwright's thoughts. In that incident St Arthur Pinero eaw a new outcome of the eternal demestic triangle - a wife committing suicide to escape from the cruelty of a husband and the disloyalty of a paramour.

In London at that time then was a woman celebrated for her beauty and her success in breaking up homes. She has since become Robert Hickens' Bells Donna; but Sir Arthur first employed her to balance sixmatically the guilt of a hadard who would not forgive the same guilt in his wife-until, in deperation, she killed herself. The playwright even cast for to woman in the case an any

who strikingly resembled the woman in real life. With the much material assembled, Pinero followed his used method: Went in for from six to eight months of social is in London, devoting that period to the gathering of mayrial, to anything but playwriting-to club life, dinner balls, the usual society treadmill.

Then he suddenly disappeared from London, and for the rest of the year he was secluded in a remote village, out reach even of his immediate family; but before the year and up Mid-Channel, a play the story of which is the deal !! suicide of a repentant but unforgiven wife, was announced

Every organic play, like any simple sentence, must have subject and a predicate. This is only to say that rec rightly thought-out play is reducible to a single payosition. The chief figure or protagonist is to a play + wi the subject is to a sentence; the action is to a play what the predicate is to a sentence.

For example: in Disraeli, Louis Parker laid emphase the subject, the chief figure, Benjamin Disraeli; in Romary, on the predicate, the story; in Pomander Wall again on the predicate, the environment - because the germinal idea of the first was a character; of the state two, stories and scenes.

Had not the last-named play first taken root . M' Parker's mind entirely as a scene, it might just as well live been written with its emphasis put on the central characters. the old admiral, rather than on his environment; its

was in the following way that Pomander Walk first occurred to Louis Parker: In 1910 the playwright reached the locality of his home, Kensington, late one night, empty of pocket and very low in spirits. He was returning from the last of the celebrated pageants, some dozen of which he had organized and presented as open-air performances in various parts of historical England.

Great fame, but not even a shadow of financial fortune,

accrued to Parker from these pageants.

As he puts it: "What was made at the Warwick Pageant was lost at Bury Saint Edmunds."

Hence, after a long absence he had to return home and there plunge into fresh devices to get free from serious financial straits. His thought as he neared his house in Pembroke Road was: "I must write a play; I have a family awaiting me at home." But where to find the necessary material? How to make even a beginning?

"If I could look beneath the roofs of that row of houses standing before me," the playwright said to himself as he came within sight of Pembroke Road, "I am sure I should find dozens of plays." And on the heels of that thought came the idea: "Why not? Who knows those people better than I? I have been beneath every one of those roofs."

And, with that, Mr. Parker entered his house; hurried to his deak; wrote steadily for three hours, and the following moon delivered to Golding Bright, his play agent, a fifteen-page scenario of a play to be called Pomander Walk. Two days later George Tyler, the manager, then in London seeking plays, gave Mr. Parker, through Mr. Bright, a check for two thousand dollars for the accurate.

check for two thousand dollars for the scenario.

"Directly I knew it was to be produced," says Mr.
Parker, "the play practically wrote itself from my original scenario."

Where the greatest emphasis shall be laid, then, in the making of a play is also determined by the character of the dea from which it is born. The coming of that idea is all matter of chance.

Very likely Jave thought it an idea for a play when he lest felt Minerva springing from his brain.

Three Kinds of Plays

REPRESENTATIVE contemporary plays, traced to their origins, are divided into three groups;

1—Those that are born of a central figure—man or oman—which, in conflict with environment, reveal character and important social ideas, thus generating dramatic reomic situations; for example, Casar and Cleopatra, omance, Lady Windermere's Fan, and so on.

2—Those that are born of important social ideas or leals which, put into practice, generate dramatic or comile tuations and reveal character; like Man and Superman, ruth, As a Man Thinks, The Thief, and so on.

N.—Those that are born of dramatic or comic situations high, when developed, generate dramatic or comic action ad reveal character, but no special ideas or ideals: like risona, Secret Service. The Seven Keys to Buldpate, he Music Master, and so on.

In short, all sound plays are born of the development of character, an idea or a situation. This central character, as or situation comes of reflection—is found in the newspers and magazines, heard in chance conversation, or countered on the streets.

Augustus Thomas, who thrives on a healthy scorn of thric—his saying is: "The longer I live, the less regard ve I for the so-called technic of the drama"—but who a consummate master in building up in his own way dramatic or comic material of almost any origin, once gave me the following set of notes, briefly accounting for the origin of his best-known plays:

"When I started to write Arinona it was only with the main idea to produce a modern and sane melodrama on a Western subject. With personal letters from General Nelson A. Miles I went to the military poets, where I was made at home and was introduced to the neighboring ranchers, whose guest I subsequently became. I spent a couple of months in the district and was impressed by the juxtaposition of these two lives—that is, the ranchman and the soldier; also, by the points of contrast between them as well as those of contact. Most of the people were young and romantic; when not so they were middle-aged and vigorous.

"The character element was there plentifully—the story grew of itself. For some time after, I was at a loss for a sufficient reason to have the military active, as I needed them. One morning the papers reported the Maine as having been sunk in Havana Harbor: I promptly invented the Spanish War and raised a company of Arizona volunteers. The United States Government and General Leonard Wood stole my idea before I could get it into print; but that was the genesis of my piece.

"It is a theory of mine that one of the chief tasks of the dramatist is to know what will interest people a year from now—that is to say, when his proposed pluy shall be launched. Some three years ago I said a good play should be written on the relation of the Jew to the life about him is America. I had no intention then of writing such a play myself. Several plays with Jewish subjects followed; but it seemed to me they had failed to get the relation I had noted—to show the Jewa charitable, high-minded and ethically conscious, as I know them to be.

"These plays had also failed to note the connection of the early Jewish law with our own modern code. It was a wish to depict this social relation of the Jew, and to show the value of his early and persisting standard of morals, that made me write As a Man Thinks. The starting point there, as you note, was an idea and not a situation. The process was to select representative types—let them live together in one's mind and work out their own story, with such supervising hints as a dramatist would inevitably give.

"You ask me shout The Witching Hour. The sucleus of that was written in a one-act form twenty-two years ago, and after I had had some business relationship with Washington Irving Bishop, the thought reader, and some knowledge of his telepathic power. A. M. Palmer, for whom the play was written, felt that the public knew too little of the subject; and I guess he was right, because even after the four-act form of the play was produced, under the title of The Witching Hour, an authority so eminent as our materialistic friend, Professor Münsterberg, denied that any such thing as telepathy existed. The preponderance of testimony, however, was on the other side, having each advocates as William James, Sir Oliver Lodge, and others; and hesides, I had my own knowledge of the matter. There again an idea was the central thing."

Probably nine out of ten plays devoted principally to action owe their origins to the columns of newspapers. A Doll's House, for example, was born of a newspaper account of a wife who was arrested for forging a check in order to obtain money to repaper the walls of her sitting room.

William Gillette, bored to wearines from playing Sherlock Holmes season after season, one morning opened a copy of the New York Times and caught sight of a cabled dispatch from Russia. The item occupied exactly two inches on an inside page. It told of the escape of three spies from Siberia. The men had broken into a signal station, which stood alone by the railroad tracks. Two of the spies had chloroformed the telegrapher, while the third, himself a telegrapher, dispatched an order over the wires for a special locomotive. With its arrival all three, passing themselves off as linemen, rode away at top speed for the nearest boundary.

Now the one point in the item that fascinated Gillette was the fact that one of the spies, a prisoner in the enemy's country, was a telegrapher. In itself that was a dramatic nugget. At once there was a fresh interest in life for the playwright. A play was born and began to develop the moment be recognized the dramatic essences in that single situation.

Gillette went on a tour from New York to San Francisco, performing Sherlock Holmes in public; but by himself, during hours of secluded, silent reflection, it was the play with the telegraph scene that he was really acting.

June came, and not a line had yet been written of a play that had been constantly building itself in its author's mind since October. The tour ended and the company returned East, but without Gillette. Nothing was heard from him by anybody for seven weeks.

At the end of that period, however, he boarded a train in a suburb of Lee Angeles, carrying the completed manuscript of Secret Service. In less than two months of playwriting its author had recorded nine months of playthinking. That was a play beginning with a single concrete incident, out of which naturally developed rapid, logical and picturesque action.

Plots From the News Columns

THE news column of the daily papers is a rich field for such material; but the vein does not always develop gold. About six years ago the late Ciyde Fitch had three plays going in as many theaters on Broadway. They were called Truth, The Happy Marriage and The Woman in the Case. The last is worth mentioning as an example of what not

to do with a good plot found in a newspaper.

The Woman in the Case is the story of a wife's loyalty to her husband, who has been convicted of poisoning a friend, a member of his club, and is up for a second trial; but there was another figure, a woman of the half-world—The Woman in the Case. She had been loved by the murdered man. The accused had tried to undermine her influence over her lover. In revenge she became the star witness for the prosecution. She implied that the husband had been jealous. All circumstantial evidence pointed to the husband's guilt, but the wife was eloquent in her belief in his imposence. Her loyalty knew no bounds. Her presence at the Tombs was constant.

Of course The Woman in the Case was the Molineux trial, which was then filling the newspapers. The names of the principals were changed and the character of the husband was somewhat ennobled to allow for a happy ending; but he was acquitted in the theater, just as he subsequently was in court, and for the same reasons.

In short, a celebrated local case of absorbing interest to the public was transcribed by Fitch's pen until it fitted the limitations of the stage instead of being translated through his imagination and given an extra social significance by the stage. A real local event of tragic importance was

(Concluded on Page 30)

ment and become deline.

A Half-Dress Rehearsal

THE LAST ENTERPRISE

WHEN the San Francisco earthquake had ended its forty-eight seconds of diabolic dancing, "Judge" Harris, in one of the police-station cells of the City Hall's basement, peered out of the folded arms in which he had bidden his bald

had hidden his bald pate and saw before him a good breach in the wall. Without too much hesitation he walked through that breach to the sidewalk and stood free beneath the morning sky.

He had gotten into the cell through a long course of debauch alcoholic, begun many years before with a sorrow so old he could not remember it. This time even his legendary frock coat, his extraordinary beaver, and his reputation on the streets of Frisco as the last of the characters left by a departed romantic period had failed to save him. But the elements were with him. Years of gradual slipping had put him in; a few seconds of catuclyum had taken him out. He turned his blinking eyes and his inflamed nose to the rising sun in supreme inquiry.

The sun was rising strangely, as though

behind a pane of crucked glass. It danced; it turned; it was very red; it was dull and molten. Finally the judge diagnosed this behavior—the city was burning. He shuffled on downtown to see it burn.

He saw it burn for three days. He lingered on the edge of the fiery sea, backing tranquilly before its steady advance, removing before its tide his extraordinary frockroat, his incredible beaver, his contemplative stupor; and standing at a corner now and then, legs apart, epic, he answered the confingration's flaunting with the flame of his nose.

Then the fire ended. He found himself camped among ruins, by the trickle of an old waterpipe, and very happy; for his city now was different from the city it had been, was different from any city that ever had been. He had sensed the change even while it was still burning. Accesting then, with a muttered request, a man in an alley, he had been astonished to see the stranger empty the contents of his purse on his palm and count out to him exactly one-half—in this case one dollar and seventy-five cents. A little later, when he asked bread of a woman, she gave him precisely one-half of the loaf she bore under her arm.

This blessed condition was continuing; the city had become a city in which every one gave a maiety of what he had to every one else. Also, there were lines in which one took one's place; and, moving forward little step after little step, one came finally to an important individual with a red cross on his sleeve who gave one potatoes, bears, bacon, flour and pyramids of corned beef. Once, getting in the wrong line, the judge had even been offered a bouse.

It was a very little house and it carried with it the obligation of living in one of the organized refugee camps. The judge refused it; he preferred his own camp. This was in the ruins. A remnant of brick wall gave shade. Other bricks had fallen amiably into the shape of a very good fire trench. A broken pipe trickled like a spring; lush grass was already growing round it. Making his coffee and cooking his bacon and flapjacks, the judge felt long-gone efficiencies stir deliciously within him—floppings of pancakes, crispings of bacon, coaxings of biscuits to flaky embonpoint—and he was thrown back forty years to the time when, young, he "bached" it on the placers of Coyote Flat; to that time when something had happened—his old head could not quite remember what—which had sapped his fibers and had started him on the long downward path.

He was thus giving promise of ending his days in idyllic ease when an accident threw him back into the fields of endeavor. This accident was a small accident. The judge one morning again took a place in the wrong line. Arriving at its head he found himself facing, instead of the flour and bacon he needed, a huge heap of clothing. By James Hopper

ILLUSTRATED BY H. T. DUNN

"You Jue, Steedsman, It Isn't the Custom. It Jan't Bone"

The judge's capacity for refusing was not large; he did not turn away. A kind, round lady was distributing. In a moment she put in his arms a very respectable said of black, with necktie and socks to match; but by this time his eyes were so very wistful on something else that she pivoted to see. The judge was looking hungrily and longingly at a shirt. She had been wondering earlier who could have sent in those shirts and what in the world she should do with them, for they were flanned shirts such as had won freedom and reconstruction for Italy, and many tender glances on the Fourth of July for the stalwart members of Exempt Company Number One, Sag Harbor. She did not know that forty years ago, on the placers of Coyote Flat, the judge had worn just such a red flannel shirt.

"Lady, please; may I have that shirt!"

"Why, certainly, my good man."

The good man, receiving the red shirt, returned the black coat.

"But you can have the coat, too, my good man."

"I don't want the coat. Just the shirt. Say, lady, may I have these overalls?"

"Certainly, my good man."

Now his mouth was open and the yearning in his eyes was far beyond that which the shirt had drawn. He had seen a mountain of boots—boots accordion-plaited at the ankle, with two unsabamed loop-straps at the sides.

"If I could have boots like that, madam!" He was given the boots. "Now a belt?" he murmured. "And a sombrero"—when he had obtained the belt.

He left, holding the garments in his arms with the gesture of a mother holding her halvy, and back in his camp, behind a ruined wall, put them on immediately. The shirt was open on the old rupy throat; the belt was tight about the sunken abdomen; the overalls were tucked within the boots, and there was a tilt to the sombrers. He stamped about weakly at first, then with what might have passed as rising strength. And with this act the vague fermentation that had been going on within him came to a clear result. He saw with shrupt vividness the placers of Coyote Flat, where he had mined forty years before, the pines, the swarm of men, the noisy camp with its Irail cabins, the booming floroes; and sitting down, his old head in his hands, he began to consider seriously a project that for years had been tormenting him dimly.

It was to him a perfectly simple and good plan, and one certain of success. When he had thought of it ten years before, his heart had almost knocked him down with its beating, and he had thought his fortune surely made. Yet he had never succeeded in interesting the necessary capital. It was generally in saloons that he tried to do this. To any one who had been a little kind to him, who had allowed him

to sneak into a general Come-boys-this-is-on-me image, the judge in gratitude would try to unfold the magnificent of his embryo enterprise. He would take him to the minithe bar and would mumble in his ear; but the chosen on

never listened to the

At a certainmone:
he always raised in

ward seemed just als:
afraid of him.

The judge, bead a hands, thought now!! these many rehufu

"What I need he grubstake," he man tered.

The next day is appeared before a committee of leading citizens which was deleg out loan funds to ne seeking rehabilitation. Being leading citizen they had never not the judge in the place where he had ucust capital, and one the experience of year caused him to be decreed.

He did not discouhis true intentions. Its asked more motor; for a stake that would enable him to start a

vegetable garden on the outskirts of the city. "A plus to grow cabbages and things," be described it.

That forty-eight-second dreadful dancing which he pend this committee had suffered a few weeks before tails them a little more indulgent and akeptic and huncry than they had ever been. They staked the judge at the cabbages. The next day he left the city on his way in his splendid enterprise.

It did not occur to him to take the train, for he was inthings as he would have done them forty years below. By embarked on an old river steamer, which began to day the waters with its wheel tail, slowly crossed the by it black profile against the setting sun, and entered a rive. Up this river, winding along interminable alough, " coughed all night. The judge, who to economize had non-no cable, lay wrapped in his blanket on the upper de-He did not sleep. The boat coughed, coughed, out in churned, churned, churned; sidled up to a low bush and sidled off again, its cargo increased by a sack of postor a crate of strawberries. And the judge remembered the days when such steamers came swiftly down the red splendid with lights, neisy with the clicking of chips with the loud exhilaration of men down from the placen vill gold dust in their pockets, gold dust to stream of the roulette tables, and gold dust in the purser's sale le longer orgy in Prison.

At sunrise the spires of a city appeared across the tale and an hour later the boat tied up at its very hear. In judge scrambled out, in haste to outfit. He were his look his shirt, his sembrero; his blanket lay across his had Early loulers viewed him with stupor.

His first search was among horse merchants and her stables, and it took him some time to accept the fart the what he was seeking to buy was no longer an object trade among men. Noon found him on the outskirts of town, following a bevy of small boys in search of a crist Bob, who "had one." Bob, when found, did have use an was willing to sell. And the judge bought a little tan-bor curly-haired donkey, with innocent eyes and a philical disposition.

This the judge led back to the center of the town to main street and the harness shop.

At the barness shop he bought a packsaddle, who forthwith girthed on the burro, two big saddlebap, the long cotton pack rope, with a hair cinch. The burro accountered, was then moved down the street to the grow where his bags were filled with provisions—flour, but coffee, baking powder, salt and sugar. At the dryot store a thick double blanket was thrown over the last stationing was before the hardware store. By her

ck the judge was ready. By five he was out of town, at hing sun-white road that stretched toward the blue the distant sierra.

The little donkey trotted behind him, vaguely like a tirtle beneath the carapace of its pack. From the knot of the faultiess diamond hitch, cooking utensils dangled; fore and aft in the crotch of the saddle a pick and a shovel rose high above a wide, shining white pan. And the farmers along the way watched, with open mouths, the old man pass, with his white beard, his boots, his red shirt, his sombrero, his little pack animal, with pick, shovel and pan; and at the sight they felt stirring within them old memories of past romance.

He camped, as night came on, near a farm. Small boys in ambush behind the willows watched him eat, silhouetted against the fire, his supper of flapjacks and crisped bacon; lster the farmer himself called, curious to engage him in talk; but, seized with a fear of betraying his precious plans, the judge answered only with ill-natured gruntings and in their presence rolled himself in his blanket to sleep.

He was off again early the next morning. For three days as trudged stubbornly across a plain in the glare of the sun. Then the ground rose under his feet to foothills. It was till early in the year; the grass was green; there were mall oaks, and brooks that ran clear. His purpose now eerned to fade at times, to leave him altogether. He pitered a good deal. Once he passed a whole day playing with polliwogs in a green pool. Another afternoon slipped way while he wasted all of his ammunition shooting with its big six-shooter at a tin against a tree. He would stretch in his back for hours, his cheek caressed by a blade of rass, his eyes on the sky. A second childhood was coming a hirn like a grace.

Then, frowning, he would remember, and would push on ith trembling energy; thus fitfully he rose into the heart of he hills. There came a long, steep grade, which wound him pward for a whole day; and when the road flattened gain it was stretching high through the pines, and a new igila nee had come upon him. The sun set, the moon rose. It went on with long strides, prodding the little burro eforce him, while his old black eyes searched to the right, then left, for faded recollections of old landmarks. The sad, a tollpike, had been little traveled so far this year; ut a fter a while he turned off from it into one still less equencted—one of which, in fact, the carpet of grass, the reacthing bramble and the absence of ruts told of long bandlonment.

He followed this indistinct way through the pines, the irro trotting before him. Then the pines ceased to be id he was on the edge of a wide and denuded flat. His art beatstrongly; he halted and stood looking, immobile. It was a ravaged stretch of land; the moon poured its cusuation upon it and made it livid. There was not a see and not a blade of grass. And not only was there it a aree and not a blade of grass, but there was no earth.

he marth had been ug, scratched, nuli cked away to its pet minute grain; it is as though over the te out this landscape ne monstrous and alo-us deity had ured vitriol, corrodt its fairness down the bone; and only g granite bedrock nained, this itself graved in miniature nons and frozen ves, sharp-crested. The judge closed his se; and instantly he v the land as it had in when he had been e, as it had been re than forty years ore. Over the flat, armed, dressed as he : bent at the waist, h pick and shove y attacked fiercely soil; their picks at up and down ftly; they were like

chanical toys.

Le opened his eyes

, however, and

ling them with his

d peered across

space anxiously,

ched for the first

e with a doubt as

the possibilities of

enterprise. And

he saw that for

which he was searching, that which was assurance of success. Over there in the dim opalescence of the moon rode something like a warship on waves of granite. A more fixed contemplation resolved it into a hillock with a flat top. It stood there in the center of the corroded devastation, an isle intact; a bit of the original landscape left there, spared through some mysterious captice of the bordes which, all about, with the thoroughness of anta and the violence of dynamite, had gutted the land for its gold.

The judge spoke aloud in the stillness. "It is still here," be said.

But his emotion demanded an audience. "It is still here, Nicodemus!" he repeated, addressing the little ass.

Nicodemus licked up a blade of grass, but otherwise was unmoved.

"Our fortune is made, Nicodemus!"

Nicodemus rubbed his pack pensively against the last small pine.

The judge clucked the little donkey on. He did not drive the animal toward the mess that had so interested him, however, but along the faint traces of the road skirting the flat to the right, leaving the mess, mysterious island in the liquidity of the moon, to the left.

"We're going to see how the old camp has stood it, Nicodemus."

The burro's small books drummed on the hard pan; the nails of his boot crunched on the granite. The noise they thus made stirred him with an uneasy sense of desceration; throwing long side glances he tried to walk on tiptoe and was glad when, with a little leap, the indistinct road came to fertile ground again. A minute later the way became the main street of a village.

It was a strange village. The street, long neglected, accoped by the rains, was a guirh. On both banks of the gulch the little houses rose. They were stilt, one to the left, another to the right, as though drunken or as if suddenly petrified in the middle of a mad dance; and some seemed to be bending toward the lone man passing and others to draw back in scandal.

From the yawning doors not a light came and not a sound; in the whole village there was not the bark of a dog or the passing of a cat.

"Coyote Flat, Nicodemua," said the judge with the tone of a cicerone.

He went on down the main street, pushing the little donkey abend, until he came to a cabin larger than the others and with a false front that made its one story look two. This he entered.

He could see the stars through a rent roof; and his feet were in a soft dust made of the earth that had been beneath the floor. The room was large, and to his right, massive and well-preserved inside that frail and ruined house, possessed of an indestructibility like that of an altar, a long piece of furniture stretched a few feet from the wall. He moved toward this sort of counter, leaned one elbow on it, turned toward the center of the room and, with a large, loose, amiable herding gesture of his left arm, shouted:

"Come on, everybody! It's on me this time!"
No one answered. He pounded the counter impatiently.
"Come! The poison is on me!"

Then the sound of his voice and the silence that answered frightened him abruptly. He stumbled toward the door,

out on the street again.
"Nicodemus, take off your hat! This is the Golden
Eagle Hotel and the Golden Eagle Hotel bar."

He went on a little farther and stopped by a cabin that was altogether down, a pile of loose boards and shakes on the ground.

"Nicodemus, here's firewood. We camp right here, Nicodemus."

When he had unpacked the burro and had lit his fire he went off with his pail behind the houses—the deserted camp was flat as cardboard scenery—slid out of sight, and a little later returned grunting, the pail full of cool, clear water. The burro was already at his meal, hopping about with bobbled ankles and cropping bunch grass between boards and shakes. The judge cooked, ate, rolled up by the fire and went to sleep.

He woke twice. The first time he remained motionless on his back, not daring to let his eyes roam. A great silence lay with the moon on the descried and rulned camp, and the mountain cold pressed on him as though it were a hand. A deep sigh coming from very near raised abruptly his dim dread to a passion of fear. Then that which had so hurt him now reassured him—little Nicodemus came sauntering by, munching, carelessly treading possible terrors under his small boofs. It was be who had sighed, waking half frazen.

And the second time the judge did not know whether he was really awake. The moon was sinking behind the trees and in the thickening darkness the ramp seemed repaired and restored. What had been down was up; holes in roofs and walls were filled. And what thus stood repaired seemed of another stuff, less material, than the more solid parts that had resisted time. The doors were all closed; the windows were all closed; the judge funcied he heard behind these closed doors and windows the measured breathing of hundreds of men. From the Golden Eagle Hotel came a cry

An owl flee by, velvety. Nicodemus shook himself hard by; and the judge, sitting up with prickling hair, saw the little animal hop right through one of the restored walls. As though this had been a signal, a respection of things as they are, suddenly all the holes became holes again, the patches in walls disappeared, the semimaterial ghostly fabric became air—and the camp was a ruin again.

When in the morning the judge woke he found the devastation about him more eloquent in that light. The shakes with which roofs and walls had been made had curled to the heat and cold of successive seasons, and in agonized con-

tortions had torn themselves from their nails; there were great holes in walls and roofs; many cabins were down altogether; one or two only were apparently intact.

The judge, with shufding steps as though all his late energy had gone out of him, as though this had been a last flare to be followed by the final torpor of age, pottered about the ruins. He seemed to have forgotten altogether his superb and urgent enterprise. He stood on piles of shuffled lumber, picked up now and then an old corroded pot, a pan; he entered cabins and, before some rude fireplace still sooted with lack, nodded with what might have been an old man's wisdom or an old man's weakness; he leaned on the bar of the Golden Eagle Hotel, that bar so humorously solid and permanent in the ruined flimsiness surrounding it, and seemed to ponder a long

His wanderings, though aimless in appearance, were in fact the following of a thin

time.

In the Chart Boor of the Vanished Cabin a Young Waman Stood

thread of memory which stretched before him like a spider's web, tenuous, elusive, visible only in cortain plays of light, lost altogether at times; then again before him. He zigzagged, turned, twisted, climbed mounds of lumber, went to the right, to the left. Once he thought he had found his old cabin. There was left only a piece of one wall; but against that piece his bunk still stood, the bunk he had occupied more than forty years before. Like a child playing a game he got into it and lay on his back, looking up through his old syelids at the sun. It was very quiet and peaceful here. "Good old bunk!"

He was discovering, however, that this was not the end of his search; that the dim urge within him stirred still unsatisfied; that it was still pushing him on, he knew not where—except that somehow it had to do with pink calico. Yes, pink calico—that was it. He rose and began his wandering again, following the impulpable spider thread. And then, suddenly, he had found?

He knew that he had found because of the peace that had come to him, as though forever an anchor had been dropped; but he did not know just what it was he had found. He was standing before a spot where a cahin had been; but of that cahin there remained only débris between the four corner posts, still standing upright, standing there upright as though they meant something.

Suddenly there came to the judge a vision at once precise and incomplete—a perfect picture, but detached from any ambience that might explain it. In the ghost door of the vanished cabin a young woman stood—a young woman of fresh, clean and buxem charm, flashing blue of eye and rose of cheek. Her dress was of pink calico; the sleeves of it were rolled up; and the bare arms were powdered with flour, as though a moment ago she had been kneading.

In her skirt a little girl hid, blue of eye and yellow of hair. The judge saw, but did not interpret. He saw without knowing just what he saw. This picture was a projection of something that had existed forty years before; but nothing that had been with it came to explain it. He puzzled; but his old brain refused to toil him. Then a sadness pinched his heart and he found himself weeping. Hot drups as of liquid lead were on his hand; he looked at them, astounded.

As though a curtain bud been rung down, the vision ceased. The judge went on pottering about the ruins simlessly.

In the morning, though, the judge woke tingling with renewed vigor. He dispatched his breakfast hastily, for a fear was now on him. He feared that his eyes had not seen aright on the night of his arrival; or that since then something disastrous had happened. It was with a shout that, debouching on the desolate flat, almost at a run behind trotting Nicodemus, he saw, affeut like an island in the morning light's liquid gold, the hillock in which lay his certitude of splendid wealth. It stood there intact in the center of a corroded devastation as though there bung above it a taboo, a curse, or a sanctity. All about it the land had been ravaged. Two generations of miners had passed here - the judge's own, the argonauts who, with pick and shovel, had scraped what they could; then that which, with terrible hydraulic streams, had washed away what remained as with acid. And both had spured that little half-acre which, as the level about it had descended to bedrock. gradually had risen a little toward heaven.

It was a small hillock now with a flat top, a diminutive of those messs one sees in the Arizona desert; and the judge viewed it with tenderness.

"She's there, Nicodemus - she's there! She hasn't budged!

"I shouldn't wonder if there were one like it in every old deserted camp of California, Nicodemus?

He Remembered Row - At. He Remembered!

"The Deserted Camp Exploration and Final Exploitation Company, Limited — how would that sound — eh, Nicodemus?

"Or shall we keep it all to ourselves?"

The burro not answering, he clucked it on toward the mesa. He observed it narrowly as he neared. It had not been touched. The walls were sheer with the exception of a little crumbling as though the miners, approaching like a surf from all sides, had been abruptly stapped by a word said up there at the top, or a gesture. When still nearer he scanned the geological structure cross-sectioned before him.

At the surface was a this layer of brown earth traversed by the roots of grass. Below was sand; then pebbles increasing in size to boulders at the bottom. And among these boulders, on the bedrock, was black sand. He nodded sagely, skirted the mess until he was on the side opposite that by which he had come, on the side bidden from the road that once had been, and, unpacking his implements, without hesitation be attacked its flanks with pick and shovel.

When he had thus secured a saddlebagful of the bluck sand he went down to the river that skirted the flat, taking along his pan. He was gone an hour. When he returned he placed beneath the nose of Nicodemus a small, open huckshin hag. Nicodemus, startled, breathed in noisily, and the old man broke out in a cackle:

"That's gold you have on your tree, Nicodemus! Gold dust! There's about ten thousand dollars' worth in that little hill. We can get half of it this summer."

He was silent, pensive, "And we'll come back next spring, Nicodemia, Our fortune is made. At last?

"The Deserted Cump Exploration and Final Exploitation Company, Limited," he added scientily after a silence.
They are titled in his bundle, he relied the nick at the and

Then, splitting in his hunds, he raised the pick at the end of his lean, trembling areas and brought it down against the side of the billock. It but weakly: from its point a little crumble of earth run down to his shows.

"We're off, Nicodemus!"

He worked until sundown; then with Nicodemus he returned to his camp among the ruined cabins, the boards and the shakes; and in the morning, with the ruing oun pricking his back, was egain at the mess with pick and shovel. When Saturday came he did not dig, but spent the day transferring the excavated sand and rubble, with the aid of Nicodemus, to the banks of the stream. And all Sunday he squatted by the water's edge and rocked and panned. When, Sunday night, he regained camp he held tight in his right hand a little buckskin bag full of gold dust. He was too tired to cook, and munched some cold biscuits; but immediately afterward he was up, searching about the ruined camp.

When he had found a cabin that was altogether down in a loose shuffle of lumber be lifted several boards, introduced his long arm beneath them, faid the little buckokin bag carefully on the ground and let the boards fall back on it. Then with a night he rolled up in his blanket: but in the middle of the night he was up again and, when he had found his carbe, lay long on his side, his arm, underneath

the boards, stretching to the little bag, his fages tight about it—until the cold had driven him but to his bed.

On Monday he was again picking at the mea. He blows were feeble, but he made this up by the patience of his industry. His mind, much of the time was a vacuity; but all the time in the center of the haze there burned, fixed, a kernel of purpose. And his pick censelessly rose and fell, rose and fell going up slowly and tremblingly at the end of his old, thin arms, descending loosely; it scratched and scratched and the loosened earth rose about his boots which beneath the frailty of his body, took on an appearance of great weight, size and solidity as though they had been of bronze. Early on Tuesday he was here again—and Wednesday. Toward the end of the west

here again—and Wednesday. Toward the end of the west he began to move what he had excavated to the bank of the stream. On Sunday he panned and rocked for thirteen hours and, when night had come, deposited in his carte beneath the boards of the fallen cabin a second fat little buckskin hag of precious dust.

The days now became the beads of a chaplet, slipping one by one. His undertaking possessed him altogether, is gave himself hardly time to sat and to sleep. At pep ald dawn be came running up with Nicodemus to the measurement of the dragged away at dark, full of regret. And his success was proving far beyond what he had dramed

Though his age and his weakness and the primitiveness of his methods were holding birn much behind his planning though he had so far merely scratched the sides of the hillock and saw that, instead of two summers, it would also him ten at the same rate to level it, yet he was taking ast in gold as much as though the mosa held merely what he had hoped and, a giant, he were demolishing it ten time as fast. It seemed as though the argonauts, who tak attacked the flat for gold, in setting out this small hallower had reserved unwittingly the richest spot. It may values beyond what the judge could remember of the ion claims forty years before.

"Why, it's a real pocket—a real pocket, Nicodemus There's hundreds of thousands in there, Nicodemus Well be sliding on velvet, Nic—on velvet!"

The work, with all its fascination, had its small amovances. At times in his digging he came on something that gave him pause. He hesitated a while; then using the pick very carefully he freed, little by little, buried object that looked like sticks of bleached, porous wood. He had then carefully together by his side and, gaining acceptonance and assurance by the very act, at length was stading upright reflectively, holding in his hands a round thing, in the peature of the Prince of Denmark in one of Shakaper's famous scenes. His undertaking lost its spiender; he shivered a little in sickish distaste.

This lasted but a moment. His pick, rising fell against bit into soil that he knew held much gold. The days passed one after the other, each full, tasting of duty will done; and in the cache under the planks of the ruines cabin the number of little bugs of gold increased, squatted in a line in the built-light, like rotund little Buddhas.

It was then that the fascination exercised on him by the top of the little mess began to put forth almost irresistive strength. When he worked it was right there above his head—the top of the mess—very near and yet invisite it beckened to him all the time, as though up there in the silence it held something to show him or a whisper for his ear. On the other hand, he could not hear the thought of dropping his pick for a moment or ceasing for a second the diligent scratching which was giving him a dignity long lot, which was rehabilitating him, which was siving him said.

which was rehabilitating him, which was giving him gold.

When he came hurrying is the morning he could see if, the top of the mesa, as long as distance made it indisting

THE FAKERS By Samuel G. Blythe

HITTLINGS went to South America on business for a client, and was gone for six months. He told Hicks they would take up the matter of a partnership when he returned. Hicks kept on at his acquaintance-making. securing some business which Gudger handled for him. He was constantly in the company of Rollins, who expressed great affection and respect for Hicks and selped him in every posdble way. Hicks particiosted in each movement or the betterment of Rextown, was active mough in church affairs a keep himself in good tanding, and essayed the part of prominent citizen. is wrote regularly to lenator Paxton, making ree comments on the own, the people, his plans nd his prospects. Every ime Hicks' name apeared in the papers he ent a clipping to Paxton. ince he spoke of the hittlings proposition.

"On the broad, general mary that two heads are etter than one, if each is swenably non-omeous," enator Paxton wrote in ply, "I should say the lan is a good one. As political move it has its crits, also, for it stands reason when a law m is composed of two

artners, and has a political alone to it, if one partner is a emocrat and the other is a Republican the harvest will much more complete and satisfactory than it would be both were reaping in the same field. I think you might all make the experiment, only nover trust any person, emmie, in a business deal except one, and do not be too ending with me. Get it all down in black and white and on't let the other man use you half so much as you mee other man. Everything, they may, is fair in love and ir, and that may be so. It also is true that everything by fair in polities, so keep your vye no your nonclass musantly, and remember that the only way to be presperous. the future is to have been discreet in the past.

Chittlings was detained and did not get back to Rextown til September. "Let it wait until the first of the year," said to Hicks, and Hicks was glad to do so, for he was tremely busy with politics. County conventions were to held, and Rollins insisted that the Democrats must put a full ticket, from county judge to road superintendent. ere were many conferences at the office of Rollina and eks took part in them all.

As usual it was difficult to get Democrate to take nominans, for the fight was hopeless.

I've got you slated for prosecuting attorney," Rollins d to Hicks.

'Prosecuting attorney!" Hicks exclaimed. "Isn't there udge to be named?"

'Yes," said Rollins, "but another man has been named that. You take the prosecuting attorney nomination. at will give you an opportunity to go out into the towns i get acquainted with the farmers. It's a county office, a know."

ficks reluctantly consented.

Ie was firmly of the opinion that his services to the mocracy of Rextown and the surrounding country ened him to nomination for the highest office within the gift he people at that time, but Rollins had picked an older yer with a war record for the place, and Hicks subsided, without much inward protest.

Inough delegates were rounded up to make a Demotic convention possible, and Rollins called the gathering order at the appointed time. The assemblage, which uded Democrats from all over the county, was a listless , for it faced certain and overwhelming defeat and knew Rollins had asked Hicks to get ready for a speech, and

"Paddy. That Old Grandstander, Rollins, is Making a Good Draf of a Kom Oner the Franchite Master."

after the furmalities attending the monimation of the ticket were burried through, Rollins addressed the delegator:

Follow Democrats and gentlemen of the convention?" in began. "I now take great pleasure in introducing to you a sterling young Democrat who has recently come to our rity, a man who believes in the ultimate triumph of Demcoratic principles, who holds Thomas Jefferson to be our greated American, and whom you have just numbrated for the important office of prosecuting afterney. Mr. T. Marmaduke Hieles, of Regiown, will now address you.

Tunmie had felt be should array houself in his frick coat and wear his high but, but Rollins told him not to. So he came in a sack coat and soft hat. As Rollins pronounced his name he stepped forward on the stage and bowed. There were a few scattering handelaps. Some of the men in the rear of the hall started to go out.

"Fellow Democrats," Tommie began; "I trust you will bear with me while I give to you my brief message. While these are times of dull despair for our party, I am one who has his face turned toward the morning and I can confidently assert to you that every cloud has a silver lining, that the night is darkest just before the dawn and that there is no lane without a turning. Fellow Democrats, truth is mighty and must prevail. As the poet has it: Truth forever on the scaffold and wrong forever on the throne'; and, as you all know, the minority is always right. These are times of stress. The very foundations of our country are threatened by the insidious underminings of the corrupt influences that have control of the Republican party."

That's the stuff!" abouted Rollins.

Hirks spoke for twenty minutes. He had schooled himself in his piece, had practiced it before his looking glass in his room and knew it by heart. He was full of confidence, threw in every gesture he had ever seen a platform orator use, and ran his voice up and down its register with amaging results. He stamped his foot, waved his clenched fists in the air, and walked from one side of the stage to the other. When he had finished sweat was dripping from his forehead, but his voice continued strong and his peroration could have been heard as far as the city hall.

Two bored reporters watched him with much amusement. As Hicks finished he looked anxiously at the reporters. He had noticed, as he was talking, that they were making no notes of his speech.

"Did you take it dawn?" he asked anxjously, learning over to the table where the reporters sat. "I can give you copies of it."

"We've got some of it," fibbed one of them graciously.

The convention adjourned and some of the country delegates congratulated Tommie. One old man said he was glad. in find there were still young men who had the courage to fight the forces of corruption in politics and faith to speak what was within them. The papers made only brief mention of the convention, gave the list of nominations and said T. Marmaduke Hicks addressed the delegates. Tommle was incensed when he saw no reports were made of his speech. "Dut," he consoled himself by thinking, "the time will come when they will print what I have to say on the front page,"

Figureed by Rollins, who gave him money for livery righ and for his meals at the country hotels, Tommie traveled all through the county, speaking at achoolhouses and wherever he could get a few people together. It was discouraging work. Most of those who came. to hear him were Republicans. They joered at him.

But he stack to his july, and by the time the campaign was over could make a resounding speech, full of allusions to the corruption of the Republicare and filled with promise for better days if the Democrats were put in power. He took up the condition of affairs under the Republicary prosecuting attorney, charged that official with despliction of duty, with grow favoritism, with grafting and with about everything else, and promised a clean, rapable, homest administration of the office and the relentless prosecution. of all eritainals, whether of high or low degree, if he were

Also be did his Arst house-to-house-or rather farm-tofarm-canvassing. He were his oldest suit of clothes, let his shoes remain unpolished, was hall-fellow-well-met with the farmers, ate with them when he could, was elaborately polite and flattering to the women, took part in prayer meetings in the churches, and descanted continuously on the necessity for getting back to the soil and the rugged honesty of the agriculturist as opposed to the scheming, contriving dishonesty of the city dweller.

He put in the last week of his campaign in the city, where he dressed with scrupulous care, making up as he thought a clean-cut, alert young prosecuting attorney should look. He spoke every night, sometimes on the street corners and once or twice at very small rallies. His opponents took no notice of him, and the papers joshed him a little and reported none of his speeches. The campaign was neither exciting nor interesting, and the outcome was never in doubt. Tommie ran a few votes ahead of the rest of the ticket, but was overwhelmingly beaten.

Rollins told him he had done well. Tommie thought so too. He had learned something about campaigning. Also he had spread the knowledge among the country men that be was a young man of correct deportment, a church member, and that he neither drank nor smoked. He never for a moment let down on his pose of being the friend of the people, and he considered he had sown good seed. Besides, it hadn't cost him anything. Rollins had furnished the money, and Tommie made Mrs. Hungerford deduct for the meals that he missed while he was speaking in the

He had attracted some attention among the lawyers. They talked about him. Chittlings was especially kind in his comment. "It's all right," he said; "if that is the game you are going to play you have got to start it that way. Keep at it and you may win out some day, if a pestilence blows along and kills a few thousand Republicans and passes by the Democrats."

A little law business came to him as the result of his campaign. He was one of the leading figures at a union Thanksgiving celebration, where the Methodists, Baptists and Presbyterians joined in a service on the night before that festival at Tommie's church. He made an address on The Necessity of Brotherly Cooperation, which was pronounced very fine by those who heard it and was mentioned for a quarter of a column or so in the papers. He was active in the Christman celebration at his church, and a day or two before the end of the year was asked by Chittlings to come up and see him.

"You've had plenty of time to think that proposition over," said Chittlings. "How do you

feel about it?"

"But Mr. Chittlings," Hicks replied, "you never have made a definite proposition as yet."

"Well, I'll make one now. I'll take you into partnership, give you twenty-five per cent of the grosa receipts and charge no expense to you except rent for one office room; you to bring in all the business you can and I to de the same. I will look after the legal necessities, although you can make the necessary bluff, and you'll continue to play your Democratic game while I take the other end of the politics of the combination. How does that strike you for the first year?"

"I don't relish your continual reference to my playing a game. I am sincere in these matters, Mr. Chittings."

"So much the better. I always respect sin-cerity, especially when I find it in such large quantities. How does it hit you?

"What is to be the name and style of the firm?" Chittlings glanced at him in astonishment, "Chittlings & Hicks, of course," he replied.

Tommie looked Chittlings squarely in the eye. "I think Hicks & Chittlings would be more appropriate, provided I enter into this compact with

you," he said steadily.
"Wow!" exclaimed Chittlings. "Great arematic spirits of ammonis!" Then be reared with laughter. "Son," he gasped, "you'll do! You will absolutely do! I'll make that thirty per cent. Come up to-morrow and sign the papers

Hicks salved his wounded feelings with the extra five per cent offered by Chittlings, and signed a partnership arrangement for a term of one year, with a privilege of renewal or dissolution.

on notice by either partner at the end of the nigth mouth. He gave up his office and moved down to the suite occupied by Chittlings. The firm's name was put on the door as "Chittlings & Hicks, Attorneys-at-Law," and it was many a day before Hicks could look at it without feeling that by all the merits in the case it should read Hicks & Chittlings. Hicks was much elated over his new office surroundings. He had a good-sized room cut off by a ground-glass partition from the very large room formerly occupied by Chittlings. "Mr. Hicks" was chastely painted on his door. He thought the door should be labeled "Mr. T. Marmaduke Hicks," but Chittlings told him it was much better form to have it read just "Mr. Hicks" - it gave class, he explained. There was a stenographer, the first one Hicks ever had at his disposal, and he dictated reams of letters to that outraged person, many of them letters he never sent and never intended to send. He wanted to impress the stenographer; for no persons were too humble, in the opinion of Hicks, to have brought home to them by word or doed the transcendent abilities of T. Marmaduke Hicks.

THE municipal election to be held in Rextown that spring was unusually important. The street-car company, which operated all the cars in the city, was about to make an application for an extension of its franchise and a renewal on most favorable terms-favorable, that is, to the company. The Chronicle, inspired by Rollins, had opposed any extension unless there should be certain concessions. The Chronicle demanded universal transfers, better cars, improved service and a three-per-cent tax on gross earnings for the benefit of the city. Naturally the street-ear company was opposed to all this, vigorously and hitterly opposed.

The etreet-car company was close to the Republican organization. It controlled the board of aldermen, through Boss Rose' organization, for the aldermen were almost all Republicans. There had been an attempt to shove the franchise matter through the board that was to go out of

oril, but the Chronicle made such a row about it. et-car magnates and the Republican bees old be as well to wait until a new board was o do it then. They were sure they could elect a no matter what the issue was, and would then nchise through in an orderly manner and claim

that the people had spoken on the matter, and they were simply bowing to the will of the voters and taxpayers.

Rollins, who despite his fondness for political letterwriting and his dreaming was a ehrewd politician. new an opportunity here. He had no interest in the streetcar company and bated all the directors and managers thereof, for they were all Republicans. He knew that the people felt-us the people always do-that the street-car company was robbling them, depriving them of accommodations they were entitled to, and he further knew the three-per-cent tax to be paid into the city treasury was a strong indurament for yetse against aldermen who would be in-clined to grant the franchise extensions without that feature included in them. When it was intimated that the street-car company intended to jam the extended franchise through the old board of aldermen instead of waiting for the new, he promptly lex loom a broadside in the Chronicle mying he would go to the courts if they did, enjoin them, and fight.

them to the last, inasmuch as the franchise matter properly came within the jurisdiction of the new board, or Rollins held it did, which amounted to the same thing in the circumstances. He had strong popular support for this.

William P. Roscoe, president of the street-cur company, right Boss Paddy Ross, of the Republican organization. "Puddy," he said, "that old grandstander, Rollins, is making a good deal of a row over the franchise matter."

"It won't amount to nothin'," assured Hoss.
"I don't know about that. The people are all in line to oppose us at any time or place. I'm afraid we waited too long. We should have jammed it through the present

"Now, Roscoe," courneled Ross, "don't you get cold feet. I told you I will elect a board of aldermen and a mayor that will give you the right to make a powerhouse out of the city hall if you want to, and I'm going to do it. Just leave this to me.

"But there is a great deal of agitation."

"I know it, and there'll be a let more before there is any less, but it's the votes on election day that count and I'll have them, don't you worry. I'll pull you through this just as I always have. Let Rollins howl. I'll produce on election day, and I'll produce a set of highbinders for aldermee that will give you Main Street for a pleasure park if I say the word.

Roscoeleft. He was nervous. This nervousness increased as Rollins renewed his attacks, and the Chronicle kept pounding. He went to Rose again but was told to sit steady and attend to his street-car business, and all would

Rollins had talked with Hicks about the campaign he was making, and Hicks was enlisted in the fight. Chittlings advised Hicks to keep off for business reasons, but Hicks couldn't and wouldn't. He saw unlimited opportunities for speechmaking in which he could attack the street-car octopus - he had resolved to call it an octopus - and declaim sassiunately for the rights of the poor, down-trodden workingmen, who were defrauded by being deprived of universal transfers and who had poor service for their hard-earned nickels. He urged Rollins to demand a three-cent fare, but Rollins thought that too radical and refused.

"Hicks," said Rollins, "this is our chance. We have an opening now. If we put up good, clean men, as many of them Democrats as possible, but with a few independents

to give the ticket a non-partisan flavor, we can wie the whole shooting match, mayor and all."

"So I think," assented Hicks. "The people will raly to me as their candidate for mayor."

"As their candidate for what?" exclaimed Rolling

"Their candidate for mayor."

"But you're not going to be their candidate for maror" "Why not?" demanded Hicks. "In view of all me sacrifices for the party, I surely am entitled to this small recognition."

You are not," said Rollins firmly. "You are to be the candidate for alderman in the Seventh Ward."

" began Hicks.

"Oh," Rollins interrupted, "you can speak all over the city. It will be a good chance for you.

Hicks tried several times to convince Rollins he was the logical randidate for mayor. Rollins would not allow it, and when became he must take the nomination for aldernay of the Seventh Ward or nothing, Hicks sulkily commis-He announced his candidacy for alderman in an intervenin the Chronicle, bustening to the office to get it in pair

for fear Rollins might change his mind.

"Going into it, I see," said Chittlings after he had real
the Chronicle interview, in which Hicks had made very ous denunciations of the street-car octopus. Bick van quite clear as to what an octopus was, but none the less is accused the street-car company of being one, and of soming the lifeblood from the poor, downtrodden workingnal. Later he learned about octopi, and cut out the blood sucking feature, using that only when, for a clurge is referred to the company as a vampire, which creature to had been informed, is an artist at blood-sucking.
"I am," Hicks replied.

"Well, good luck; only keep your politics dear from the aw business and watch out you don't get your fages burned. Paddy Ross is a very capable citizen, you know."
I am not afraid of Paddy Ross and his benchmen when

have the people on my side," declaimed Hicks. You may have the people on your side," laughed Chitlings, "but you will have Paddy Ross on your seck, and that will be uncomfortable—for you."

The city conventions were held and Hicks was necimal.

as the Democratic-reform candidate for alderman from the Seventh Ward. The campaign, which had three veto to run, began immediately. The two afternoon paper as the Leader, a morning paper, upheld the regular Republicar ticket, which was favorable to the street-car company, and pointed out the great benefits that had come to Kestwa through the liberal, public-spirited policy of the conpay. how it had millions invested and how it had developed the suburbs by the extension of its lines. Statistic property by the company were printed, showing the small per cell of earnings compared with the expenses of operation. I'm ises were made of a liberal future policy if the trackies extensions were granted.

Rollins was in his element. For the first time he was fighting with a chance to win. The Chronickestoodsardly behind the Democratic-reform ticket, which was made to of excellent men, and the people - as usual - were in lavor of giving the street-car company nothing and of getting free rides if possible.

Hicks and Rollins organized a series of noonday notice in a vacant store on Main Street, and Hicks and other erators spuke every night in various parts of the city. Hideturned himself loose. He attacked the street-car company from every angle. He spoke eloquently of the was of the workingman. He pledged himself a hundred time och twenty-four hours to fight for the common people, shoul be be elected, and he plainly told the street-car company it need expect no favors at his hands. He was in favor municipal ownership for public utilities, and he draged a his three-cent-fare idea and was always applauded.

He had an apparent cornestness and sincerity that caught the crowd, and a flow of language that, thought had no argument in it, was denunciatory in the extrem-He called the street-car magnates wolves and pluteran with no other plan than to bloat their fortune with nine exterted from the poor, downtrodden workingman. It flayed Roscoe on every corner, and he tore into Pain Ross as the most notorious example extant of the comit political boss. He warned the people they need excit nothing but confiscation of their streets and an ultimis ten or fifteen cent fare if the Republicans won; and never failed to allude to himself as the gallant young or sader who would bring peace and plenty, three-cent faand universal transfers, a sent for every passenger, and cars for the rush hours, and special reduced rates for select children-if he were elected.

Toward the last his speeches fell into three parts Tr first was a denunciation of the street-car company; the ond was an assault on Roscoe; the third, and by lat !! longest section, consisted of promises of what he. T. Vimaduke Hicks, would do, with explanations at great showing how eminently he was fitted to carry on a promises, intellectually, morally and by reason of to integrity and his enormous desire to help the workers

Paddy Ross had many orators out campagning and kept busily at his inside work. At first he was out!

he would win. Then he discovered the people were much aroused, and the talk of Hicks and his fellows on the Democratic-reform ticket was having its effect, especially in the Fourth, the Ninth, the Tenth and the Sixteenth wards, where most of the workingmen lived who were employed in the big factories and mills on the lower side of the town. In Rextown the factories were on one side of the city along a small stream that local pride called a river, and the workingmen lived across town from them in the wards enumerated, went to their work in the street cars in the morning and returned to their homes at night, going across town again. The city was loosely built, and it took almost half an hour for the workingmen in these outside wards to get from their homes to the factories and mills, and another half hour to get home at night, for the car service was none too good. The consequence was that the early morning cars were crowded and the cars returning at six o'clock ammed.

"How does it look, Paddy?" Roscoe asked, at the beginning of the third and last week of the city campaign.

Not so good as it might. That young windjammer, Hicks, is making a lot of headway with these workingmen, and there are a good many votes against us in the middle of the town.

"But you can hold them, can't you?"

"I can hold the middle wards all right. I'm afraid of those wards where the workingmen live in numbers—the Fourth, Ninth, Tenth and Sixteenth."

"We've got a week before election. Can't we shove he franchise extension through the board at the meeting o-morrow night?"

"If we did," said Ross, "they'd tear us up by the roots. We've got to win this by votes. Don't werry. I'll have en all right. The only trouble is with those wards out on

he edge of town, and they've tot a grouch for fair."

Roscoe went away, much erturbed. He stopped in at me of the noonday meetings. and heard Hicks say things o an applauding crowd about loscor fattening on the nickels crung from the grimy hands f toil that made him feel like booting that young man. licks saw him and shouted:

There he is! There he is, his arrogant plutocrat who wis to debauch the electorte of this city by electing to he heard of aldermen servile. nd corrupt tools of Paddy loss to do his bidding and rob he poor workingman of the ard-earned fruits of his honat toil by extorting from him soney grudgingly paid to him others of his ilk-these lutocrats who ride in their slatial automobiles while the oor workingman must crowd to dirty, ill-smelling, antinated street cars, or walk ith weary limbs from his amble home to the factories, here they chain him to his ench in order that they may out and fatten on the results his honest industry."

Roscoe fled, followed by ers. He was much upset hen he reached his office. Jenkins," he said to the genal manager," have you heard e things that demagogue, icks, is saying about me?" "Yes," Jenkins replied.

"Well, what are we going to rabout it?"

"There's nothing we can do it trust to Paddy Ross, so r as I can see.

"It's terrible!" moaned oscoe. "Simply terrible! hy, I heard him to-day, and called me a vampire and a oodsucker and an actopus d I don't know what else." "Is that all he said?" asked ukins. "Evidently you In't hear him when he was good form!"

VHE excitement increased as the week progressed. ddy Ross was shaky in his n mind over the outcome,

and his shakiness increased when the results of his final poll began to come in on Wednesday. It looked like a close election with a ward or two to decide it. Paddy was sure of carrying seven wards and gave the opposition four sure, and that left five to fight for. He must have nine men to control the board. He had held a certain proportion of the voters in the outside wards and was working desperately in the wards in the center of the town, where the big business interests were arrayed for the street-car company and where the better classes of Republicans lived. He felt be must do something to pull back the Fourth, Ninth, Tenth and Sixteenth. If the opposition lost those they couldn't win. He sent money there, and put his strongest workers in the factories and mills to persuade the workingmen who lived in those wards to be ressonable. The street-car company put on many extra cars on the crosstown lines, and saw to it that every man had a seat. The workingmen were excited. Hicks and his allies had stirred them exceedingly. Rollins kept steadily pounding through the columns of the Chronicle, and had boys at the corners in these wards every morning, who gave each workingman a free copy of the Chronicle containing the Rollins broadsides.

Ress was worried. Roscoe was frantic. Rollins and Hicks were jubitant. On Wednesday, after his mounday meeting, when he had been especially inflammatory in his speech and had been loudly cheered. Hicks ate a sandwich and drank a glass of milk and went to his office to rest. The office was empty. The stenographer was out at lunch and so was the clerk. He was tired. The strain was beginning to tell on him, although the tonic of the applause, which he loved, braced him up during his public speaking. He removed his cost, locked the door of his room and leaned back in his chair. He was dozing when he heard Chittlings. come in, accompanied by another man.

"Nobody here," said Chittlings. "I suppose that young partner of mine is out stirring them up."

"He's a fine partner for you to have," said the other man. "How'd you come to pick him out."

Hicks could hear the talk; he listened for Chittlings'

"Oh, he's all right. I can use him in my business. He'll get over this, but he's raising merry hob at this juncture, isn't be?"

"I should say be is!" said the other man bitterly.

Chittlings spoke again. "Well, Jenkins Jenkins! The general manager of the street-car company! Hicks moved noiselessly over to the ground-glass partition between his room and that of Chittlings. He strained his ears to hear.

Well, Jenkins, you're in a mess, I'll say that for you. Unless you can pull something off in those outside wards you may get whipped."

"Pull something off?" replied Jenkins querulously. What can we pull off? We've done everything anybody has suggested and we've simply upholstered Paddy Ross with money, and he's scared stiff right now over the outlook. What do you want to talk to me about?"

"My dear Jenkirs," said Chittlings suavely, "I asked you to come in and confer with me because it appears to me that for the general manager of a great public-service corporation you display a lack of resources that is amazing."

What would you do, Mr. Wiseheimer?" asked Jenkins with a sower.

"Far be it from me to assume to instruct you in your business, Mr. Jenkins," continued Chittlings pleasantly. "Not for the world would I suggest such a possibility, not for the world. Only, if I were general manager of the street-car company, I know what I should do."

"What would you do?" asked Jenkins excitedly. "What would you do?"

'Softly, my dear Jenkins! Softly!" said Chittlings sooth-ingly. "Be calm. First and foremost, of course, I am under the rather preming recessity of inquiring what a plan such as I have in mind would be worth to your aggregation of octopuses, as my partner dubs you?"

"Any amount of money, if it works," Jenkins exclaimed.

"That is rather indefinite, don't you think, Jenkius, in these days of hard, precise commercial transactions? Any amount now might dwindle to a very insignificant amount after election. Besides"-and Chittlings' voice grew almost caressing-"I didn't ask you for money. You jumped at a wrong conclusion. But I suppose," he laughed, "you are so used to buying protection you think that is the only way you can get it.

"What do you want, then?" asked Jenkins suspiciously.

"Would it surprise you if I told you I have nothing but the best interests of the company at heart?" asked Chittlings.

"It would. It would surprise me very much," Jenkins answered barshly. "But get down to business. What do you want?"

"A very small return, Jenkins, a very small return. I own some of your stock - not much, but enough to qualify; and I want to be put on your board of directors, for the business and financial standing that it will give me. Also I want your promise to make me one of your attorneys—to make me, you understand, not

Hicks, listening on the other side of the glass partition, clenched his fists. His partner intended to leave him out of this arrangement.

"That's a good deal," said Jenkins.

"A good deal!" Chittlings' voice hardened, "A good deal when, if this thing goes (Continued on Page 49)

Bad Banking in Illinois

ILLINOIS law permits any penniless adventurer to call himself a bank, using whatever high-sounding title his fancy may dictate, and to flower a gullible public by accepting its money on deposit, then using the funds for any purpose he pleases.

Every year some of these bogus, uninspected, nonreporting, unregulated private banks fail. In the last twenty years confiding people in Chicago alone have been swindled out of immense sums. The discouragement of thrift, the injury to bonest banking and the shame to the state have been pointed out innumerable times; yet to this day the law stands blandly by, furthering the rubbery by refusing to lift a finger to prevent it.

The reason for this scandalous condition is found in the legislature. The outrage is of long standing. Everyhody knows it. Nearly everyhody condemns it. But a little coterie of interested persons, who find a private profit in perpetuating the scandal, has always been able to exert sufficient influence on the crowd of featherweights at Springfield to prevent a remody.

This year a patriotic body recommends that about a third of the present legislators be defeated, as plainly unfit; but, with a legislature comprising some two hundred members, at least a third will always be unfit. In a lawmaking body of one-tenth that size, character, ability and responsibility might be expected.

A Gleam of Sunshine

THE iron and steel industry is in a depressed state. Orders are scarce and prices are low. With the distinguished exception of Judge Gary, the industry appears to be even more depressed mentally then physically. Its immemorial bulwark—the tariff—has been whittled down to a point where it is scarcely perceptible to a jaundiced

Agile foreigners—we gather from some trade reports are flocking over it like grasshoppers descending on a field of young wheat; and the Government is pressing forward like a ruthless tortoise with its suit to dissolve the Steel Trust. Yet, for some weeks at this writing, the common stock of the Steel Trust has been selling above sixty dollars a share—considerably higher than it sold a year ago and within a few points of the highest mark of the last year and a half.

An industry one-half of the goodwill of which is worth three hundred million dollars in the market cannot have more than one foot in the grave.

Uncle Sam as a Banker

A DISTINGUISHED German banker points out something that Americans are apt to overlook amid discussions of the failings of our present banking system and the somewhat patchy and experimental character of the new banks that are in process of establishment—namely, that no such experiment in banking was ever before carried out in the world, because nowhere else in the world has there ever been a material change in a banking system which

was at all comparable to that of the United States in point of size. Our reporting banks have twenty-two and a half billion dollars of assets. Their deposits, at eighteen billions, are double those of the English banks and four times those of the German banks.

In 1890 Mulball calculated the banking power of the world at sixteen billion dollars, this country being credited with five billions. Our present banking power is nearly fifty per cent greater than that of the globe twenty-four years ago. In 1808 the Comptroller of the Currency calculated the banking power of all foreign countries at twenty-eight billions—but little over twenty per cent greater than the present banking power of this country alone.

To see how big the United States is one must go to Europe for comparisons.

Big Banking Alliances

A BIG German bank boasts that it is represented on the directorates of more than two bundred corporations, while a higger rival figuratively gathers about half of industrial and commercial Germany under its wing.

As to the corporate connections of eminent Wall Street bankers, one may refer to the Money Trust report. In Germany and the United States, at least, Big Business has deliberately—even eagerly—put itself in hock to big banks. The common explanation is that Big Business constantly needs fresh expital and ties itself up with certain powerful banks in order to get itself financed.

That is not the real reason, however. A sound railroad or industrial does not need to stand, hat in hand, in Morgan's anterporn or the anterworn of the Deutsche Bank to get capital. The real reason is to restrain competition. Big Business does not flock to big banks as a source of capital, but as a refuge from competition.

Undoubtedly the most important function of such institutions as Morgan & Company and the Deutsche Bank is to keep competition in hand. They are a sort of medieval fair, at which traders can meet and discuss and adjust their differences under bunds to keep the peace, and make plans for their mutual benefit without knifing one another.

Mellen's testimony pictures Morgan in a dominating position. An important reason for that position was that Morgan, taking it all round, could do more to suppress competition than anybody else. Naturally, therefore, business turned to him.

Timber Waste

WHEN we fell a tree, thirteen per cent of it is left to ret as stump, top and branches. At the sawmill forty-three per cent of it goes into sawdust, bark, slabs, and so on. Two per cent is lost in seasoning; three per cent in planing and finishing. Four per cent more goes into the kindling heap when a house is built. Only thirty-five per cent of the original tree emerges in the form of a building—and when the carpenters are careless the proportion is less than that. Then we drop a lighted match into the oil can, burn the house and collect the insurance.

Outside of cities our whole country is built of wood, while European countries use brick and stone. This involves an enormous consumption of lumber—relatively to population, many times that of England, France or Germany. Every foot used involves two feet that may be wasted. Part of the waste, of course, is inevitable; part may be utilized in by-products.

That the immense fire waste is largely preventable every one knows. A shingle roof, for example, may be so treated as greatly to reduce its inflammability. We usually deem it easier not to bother about that and let the insurance company pay the loss if a fire occurs. Insurance ought to penalize carelessness more heavily than it does.

How the Money is Divided

A CORRESPONDENT asks: "Of the total product of manufactures, what part goes to capital and what to labor?" We corredves should like to know. Something that points in the direction of an answer may perhaps be deduced from the census, the census figures bearing on the subject being roundly as follows:

Selling value at the factory of all products of manufactures in 1909 was—cutting off a row of ciphers—twenty dollars and sixty cents; materials consumed out twelve dollars; salaries took one dollar; miscellaneous expenses, including everything that can come under the bead of expenses except wages, interest and depreciation, took two dollars. That leaves five dollars and sixty cents to be divided between capital and above, excluding salaried labor. Wage labor got three dollars and ferty cents, leaving two dollars and twenty cents for capital.

Reducing it to other terms: of every dollar of the net residuum, capital got thirty-nine cents and wage labor sixty-one cents; but capital's thirty-nine cents is still chargeable with depreciation.

That is as far as census figures go in answering the question; but that twelve dollars-really twelve billion

dollars—of materials consumed was also a product of laber. Some of it was produced within the processes covered by incensus report—for example, the finished product of a blan furnace is the raw material of a billet mill; the finished product of a sawmill is the raw material of a furnish factory. Some of it was produced outside the processes the census classes as manufactures—for example, the iron or that goes to the blast furnace and the logs that go to the sawmill.

Out of a dollar of the gross value of products of manfactures, as reported by the census, the wage labor overed by the census report gets only sixteen and a half own. More significant than that, however, is the fact that the seventeen and a half cents ten years ago; and over a log period the proportion of the gross value going to wage labor has pretty steadily decreased, while the steam horse procemployed has rapidly increased. From 1904 to 1909 the gross value of products increased forty per cent, wage increased thirty-one per cent, and primary horse poor increased thirty-nine per cent.

There is nothing more discouraging, under this badis, than census figures, partly because they are only rough as more or less questionable approximations, and partly because they indicate no advance whatever in the region position of wage labor.

Handicaps on Foreign Trade

AT THE national conference on foreign trade more than one speaker pointed out that cooperation was seen sary. A few great exporters, such as the Oil Trust, the fact Trust and the Harvester Trust, maintain hig organization to look after their sales abroad. Only a huge concern to bear the expense of such an organization. Smaller concern must depend wholly on the Consular Service or cooperate must depend wholly on the Consular Service or cooperate out violating the antitrust laws and being rewarded by a term in prison?

Gentlemen learned in the law have debated this question arguing that a certain amount of cooperation would probably be lawful. That any effectual cooperation will be lawful after the antitrust legislation on which Problem Wilson now insists is enacted seems rather doubtful.

The president of the Amalgamated Copper Companion observed that foreign buyers were organized to a largestent and exerted a united force, "fixing the pricest which they will trade," and waiting patiently until, among overganized American sellers, some one came down to least level, which immediately established the market price that all other American sellers were bound to meet.

That cooperation is necessary for a vigorous extenses. I foreign trade seems hardly to be denied. The law may promit it. Then the question will arise: If cooperation may be beneficial in foreign trade, why must it be deemed always injurious in domestic trade?

A Long Step Forward

THE constructive thing in the President's trust program is the proposal to create an industrial commission with powers somewhat like those of the Interstate Commerce Commission. This will be one positive forward step in 1 field where, so far, we have merely marked time or take negative steps.

There are all sorts of combinations and all sorts is restraints of trade. Some of them are very bad; but some of them are very good. Indeed, some of the most important restraints are imposed by the Government bed. Attempting to deal with all of them along the line of a sweepingly prohibitive statute will never, in our opinion get the country very far toward any desirable goal.

Take two examples of our dependence on the Sherma-Law as the sole instrument for dealing with combination First, the old Standard Oil Company paid divideous of forty or fifty per cent a year. In 1913 the various orpanies into which the old concern was resolved by justice decree paid dividends equivalent to more than a busine per cent on the old stock. That is what mere dissolute comes to. Sessed, the Government is now eating to a solve the American Sugar Retining Company, and incompany very pertinently pleads a decision by the Supren-Court twenty years ago, holding that it was not a visite of the Sherman Law.

An industrial commission with power to require a quate reports, inspect books and examine officers will the course of time collect a body of trustworthy infortion about restraints and combinations, in the light which we may know better how to deal with them. It existence of such a body will be a valuable restraint unconscionable practices.

It would be impossible to deal satisfactorily with Troads through the slow-moving, circumscribed courts of dealing with railroads is simple in comparison to dealing with trade restraints and combinations, which promuch more various forms and differing conditions.

The spirit of the President's message is admirable commission with adequate powers animated by that at will be very valuable.

WHO'S WHO-AND WHY

Serious and Frivolous Facts About the Great and the Near Great

the New Chief of the My and Jahry Jailarmen

TP SPAKE the sailormen, the sly and salty sailormen, calling to Josephus, Lord of the Admiralty.

"Joey, old top," they said, quite casual-like, "who have you in mind for chief of the Bureau of Navigation?"

"And what," asked Josephus, recently transferred from tripod to the Navy Department trapeze-"and what is the Bureau of Navigation?"

"Hah!" responded the sallormen, the sly and salty sailormen. "It is merely one of your little bureaus, of not much consequence; but you've got to have a head for it, of course. Now what do you say to Jimmis Portsides? Fine chap, Jimmie; and will do you credit."

"I'll see about it," replied Josephus.

"Curses!" said the sailormen, the sly and salty sailormen, as they were piped out of the room by Civilian H. A. Banks, of North Carolina, the same being the private secretary brought up by Josephus when he left the Tarbeel State to be the Old Tar

the Administration. "Anxious, it seems to me!" commed Josephus with himself.

In came a friend wise to the ways of Washington. "What," asked Josephus, "is the chief of the Bureau of wigation?"

"You are an editor?" spoke the friend.

"I am; but what has that to do with it?"

"I seek a comparison that will penetrate your editorial derstanding. In naval terms you would be fogged. Let say, then, that the chief of the Bureau of Navigation he managing editor of the Navy Department. 'Aha!" exclaimed Josephus, which is as far as he allows

uself to go in the way of exclamation. "Aha! Aha-ha-ha!" Whereupon Josephus ched out on the deck one of our dreadful radnoughts and cked therefrom tor Blue, and made chief of the Bureau Navigation-Victor re-does not that nd like a name out i book?-who, as it. nced, was born in

Tarheels All

th Carolina himself.

JOW," spoke Jose-phus, "by all the on the tarry heels of **Farheelers**, including my cole ed and constiveson. mel Tom Pence, let n try to put over thing on this North olina combina-"-which, in sooth, ems has been reably hard to do, with th Carolina repreed in Josephus, In ks and in Victor -North Carolina uard.

The Bureau of Navigation looks out for the human equation in the navy. It has to do with the men who fight and the men who stoke and the men who tell the men how to fight and how to stoke. Congress, of course, regulates the number of men there shall be in the navy; but the Bureau of Navigation gets them, enlists them, regulates them, directs them, disciplines them, and is the boss of the human side.

Not only that - and when you read this you will understand the concern of the sly and salty sailormen-the Bureau of Navigation exercises the same functions toward the officers in the navy. It commissions them, examines them for premotion, assigns them to stations and ships, and makes them toe the disciplinary mark as set forth in the regulations, which, with the approval of the Secretary of the Navy, it promulgates and enforces.

Victor Blue's Exploits at Jantiago

NO MAN in the navy, from coal passer to the main laff on the bridge, but has personal dealings with the Bureau of Navigation at one time or another. It is the papa-in-ordinary to the whole outfit. It directs their movements and tells them what kind of uniform clothes they must wear. If, perchance, a fussy and dressy man should get to be chief of the Bureau of Navigation be would have it in his power to put the whole corps of officers in that arm. of the service in debt to the tailors.

This matter of clothes is an intensely vital problem. The expense of uniforms for an officer is so great that the older ones tell the ensigns and junior lieutenants to hold their horses when they clamor to get married, and wait until they get to be commanders before they hop into that delightful state, for fear some chief of navigation will order a new cut of coat and put them on the rocks.

Uniforms are necessary; and it takes a large book, seued by the Navy Department, to tell the officers just how many and what kinds they must have. The change of the style of a collar on an officer's coat is more vital to the officers than the change from two turrets to three in the building of a battleship. It means a new uniform coat, and uniform coats are expensive. If some surtorial chief of navigation should decree that the uniforms of the jackies should be of radically different out and style it would cost the Government the price of a submarine or a destroyer.

So you see why the sly and sulty sailormen had designs on that bureau. The chief of it is a most important person, and twice important when there is a prospect of active service, such as has recently occurred in Southern waters. When Josephus found out about it all, as I have stated, he named Victor Blue for the place; and now, in his espacity of rear-admiral and chief of the bureau, Victor Blue is the big force in the department.

They knew about Blue when his name came up in Congress for his new place. He had been there before.

Once, officially and by special act, Congress designated him a hero and gave him a special medal of honor. Being a modest man and devoted to the service, he took the designation and the medal and let it go at that. He did not try to use either his heroism or his medal as a political asset; nor did he do any lecturing or interstate osculation. He kept on at his trade, which is that of a sailor.

At the time of the Spanish War the Board of Strategy was quite certain it had located the Spanish fleet in Santiago Harbor; but there came so many stories that it was elsewhere, that it had escaped, and that it never had been in Santiago Harbor, that the Board of Strategy began to have doubts; and so did Rear-Admiral Sampson, who was in command down there. It seemed to all concerned that it really was important to know exactly where the Spanish fleet was. Sampson called his fleet officers into conference and asked for a volunteer to go ashore and find out. Victor Blue volunteered. So did many others, but they selected Blue because he had been long in those waters, had a Spanishy complexion, and spoke the lingo.

Blue was put ashore at Aserradero, which is west of Santiago. He came on a company of four Cubane and with them worked his way round the entire harbor, making notes of it and securing the first positive information that Cervera and his ships were therein. After waiting hopefully for two weeks for the Spanish fleet to come out, Sampson decided to make an attempt to force Cervera to accept his hospitality, inasmuch as Cervers would not heed polite invitations to come out and be slaughtered.

This forcing was to be done by an attack with the torpedo destroyers, and it required more detailed information as to the exact location and character of the Spanish ships. Blue went through the Spanish lines again, and brought out a complete naval map, showing where the ships were, their number and of what character, and all that was necessary to know. Before this attack was made Cervera made his dash for the open sea; and immediately thereafter the Sampson-Schley controversy began.

No Swivel-Chair Admiral

BLUE is forty-eight years old and was graduated from the Naval Academy in 1887. He began as an engineer. but was transferred to the line and worked his way up through the various grades. His service has been varied; but he has been in most of the fighting done by our ships and with many of the landing forces. He gave distinguished service in the Boxer troubles in China, where he was a staff equadron commander, and in numerous affairs in Southern waters where our ships have been used. Unlike some of his colleagues who have done their sailing in swivel chairs. Blue has been at sea a large portion of the time he has been in the navy and has had a wide experience,

He is a fighting man who does not boast of it, and a sailor who has a definite idea that sailors-even naval

> officers-would do well to go to sea from time to time; and he is sending many of the chair-warmers there. Likewise he is from North Carolina, but has been too busy at his trade to mix much in the intrigues and politics of the department-which does not hurt him in the eyes of his chief.

Whether the navy does no more than it has already done in Mexican waters or does a great deal more, Blue will be one of the main directing forces, as he has been came in.

As he is a quiet, cool, level-headed man, who knows his business, the navy will be adequately handled along the lines laid down by the secretary and Victor Bluenot, as might have happened, along the lines laid down by certain of the sly and salty sailormen.

AN AMERICAN VANDAL

Old Masters and Other Ruins—By Irvin S. Cobb

OF COURSE it is a fine thing for one, and gratifying, to acquire a thorough art education. Personally I do not in the least regret the time I gave and the study I devoted to acquiring mine. I regard those two weeks as having been well spent.

I shall not do it soon again, bowever, for now I know all about art. Let others who have not enjoyed my advantages take up this study. Let others scour the art galleries of Europe seeking masterpieces. All of them contain masterpleces and most of them need scouring. As for me and mine, we shall yo elsewhere. Hove my art, but I am not fanatical on the subject. There is another side of my nature to which an appeal may be made. I can take my Old Masters or I can leave them be. That is the way I am organized - I have selfcontrol.

I shall not deny that the earlier stages of my art education were fraught with agreeable little surprises. Not soon shall I forget

the flush of satisfaction which run through me on learning that this man Doré's name was pronounced like the first two notes in the music scale, instead of like a Cape Cod fishing boat. And, lingering in my mind as a fragrant memory, is the day when I first discovered that Spagnoletto was neither a musical instrument nor something to be served as gratin and cated with a fork. Such acquirements as these are very precious to me.

But for the time being I have had enough. At this hour of writing I feel that I am stacked up with enough of Bougtereau's correl ladies and Titian's chestnut ones and Rubens' bay ones and Velasquez's pintos to last me, at a conservative estimate, for about seventy-five years. I am too young as a theatergoer to recall much about Lydia Thompson's Blendes, but I have seen sufficient of Botticelli's to do me amply well for a spell. I am still willing to walk a good distance to gaze on one of Rembrandt's pertraits of one of his kinfolks, though I must say he certainly did have a lot of mighty homely relatives; and any time there is a first-rate Millet or Corot or Meissanier in the neighborhood I wish somebody would drop me a line, giving the address.

As for pictures by Tintoretto, showing Venetian Doges hobbobbing informally with members of the Holy Family, and Raphael's angels, and Michelangelo's lost souls, and Guidos, and Murillos, I have had enough to do me for months and months and months. Nor am I in the market for any of the dead fish of the Flemish School. Judging by what I have observed, the Flemish painters were devout churchmen and painted their pictures on Friday.

Worth a Million Without the Frame

THERE was just one drawback to my complete enjoyment of that part of our European travels we devoted to art. We would go to an art gallery, hire a guide and start through. Presently I would come to a picture that struck me as being distinctly worth while. To my untutored conceptions it possessed unlimited beauty. There was, it seemed to me, life in the figures, reality in the colors, grace in the grouping. And then, just when I was beginning really to enjoy it, the guide would come and snatch me away.

He would tell me the picture I thought I admired was of no account whatsoever -- that the artist who painted it had not yet been dead long enough to give his work any permanent value; and he would drag me off to look at a cracked and crumbling canvas depicting a collection of saints of lacquered complexions and hardwood expressions, with cast-iron trees standing up against cotton-batting clouds in the background, and a few extra halos floating round indiscriminately, like sun dogs on a showery day, and, upabove, the family entrance into heaven hospitably ajar; and he would command me to bask my soul in this magnificent example of real art and not waste time on incorpequential and trivial things. Guides have the same idea of an artist that a Chinaman entertains for an egg. A fresh ogg or a fresh artist will not do. It must have the perfume of antiquity behind it to make it attractive.

The is Not Going to Huy Anything - The it Merely that Shenping

At the Louvre, in Paris, on the first day of the two we spent there, we had for our guide a tall, educated Prussian, who had an air about him of being an ex-officer of the army. All over the Continent you are constantly running into men engaged in all manner of legitimate and dubious callings, who somehow impress you as having served in the army of some other country than the one in which you find them. After this man had been chapsumning us about for some hours and we had stopped to rest, he told a good story. It may not have been true—it has been my experience that very few good stories are true; but it served aptly to illustrate a certain type of American tourist numerously encountered abroad.

"There were two of them," he said in his excellent English, "a gentleman and his wife; and from what I saw of them I judged them to be very wealthy. They were interested in seeing only such things as had been recommended by the guidebook. The husband would sell me they desired to see such and such a picture or statue. I would excert them to it and they would glance at it indifferently, and the gentleman would take out his lead pentil and check off that particular object in the book; and then he would say: "All right—we've seen that; now let's field out what we want to look at next." We still serve a good many people like that—not so many as formerly, but still a good many.

"Finally I decided to try a little wheme of my own. I wanted to see whether I could really win their admiration for something. I picked out a medium-sized painting of no particular importance and, pointing to it, said impressively: 'Here, m'sieur, is a picture worth a million dollars—without the frame!'

"'What's that?' he demanded excitedly. Then he called to his wife, who had strayed ahead a few steps. 'Henrietta,' he said, 'come back here—you're missing something. There's a picture there that's worth a million dollars—and without the frame, too, mind you!'

"She came harrying back and for ten minutes they stood there drinking in that picture. Every second they discovered new and subtle beauties in it. I could hardly induce them to go on for the rest of the tour, and the next day they came back for another soul-feast in front of it."

Later along, that guide confided to me that in his opinion I had a keen appreciation of art, much keener than the average lay tourist. The compliment went straight to my head. It was seeking the point of least resistance, I suppose. I branched out and undertook to discuss art matters with him on a more familiar basis. It was a mistake; but before I realized that it was a mistake I was out in the undertow sixty yards from shore, going down for the third time, with a low, gurgling cry. He did not put out to save me, either; he left me to sink in the heaving and abysmal sea of my own fathomless ignorance. He just stood there and let me drown. It was a cruci thing, for which I can never forgive him!

In my own defense let me say, however, that this fatal indiscretion was committed before I had completed my art education. It was after we had gone from France into Germany, and from Germany into Austria, and from Austria into Italy, that I learned the prelesson about art—which is the whenever and wherever you me a picture that seems to you resonably lifelike it is sinctime in ten of no consequence whateever; and, unless you are villing to be regarded as a more ignramus, you should straighter leave it and go and find strancient picture of a group of clothing dummies managements

and stand believe that one and cury our regardless.

When in doubt look up a please of Saint Sebastian. You never apperience any difficulty in heart him—he is always represented a wearing very few clothes, but a such that clothes would not him anyway. Or else seek on Saint Laurence, who is invariable featured in connection with a gridiron; or Saint Bartholmos who, you remember, achieve canonization through a prome

of flaying, and is therefore shown with his skin folded seed and carried over his arm like an overcoat.

Following this routine you make no mistakes. Every body is bound to accept you as one possessing a depletowledge of art—and not mere surface art, either, but the innermost meanings and conceptions of art. Only seed times I did get to wishing that the Old Masters had be a little more to the imagination. They never withheld any the painful particulars. It seemed to me they resource the glorious end of those immortal fathers of the last it including the details of the martyrdom in every picture Still, I would not have that admission get out and object general circulation. It might be used against me is a argument that my artistic education was grounded as a false and beretical foundation.

Doing the Vaticon

IT WAS in Rome, while we were doing the Vadeas the pur guide furnished us with a night that, considered is human experience, was worth more to me than a pair of Old Masters and Young Messers. We had pushed our problistered feet—a dozen or more of us—past miles of pairings and sculptures and relics and art objects, and we were tired—ah, so tired!

Our eyes ached and our shoes hurt us; and the calver our legs quivered as we trailed along from gallety is corridor, and from corridor back to gallery.

We had visited the Sistine Chapel: and, such with a weariness, we had even declined to become excited by Michelangelo's great picture of the Last Judgment. I will disappointed, too, that he had omitted to include in it collection of damned souls a number of persons I had coldently and happily expected would be present. I say a one there even remotely resembling my conception of the person who first originated and promulgated the doctor that all small children should be told at the earliest power moment that there is no Santa Claus.

That was a very severe blow to me, because I had always believed that the descent to eternal perdition would be incomplete unless he had a front seat. And the man in first hit on the plan of employing child labor on night on the cotton factories—he was unaccountably absent of And likewise the original inventor of the toy pasts. I fact, the absences were entirely too numerous to sure angelo's Last Judgment—it was too large and too could cated to he reproduced successfully on a souvent peacetrd; and I think we should all he very grateful is the mercy anyway.

As I was saying, we had left the Sistine Chapel and so behind us and had dragged our exhausted frames of as an arched upper portion in a wing of the great are averlooking a paved courtyard inclosed at its faring by a side wall of Saint Peter's. We saw, in another particular to the one where we had halted and running particular, long rows of peasants, all kneeling and all with the faces turned in the same direction.

"Wait here a minute," said our guide. "I think you will see something not included in the regular itinerary of the day."

So we waited. In a minute or two the long lines of kneeling peasants raised a hymn; the sound of it came to us in quavering snatches. Through the aisle formed by their bodies a procession passed the length of the long portico and back to the starting point. First came Swiss Guards in their gay piebald uniforms, carrying strange-looking pikes and halberds; and behind them were churchly dignitaries, all bared of head; and last of all came a very old and very feeble man, dressed in red, with a wide-brimmed red hat and the red made a strong contrast for his white hair and his white face, which seemed drawn and worn, but very gentle and kindly and beneficent.

He held his right arm aloft, with the first two fingers extended in the gesture of the apostolic benediction. He was so far away from us that in perspective his profile was reduced to the miniature proportions of a head on a postage stamp; but, all the same, the lines of it stood out clear and distinct. It was His Holiness, Pope Pius the Tenth,

blessing a pilgrimage.

All the guides in Rome follow a regular routine with the tourist. First, of course, they steer you into certain shope in the hope that you will buy something and thereby enable them to carn commissions. Then, in turn, they carry you to an art gallery, to a church, and to a palace, with stope at other shope interspersed between; and invariably they wind up in the vicinity of some of the ruins. Ruins is a Roman guide's middle name; ruins are his one best bet. In Rome I saw ruins until I was one myself.

Romulus and His Circus

WE DEVOTED practically an entire day to ruins; that was the day we drove out the Appian Way, glorious in tegend and tale, but not quite so all-fired glorious when you are reeling over its rough and rutted pavement in an elderly and indisposed open carriage, behind a pair of half-broken

Roman-nosed horses which insist on walking on their hind legs whenever they tire of going on four. The Appian Way, as at present constituted, is a considerable disappointment. For long stretches it runs between high stone walls, broken at intervals by gateways, where votive lamps burn before small shrines, and by the tombs of such illustrious dead as Seneca and the Horstii and the Curiatii.

At more frequent intervals are small wine groggeries. Being built mainly of Italian marble, which is the most enduring and the most unyielding substance to be found in all Italy—except a linen collar that has been starched in an

Italian laundry—the tembs are in a pretty fair state of preservation; but the inns, without exception, stand most desperately in need of immediate repairing.

A cow in Italy is known by the company she keeps; she rambles about, in and out of the open parlor of the wayside inn, mingling freely with the patrons and the members of

the proprietor's household.

Along the Appian Way a cow never seems to care whom she runs with; and the same is true of the domestic fowls and the family donkey. A donkey will spend his day in the doorway of a wine shop when he might just as well be enjoying the more sanitary and less-crowded surroundings of a stable. It only goes to show what an ass a donkey is,

Anon, as the fancy writers say, we skirted one of the many wrecked aqueducts that go looping across the country to the distant hills, like great stone straddlebugs. In the vicinity of Rome you are rarely out of sight of one of these aqueducts. The ancient Roman rulers, you know, curried the favor of the populare by opening baths. A modern ruler could win undying popularity by closing up a few!

We slowed up at the Circus of Romulus and found it a very sad circus, as such things go—no elevated stage, no hippodrome truck, no centerpole, no trapeze, and only one ring. P. T. Barnum would have been ashamed

to own it. A broken wall, following the lines of an irregular oval; a cabbage patch where the arena had been; and various tumble-down farmsheds built into the shattered masonry—this was the Circus of Romulus. However, it was not the circus of the original Romulus, but of a degenerate successor of the same name who rose suddenly and fell abruptly after the Christian Era was well begun. Old John J. Romulus would not have stood for that circus a minute!

No ride on the Appian Way is regarded as complete without half an hour's stop at the Catacombs of Saint Calixtus; so we stopped. Guided by a brown Trappist, and all of us bearing twisted tapers in our bands, we descended by stone steps deep under the skin of the earth

SODA

WATE

the muldered bones of those early Christians from the vulgar gaze and prying fingers of every impious relic hunter who might come along.

The dispute rose higher and grew warmer until I offered to bet him fifty dollars that I was right and he was wrong. He took me up promptly—he had sporting instincts; I'll say that for him—and we shook hands on it then and there to bind the wager. I expect to win that bet.

We had turned off the Appian Way and were crossing the edge of that unutterably hideous stretch of tortured and distorted waste known as the Campagna, which goes tumbling away to the blue Alban Mountains, when we came on the scene of an accident. A two-wheeled mule cart, pro-

> ceeding along a crossroad, with the driver saleep in his canopied seat, had been hit by a speeding automobile and knocked galley-west. The automobile had sped on-so we were excitedly informed by some other tourists who had witnessed the collision-leaving the wreckage bottom side up in the ditch. The mule was on her back, all entangled in the twisted ruln of her gaudy gear, kicking out in that restrained and genteel fashion in which a mule always kicks when she is desirous of protesting against existing conditions, but is wishful not to damage herself while so doing.

> The tourists, aided by half a dozen peasants, had dragged

the driver out from beneath the heavy cart and had carried him to a pile of mucky straw under the eaves of a stable. He was etretched full length on his back, senseless and deathly pale under the smeared grime on his face. There was no blood; but inside his torn shirt his chest had a caved-in look, as though the ribs had been crushed flat, and he seemed not to breathe at all. Only his fingers moved.

and wandered through dim, dank underground passages, where thousands of early Christians had lived and hid, and held clandestine worship before rude stone altars, and had died and been buried—died in a highly unpleasant fashion, some of them.

The experience was impressive, but malarial. Coming away from there I had an argument with a fellow American. He said that if we had these Catacombe in America we should undoubtedly enlarge them and put in band-stands and lunch places, and make them altogether more attractive for picnic parties and Sunday excursionists.

I contended, on the other hand, that if they were in America the authorities would close them up and protect

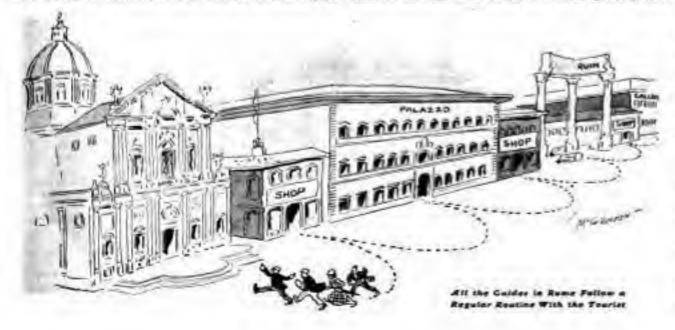

First Aid to the Injured Mule

THEY kept twitching, as though his life was running out of him through his finger ends. One felt that if he would but grip his hands he might stay its flight and hold it in.

Just as we jumped out of our carriage a young peasant worman, who had been bending over the injured man, set up a great outcry, which was instantly answered from behind us; and looking round we saw, running through the lare fields, a great, bulksome old woman, with her arms outspread and her face set in a tragic shape, shricking as she sped toward us in her ungainly wallowing course. She was the injured man's mother, we judged—or possibly his

There was nothing we could do for the human victim. Our guides, having questioned the assembled natives, told us there was no hospital to which he might be taken and that a neighborhood physician had already been sent for. So, having no desire to look on the grief of his mother—if she was his mother—a young Austrian and I turned our attention to the neglected mule. We felt that we could at least render a little first aid there. We had our pocket-knives out and were slashing away at the twisted maze of ropes and straps that bound the brute down between the shafts, when a particularly shrill chorus of shrieks checked us.

We stood up and faced about, figuring that the poor devil on the muck heap had died and that his people were bemoaning the death. That was not it at all. The entire group, including the fat old woman, were screaming at us

General Motors Truck Company is the hig manufacturer of commercial motor vehicles-building both gasoline and electric trucks for every business requirement.

The product of this big organization is branded GMC. It is the mark not only of a thoroughly good motor truck, but more important, it stands for a business stability and permanence that insures satisfaction to GMC Truck owners today and years hence.

In buying from a big manufacturer, GMC owners get the additional benefit of production economies which result from big volume and low overhead expense.

They are able to select trucks that absolutely must their near business needs at priess which represent metual Fruch value.

and shaking their clenched fists at us, warning us not to damage that harness with our knives. Feeling ran high, and threatened to run higher.

So, having no desire to be mobbed on the spot, we desisted and put up our knives; and after a while we got back into our carringe and drove on, leaving the capsized mule still belly-up in the débris, lashing out carefully with her skinned legs at the trap-pings that bound her; and the driver was still prone on the dunghill, with his fingers twitching more feebly now, as though the life had almost entirely fled out of him-a grim little tragedy set in the midst of a wide and aching desolation! We never found out his name or learned how he fared whether he lived or died, and if he died how long be lived before he died. It is a puzzle which will always lie unanswered at the back of my mind, and I know that in odd moments it will return to torment me. I will bet one thing, though-nobudy else tried to cut that mule out of her harness!

In the chill late afternoon of a Roman day the guides brought us back to the city and took us down into the Roman Forum, which is in a hollow instead of being up on a hill as everybody imagines it to be until they go to Rome and see it; and we finished up the day at the Golden House of Nero, hard by the vast ruins of the Colosseum. We had already visited the Forum once, so this time we did not stay long - just long enough for some ambitious pickpocket to get a wallet out of my hip pocket while I was pushing forward with a flock of other human sheep for a better look at the ruleed portico wherein Mark Antony stood when he delivered his justiy popular funeral ora-tion over the budy of the murdered Casar. I never did admire the character of Mark Antony with any degree of extravagance, and since this experience I have felt actually

bitter toward him. The guidebooks say that no visitor to Rome should miss swing the Golden Heuse of Nero. When a guidebook trice to be humorous it only succeeds in being feelish. Practical jokes are out of place in a guidebook anyway. Imagine a large, oldfashioned brick smokehouse, which has been struck by lightning, burned to the roots and buried in the wreckage, and the site used as a pasture land for goats for a great many years; imagine the débris as having been dug out subsequently until a few of the foundation lines are visible; surround the whole with distressingly homely buildings of a modern aspect, and stir in a miscel-laneous sessoning of beggars and loafers and souvenir venders - and you have the Golden House where Nero meant to round out a life already replete with incident and abounding in romance, but was deterred from so doing by reason of being rut down in the midst of his activities at a comparatively early age.

In the Golden House

In the presence of the Golden House of Nero I did my level best to recreate before my mind's eye the scenes that had been enacted here once on a time. I tried to picture this moldy, know-high wall as a great glittering palace; and youder broken roadway as a splendid Roman highway; and those American-looking tenements on the surrounding hills as the marble dwellings of the emperors; and all the broken pillars and shattered portices in the distance as arches of triumph and temples of the gods. I tried to convert the clustering mendicants into barbarian prisoners clanking by, chained at wrist and neck and ankle; I sought to imagine the pestersome flower venders as being vestal virgins; the two frowsy policemen, who loafed near by, as centurions of the guard; the passing populace as grave senators in snewy togas; the flaunting underwear on the many clotheslines as silken banners and glided trappings. I could not make it. I tried until I was lame in both legs and my back was strained. It was no go.

If I had been a poet, or a historian, or a erson full of Chianti, I presume I might have done it; but I am no poet and I had not been drinking. All I could think of was that the guide on my left had eaten too much garlic and that the guide on my right had not eaten enough. So in self-defense I went away and are a few strands of garlicmyself; for I had learned the great fesson of the provertic

When in Rome be an aroma!

When we had reached Pompeli, though, the situation was different. I could conjure up an illusion there—the biggest, most

vivid illusion I have been privileged to harber since I was a small boy. It was worth spending four days in Naples for the sake of spending half a day in Pompeii; and if you know Naples you will readily understand what a high compliment that is for

To reach Pompell from Naples we followed a somewhat roundabout route; and that trip was distinctly worth while too. It provided a most pleasing foretaste of what was to come. Once we had cleared the packed and festering suburbs, we went climbing across a terminal vertebra of the mountain range that sprawls lengthwise of the land of Italy, like a great spiny-backed crucodile sunning itself, with its tail in the Tyrrhenian Sea and its sneut in the Piedmonts; and when we had done this we came out on a highway that skirted the bay.

There were gaps in the hills, through which we caught glimpses of the city, lying miles away in its natural amphitheater; and at that distance we could revel in its picturesqueous and forget its bouquet of weird stenches. We could even forget that the automobile we had hired for the excursion had one foot in the grave and several of its most important vital organs in the repair shop. I recken that was the first automo-bile built. No; I take that back. It never was a first—it must have been a second to start with.

I once owned a half interest in a sick It was one of those oldfashioned, late-Victorian automobiles, cut princesse style, with a placket in the back; and it looked like a cross between a flat-bed job press and a tailor's goose. It bruke down so easily and was towed in so often by more powerful machines that every time a big rar passed it on the road it stopped right where it was and nickered.

The Invalid Motor Car

Of a morning we would start out in that car, filled with high hopes and bright anticipations, but eventide would find us returning homeward close behind a higger automobile, in a relationship strongly suggestive of the one pictured in the well-known Nature group entitled: Mother Hippo, With Young. We refused an offer of four hun-dred dollars for that machine. It had more than four hundred dullars' worth of things the matter with it.

The our we chartered at Naples for our trip to Pompeli reminded me very strongly of that other car of which I was part owner. Between them there was a strong family resemblance, not alone in looks but in department also. For patient endurance of manifold life, for an inexhaustible capacity in developing new and distressing symptoms at critical moments, for cheerful willingness to play fool to some other car's dam, they might have been cults out of the same litter. Neverthelese, between intervals of breaking down and starting up again, and being helped along by friendly passer-by auto-mobiles, we enjoyed the ride from Naples.

We enjoyed every inch of it.

Part of the way we skirted the flanges of
the great witches caldron of Vocavius. On this day the resident demons must have been stirring their brew with special onthusiasm, for the smoky smudge which always wreathes its lips had increased to a great billowy plume that lay along the naked flanks of the devil mountain for miles and miles. Now we would go puffing and pant-ing through some small outlying environ of the city. Always the principal products of such a village seemed to be young habies, and macaroni drying in the sun. I am still reasonably fond of babies, but I date my oss of appetite for imported macaroni from that hour. Now we would emerge on a rocky headland and below us would be the sea, eternally young and dimpling like a nuclden's cheek; but the crags above were eternally old and they were all gushed with wrinkles and seamed with folds like the jowls of an arcient squaw. Then for a dis-tance we would run right along the face of the citf.

Directly beneath us we could see little stone buts of fishermen clinging to the rocks just above high watermark, like so many gray limpets; and then, looking up, we would catch a glimpse of the vineyards, tucked into man-made terraces along the upper cliffs, like bundled herbs on the pantry shelves of a thrifty housewife; and still higher up there would be orange groves and lemon groves and dusty-gray olive groves. Each succeeding picture was Byzantine in its coloring. Always the sea was molten blue ename! and the far-away villages seemed crafty inlays of mosaic work; and the sun was a disk of hammered Grecia

A man from San Francisco was sharing the car with us, and he came right out and said that if he were sure heaven would be as benutiful as the Bay of Naples he would change all his plans and arrange to go there. He said he might decide to go there anyhow, because heaven was a place he had always heard very highly spoken of. And I agreed with him.

The sun was slipping down the western sky and was laced with red like a bloodsto; eye, with a Jacob's ladder of rainbow shale streaming down from it to the water, when we turned inland; and after several seal minor stops while the automobile caught its breath and had the heaves and the asthma, we came to Pompeii over a read

built of volcanic rock. I have always been glad that we west there on a day when visitors were few. The very solitude of the place aided the mind is the task of repeopling the empty streets of that dead city by the sea with the life that was hers nearly two thousand years ago Herculaneum will always be buried, so the scientists say, for Herculaneum was souggled close up under Vesuvius, and the hissing-hot lava came down in waves; and first it slugged the doomed town to death and then slagged it over with impenetrable, flinthard deposits. Pompeil, though lay farther away, and was entombed in dust and ashes only; so that it has been romparatively easy to unearth it and make it whole again. Even so, after one hundred and mixty-odd years of more or less dessitory explorations, nearly a third of its supposed area is yet to be excavated.

It was in the year 1592 that an architect named Fontana, in cutting an aquedact which was to convey the waters of the Sarno to Torre dell'Annunziata, discovered the foundations of the Temple of las, which stood near the walls on the inner whand side of the ancient city. It was at first supposed that he had dug into an isolated villa of some rich Roman; and it was not until 1748 that prying archaeologists bit an the truth and induced the government to send a chain gang of convicts to dig away the accumulations of earth and tufa; but if it had been a modern Italian city that was buried no such mistake in preliminar diagnosis could have occurred. Any bal-would have known it instantly by the same I do not youth for the dates—I copied them out of the guidebook; but my experience with Italian cities qualifies me to steak with authority regarding the other matter

Thoughts on a Pompellan Bar

Afon we entered Pompeli by the restored Marine Gate, Our first stop within the walls was at the Museum, a comparatively modern building, but containing a fairly complete assortment of the relies that from time to time have been disinterred in violous quarters of the city. Here are wall rabinets filled with tools, ornaments utensils, jewelry, furniture—all the small things that fulfilled every-day functions to the first century of the Christian Era. Here is a kit of surgical implements, and some of the implements might well belong in a modern hospital.

From here we went on into the eny proper: and it was a whole city, set off to itself and not surrounded by those jarring modern incongruities that apoil the ruins Rome for the person who wishes to give his fancy a slack rein. It is all here, looking much as it must have looked when New and Caligula reigned; and much as it will still look hundreds of years hence, for the government owns it now and guards it and protects it from the hammer of the vandal and the greed of the casual collector. Here it is - all of it; the tragic theater and the comic theater; the basilica; the greater forum and the lesser one; the market place. the amphitheater for the games; the training school for the gladiators; the temples the baths; the villas of the rich; the note of the poor; the cubicles of the slaves; shepoffices; workrooms; brothels.

The roofs are gone, except in a few instances where they have been restored; but the walls stand and many of the detacted pillars stand too; and the pavements havendured well, so that the streets remain almost exactly as they were when this was city of live beings instead of a temb of deamemories, with deep groovings of characteristics in the flaggings, and at each crosses atepping stones dotting the roadbed in punctuation marks.

At the public fountain the well curbs are worn away where the women rested their water jugs while they swapped the gossip of the town; and at nearly every corner is a groggery, which in its appointments and fixtures is so amazingly like unto a family liquor store as we know it that, venturing into one, I caught myself looking about for the Business Men's Lunch, with a collection of greasy forks in a glass receptacle, a crock of pretzels on the counter, and a sign over the bar reading: No Checks Cushed - This Means You!

In the floors the mosaics are as fresh as though newly applied; and the ribald and libelous Latin, which disappointed liti-gants carved on the stones at the back of the law court, looks as though it might have been scored there last week - certainly not further back than the week before that. A great many of the wall paintings in the in-teriors of rich men's homes have been pre-served and some of them are fairly spicy as to subject and text. It would seem that in these matters the ancient Pompeilans were pretty nearly as broad-minded and liberal as the modern Parisians are.

Mrs. Belladonna Goes Shopping

The mural decorations I saw in certain rilias were almost suggestive enough to be acceptable matter for publication in a French comic paper—almost, but not quite. Mr. Anthony Comstock would be an unhappy man were he turned loose in Pompesi—unhappy for a spell, but after that averagingly home.

that exceedingly busy.

We lingered on, looking and marveling, and betweenwhiles wondering whether our automobile's backing cough had get any batter by resting, until the sun went down and the twilight came. Following the guide-book's advice we had seen the Colosseum in Rome by moonlight. There was a full moon on the night we went there. It came beaving up grandly, a great, round-faced, full-cream, curdy moon, rich with rennet and yellow with butter fata; but by the time we had worked our way south to Naples a greedy fortnight had bitten it quite away, until it had been reduced to a mere cheese rind of a moon, set up on end against the delft-blue platter of a perfect sky. We waited until it showed its thin rim in the heavens, and then, in the softened half-glow, with the purplish shadows deepening between the brown-gray walls of the dead city, I just naturally turned my imag-ination loose and let her soar.

Standing there, with the stage set and the light effects just right, in fancy I repop-ulated Pompell. I beheld it just as it was

on a fair, autumnal morning in 79 A. B. With my eyes half closed, I can see the

vision now.

At first the crowds are massed and mingled in confusion, but soon figures detach themselves from the rest and reveal themselves as prominent personages. Some of them I know at a glance. You tall, imposing man, with the genuine imitation sealskin collar on his toga, who strides along so ma-jestically, whicking his cane against his leg, can be no other than Gum Tragacanth, leading man of the Bon Ton Stock Com-pany, fresh from his metropolitan trumphs in Rome and at this moment the reigning matinée idol of the South. This week he is playing Claude Melnotte in The Lady of Lyons; next week he will be seen in his cele-brated characterization of Matthias in The Bells, with special scenery; and for the

regular Wednesday and Saturday bargain matiness Lady Audley's Secret will be given. Observe him closely. It is evident that he values his art. Yet about him there is no take ostentation. With what gracious condescension does he acknowledge the halftimid, half-daring smiles of all the little caramel-chewing Floras and Faunas who have made it a point to be on Main Street, at this hour! With what careless grace does he doff his laurel wreath, which is of the latest and most modish fall block, with the bow at the back, in response to the waved greeting of Mrs. Belladonna Capsicum, the acknowledged leader of the artistic and Bohemian set, as she sweeps by in her chariot bound for Blumberg Brothers' to do

a little shopping. She is not going to buy mything—she is merely out shopping. Than this fair patrician dame none is more prominent in the gay life of Pompeli. It was she who last senson smoked a cigarette in public, and there is a report now that she is seriously considering wearing an ankle bracelet; withal she is a perfect lady and belongs to one of the old Southern families. Her husband has been through

the bankruptcy courts twice and is thinking of going through again. At present he is engaged in promoting and a writing a little life insurance on the side. Now her equipage is lost in the throng

and the great actor continues on his way, making a mental note of the fact that he has promised to attend her next Sunday afternoon studio tea. Near his own stage door he bumps into Commodius Retunda, the stout comedian of the comic theater, and they pause to swap the latest Lambs Club repartee. This done, Commodius hauls out a press clipping and would read it, but the other remembers providentially that he has a rehenrial on and hurriedly departs. If there are any press clippings to be read he has a few of his own that will bear

Superior Maxillary, managing editor of the Pompelian Daily News-Courier, is also abroad, collecting items of interest and subscriptions for his paper, with preference given to the latter. He enters the Last Chance Saloon down at the foot of the street and in a minute or two is out again, wiping his mustache on the back of his hand. We may safely opine that he has been taking a

small ad out in trade.

At the door of the county courthouse, where he may intercept the taxpayers as they same and go, is stationed our old friend, Colonel Pro Bono Publico. The Colonel has been running for something or other ever since Heck was a pup. Today he is wearing his official campaign smile, for he has just been announced as a candidate for county judge, subject to the action of the tepublican party at the October primaries. He is also wearing all his lodge buttons and likewise his G. A. R. pin, for this year he figures on carrying the ald-soldier vote.

Nux Vomica's Lost Limerick

In front of the drug-store on the corner a core of young bloods, dressed in snappy togas for Varsity men, are skylarking. They are sepecially brilliant in their flash-ing interchanges of wit and humor, because the Mastadon Minstrels were here only last the Mastadon Minstreis were here only last week, with a new line of first-part jokes. Along the opposite side of the street passes. Nux Vomica, M. D., with a small black case in his hand, gravely intent on his pro-fessional duties. Being a young physician he wears a beard and large-rimmed syn-glasses. Young Ossius Dome sees him and glasses. Y

Ob, Doc!" he calls out. "Come over here a minute. I've got some brand-new limericki for you. Tertiary Tonsillitis got 'em from a traveling man he met day before yesterday when he was up in the city, laying in his stock of fall and winter armor.

The healer of ills crosses over; and as the group push themselves in toward a common center I hear the voice of the speaker; "Say, they're all bully; but this is the bullissimus one of the lot. It goes like this;

"There was a young maid of Sorrento,
Who said to her _____

I have regretted ever since that at this juncture I came to and so failed to get the rest of it. I will bet that was a peach of a limerick. It started off so promisingly.

And now it devolves on me as a painful et necessary duty to topple from its pedestal one of the most popular idols of legend-ary lore. I refer, I regret to say, to the widely famous Roman Sentry of old Pumpeii.

Personally I think there has been entirely too much of this sort of thing going on lately. Muckrakers, prying into the storied past, have destroyed many of the pet characters in history

Horatius never held the bridge: he just let the blamed thing go. The boy did not stand on the burning deck, whence all but him had fled; he was among the first in the lifehouts. That other buy—the Spartan youth—did not have his vitals grawed by a fox; the Spartan youth had been eating wild grapes and washing them down with spring water-hence that gnawing sensa-

tion of which so much mention is made. Even Barbara Frieschie is an exploded myth. She did not nail her country's flag to the window exament. Being a female. she could not oail a flag or anything else to a window. In the first place, she would have used a wad of chewing gum and a couple of hairpins. In the second place, had she recklessly undertaken to nail up a flag with a hammer and nails, she would never have been on hand at the psycho-logical moment to invite Stonewall Jackson to shoot her old gray head. When General Juckson passed the house she would have

been in the bathroom bathing her left

thumb in witch-hazel

Furthermore, she did not have any old gray head. At the time of the Confederate invasion of Maryland she was only seventeen years old some authorities say only seven-and a pronounced blonde. Also, she did not live in Frederick; and, even if she did live there, on the occasion when the troops went through she was in Baltimore visiting a school friend.

I repeat that there has been too much of this. If the cruze for smushing all our romantic fixtures persists, after a while we shall have no giorious traditions left with which to fire the youthful heart at high-school commencements. But in the inter-ests of truth, and also because I made the discovery myself. I feel it to be my solemn duty to expose the Roman Sentry, stationed at the gate of Pompeli, looking toward the sea, who died, we are told, because he would not quit his post without orders and had no orders to quit.

Those Ringing Lines of Laryngitis

Until now this party has stood the acid test of the centuries. Everybody who ever wrote about the fall of Pompell, from Plutarch and Pliny the Younger clear on down to Bulwer Lytton and Burton Holmes, had something to say about him. The lines on this subject by the Greek poet Laryngitis are familiar to all lovers of that great master

Suffice it to say that the Roman Sentry, perishing at his post, has ever been a favor-ite subject for historic and romantic writers. I myself often read of him-how on that dread day when the devil's stew rame to a boil and spewed over the sides of Vesuvius, and death and destruction poured down to blight the land, he, typifying forti-tude and discipline and unfaltering devo-tion, stood firm and stayed fast while all about him chaos reigned and fathers forgot their children and bushands forgot their wives, and vice versa, though probably not to the same extent; and how finally the drifting ashes and the choking dust fell thicker on him and mounted higher about him, until he died and in time turned to ashes bimself, leaving only a void in the solidified sing. I had always admired that soldier—out his judgment, which was faulty, but his heroism, which was immense.

To myself I used to say:

"That unknown common soldier, nameless though he was, deserves to live forever
in the memory of mankind. He lacked imagination, it is true, but he was game. It was a glorious death to die painful, yet splendid. Those four poor wretches who shalls were found in the prison down under the gladiators' school, with their ankles fast in the iron stocks - I know why they stayed. Their feet were too large for their own good. But no bonds except his dauntless will bound him at the portals of the doomed city. Duty was the only chain that held him. "And to think that centuries and cen-

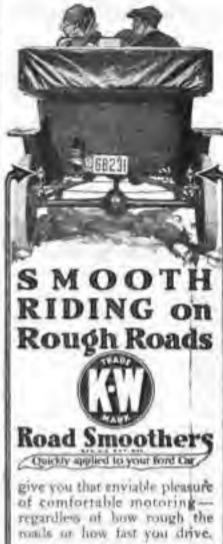

turies afterward they should find his monument—a varant, empty mold in the piled-up pumice! Had I been in his place I should have created my vacancy much coner-say, about thirty seconds after the first alarm went in. But he was one who chose rather that men should say, 'How natural he looks!' than 'Yonder he goes!' And he has my sincere admiration. When I go to Pempeli—if ever I do go there— I shall seek out the spot where he made the supremest sacrifice to authority that ever any man could make, and I shall tarry a

while in those hallowed precincts!"

That was what I said I would do and that was what I did do that afternoon at Pompell. I found the gate looking toward the sea and I found all the other gates, or the sites of them; but I did not find the Roman Sentry or any trace of him, or any authentic record of him. I questioned the guides and, through an interpreter, the curator of the Museum, and from them I learned the lamentably disillusioning facts in this case. There is no trace of him because he neglected to leave any trace.

Doubtless there was a sentry on guard at the gate when the volcano belched both, and the skin of the earth flinched and thivered and split asunder; but he did not re-main for the finish. He said to himself that this was no place for a minister's son; and so be girded up his loins and he went away from there. He went away burriedly - even as you and I.

Apply modern methods to your housekeeping problems. Let electricity, which is instantly available at every light socket in your home, be your willing servant. Do all of your ironing and much of your cooking the Holmit way—you'll find it a delightful change, saving you time, trouble and strength—a real economy. No special wiring—no bother—nothing to learn.

Cook it electrically - right at the table.

Breakfast: Perfect coffee made in Aluminum El Perco—with toast and eggs or potatoes and chops, or whatever you please, perfectly cooked and sizzling hot right from El Grillo. Or for a quick luncheon—prepare it on the porch if you choose; or a dainty after-theater snack.

Yes-"to boil it is to spoil it"

Simply put cold water into the pot, ground coffee into the basket, and insert the plug. In half a minute percolation begins and shortly you pour a perfect brew—none of the caffein bitterness. Because when made in Aluminum El Perco, the coffee is never boiled.

Aluminum El Perco is very handsome and light. No floats, valves or traps to get out of order. Extremely economical because the heating element is entirely surrounded by water. Heating Element guaranteed for five years. Price \$7.50. In Canada, \$9.75.

Glowing Electric Table Stove

The instant the switch plug is inserted, the El Grillo coils glow cherry red and cooking begins—any two operations at once, one above and one below the glowing coils.

A deep dish for broiling thick chops: a medium dish for eggs, etc., and a shallow dish for frying cakes, etc. El Grillo rests on a tray so that the finest finished furniture is not injured.

Made entirely of pressed steel, nickel plated, with mirror polish. Ebonite handles, always cool. Heating Element guaranteed for 5 years. Price \$5.00. In Canada, \$6.50.

Send for this free "Home Book of Electricity"

Can you go to your meter and tell how much electricity you have used this month? Well, it is just such practical things that are explained in our 32 page Home Book of Electricity. You will find something interesting on every page, and we will be glad to send you a copy free. Use the Coupon in the corner.

Here are some of the chapter headings: Electrical Terms You Should Know — Electrical Trackins Explained — How to Figure Costs — Funes — Evolution of Electrical Appliances — How to Regard Broken Cords — Electro Magnets — Dynamics and Makes — How to Read Your Meter — Core of Electrically Heated Appliances — Ele.

king Set, \$2.00. Canada \$2.50.

All of our appliances are designed to yield maximum efficiency and satisfaction at lowest cost for current. They all possess a sturdy character, are handsome in design and are sold at popular prices.

Owing to these facts several million Holpoint appliances are in use all over the world. Every one guaranteed as to material, workmanship and life of element.

El Boilo (immersion heater) three styles.

Plunge El Boilo into any liquid, put in the plug and shortly your liquid boils—that is the whole idea. El Boilo is a long, slender cylinder enclosing a specially efficient heating element. When submerged, every unit of heat is utilized, hence it is economical, convenient and sanitary.

Straight & Boile, small

In the bedroom, nursery or anywhere there is an electric lightsocket available, you can instantly prepare a hot drink, or a quantity of hot water with the small size El Boilo.

Men find it a great convenience for heating shaving water. Heavily nickel plated, polished to mirrorfinish. Furnished with 6 feet of flexible cord and removable plug.

Guaranteed 2 years. Weight less than I lb. Price \$3.00. Canada \$4.00.

Thousands of Distributers

electrical supply dealers, hardware stores, department stores, lighting companies, drug stores, etc. There are several thousand scattered over this country and Canada, and most foreign countries. Look for the Hotpoint sign in the window.

Straight & Boile, large

Made the same as small El Boilo, but is 10 inches long, and weighs a little over one pound. It attaches to any lamp-socket.

Especially desirable to heat larger quantities of water and for simple boiling operations in the kitchen—also for boiling eggs at the table, or besting water for tea or chocolate. Gueranteed 2 years. Furnished with cord and plug complete. Price \$4.00. Canada \$5.00.

Crookneck & Boile

Large size El Boilo made crookneck form so that it will lie flat on the bottom of a dish. Especially adapted for sterilizing and similar uses in Hospitals. Used by doctors and dentists, etc.

El Boile lies clear to one side of the dish, giving access to the entire surface for the sterilizing operation. Guaranteed for 2 years. Furnished with cord and plug complete. Price \$5.00, Canada \$6.50.

We Fill Orders

If you are unable to find a distributer in your community, order direct, sending check to our nearest office and any of our appliances will be shipped prepaid at regular prices. We guarantee asfe delivery. Be sure to state voltage. Ask your Lighting Company.

HOW PLAYS ARE BORN

(Concluded from Page 15)

actualized on the stage instead of being realized from a larger point of view and so

added to by the stage.

The play did not succeed. The public concluded that it would not pay two dellars to see something that could be seen for nothing.

So much for plays born of the best plays but the best plays.

the newspapers; but some of the best plays

the newspapers; but some of the best plays over written have been born in the streets. Many who read this have, without knowing it, seen one that was born in a fog.

One blindingly foggy night in London, Haddon Chambers and Paul Arthur were trudging after an evening spent at a theater to Chambers' quarters. Suddenly out of the impenetrable fog that surrounded both playwrights loomed what Chambers still rails "a smear," "a stain on humanity," a typical London tramp. typical London tramp.
Chambers and the tramp collided; but

Chambers and the tramp collided; but the tramp was quick with apologies. He interested the dramatisi, who finally invited him home for a bite of supper, much to the disgust of his friend Arthur.

The man, whose name was Burns, accepted—"Thanking you kindly!" With no thought of play writing, Chambers sented his strange guest at a supper, to be served by Hogg, the playwright's valet; but, at the eight of "such an 'airy, hawful, in fact, 'orrible specimen of humanity." Hogg's sense of decreey was so outraged it was only after a sharp word or two from his master that the valet consents to serve the tramp. That flash of class distinction alone would have repaid Chambers for bringing flurus heroe; but the real reward came when Burns was, with great difficulty, feally persuaded to talk. "He was a Horatian without knowing it," Chambers says in teiling the story. in teiling the story.

A Play for an Overcoat

Asked whether he had ever worked, hurns, amazed at the thought, answered: "Certainly not! Work's for workmen!" Burns' only friends in life turned out to

be a caleman, called Nighty because he was at his stand all night, and other dictam and jeteam, male and female, who, like himself, were suntained by the charity of the Salvation Army,

The strange party ended finally by Burns.
"Thanking you all kindly!" politely bewing his way out and leaving the house with Paul Arthur's overcost, quietly but effectively taken from the hall rack.

tively taken from the hall rack.

What Burns left, however, was a play—Passers-By—which has since exreed the price of many an evercoat. The tramp's conversation had assembled in Chambers' quarters five unusually dramatic characters—a philosophic tramp; an eloquous cabman; an aristocratic valet; a woman of the street; and Chambers himself, who portrayed any young man fond of multiplying sensations with real life.

Chambers called his hero Waverton, from the name of the street where the playwright lives. And, with that, he had his characters and wrote his first act. He employed Burns by his real name; Nighty by his. His valet, florg, he renamed Pine, and the woman of the street he called Margaret Summers.

and the woman of the street he called Margaret Summers.

Then an extraordinary thing happened. He could not begin his second act! None of his characters would move. The love litterest he wanted to create was blocked at every turn. He had his young man and his young woman, but Margaret's character contralled any true love story. Six young contralled any true love story.

his young woman, but Margaret's character contradicted any true love story. Six years want by before he found a solution.

Mr. Chambers visits his dentist not always as a dentist, but frequently for what a playwright calls "the outside point of view."

It was during just such a visit that the dentist one day said to the playwright:

"How is it that nobody ever writes a play in which the modern Mary Magdalen, 'the lovely woman who stoors to folly.'

im, the lovely woman who stoops to folly, gains some of the Christian sympathy accorded her in the New Testament? always ultimate disaster when we know it is not so in real life?"

Done!" gried the play wright, "I shall redeem Margaret Summers. She shall not be a woman of the street, but a good woman, misled by her very goodness and yet triumphing because of it in the end. She shall marry my roung man. Waverton. "Wheredgon," as Mr. Chambers puts it, "Passers-By began to write itself."

and vague; but when he was near enough to see better, then it had risen again tantalizingly above his head, out of the reach of his ingly above his head, out of the reach of his eyes. It called him in the morning light; it held something up there for him. But here at his feet was his pick; his undertaking; his enterprise; his gold. He grasped the pick; he dug; he sealed his ears and his

The insistence of the top of the mesa did not wane, though-it grew; it was con-stant. Now and then his petrified memory, stant. Now and then his petrilled memory, stirring as though galvanized, told him he should be up there. There was something for him up there—something long lost, to be gathered up and reentwined in the fibers of his existence.

And one bright Sunday morning, as he squatted on the bank of the river, racking the gold out of the black sand he had mined decine the week, he waddenly sprang up-

the gold out of the black sand he had mined during the week, he suddenly sprang up-right, dropped everything, and went speed-ing drunkenly on his old thin legs to the mess. When he reached it he did not stop; up the slope he had excavated, he scram-bled painfully to the top.

hed painfully to the top.

Now that he was up there, he did not know why he had come or for what he was searching. It was warm, for one thing, and very peaceful. There was grass all over, thick and high—it was just beginning to dry to the season's aridity; and a light hreeze, passing now and then, stretched it into long, silvery shimmerings.

A thread seemed to attach itself to his heart and to tug gently; but when, obeying, he began to walk, he found that the surface beneath the grass was not flat and smooth as the grass made it appear. His feet were passing over a series of rounded swellings, like smooth, solid waves. And now and then they kicked up a little plank—a little plank bolished white by the years and the weather.

There seemed to be many of these, lost

There seemed to be many of these, lost

There seemed to be many of these, lost at the bottom of the grass. A few stood opright and he stumbled over one.

The invisible thread continued tugging at him gently. He walked, stepping high, placing his feet in the depressions between the earth-swells; with head inclined toward one shoulder, he seemed to be listening intently—listening to the beheat of a memory which, though so old and faded it bearly was would not be him so. At hardly was, would not let him go. At leight he was in the center of the little plateau be had been so diligently demol-ishing. He stooped and parted the grass, and the movement revealed a stone there a river boulder that, long ago, had been smoothed and carved.

The indentation made by a rude but pa-tient chinel had long ago disappeared, but in the wound a lichen had taken hold—a lichen which, examined closely, was a tight tisue of hundreds of very small yellow flowers. And, written thus with these mimuscular flowers, on the stone an inscription spread:

ROSE WIFE OF TOM RAND, AND BABY RICHARD

The judge read. And now he knew why he was here. He saw sgain the vision he had had the first day in the deserted comp. He saw before a cabin again the young woman of sweet, buxom charm, with the little child in her skirts. But with that vision came others to complete it, to explain it. He remembered now—ah, he remembered! And dropping to one knee, like an empty scarecrow collapsed, he began to grimace in the horrible and piteous weeping of the very old.

Forty-five years before, in this camp of Coyote Flat, he had been the friend of Tom Rand. And he had loved Rose, the wife of Tom Rand.

It had not been a loud and red passion, but a gray, wistful and dreamy affliction of the innermost fibers of his heart, half ecstasy and half ache, rising at times exquisitely to a pang, of which he could not have told whether it was torture or whether it was heaven.

He was but in his early twenties then, yet for several years already he had knocked adventurously about the camps, very busy in concealing his real timidity beneath

externals of swaggering wildness.

She was a few years older than he; she had come, but a child-bride, with her husband across the plains in the heroic period;

and she was the glory, the pride, the treas-ure of the camp. All the men loved her, with the respectful chivalry of the time and the place. In that overwhelmingly male life she was the delicacy, she was the iridescence, she was the dream. The knowledge of her being lay there at the back of the heads of all, even at the most rageful moments of their toil for gold, a restfulness, a heavy happiness. It made them think sweetly of their return to camp, of the long Sunday at the end of the week; it was as though each had had a home. Fleet sensings of her passed over them like pleasant zephyra—her flower cheeks; her rose mouth; the pink of her calicoes; her firm, round arms, bare to the elbows; the fragrance of baking bread. Rose hanging against the sunset the long line of wash—even that, to

the camp, was an enchantment.

If they had been caressed by the radiance of her charm, he had been penetrated proof her charm, he had been penetrated pro-foundly. And now, weeping, senile, on the little mesa, at the foot of the stone that bore her name, he saw himself again as he had been nearly half a century ago. He saw himself lounging about her cahin in long hours of delicious, half-sad idlences, during which all his energy of life, all his plans, had lain still, had lost substance, had evaporated; and his young strength itself had seemed to swoon. had seemed to swoon.

The little girl, Bettle, gave him an excuse for long lingerings here. She was three years old, a miniature of her mother in her pink pinufores, with her yellow hair and her curiously maternal little air; he would play with her for hours before the cabin door. And the mother, going to and fro about her work, shed on him the moonlight of her charm, pierced him at times with a flashing blue smile.

hlue smile.

Just what she felt toward him he did not know, he had never known. Perhaps she had been unable to tear out of her heart a certain happiness at his devotion. But her husband was to her her husband—there was no doubt of that; to her so much bigger, possessed of such patent superiority, that possessed of such patent superiority, that near him other men were all somewhat like

Her arms, bare to the elbow, were often floury; and a sweet odor of baking bread came from the cahin.

She was amused with him -- that is how it was; a tender amusement that showed in her eyes. Once in a while the imp that is in all women sprang to the saddle, reined her to some small maneuver that almost killed

to some small maneuver that almost killed him with joy; but immediately her amuse-ment bedewed itself again with compassion. One day she had kissed him. In an explosion of mischief at the night of his long, long face, she had suddenly seized that long face between her hands, warm and wet with suds, and had pressed a king on his live. kias on his lips.

For many years it had remained with him, the sense of that healthy, firm and sane kiss. He could feel it there on his lips now-and the memory on his cheeks of her

warm, soupy hands.

And that had been all.

That had been all.

She had died one day—with the baby boy to whom she had striven to give life.

They had all stood there-the whole camp-one sunny morning on this little flat top. Tom, stiff and strange in black clothes, put on him earlier as though on a doll, seemed only dazed. The ground was a bit resonant here, as though hollow. The boots cried on the stones. Some one had read out of a book. It was very still and very hot. A woman he had never seen had little Bettie; the child cringed in the voman's skirt.

Plunk! A small shovelful of heavy soil had been abruptly dropped on his heart, his naked heart; and he had fainted. He had fainted right here on this little flat, before all those men, before the woman and the child. He had fainted right here forty-five years

before, before all the men. And yet afterward he had forgotten!

He had forgotten! And that was life!

He was now digging in this place for gold! The idea that he should be digging in this place for gold now raised in him an uncontrollable grief; and, stretching full length along the stone, he wept in gurgles and falsetto sobs until a little rabbit, autonished and curious, peered with mobile nose over the edge of the mesa, and remained

with its two long ears petrified, watching seriously this heap of rags on the ground, from which came sounds so strange.

When, near sundown, the judge descended from the mesa, he was spent, like a child who had been through a tantrum; apwho had been through a tantrum; appeased his wee, and through his veins a pleasant peace was stealing. Nicodemus was down there, waiting for him. The judge's voice was low in the slanting light, distended, as was his whole being.

"Nicodemus, it's all off. It's all off, Nicodemus. Back to Frisco with us! And itself.

just a little poorer than we came! Don't you understand, Nicodemus? Why, it's so very simple! That mining scheme is off-do you understand? - all off. You see, Nicodemus, one can't do what we've been doing. It isn't the custom. It isn't

Noon of the next day saw the two already well on their way back to civilization. The road, between pines and carpeted with needles, looped downward toward the plain; needles, looped downward toward the plain; the pack was light, with much less provision than it had held coming up, and without shovel, pick and pan. Master and benstle tramped alacriously. Suddenly the judge broke out in loud laughter:

"Say, Nic, think of all that gold we two left up there! Can you see those fat little bags in a row under the boards? Looking at each other out of the corners of their

at each other out of the corners of their

eyes?

"Who'll get 'em? A rat, I guess. He'll rome gnawing at the burkaldn. The dust will get into his nose and he'll think it's snuff. Snuff, Nicodemus!

"Ah, well, Nicodemus!

"Ah, well, Nicodemus. I guess it's the Old Folks! Home for me now. Tisn't such a bad place, Nicodemus. I used to pass it once in a while in old Frisco. There's a bench in front, on the sonny side, and from it one can see the sen. it one can see the sen.

"And say, Nicodemus, you know, I didn't leave all the gold behind. You remember that little hag I was leginning to fill yester-day, just before I went up to the top of the mesa? Well, I've got that with me. Yes, Nicodes. It'll keep me in tohacon at the Old Folks' Home.

"I'll sit on that bench in the sun and I'll

I'll sit on that bench in the sun and I'll smoke my pips; and maybe in the amoke sometimes I'll see—you know what I'll see, Nicodemus.

"Well, we haven't made our fortune, little donk. No; we haven't made our fortune. You see, our acheme was wrong from the bottom. One can't do what we were doing. It isn't the custom. No. Nico-demus; one can't mine a cemetery. It isn't

done! Nope!
"Whoopee, Nicodemus! Let's trot. I'm
beginning to pine for that Old Folks'
Home!"

Hot Treatment

HEATING up an arm or a leg by elec-tricity—not heating it from the out-side, but equally all the way through—is one of the most recent uses at electricity in

In some forms of rheumatism, of neuritis and diseases of the joints, for instance, it has been found helpful to heat the diseased part of the body much above normal tem-perature; though, of course, this treatment is far from being a cure-all. It is like making an imitation of an electric stove or electric iron with a knee joint for a hot-plate, and is nothing like the old battery-shock treatments that gave one a pleasant

tingle.

The principle of an ordinary electric stove is very simple. If the right kind of current is sent through the right kind of iron plate, the current finds it hard to get through. The metal from one side to the other resists the current, and this resistance shows itself by heat. The entire plate becomes bot, inside and out, from the quarrel it is having with the electricity. It is in this way that disthermy, as the electric beauting of muscle and hope in electric heating of muscle and bone is called, operates.

A high-frequency current of considerable magnitude is sent through the leg, because this kind of current will meet with much resistance; and the consequence is that beat develops along the path of the current. The electricity is kept on only a few minutes at a time and may be regulated to give just the amount of heat desired. All beneficial effects come from the heat and not from the current itself. It is like hav-ing the benefit of a hot-water bottle inside of the joint as well as outside.

According To Your Income

YOU do not have to wait until you have accumulated enough money to have accumulated enough money to pay for standard securities in full. You was ment on the Partial Payment Plan.

A LILY OF THE FIELD

(Continued from Page 11)

it on the bills of the next month in case she

was not able to carry out her determination to reduce expenses all at once.

Perhaps Marjory might have got along better during the next month, but one of her wealthy Eastern acquaintances came to visit her overnight; and, charmed with what she thought the simplicity of Marjory's way of living, she stayed a week. It seemed so quaint to her not to have a butler or a personal maid, and to live in dear, tiny personal maid, and to live in dear, tiny rooms; but Marjory felt obliged to give ber a dinner, a luncheon and a tea, and to take her once to the theater.

her once to the theater.

She was so busy during the guest's visit that she did not have time to go to her mother's house for lessons in cooking and managing; she did not even go to market, but continued to order over the telephone. She knew that the hills during the visitor's stay had risen enormously, but she thought she could cover them by her untouched eighty dollars. Her friends entertained her guest so lavishly that Grover grumbled at having to go out so much. That was his only complaint; but Marjory thought fearfully of the social obligations she was piling up and would somehow have to discharge. up and would somehow have to discharge.

The next month when the bills came she looked at them anxiously but hopefully, for she thought she had been doing the best she could. Exclusive of rent they rame to one hundred and thirty dollars. That was an improvement over the preceding month, of course, but a small one when she con-sidered that she had spent her allowance

and five-eighths over.

One evening while she was going over her accounts in her mind, wondering whether she really could have ordered this and that, Grover handed her another check for eighty dollars, remarking that the canceled check for the other eighty had not yet come back, "No," said Marjory absently; "I haven't

cashed it yet." "You haven't! Marjery, what does this mean, dear? You didn't let last month's bills run on?"

Marjory broke into tears.

"Oh, please don't bother me!" she said; and going to her room she locked the door after her and threw herself on the bed, telling herself miserably that she was a failure, but really expecting Grover to knock at the door and make her let him in that he might tell her she was not.

Grover's Uttimatum

Grover, however, took his hat and went over to his father-in-law's. At the end of two hours he came back, to find Marjory pale and wasted with tears because he had

pale and wasted with tears because he had been gone so long and so inexplicably.

"I've been having a talk with your father and mother," he began abruptly and without any endearments. "They've explained everything. I drew them a check for the money you begged of them last month. It took all the little surplus I had in the savings bank, Perhaps I did wrong to marry a girl like you, Marjory you should have taken some fellow with a big income; but my mother was a rich girl and learned to my mother was a rich girl and learned to be the wife of a poor man. I thought you, who had only been brought up as though you were rich, could surely do the same."

She began to protest that poverty did not matter when she loved him; but he held

up a hand, compelling her silence.

"I'm not talking now to the woman I love, but to a prospective business partner. You can do one of two things—go back to your parents and live as you always have, an unthinking charge on them, or you can an untrinking charge on Lean, upport you; stay with me and live as I can support you; in which case you cannot be an unthinking charge, but will have to use every ounce of brain you've got to help me.

Marjory complained that he was cruel to suggest sending her home just because she had been slow to learn. He heard her in silence and repeated his terms. Again she fell into tears. When the scene had been repeated several times Marjory realized that Grover would not pet and soothe ber, but was indeed trying to enter into negotiations

was indeed trying to enter into negotiations with his business partner.

"I am very much in earnest," Grover said again and again. "I am trying to be patient with you, because your parents have said that if you are useless as a work-aday woman it's their fault. Take all the time you like before deciding."

Write Us on Anything You Word in Rubber

When Marjory had exhausted her emo-tions she lay quietly on her bed going over her situation. After a time she sat up and

said:
"I choose to stay with you, John, and to
be your helpful partner. I'll save somehow
and make up that money you had to pay
back to my people. There's only one thing
I'd like to suggest: I don't propose to
blame any one for the do-nothing sort of
creature I am, and I don't propose to sak
much help in learning to be different. What
I want to know is this: Will you back me
up in whatever form my attempt at econ-

I want to know is this: Will you back me up in whatever form my attempt at economy takes, even if it is hard on you?"
"I'm willing to pay whatever I have to while you're learning," Grover said; "for I'm guilty too."

Some days later Marjory proposed to Grover that they should rent their apartment, furnished, for nine months to a young mairried couple she knew, who lived in a hotel but wanted to try housekeeping. in a botel but wanted to try housekeeping.
She had been to see them and had proposed
to rent her flat for eixty dollars a month.
She suggested to Grover that abe and he
abould live in a flat in a model tenement in

ahould live in a flat in a model tenement in the poorer part of the city.

"I can subrent one, furnished, until the warm weather, for eighteen dollars a mouth," she said. "There are some nice people in the building—settlement workers and artista. We'll not be lonely. It may seen quinotic to you, but I want to get right down to fundamentals. I'd like to live in that quarter and see how poor women manage who do it so twelve dollars a week or loss. Bisides, if we live away from our friends we shall not have to entertain or be contextuined so much; and we can rome entertained so much; and we can come back to our home ready to form new habits."

Hard Lessons Worth Learning

Grover agreed; and so his lily of the field

Grover agreed; and so his lily of the field began to turn herself into something useful. She found her new life hard, for she did all the work herself—even the cleaning, though Grover objected to that. Marjory, however, wanted to work up from the beginning.

She learned from the Yiddish lotcher has to judge meat; and she saw, with surprise, the discrepancy between the prices she had formerly been charged for roasts and steaks and the prices she now publicate and steaks and the prices she now publicate of prices for staple foods. She learned to weigh, to a cent, the values of prices of various grades; and she grow to hate the lists of prices for staple foods. She learned to weigh, to a cent, the values of prices of various grades; and she grow to hate the lists of prices for staple foods. She learned to weigh to a pruce. She knew sixteen ways of serving potatoes, because, in her first fervor of making up what her extravagance had cost her bushated, she fed him almost bothing but stewed meat and potatoes. Grover never complained, for he saw that her mistakse were on the right side.

Marjory did not have to give up all her friends. She simply is aroad to discriminate between the few who cared for Marjory plus the conventional supensive things with which Marjory used to be sarrounded. She found, after her first disappointments and anotherings, that she was perfectly happy with those who isset the rounded to seek her

snuhbings, that she was perfectly happy with those who took the trouble to seek her out and were reedy to accept the simple

entertainment she offered.

When her nine months apprenticeship was over Marjory had lived on various allowances, ranging from forty dollars a month to eighty. She had put her mind on her work and was able to talk to her mother. almost as an equal in housekneping. Her hands were not so well kept, but her brain was kept much better. She went back to her hans with the feeling of a sinner who has worked out a well-deserved punishment. She almost felt as though the ought to give up the flat because it cost two dollars and a half a month more than Grover at first in-

half a month more than Grover at first intended to pay; but, after all, it was homeand it was likewise a good deal of trouble to
move. She did not want to be quisotic.
She used only sixty or sixty-five dollars
of her allowance of eighty, putting the
balance in a savings bank. This economy
she kept up for two years, despite the fact
that Grover's sulary had been increased to
twenty-two hundred dollars. Marjory,
however, said she was even happier when
saving than she had been while spending.
Then an event happened that promised

then an event happened that promised to increase their scale of expenditure some three hundred dollars a year. Prudent Marjory welcomed the expense and made no plans for chooseparing; but she did say, when the event was but ten minutes old; "John, of course she's benutiful; but does she look as though I could bring her

up to be useful?"

THE GENTLEMANLY THING

course, belonged to another order of things; but in the case of a junior clerk a pair of light-gray spats was certainly going rather far. Still, when all the facts of Mr. Hartshorne's amazing triumphs at Sheercliffe-on-Sea had been adduced, the more impressionable members of the staff were inclined to feel that, after all, there might be something to be said in their favor. Nevertheless incredulity tempered by disrespect was the prevailing emotion. Indeed, before the week was out Mr. Hartshorne was christened Lady Mary.

Mr. Hartshorne was too much of a gentleman to show annoyance at such a crude form of wit. He was seated too firmly on his throne to fear the opinions of those dwellers in outer darkness who had never seen Sheercliffe-on-Sea-let alone having been to tea at the Majestic. Indeed, he was inclined to take his courtesy title in the light of a compliment; and at the in-credulity of his colleagues he could afford to smile.

Mr. Burrows, however, the ever stanch and faithful, lived in a kind of reflected glory. Was it not he who had driven in a taxi to Liverpool Street on that historic Saturday afternoon to see Mr. Hartshorne off by the 3:20? The taxi and the second-ciasa return to Sheercliffe-on-Sea could not be denied; so what reason was there to dis-credit the Hotel Majestic and Lady Mary

and Viscount Cardew?

Then there was Debrett. A freckled youth named Templeton, who wore pincenez and was the acknowledged descendant of an Anglican clergyman, and was singularly cynical and well-informed in consequence, offered to bet Mr. Burrows a shilling that the Cardews were not in Debrett.

Mr. Burrows took him up at once, with great gallantry, though it was the first time he had heard of Debrett. He did not let on, of course, to young Templeton that such was the case, but looked very contemptutually at that skeptical youth, booked the bet in his pocket diary, and promptly carried the terms of it to Mr. Hartshorns. "I say, Bertie, old man," he said breathessly, "what do you think of that conceited young ass, Templeton? He's had the cheek to bet me a shilling the Cardews are not in Debrett."

"Not in where?" said Mr. Hartshorne with a slight fatigue in his manner. Indeed, its admirers had noticed already how well slight air of fatigue went with a pair of ght-gray spats.
"In Debrett," said Mr. Burrows.

"I don't know about Debrett," said Mr. fartshorne, "but I do know they are in resevenor Square; and IA is their number."
The fact was, Mr. Hartshorne himself

ras not quite clear as to what Debrett might e; but he was far too much a man of the orld to confess his ignorance. He was uner the impression that it might be a house genta' list, but judicious inquiries that venting of a well-informed acquaintance t the Bagsworth Imperial Club gave him

truer insight into its nature.
"Oh, you mean the Snobs' Bible!" said
well-informed acquaintance, who was

the Press.
"Where can I see it?" asked Mr. Hartsirne carelessly, though he felt it was no
sigrace to sit at the fest of this Gamaliel.

"In the British Museum, I expect."
In the company of Mr. Burrows Mr. artshorne went to the British Museum on e following Saturday afternoon. They ould settle young Templeton's hash for m. He was the grandson of a parson, so said; but there was no youth in the city ore urgently in need of being taken down

At the British Museum there was a ficulty about admittance to the room in ich Debrett enjoyed its being, owing to ather stupid display of red tape on the rt of an official, who was unable to pass

'We only just wanted a glance at the obs' Bible, you know," said Mr. Hartsme with his slightly fatigued air, which . Burrows felt he had never heard to

ter advantage. Cannot belp that, sir," said the official. ou can tsee a Common Prayer book here hout a ticket.

Where can I get a ticket?"
At the office, I expect."
t the office, however, they wanted a meholder's reference and other absurd es of ritual, which struck Mr. Hartshorne as such a ridiculous display of red tape that he suddenly left the building in a huff, for all his fatigue, and vowed he would try the Free Library at Bagaworth.

At the Free Library at Bageworth they were more sensible; but they were too democratic to keep a Debrett. They thought, however, the Carnegie, at the end of the

road, might be able to meet the case.

Mr. Burrows won his shilling. Debrett, at the Carnegie, said: "Cardew—see St. Quentin." After tracking William Philip Ambrose, fifth earl, through several pages of most intrinste remifications they were most intricate ramifications they were rewarded by "Viscount Cardew, b. 1889; Pea-green Guards"—and so on; and "Lady Mary Evelyn Angelica, b. 1891." Mr. Burrows took pains to copy out these facts and claimed his money at quarter past ten on the following Monday.

It is no more than the due of young Templeton to say that he took his defeat like a sportsman and paid his shilling with

a grare that became his lineage.

The incident made rather a sensation in the office. Even the most virulent oppo-nents of the light-gray spats insensibly modified their attitude a little. Mr. Hartshorne's manner grew increasingly tatigued in consequence; but he was not really insufferable at least Mr. Burrows would never allow that he was. It was certainly true that he became still more exclusive at the Bodega. He had no longer that friendly lightness and grace in his intercourse with Tom, Dick and Harry. It was no longer safe to call him Bert; there were times when even Mr. Saunders, his old schoolfellow, hardly liked to venture it. He was a lonely, inaccessible spirit now. Mr. Hurrows alone in the office was admitted to his regard. And even he was far too full of tact ever to

And even he was far too full of tact ever to presume on it.

Yes; Mr. Albert Edward Hartshorne was a changed man. He had entered his kingdom. He stuck to the light-gray spets so manfully that, with the aid of Debrett, in a surprisingly short space of time he had lived them down. He was not exactly popular, but he was admired. His voice was really very fatigued at times, and in moments of high inspiration a slight lisp was superimposed on it; but, as his faithful henchman, Mr. Burrows, said, if you were a born put you were justified.

"YOU haven't called yet, Bert," said Mr. Burrows tentatively as one day they walked along Leadenhall Street from the

Bodegn.
"No; but I shall," said Mr. Hartsherne
rather wearily, "as soon as my tailor fellow
rather wearily, "as soon as my tailor fellow has finished my new morning coat.

Had Mr. Burrows not been of the faithful this reference to a new morning coat might have been interpreted as swank, because Mr. Burrows was aware that his distinguished friend had yet to possess an old one; but in real greatness little weak-nesses are condoned—they strike such a human note. They give those on a higher plane of being a little in common with humanity at large; and it behooves humanity at large to be grateful accordingly—at least that was the view of Mr. Burrows.

"Will it have braid on it, Bert?" said the ever-faithful henchman. No one was by, so "Bert" did not matter.

"What do you think?"

The answer was jocular, but very urbane and Cardew-like in its case and charm; but Mr. Burrows somehow felt a tinge of shame. His plebeian question had been rebuked in

a gracefully patrician manner.

Life was not altogether a bed of roses for Mr. Burrows. His friend took a lot of living up to; for Mr. Burrows, with all his keen appreciation of nuttiness in others. vas far from heing a born nut himself. Nature had not designed him for the course and he was acutely conscious of the fact; but he did his best to conform in speech and manner to the ever-rising standard of his friend. He made howlers sometimes, and his cheek often burned in the watches of the night when he remembered he had made them. Still, if you are not a born out you cannot help committing little solecisms now and then.

Nevertheless Mr. Burrows did his best to live up to Lady Mary; and, making every allowance for an incurable absence of style, it was a very good and honest best, and Mr. Hartshorne, like the large-hearted and liberal-minded man he was, counted it to him for righteousness—though some-times in public be patronized him fearfully.

One day—to be precise, the day before the braided morning coat was due from the artistic tailer in the Strand to whom had fallen the honor of devising its being—Mr. Hartshorne sauntered—literally saun-tered—into the acting submanager's room at about quarter past eleven.

The acting submanager was a sour and satirical man, with a rather acid way of looking at life.

"Well, Mr. Hartsherne, what can I do for you?"

The acid way of looking at life remained just now with the acting submanager, who had not yet got over his spats. Indeed, he certainly looked as though he knew what he would like to do with Mr. Hartshorne.

"May I have next Thursday afternoon oil, sir?" said Mr. Hartshorne, with so much fatigue in his manner that, instead of asking a favor, he might have been conferring one.

"Want to call in Park Lane, I suppose? said the acting submanager with a con-siderable display of acerbity.

"Grosvenor Square, as a macter of fact," said Mr. Hartehorne in the way that Cardew himself would have said it. "Oh!"

Oh! was all the acting submanager said at the moment; but be stroked his chin—one of those square and aggressive china— rather thoughtfully.

He had heard the Lady Mary story from the lips of a thrilled subordinate; and, being a pensimist by nature, his longing at that moment to kick Mr. Hartsborne nearly overmastered him.

"What are you going to do there, Mr. Hartsborne? You have not taken a house there, have you?"
"No," said Mr. Hartsborne, quietly ignoring this banal piece of frony; "but I have an invitation from my friend Lady Mary Cardew to meet Proser?"
Who the devil is Proser?"

It was abundantly clear, of course, that the acting submanager was not acquainted with the works of the author in question, but he had no need to go out of his way to be vulgar when he confessed his ignorance.

"John Michael Prosser," said Mr. Hartshorne with patient impressiveness, "in the

relebrated novelist.

"Never heard of him," said the acting hmanager.

Mr. Hartsborne knew that. But in Mr. Hartsborne's opinion the time had come to administer the coup de grâce to the acting submanager. Accordingly he proceeded to do so. Very slowly he produced from his pocket a coroneted envelope and handed it or elence to that gentleman.
For a moment it almost seemed as if the

acting submanager were going to be actively ill. With an effort, however, he was able, and by the courtesy of that Providence which watches over acting submanagers, to over-come his nauses. And then he read:

"Saturday. 1A, Grosvenor Square, W.

"Dear Mr. Hartehorne: It will be so pleasant if you will come to tea on Thursday at five o'clock, to meet John Michael Presser. Do come if you can. He knows how you admire him.

"Yours sincerely. "MARY CARDEW."

The acting submanager folded Lady Mary's note, returned it to its coroneted envelope, and handed it, without a word, to Mr. Albert Edward Hartsborne; but such a look of yearning had entered the eyes of the acting submanager as to give them that quality of soul they might be said to lack as a rule.

t was reasonable to suppose that an acting submanager would have made some attempt to behave like a gentleman, even if he was not one at heart; but he merely tugged at his straggling gray mustache, which gave him such a look of commonness,

and glared from behind his spectacies.
"It really seems to me, Mr. Hartsborne, he said at last in his metallic voice that was so unpleasantly reminiscent of the prov-inces, "that the time has come when the Palatial will be well advised to dispense with your services. It is not the custom for its junior clerks to attend afternoon parties in Grosvenor Square."

"But this is an exceptional case," said Mr. Hartshorne quietly but firmly.

\$5,000 in CASH PRIZES TIRE MILEAGE CONTEST

FOR EMPLOYED CHAUFFEURS ONLY

GAIN we urge owners of cars, since there are impor-A rant benefits, to encourage their chauffeurs to enter the Second Ajax Tire Mileage Contest for employed drivers, now in progress. A good driver is inspired to become a better one, to conserve the mileage built into Ajax tires, to properly care for and keep tires inflated, to increase the life of tires in miles and to reduce the cost of motoring in dollars.

The interests of owners are protected in the Ajax written guarantee of 5,000 miles, while we reward with 208 important prizes, totaling \$5,000, highest mileages beyond this 5,000 mile figure. In case of ties, a prize identical with that tied for will be given each tying contestant.

Investigate! Know how much better are Ajax tires.

"While others are claiming Quality we are guarantieing it."

"A very exceptional case, I should think," said the acting submanager.

The acting submanager, however, having no pretensions to be considered a gentleman, could hardly hope to appreciate the case's exceptionalness in all its aspects. He gave his vulgar mustache another tug and continued to glower.

"Look here, Mr. Hartshorne," he said at st; "you can have Thursday off on one condition. And the condition is that you accept a month's notice from to-day from the Palatial Insurance Company.

Mr. Hartshorne was completely taken hir. Hartshorne was completely taken aback for the moment. It was a blow in the face, and he feit he had done nothing to deserve it. However, the great soul that had conquered Lady Mary and had forced the portals of the Majestic did not desert him in this tragic hour.

"Sir." said Mr. Hartshorne, drawing himself up to his full height, "I accept your ultimatum."

It was pure Presser, and subennsciously the great soul of Albert Edward Hartshorne was rejoiced in that sublime fact. But the acting submanager was an underbred man who did not know his Prosser. His lip curled contemptuously. "Very well, Mr. Hartshorne," he said. "A mouth from to-day! But you are be-liaving like a fool. It will be a long while

before you get as good a situation as the Palatial with such opportunities for better-ing yourself. Your shorthand is not good

ing yourself. Your shorthand is not good enough."

His shorthand! In Mr. Hartshorne's opinion that was a sublime touch. Poor earthworm, burrowing in mire! How could any man speak of shorthand at such a moment as that!

"Sir, I accept your ultimatum," said Mr. Hartshorne again.

He howed to the acting submanager with along directly, burned on his gray-

with aloef dignity, turned on his gray-spatted hoels and withdrew Promer-like

"I HOPE he's coming, Mary," said Sybil de Gex, preparing to bite a large plece out of her cake. "I've given up a matinée on purpose, you know."

This was spoken to the hostess in a confidencial tons.

fidential tone. She raised her own a little

from the room.

fidential tone. She raised her own a little in reply.

"Of course he'll come, Sybil, I know nothing will induce him to miss John Michael Prosser."

John Michael Prosser sat very modestly in a corner of the immense drawing room, balancing a rather wabbly cup in a rather uncertain saucor on a rather nervous knee. John Michael Prosser was a funny little old lady in blus spectacles, and she beamed with anxious pleasure at Lady Mary's remark.

To Miss de Gex belonged the brilliant discovery that John Michael Prosser was in real life a certain Miss Agnita Shrubsole, a former governess of the Blenkinsops. The Blenkinsops, it seemed, were some rather quaint people who had come to live next door to the famille de Gex in Cadogan Gardees.

But the undefeated Sybil, having once scented her prey, tracked her through Pim-lico, through Bayswater, and finally to Wimbledon Heath, where, having run her to earth in that sylvan retreat, she brought

the poor old lady thence, small and sparrow-like, and rather anxiously smiling, to all the splender of 1A, Greevenor Square.

This is not the time or the place to dis-play the Odyssey of Miss Agnita Shrub-sole's heart as she sat pecking, without much of an appetite, at one of Mr. Rumpelmeyer's choicest cakes in a remote corner of this almost bewilderingly aristocratic interior.

She awaited the arrival of a most enthusiastic admirer, who, though not in the Guarda himself, had had a father who had commanded them, and who had been simply

thrilled to the marrow by John Michael Presser's wonderfully vivid and lifelile pictures of that too-little-known brand of

His Britannic Majesty's service.

The hour of five was told by a wooderfully melodious clock on the nearest of several chimneypieces that this great room could boast, which, however, was completely overshadowed by a Biblical subject from the brush of Titian.

from the brush of Titian.

"It must be so interesting, Miss Shrubsole, to be able to write," said Lady May
as she gave John Michael Prosser her this,
cup of tea, for all that she had not yet faished her first piece of cake. "It is so dever
of you to write as you do. I wish I could."

Lady Mary was lying quite agreeably in
the cause of conversation. She neither
thought it clover to be able to write its
John Michael Prosser, nor had she the
least wish to emulate the poor old thing is
the queer old bonnet perched on the top of
her absurd old head; but something had to
be said, and to be said very pleasantly. be said, and to be said very pleasurily because the proceedings were rather is-clined to drag a little in the absence of the Prince of Denmark.

John Michael Prosser, by herself, was us, showing much sport for the members of the coars are. She was too undercharded to

showing much sport for the members of he own sex. She was too undercharged and wary to give them much of a run for their money. Dorothy and Pauline were fraid; disappointed—they had counted on a Bonnie Edith at least; but poor, harmles John Michael was almost a lady.

"I shall be so disappointed," said Syst de Gex to her hostess at ten minutes part five, "If he leaves us in the lurch! I did! know that anything quite so priviless was in existence."

in existence.

Nevertheless the minutes passed sol Mr. Albert Edward Hartshorne did so Mr. Albert Edward Hartshorne did sec appear. However, the totally unexpected arrival of Cardew at quarter-past five seemed to help matters a little. Cardew, it appeared, had quite definitely refused the invitation to be present at the meeting. Somehow he did not think it was quite going to be cricket. It was so like a man retty have a sense of humor.

Cardew came in looking a little duler than usual. He was carrying an eventu-paper. When he had had time to glass at John Michael Prosser, who as the misuse passed seemed to grow smaller and men-insignificant and less articulate in her or-ner by the Adam chimneypiece, Cardes shock his head rather solemnly at his siste. "No, Moll," he said in a solemn where: "I was afraid it wasn't quite going to be criciost."

"He hasn't come yet," said Lady Mary

hopefully. "He won't come now."

"Of course he'll come—unless he has been gathered to his fathers."
"Well, be has been, it appears. My rye fell on this at the club and I've brought it

to show you."
Cardew had opened the evening pare.
He pointed to a short paragraph, set in an inconspicuous place at the bottom of the pare.

A CLEEK'S TRAGIC DEATH

An inquest was held last evening of Albert Edward Hartshorne, twenty-firm of Areadia Villas, Bagsworth, a clerk in the service of the Palatial Insurance Company. Leadenhall Street, E. C., who lost his line in a gallant but vain attempt to reserve woman from drowning in the Thames. It woman from drowning in the Thames. It is jury returned a verdict of accidental death and, though highly commending yours. Hartshorne's conduct, added a rider to be effect that it was most unwise for person who were unable to swim to venture out it. who were unable to swim to venture out of their depth.

That fascinating smile of Lady Mary had something perhaps a trifle odd us = "That's solike a British jury," she said"no sense of romance! They don't sem is realize that, after all, it was the gentleman thing.

The gay and festive CLAVERHOUSE

(Continued from Page 5)

It's deadly to me to be agitated and bothered as you're ugitating and bothering me now." At this she drew her two hands across her two eyes, moved to the chair, seated herself and clasped her hands tightly. "I'm listening," she said, making what was clearly a fremendous effort at self-

control.

"Very well," said the man, "I'm speaking." He cleared his throat, folded his arms and closed his eyes. "I know a girl who has probessed to be madly in love with me for ever and ever so long." Then speaking slowly: "I know that I've never loved her, and I've told her so over and over again; but she won't believe it. She keeps declaring that she'll win me some day. She says that some time I'll be in bitter straits and turn to her. Then when I'm desperately in need she'll go through fire and water to save me. And after I'm saved I'll love her passionately, and we'll be happy thenceforth and forever. That's her view of love her passionately, and we'll be happy thenceforth and forever. That's her view of our case. I don't say what I've always thought myself, but Fate has stood by her enough to have it come to this—that I am in bitter straits, and seeing the way she feels I'm going to take her at her word and see what her word is really worth. She has only wanted a chance to prove how much she feels and how thoroughly she means what she says. And now I'm going to give her that chance."

He passed and Madeleine leaned for-

her that chance."

He pawed and Madeleine leaned forward, almost breathless.

"What do you mean?" she gasped.

Claverhouse coughed. "Quiet and rest.

might do something for me; and it's just possible I might marry a woman who would keep me alive from day to day by administering it assetly and conscientiously. I don't say that I would; but I might." He paused acids.

don't say that I would; but I might." He paused again.

"Yes, yes," she whispered quickly.

"I've been inquiring into the matter," he went on, "and there's Yewatenes. The property of our untle. It's retired and suitable. I ask nothing, but your mether might negotiate with the agent and after you and she had taken it and were settled there, you might ask me to visit you and I might come. Of course there's no time to be lost, because I'm pretty for gone; but if you feel like taking the matter up this is my ultimatum. That's what I wanted to say. That's why I sent for you. Don't bother me with any '15' and 'anda,' but go straight home at once and are what you can straight home at once and see what you can do. I've put my life in your hands. Do as

do. I've put my life in your hands. Do as you please with it."

With a sudden fling of his head be turned. Irom her and lay quite still. She was staring intently toward blue.

"And my mother?" she said, very low.

He musle me answer. She areas then, standing motionless.

"I will go home and try." Her voice was very uncertain. "I will make every effort. Perhaps mamma will consent; but Lean'the. Very uncertain. "I will make every effort.
Perhaps mamma will consent; but I can't be
sure. Yewstones is in the north, but I can't be
"Quite se," he answered.
"If we cannot get it?"
"I won't go anywhere else."
"Our own place to Wilts is
"I won't go anywhere else."
"But if the

"I won't go anywhere else."
It might be lancied that melt speeches

It might be funcied that melt speeches would naturally tritate; but Madelens Wythe was absolutely mad with love for the man stretched there before her.

"Ernest!" she plended.

Claverhouse extended his hand, seized the whisky bettle that atood on the table and hurled it against the wall opposite. It banged and shattered with an architectural.

The valet rushed in at more. The valet rushed in at once.
"My nerves are in a fearful state," said

the invalid turning his head. "Clean up that mess, Connad."

Very quietly Madeleine turned and left

the room. The valet was sopping up the spirits with towels.

"See if they're gone," his master said presently. He went to see and reported in the affirmative.

"Wonder when Back went!" drawled

laverhouse

YEWSTONES! As this season!" The countess opened her eyes widely. Why of course you can have it. Nebody s ever there now. I believe the shooting is all let away, because of the ghost or the dump or something. People never liked it-We haven't been there ourselves in years. But why do you fancy doing such a weird

Mateleine Wythe's mother shock her head. "Idon't know exactly. My pirl mode quiet, and Vivian—I think it was Vivian—

quiet, and Vivian—I think it was Vivian—suggested Yewstones. He used to be there as a boy, I believe, didn't he!"

"Oh, yes"—the counters' tone was mildly indifferent—"Gregory used to send the boys there a lot. We were always hearing of some way in which the heir had been mained by Ernset at Yewstones. Still, if Vy went under Ernest came on; and we always rather loved Ernest, wretch that he was—and lo."

Lady Wythe moved uneasily. "He's so ill," she said quite softly,
"Dying, I thought," returned the countees brightly. "Sir William looked in after his diagnosis, his blood exemination and all that, to tell us the truth. Gregory was quite depressed.

But us to Yewquite depressed. . . But as to Yew-stones now, you know it'll be glustly lonely. You'll never step there more than a week. I'll wager. Rate, buts, walls ten fort thick. They used to drive the cattle into the chapel during the barder raids, I'm told. It's an

awful hole."
Lady Wythe, looking very ill at ease, dropped her eyes over her outspread fan and felt extremely unhappy.
"I must get off to some quiet pernet. The physicians feel that Medelelus is rather overdoing it."
"And I was just thinking how well she looked," the counters declared, staring across the ballroom. "How can you call her lagged? She's positively blooming to-night."
Lady Wythe lifted her eyes at that and glanced to where her daughter flimted up positie.

"It's her perves," she said in almost a whisper. "Nothing else."

"It it's her nerves they Il never conseright at Yewstones," neartest the rountess candidatily. Then suddenly she become really arison. "It's the worst old hole in the county, and I don't know what besides. I wouldn't sleep under its roof again for worlds myself. You'd hate it."

"But I want it," personned Lady Wythe. "Vivian has talked of it till Madeinte has set but heart on just that one place. I Cante will under that attracts her, I helieve. I really do want a."

Then the countem put up her beginned and housed at her friend with class attention. "There's something back," also said. "Either you're keeping is from ros, or ——" "I're keeping nothing from you," declared the other.

clared the other.

chared the other.

"Then they are isosping something from on. Gregory told me that Vivian was assing about it. What mystery is it? Are you taking Vyvie with you?"

"No," said Lady Wythe, "by no means. To tell you the whole truth, all I know is that Madeleise has begged me, as a personal favor to her, to take Yeuntones—no other house in England—and five there for six mouths. I do not know why, Madeleise confides very little in one If I thought that Vivian had much to do with the plan I should be only too happy." The mother could barely restrain her tears as she spake. ahe spake.

The countess modded wisely. "Depend upon it, he has something to do with it. Madeleine is plotting a bit, se girls love to do. Only some very serious and united thought could spring from Yewstones as a base. You shall have the place, my dear, and Gregory will get a line sent Shandy as to deaning it up and getting in freewood, and all that, You'll take your own servanta, of course?

"Naturally. "Then do not trouble as to other things. If we can help to bring Vivian's affair out smoothly we'll be only too happy. The poor fellow's been looking so knocked up lately. It's too bad of your girl, it really is, you know.

"It's not my facilt, dear."
"I know it's not. But possibly all's on the road to mending now. Let us hope so."

The countess rose and moved on to other guests; but Lady Wythe remained scated and thoughtful. She had much to trouble her in the behavior of her beautiful and

headstrong daughter-the daughter who

headstrong daugnter—the daugnter who would not accept a possible fiance with Captain Heck's prospects and who would persist in loving his reprobate county. "What does possess girin newadays?" she saled of herself tearfully, recollecting her own calm betrothal and most correct married life.

Later, going home in their brougham, the said to Madelsine: "I spoke to the counters about Yewstones."
"Is it to be sure, then?"
"I think so. The sarl will send word to his agent to have it put in order."
The lights of Gresvenor Square were making in bright succession want Made-

The lights of tarsevenor Square were finaling in bright succession past Made-icine's gaze. "I'm glad," she said briefly. "We can be there by the first, then?" "Pussibly; saon after anyway." There was a little passe, and then the daughter said: "Surely you know who will

visit on there?"

There was that in her words that sud-dealy from the mother's heart. "Made-leine!" she stammered. "He....."

"I know" — the daughter's voice was stilly calm..."I know that he is dying. Everybody believes it. Well, I have seen

"You have seen him!" cried the mother,

"You have seen him!" cried the mother, starting in her seat.
"I have seen him. There is just one chances for him to recover—a house life of love and care. I mean to give it him if it wrecks my whole future to do so. It is no use to discuss the matter with me. I mean to give him that charge."

Lady Wythe leaned back as one deprived of all means and strength.

Lady Wythe (eased back as one deprived of all seems and strength.

"Oh, Madeleine!" It was a moun.

"It is no use, mother, not the slightest use. I have never loved any one but Ernest and I server shall. If he does not live to custy use I shall never marry. Never!

Never!"

There was silence after that, and silence

after they reached bome.

But the next afternoon Lady Wythe went to see Claverhouse, and the call was prolonged. When later she met her daughter in her tecodoir, just before the dressing bell, ahe sald:

"I have been lo see Ernest and to ask him to stop with us, and he has accepted

my invitation."
It was then Madeleine's turn to start in

"And all is settled now as to Yewstones. We shall go down on the third," continued her mother. "He will come on the sixth. We shall need a day or so between to set his rooms in order,"

"Yes," all the arrangements are complete."

Madeletes seemed last in thought. "I hope that he will grow latter there," she said to berself,

Her mother said nothing. Within her wal she hoped to heaven that Claverhouse would die there, and that there would be an end of him. She and Beck and not a few others were united in their view of the Hourable Ernset. But Madeleine Wythe adored him.

IT IS one of the croclest facts in life that one who does a thing may never know what he does not like he does it. This is a fixed law and was promulgated on the day that becausity was turned losse to try in and a way to avoid it by pleading, not ignorance but considerance. On that day men and women began to laney that they smild know a fast they were desire before they did it. But the majestic might of any law is not to be altered. And so life moved on and track to ignore the unalterable truth. It followed that no woman who loved ever knew what she did until it was all over; but every woman, are, every girl of seventien, was quite positive that she knew, and acted accordingly. Also no man ever planted any thing whatever really open-species to the consequence, but every man, young or old, a positive of being himself the one and only emergion to the rate. We are T IS one of the cruciest facts in life that

all been blind, live blinded and the blindly. And we come of an ever admin it. Thus God has ordained. Allah has evidently willed and Satan has must certainly determined.
All of which tocontrovertible and philo-

states for the coming of Convertingly in the case of the coming of Convertings to Year stones. For the plot worked out a the plotter had placed and by same hither to be named back to health, if that were possible, by the sweet retired life of "deep-in-the-county," and the affectionate and

KREMENTZ & CO. 40 Chestnut St., Newark, N.J.

solicitous ministrations of one who really worshiped the ground he walked on.

But, to revert to the statement which opens this chapter, never did any one in this world of unforeseen developments do any-thing with less idea as to the actual finals than did Madeleine Wythe when she undertook to save Claverhouse's life, if such a

saving were possible. The whole affair, indeed, was bound to be unlike anything else that ever had hap-pened, simply because of the man whom it concerned; but how unlike was altogether unthinkable.

Neither Lady Wythe nor her daughter had ever had their cousin to stop with her before, for the simple reason that as soon as Madeleine fell in love, Claverhouse began to avoid her. He had not avoided her alternatives but he had decreased all altogether, but he had dropped all cous-inly intercourse. Lady Wythe disliked him, disapproved of him. It had all been most unfortunate. And now things were to be brought to a head.

But what a business it all was! In the But what a business it all was! In the first place it had been comparatively simple to give the invitation, receive the acceptance, and travel down to Yewstones. But Yewstones was, despite vigorous preparation, anything but the ideal country house into which to bring an invalid. It was a huge old place with window embrasares six and eight feet deep, and a stone arched entrance from which the drawbridge had been withdrawn for less than a cenhad been withdrawn for less than a cenhad been withdrawn for less than a cen-tury. It was all ups and downs, three steps here and seven there, with oak paneling; long, heavy, dark hangings; and stone floors that felt cold and hard through the thickest rugs. The pale September sun-shine could not possibly get within and at night the candles and lamps seemed smoth-ered by the overhanging darkness.

Under these circumstances it was but to be expected that the installing of a London

Under these circumstances it was but to be expected that the installing of a London environment should prove more than a little difficult. The time was very short and the work very arduous. It was like-wise natural that Lady Wythe should be much depressed by the gloom and chill of the place, and should feel anything but joyous as on the appointed day she awaited in the drawing room the arrival of her un-

welcome visitor.

She was trying to be trustful and courageous, but she had small faith in her hold on either of these virtues. Claverhouse had assured her of his good intentions, but no one believed anything that he said, for it was never possible to divine just what he meant when he uttered statements. Small wonder, therefore, that the mother sighed

as she waited.
Courad had wired the hour they were Conrad had wired the hour they were leaving in Claverbouse's touring car. If all went well they should arrive just before tea. It was quite four now. Madeleine was upstairs, giving some last personal touches to the suite set apart for the invalid, his nurse and his valet. This was in the opposite wing from the apartments occupied by her mother and herself, and consisted of large, stately, paneled chambers, as were all the rooms at Yewstones.

"I do hope he will be in time," said Lady Wythe to herself, looking at the clock. Nothing told her that he would be in time; for it was not at all certain that, having once started, he would keep on coming. Indeed there was no knowing what he would do. She, having married into the family, knew his disposition far better than

Madeleine. To marry into a family is far more enlightening than to be born into it. She sighed deeply. She was wretchedly worried and anxious.

Then Madeleine came in, her cheeks flushed and her head held extremely high.

"Is all quite right abovestairs?" her mother asked, turning her head.

"Quite right," she answered, a certain defiant coldness ringing clearly in her tone.

At that moment the whir of a motor spun in from outside.

exclaimed Lady Wyth starting to her feet and hastening first to-ward the window and then to the hall.

Madeleine had run quickly toward the remodeled entrance with its graded car-riage sweep. Her heart was bounding with joy over the thought that the tiresome drive was ended and the dear man safely at the door. It must be remembered that she had no more personal experience of Claverhouse than had her mother. Perhaps this fact accounted for a great deal, love rarely depending much on personal experience.

By the time Lady Wythe reached the portice the first amazement as to young

Claverhouse's behavior had become a set-tled fact. Lady Wythe, coming out upon the step, stopped as if turned to stone. And small wonder; for quite a striking tablesu had formed there.

Madeleine was down by the car and a group of house-servants was gathered close about it. The chauffeur and Conrad were among them. Every one seemed rather un-certain what to do. Her ladyship was at a loss to imagine what had happened, and her heart throbbed quickly as she ran down the steps. Then she learned the explana-tion, which was, like the explanation of most mysteries, extremely simple: Claverhouse was asleep in the ear!

"He must not be disturbed," said the new nurse, a meek, pale little woman, speaking softly over the side. "I will sit here beside him until he wakes. More rugs, please."

"But wouldn't it be better to awaken him and get him to his room?" said Lady Wythe, also softly. Conrad shook his head. "We shouldn't

dare undertake it, my lady. We never dis-turb him when he is asleep. I can carry up the luggage and unpack, and Mrs. Watson will sit here beside him. If you'll just sta-tion some one at the gate to see that no other car comes to make a noise, and tell the servants, please, my lady, not to make any noise induors either. His hearing is so acute." All this in a whisper. Lady Wythe gave the necessary orders

at once, of course, and the luggage was got out and carried in with infinite precautions. Madeleine went up to the rooms again to make sure that the fires were all right.

"If I might just suggest, Miss, the sending out of a cup of tes to poor Mrs. Watson," said Conrad, husy unbuckling and unstrapping.
"She'd appreciate the kindness ao."

"She'd appreciate the kindness so."
"Certainly." was Madeleine's reply. A cup of tea was sent out to the nurse, who did appreciate the kindness, but indicated by signs that still another rug should be provided with which to cover the sleeper. The butter undertook to have somebody totals one. fetch one.

"You haven't got anything like a little oil-stove, have you?" Claverhouse's valet asked him next. "To set on the windward side of the motor to hold off the chill, you

The butler thought there was one in the housemaids' room. But it was old, and possibly the wick -

"You get it out and we'll have a look at it," said Conrad. "Possibly I can fix it." The butler didn't seem altogether pleased at the prospect of spending the interim between tea and dinner cleaning an oil-stove, but he went away again and had a scullery maid bring the stove into the outer puntry.

There the two men took off their coats, and after working for an hour and a half did finally succeed in persuading the stove to burn gayly beside the car,

"We ought to put two or three screens round it," suggested Claverhouse's devoted attendant.

attendant.

The screens were accordingly brought from all over the bouse and arranged about

the car.
"I suppose you haven't any hangings hig enough to cover over the top?" whispered Mrs. Watson.

Mrs. Watson.

"Well, we can see," replied the now perspiring manservant, and went to consult her ladyship. Together they toured the house, measuring draperles by eye, and in the end the staircase curtains were unhung with a ladder belonging to the garden department. These were adjusted over the screens, secluding Claverhouse and his

nurse inside.
"But ain't it just wonderful how he sleeps!" observed the butler.
The reflections of the lady of the house

were much the same; but presently altered.
"I hope that no one will come to call this evening," she ejaculated, contemplating the nondescript gypsy tent from the doorway. w that no gravel had ever been so graced before. Madeleine, standing beside her mother, made no com-ment. She was thinking how different the arrival had been from anything which she

had planned.

They went indoors.

"If I might suggest, no dressing-bell,"
Conrad said later in the servants' hall.

"Of course not," returned the butter.
And then he hurried away to adjust that

little matter.

Dressing time came and dinner was served, and still Claverhouse slept on.

HUDSON Six-40 For 1915

\$1,550

The Thoroughbred

The latest refinement in Sixes—one of the handsomest cars in the world—setting many new standards in high-grade cars, and another new record in quality price—the 1915 model of the car whose popularity compelled us in eight months to treble our output.

31 New Features

The HUDSON Six-40 came out last year to win a new field to Sixes. Our famous engineering corps — headed by Howard E. Coffin — had devoted three years to the model. It typed, in their opinion, the ultimate in Sixes, as denoted by modern trends.

In lightness, it set a new standard for cars of this capacity. It cut down old-time averages about 1,000 pounds. All this was saved, with no sacrifice of staunchness, by costlier materials and better engineering.

In economy, it lowered operative cost from 15 to 30 per cent under former like-powered cars. This by lightness, by employing six cylinders and by a new-type motor.

In beauty, design and equipment it excelled, in some respects, any other car of the year.

In price—then \$1,750—it set a new record among cars of comparable quality.

We knew that men wanted this type of car. They wanted lightness, modest size, economy. They rebelled against over-tax. Yet they wanted quality and they wanted beauty. And they wanted, above all, a Six.

But we did not dream how many men waited such a car. They flocked by the thousands to HUDSON dealers, and placed 3,000 orders more than we could fill. At the end of the season men were offering premiums — as high as \$200 — to obtain this light Six-40.

Now our 48 engineers have devoted another whole year to this car. They have brought the weight down to 2,900 pounds. They have added comfort, convenience, silence and beauty in 31 important ways.

In the HUDSON Six-40 for 1915 we offer you the best consensus of present-day ideals. Many men must buy cheaper cars. Some will always want the big and the costly. But most men will concede this new HUDSON Six-40 to be America's representative car.

Price \$200 Less

The HUDSON Six-40 demand has compelled us to treble our output for next year. Building three times as many, our cost per car will be lessened by \$200. So the price for 1915 has been fixed at \$1,550.

That accords with HUDSON policy. It is the latest of the thousand things we have done to bring the best within reach of the many.

Think of this ideal car—the very embodiment of all that's desirable—a HUDSON and a Six—selling for \$1,550. Only a little while back there was no Six sold for twice that.

The new HUDSON Six-40 is a thoroughbred Six. Its very lightness denotes the highest grade of materials and a masterpiece in designing. It is distinguished in lines and beauty. Its finish, its beauty and equipment all show our infinite pains. It seats up to seven, with the disappearing tonneau seats.

A year of use in thousands of hands has proved the faultless construction. And now this new model shows all the refinements which 48 men in four years have worked out.

Go to your Hudson dealer and see it. It is the finest example you will find this year of the progress made in motor car building.

Six-40 Phaeton, \$1,550 f. o. b. Detroit Six-40 Standard Roadster, same price

The HUDSON Six-54, built on the same lines, but with larger motor and 135-inch wheelbase, sells for \$2,350. It offers to men who want size and impressiveness the best that is possible, and at a modest price.

Hudson dealers everywhere now have these new cars on show. Our new catalog on request.

HUDSON MOTOR CAR CO. 8034 Jefferson Ave., Detroit, Mich.

THE FAKERS

(Continued from Page 21)

against you you will have to spend, at the very least calculation, a hundred thou-sand dellars right off the bat for new equipment, for extension of your lines, and lose a lot of fares because of the universal trans-fers, besides the increased tax you must pay. It seems to me a very modest requirement."
"I can't put you on the board," parleyed

"Oh, yes, you can; or you can have Ros-coe put me on, with the aid of his proxies, at the next annual meeting, and you know it." "Maybe he won't do it." "He will if you ask him."

"And our attorneys ""Oh, quit four-flushing round like this!"
exclaimed Chittlings. "I'll take a chance,
if you will give me your word and call
floscoe in to make it good."

"Come on over and see Roscoe then, and explain it to him."

"Bring him here," insisted Chittlings,
"It's only a step from your offices and it's safer here."

"That partner of yours may be coming

in."
"No danger. He's off somewhere taking great pleasure in hearing himself rip the hides off you and Roscoe."
Hicks heard Jenkins say a very uncompilmentary and prefane thing about himself, and smiled. Jenkins called Roscoe on the telephone and urged him to come over. In few minutes Roscoe arrived. Chittlings was waiting outside for him and unhered him into his office. him into his office.
"What is it?" asked Roscoe brusquely.

"Mr. Chittlings has a plan whereby he says we can make sure to win the election next Tuesday."
"What is it?"
"But," continued Jenkins, "there are a

few conditions. He wants to go on our board and he desires a share of our legal business for himself."
"Let's hear the plan and we'll decide that later."
"Oh, no," said Chittlings. "Decide first

and make a memorandum to that effect, and then listen. You're in a bad way, Mr. Roscoe, and I can pull you out. Of caurae if I do not, nothing comes of the deal."
"All right," assented Roscoe; "it can be arranged."
"Write a line asking me to call at your

"Write a line asking me to call at your offices and saying you desire me to enter your employ as one of your legal representatives; say the question of a retainer can be arranged at our meeting. I shan't call until after election, and if you are beaten I'll never call. The board business can be arranged later."

Hicks heard the scratching of a pen. "There," said Roscoe, "is that satisfactory?"

"It is," Chittlings answered after a

"Well, what's the plan?"
"A simple thing," said Chittlings. "All you've got to do is to have some sort of a you've got to do is to have some sort of a lake accident at your powerhouse on the siternoon of election day and tie up your entire system. The men who do the bulk of the voting in the Fourth, Ninth, Tenth and Sixteenth wards are figuring on voting between six and seven at night. The polls close at seven. Paddy Ross has the machinery and he can see they are closed share. chinery and he can see they are closed sharp on the dot. Wrock a dynamo or do some-thing and shut down every car. They won't get on to it for ten or fifteen minutes after they come out to take the cars, and by the time they have walked across not enough of them can vote to carry those wards, for P. Ross will have his votes in early and his election officials in the booths will take good care that the votes of those who do get there are slowly taken. The polls will close at seven, and you can carry those wards and win. Almost childish, isn't it, Jenkins? Wonder you hadn't thought of it yourself; but like all business men you de your po-litical thinking by proxy, and I happen to be the proxy in the present instance."
"Good!" exclaimed Roscoe. "We can do that. It will work, too, if nobody known of it. Why didn't you think of it, Jenkins?"
"Hold on," broke in Jenkins, trying to justify himself. "Hold on a minute. Elecbut like all business men you do your po-

justify himself. "Hold on a minute. Elec-tion day is a holiday. The men won't be in the factories."

"For heaven's sake, Jenkins!"—Chitt-lings was brutal in his tone—"do you know any politics at all? This isn't a general election and a holiday by law. This is a municipal election, and no holiday at all,

unless individual employees want to make it so, and you can see to it that they do not."

The three went out. Hicks, standing against the ground-glass partition, thought hard. The plan would work. The main strength of the fusionists was in those four wards, and the men couldn't vote until after six o'clock. He knew the employers wouldn't shut down a minute before six o'clock, and the polls closed at seven. With-out a street-car service they couldn't get across town in time to vote is numbers enough to carry the wards.

His first impulse was to tell Rollins about the started, stopped with his hand on the doorknob, walked slowly back to his chair and sat down. Chittlings had exacted a price for the plan, a good price, and Hicks had been amazed at the eagerness with which Roscos and Jenkins had snatched at this stone. Evidently, they this straw. Evidently they were badly frightened over the outcome of the election. He sat for an hour and considered the sit-

uation. He knew he could make a sensation by exposing the plot, but that would mean nothing to him but a possible election to a place he didn't want, except for advertising purposes, and he had shout as much adver-tising as he could get anyhow. He weighed it all carefully in his mind. He saw the head-lines in the Chronicle, lauding him for exposing this last desperate expedient of the plutocrats, and he saw the headlines in the plutocrats, and he saw the headlines in the other papers calling it a roorback and him a fool. Of course, if he exposed the plot the street-car company wouldn't dare to put it through, and that might result is the election of his ticket; but he had no fancy for serving as an alderman. He wasn't concerned about the franchises for the company. He had heen talking to exploit Hicka, and here was a possible chance to get something concrete out of it—some money, perhaps. money, perhaps.

There were two courses of action open to him, as he viewed the matter—for the idea of making no use at all of the information he had secured by eavendropping never oc-curred to him. He could withhold the news of the plot, confiding in notody but Ralliza, until Monday, the day before election, when he could disclose it dramatically and sensationally at his last noonday meeting, and block the plan. Or he could do as Chittlings had done, realize on it from Roscoe for lings had done, realize on it from Roscos for his own profit and say nothing. There was glory and a possible election to a minor and laborious place in the first procedure; and there might be money in the second. He liked glory and he liked money. He had no scruples about trying to realize on his in-fermation, in a financial way, in case that seemed to be the best thing to do, for, ac-cording to his lights and political upbring-ings, corporations were legitimate prey for men in politics and money extorted from ings, corporations were legitimate prey for men in politics and money extorted from them was bonest graft. Corporations, he had been taught in Washington, were to be milked whenever possible, as a slight recom-pense to the politicians for the conferring on the corporations, through favorable legislation, of the milking privileges for the people. It seemed to him a smart, a thor-oughly political and not a reprehensible thing to do to shake down a corporation whenever possible, especially such a corpo-ration as this street-car company, which was ration as this street-car company, which was robbing the people every day and desired further legalized opportunities for greater robberies.

He debated with himself whether, in the long run, it would be more profitable to him to use his information to extert money from Roscoe, or some other perquisite of value or to make an exposure, run the danger of losing his law connection with Chittlings. with the great gain to come in advertising and public acclaim. He knew Rollins would be delighted, and could see in his mind's eye the way that earnest antagonist of the street-car company would display the news of this plot in the Chronici

Several times he decided to get what he could out of it from Roscoe, and each time his decision was reversed by the thought of the sensation he could make and the headlines in the paper, with himself as the cen-tral figure in the exposure and destruction of this startling conspiracy. His fingers itched for money and his vanity clamored for publicity. He worked himself into a fever between his doubt and his desire, and he remained locked in his office until five o'clock wrestling with the problem, without reaching a satisfactory conclusion. Finally he had an inspiration.

THE GOODYEAR TIRE & RUBBER COMPANY, Dept. 224, Akran, O'.

"By George!" he exclaimed. "I know what I'll do. I'll ask the senator." It was Wednesday afternoon. A letter sent on the night train would get to Wash-ington late on Friday. He could address it to the senator's house, put on a special delivery stamp, and be reasonably sure of receiving the telegraphic reply he would ask for by Saturday morning. That would give him all Saturday for operation on Rascoe. He went to his typewriter and wrote:

REXTOWN, April 15, 1902.

REXTOWN, April 15, 1902.

"My dear Sension: You have always been willing to advise with me heretofore, and I wast your counsel again. I am in a dilemma. Briefly, the facts are these:

"It has become known to me that the street-car company, against which we are fighting in the municipal campaign now going on, has a plot in mind that will distranchise the bulk of the voters in the four wards where the most of our strength is. This plan was of sufficient value to the corporation to induce it to pay hundromely poration to induce it to pay handsomely for it.

"Aside from the three principals, I am the only person in Rextown who known of this plot. Now, my dilemma is this: Shall I use this information to destroy the plot, and thereby help our side win and get a lot of publicity for myself out of it; or shall

of publicity for myest and of it; or stand I use it for the purpose of getting money for myself?

"The streat-car magnates are in desparate strains. We have them whipped. They probably can win if they put this thing through, and that makes it certain they will pay me to withhold my knowledge of their plan, for if they less they must immediately assent large amounts of money for improvespend large amounts of money for improve-ments, extensions, and so forth. "I know enough of what gass on in Wash-

"I know enough of what green on in Washington to know that exporations are considered legitimate subjects of attack in this manner, and that they usually pay for protection and political aid. I can aid this corporation by withholding my information, or I can hart it in a most vulcarable spot, its treasury, by telling what I know. Which would be best for me? I am ware I can get a good-sized sum for my

sure I can get a good-sized sum for my information.

"Please consider this sacredly confidential and advise me by telegram. In order that there may be no leak here, I suggest you send me a telegram reading like this: 'Your brother has arrived,' and sign it 'Charles Smith,' if you advise me to expuse the plot, or a telegram reading: 'Your money will be held subject to your directions, and sign it 'William Jones,' if you think I should negotiate with the corporation. I merely suggest these ciphers. Any telegram with the word 'brother' in it will mean to me that I am to pruceed with the exposure; and any telegram with the word 'money' in it will mean that I shall negotiate with the street-car company. ate with the street-car company.
"With kind regards and best wishes,

"Faithfully,

"T. MARMADUKE HICKS."

Hicks mailed his letter, taking it to the station himself to make sure it went on the easthound train. A telegram was waiting for him when he reached his office on Sat-orday morning. He tore it open and read: "Wassington, April 17, 1902.

"Т. МАКМАРИКВ НІСКА Care Chittlings & Hicks,

Rextown. "Your brother's money.
"Charles William Smith-Jones."

HICKS stared at the telegram in dismay. He read it again: "Your brother's

Went did it mean? Was the telegram a pone? If it was it was a croel one, for it left. nim is a most uncomfortable position with on plan formed. Your brother's money!"

Hicks sat at his deak and ranked his brain. Suddenly be jumped to his feet and

shouted: know! I know! He means to soth—get the money and make the expo-sure. That must be it." Hicks reproached himself for not think-

og of this himself, and for going to the senator with a problem which, now that it was solved for him, seemed so simple of solution. He instantly determined in get in the solution of Rosepe, see what could be and later to seek Italline

CUNCOR. nyelope on his desk, adthe heavy handwriting

of Chittlings. He tore it open and read, arrawled on a slip of paper:

"Dear Hicks: I'm going out to Grands-burg to spend Sunday. I'll be back on Manday afternoon, in sufficient time to vote against you on Tuesday. Yrs., J. E. C."

As Hicks sat with the note in his hand be had an idea. "Why certainly," he said. "That's the way to do it. Use Chittlings." He locked the outside door and called up

the offices of the street-car company.

"Hello," he said, talking as much like
Chittlings as he could, "This is Mr. Chittlings, the attorney, to talk to Mr. Rusene."

There was a pause.

There was a pause.

"Hello, Mr. Rosene, this is Chittlings—
J. K. Chittlings ... I'm very well, thank you ... Oh, yes, I am sure it will work ... Earsilent plan, don't you think, can be executed easily too ... My business with you ... I think it would be well if you came to see my partner, Mr. Hicks. Dun't say I mentioned the matter to you. He'll be at the office about nine-thirty ... Oh, no, I am not concerned. From some things I heard I fancy it would be to your advantage to talk to

and Jenkins carne in.

"Who do you wish to see?" asked Hicks.

"Mr. Hicks."

"I am Mr. Hicks. And you?"

"I am Mr. Jenkins, general manager of the street-car company."

"And what is your business with me?"

"I understand you desire to see me."

"For what purpose?"

"I understand you desire to see me."
"For what purpose?"
"I don't know. Mr. Roscoe said you wanted to see me. He said he was in touch with a person this morning who intimated you would talk with Mr. Roscoe."
"If that is so, why didn't Mr. Roscoe come himself, provided he wants to see me, although I cannot imagine what husiness he can have with me?"
"Hs thought I—"
"But, Mr. Jenkins, I have no possible business with you, nor am I in the liabit of talking to intermediaries. If Mr. Roscoe wants to see me I should suggest that Mr. Roscoe appear in person. Good morning."

Roscoe appear in person. Good morning."

Jenkins stared at the perfectly possessed

Ricks, whistled and went out. Half an hour later the door opened again and Reson

hour later the door opened again and Rosen came in.

"Mr. Hicks?" he asked in a much-strained voice.

"I am Mr. Hicks, sir."

"And I am Mr. Hoscoe."

"I recognized you instantly. And what can I do for you, Mr. Roscoe?"

Hicks waved Roscoe to a chair with a polite gesture. Roscoe sat down, dutching his derby hat in both hands. He was red in the face and breathing hard.

"It was intimated to me, Mr. Hicks, that

"It was intimated to me, Mr. Hicks, that you desire to see me."

you desire to see me."

"For what purpose, Mr. Roscoe!"

"I haven't the slightest idea."

"Nor have I."

"But"—Roscoe was much perplexed—"I was told to call on you, and I am here."

"I was told to call on you, and I am here."

"I am sure I arn very glad to see you, Mr. Roscoe," said Hicks suavely; "but uoiess this is a social call I know of no other reason why you should be here."

"A social call!" shorted Roscoe, "I like your nerve, young man! The idea of me calling on you socially. Good-day."

He rose and jammed his hat on his head. As he was passing out of the room Hick called: "Oh, by the way, Mr. Roscoe, now that your visit has refreshed my memory, there is a matter I might discuss with you."

Roscoe turned, "What is it?" he asket sharply.

sharply.
"It relates to that plan you have for a fake accident in your powerhouse on the afternoon of election day, and the constant post page." quent crippling of your system just before the polls close."

Roscoe's jaw drapped. He stared at Hicks. His face went from red to purple ded slowly back to red ag

He stammered, stuttered, gasped.
"You scoundrel!" he shouted. "Do you mean that you and your blackmailing partner are trying to collect twice on that Well, take it from me, you can't! I'll have you arrested first!"

"I do not know to whom you refer as my blackmailing partner, Mr. Roscoe," and Hicks steadily, his eyes narrowing as be or contrated them on the street-car magnifi-

Rosens flopped down in a chair. "What do you want?" he asked.

"Nothing, my dear sir, nothing. I merely sugested we might discuss this matter. Of ourse, you know, now that I am in full possession of the facts in the case, it is my duty to expose them, which I shall do at my noonday meeting to-day, and you will not be able to carry out your nefarious scheme."

"Do you intend to do that?" asked Ros-

coe, who was clearly hadly frightened.
"It is my duty," declaimed Hicks.
"Doesn't it appeal to you in that light?"
"What will you take to keep quiet?"

"What will you take to keep quiet?"
Roscoe's voice was husky. His tongue was dry. He gulped and choked over the words. He knew he was trapped.

"What will I take?" exclaimed Hicks.

"Why, my dear sir, I have no idea of keeping quiet! What will I take? Do you mean you are trying to bribe me to keep this nefarious plot a secret and allow you to defeat the will of the people? I am surprised at you, Mr. Roscoe!"

"What will you take to keep quiet?" dermanded Roscoe again.

"Why, really, Mr. Roscoe," continued Hicks, "the matter hadn't appealed to me in that light. I am at a loss to understand

in that light. I am at a loss to understand
you. Do you mean what compensation
would I exact to remain silent about this
whole affair?"
"Exactly that," Roscoe replied.
Hicks paced back and forth across the

"I hadn't considered that," he said, half
to himself. "Of course I could not think
of doing such a thing; but if I were so inclined, what would it be worth to you, Mr.
Roscoe?"

"I will give you a thousand dollars to say

nothing."
"A thousand dollars!" laughed Hicks.
"Why really, Mr. Roscoe, for a man of large affairs you have very primitive ideas

about money."
"How much then?" asked Roscoe, glaring at the laughing Hicks.
"Well, Mr. Roscoe, if I were to put a
valuation on this matter, which of course I
shall not do—inasmuch as I have no idea of not exposing you - except for the purpose

of not exposing you—except for the purpose of prolonging a most agreeable conversation, I should say that five thousand deliars would be barely adequate."

"Five thousand deliars!" screamed Rescoe. "Why, that is preposterous!"

"Oh, fie, fie, Mr. Roscoe, you are excited. Remember I am offering you nothing."

"Well," said Roscoe, "I'll give you five thousand deliars. I'll mail you a check."

"My dear Mr. Roscoe you will do nothing of the kind. I could not use a check."

"How do you want it then?" persisted Roscoe.

Roscoe.
"I have often noted the peculiar shade of yellow on the backs of one-hundred-dollar bills," said Hicks as if no one were present and he were talking aloud for his own amusement. "It certainly symbolizes the gold for which they are legal tender. I don't suppose a package of fifty of those bills would be bulky, would it, Mr. Boscoe?" He turned to Roscoe, who sat and glared

He turned to Roscoe, who sat and glared indignantly at him.

"I haven't got fifty hundred-dollar bills on me and you know it," growled Roscoe.

"Why should you have? I see no reason why a man, even of such great affairs as yours, should carry so much money with him. However, I understand the banks have them in large supply. Not going, are you? Well, I shall be glad to see you at any time. I shall be here until a quarter to twelve, when I have an address to make. It would be quite sensational, wouldn't it,
Mr. Roscoe, if I happened to mention this
rmatter of the proposed fake accident at the
powerhouse in that address? I am assured of
n large audience and the reporters generally
drop round." twelve, when I have an address to make.

Roscoe's face grew purple again. He rushed out.

Half an hour later Roscoe came back. He took a bundle of hills from his inside

coat pocket, "Here's your money," he said, holding

Hicks gazed steadily out of the window.
What money?" he asked. out the bills.

"Your five thousand dollars."
"Not mine, yours," insisted Hicks.
"How very kind of you to bring me these samples for my admiration! Fifty, did you say? Would you mind counting them one by one? It doesn't seem possible there are fifty there."

Roscoe, trembling with rage, counted the

bills one by one.

"Ah," said Hicks, after he had finished;
"there are fifty, are there not? Ours is a most compact currency.'

"Gr-r-r!" choked Roscoe, standing with the little package of bills in his hand. "I suppose you will give me what passes for your word that you will not mention this matter?"

"I have promised nothing, Mr. Roscoe. "Do you mean you sent me out to get this money and that you are going to give no return for it. What is this—just a plain hold-up?"

Roscoe by this time was almost beside himself. "Here is your rotten money," be shouted. "You and your gang have got me crazy. If you break faith with me I'll punish you if it takes a lifetime." He threw the money on the desk and

hurried out.

"Mr. Roscoe! Mr. Roscoe!" shouted Hicks. "You left something here." Hicks gathered up the money, counted it, caressed it, felt the texture of the bills, admired the engraving and the color. It was more money than he had ever seen at one time in his life, and it was his, if he wanted to keep it. He thought he would keep it, and was preparing to hide it somewhere until a favorable time came to deposit it in a bank, when his eye caught the

telegram from the senator.

"Your brother's money."

Hicks recalled men who had taken money to entrap bribers, and the notoriety they had attained by expening the bribe-givers.

He felt sure the senator meant to do that,

"This game is only half over," he said to

himself, and he telephoned to Rollins to come to his office after the noonday meeting that day, which Rollins promised to do. Hicks went across to the store where the noonday meetings were held and exceri-ated Roscoe and the other street-car mag-nates; but he said nothing about the plot. "What is it?" asked Rollins as he came into Hicks' office about one o'clock.

"Roscoe was here this morning."
"Roscoe!" repeated Rollins in amazement. "What did that pirate want of you?"

"He tried to bribe me.

"What for?" asked the incredulous Rol-us. "Why should be try to bribe you?" "What for?" asked the incredulous Rollins. "Why should be try to bribe you?"

"Because I know something he wantsno one cise to know. He left these," and
Hicks took the hundred-dollar bills out of
his pocket and spread them on the desk.

"How much?" asked Rollins, looking at
Hicks and then at the money. "How
much? What for? Did you take it?"

"Hold on," interrupted Hicks. "Don't
get excited. Of course I took it, for here it
is: but I didn't take it to keep. I took it to

get excited. Of course I took it, for here it is; but I didn't take it to keep. I took it to show at the meeting on Monday, when I will expose the whole affair."

"I don't understand." said Rollins. "What is it? What does he want? Why have you all this money if you don't intend to keep it? What is it all about?"

"Now keep quiet and listen," urged Hicks, "and I'll explain it all. I found out a plot they have to aton the care."

a plot they have to stop the cars—"Stop the cars!" broke in the excited Rollins. "When? Why? What for?"

Rollins. "When? Why? What for?"

"Wait a minute, please. I found out about a plot they have to stop the cars about closing time in the factories on Tuesday afternoon, and thus make it impossible for the majority of the mill men to get home in time to vote. Roscoe learned I knew of this and came here and offered me this money to say nothing about it."

"How are they going to stop the cars?"

"By a fake accident at the powerhouse that will put them out of commission just before air o'clock. The polls will close at seven sharp. The men won't know about

before aix o'clock. The polls will close at seven sharp. The men won't know about this and will hang round waiting for cars for ten or fifteen minutes. Then they will walk across town, but most of them won't get to their polling places in the four outlying wards until after it is too late to vote."

Rollins whistled. "Well," he said, "what shall we do about it?"

"Expose them," said Hicks. "Put a big advertisement in the Chronicle for Monday morning urging all the people in Restown

morning urging all the people in Rextown to come and hear my noonday address. Get up an extra edition of the Chronicle for circulation on Monday afternoon. Play it up all over the paper on Tuesday morn-ing, and they won't dare pull off any seci-dent. Besides, we can frighten the factory owners into shutting down for half a day if we go at it right."
"Fine!" shouted Rollins. "Fine! It'll

beat them. But what shall we do with this

money?" "I'll take care of that," replied Hicks. "I'll use it as proof in my speech, and then we can decide what use to make of it afterward."

This Stewart regular 60 mile diad - 10,000 mile dist - 10,000 miles of the control o glass tage in crosp jed lacquar with pulsahed bress from to meich your Furd car. he can with unplate equipment to only \$12.

Here's a genuine Magnetic Type Stewart peedometer, with special equipment to fit your Ford car. Here's apportunity to get out of your Furd car all the pleasure it can give, - a knowledge of exactly what it can do.

When you leave your garage note liew accurately the Stewart registers on your Ford starts to move. Slowly, steadily moves the speed dist with its big, plain, easily read figures—1 mile per lour—2—5—10—20; always on the dot-steady as a dis—indicates from first turn of wheel—no jumping of the figures—tells exactly just how fast you are going.

Look out! There's a motorcop, his eye is on you. Wotch your speeduracter—it will keep you within the speed limit set by law. Your Stewart Speedometer will some you from arrest, humiliation and a fine probably greater than

Out to the country roads. Now what is your Ford really doing! Open law up. Soon your Stewart Speedameter shows 25 miles—30 miles—35 miles—40 miles—more if you want it. Again your Stewart Speedameter is right on the dot, telling you exactly how fast you are going,—not guess work, but easel proul of what your Ford can do.

Gasoline, - how many miles per gallon are you getting out of your Ford? Dil, too? What a satisfaction to know, definitely, how cheaply you can run your Ford. Your Stewart Speedometer tells you exactly.

Bang! These goes a tire! What's this? Your Shewart Speedometer mileage record shows you that that fire has can only 3,000 miles. Perhaps it is guaranteed for 5,000 miles. Off to the tire dualer you go. Is he skeptical? Is be disagreeable? Not at all! He takes one look at your Stewart Speedometer's mileage record. which he never questions. He sees exactly how many miles that the less ron,—low far it has fallen short of the guarantee. You have got the proof and he's glad to accept it. And you get an allowance on the new tire equal to 2,000 miles.

Again you hit the country read. 31 miles-34 miles—that is all that you seem to be able to get with everything wide open. Something is the matter somewhere. You cannot get the speed you know your Ford has been giving. Needs fixing. Your Steamst Spendometer has

PINCH HITTING FOR CUPID

(Continued from Page 14)

short. "See you later."
"Don't forget the number," says Mary.
"I want to hear all about the ranch." She watched him as he crossed the lobby to the

elevator.
"Chief, is it true what they're saying about him?" she asked me.

"That depends on what they're saying."
"Billy Mason told me he'd be surprised
if Joe finished the season. Of course last

year was his bad year, but I was hoping he'd get going again. I see he's not hitting."
"Well, Mary," I says, "he may last the season and he may not. You know how it is with ball players. They don't last forever. Next to me, Joe's the oldest man on the pay roll."

the pay roll."
"Humph!" says Mary, "Do you call him old? Better look out, Chief! Joe and

me are the same age.

"He's old for a second baseman." I saw I should have to hedge that bet. "This is his twelfth season and naturally he's slowing up. There's three or four years of base-hall in him yet, but not of the big-league variety. He told me last fall I'd better look out for another man."

Right in the middle of our talk the other man came along. Tom bought a box of eigarettes and I had to introduce him to Mary. She knew he was warming the bench, waiting for Joe's job, and that was probably the reason why she was rather cool with him. That's a bud way to get rid of a fellow who is loaded to the ears with pride and good opinions of himself. Tom ran't get over the notion that strange women ought to like him on sight, and when I went away he had both shows on the showcase and was settling down to convince Mary that he was quite a fellow. He put in the whole evening at it. Joe passed through the lobby twice, but he didn't stop. The next day, in the dressing room at the

the lobby twice, but he didn't stop.

The next day, in the dressing room at the park, Tom brought about the first open clash with Joe. It might have been accident, but it had all the earmarks of design.

"People," says he, "that girl at the cigar counter in the hotel is all right. If she's got a night off this week I'm going to take her to the theater. I'll bet she'd go if I asked her."

Joe was over in a corner lacing up an ankle bandage. He walked over and stood in front of Roche. Some men get noisy when they're in earnest. Joe spoke just above a whisper.

when they're in earnest. Joe spoke just above a whisper.

"That'll do you!" says he, "Let your voice fall right there."

"What do you mean—let my voice fall?" seks Tom. "I didn't say anything wrong about the girl, did I?"

"There was nothing wrong with what you said and you may be thankful for that. You picked the wrong place to say it—that's all."

"It seems to me you're mighty particulation."

"It seems to me you're mighty particular," says Tom with a sneer.
"I am," says Joe.
They looked at each other for a few seconds. Joe's right hand hung at his hip, cocked and primed, ready if Tom made a move; and a nasty right hand it was too. Tom saw it hanging there and cast his vote for peace. He sat down.
"Oh, well, if that's the way you feel about it ——" says he.

says he.

After Joe had gone out on the field Tom

After Joe had gone out on the field Tom began to ask questions.

"Hancroft ain't no Chevaller Bayard that I can see," says he, "What license has be got to hop all over me like that?"

"Well," says Nat Beers, the catcher, Joe thinks pretty well of that lady himself."

"Oh, he does, does he? And what does he lady think?"

"Maybe you'd better ask her, "says Beers." I guess I will," says Tom.

By accident Roche had found a way to sedevil Joe, and he went to it with all the soor judgment of a kid and all the spite of a rown man. He hung round that cigar

rown man. He hung round that cigar ounter every minute he was in the hotel; nd of course Joe wouldn't come near while e was there. I'll bet Tom didn't enjoy it ny more than Mary did, but he was out to

ake Joe sore and he succeeded. Joe spent se rest of his evenings in his room and idn't get a chance for a quiet talk with

lary on that trip.
We finished up at St. Louis and started ast: and somewhere on the road Joe lost e fighting snap and the pepper that had en holding him in the line-up. When a an gets so that he doesn't kick on a called ird strike he's in a bad way. Joe began

"Oh, I'm all right, I guess, "says he, rather to play ball as though he didn't care; and the home papers started to roast him and demand a new second baseman. Two or three sporting writers can put their heads together and drive any baseball player in the country out of business if they hammer at him long enough; and the newspaper knocking was just an additional push down the tologgan for Joe. The fans chimed in, too, and it got so that the anvil chorus atruck up the minute Joe showed his head. Even at this time Joe's absolute fairness

did not desert him.

did not desert him.

"It's no use, Chief," says he. "I'm gone!"
There was only one thing I could do. I
benched Joe and put Roche at second; and
Tom, seeing that his chance had come at
last, played like a wild man. A week or ten
days afterward Joe came to me again.

"It's up to you to do something," says he.

"What do you want me to do, Joe?"

"Ask for waivers. Find out whether any
of these other teams want me. Even if I

of these other teams want me. Even if I was in shape to play, I couldn't stay here, with the papers knocking and the fans after me. I might finish the season with some other club, but I'm not going to finish it on the bench. I don't want to draw a salary that I can't earn.

I tried to talk him out of it, but it wasn't any use. Joe was in earnest and in the end I asked for waivers. None of the other managers wanted him; I hardly thought they would. This was the situation when we started West the second time and on the

train I had a long talk with Joe.

"They've all waived," says I. "I can trade or sell you to Toledo or Milwaukee. You'd get pretty good money in the American Association for a couple of years. What do you say?"

"It's all the same to me," says Joe.
"Well, you might be thinking it over and let me know. If you've got a preference

for either of those towns

"It don't make any difference," says Joe-Of course I could have gone ahead and made any arrangements that suited me. The baseball law is all on the manager's side and when a man is worn out you can sell him, trade him for a bat-bag, or give him away; but when a player has given me the best that's in him I believe that he is entitled to some consideration.

I HAD hoped that Tom Roche would for-get his foolishness; but the first thing he did when we got to Chicago was to ask when Mary would come on duty. He gave the cigar counter a strong play—and Joe, the chump, let him do it. After the opening game Tom anchored himself, with one elbow on the chewing-gum case, and Joe sat down across the lobby with a magazine in his

It was a three-handed game of freeze out, Mary playing against Tom and Tom play-ing against Joe. Joe lost. Tom stuck till eleven o'clock, when Mary shut down for the night, and then he escorted her as far

us the street door. Several times that evening I noticed that Mary glanced over at Joe as though she wanted to catch his eye. That started me to thinking. If Joe was ever going to have his heart-to-heart talk with Mary now was the time. I didn't know how things stood with them; but it seemed to me that after the shoe drummer had hit for Cupid, and I'd gone in to run for him, a score was in

danger of being left on the bases.

The next day I asked Mary whether she couldn't get off at eight o'clock and go to the theater. She said there wasn't a chance; it was her long day, from noon till eleven.
"That's too bad," says L. "I wanted to

give a party for you and me and Joe. "Maybe I can fix it," says Mary. "Yes; I can pay a woman to work in my place. Then I went after Joe. I found him in his room, getting ready to shave. His face

was all covered with lather.
"Anything doing tonight?" I says.

Joe shook his bead. "All right. You're going to a theater

party."
"Not on your life!" Joe didn't like

"But it's my party," I says. "I'm giving it. It is going to be very select. Mary will "And who else!" Joe shot that one at

me quick, without waiting to set himself. "Who else?"

"Why, just you-and me."

80,000 Women Released From Washboard Slavery

In eighty thousand homes this week the family washing is being done without the drodgery of washboard robbing and wringing by hand. The Gard Electric Washer has eliminated both of these back-breaking tasks. Three Cents Worth of Electricity does the washing and wringing. With a turn of the switch the cylinder revolves, washing clothes clean and white. In more a monates an entire family washing is familied.

The Improved Thor Electric Washer Silent, Chainless

A decided advance over any previous model. They's driver with a spiral bovel, not a worm, gear—absolutely noticless; all machinery enclosed, protecting bands and clother. Wranger guard makes accidents impanishe.

So much is expected of a Firestone Tire that nothing is left undone to make every tire worthy of our name and reputation.

There is always room at the top, but the position demands watchfulness.

That is why the makers of Firestone Tires are sleepless in maintaining that quality which means a full measure of comfort, security and economy.

Firestone Comfort can result only from the extra quantity and superior quality of rubber in Firestone Tires. Firestone Security springs from a design which is scientifically exact to hold against pressures and strains. Add to this the giant grip of the real Non-Skid tread design, and you have the reasons for the confidence of Firestone users.

Firestone Economy proves out in service because it is built in at the factory. An extra amount of finest rubber and fabric, given surpassing toughness by Firestone methods the better workmanship—the more rigid inspection—these are the things that assure Firestone users—Most Miles per Dollar.

HE beauty about Ivory Soap is that you can use it satisfactorily under all conditions.

When the skin is irritated by sun or perspiration Ivory Soap gives a pleasant bath because it is as mild as soap can be made.

When your bathing is done in lake or stream you cannot find a handier soap because Ivory Soap floats.

When there is general cleaning to be done—dishwashing, laundry work, etc.—it is unnecessary to provide a laundry soap, for Ivory Soap not only is a mild, safe cleanser, but a thorough one.

For any purpose, in any place, at any time, Ivory Soap can be used to entire satisfaction, because it is pure, high grade and—floats.

MYNON SOAP

.... IT FLOATS

Compare the Old Way of Shaving with the Mennen Way

Use Mennen's Shaving Cream and it will take you but half as long to shave. You will be rid of all the sore, smarting after-effects, for Mennen's contains no free caustic to bite and burn your skin.

You will find it is the lather—not the razor—that has made shaving a torture. The full creamy lather of Mennen's Shaving Cream needs no "rubbing in" with the fingers. It instantly softens the stiffest heard and leaves the lace smooth, soft, cool and comfortable.

A user of Mennen's who says he is afflicted with an exceedingly tender face and a heavy, wiry heard, writes: "The first time I used Mennen's I attributed the good feeling to the condition of my razor — the second time I attributed the happy after-effect to the good condition of my face. The third day my scepticism biossomed into hope; but, to make

ture, I used another preparation on the fourth day, and — Mennen's had a convert. Mennen's is economical in every sense; it economizes time; it saves temper; it protects the skin against razor irritation; it contains no alkali to eat into your pores; it leaves your face refreshed, your temper equable."

Another says: "A little strip of the cream applied to the face—a few strokes with a wer brush to distribute the lather—and one's face is ready for shaving. It isn't necessary to work up a lather with the bristles as was the case when using soap and powder, and best of all, the lather generated with your cream lant. I

may frankly say that I have never used a lathering medium that produced as fluffy, creamy lather, which softens the beard, does not dry on the face, and leaves the skin as cool and fresh as does Mennen's Shaving Cream."

Mennen's Shaving Cream is put up in sanitary, airright tubes with handy, hexagon screw tops. No amount of advertising can make you realize what a difference there is between it and other shaving preparations. You must try it—then you will know.

At all dealers—25c. Send 10c for a demonstrator tube containing enough for 50 shares. Gerhard Mennen Co., Newwork, N. J. Makers of the celebrated Mennen's Borosed and Field Tallium Toilet Poruders and Mennen's Gream Dentifrice.

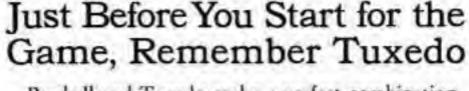

Mennen's Shaving Cream

NAPOLEON LAJOIE peerless second baseman of the Cleveland American tram, says:

"Tuxedo and I have been friends for years, and the longer I use it the better I like its mild, soothing effect."

Baseball and Tuxedo make a perfect combination. The perfect sport and the perfect smoke. In pipe or cigarette—Tuxedo is always ideal.

The fellows you see out there on the diamond know this; and after the game and the shower and the rub-down, their first bit of relaxation is a refreshing smoke of Tuxedo.

Tuxedo is mild, healthful, wholesome, beneficial. If it wasn't, these ball players wouldn't continue to smoke it.

All sorts of famous athletes, opera singers, golfers, airmen, trapshooters-men who have to be right at the top notch of physical fitness all the time-use Tuxedo steadily.

There isn't a speck of irritation, scorch, sting or bite in a pound of Tuxedo. All that is removed by the famous original "Tuxedo Process"—a process that has had imitations galore—but the original "Tuxedo Process" is still the best.

Tuxedo is the best tobacco - made of rich, mellow, perfectly aged Kentucky Burley. None better can be bought, because none better is grown.

The Cost of Tires

No-Rim-Cut Prices—Since 1909—Have Been Cut in Two. Last Year Alone They Dropped 28 Per Cent. Now These Tires—Once the Extra-Priced—Undersell 16 Other Makes

A curious thing has happened.

Once we had to explain why No-Rim-Cut tires cost more than other makes. Now men are asking why they cost them less. Did we over-charge you formerly, or do we undercharge you now?

Why They Cost More

They cost you more than others once, because they cost us more. And they cost us more today.

No-Rim-Cuts are the only tires which embody our coatly, efficient way to put an end to rimcutting.

They are the only tires which get an "On-Air" cure. That is, we final-cure on air-filled tubes, under actual road conditions. We save in this way all the countless blow-outs due to winkled fabric. This one extra process—used by us alone—costs us \$450,000 per year.

They are the only tires in which hundreds of large rubber rivets are formed to combat tread separation.

They are the only tires which have our

double-thick All-Weather tread. The anti-skid as smooth-riding as a plain tread, but with deep, resistless, sharp-edged grips.

Why They Cost Less

Of course, raw rubber has come down; but not more for us than for others.

Our overhead, since the days of small output, has dropped 24 per cent.

Our labor cost, through multiplied production, has dropped 25 per cent.

Our selling cost has dropped.

And our profits were pared until last year they averaged 6½ per cent.

We have new buildings—new equipment new efficiency methods. We often make in one day as many motor tires as we made in a month five years ago. Not another plant in the world has such an output.

Tire Users Did It

Our present prices are largely due to the men

who get them. They have bought these tires by the millions. And this year they are buying 55 per cent more than they ever bought before. We have used our multiplied sales to save all that we could for you. And we have given you more than we saved.

Extra Quality Can Anybody Give It?

Of course, the claim for extra price is extra quality. That's too indefinite to argue. We spend \$100,000 yearly to find ways to better tires. That others excel us is simply unthinkable. More men have adopted Goodyears than any other tire in the world. It can't be supposed that so many men are mistaken.

We've told you four ways where Goodyear tires excel. They deal with the four greatest factors in upkeep. No man can think that we give those things and then skimp quality.

The truth is, Goodyear prices buy the utmost in a tire. Why pay for three tires what we charge for four? Any dealer will supply you Goodyears if you say that you prefer them.

The Jeffery Car is the Car You'd Build

If you had all the money you needed. If you had a big motor car plant—and you knew how. If you had the knowledge and experience of all the best engineers in the world, and you built a motor car, what would it be like?

First, it would be driven by a light, high speed, high efficiency motor. The bulky, slow speed motor is a thing of the past. Europe has proven that economy and highest efficiency are secured through the light, high speed motor. The trade papers are full of editorials and articles by the best known engineers endorsing the idea.

Then you would build your springs, axles and drive shafts of vanadium steel. All the highest priced cars use it. It costs 17 56 cents a pound as against 8 cents for the ordinary steel; but you are building a

car to go at least 50,000 miles.

Imported annular ball bearings would claim your choice because, like Swiss watches and scientific instruments, they bear an enviable reputation for fineness and efficiency. You would buy the best and therefore the highest priced starting and lighting system.

A four speed transmission would be used, Bosch duplex ignition, the best type of some highest grade carburetor like the Rayfield, Spicer universals, full floating rear axles, Daimler leather couplings and Warner speedometer.

Then your equipment would be the best you could buy.

Now we say that you would incorporate these units in the car you built because the best engineers and the most experienced and successful builders are incorporating some or all of them in the highest priced cars on the market. It is no mere coincidence that the Jeffery is built from these high grade materials.

Jeffery brought the light, high speed, high efficiency motor idea, as an accepted and proven principle, from Europe last Fall. That made

possible a wonderfully economical car.

Then he spent a million dollars for quality alone which he might have saved had he been satisfied to build an ordinary car, in putting that superquality into the car which we have said you would put into the car you built.

So Jeffery has built for you the very car that you would build yourself had you the facilities. In finish and style it delights the eye.

The man who buys a Jeffery now will have the satisfaction of being

thoroughly up to date next season.

The early announcements of many of the big manufacturers show that the light, high speed, economical type of motor will be the dominant one next season.

\$1550

It's Economy Year and Jeffery Made It So

The nearest Jeffery dealer will show you the car that you would have built yourself. A car of quality. A beautiful car of exclusive design. An economical car.

Do good, quick, clean Ironing

You can iron in any room in the house—or on the porch with a G-E Electric Iron. Attach it to any light socket, turn the switch and the G-E Iron is ready in a moment.

Aside from these conveniences, think of the time, money and steps a G-E Iron saves. Think of the lessened wear and tear on the family linen.

With a G-E Electric Iron you get "Even Heat"

No spot too hot; it is no hotter at the point than at the heel—at the edges than in the center. This safeguards against scorches—makes the ironing go quicker and easier; saves time, which means saving electricity; in fact

An average family ironing costs only 15c for electricity

Specially arranged air chambers in the G-E Iron hold the heat down directly to the ironing

surface. Using the heat this way also permits you to do considerable ironing with the electricity turned off.

The G-E trademark on this iron stands for quality it assures you a lifetime of satisfactory service.

The G-E Iron recommended for all round family use is the 6 lb. iron. Get it from the nearest store selling electrical goods. Price, with heel stand complete, including cord and attaching plug, \$3.50.

Banish hot-weather Discomfort

Turn the switch and command the faintest zephyr, or a sweeping breeze—as you please—and it shall be yours—in home, office, bedroom, ballroom or workshop. A simple device places the speed entirely within your control.

Twenty years of laboratory study and factory application are concentrated in the smooth-running, noiseless mechanism of the G-E Electric Fan.

Its oscillating motion

silently stirring the air-like the breeze flow of nature-is only one of the many practical features of this fan.

Its sturdiness of construction, the perfect integrity of its materials and parts, its delicacy of balance throughout which prevents vibration and wear, all assure you a lifetime of satisfactory service.

As to Economy, sufficient to say that the G-E Fan, depending on the size, can be run

Three or four hours for one cent

-less than the cost of burning a single ordinary incandescent light.

G-E Fans are made in many sizes and styles for use in homes, stores, offices, hotels, restaurants and factories. Any desired finish to match surroundings may be ordered.

Look always for the big G-E trademark on the face of the fan. The nearest electrical dealer or your lighting company will show you the particular type of G-E Fan appropriate for your needs.

The Extravagant Way to do Business is to Use the Methods of Yesterday

ROM a business standpoint the motor truck is probably the greatest economic factor ever introduced.

It has proved its economy, its productiveness and its downright efficiency over the horse in every possible respect.

Yet, in spite of this, some business men still prefer to be backward by continuing to use, and lose money on, the out-of-date methods of yesterday.

What does it cost you to do business with horses?

Ten to one you cannot answer!

But-

Whatever your answer might be to the above, how can you reply to the following:

The Peninsular Wet Wash Company of Portland, Oregon, replaced three teams (6 horses) with one Willys Utility Truck. And in addition to greatly reducing their hauling investment they cut delivery operating expenses \$250 a month or \$3000 a year. Bear in mind that one Willys Utility Truck alone effected this enormous saving.

Now what about your horses?

And this is but one of scores of similar cases!

Yet economy is not the greatest asset of this truck. Increased business is what makes for increased profits, and there is where the real value of this truck comes in.

With one of these trucks you do infinitely more work than you can do with three or four teams. You can cover more territory, get at more customers, develop more business—in short make more money.

Understand this is not a theoretical statement. Willys Utility Trucks are accomplishing this for hundreds of others. They can do precisely the same for you. Their adoption will increase your business and decrease the cost of getting and handling it.

We have the facts and figures in connection with your business to prove this. We will be glad to present them at any time you appoint.

Write us direct for literature, special body book, complete details and data. All gratis. Address Dept. 151.

The Willys-Overland Company, Toledo, Ohio

Three Quarter Ton Capacity-\$1350

Price includes thesees and driver's sees. Body as shown \$150 error. Prices f.v. h. foctory.

NOW LET'S APPLY THAT to an automobile motor—in actual use. The average cur in hands of the average driver—and especially the expert demonstrator -- is never driven to its limit for long at one time. A spurt, a stunt-then a good long rest—inspection and the necessary adjustments.

And most any motor will stand up under that.

OR: IF THE OWNER DRIVES carefully alwaysnever forgets-a motor of mediocre quality will stand up for quite some time.

BUT IF, ONE DAY, he and the car happen to be feeling good and a friend tries to pass him on a clear straight road, he is liable, being human, to step on the accelerator and cut her loose for a few miles.

THEN -GONE IS THE SILENT CAR; gone the sweetness that tempted him to buy. Gone the power of which he was so proud. Gone - and gone for good.

PERHAPS HE DOESN'T NOTICE IT just at the time. But a few days later his our catches a lot of sounds that were not there before.

real work."

AND THE NEXT DAY when you go out with the family for a quiet, restful drive, you'll find that wonderful car in the same mood—page of the creaks and squeaks and noises you'd find in a carof lesser quality.

BUT," YOU MAY SAY, "I am not a speed maniac." All right. Nevertheless you do want to get there and back-regardless of weather or road conditions. Don't you?

VERY WELL, THEN. YOU KNOW that, so

What You Get In This FOUR That You Do Not Get In Others

A greater proportion of manufactured parts.

A chain of quality-producing processes not equalled in the construction of any car at any price.
